What if you could be anywhere in the world with a single word? The late (?) Mr. Box discovered the secret of teleportation through the "Whereaway Box," and used it to power a life of freewheeling theft. This generic Supers article presents this supervillian, and explores ideas on what to do with him, now that he's "dead."

* * *

When Daniel Whereaway was 10, he saw space fold by the River Thames, right in front of his hand.

It was on a school trip to Westminster to see Cleopatra's Needle, at the Victoria Embankment. As he stared up at the ancient obelisk, the tour leader explained that there was not one Cleopatra's Needle, but *three:* one here, one in New York, and the other in Paris. All were different, yet all three were "Cleopatra's Needle," even if Cleopatra herself had nothing to do with them . . .

It was an interesting story, but Whereaway wasn't listening. He was imagining that the three needles, all identical in his mind, were somehow the *same* object -- somehow existing in three different places at once. If he wrote his name on one, would the other two now bear his signature? If the Russians bombed London, would the other two vaporize?

And if he were to touch one, and desire to be at another, could he speak a word and find himself *somewhere else?*

He reached out his hand towards the needle in wonderment, closed his eyes, and breathed the word "Paris." In his mind he imagined the world whooshing by underfoot: the Thames, the South of England and its Channel, the North of France, and then the great city he'd only seen in picture books, magically zeroing in on another great finger of red granite . . .

He just might have opened his eyes in Paris if Robert Fisk, class bully, hadn't picked that moment to thump him on the head. The injury left Daniel seeing stars for the rest of the afternoon, and forever taunted by the thought of surprise-calling his parents from France.

Which is why, 25 years later, Mr. Fisk mysteriously disappeared from his London flat and reappeared in the air over Paris, crashing messily to earth not far from the Place de la Concorde. London Investigators found a small, white cube in his recliner seat. And their French counterparts discovered another cube affixed to the bottom of a plane -- one that had been over Paris just as Mr. Fisk's favorite show had come on.

The super-thief known as "Mr. Box" had struck again. He was always pulling little jokes on his enemies and occasional allies, but that was the first time he resorted to murder. No one -- not even his arch-foe, The Stabilizer -- was certain why Whereaway's methods took a turn for the deadly.

But given the rumors of his impending demise from cancer, some suspected he was losing his mind . . .

The Man

The bump that Fisk gave him may have gone away, in time, but Daniel Whereaway never abandoned the idea of a thing being in two different places at once, and instant travel between them. He read and watched anything he could (*Dr. Who* being a particular favorite) and daydreamed to the point of obsession. And when he went to University he pursued a study of theoretical physics so esoteric -- perhaps "crazy" -- that only three scientists in the world knew anything useful.

It was a long, grueling process, traveling to each man, in turn, and learning at his feet. He had to cross the line from

dedicated student to thieving vagabond several times, just to survive his treks across the world. But after 10 years of studying bilocation, matter transportation, and dimensional transcendentalism he emerged with a solid theory of how to achieve his lifelong dreams.

It was not to be an easy path, as he had no funding to speak of, so Daniel used the skills he'd learned to survive his education. He turned to confidence schemes to finance his researches, and outright theft to acquire the things he needed. In time he gained a reputation as something of a gentleman thief, and his dandyish manner of dress -- borrowed from one of his favorite Doctors -- certainly didn't hurt.

After years of theft and feverish experimentations came his first miracle: a small box which, when energized through the process he'd discovered, became two . . . and yet one. One he had sent to Paris, with precise instructions on its placing at Cleopatra's Needle. The other he kept with him, waiting for the predetermined time. When it came close, he marched down to the Victoria Embankment, pulled the box out of his pocket, consulted his watch, and said one word: "Paris." And then Daniel was gone.

Mr. Box -- as he'd rechristened himself -- stayed near, at, or under the Place de la Concorde for the next 10 years. His hideout was a treasure trove of objects d'art from the entire world, with only the finest and most exquisite things "borrowed" for his collection. And it was quite an honor for a fellow superthief to be invited to tea or dinner at his place, though anyone trying to steal from *him* literally vanished.

Attempts to nab Mr. Box, in or after the act, proved highly elusive. The Stabilizer -- Europe's greatest superhero detective -- seemingly came within inches of achieving this goal on several occasions, but it turned out those inches were misdirection on Box's part. And the one time his rivals seemed to beat him to the goal, and truly deter him, was simply a generous feint: Daniel hadn't wanted that painting, anyway, and only wanted to give The Stabilizer a merry Christmas.

All was well and good until this last year, when Mr. Box's behavior became more erratic: desperate, and lacking his usual poetry. When El Palo Rojo apprehended The Chiurgeon in Madrid, among the criminal doctor's many confessions was that Mr. Box had come to him for treatment, and he'd discovered numerous outbreaks of cancer throughout his entire body. The Chiurgeon was willing to try some radical treatments, but Box politely refused, saying he preferred a dignified end.

Then came the death of Mr. Fisk, followed by The Chiurgeon's inexplicable escape from his holding cell. A short while later, The Stabilizer received a card in the mail from Mr. Box, telling him where to find his hideout, and that all his "borrowed" things might now be returned. At first he thought it another misdirection, or perhaps a joke, but the hideout was indeed there, and within it was a decade's worth of exquisite theft.

That was almost a year ago, and though there has been no further sign of Mr. Box, The Stabilizer refuses to count him gone. His file is still marked "Solution Pending."

Daniel Whereaway, 40; British citizen with criminal record

Stats: Average Body; Impressive Mental; Medium Spirit

Appearance: 5'9, 190 lb, wavy red hair, green eyes, handsome features.

Costume: Crushed blue velvet smoking jacket with white cravat, gloves and spats. Often carried an ivory sword-cane, but never needed to use it.

Family: Mother and Father, 60 and 59, (estranged)

Power: The Boxes

A Whereaway Box is nothing special to behold, at least at first sight. Each one is a solid, white cube made of smooth plastic, ranging anywhere from about the size of a sugar cube to one the size of a small elephant. There are no

markings of any kind on the sides, and nothing inside. The length of each side, whether in millimeters, centimeters or meters, is Pi, and they smell slightly of ozone.

What is truly special about the boxes is that each one is actually two, and therefore in two places at once. Whatever is done to one box happens to the other. And as well as allowing instantaneous travel between them, they also allow whoever's holding one box to be vaguely aware of the immediate surroundings of the other.

Travel is conducted by simply touching a box, which can be set to active or passive mode. In passive mode the box must be activated -- sometimes by codeword or thought, sometimes by touch -- in order to work. In active mode it is set so that it will activate whenever *anyone else* comes into contact with it, regardless of whether they know what they're doing or not. (This is how the late Mr. Fisk met his maker in Paris.)

Upon activation, the box transports its operator and anything he may be wearing, carrying, or even touching at the moment. This is how Mr. Box was able to steal extremely heavy, amazingly-secured or guarded things, so long as they, or their secure housings, were relatively free-standing. He only needed a moment to touch the object of his desire while activating a box, and then he and the object were gone before anyone, or anything, could react.

The size of the boxes has nothing to do with how much a user can carry at once, but how many trips one can make with them. The smallest, sugar-cube sized box is good for one trip only, while something 31.4 meters to a side is good for thousands of trips back and forth. The only physical difference between a functioning box and a spent one is that the ozone smell has dissipated.

To this day, no one is quite certain if Whereaway learned some secret process for constructing his boxes, if he developed a special power to imbue them with their singular abilities, or some combination of the two. He was careful to destroy all his notes and journals, and teleport his equipment to the bottom of the ocean, prior to his disappearance. And he shared the secret with no one, in or out of the criminal fraternity.

The closest anyone's gotten to duplicating Whereaway's secret was the would-be superthief Planar, who tried to reverse-engineer a spent box. His first heist was also his first field test, and proved fatal. He dropped down dead in Mexico City, still clutching the statuette he'd attempted to steal, while a perfect duplicate of himself materialized in Acapulco, also dead, and clutching an exact copy of the statuette.

Ideas for Use

Whereaway is . . .

- **Dead.** He'd conquered all, and was unable to think of new vistas and conflicts to allay his boredom and wanderlust. After planting the story (and a means of escape) with the Chiurgeon, and "thanking" Fisk, he teleported to a remote location in the Andaman Islands to enjoy one last sunset on a beach. The wine was stolen from the best vineyard in France, and the poison was slow and painless, almost like falling asleep. The waves and fish claimed what the authorities could not.
- **Missing, presumed dead.** He *did* have terminal cancer, and rather than suffer, he rigged it so The Dimensioneer unwittingly teleported a box, just as Whereaway activated the other. That was however-many blind teleport tests ago, not even The Dimensioneer knows where it could be. But he insists that none of his journeys are ever necessarily one-way: Mr. Box may well return, one day.
- **Hiding.** The Stabilizer, who can also track molecular processes, was closing in on Whereaway's secrets. So he paid the Chiurgeon to lie, abandoned all he had and vanished, and is currently living in Paris under an assumed name. One day The Stabilizer will get self-assured and careless, just like every other hero, and on that day Mr. Box will stage a grand comeback, so that his beloved rival might regain his true glory.
- **Redeemed.** The cancer had been caused by his boxes, or so he surmised, and in his despair he blamed Fisk. But the utter glee and ease with which he dispatched his old, childhood nemesis -- crossing the line from thief to murderer -- scared him. So he's faked his death and is spending however much time he has left perfecting his boxes. He hopes to present them to the world as a parting gift, and restitution, before his demise.

The Omniscient Eye

If There's No Up in Space, How Do I Know I've Got the Right Elevator?

Beanstalks, orbital elevators, call them what you will, but what's the experience of riding one likely to be like? For example:

- **How thick is the cable going to be?**
- **How will you get into one of the "cable cars" that goes up to orbit?**
- **Would they be able to stop and start individually, like trains on a track, or would there be some sort of continuous belt arrangement, so the whole system would either be running or stopped, like a ferris wheel?**
- **How will bad weather on the surface (say, hurricanes) effect the system?**
- **How big could the cars be? Automobile-sized? Tour bus? Hotel?**
- **How long would the trip take, how long until you're above breathable atmosphere, and how would gravity change during the trip to the top?**

Let the Omniscient Eye take you on a tourist trip up the Space Elevator. We fly into Doorstep Airport, a hundred miles from the elevator's anchor point. The train from the airport takes us past the missile batteries protecting the elevator from terrorist aircraft. The anchor facilities look like the world's biggest train station. Containers just arrived from orbit are hauled to the airport while others wait their turn to go up.

Passengers go straight to the reception lobby. We pay for our reservations and walk over to the noon passenger car. It's roughly the size of a Greyhound bus stood on its end. Twenty passengers and crew would make it very crowded, but since it's made out of the same materials as the elevator cable almost the entire volume is available for living quarters and cargo instead of structure. A movie about the glories of the elevator entertains us until it's our car's turn to go up. It moves horizontally 300 meters to the elevator and locks onto the "up" cable.

The end is the thinnest point of the cable. The cable is shaped as a flat ribbon, providing a good surface for the climbing engines to grip with their rollers. If it was compacted into a square it would be only 1.5 millimeters on a side. This version of the cable can handle a 20-ton load at the end. The thin initial deployment could only support a 600 kg car without breaking. Future plans are being developed for a thicker cable to handle hundred-ton cars; now that a second cable has been set up for down traffic, anchored 200 meters west of the first, there is even more demand for trips to GEO and beyond.

After the final safety checks the car's engines start hauling it up. The acceleration is gentler than the elevators in some skyscrapers. It feels like we're creeping along the elevator but the view is too fascinating for us to care. The security zone has gone back to jungle since it was evacuated for construction. The mountains behind it grab our attention next. Behind us a boy tries to frighten his grandmother by pretending he feels the car shaking from the wind. A steward quickly spikes him by explaining that all Anchor Station traffic is shut down when the winds are even half of the strength needed to shake a car on the cable. The lounge entertainment is replaced by a dry documentary about how little effect Hurricane Margaret had on the elevator 12 years ago. All but one of the test cars sent through made it. While the cars had a hard time holding on in the wind, the cable had less stress from the hurricane than from its normal traffic load.

When the world looks round we realize we're actually in space now. The first 100 kilometers took us nearly an hour, going slowly to avoid excessive drag. A few hops reveal that gravity is noticeably lighter now. 3% less isn't much of a difference, but it feels like taking off a backpack. The elevator has reached its top speed and is climbing at 400 km/hr with the engines fighting gravity, not accelerating.

The stewards serve dinner six hours into the trip. Not bad, compared to airline food. As soon as we finish we're back at the windows. The world looks stationary from up here. It's only when we come back that we realize how much we've moved.

At midnight we give in and climb into our hammocks. A real bed might be more comfortable, but nobody on this trip wanted to buy an extra ticket to pay for the weight of the mattress. Ninety hours is too long a trip to stay up the whole time. When we wake up we're only a fifth of our normal weight. At breakfast all the parents are busy keeping the kids from spilling their drinks to watch the low-gee splashes. The windows aren't grabbing as many people with Earth over 7000 km away. Most of the passengers have switched to normal travel pastimes: books, videogames, and cards.

Finding a quiet corner for a card game makes us accidental witnesses to a milestone in the trip. As dinner approaches the head steward opens the control console, disarms the parachute deployment system, and activates the emergency maneuver thrusters. We've passed 23,500 km. If the car had fallen off the cable below that altitude it would have landed on Earth. The parachutes would have softened the landing enough for most of us to survive. Now a loose elevator car would stay in an elliptical orbit. The thrusters would maneuver it enough to avoid hitting the cable on the next orbit. There's a week's worth of air and water on board, enough to hold us until a rescue rocket arrives.

Gravity drops quickly down to near-zero over the rest of the trip. The stewards are good at spotting imminent space sickness but one kid throws up before they can slap an anti-nausea patch on him. The downstairs lounge is taken over by the active types exploring low- gee acrobatics. The stewards have ice packs and finger splints ready for the inevitable.

By the time we get to GEO Station we're used to free fall. The business travelers head out to their jobs. A pair of gray-haired greeters escort new residents to the zero-gee retirement home. The rest of us go on the station tour.

The elevator engineers constantly fight proposals to hang permanent structures on the cable. The lowest 1,000 km of the cable is a perfect place for tourism and observation platforms. Some people even want to put manufacturing and luxury housing there. Their weight would cut directly into the carrying capacity of the elevator. The lower the altitude the more effect it has. Geostationary altitude is the only place where mass can be connected without putting stress on the cable . . . and with the engineers' blessing GEO Station has been expanding steadily since the elevator first went operational.

Structures placed east and west of the cable exert virtually no force on the rest of the station. North and south extensions are pulled toward the equator by gravity, compressing the middle, which is easily handled. It's up and down extremes that cause the problem by pulling away from GEO. More than one tenant has had a module forcibly dismantled for disturbing the balance of the station. It's grown into a rough cylinder including the up and down cables (now over a kilometer apart), stretching along the equator for over 2,000 meters. The original spacecraft servicing hangers have been converted into pharmaceutical and integrated circuit factories. New hangers are on the ends of the station to make docking easier and safer. In between are the living quarters, communications antennas, hydroponics gardens, and government facilities with no identifying markings. A new residents-only recreation facility just opened, catering to "Jacks" who don't want clumsy visitors getting in the way of their zero-gee sports.

Other Elevator Concepts

The description of this trip is focused on one type of space elevator, an enlarged descendant of the NIAC study design. There are lots of other designs out there. Until we actually build a 1,000-km-long cable which is strong enough to support a space elevator everybody has to work to assumptions about what the elevator will be made of and how it will behave. Carbon nanotubes are the current material of choice, but scaling them up into huge structures may have emergent effects that don't match their theoretical behavior. By the time there's enough market demand for a elevator we may be capable of producing cables of solid diamond, or of composites with currently undreamed of strength.

Other design choices have to be dealt with regardless of the material. The elevator cars can be powered by their own batteries, draw off a power line attached to the cable, or receive a radiated power beam. The climbing motor can surround the cable, cling to one side of the cable (allowing up and down traffic on the same cable), or even be on the cable instead of the car. There are published designs using all of

After the tour we get back in our passenger car, now flipped over with its top toward the Earth. Our trip resumes upward, headed for the end of the cable 72,000 km from the center of the Earth. 20 hours later we notice gravity is back. More precisely, centrifugal force is now slightly stronger than gravity and we're being very gently pressed against the spaceward side of the car.

There's one bit of excitement on this leg. The stewards tell everyone to seatbelt, the first time we've used them. We suddenly feel Earth-heavy as the car brakes to a stop, then heads back down the elevator. The head steward explains, "We're doing vibration damping. Moving cars changes the resonance of the cable and absorbs the energy of a wave. Normally we just use cargo cars for this, but because of the special event we've got much less cargo on the elevator than usual, so passengers have to help out." After an hour we get the seat belt warning again. A table of careless players have all their cards wind up on the ceiling as the car accelerates up again.

The windows on the car only face away from the cable. Early passengers looking at the cable had been shocked by other cars zipping by at a relative 800 km/hr. As we approach Departure Station -- 2,000 km before the end of the line -- everyone lines the windows to catch a glimpse but the huge structure flashes by in a few seconds.

We finally arrive at Top Station, the counterweight holding up the entire elevator. One steward leads us to an observation dome while the rest help load ballast into the car before immediately heading down again. In the dome we look up but Departure Station blocks our view of Earth. We're at 0.03g and don't feel upside down at all even though the planet is directly "above" us. A display shows cars positioned all over the upper elevator for damping duty as well as a countdown. The Jacks worry more about the damping; departure is "ready or not" by now and they're concerned about whiplash damage. Like the rest of the tourists we just watch the countdown. When it gets close to the end we lie down to watch the show without getting a crick in our neck.

The station manager does the traditional last 10 seconds of the count. Anyone expecting pyrotechnics should've know better. Departure Station is just retracting the arms holding *Zeus* in place. The monitors show the separation increasing. To the naked eye the it's all one big jumble of trusses and pressure vessels. We still cheer as the first manned Jovian expedition starts on its way.

The next hour gives us a better look at *Zeus.* The crew sees itself traveling in a straight line perpendicular to where they left the elevator, a stone slung by Terra's sling at over 18,000 km/hr. To us the ship is heading straight up along the elevator at 2,000 km/hr. Seeing something kilometers long heading toward us at that speed makes some of our fellow tourists nervous. The rest of us watch in awe as the huge ship swells above us, finally passing by only 300 klicks away. A few of us catch our breath before joining the stampeded to the Farside observation dome.

The elevator is going back to normal operations. The "twang" from releasing the ship was about as strong as analysis had predicted, so the vibrations were quickly damped by the cars in place along the cable. When *Zeus'* propellant tanks were being filled there wasn't much capacity left for routine cargo. Now all the low-priority loads are being sent up using both cables for "up" cars. We'll be spending a few days at Top Station while waiting for them to catch up.

those options.

An elevator will also change over time. The initial line will be the minimum necessary to hold itself up, to make deployment easier. As time goes by it will be augmented or replaced by stronger cables. Some elevator concepts have three or six cables close together as their eventual configuration.

How will this affect the passengers? Not all that much, most likely, if all that's changed is the infrastructure. A huge change in the strength of the cable will be noticed. At the weaker end of the possible cables humans travel suited up in Gemini-size capsules, with no tourists allowed. When the cable reaches its full potential there'll be additional platforms for tourists to stop off at, such as the "One Hour" right above Earth's atmosphere described in Gerrold's *Jumping Off the Planet.* But regardless of how comfortable the trip is the view (and the gravity) will be the same.

Walk the Plank

Published by [Green Ronin](#)

Designed by Brian Hess & Evan Sass

Edited by Bill Bodden, Brian Hess, & Eric Sass

Art by Ramsey Hong, jim pinto, & Hal Mangold

70 cards (five suits of 13 cards each, two Walk the Plank! cards, one Sea Monster! card, one I'm the Captain card, one advertisement), rules sheet; full-color, tuck-boxed, three to nine players; $14.95

For a group whose romanticized contingent disappeared over a century ago, pirates are certainly hale and hearty when it comes to modern media. There's no getting rid of them in the game industry, that's for sure, though in Green Ronin's new trick-taking card game *Walk the Plank* you may have to dispense with a few of them.

The object of the game is to be the last one to take a trick and become captain.

You and your mates (three to nine of you) have your ship; what you don't have is a leader. Everyone has it into his head that he is best suited to wear the mantle of captain, but he needs to convince everyone else. The man in command (for now) is whoever draws the highest card from the deck. For the first round, everyone receives seven cards. They number one to 13 in five different suits (Monkey, Doubloon, Hookhand, Pegleg [sic], and Parrot); somewhere in the deck also sit two *Walk the Plank!* cards and a lurking *Sea Monster!* Another card is flipped up to show what the trump suit is for the inaugural hand.

At first blush, it's a lot like Hearts. The captain leads with whatever suit, uh . . . suits him. If you can you must follow suit; if you have nothing from that run of cards, you can play whatever you like. The highest card from the lead suit takes the trick (everyone playing one card from their hand is called a battle) unless a card from the trump suit is played. Then it's the highest card from that suit. Either of these can be beaten by making the other contenders *Walk the Plank!,* however. Even that can be beaten by the arrival of the *Sea Monster!,* but in that case no one takes the trick.

Whoever took the most tricks during the hand is captain for the beginning of the next round. He gets to choose the trump suit after seeing his new hand. Attrition being what it is on the high seas, a) if you did not win any tricks that round it means your "friends" have disposed of you in some appropriate fashion and you're out of the game entirely; and b) everyone gets only six cards this time. Play continues in this fashion, the hands dwindling by one each round, until everyone has either been forced from the game or you get to the last round with one card each. The winner of that hand wears the captain's hat, and anyone who feels otherwise had better be prepared to back it up with steel.

When, oh when, will the paper embargoes of the world end? They didn't by press-time for this game. Like too many of its recent fellows, the cards are terribly flexible. They may possess some quality of weaving that allows them to hold up well under strain (and they need to, given how often they must be shuffled), but they can still bend alarmingly. There's a touch of irony to be found in the fact that the rules sheet is a pretty darn thick piece of paper. The artwork is okay for the *Plank* card, though it looks like someone tried to fit too much detail into what was meant to be a cartoon; the *Monster* accomplishes this much better. The rest of Ramsey Hong's pictures -- the suit cards -- are far better, with heavy, loving ink strokes that show a lot of character.

It's always worrisome when a game advertises itself as being like some other, more familiar game. Too often it amounts to a few little tweaks to the rules that don't amount to much. This does not fall into that category. It doesn't sound just from reading the rules -- a rather complete accounting that offers examples of play and definitions galore in just one sheet -- as if it's much of a simulation of pirate life. But when the rounds start and your competitors (your competitors if you're lucky) start falling to the wayside, there's a rush that comes from surviving one more turn.

It can be irritating shuffling the deck each and every turn, especially when you're doing it for the sake of a couple of cards, but they mix smoothly. Anyone who can resist the siren call of talking like a buccaneer during play is too much in this world, and probably deserving of embracing the briny. **Walk the Plank** is rapid, fun, and more than worthy of a little treasure from your own cargo.

Pyramid Review

Weird Wars: Tour of Darkness (for Shane Lacy Hensley's Savage Worlds)

Published by [Pinnacle Entertainment Group](#)

Written by Teller with Shane Lacy Hensley, Simon Lucas, Rob Lusk, Greg Whalen, & Jason Young

Illustrated by Niklas Brandt, Cheyenne Wright & Richard Pollard

146-page black & white hardback; $29.95

Except for **Recon,** both in its original version published by RPG Inc. and the revamp released by Palladium, the Vietnam War has to date remained the province of the war-gaming rather than the roleplaying hobby. But **Revised Recon** is now joined by a second, **Weird Wars: Tour of Darkness.** As the title suggests, this is a sequel to 2001's [**Weird Wars II: Blood On the Rhine,**](#) but unlike that game, Tour of Darkness is not powered by the **d20 System.** Instead it uses [**Shane Lacy Hensley's Savage Worlds,**](#) the pulp orientated RPG also used for [**Evernight**](#) and [**50 Fathoms.**](#)

Spanning roughly a 25-year period, **Tour of Darkness** encompasses the history of Southeast Asia from the end of World War II to the fall of South Vietnam. Games can be run during France's attempted reoccupation of her Indochina colonies, during the early build up of U.S. forces in the early sixties, and finally in the desperate years of the late 1960s when conscripts spent a hellish year in-country. **Tour of Darkness** can be run as a straight military game, but as it also happens to be a **Weird Wars** title, there is a lot more going on. Horrors lurk out in the jungle, temples to dark gods stand forgotten, ready to reveal best forgotten knowledge to those that dare, and the U.S. military finds willing allies in tribes of cannibals. If he is lucky, a conscript will hear no more of this than rumors. Then his tour will be up and he can go back to the real world.

On the other hand, contact with the outré -- perhaps with strange beasts or with North Vietnamese sorcerers, and the soldier is likely to come to the notice of certain people in high places. Then he is a candidate to know the truth and once he knows, his tour is for the duration.

In the default setting, players take the roles of grunts, part of a 10-man squad serving in the U.S. military. This can be in the Army, the Marines, the brown water Navy, or even the Air Force; or serving with allied forces from Australia, New Zealand, South Korea or South Vietnam. Civilian characters are also possible: nurses, reporters, CIA spooks or archaeologists looking to investigate ancient sites before the North Vietnamese do. Characters are created using the standard **Savage Worlds** rules, players spending points to buy up the skills needed to qualify for a particular service branch. Unlike Blood on the Rhine, a player is expected to think about what his character did before his tour. One new Hindrance, the (political) "Activist," ties easily into this. The other Edges and Hindrances are all war related, such as a machine gunner's "Hose 'Em Down," and "Thumper King" for use with the M79 grenade launcher. Others tie into service branches, training, skills and command experience. The Rank Edge figures predominantly as it is possible for one player's character to outrank the others. Many also tie into the wargaming aspect of Tour of Darkness, such as "Command Presence" and "Spotter." A new and simple system of Sanity is introduced to handle the mental strain of encountering the setting's Horrors.

Up until page 35, **Tour of Darkness** is still a normal Vietnam-set game and players should have access to the sections covering setting and equipment information. (Pleasingly these first 35 pages are available as a player's book in PDF format). After that, the book is for the War Master's eyes only as it deviates away from the "reality" of the war.

[SPOILER ALERT!]

This begins with a true history of the war, that Ho Chi Minh employed not only guerrilla tactics, propaganda and so on to subvert South Vietnam, but also arcane magics and sciences scavenged from the Japanese and Nazi research programmes of World War II that were investigating an ancient evil empire.

In response, the successor to the OSI -- the Office of Strategic Intelligence who foiled the Nazi's arcane machinations -- now seeks to thwart North Vietnamese sorcerous chicanery. But unlike in World War II, the Central Office of Foreign Experimental Technology is not fighting fire with fire. Members do not have access to Rune Magic and instead seek to destroy instances of sorcery, though elements of the CIA are interested in harnessing the ancient knowledge to their own ends.

Besides the threat of North Vietnamese soldiers and guerrillas, player characters may encounter a variety of horrors. These include Ape demons that guard the temples; Moon Walkers, the risen corpses of tortured prisoners; and Vampire Leeches, that suck out pints of blood when they latch on. Some creatures come from American actions in theatre. Napalm Horrors were napalm-bombing victims and seek to inflict those flames on new victims, while Blights were born of the defoliation programs. Interestingly, the Hsia Thung are snake men opposed to the Vietnamese use of sorcery, which could easily be tied into **Delta Green** as Serpent Men. And then again the Tcho-Tcho could easily replace one of the setting's cannibalistic tribes.

Besides the set of mission generator tables that let the War Master create assignments for both the French and US forces, **Tour of Darkness** includes some 20 "Savage Tales." These are fully prepared missions all ready to play spread across both the French and American involvement in Vietnam. All but one of the French Savage Tales could easily be run later during the sixties with US troops. That single one takes the characters to France's defeat at Dien Bien Phu in 1954, so it could be run as a flashback. Most of the Savage Tales are ordinary military missions tied into the ordinary history of the Vietnam conflict, but some are more. These are "Plot Points," and are tied into the "real" history of the conflict. Played in order, perhaps with ordinary missions generated by the War Master scattered in between, the 20 Savage Tales take a set of player characters from the start of their tour to their first encounter with the occult, increasing the number of these encounters until they are no longer fighting the spread of communism, but preventing the use of dark magic by the North Vietnamese leadership.

[END SPOILER ALERT]

Tour of Darkness is more of a hybrid between miniature war games and RPG than previous **Savage Worlds** supplements. Characters are part of a 10-man squad that one player is expected to command, and as characters rise in rank, players are expected to command their own units. This is in conjunction with the mass battle rules from the **Savage Worlds** core book. A series of heavy weapon fire templates are also included for use with these rules.

Physically **Tour of Darkness** is a slim hardback, reasonably well edited but sparsely illustrated with either photographs or line art. This is where the problems with the supplement begin. Not enough of the equipment or the horrors is illustrated. This is not a problem for the former, as references can be found elsewhere. But then again, not everyone knows what a MAT-49 SMG looks like. In the case of the horrors, the lack of illustrations is far more of an omission. Another problem is the lack of an index, which makes finding various details of the setting's altered history somewhat difficult. Another hindrance is the lack of an extensive glossary, useful to those who know little of the conflict.

Although rules are included for player promotion, no guidelines are included for handling this process. Also missing are rules for winning decorations and a list of North Vietnamese military ranks.

Further, **Tour of Darkness** suffers from being a hybrid between a Vietnam game and a horror game. The latter is better supported than the former and a War Master may have to refer to other sources to get more information on the Vietnam conflict. Unfortunately the book lacks a bibliography, which would have helped in this. One such source might be Palladium's **Revised Recon,** still the definitive RPG of the Vietnam War.

Yet **Tour of Darkness** successfully slides the arcane and the horrors under the setting of the Vietnam War, the idea

being that the U.S.A. is not fighting the war to stop the spread of Communism, but to stop the acquisition of sorcerous power by the North Vietnamese leadership. The book is strong on atmosphere, and the setting is much the better for not being as pulp like as was **Blood on the Rhine.** The Plot Point campaign is also well designed and successfully gets across the desperate nature of the situation described.

As the first new **Weird Wars** supplement for the **Savage Worlds** system, **Tour of Darkness** is the first non-fantasy and first modern-set supplement. It is a successful transition and makes more of the core game's Mass Battle system than the previous titles. Anyone looking to find a combination of dark horror roleplaying and wargaming will find no better example than **Weird Wars: Tour of Darkness.**

Routine Difficulties

Whenever I run a *Vampire* campaign, one of the aspects that I try to impart early on is how *different* an existence is when you're only permitted to be animate during the hours of darkness. Establishing a bank account? Getting a driver's license? Signing for a package? Shopping at most non-24-hour locations? Impossible on your own.

Think about that for a moment, and let's take this to the logical extreme. The greatest curse of being a vampire isn't the weight on the soul caused by the need to drain the blood of the innocent night after night to stave off the pangs of an insatiable hunger. No, the greatest curse of a vampire is far more insidious: the need to spend the rest of eternity, doomed to shop at Wal-Mart.

The situation is even worse in any non-modern historical eras, before the era of Internet shopping and 24-hour convenience. In *Dark Ages* campaigns, when people still actively believed in vampires, the slightest slip can expose your secret, especially if you act too suspicious: "Why, exactly, do you insist on meeting in church only when it's night, my pasty-skinned friend?" And there aren't all-hours rocket-trains to whisk you away to safety should it all fall apart.

In case you haven't guessed, this column is about an omnipresent force that plays a part in each and every one of our lives: Wal-Mart.

Er, no. Our daily routine.

I've talked before about looking at how sleep helps define our lives. In a broader sense, though, sleep helps define our lives. I can't speak for everyone, but the act of sleep tends to define the beginning and ending of my days, to the point where -- if I miss an evening of sleep (an all-too-common occurrence) -- I tend to fall a day behind in my mental calendar until I take a moment to adjust myself. (In that case, "shower" usually substitutes for sleep.)

But what is a "day in the life" for your character? If you weren't adventuring, what would you be doing . . . or not doing? An early issue of the Indiana Jones comic book from Marvel Comics -- released shortly after *Raiders of the Lost Ark* came out -- opened with Indy using his whip to snatch the cigarette out of the mouth of one of his female students after class, so he wouldn't get rusty. Now, whether or not one agrees with this characterization of Dr. Jones, it's certainly an evocative piece of information to detail a pulp character. And, coupled with the information we get from the movie, we can develop a portrait of such a character in his mundane moments: He teaches their minds and endangers their bodies . . . with archeology!

Superman is another good example of someone who has his "day in the life" pretty well established. In his heroic identity, it's been established that he usually acts nonstop to help out as best as he can, untangling traffic jams, rescuing kittens in trees, stopping mundane crimes, and so on. In a gargantuan city such as Metropolis, there's always going to be *something* to do, and Superman's just the guy to do it. (Curiously, there was a classic Batman story that covered much the same ground in the 1980s; the entire issue revolved around an overworked Bruce Wayne/Batman trying to get a few hours of sleep, and how events in both identities kept conspiring to thwart him.

As a thought exercise for your character -- one you can keep to yourself or share with your GM -- give a map of what a typical block of time looks like to you. I'd recommend Thursday through Saturday, since that covers two standard work days as well as one of the weekend days.

- Does your character need a normal amount of sleep? What time(s) does he go to bed?
- Where, how, and how often does your character eat?
- Does he have a job? If so, does it keep him late with any frequency? Does he ever need to work weekends?
- Does he have any hobbies that take up any significant periods of time? Are those accomplished at or away from home?

And so on.

Once you have an outline of a few days in the life, you can begin to see where there are opportunities for story ideas, either injected by the GM or proposed by the player as a subplot.

For example, let's say you've defined your character as a respected scientist for a top-secret project, who also researches Things Man Was Not Meant To Know on the weekends. You shared your thought exercise with the GM. A couple of the facts it reveals is that the character eats off-site for an hour an evening, and the character occasionally needs to work late. The GM ties the two together and has the PC informed that the evening is going to be a late one because of his job, but he's encouraged by his bosses to go get a meal. Traveling off-site, he is encountered at the beginning of his meal break by a mysterious person who reveals some aspect of a nefarious plot that needs to be resolved quickly. Does he attempt to solve things with the remains of his meal break? Try to shirk his overtime duties? Work his overtime, all the while hoping that nothing goes BOOM! until he gets off work? (In the last case, he may also be dealing with sleep deprivation if kept too late into the evening.)

It could be said that adventure is the thing that gets in the way of a nice comfortable rut. Of course, without adventure there's nothing for heroes (and players) to do . . . but it's much more interesting to have your life upended if you know what your snow-globe life was before it got shaken.

Twenty Tips for Free RPG Day 2008

by Steven Marsh

The first Free RPG Day is now a fading memory, but it's never too early to plan for next year. To that end, here are some tips for everyone who could be involved in the future, from someone who spent a *lot* of time thinking about the matter.

Organizers

Get a Better Look! I think it would be ideal if there was a better trade dress or logo; the "come to the circus!" theme of the star-burst logo suits some products, but on others -- especially on more serious fare such as *Changeling: The Lost* or *Septimus* -- it's inappropriate. (You may even want to offer an incentive to publishers who incorporate it into their cover designs, to dissuade them from simply viewing Free RPG Day as a chance to print a new batch of promo items intended for year-round use.)

As Seen On . . . The biggest problem Free RPG Day had, as best I can tell, is getting the word out more than it already was. While some stores had exceptional promo machines, others could use help. I would do research among customers who participated in the event, and try to figure out how they learned about Free RPG Day. You may learn otherwise, but in general I've found that (for example) a one-shot expensive magazine ad often doesn't offer as good an exposure as more modest methods might. One good idea I heard about in my trek was Free Comic Book Day's use of plastic bags with the logo and date on them, distributed months before the event. Such a program translated to Free RPG Day would give an immediate conversation-starter, a reminder that sticks around the house, and be a useful item for many stores to boot. I also heard a request from a couple retailers for signage larger than an 8½"×11" sheet of paper.

One inexpensive way to get the word out would be to come up with some goodies to give stores and fans who promote Free RPG Day (probably with a separate prize for best store idea and best fan idea). I think Free Comic Book Day does something similar, so it'd be easy to ape their program.

More Is More! Come up with the means of making additional product available. For example, it may not be economically feasible to allow stores to buy multiple packs (although if it is, great!), but it might be possible to let them purchase additional copies of specific books for which they believe there will be a demand in the store . . . perhaps at the publisher's cost (which would be more expensive per unit than buying more packs but should still be fairly affordable).

This is especially true for "high-demand" items; in my travels, I saw and heard about many customers coming for the one item they were interested in, then leaving. Almost always these were folks who were already players of that game line, so the promotion probably didn't do much to sway them to buy more (either of the chosen publisher's material or of the other publishers whose material wasn't chosen).

Expand Your Mind! Three of the retailers I visited mentioned that they would like to have seen other aspects of the gaming world represented at the event. While I tend to believe that it's best to keep the event a Free RPG Day (as opposed to a "Free Game Day" . . . does that mean board games, war games, video games, LARPS?), I'd like to see some of the ancillary ideas related to tabletop gaming become a part of this event. This is especially true of miniatures and dice; I think a painting contest held at each store, where participants get to keep their entry, would be a neat event, something that's likely to get the comic readers or DVD buyers to say, "What's going on there?"

We Want . . . Information. Get as much information as you can from participating retailers. Most entries on the shop list this year only had a store name and address; only a few had a phone number, and none had any more information than that (such as a website or store hours). By getting that information from the retailers, you can make it easier for customers to seek out unfamiliar stores . . . which is part of the whole idea in the first place.

Publishers

Part of a Whole . . . Telling customers how your freebie fits in with the larger whole is a good thing. For example, if an adventure leads into another one (or can be connected), or if some plot point is explained elsewhere, then it's great to bolster a sense that a product fits into a larger line.

. . . But Standalone. By the same token, you don't want the customer to feel like they haven't gotten a complete or worthwhile experience out of the item they've chosen. Since, for many folks, this will the first exposure to a particular game or product line, it's a good idea to try to make it as complete an experience as possible. Some game lines have it easier than others; for example, *d20 System* adventures can't possibly reprint all their rules, but the system's well-known enough (and freely available online) that they can simply -- and should -- inclue an adventure with the characters, background, and so on required to make it work. Even so, it's great if a pared-down version of the rules can be presented along with characters and an adventure. This is a case where having a well-developed website can come in handy. For example, if there isn't room for pre-generated characters but there are suitable examples online, then you can add a URL to those characters and let would-be players print them out themselves.

Be Attractive! They say you can't judge a book by its cover, but lots of gamers do every day. Do whatever you can to make the exterior of the promo look appealing; otherwise, it may not even make it out of the box onto the freebie shelf, let alone into the hands of customers.

Now 'n Later! Ideally, a freebie adventure has something in there that makes me want to keep it around even after I've played the adventure or been enticed to pick up the full product. For example, maybe a *d20 System* adventure has new monsters or magic items that are interesting.

Recruit Your Minions! Provide incentives for your fans who arrange events with local stores and/or make themselves available for demos and the like. You may even want to make any such bribes *extra* special, such as offering to incorporate them (or their character) into next year's Free RPG Day product if they help with this years.

Retailers

More Is More! Figure out how to let customers get more product per person. As it stands, many stores had no choice but to limit one item per customer, probably because they didn't have enough (or they were afraid they wouldn't have enough to last the day). At stores where it's feared that product will run out, I'd consider coming up with a tiered system to allow customers to get more stuff. Thus each customer might be entitled to get one book for coming into the door. They might be eligible for a second book if they participate in a brief (five-minute) demo of some neat aspect of one of the sponsor RPGs. They might get a third book if they take part in a longer (hour-long) demo. They might get a fourth item if they *run* that five-minute demo for six other patrons. And so on. This will open up the possibility of more enthusiastic patrons -- the ones more likely to be or become larger spenders -- to get more stuff at the expense of their time or being exposed to new product lines. And by making folks jump through a few hoops, you should also avoid the problem of greedy folks barging in, snatching one of each item, and darting for the door to spiral out into the night.

Make It an Event! One thing I learned in my trip to various retail locations is that this event seemed to be whatever the store made of it. Those who pumped it heavily and ran lots of events saw lots of people coming, while those who treated it more low-key tended to have smaller turnouts.

Let Us Know, Let Us Know, Let Us Know! Provide information by whatever channels you have with your customers and would-be customers. If you have a website or mailing list, post information about what your store has planned for the event. Print up fliers a few weeks before the event and hand them out with every purchase. Put up posters about the day in your store.

Get Info! Or at least try. It's amazing now that I think of it, but none of the stores I visited seemed to be taking any information from folks (such as being added to an e-mail list). Such information is usually trivial; having a raffle for a

snazzy prize usually works, as does offering a discount or other goodie for those who sign up for more information from the store.

Contact Publishers Yourself! When I worked retail at a FLGS, I had surprisingly good luck contacting companies and asking for additional support (posters, promo items, and so on). If there's a particular company or two that does consistent business for your store, why not send them an e-mail and see if they can do something extra for you? Sending a couple of pictures of appropriate displays or demos can help show the publishers that you're serious. If you're going to make an event of it anyway, you might as well try to tailor it to your own store's customer base.

Fans

Ask! Many FLGSes simply may not have heard of the program, or have heard a bit about it but declined to participate. If your shop doesn't have posters up about the event, or if it doesn't seem to be aware of it, feel free to ask. Maybe if enough cash-carrying customers make inquiries, the FLGS might change its mind.

Run, Forrest, Run! For locations that offer in-store gaming, you might want to consider running demo sessions of a favorite system (especially if that game has a freebie offered). Even if a shop doesn't normally have in-store events, it might still be possible to become involved. For example, if there's a local club or con that you're a member of, see if you can't work some kind of cross-promotion (say, a guarantee of having the freebies you want, in exchange for being on-hand to answer questions about game systems or offer brief demos).

Tell Your Friends! This one is obvious, but it bears repeating: There is seldom better advertising than word of mouth. If you're excited or intrigued by Free RPG Day, tell your gaming group. This is especially true if you know a lapsed gamer, since these products are especially designed to appeal to those folks. Besides, it's always more fun braving a potentially hectic event (like any of the various Free Days) if you've got a friend watching your back.

Don't Be Greedy! If you're fortunate to have a store that doesn't closely monitor Free RPG Day offerings, it can be tempting to take multiple copies or to snatch up material that you're not really interested in. By all means, flip through stuff that you're on the fence about, but don't take stuff that you know you don't want just for the sake of owning it.

Order! Finally, if the publishers have done their job correctly and stoked the longing in your heart for a new game or supplement, order it from the shop you got the promo from. Yes, it might seem obvious, but it would be a shame if the local game shops that make such events possible were to fade away because inspired customers went elsewhere to seal the deal.

* * *

There's no such thing as a free lunch, but at least one day a year there might be a free game. If customers go to their local game shop with a closed wallet and open mind, they may well go home with a something new that gives them whole new avenues for their tabletop amusement. And that's a game where *everyone* wins.

Pyramid Review

Marvel Heroes

Published by [Fantasy Flight Games](#) & [Nexus Editrice Srl](#)

Designed by Marco Maggi, Francesco Nepitello, Roberto Di Meglio, & Salvatore Pierucci

Art, graphics, & layout by Fabio Maiorana, Kurt Miller, Salvador Larroca, & Paco Roca

Sculpting by Bob Naismith

English edition edited by James Torr

Mounted map board, 20 painted miniatures (Captain America, Hulk, Iron Man, Thor, the Human Torch, the Invisible Woman, Mr. Fantastic, the Thing, Daredevil, Dr. Strange, Elektra, Spider-Man, Cyclops, Phoenix, Storm, Wolverine, the Red Skull, Dr. Doom, the Kingpin, & Magneto), eight specialty dice, 218 cards (12 Master Plan, 24 Story, 36 Headline, 12 Team Power-Up, 50 Resource, 10 Scenario, 50 Villain, four Team Reference, 16 Superhero Reference, & four Mastermind Villain Reference), 122 counters (one First Player, one Archnemesis, 12 Combat Power, one Game Round, one Action Round, four Team Victory Point, 13 Super Hero Wound/KO, 36 Threat, 52 Plot Point, one Trouble Level Track); full-color boxed set; two to four players; $59.95

Every year sees a new crop of superhero films, and that's accompanied by someone -- usually a top toy company -- putting out whatever game design they have close at hand. Sometimes it's a decent time-killer, but more often it's a sloppy effort that just capitalizes on the market for a couple of months. Something that reaches deeper like the *Marvel Heroes* board game is another matter entirely.

Based on the books from the Marvel Comics Group, the object of the game is to finish the scenario with the most victory points.

Everyone takes a set of four superheroes; the available teams are the X-Men, the Avengers, the Fantastic Four, and the Marvel Knights (a loose confederation of loners like Spider-Man and Daredevil). Another player portrays your team's mastermind opposition, so for example if you're the Fantastic Four the person to your left plays Dr. Doom. Plot Points let you ready heroes and allies with which to patrol.

Manhattan Island is divided into districts and Headline cards advertise the trouble plaguing each area, and superheroes are dispatched to confront them. Some heroes are better suited to certain disturbances, lowering the Trouble number (how many dice are rolled). This roll determines how many points opposing players can spend to bring out Villain cards and other effects. If it's a Mastermind Headline, the team's arch-foe may step in as well.

Heroes have three combat powers, each rated for Attack, Defend, and Outwit. The hero and villain players secretly

select a power and trade blows using those stats, alternating offense and defense; if no one wins they go to the Outwit phase. Combat uses the specialty dice imprinted with Hits, Trouble, and Boosts. Hits hurt your enemy, and Boosts may produce heavier damage. Successful heroes gain Victory Points from Headlines while unlucky ones end up in Recovery licking their wounds. The really unfortunate ones find their Mastermind is behind the current plot, ready to fight another battle with special options (like rolling extra dice) and activate Master Plans. Successful plans improve the villain so he's harder to deal with next time, but heroes counter this with the Story deck. These bits of background color in a champion's life can be turned in for team improvements.

Every game has a Scenario card, based on those annual summer comic-book crossover events, that changes how events play out. Villains may be tougher or deprive you of Victory Points. They may just make the goal harder, or they might offer new ways to win -- or lose.

You're going to love the miniatures that come with this game. They are solid, A-level icons, beautifully crafted and colorfully rendered. Storage is a thorn -- the molded tray holds them immobile even upside down, but you could bend or break them prying them out or reinserting them. It's best to just throw them in the box. The map is big and bright, with plenty of room for everything. One strange quirk: There's a dedicated, preprinted space for Scenarios but not for Headline discards; you only use one of the former in a single game and cycle constantly through the latter. The cards hold a combination of old and new art, and once more we find the nice thing about comic-book games is the library from which to pull illustrations. The rest of the components, including the rules and the many counters, are all good (unless your experience with *Fantasy Flight*'s teeny-tiny cards, of which there are some, has put you off before).

Let's get the biggest issue out of the way: The learning curve is sheer nightmare. How is this possible? Mostly it's the instructions. Every new set of rules requires some period of adjustment, but this game would definitely benefit from a flowchart to facilitate familiarization. Everything works together to produce a greater whole, and that gestalt is not only enjoyable, it's perfectly understandable. The question is, will the players stick with it long enough to find out how workable and engaging the game can be?

Characters are painted in broad strokes, but there's detail enough to provide a richer experience. A hero's powers change focus depending on whether he leads the charge or holds a supporting position. Even with only 20 characters, the Villains and Allies you can draw upon provide the flavor of the larger Marvel Universe. The choices one must make -- manipulating the Story cards, moving to intercept trouble -- mean there are multiple ways to gain power and score Victory Points, and subtle use of weaker abilities can turn the tide. There's not a lot to remember, just a lot that needs to be done to achieve the win. *Fantasy Flight* has brought out a supplement for many a game, and ***Marvel Heroes*** is a clever setup for which this would definitely be welcome . . . especially if it included a flowchart.

--Andy Vetromile

American Phaëthon: Casey Jones

"Come all you rounders if you wanna hear
The story about a brave engineer.
Casey Jones was the roller's name
On a 6-8 wheeler course he won his fame.
Caller called Casey 'bout half past four
He kissed his wife at the station door.
He climbed in the cabin with his orders in his hand
Said 'This is the trip to the Promised Land.'"
-- Johnny Cash, "Casey Jones" (1963)

Casey Jones, the greatest locomotive driver that ever lived, was under the gun. He'd just finished a record twelve-hour run, and he was wrung out and looking to unwind. But his brother engineer Joe Lewis took sick, and when they found Casey he volunteered to take Joe's place in the cab of the "Cannonball Express," running through the night across the West. Thanks to that illness, and the delay in calling Casey (who might not have been home that night), the train got started ten hours late. Casey, who never blew a schedule in his life, had to make up the time by holding the valves down and blasting across the countryside faster than any man had driven any train before. He and Sim Webb, the fireman, used up every ounce of coal in the tender, and cut up the benches in the cab to boot. Casey's train climbed sheer hills at top speed, blew through flooded crossings, flew across flat rails without touching them, and rattled across bridges so fast they fell to pieces with the wind of his passage. Casey's famous whistle screamed out his name under the moonless sky. After an all-night run, he had made up all but two minutes of the time, but he and the "Cannonball Express" were at their limits. Suddenly, the lights of another train loomed up on the track ahead. Casey blasted his whistle, but the train ahead didn't move aside. "You better jump, Sim," Casey said to his loyal fireman, and threw him bodily out of the moving cab. Sim hit a ditch, rolled, and came up to see Casey and the "Cannonball Express" slam into the train ahead in a titanic crash. When they cut open the cab, they found Casey Jones dead at his post, one hand on the whistle and the other on the brake.

"'Twas around this curve he spied a passenger-train.
Reversing his engine, he caused the bell to ring.
Fireman jumped off, but Jones stayed on --
He's a good engineer, but he's dead and gone."
-- earliest known version of "Casey Jones" (1908)

That, at least, is the story the way I heard it as a kid, as I heard most all my American mythology; in pieces and thrown together from Burl Ives records and Disney specials and brightly-colored books out of the library. And just a little less grandiloquently, it's how America heard it all, too, in a smash vaudeville hit called "Casey Jones, the Brave Engineer," with words by T. Lawrence Seibert and music by Eddie Newton. Seibert and Newton weren't the first to sing about Casey; there's that 1908 version, published in the *Railroad Man's Magazine* and credited to Jones' "negro fireman." A black engine-wiper named Wallace Saunders is usually credited with first immortalizing Casey in a blues ballad, but the 1908 version isn't blues but a traditional Anglo-American "vulgar ballad." (In other words, country-folk.) Some fragments of a "Casey Jones" blues survived into the 1920s (and later), eventually harmonized and recorded as a blues by Mississippi John Hurt in 1928. Whether there was one song or two, neither hit like Seibert and Newton's version, which they published in 1909, and which spawned at least forty variants of its own in the next ten years. It also touched off a storm of curiosity -- who was Casey Jones, and did he really die like that?

Was he John Luther "Cayce" Jones, who died near Canton, Mississippi in 1900? Or Peter Martin "K.C." Jones, killed in Mammoth Springs, Arkansas in 1902? Or Harrison "Stacey" Jones, who fatally crashed on the Northern Pacific near Billings, Montana in 1899? Or perhaps Cassidy Jones, killed on John Henry's B&O near Cumberland, Maryland in 1895? Others plumped for Casey Shannon (died on a switch engine in Marshfield, Oregon), David Casey Jones (killed near Mammoth Springs, Tennessee), James A. Michaels (a candidate suggested by a hobo named "Kelly the Rake"), or a purely imaginary character.

"Reports received to date indicate that Engineer Jones of the passenger train, who lost his life in the accident, was alone responsible for the accident as train No. 83 which was obstructing the main track at Vaughan sawing by train No. 26 was properly protected by flagman, who had gone back a distance of 3000 feet, where he had placed torpedoes on the rail; then continued north a further distance of 500 to 800 feet, where he stood and gave signals to train No. l; which signals, however, were apparently not observed by Engineer Jones: nor is it believed he heard the explosion of the torpedoes as his train continued toward the station at a high rate of speed, notwithstanding the fact it was moving up a grade; collision occurring at a point 210 feet north of the north passing track switch. It is also stated that Engineer Jones of train No. l failed to sound the whistle for the station when passing the whistle board."
-- A.S. Sullivan, General Superintendent, Illinois Central Railroad, formal accident report letter (May 10, 1900)

All things considered, it took remarkably little time before the truth -- or at least *a* truth -- emerged. By 1920, "Casey Jones" had been firmly identified with John Luther Jones, born in 1863, raised in Cayce (pronounced "Casey"), Kentucky, and killed in a wreck on the Illinois Central Railroad at 3:52 a.m. on April 30, 1900. He had taken over the Memphis-to-New Orleans run from a sick friend, and it had indeed been late getting into Memphis. The scheduled departure time was 11:35, but Jones didn't get the "Cannonball Express" going until 12:50. He was a "fast roller," though, and he had priority passage down the tracks, as he was carrying federal mail. He had actually made up the time by the time he got to Vaughan, a Mississippi whistle-stop 175 miles south of Memphis. Here, two southbound freight trains were having trouble squeezing onto the siding to let the "Cannonball Express" past, and if there were signals (a flagman and two torpedo explosions), Jones didn't see them in time. His last words were "Jump, Sim!" before he plowed into the caboose of southbound freight No. 83. Sim Webb, Jones' mulatto fireman, jumped and lived to tell the tale. Most likely, Jones' reflexes had started braking as soon as he saw the lights; the Express' wreck "slightly bruised" three passengers and "jarred" two, but only one person died in that crash: John Luther "Cayce" Jones, the great "fast roller."

"The railroad ran along side the bank
Casey crawled out from behind the tank
Bill said to Casey, 'You're a racing man
Get up your steam and go as fast as you can.'
Now Casey and Bill, down the Mississippi
Casey and Bill, all full of glee
Casey and Bill, down the Mississippi
Trying to break the record of the Robert E. Lee."
-- Earl McDonald, "Casey Bill" (1927)

And one hero was born in it: Casey Jones, the Brave Engineer. He became a national figure -- running his trains on the B&O, the Northern Pacific, and any other local line. (In some versions, he dies wanting to run on "the Colorado and the Santa Fe," but in others, he's on the Santa Fe line to start with.) His crash happens outside Frisco, New York, Cincinnati, and everywhere else. He joined America's growing pantheon of working-class heroes: [Paul Bunyan](#) the lumberjack, Joe Magarac the steel-worker, Gib Morgan the oilman, and [John Henry](#) the railroad driller. His powers, like theirs, became increasingly superhuman, especially his ability to run trains through floodwaters, a common motif in the various ballads and folk-songs about him. Likewise, his speed. According to Furry Lewis' 1928 "Kassie Jones," for example, Casey left Memphis at a "quarter to nine, got to Newport News, it was dinner time." There was no direct rail line from Memphis to Newport News, much less one that could be run in three and a quarter hours.

Tin Pan Alley explicitly connected Casey to fellow speed-demon Steamboat Bill, who first emerged from folklore (if he wasn't pure invention) in a 1910 hit song for the Leighton Brothers that riffed heavily on Seibert and Newton's "Casey Jones, the Brave Engineer." (The song "Steamboat Bill" inspired the cartoon "Steamboat Willie," and thus Casey Jones is in a way the father of -- or an avatar of -- America's second-greatest cartoon hero, Mickey Mouse.) In "Steamboat Bill," Bill attempts to break the record of the *Robert E. Lee,* the (historical) fastest steamboat on the Mississippi River, but his boiler bursts and he dies in the attempt. His widow reassures the children, as if presaging the train's future supremacy: "The next papa that you have will be a railroad man," again connecting Bill and Casey. This line is also a parody of a line in "Casey Jones, the Brave Engineer" in which Casey's widow assures his kids that they "got another poppa on the Salt Lake line." (John Luther's widow Janie Jones was not at all amused by this jape.) Steamboats were somehow a vital part of the myth: Collins & Harlan recorded "Casey Jones Went Down On The

Robert E. Lee" in 1912, and Earl McDonald's Original Louisville Jug Band blended the two seamlessly in 1927's "Casey Bill." In this version of the myth, Casey Jones and Steamboat Bill decide to race down the river, but die when they collide on a drawbridge. [Fear death] by water.

"Womens in Kansas, all dressed in red,
Got de news dat Casey was dead.
De womens in Jackson, all dressed in black,
Said, in fact, he was a cracker-jack."
-- blues version of the "Ballad of Casey Jones" collected by Howard Odum (1911)

And like all the knights who die by water, he is mourned by women. Odum's version above mentions women in red and black, and a flock of "womens in red" gather to mourn Casey Jones in Jesse James' 1936 piano blues, "Southern Casey Jones." The Grateful Dead weren't the first, in other words, to introduce the "lady in red" to Casey. (She also pops up as the loathsome "Lady in Red Scarlett" who marries Sir Gawain, and as the "Lady in Red" in at the death of a later American folk hero, John Dillinger.) In some versions of the ballad, Casey is himself a "rounder," a traveling adventurer with all the appetites of a mythic hero, with multiple women on the side. (In *An Officer and a Gentleman*, Lou Gossett sings one such graphic variant, indicating that Casey's prowess was not limited to engineering.) The blues term is "natural born easman," and it appears in tens of "Casey Jones" variants. In short, Casey Jones (like John the Conqueror or John Henry or Gawain) is what they delicately call a "solar hero" or a "fertility figure" or a "phallic hero." Is it just a Freudian pun, then, that has made "locomotive going into a tunnel" the great American symbol for, well, phallic heroism?

"The angels got together and they said it wasn't fair,
For Casey Jones to go around a-scabbing everywhere.
The angels' union Local Twenty-Three it sure was there,
And they promptly fired Casey down the Golden Stair."
-- Joe Hill, "Casey Jones, the Union Scab" (1911)

The "rounder" Casey Jones is one aspect of what we might consider the dark side of the legend. Like the legend itself, that dark side is rooted in history -- as we saw above, the official Illinois Central investigation blamed Jones for the crash, claiming he ignored the flagman. (Webb gave conflicting testimony.) A number of ballad versions depart from the apotheosized Jones, with Harry "Haywire" McClintock's version typical: "They flagged him down but he never looked back." In some versions of the tale, Casey Jones isn't found with his hand on the brake, but on the throttle -- as though he deliberately sped up to ram the lowly freight that had the temerity to interrupt his run. This side of the story, the irresponsible speed freak, runs from some of the earliest blues into the Grateful Dead's "high on cocaine" version.

A lecher, a speed freak, and a scab to boot? Joe Hill's Wobbly version "Casey Jones, the Union Scab" blames an incompetent, overconfident Casey for union-busting on the Southern Pacific Line, an interesting case of the IWW carrying propaganda water for the Illinois Central Railroad. (Not only did Jones never run on the S.P., he was a union man twice over, belonging to the Brotherhood of Locomotive Firemen and the Brotherhood of Locomotive Engineers.) At the end of Hill's version, Jones dies in a ditch, scabs on the striking angels by singing for St. Peter, and winds up shoveling coal in Hell. Jim Holbert's 1940 variant straight-out implies that, like other mythic heroes, Jones is damned for his hubris: St. Peter tells the dead Casey, "You've run your engine so brave and bold, I'll send you back to shoveling coal." This larger legend of the hubristic, swaggering Jones echoes the myth of Phaëthon, the son of Helios (or Apollo), who is killed by Zeus for driving the solar chariot too fast and erratically. Like the "dark" Casey Jones, Phaëthon ends up in a water-filled ditch (in his case, the Eridanos River), mourned by women on the banks (his sisters).

"If I can have Sim Webb, my fireman, my engine 382,
Although I'm tired and weary, I'll take her through.
Put on my whistle that come in today
Cause I mean to keep her wailing as we ride and pray."
-- version of "Casey Jones, the Brave Engineer" as re-written by Janie Jones (ca. 1928)

And mourning women by water recall other figures out of the mythic mists, such as La Llorona, or the Lamia, the child-lost child-killing spectres of the American Southwest and ancient Greece respectively. They are daughters, or cousins, or sisters, or aspects, of the great female demon Lilith, who is hidden under the word "nightjar" in some modern translations of the Bible. The most common American nightjar is, as it happens, the whippoorwill. That would be, of course, the whippoorwill that catches the souls of the Dunwich dead (for their own ride across the water), the whippoorwill that Casey Jones built his whistle to sound like, according to Fred J. Lee's 1939 biography *Casey Jones: Epic of the American Railroad.* (Steamboat Bill's steamboat is called *The Whipperwill,* while we're on the topic.) In his time, engineers had their own particular whistle -- as the ballad tells us, "they could tell by the whistle's moans/that the man at the throttle was Casey Jones." Indeed, for decades after the crash, yard workers heard Casey Jones' ghostly whistle on the site at night, a spectral call to an American Wild Hunt -- hardly surprising, given that Jones died on Walpurgisnacht, after all.

But Jones, according to the accident investigation, was using a "new whistle which had been put on the engine at Memphis; Jones stated that going into Canton it would arouse the people of the town." This isn't the only strange case of substitution -- nobody quite seems to know whether the engine he drove to his death, No. 382, was his own or that of the man he was replacing. (The records say that Jones' assigned train was No. 384.) Jones began on No. 638, which he saw on display at the Chicago World's Fair in 1893, and convinced the IC to let him drive right off the lot and down to the roundhouse in Memphis. This assumption of a virgin instrument has powerful magical significance (especially so if Jones is, indeed, a "phallic hero"), made still more intriguing by the kabbalistic discovery that the word *chakkiym,* or "Magus," adds to 638. (As does *'iyr nachash,* or "serpent city," for those looking for another Lamia connection.) Jones' status as son of Helios Apollo may emerge in the kabbalistic equation of 384 with "Messiah YHWH," while the train he drove through the "undiscovered country," No. 382, equates to *bilshan* or "searcher." "Casey Jones," by the way, adds to 291, which is to say *eretz,* or land, with a strong connotation of sacred or elemental earth -- or "Ophir," the land of Solomon's gold.

"Trouble with you is
The trouble with me
Got two good eyes
But we still don't see
Come round the bend
You know it's the end
The fireman screams and
The engine just gleams."
-- Robert Hunter, "Casey Jones"

So what do we have? A solar hero, whose birthplace is unknown. He assumes the powerful virgin instrument, Magian locomotive No. 638, and rides the rails blowing his whippoorwill whistle, sacred to Lilith and all those women who wait by the water for the dead. He has some mystical power over water (and real power over steam), and a (piebald -- like Percival) companion who controls fire. His name is Earth, and his whistle harnesses the air. Eventually he becomes the anointed one, No. 384. On Walpurgisnacht, at the cusp of the new century, he changes trains to the "searcher," and installs a virgin whistle. He drives ahead into the darkness, past the flags and the fires, and hurls himself -- like the Roman general Decius Mus (whose name splinters off to become Jones' cartoon avatar?) -- through the cold iron crossroads and into Ophir, into the country of the dead. Only he dies, only he goes over the water to where the Lady in Red is waiting for her "natural born easman." His identity splinters into a dozen dead Joneses, and even into the Charontic steamboat he vaults at top speed. But he makes his leap. The son of Apollo, god of music, he lives forever in song, driving his chariot eternally across the American cantosphere.

A Mélange of Magical Creatures VIII

for *GURPS*

by Eric Funk

This is our eighth trip into a world of unusual creatures; as ever, all these life forms straddle the worlds of the familiar and strange.

Balloon Mouse

To the untrained eye, a sitting balloon mouse resembles any other small, brown arboreal rodent. That said, this airborn mammal is related to the flying squirrel, only the balloon mouse uses gas bags on its flanks to float and its tail to steer and propel itself. Coming from an environment where the trees are too far apart for "flying" squirrels, these rodents can travel a greater distance. Using a form of methane for lift, they can float almost indefinitely.

Encountered

"The woman climbed to the top of the tallest parapet. There, she tied the message capsule to the mouse's tail, and proceeded to throw the animal off the roof. It quickly inflated the gas bags on its flanks and drifted with the wind. Its tail weighted down, it could not maneuver. It drifted down and downwind for several hundred yards, to be collected by the recipient. It was a good plan, except when it was intercepted by a hawk."
-- Castle Guard log, 405th day of the Year of the Flaming Badger.

Balloon mice can be found in forests, hills, and places where the wind shifts often. Unfortunately, these creatures are often the victims of children throwing rocks. They are virtually helpless in the air while floating, sometimes diving at unexpected noises. Children also use this feature to try to drop them on unexpecting passers-by.

Industrial Uses

"These creatures are one of the incentives for ordinary citizens to invest in windows, or at least bug screens. No one knows when a mouse might blow into a bedroom or an attic. In particular, if someone is leveling sections of forest, there can be a flock of these rodents migrating together. I, for one, have had a bad experience with such a creature landing in the middle of a brewing postion."
-- Master Alchemist Trimsad, *Urban Hazards*

Production of methane gas can be useful as it is odorless, flammable, and sold as a "natural gas" that creates only carbon dioxide and water vapor when burned. It can be refined to form ammonia, as well as hydrogen and acetelyne for high-temperature flames. Finding humane ways to extract it is a challenge as methane is lighter than air. Enchanters have harnessed special glands to create air to lead to hotter flames.

Adventure

The heroes must build a balloon, using the balloon mouse as a model. The adventurers can start by keeping away hecklers, who wil be followed by saboteurs if the tests are successful. Phase II may involve traveling in this dirigible (lit. "steerable").

Balloon Mouse

Appearance: Large mottled brown to gray squirrel.
Category: Mammal.
Diet: Herbivore.
ST 2; **DX** 14; **IQ** 3; **HT** 14.
Will 10; Per 12; Speed 7; Dodge 11; Move 7.
SM -4 (18" long) (Inflated: -3); 2-4 lbs.
Traits: Combat Reflexes; Elastic Skin; Flight (Lighter-than-Air); Night Vision 3; Peripheral Vision; Skinny; Striker (Tail: Crushing); Temperature Tolerance 1; Wild Animal

Giant Balloon Mouse (Large as a housecat)

ST 4; **DX** 14; **IQ** 3; **HT** 15.
Will 11; Per 12; Speed 7; Dodge 11; Move 7.
SM -3 (2' long) (Inflated: -2); 5-10 lbs; DR 1.

Variants: There are rumors of mice that can ignite their gas with a piezo-electric effect. This surprises many predators.

Forger Fish

"We entered the basement, our stun guns at the ready. A half-dozen crooks were at work, making their phony money. Moving in unison, we caught them all by surprise. Securing the room, we then took pictures of the evidence. Everyone was surprised by the variety of tools we seized from these brazen criminals: a small smelter, samples of coins from a dozen realms, raw copper, gold, and silver, and a dozen full aquariums."
-- Lieutenant Bridghen, TAG Liaison.

In the wild, each forger fish breed has a class of "perfect" rock, be it shiny, smooth, or pitted. Then, the signature ability of this orange and gray fish is to duplicate such "perfect" rocks to make a nest, and attract a mate. They perform this by leeching the chemicals they need from the water. The most common breeds of forger fish create material from the size of a sugar cube to the size of an eyeball. The problem is that the denser the object, the longer it takes. Light metals such as copper do not take long, but gold can take a while, and a fish is likely to die of old age before it finishes magically strong metals. This goes double for those not present in the waters. A fish in a cage in a river does better than one in a tank.

Encountered

Officially, the animals can only duplicate items made from one metal, but word has spread that this may not true. These fish can be involved in incidents where false coins are too pure (for example, the human forger only left copper as a source when the government had debased the coin by 20%); in such cases, the forgeries are are often discovered quickly. Some people have used forger fish to duplicate coins and even small keys, and a few suspect these animales are somehow related to the age-old tradition of throwing coins into a fountain.

Industrial Uses

"The first discovery of these creatures dates back to when a fisherman found his catch to have two hooks in its mouth. It did not seem that odd at first, but then he realized that the two hooks were both bent in the same way, and had the same loop shape he had hammered into place with his pipe.

"He then experimented by putting the fish in a vat of water in the back, and giving it a silver ring he had found. Sure enough, after a week it started to form in the fish's mouth. He sold the duplicate at the next town fair, and continued this until the fish died a few years later. His tale at the taverns spread, and eventually another fish like it was caught by a ship's crew. Not all of them waited for the fish to die to tell the secret. Needless to say, trouble ensued."
-- *History of Magical Fish*, Chapter XXIX.

Governments can put these fish to the same use as forgers: the creation of exact duplicates of verified measures. Some organizations have had success in breeding bigger forger fish to duplicate items as large as a fist. Enchantments are not copied, nor are alchemically transmuted substances. Thus, an Atlantean civilization is safe with orichalcum coinage. More exotic elements may be toxic to the fish, but powerful organizations may not care. It might be a cheap way to clean up pollution, or mine valuable minerals, such as gold or platinum. Ultratech societies might be able to produce integrated circuits or microchips. The catch is that it requires a sample to duplicate from, and any imperfections will be carried over. Power cells form uncharged. Uses in enchantment include various duplicate spells, as well as scribing spells.

Adventure

The heroes are hired to make a duplicate of a magic ring that belongs to a certain crime boss. The plan is to replace it, and set him up to kill someone with it. There will be officers waiting to arrest him when it fails to activate. (As a high-tech variant, the ring contains a computer. Its memory will be empty.)

Forger Fish

Appearance: Small coppery-blue fish.
Category: Fish.
Diet: Herbivore.
ST 2; **DX** 13; **IQ** 2; **HT** 15.
Will 10; Per 10; Speed 7; Dodge 10; Move 7.
SM -5 to -4 (10" to 18"); 5-10 lbs; DR 1.
Traits: Aquatic; Gills; Ichythoid; Night Vision 2; Peripheral Vision; Pressure Resistance 1; Resistance to Poison +8; Sealed; Snatcher (Persistent; Requires item present to duplicate); Unusual Biochemistry; Wild Animal.

Giant Forger Fish

ST 5; **DX** 12; **IQ** 2; **HT** 16.
Will 10; Per 11; Speed 7; Dodge 10; Move 7.
SM -3 to -2 (2' to 3') ; 20-30 lbs; DR 2.

Video Moth

"The star of stage exited the theater, with her entourage about her. Klieg lights set her name in ilumination, spotlights highlighted her form. The vibrant colors glistened in the artificial daylight, the various gems about her creating rainbows for all to see. Moths fluttered about her, capturing her meteoric rise for the quarter of an hour that she will last."
-- The XLIXth Annual Combat Art Awards.

This bright white moth has the luminescence of a fire fly, and yet is itself attracted to brighter light. The more varied the pattern, the more attractive it is. In nature, video moths are found in cold climates. They find the most dramatic light pattern, and then try to use it to attract a mate or scare predators. Landing on a natural ice crystal, they can create dramatic pictures, even to the level of holograms. They create what is translated from the native tongues as mirages. In snowy regions, these areas appear to have more snow than they actually do. It is not apparent in daylight as snow blindness limits vision.

Encountered

Soon after discovery, enchanters and hedge wizards found that these creatures can be made to witness a scene, and then that scene is stored in the creature permanently. If preserved properly when it dies, its body can the be broken up and the message released. This is typically in a powder over a crystal ball, but some wizards find tossing it in a fire is

just as effective. Video moths are a hazard to navigation in arctic climates. In nature, the scenes are selected for their vivid changes of colors.

Industrial Uses

"Ducking into a dell, we quickly released a handful of moths. Pulling white sheets over ourselves, we tried to remain motionless. We listened tensely while the enemy patrol approached. Right above us, I heard an officer warn a soldier that the gulley was full of snow from the last storm, and the sound of scooping snow. Just then, a snow ball fell on my head and stuck. I found out that we were only barely covered by the illusion."
-- Lieutenant Mawthers, First Mountain Forces

While primarily used as message recording devices, there are many ingenious applications of this technology. Some moths are trained to record one image per second, allowing for a variety of still shots. Others are trained to take them at a rate of 25 per second. High-priced brands claim higher quiality, while some cheaper brands are video only -- no sound. Video moths are instrumental in the creation of magical items to engrave pictures, as well as wizard eye and ear. Enchantment of the last may not be possible with low-quality breeds.

Adventure

Many types of covert missions can be undertaken if information can be smuggled out as powder. The adventurers may be hired to devise a fool-proof security scheme, or they might be called upon to defeat one.

Video Moth

Appearance: Snow-white moths with bioluminescent abdomens.
Category: Insect.
Diet: Luminivore.
ST -; **DX** 12; **IQ** 3; **HT** 12.
Will 8; Per 9; Speed 6; Dodge 9; Move 6.
SM -11.
Traits: Acute Hearing 1; Acute Vision 2; Chameleon 1 (Fringe); Domestic (or Wild) Animal; Eidetic Memory (Reprogrammable); Flight (Winged; Air Move 12); Night Vision 1; Reprogrammable.
Notes: Stores dozens of still images, or a few minutes' worth of video. In combat treat as Bees, except

Giant Video Moth

ST 1; **DX** 10; **IQ** 3; **HT** 14.
Will 9; Per 9; Speed 6; Dodge 9; Move 6.
SM -6 (7" long); DR 1.
Notes: Stores hundred of still images, or an hours' worth of video.

Frag Plant

"There we were, in the fields, moving toward the enemy outpost in the night. The moonlight glinted off the crops planted in neat rows. We evaded a number of tripwires as we crossed the field, alert for ambuses from all sides and above. Curley had the sharpest eyesight, and easily found the wires. It was only after the fourth we found, near the middle of the field that we realized that the wires were attached to the plants. One false move and we could be shredded by the plants themselves."
-- Former Private Likels, now OED, *Tredroy Allied Guard*

This plant has unusually dark, thick, shiny leaves. Under this unusual texture can be found two discrete circulatory systems. Both carry nutrients throughout the plant, and experiments show that it can survive with only one. The first

benefit is a resistance to extreme temperatures. In fact, the plant gives off a lot of heat. This appears to be some kind of defense mechanism against competing plants and to repel animals. The silicates permeating the plant's leaves are very sharp, and can kill small herbivores from the inside out if eaten. They rarely get the oportunity, however, due to the nature of the plant's leaves: The dual circulatory systems form halves of a binary explosive. When bitten into, the juices mix, and the leaf explodes outward from the stalk like a fragmentation grenade (3× for internal damage, see p. 415 of the **Basic Set**). At the end of the growing season, when the leaves begin to shrivel, the stalk explodes, launching the seed pods great distances.

Encountered

Adventurers will likely encounter these plants as targets and victims. Alternatively, a plant-themed ninja or demolitions expert could be an interesting concept. Combat and birds have carried the seeds far and wide. As a defense mechanism, frag plants spread out seeds widely. Thus, a field in the wild may have many plants, but few close together.

Industrial Uses

"It happened at the stroke of noon. A clatter and the sound of horses' neighing arose from every quarter of the small town, followed by small laughter from the shadows. The wood sprites had disabled every carriage and wagon in town. The Iron War had begun."
-- Father St-Germain, *The Iron War*

Some individuals consider these plants to be an excellent addition to crop rotation as they remove sand, clay, and chalk from the soil. They consume a lot of nitrogen, however. They are best gathered using tools that cauterize as they cut.

Carefully powdered, the plant material is safe to handle, but when lit, the chemicals merge and flash-burn. Stored properly in controlled conditions, the plants can make good space heaters. Their heat resistance makes them useful for heating air to high temperatures for distribution in office and apartment buildings without the use of fossil fuels. After all this, they are most useful in a safe, powdered form. The enchantment of fire spells, as well as spells that add energy to items, are commonly enhanced with parts of this plant. Lesser known applications include the body of wood spell as well as spells to remove foreign objects from a body. If the flame is slowed, the plant might burn for hours.

Adventure

The heroes are sent to deliver a shipment of frag plants through cold weather. It is known that the internal warmth will not be enough to keep them from freezing . . . so they need to be careful with heat sources. They will find opposition in the form of several terrorist groups seeking to steal or destroy their group. At the story's climax, at least two groups will start attacking each other for the right to destroy these plants.

Frag Plant

Appearance: A plant with thick, dark leaves that are shiny.
Category: Plant.
Diet: Photovore; Lithovore.
HT 14.
SM -3; 5 lbs; Stem: DR 2 (Sealed); Leaves: DR 1 (Sealed).
Notes: The fragmentation damage is [1d-2], with further multiples of 2× if against skin, or 3× if bitten (see p. B415).

Rock Brain

"The ninja ran along the support beam over the atrium below. Deftly, the form lept effortlessly over lanterns and vines.

Suddenly, the man in black garb stumbled, tripped, and fell. He never noticed the runes on the carved statue at the base of the last pillar glowing pink."
-- Yakizora house sentry log, Day 223, Year of the Dancing Flamingo.

More and more frequently, remote villages are discovering what appear to be strange pink fungal growths on rock formations. Oddly, these formations are normally in a small gulley that people must travel through. Since most reclusive villages are insular, there has been little communication of this special feature to outsiders. The name given this "creature" was given by the largest village that found these lobe-like patterns nearby.

Encountered

This life form is still unknown to the world in general. When dormant, it is a dark pink, often invisible on bedrock such as granite. People near to these runes observe very slight distortions of gravity. Such things are generally dismissed as the wind, or something they ate or drank. Those few who try to remove the moss often have accidents if they work alone.

Accidents can take many forms, from people tripping at the worst possible moment, giving people a jar when they might have a heart attack, possibly using telekinesis to take away a creature's ability to breathem or mentally poking animals until they go mad, it turns the PCs' dog wild or whips the horse an adventurer is riding into a frenzy.

Industrial Uses

"This is the fourth day of observing the runes of the rock. When I get closer, they glow, but there is no increase in energy drain from the environment. What is causing it? Now, I will spin it again. It seems to be linked to the disorientation I get when I touch the rock. My apprentice has left for a petri dish. While he is getting it I will begin to take samples."
-- The last journal of Gurzin the Sage

Some enterprising organizations have found special energies to excite the organisms' growth. They then harvest them to form a paste that serves as an antigravity paint (Regular or Superscience, see *Vehicles*). Extruded resins can be used in small doses to lower penalties from adaption to new gravity, and spin gravity. The military has also been working on variants to lower the effective gravity experienced by pilots, pushing off the limit of a G-induced Loss Of Consciousness (see GLOC, p. 154). If all rock brain colonies are connected, then they might serve as a framework for a communications network, perhaps without knowing its true purpose.

Adventure

There have been a string of strange murders in an alley in a small district of the PCs' town. There were no connections between the strangled victims, and nothing was stolen during the attacks. A dependent of the PCs will be asked to go through there soon. Can they solve the mystery in time? (In fact, it is an alien intelligence sent to test the reactions of beings on this plane. Whether it is of the same race as the invaders or simply some sort of minion remains to be seen.)

Rock Brain

Appearance: Pink runes on rocks that look generally like brain matter.
Category: Fungus/outsider hybrid.
Diet: Unknown.
ST -; **DX** 8†; **IQ** 9; **HT** 8.
Will 12; Per 10; Speed 4; Dodge -; Move -.
Traits: Body of Shadow; Control (Gravity); Gravity Talent 4; Legless (Sessile); No Fine Manipulators (No Manipulators); Secret Communication (Home Plane Only); Telekinesis 10‡.
† Speed, telecontrol only, see *Powers,* pages 90-92.
‡ Note that ST10 is strong enough to lift a 200-lb person off the ground (see *Basic Set,* page 17).

Giant Rock Brain

ST -; **DX** 10; **IQ** 10; **HT** 10.
Will 13; Per 11; Speed 5; Dodge -; Move -.
Traits: As above, but with Gravity Talent 8 and Telekinesis 20.
Notes: This represents a large colony rock brain.

Fir Bird

*"You let it **what**?"*
"Look, it has the beak of a hawk, and is sitting in our campfire. It's not easy to shoo away something like that."
"It's making a nest of the fire logs. You don't suppose . . ."
Both turned and squinted as a loud thump heard, and they could make out a large, brown egg nestled in the embers.
*"**I** wanted to cook supper. **You** light us another fire."*
-- Expedition to the Westun Dragon, Day 16.

These orange and brown birds can be found in heavily forested areas, and dry plains. What makes them unusual is the durability of their eggs and their resistance to fire. Fir bird eggs can hibernate for centuries, and can even withstand being dropped from great heights onto solid rock. It takes a hot fire to incubate the eggs; a bonfire for six to eight hours *might* suffice. In nature, these birds live in areas that are prone to wild fires and forest fires. Thus, they lay their eggs in pine trees, one per year, or more in a dry season. Forest fires can be between 10 and 50 years apart, or further with sentient intervention. When they do occur, then there are great abundances of these creatures. Many cultures celebrate these events.

Encountered

A typical adventurer is most likely to encounter this creature as an unexpected visitor to a fire, be it out of doors or in a city. Fir birds can make good babysitters or nannies for other bird types, should a rich noble seek to raise an otherwise dangerous avian.

Industrial Uses

"It is not unknown for fir birds to adopt other avian young during rainy seasons. Some suggest this is so their kind will be protected from such predators later. On the other hand, they will quickly abandon this 'changeling' if they come across a lone baby fir bird."
-- *Birds of Prey*, Chapter XIII.

The eggs can be incubated in a common stove, as long as it is a real flame (home electric ovens are not powerful enough). The meat is spicy. Fir birds might be a good source to harvest in a desert area. Their low oxygen requirements makes them ideal candidates for early introduction to a warm world with a low partial pressure of oxygen. Fir bird feathers are fireproof, offering DR 5 versus flames (buy as Cloth armor at 5× cost, as per pages 283-284). The egg fragments are useful for the Suspended Animation enchantment as well as halting poison.

Adventure

The adventurers must gather all the fir-bird eggs that they can, and create a large bonfire. Meanwhile, conservationists and enemies will seek to quench it or fireproof the bonfire site before the conflagration begins, dousing it with water and using magical means. The next trick is to protect and feed the flames overnight, and then run when the eggs start to hatch . . .

Fir Bird

Appearance: A dusty orange bird of prey with dark brown to dark green markings.
Category: Avian.
Diet: Carnivore.
ST 5; **DX** 12; **IQ** 3; **HT** 12.
Will 11; Per 11; Speed 6; Dodge 10; Move 2 (Ground).
SM -4 (18" long) (-3 with wings unfurled); 5 lbs; DR 2 (DR 10 vs. Fire).
Traits: Acute Vision 2; Combat Reflexes; Doesn't Breathe (Only ¼ as much Oxygen); Enhanced Move 0.5 (Air Speed 18); Flight (Winged); Night Vision 1; No Fine Manipulators; Penetrating Voice; Sharp Beak; Sharp Claws; Temperature Tolerance 5 (Heat only); Wild (or Domestic) Animal. *Skills:* Brawling-13.

Giant Fir Bird

ST 8; **DX** 12; **IQ** 3; **HT** 13.
Will 11; Per 11; Speed 6; Dodge 10; Move 3 (Ground).
SM -1 (4.5' long) (-3 with wings unfurled); 10 lbs; DR 4 (DR 20 vs. Fire).

Porcu-Pain

"The battle lines closed. There we stood, certainly less than a hundred yards from the enemy, both lines poised to strike. Our generals had met and parted, shaking heads. Suddenly, a horn sounded on the enemy's side. A battle cry went out across their lines. Raising their spears in unison, the unarmored enemy soldiers thrust them into the ground, drew what seemed to be a needle from a pouch on their waist, and jabbed it into their left arm. They screamed in unison, and charged us with unbelievebale speed."
-- Sargent Witherson, First Firemaster, on *The War of the Plains*

These procupine quills are coated in an injection poison that overloads the target's metabolism. When they detach, they continue to feed the poison for much longer than the standard duration, in addition to the normal dangers that quills present (see ***Bestiary***). What many users do not realize is that extended use presents a real danger to their life. Even the creature's blood is saturated with this serum, to which it is immune.

Encountered

Street fighters carry these quills as a boost to combat. Some riders carry them instead of spurs. The positive and negative effects are so visible that it is a banned substance in most organized competitions. Heroes may encounter fighters who are trying to get off the drug. They sometimes suffer from Indecisiveness.

Industrial Uses

"The monks squared off against the bandits. While the older disciples negotiated with the bandit leaders, the eldest monk pulled out a tea kettle and lit a fire. As negotiation worsened, the monks passed teacups around. Just as the mercenaries reached for their weapons, the enlightened sipped their tea. Then the chaos began."
-- Miquel the Gray, *Travelling with the Elightened*

If properly dosed, the serum can be of great help, improving reaction time for first aid responders. In dangerous doses, one can easily overload and die. Alchemists have long used the quills in potions of haste, regeneration, and restoration. Abuse by those with regeneration powers could result in tumors and accelerated growths.

Adventure

The heroes are facing off against a group that uses these quills to their advantage. The competition can be any type -- combat, sports, mind games -- but the result is the same. Can the adventurers out-last them, or will they succumb to the temptation to use the same drugs?

Porcu-pain

Appearance: A porcupine with slightly purple tinted quills.
Category: Mammal.
Diet: Herbivore.
ST 4; **DX** 10; **IQ** 3; **HT** 14.
Will 10; Per 10; Speed 6; Dodge 10; Move 6.
SM -2 (3' long); 20-30 lbs; DR 2.
Traits: Affliction (HT; Altered Time Rate (Requires 1 HP per minute); Blood Agent; Link (Spines)); Clinging (Wood Only); Enhanced Time Sense; Night Vision 2; Peripheral Vision; Quadruped; Spines (Long); Wild Animal.
Notes: See ***Bestiary*** for detailed porcupine quill rules.

Giant Porcu-pain

ST 12; **DX** 9; **IQ** 3; **HT** 15.
Will 12; Per 11; Speed 6; Dodge 10; Move 6.
SM 0 (6' long); 200 lbs; DR 10.

Beyond Fantasy

This article describes seven creatures, most of which could appear to physically exist in a hard-science world, even if the more wondrous aspects could not:

- Balloon mice might exist as floating creatures.
- Forger fish could electroplate items.
- Video moths could repeat flashed sequences and store messages in some kind of decipherable code.
- A frag plant *might* exist, given enough genetic diversity in the cosmos.
- Rock brains could be hallucinagens, and distort one's perception of reality.
- Fir birds could be nothing more than fire-resistant birds.
- Porcu-pain could have a stimulant that burns out the user.

* * *

Special Thanks to Gary J. Bartz for his deep wood vision, and to my parents for their encouragement and support of my crazy hobbies, and the ideas for the frag plant and porcu-pain!

Diplomacy II: Renaissance into Modernity

by Matt Riggsby

We've already seen how diplomacy in the Middle Ages was very different from the diplomatic practices of today. This article describes the development of diplomatic practice during the Renaissance, Reformation, and the edge of the modern period. These years saw the appearance of resident ambassadors, extraterritoriality, and a secular legal basis for diplomacy.

Historical Background

The major developments of this period were not solely Italian inventions, but most new institutions and practices were Italian, or at least most fully developed in Italy. In the later years of the Middle Ages a few powers (mostly Italian but the French and Holy Roman Empire got in on it as well) started placing representatives with foreign courts for longer and longer periods. Still, even years-long missions would end once there was no clear need for them (for example, if a war ended in which the two powers were allies). A number of major cities which had permanent trade colonies also had, in a way, essentially permanent representatives. By the Renaissance, several major Italian powers had merchants, along with relatives, servants, and other hangers-on, permanently stationed in foreign centers of trade. Constantinople, for example, had small suburbs specifically set aside for the Genoese, Venetians, and others. These colonies were administered by consuls elected by the residents or appointed from home. Though they were primarily internal administrators, consuls also represented their colonies to higher native authorities (for example, taking responsibility for colonists who broke local laws) and dealt with ongoing trade relations. From time to time, they might also be called on to perform small bits of lesser diplomatic business. But actual diplomats were still not permanent, and permanent representatives were still not diplomats. It took a particular set of pressures in the 1450s to push the Italians into establishing permanent diplomatic relations.

By the 15th century, Italy was dominated by five powers: Milan, Venice, Florence, the papal states, and Napoli, with second-rank states such as Genoa, Bologna, Ferrara, and Siena acting as buffers and minor allies. Though each state had its own ups and downs, they were in the long run consistently evenly matched. Moreover, the foreign policy of each slowly moved towards attempting to maintain a balance of power. If one state appeared to be getting too strong, others would unite against it. However, if any alliance appeared likely to particularly benefit any one state more than the others, allegiances would shift again to maintain the status quo.

External factors also intruded on the chaotic Italian situation. Foreign mercenaries brought rougher, more destructive tactics into the Italian wars, giving the Italians a look at what their internal conflicts might turn into. And in 1453, Constantinople fell. Though it had been generations since the remnants of the Byzantine empire had been a significant obstacle to the gathering Turkish menace, the city's fall still came as a tremendous shock to the West and left the Italians feeling exposed and vulnerable. Eager to end the constant internal fighting and worried about threats from without, Italy was ready for a long-term solution.

These conditions culminated in the Treaty of Lodi in 1454. Initially, it was simply a non-aggression and mutual defense pact between Venice and Milan, ending a conflict which had, typically, seen alliances shift in order to limit the gains of the powers which had achieved the upper hand (Florence had initially been allied with Venice, but moved its allegiance to Milan when Venice appeared likely to win too much territory). Such agreements were hardly unique, but what made the Treaty of Lodi unusual is that it was open-ended. Other states were allowed to join in the alliance, which, at the time, was a very attractive prospect. By the end of the year, every major power in Italy was a signatory, as were many minor powers. The terms of the treaty prohibited attacks on other signatories, threatening them with expulsion and promising that the "Most Holy League" which the treaty formed would come to the defense of any attacked members (or, at least, their Italian territories; no one wanted to commit to defending Venetian and Genoese territories abroad).

Of course, establishing peace was one thing; maintaining it was quite another, which is where the full-time diplomats came in. The Treaty of Lodi required that signatories consult with one another to head off -- or, failing that, put an end to -- hostilities. Since wars were always threatening, it proved effective to place resident ambassadors in one another's courts, with an ongoing brief to keep communications open and information flowing. As it happens, the treaty was adhered to irregularly from the very beginning, there was never a unified military response against Turkish raids, and the shifting alliances of the pre-treaty period simply shifted with greater agility. But the network of resident ambassadors does appear to have at least limited the number and extent of wars in Italy for 40 years, and prevented significant fighting for about three quarters of that time. Compared to the period leading up to it, that's not bad.

The fragile Italian peace collapsed in the face of foreign intervention, but the Italian diplomats who brought France and Spain down onto the peninsula in turn transmitted the new style of diplomacy. Spain, France, Germany (or, more accurately, the Holy Roman Empire, which consistently included German but at times included Burgundy, the Netherlands, and Spain), and, increasingly, England experimented with resident ambassadors and various mechanisms for their use.

The results were similar to the Italian experience: experiments with a balance of power finally upset by a new influence, in this case the bloody conflicts following on from the Protestant reformation. The idea of a unified Christendom, from which many justifications for diplomatic practice were drawn, crumbled as Protestant nations established themselves, Catholics found themselves allied with Protestants against other Catholics, and some Christian nations even allied with the Turks against their co-religionists.

As the deadliest strains of fanaticism burned themselves out, the need for diplomatic institutions remained, but their legal justifications had to change, as did the general perception of diplomats. During the Middle Ages, diplomats had peacemaking as their highest stated goal; they served not just their rulers, but Christendom as a whole. By the 17th century, it was clear to everyone that ambassadors were, first and foremost, agents of their country's interests. That principle formed not only the basis of that period's legal basis for diplomacy and the treatment of diplomats, but our own as well.

Diplomatic Practice

The forms and systems of diplomacy didn't change overnight. Permanent ambassadors developed from and existed alongside traditional single-mission ambassadors, not immediately replacing them. Special-purpose embassies were still sent for most important tasks, and for several decades were still used almost exclusively outside of Italy.

Permanent ambassadors handled more routine diplomatic tasks, but they were primarily available as conduits of information. The primary occupation of early resident ambassadors seems to have been writing letters home containing accounts of every possible item of news, history, or rumor which might possibly have some political significance, often on a *daily* basis. A diplomatic letter home contained a great deal of information, usually including:

- Date, time, and location of dispatch of the current letter
- Acknowledgement of recently received documents
- Summary of previous communications
- The diplomat's current narrative
- Copies of any interesting documents

The first three items were vital to maintaining archives and for putting incoming information into context. These masses of raw detail were accompanied on a regular basis (usually on set intervals of a few months) by summary reports, giving a broader picture of the local situation and the ambassador's efforts.

As with earlier diplomatic documents, security could be a problem. Any message sent home might be intercepted and read (Europe's first post-Roman postal system, established by Henry VIII, informally doubled as a surveillance bureau). Particularly sensitive documents, therefore, were encoded. Renaissance cryptography was primitive by modern standards, of course, but it was more sophisticated than simple substitution ciphers, the weaknesses of which were recognized early on. Diplomatic ciphers would have two or three symbols for each letter, and might be further

complicated by symbols without any meaning (to be inserted at random into messages as a way of introducing "noise" into the "signal") and symbols representing common words, such as prepositions, conjunctions, and pronouns. Some diplomats might further obfuscate their messages by coming up with code names for important people and places, making it less clear what the message was about even if the cipher were broken. One Spanish ambassador charmingly used names out of chivalric mythology. Each ambassador had his own cipher, which may have made his country's diplomatic correspondence as a whole more secure; however, most people trying to break the ciphers were only interested in the letters written by one ambassador, so that made little practical difference.

The problems with such ciphers are what one might imagine. Although a few different symbols might be used in place of any given character, a lazy or hurried secretary might not use all of them, making the resulting letter as easy to decode as a simpler substitution cipher. Parts of a message might be written in plain text, making the meaning of the whole clear. And, given enough samples to work with, even these more complex ciphers could eventually be decoded.

This function, the regular gathering and provision of information on their government's behalf, went some way towards hurting the reputation of diplomats. Although they were useful for coordinating international activity, is was difficult to ignore the fact that they were essentially very polite spies. But ignore that fact rulers did; to send away ambassadors meant that their own would likely be expelled as well, and the pace of international relations and the requirements of maintaining national prestige were such that it became impossible to get along without maintaining at least a few ambassadors.

Of course, ambassadors themselves rarely engaged directly in espionage. After all, they were prominent, well-known middle-aged or elderly men whose comings and goings were widely observed, hardly attributes which make one a covert operative. First and foremost, therefore, ambassadors collected public and semi-public information which anyone living in the same circumstances might find out, the sorts of items which would appear in newspapers if such things had existed at the time. It was from ambassadors that rulers learned that armies were being raised, that the wheat was growing poorly that year, that such-and-such a princess was pregnant (possibly by a captain of the guard rather than by her husband), and that the cheesemongers were revolting.

However, an ambassador might employ (or employ people to employ) spies who more actively sought out secret information. This could mean anything from regular employment to occasional bribes to just having drinks with a disgruntled courtier or servant and letting him talk. It worked the other way as well. Rulers and other ambassadors could learn a great deal about a diplomat's homeland and diplomatic intentions by talking to him or gathering information from his staff and hangers-on. For example, we have a good deal of correspondence to Queen Elizabeth or her advisors from a dissident priest living in the French ambassador's household in the 1580s.

It doesn't appear that ambassadors engaged in what we might call covert operations. After all, they had their hands free with diplomacy and information-gathering. But they sometimes *did* talk to dissenters, rebels, and exiles to plot action. As the man on the spot, the ambassador likely had better access to important dissidents than his principal. This could be *extremely* dangerous if the ambassador were found out. No matter what legal immunities he might claim, the ambassador could face the wrath of a very angry monarch.

More publicly, ambassadors were more engaged in protecting the prestige of their countries. This tended to mean establishing relationships with the powerful. This also meant dealing with other ambassadors. To enhance his country's prestige, a diplomat might argue points of precedence to increase his personal standing and exclude others from events attended by the powerful. However, other ambassadors could also serve as important sources of information, so an ambassador might have to balance pushing ahead with antagonizing his colleagues.

Finally, up to this point, diplomats dealt with high-level international issues and actively avoided becoming entangled in the affairs of expatriates; bringing up the plight of this or that merchant or pilgrim was a distraction from the important business of land transfers and wars. Instead, the treatment of their

Presents

One almost universal diplomatic tool was the exchange of gifts. Diplomats were often sent with valuable gifts to present to the ruler they were visiting, and their own principal might expect to receive gifts in return. Gifts could be as simple as chests of gold or as exotic as giraffes

own nationals in the foreign country were dealt with by consuls and similar local officials. However, as ambassadors became residents, they started to assume a consular role as well. This was both convenient (an ambassador probably had better access to the highest levels of government than an official of a colony of foreigners) and more in keeping with an increasingly nationalist role. The wise ambassador also cultivated local expatriates as a useful source of information.

Diplomatic Organization

As the use of ambassadors became more sophisticated, so did the organization of embassies. Up to the Renaissance, a government would appoint a diplomat or a team of equal diplomats. They might bring along a few servants and retainers, but though they might enjoy some legal protection as part of the diplomats' entourage, they had no official standing or authority of their own. They were simply the diplomat's employees. Around this time, though, some countries began to appoint official secretaries. These were not just simple scribes; a diplomatic secretary had the legal and administrative background to prepare correspondence and other documents according to the increasingly elaborate forms required by the new diplomacy. Such secretaries might be thought of as being less like modern administrative assistants and more like a legal counsel who doesn't make important decisions himself but provides vital guidance on how to carry them out. The secretaries who had served diplomats up to this point (and, for quite some time, secretaries who continued to serve most diplomats outside of Italy) were personal servants, accompanying the diplomat on his travels. The new state-sponsored secretaries, however, might be held over in their assigned location for some time after an old ambassador left and a new one arrived. The secretary could then familiarize the new ambassador with the local situation, the state of various negotiations, and so on. Without the continuity of an embassy staff, most diplomats from outside of Italy were dropped into unfamiliar situations and took quite some time to come up to speed.

Some governments also began to give an official status to some of a diplomat's hangers-on, who might be used in an official capacity as couriers or temporary spokesmen. And diplomats continued to bring personal servants with them. Indeed, the minimum size of the diplomat's entourage was frequently specified in the terms of his mission. This was useful for prestige and for ensuring that the diplomat had sufficient aid on hand to run important errands without distracting him from his mission. Few diplomats would be caught with less than 10 followers and five or six horses.

Developments didn't just appear on the ambassadorial side. Several rulers developed more sophisticated chanceries to deal with diplomatic correspondence, while others developed semi-formal bodies of, for lack of a better name, analysts interested in composing some sort of coherent foreign policy (as opposed to the more common practice, dealing with foreign affairs as isolated, one-off situations). A chancery, in modern terms, is a glorified secretarial pool. The chancery employs scribes who compose letters and other official documents, and file them as necessary. This may sound trivial, but more capable bureaucracies could be a potent weapon in an age where conflicts could hinge on more than just brute force. A ruler with a better, more organized chancery can find (or, at least, order subordinates to find) trends in foreign and domestic politics, indications of possible alliances in the works, or simply a record of what he or his representatives have said before, so that consistent policies can be followed.

However, these moves were sporadic, incomplete, and often temporary. The French, for example, had a council interested in foreign affairs, but few resident ambassadors and a very disorganized chancery. The Spanish, on the other hand, had a moderately well-developed chancery and a sizable network of professional diplomats, but its foreign policy thinking, such as it was, was in the hands of a line of kings who actively worked to prevent their subordinates from gathering enough information to formulate policies.

In actual practice, diplomatic correspondence was rarely as well-organized as it should have been. At the "home office," batches of records might be left behind by a roving king, stored at inconvenient locations, or simply neglected.

and elephants, as Haroun al-Raschid once sent to Charlemagne. In diplomacy as in personal life, the presentation of a fabulous gift might display the giver's esteem for the recipient, but it also underlined the wealth and power of the giver. Gifts were often presented on a diplomat's first contact and his departure, but might be handed out on other formal occasions. Couriers might got to great lengths to determine an ambassador's standing at court or his attitude towards his host country by the size and nature of gifts.

Cardinal Richelieu, for example, at one point had to ask France's ambassadors to tell him what their instructions were, because copies of royal correspondence with them were unavailable. On the ambassadorial end, the ambassador's expected archive of records was, for all practical purposes, private property. An ambassador, on being replaced, might take his files with him or simply destroy them. On occasion, he might leave them behind for his successor. However, since there was usually a gap between one ambassador leaving and the next arriving and, outside of Italian embassies, there was rarely a permanent staff on hand to curate them, the old records were vulnerable to raids by the native ruler's agents. New ambassadors often spent months playing catch-up, and might even have to send home for copies of such fundamentally important information as current treaties.

With the shift of diplomats from traveling to resident agents, some classes of candidates for diplomatic started to drop out. With the collapse of the feudal system, heralds were already a quaint vestige of the past and were rarely taken seriously as representatives. Since diplomats traveled less, hardy warriors were in less demand as diplomats, though they might still be used in large numbers as couriers, and minor clerks to handle routine matters became less necessary. In the aftermath of the wars of religion, there was general unease with using clergy as diplomats. Diplomats were drawn from the ranks of the nobility and the upper middle classes, people of good families and sufficient wealth to support an appropriate standard of living, particularly in the face of pay which was poor, chronically late, or both.

There was also a slow shift in funding. Rulers were reasonably content to pay for traditional, limited-term diplomatic missions sent by foreign governments. It was a long-established part of what was understood to be a reciprocal obligation. However, when rulers outside of Italy started sending long-term embassies, they started doing so by unilaterally stationing them other countries who rarely reciprocated. The rulers of the foreign court were under no obligation to pay for them, and so they did not. Governments establishing permanent embassies had to pay for them themselves. Some rulers paid their diplomats infrequently if at all, which severely damaged their efforts to establish diplomatic services.

The final important shift during this period is a change in legal protection for diplomats. It was generally acknowledged that diplomats still required some kind of legal protection in order to follow their missions, just as they had in earlier periods, but it was impossible to justify it in ecumenical terms. The solution was to introduce what we'd now call extraterritoriality. During the Middle Ages, diplomats were liable under limited circumstances to the courts of the countries they visited. By the 17th century, diplomats were regarded as operating under the laws of their home countries. Diplomats were less likely to be tried by the nations they were working in (though it could happen), but could be tried at home or otherwise legally held responsible by their employers. Applying separate legal systems to people physically living in the same country is not such a novel arrangement as it might appear. Through most of the Middle Ages, clergy could only be tried in ecclesiastical churches. Likewise, in some places beyond the Christian world during late antiquity and the early Middle Ages, Christians living abroad might be tried by local bishops rather than non-Christian authorities, and some later Medieval trade colonies won the right to govern their own expatriates. As those institutions were fading away, a similar principle was simply applied in a new context. It's worth noting that it was initially the ambassador himself and sometimes his staff who were regarded as operating under foreign law. However, unlike modern embassies, the physical buildings they occupied (usually rented from natives) were *not* so protected. An embassy or ambassadorial residence was protected by the same

Hostage Situation

As western diplomats started to move beyond the west, they started to encounter different diplomatic traditions. One practice, sporadically practiced in the west in the past and still in the east was the exchange of hostages. Unlike modern hostages, who are the victims of political kidnapping, these hostages were selected by their ruler for an important diplomatic duty. Rulers would send sons and daughters, siblings, and other relatives and close friends to live with the foreign ruler as a guarantee that international agreements would be kept, knowing that if the agreements were broken, the hostages would suffer for it. They were both a guarantee that and an agreement would be kept and, once they returned home, an expert on the foreign nation.

Although their movements might be restricted (if nothing else, a hostage wasn't allowed to return home unless traded for another hostage), diplomatic hostages were otherwise treated as honored guests. Indeed, the Byzantines made enthusiastic use of hostages as propaganda tools. The Byzantines realized that today's hostages were likely to be tomorrow's rulers, or at least the advisors, useful allies, and close relatives of

laws protecting any other private property, but had no special status beyond that.

Adventures in Ongoing Diplomacy

Around the Renaissance, we can start thinking about diplomacy as a profession (and therefore diplomats as a type of character) rather than something done as necessary by characters who spend most of their time doing something else. A campaign involving a resident ambassador is likely to be urban and social, with very little running through the wilderness or bashing monsters in the head. Intrigue is the order of the day, with everyone trying to figure out what everyone else is thinking. An ambassador may solidly ally himself with a particular tendency at the foreign court (for example, siding firmly with his co-religionists against a heretical faction), or he may find himself setting up a number of potential alliances with a number of groups likely to do him or his country some good (he may side with a group of his more moderate co-religionists, but quietly encourage the heretics, since if they take over, the country is likely to be busy with civil war for several years, giving the ambassador's home country a free hand in other affairs). Ambassadors have a bit of an advantage in their immunity from most prosecution, but they're not intimately connected to the local society. Ambassadors, particularly new ones sent by governments with poorly organized foreign services, have to learn a great deal about the local situation, from political groupings to common courtesies, very quickly.

tomorrow's rulers. Such hostages would be indoctrinated as much as possible with the Byzantine viewpoint and overawed by Byzantine pomp and ceremony. When they eventually returned to their homelands, they could provide ready-made allies in a foreign court.

We've already discussed the sort of person likely to be an ambassador: wealthy, sociable, and impeccably respectable. Unless the PCs are going to be noblemen and other powerful figures themselves, an ambassador might be an NPC patron employing PCs to do the scut work he doesn't have time for and the dirty work he dares not be implicated in.

That said, standard PC types might make a good group of characters to work for an ambassador. Warriors could find use as guards, trusted messengers, and all-round people to lift heavy things around the household. Stealthy and social characters are invaluable for gathering information. More academically inclined characters would be useful as private secretaries. Even holy men could find employment as resident priests; after the wars of religion had died down, diplomats won the right to bring their own clergy with them, a necessity for Catholic ambassadors in Protestant countries and vice versa.

Many of the adventure seeds in the previous articles can work with resident ambassadors, but here are some more specifically suited to permanent diplomacy.

The Man Who Came To Dinner: The country in which the ambassador is stationed is on the verge of a regional revolt. The ambassador's government believes the prospective rebels have a reasonable chance of success, so they want to get on their good side before another country can secure an alliance. As darkness falls over the capital, the ambassador's servants must smuggle the fugitive rebel leader and a couple of his men into the ambassadorial residence; the general populace is unlikely to recognize him, but it's possible that someone is watching the embassy. The ambassador is ready to begin an evening's talks with the impulsive and unsophisticated but fairly friendly rebel when there's a knock on the door. A powerful but strictly royalist courtier, with a sizable entourage in tow, has happened by to be sociable. Turning away such an important person would be foolish, so the ambassador must play host to two mutually hostile parties for the evening. The ambassador might try to stash the rebel away in a locked room for a while (the rebel leader, who is spoiling for a fight, will go if the situation is gracefully explained, but only grudgingly). However, he'll have to be on guard against the rebel's impatience getting the better of him as well as the courtier's hangers-on stumbling into the wrong room. Could the social visit be a pretense to get the courtier's men in the door?

The Purloined Letter: This adventure takes the PCs out into the field. A messenger has been sent with an important dispatch from home. It is known to carry vitally important information, so agents of several squabbling local factions (possibly including the agents of other ambassadors) have been sent to intercept it. The PCs must get to the messenger first, get the documents, and get them back to the ambassador before the other agents, some of whom would be able to temporarily detain the PCs before "misunderstandings" about their diplomatic status is sorted out, get the documents instead.

[Foreigner] Go Home!: Angry crowds chanting slogans outside of embassy buildings isn't a recent invention. They go back to the dawn of permanent diplomacy. A group of rioters upset at the ambassador's country's militarism, their religion, or just their stubborn insistence on being foreign assembles around the ambassadorial residence. Although people are unlikely to die (no weapons more formidable than torches and makeshift cudgels, and clearly more interest in throwing rotten vegetables and breaking windows than drawing blood), serious injuries are a definite danger, and a torch-wielding mob is likely to play havoc with the files and some rather expensive furniture. The ambassadorial staff must try to keep the rioters out or, failing that, protect the person of the ambassador and his diplomatic records. Unless the local authorities are openly hostile to the ambassador or his country, they'll have an interest in suppressing the riot and will send troops along when word filters through to them, but members of the ambassadorial staff might want to try to slip out past the crowd and summon the cavalry before things get really bad.

Murphy's Rules

Better-than-Professional Results, At Home!

This past week I've been digitizing my music collection. This is at least the third time in my life I've done so. The first time involved a thought process along the lines of, "I'm sure 96kbps will be a high enough bit rate," while the second one involved the WMA format and a merciful hard-disk crash that annihilated all evidence of that path.

Each iteration of my CD-ripping quest is a bit different, owing to different outlooks, needs, and circumstances. While my over-600-CD library has continued to grow at a modest clip, this time the whole situation is a bit different, since I'm also assimilating the missus' CD collection . . . an extensive collection that, amazingly, only intersects with my own in three CDs (INXS' *Kick,* The Proclaimers' *Sunshine on Leith,* and Rock of the 80s (???)). So extensive is the missus' Christmas music collection that a random song selected at random has a greater chance of being a holiday tune than it does of being selected from the complete works of Peter Gabriel, They Might Be Giants, U2, or The Beatles.

Anyway, one interesting side effect of dealing with my collection is that certain CDs get special treatment. For example, some CDs include hidden tracks at the end . . . usually after an interminable period of silence. Other CDs -- most notably children's albums -- tend to combine two or more separate entities into a single track, such as the Muppet Show Soundtracks' tendency to include unrelated humorous sketch or comedy asides at the end of a song. Still CDs hide tracks in the "pregap" area (basically, you can access them by pressing "rewind" from the first track).

All of these CDs I have "fixed" according to my own specifications, either trimming the excess silence, splitting selections into multiple tracks, or recovering the otherwise unlistenable music. Still other CDs I have tweaked to my liking. For example, tracks I never wanted to listen to ever again have been deleted from their album, and "my" version of Enya's *Shepherd Moons* has both the English and Gaelic versions of "Far and Away."

And my copy of *The Very Best of the Righteous Brothers* -- quite possibly a CD whose sound inferiority is rivaled only by the number of copies in print -- has received a complete rework. The original sounded literally as if someone had hooked up a Victrola to the CD-recording machine, complete with hum, hiss, and pops, all wrapped up in an absurdly quiet package. Processing the entire CD via sound-editing software, I was able to get the noise reduced, the pops removed, and the entire thing as loud as a "regular" CD.

Anyway, what I find interesting is that the ability to handle my music collection has increased over the years, to the point where I can create something *better* than the original (at least for my purposes). This is due to a state of technology advancement that was unheard of a decade ago. Being able to hold an entire CD of data uncompressed in the memory of a desktop system? The stuff of science fiction in the late '90s.

Such is the case of games as well (especially tabletop RPGs). Advances in editing, processing, and printing technology -- combined with relative stagnation in the professional world -- has led to a situation where amateurs can produce results that are better than the professionals' efforts . . . at least for their purposes.

For example, let's say there's a deluxe downloadable character sheet for a game . . . one of those four-page versions. It would be trivial for me to print it out on nice, thick paper (say, a parchment style), hole-punch and comb-bind the edges, craft thicker outer sheets that would fold up to form pockets, include extra paper, include sheets of at-a-glance house rules, and wrap the whole thing in a cloth or suede cover, which might even include a snazzy ribbon-style bookmark. Voila! A four-page (or so) electronic character sheet becomes what might be an heirloom tomb for a would-be player.

Or if I buy an electronic adventure, I can print out multiple copies of the map for note-taking purposes. I might use image software to make a "player's version" (with false or incorrect information). I can enlarge portions for miniatures use.

In much the same way that audio-processing software has made it possible to make near-professional results in one's home -- and, indeed, results that supplant the "official" versions -- so, too, has image and printing technology gotten to the point where we can make "better" versions of professional material for our own personal uses. Some companies

even recognize this; for example, I believe Great White Games decided not to bother with a standard GM screen, instead opting for a vinyl [Customizable GM Screen](#) for their **Savage Worlds** line. Part of the rationale here is the realization that amateur results are almost better than "official" ones when it comes to game aids, since each game group will have different needs.

I suspect that this trend will continue in the future, as the tech gets better and better. Whether this marks the end of "traditional" book publication or opens up new possibilities for gamers remains to be seen. But I'm as hopeful as I've ever been . . . with the same level of optimism that I had when I said, "This'll be the last time I need to rip my music collection!" the last two times.

The Lost Isles -- Exile: Sourcebook & Scenario 1 (for *RuneQuest*)

Published by Sceaptune Games

Cartography by Halfbat

76-Page Black & White Perfect Bound Book; $14.95
80-Page Black & White 4.25 MB PDF; $14.95

With the gaming hobby being three decades old, the older gamer faces a problem -- one of time. Family commitments and job commitments means that many games have less time to play and getting everyone in a gaming group together on a regular basis can be a problem. One solution is having board and card games on hand when not everyone is able to attend as these invariably cater for a lower number of players, but apart from a GM's own campaign, roleplaying is not as readily flexible. This is certainly not the case commercially, for most scenarios on the shelves at your local games store are designed with several players in mind. This, of course, is a remnant from *Dungeons & Dragons* with its sharply delineated roles. In its current incarnation, the *d20 System* actually has a solution in Expeditious Retreat Press' "1 on 1" Adventures line, and now, so does *RuneQuest.*

New English publisher Sceaptune (correctly pronounced "Shipton," but "Skipton" is also acceptable) Games has taken advantage of the OGL for Mongoose Publishing's version of *RuneQuest* to produce its own scenarios and sourcebooks. The first of these is what it calls a "Singleton" scenario, designed to be played with the one player and the one GM, but flexible enough that it can be run with two players and a GM, or with the usual group of four to six players. As the first part of a campaign, *The Lost Isles -- Exile: Sourcebook & Scenario 1* presents a setting suitable for almost any fantasy world, complete with new cults, races, beasts, and spells, plus a two-part scenario that the character (or characters) is quietly literally dropped off at.

The setting is an archipelago thousands of miles from the mainland on the world of Lamall. Colloquially known as the "Isles of the Damned" or the Lost Isles, to the islands' Wardens they are known as the Archipelago of Justice. It is a penal colony, used by other coastal nations to incarcerate law breakers and those they find embarrassing, somewhere from where escape is made virtually impossible by the Wardens of Justice and their Guardians, the fierce dragon-like beasts they command. The Wardens are mysterious beings who use the islands as a place for the punishment of, and service by the guilty. A healthy community thrives on the islands, centered on Havens, places of safety where the Wardens' laws must be obeyed. Break them and the perpetrator is declared an outlaw, unable to enter any Haven, and can then be freely hunted and killed by anyone and his possessions taken.

The Lost Isles -- Exile cannot be played with a character created straight from the basic *RuneQuest* rulebook, unless it is a seasoned. Otherwise, to ensure that a character, referred to as the Exile, can survive the Dragon-, Drake-, and Wrymkin-infested hostile environment of the islands, he receives extra skills, skill points, Runes (integrated or not), and spells. Further, he will be aided throughout the campaign by an Accomplice, a friendly NPC controlled either by the Exile's player or another player. The five Accomplices given include a likeable Human rogue, an Elf overly protective of the natural world, a zealously Lawful Human noble, a rebelliously snotty Duck, and a heroically rebellious Dark Troll. Alternatively, the player controlling the Accomplice could just create a character of his own, using the same guidelines as for the Exile. If the campaign is to be played with just the Exile sans Accomplice, then

the player has even more points and benefits to assign. The last option is playing *The Lost Isles -- Exile* in the usual fashion with four to six player characters. In this case, each character receives just a few extra skill points. Surprisingly one option not suggested is using the given Accomplices as pre-generated player characters for this option.

The last thing that any player has to do is decide why his character finds himself on the Lost Isles. Has he been marooned and thus finds himself an accidental Exile? Or has been convicted of a crime (that he did or did not commit) and having been sentenced to serve out a term on the islands, is thus a "true" Exile? The nature of his crime can be generated or selected from the table given. Either way, the long term objective for the Exile is not only to survive, but to find the mysterious Wardens and convince them that he is worthy to leave. The only way to do that is by serving the community through great deeds . . .

[SPOILER ALERT!]

The scenario begins with the Exile washed ashore, along with his equipment. Almost immediately he encounters his soon-to-be Accomplice, being chased by a black Drake. Fortunately refuge can be found nearby in a Stonehold, a building designed to provide protection from both the islands' weather and its draconic wildlife. Once weathered, there is a Greeter ready to welcome them to the Lost Isles, inform them of the rules and point towards the nearest big island and its influential merchant. The Greeter also has the first of the scenario's several tasks, scouting out the nest of the Drake that attacked them. The others center on Stormhaven, a fallen and long-abandoned Haven, and now seemingly subject to draconic incursion. None of these tasks is particularly complex, but they do what they are designed to do. Just like the "sandbox" computer game (such as *Grand Theft Auto* or *Mercenaries*) or a MMORPG like *World of Warcraft,* this is to garner the characters favor with the factions, or this case, single faction in the setting. That faction being lawful society. This is, of course, in addition to the playing experience it is meant to give the participants, and the mechanical experience it awards the characters.

[END SPOILER ALERT]

To support the scenario, the sourcebook provides plenty of new material, all of which could easily be used in other *RuneQuest* settings. This includes the effects of Runes such as Chaos, Conflict, Dragon, Healing and Detect; and a new cult dedicated to Suberle, Goddess of the Healing Sea, as well as the basic details of two others: the mercenary guild/cult dedicated to Fulsgar, the Warrior; and Gra'al, the Dragon-god, worshipped by Wyrmkin and Dragons. There are also new spells, legendary abilities, and equipment; the latter geared towards fighting and surviving against dragons. In addition, a number of new species are described. Bar the diminutive Riverfolk, noted for their skills as sailors and traders, who are suitable as player characters, the bulk of them are draconic in nature. As you would expect, these are dangerous beasts, though lesser species like the Wyrmkin and the Vermin Drake, represent a more manageable threat.

Physically, *The Lost Isles -- Exile: Sourcebook & Scenario 1* is a clean looking book, with attractive pencil artwork and pleasingly clear cartography. Although not quite perfect, the writing is clear and concise, and it is fair to say that, over all, this is an immeasurably better looking book than Mongoose Publishing's core rulebook for *RuneQuest.*

What is so likeable about *The Lost Isles -- Exile: Sourcebook & Scenario 1* is that it makes the most of its (mostly) unique selling point, that of a scenario suitable for the one player and the one GM, but it is flexible enough to recognize and suggest other options. In fact, where other scenarios traditionally make adjustments to its opposition to present a fitting challenge to its players, *The Lost Isles -- Exile* works from the other end, adjusting its characters to fit the opposition. If the book has a problem, it is that the scenario is undeniably linear, but it does set everything up for the book's sequel, *The Lost Isles 2 -- Dryhaven.* This does mean that if the players jump the tracks and roleplay against the scenario, then both they and the GM are left high and dry. Then again, following the path set by the scenario is likely the only path to redemption.

Above all, *The Lost Isles -- Exile: Sourcebook & Scenario 1* fulfils its remit and a niche ill catered for, and does so in a fashion that is more than competent for the very first release from a new publisher. Packed with a decent amount of background and a decent scenario, *The Lost Isles -- Exile: Sourcebook & Scenario 1* is the kind of support that RuneQuest deserves and Sceaptune Games delivers to its own high standards.

Icosahedron Adventures

The High Cost of Resurrecting

by Owen K.C. Stephens

The risk of character death and how to handle it are issues in many RPGs, but they are particularly common in **d20 System** RPGs, especially those with fantasy elements. The core fantasy **d20 System** rules offers numerous ways to for characters to die as a result of a single bad die roll, and no mechanism for a player to overcome such bad results even if failure to do so greatly reduces that player's enjoyment of the game. Of course, mechanisms to give players more control are common in expanded rules and can be borrowed from other game systems, but ultimately in anything close to the core fantasy **d20 System** rules, characters are eventually going to die. The main fix for that within the rules is to have them returned from the dead, which can be costly and time consuming, and often leaves the character that died weaker than prior to his death, making him even more likely to die in the future.

One way to handle these problems is for the GM to fudge die rolls so players don't die, or at least don't do so frequently. Ignoring questions of the appropriateness of such actions (which are largely a matter of group play style and even-handed application), this method doesn't work well for groups who want the thrill of overcoming risk. Once a group realizes the GM isn't going to let them die, the sense of accomplishment can be greatly diminished.

The following are alternatives to the standard options for fantasy **d20 System** games and death. They are designed to alter the existing cost of dying and being brought back. The focus for all is to make it faster and easier to get back to the fun part of a campaign for the players involved. Many also reduce the impact of dying, for groups happy to have old characters back and willing to hand-wave some details to do so.

The Death Par Mulligan

If dying is so common, maybe everybody deserves a mulligan, as long as they aren't dying more often that other characters. The idea of the death par mulligan is that if you die no more often than other characters, the death result is simply ignored. Instead of being dead, you're on the verge of death, or the black ray only stunned you, or you grabbed a branch at the last second.

The death par is set at the number of times everyone has died, plus one. Thus if no one has died, any character can die once and take the mulligan. If that character dies a second time before everyone has died once, the death is "real" and must be dealt with by the normal rules.

For particularly forgiving groups, the death par can be set as an average of how many times the characters have died, plus one. Thus if the wizard has died five times, the cleric not at all, the fighter twice, and the rogue once, the death par is three (5+0+2+1 = 8; 8/4 = 2, +1). The cleric can take a mulligan three times, or the fighter once or rogue twice, but the wizard is facing normal risks. Of course, if the cleric does die three times and fighter once, the death par goes up to 4.

Alternatively, a GM can set a death par for each campaign, or each adventure. Players can make decisions based on knowing theat the *Burrow of Bothered Bunnies* has a death par of 1, but the *Fane of Phobias* has a death par of five.

The death par mulligan restricts the harshest penalties of death for those who are dying more than their fellows. This allows characters to die occasionally without severe penalties, but keeps characters from feeling they can die as often as they like. It does have the side effect of giving some characters freebies -- anyone more than one below the death par can risk death and know they won't pay too great a consequence. But since that likely encourages heroic risks, groups may find it a feature rather than a bug.

Everybody Else Improves

Rather than punish the character that dies by taking away experience/ability points/money for resurrection, you can give everyone else a boost. Simply rule that each time a character dies, that character is returned to life with no penalties (hand-waving as needed), and grant everyone else a minor bonus . . . perhaps one ability score point or a few free skill points. This allows players to do better if they die less (keeping death a fate to be avoided), but doesn't weaken the character that already proved too fragile. You need to look out for many-death martyrs ("Whoops, choked on a chicken bone again. I guess everyone else gets a 23rd ability score point."), but in groups that want to keep their characters alive and don't mind others benefiting by their misfortune, the system can work well.

The Old Wound

The Old Wound rules assume that no characters actually die unless their players decide they're dead. Instead, anyone apparently killed is instead just scarred, gaining an "old wound" that has a detrimental effect (just not as detrimental as being dead). Each time the rules would normally result in character death, the player decides on a scar or weakness that is instead permanently suffered, reducing one ability score of the player's choice by one point. Such damage can only be healed by spells with the same level and cost as true resurrection, making such healing rare and expensive.

The Old Wound system mitigates the lack of fun for being dead (you can be up for the next encounter, instead of being carried around as a bulk door-stop until the party can get you raised), and reduces the game mechanical penalty (there is no gold-piece cost, and players can reduce ability scores that have less effect on their overall effectiveness than losing a level would). It also allows characters to gain the kind of permanent old wounds, from lost eyes to scars that never quite close or the feel of death that still lingers whenever they think of a necromancer's attack, that can be a boon to roleplaying and character development.

The Soda Run

If your character dies, you're probably out of the fun for a chunk of the rest of the evening. You're free to do useful things for the group (such as make a run for more soda), and sit around to make commentary, but that's about it. Now, on top of that, we're discussing what *other* penalties you should suffer?

For many game groups, the risk of death needs to be real and have consequences for the act of avoiding it to be fun. For them, choose the minimum consequence that allows everything else to be fun and move on. But for some groups, the act of playing is itself fun, even if they know there's little or no real consequence for failure. For these groups, being reduced to making the soda run for an evening is punishment enough. In this case, just don't do anything about death. Ignore it, and move on.

If the group doesn't need a framing device, don't even worry about a good in-character explanation. Heroes come back in comics often enough as it is, and resurrection magic is written into the core fantasy *d20 System* rules, so there may not be a need for anything more than a *scroll of true resurrection* in the treasure pile, or a quick visit by an angel who just says it's not the PC's time to go and restores life to the corpse. Or hand-wave the whole thing and say the character *looked* dead, but is better now.

Players could even be given the option to be effectively immortal or not, as they choose, at the beginning of a campaign. Or even the beginning of each adventure, or each game session, to match a flexible mood. If the point is for the player to have fun, why not allow them to decide what penalty they pay for failing to roll a 9 or better on a d20? Of course this approach requires agreement from the whole group, to prevent feelings of favoritism or unfair advantage. But if no one has a problem with it, you can mix and match the cost of resurrection to meet each player's balance of thrilling risk-taking and long-term character development.

Hand-Waving

A number of methods call for hand-waving, or coming up with some reason why a character isn't as dead as first glances suggest. The question of how *good* those reasons has to be is one of play style. A number of possibilities are presented below for any "I'm Not Dead Yet," scene, ranging from the fairly serious to the cinematic and the downright silly.

- An object mentioned earlier as carried by the dead character -- be it a holy book of script, a drinking flask full of hooch, or a magic bit of jewelry newly acquired -- takes the mortal blow, letting through just enough damage for the character to have been knocked out.
- A mysterious benefactor appears, raises the felled PC, and leaves without a word. (This is especially good if the GM is running out of mysterious plot hooks.)
- Death shows up and complains about its workload. Any player suggesting he could just not take the dead PC convinces Death, who leaves the once-corpse confused but alive.
- Upon examining the corpse, PCs discover it's a doppelganger. Going back an encounter or two reveals the "dead character" had been replaced by a shape-shifter prior to the deadly encounter.
- One of the dead character's magic items has an unknown second function: If its owner goes unconscious it casts an illusion showing the owner as dead, to prevent further attacks.
- The death blow came from a foe who is secretly working to aid the PCs, and thus was pulled at the last second to not be fatal.
- The dead character actually avoided the fatal attack, but in doing so slipped and fell, striking a rock hard enough to be knocked out.
- It turns out some ally of the dead character foresaw this moment, and made preparations. A one-shot item on the character's body restores him to life.
- The dead character knew how badly injured he was, and was playing possum, looking for an opportunity to either heal, or spring up and deliver an attack from surprise.
- The necromantic energy that killed the PC (for *finger of death* and similar spells) actually hit and killed a fly on the target's body. The fly died, and the leftover energy was enough to stun the character.

Murphy's Rules

Designers' Notes: *GURPS Martial Arts*

by Peter Dell'Orto & Sean Punch

Appropriately enough, **GURPS Martial Arts** was written by a tag team:

Peter was the book's lead author. Sure, Sean wrote lots of material, but that was almost entirely rules text. Peter did the hard work of researching print resources, interviewing martial artists, and actually *fighting*. He also wrote up all the styles and historical material . . . which is to say, the larger part of the book.

Sean was the project's designer and editor. Ultimately, it was his job to structure a rulebook around the research. Which isn't to say that Peter didn't do *his* share of the rules brainstorming, organizing, and trimming.

We're going to tell you the book's story from *both* perspectives.

Peter Takes a Trip . . .

I came home late one night in 2003 to find an e-mail from Sean titled "Wanna write a book?" My first thought was "No! Writing a book is a lot of work!" But this wasn't just an offer to write any book. It was a chance to work with Sean on **GURPS Martial Arts** for *Fourth Edition.* I'd be the subject-matter expert and he'd provide the rules expertise. I couldn't say no. I'd been playing combat-heavy **GURPS** games since **Man to Man** and doing martial arts since junior high school. I couldn't imagine letting anyone else write it!

> *Pai Mei: It is your wish to possess this kind of power?*
> *The Bride: Yes!*
> *Pai Mei: Your training begins . . . tomorrow.*
> *-- **Kill Bill: Vol. 2***

I was living in New Jersey at the time, so I drove up to Montréal to visit Sean and draft the outline in person. It took a couple of days of systematic work, with breaks for local food and to watch an imported copy of Zhang Yimou's wuxia epic, *Hero.* The trip was dimmed by someone breaking into my car the night before I'd have left for home, forcing me to stay another day to get window repairs. (No, we didn't track the guy down and do a little reality checking on him.) But the important work was done: We'd outlined a major revision to a critical *Fourth Edition* book. It was the first step on a long journey. By the time we'd finished, I had moved to Japan and become an amateur fighter.

The Mission Statement

A crucial preliminary to writing the book was outlining our mission. Sean and I tossed around phrases like "**GURPS Magic,** but for fighters," "combat book," and "expanding the **Basic Set**" until we settled on the South Park-derived phrase "Fightin' Round the World." It was funny enough and it *did* summarize exactly what we wanted: to ensure that the book covered fighting from all over the world . . . from antiquity to modern day and beyond . . . armed and unarmed . . . from the hyper-realistic to comic-book ninjas and wuxia movies. We wanted to expand coverage of martial arts that were sadly overlooked in earlier editions of **Martial Arts** -- or that had expanded like wildfire since those were written. We also wanted to correct the perceived bias of previous editions toward barehanded martial arts from Asia, as well as the European armed-combat bias of **GURPS Swashbucklers.**

Early on, Sean decreed that techniques wouldn't be required purchases, which freed us to interpret each style's techniques list as both "recommended purchases" and "moves that gamers playing stylists should try to favor in play." I suggested that we include a paragraph of common tactics for each style in game terms, to make roleplaying a Goju Ryu karateka different from playing a Wushu practitioner or a Pankration stylist -- even if they all had the same skills. Sean thought this was a great idea, so in it went for every style! This was central to our goal of making the book a (hopefully!) complete roleplaying sourcebook for martial artists, not just a rulebook.

Reality Checking and Reliable Sources

The first two editions of **Martial Arts** were great books. Two of my favorite books, and ones that heavily influenced **GURPS.** But they were relatively old.

The explosion of the Internet in the 1990s blew the doors off a vault holding a wealth of information about the martial arts. A trend emerged toward academically rigorous works and away from books based on hearsay and odd speculation. Lots of primary source material became available. Obscure fencing manuals once published solely in their original languages and accessible only to historians were translated by enthusiastic recreationists and published. Martial-arts styles virtually unknown 20 years ago became widespread. As the subject-matter expert of our tag-team pair, researching and reality checking this material fell to me. Reality checking was the *easy* part . . .

Our biggest problem was finding reliable, academically rigorous sources. Ad copy was commonly passed off as truth, while far too many books reported second-hand information as fact. Often, an assertion would be repeated across many works . . . all of which could be traced to a single source that provided no evidence to support its claim. "Common knowledge" was rampant, much of which was rumor cloaked in the guise of fact.

These obstacles to research afflicted the martial arts of every culture. Statements like "Boxers don't close their fists" and "Knights were honorable warriors but unsophisticated hackers" were as common as "Black belts must register their hands as lethal weapons" and "Ninjas hated samurai." Then there were the claims that Western martial arts are "pragmatic" while Eastern ones are "showy." Such myths are *persistent* and highly resistant to being debunked. We needed to separate fact from fiction, to back our facts with reliable sources. **GURPS** books are held to high standards, and this one was to be no exception!

This meant lots of research. I read or reread every book on the martial arts that I could get my hands on, and then read the books in their bibliographies. I borrowed DVDs and tapes from friends, and rented movies. I even bought a few important books for Sean so that I could have a second pair of eyes looking at critical sources.

I also grilled every knowledgeable person that I could find. I talked to USMC recruits and former hand-to-hand instructors, high-ranking karateka, competitive judo practitioners, BJJ stylists, professional fighters, and more. I contacted local and not-so-local schools and asked for permission to visit. With Sean's encouragement, I posted a message on the SJ Games forums looking for style experts to question. Then I researched again to confirm or refute everything I'd seen and heard.

The same went for equipment. I had weapon owners weigh their weapons, and I weighed mine as well. We checked training gear costs by comparison shopping on the net and picking representative prices.

Interestingly, the schools tended to be dry wells. Some gave me a hard sell or flat-out ignored my requests to visit. Only two invited me in and freely answered my questions. One particular instructor in NJ, Phil Dunlap, opened his doors to me, inviting me to train at his school and ask any questions I had. He encouraged me to continue training mixed martial arts in Japan, and found me a school in my new town. This in turn led me to compete in amateur Shooto, a form of full-contact mixed martial arts. Try saying "No, thank you" to a group of enthusiastic Japanese gym buddies and you'll end up gloved-up as well! I'd like to think I'm the first **GURPS** author to score a knockout with a knee strike and call it "reality checking."

Reality checking was crucial. For both personal interest and reality-checking needs, I trained karate, two forms of mixed martial arts, muay thai, escrima, Brazilian jiu-jitsu, kendo, and more. Our pool of research experts added even more styles, providing vital feedback on styles that I couldn't try personally. We included experts and non-martial artists alike in the playtest to ensure accuracy, clarity, and ease of use. We needed to make sure that everything was

"If the masters in the old days could really jump 30 feet high," he snarled, "then why the hell did they build staircases in their houses?"

-- Pan Qingfu to Mark Salzman, **Iron and Silk**

Boss: Is that your blood?
Narrator: Some of it, yeah.

*-- **Fight Club***

accurate -- and more important, fun and playable!

In short, before we included a style, a weapon, or a technique, we insisted on checking the facts and the sources -- and if possible, reality checking it in person!

Combat Skills vs. Combat Art vs. Combat Sport

A GM who's designing a style needs to decide if it uses the basic combat skill, a Combat Art or Combat Sport variation, or some combination of the three. Sean and I had to decide this for every single style in the book. Martial skills, for game purposes, consist of three competing elements: form, distancing/timing, and power. Form is the elegance and attractiveness of the moves -- techniques with good form *look* good. Distancing is gauging where you and your weapons (hands, swords, whatever) are relative to the opponent, while timing is your ability to spot an opportunity and take advantage of it. Power is simply that -- strong techniques, delivered forcefully and efficiently to the target. Each of the three skill types emphasizes one or two of these at the cost of the rest:

> *Combat skills* emphasize power and distancing/timing at the expense of form. Any move that allows powerful strikes against a mobile, resisting foe gets used, regardless of attractiveness. Such things might not be pretty, or effective in a sporting situation, but they *work.*

> *I'm a chain belt in kung-fu!*
> *-- Billy Ray Valentine,* **Trading Places**

> *Art skills* emphasize form at the cost of power and distancing/timing. They sacrifice a lot, but form is outstanding. The moves might not work in a combat situation, but they look good -- and sometimes, especially on film or in certain competitions, that's all that matters.

> *Sport skills* emphasize distancing/timing -- and to a lesser extent, form -- over power. Because sport events generally reward proper form over injury-causing attacks, power isn't a priority. But distancing is critical if one wants to score on a resisting opponent. Some sports forms do include powerful strikes, but these generally have a very limited target set (perhaps just one area of the body) or limit scoring to only one class of strikes. How pretty it looks is secondary, although it isn't ignored; many scoring systems only reward correct technique, but you still need to hit the target!

Thus, full-contact, limited-rules bouts where knockout is a real possibility use *combat* skills. At the resolution level of **GURPS,** if you can strike, grapple, or throw a resisting opponent with limited regard for his safety, then that's indistinguishable from combat! Safety gear, immediate medical support, matched opponents, and referee stoppages -- not the underlying skill -- are what changes the contest from combat to sport.

"Why is <style> so <good/bad> in *GURPS*?"

Martial artists often have very strong opinions about specific styles -- usually their own, but also others. These range from "This is the ultimate style!" to "That style sucks!" We tried to present a fair and reasonable description and rules treatment of each martial art. **GURPS** is a game, though, so we deliberately erred on the side of combat utility and function. Even the most questionable styles might have emerged from combat arts, may purport to teach combat-effective techniques, and are likely to be depicted as extremely deadly in the martial-arts fiction that people want to emulate in an RPG!

"Why did you call it that?"

We tried to use accurate names for all styles, but we favored the names most commonly found in widely available sources to make it easy to use **Martial Arts** to adapt real and fictional material. This led to a mishmash of two different transliteration methods for Chinese, complicated by styles having different names in Cantonese and Mandarin (with different transliterations for each one . . .). Other languages presented their own unique difficulties. For this reason, we often listed alternate names as well. Our main goal was to make it easy to find more information -- to give GMs and

players the names they'd find on school signboards, book titles, and the Internet.

"Why did you cut <style>?"

Because we added so much to our edition of **Martial Arts,** a few styles presented in earlier versions didn't make it back into print. First, we cut many of the fictional martial arts, keeping only a small selection that covered a broad range of genres and play styles. It's easier for the GM to make up such styles than to research real ones, after all! Second, we cut a few historical styles. Generally, this was because we needed the space for another style that covered the same ground, geographically or otherwise -- but some were cut for being less-than-historical. The rundown:

An Ch'i -- This art was supposedly used by legendary Chinese gypsies, assassins, and proto-ninjas. It's an unverifiable style for unverifiable people. Amusingly, I own a book on the Chinese gypsies who supposedly used it . . . but even that book doesn't contain these techniques, nor does it provide any evidence beyond the author's assertions.

Kuk Sool Won -- Korean styles were possibly overrepresented in earlier books. More importantly, I had little access to solid information on this art. I *was* able to question a dedicated, willing practitioner of the widely available style of Hwa Rang Do, though, and I had numerous sources against which I could double-check his information. Thus, we chose to replace KSW with HRD.

Military Hand-to-Hand -- This became a greatly expanded section covering specific styles: the USMC's MCMAP, Israel's Krav Maga, and the combative version of Russia's Sambo. We also added a lens for converting *any* style to a military one.

Ninjutsu -- The biggest cut, but a necessary one. Ninjutsu isn't a martial-arts style. It's an occupational skill set that has a component fighting style, taijutsu, that we *did* include. The same goes for "Hashishin style" -- it's not a style, but a job for suicidal assassins who need Fanaticism and the willingness to take a few All-Out Attack maneuvers. There's no evidence that the Hashishin even trained in a dedicated system.

Police Hand-to-Hand -- This became a lens for just about any style.

Streetfighting -- This isn't a style. We replaced it with a lens for other styles and a discussion of "untrained" brawlers. This is both more accurate and easier on potential street-fightin' PCs.

Uechi Ryu -- A popular style, but . . . We needed to add Shotokan, founded by the man who brought karate to Japan. We wanted to add Kyokushin, because of its wide availability and colorful founder. We insisted on having Te, as it represented the root from which all karate sprung. Karate was overrepresented, so something had to go.

Wudong -- Wudong is a *region,* not a specific style. The Wudong family of martial arts consists of the Taoist styles, also known as the "internal" styles: T'ai Chi Chuan, Pa Kua Chuan, and Hsing I Chuan. We couldn't find verifiable sources on any style called "Wudong."

None of the above styles made it past the initial discussions, so they weren't converted to *Fourth Edition.* Don't look for them in the outtakes below!

. . . and Sean Snips

A consequence of all this research and double-checking was that we had to snip some first-draft text that was merely "nice to have" in order to accommodate playtester recommendations for material that was *necessary.* Even with cuts, though, we were running long . . . until SJ Games decided that **Martial Arts** would have 256 pages instead of 240. This greatly reduced the number of necessary outtakes. There were still a few, however, as well as many rough write-ups proposed during the playtest that we lacked

It's not daily increase but daily decrease -- hack away the

the time to properly test, or that overlapped existing material.

The remainder of this article is a mixture of things that had to come out and items that didn't quite make it in. Fair warning: we *didn't* spend much time playtesting rules that wouldn't fit. Anything involving game mechanics might need a little adjustment to be balanced in play!

Chapter 1 -- History

We made a concerted effort not to hack on this chapter. The styles in Chapter 5 were so heavily dependent on laying a solid historical groundwork that every word cut here meant adding a word in 10 places later in the book -- a false economy if there ever was one. The biographies, however, were mostly for color . . . so with great reluctance, we took a famous American fighter out of contention.

Martin "Farmer" Burns (1861-1937)

Martin Burns earned his nickname when he wrestled in a $25-prize challenge match in Chicago in 1889. His overalls and obvious rural upbringing marked him as someone from the sticks, hence the moniker. Burns wrestled two matches, winning both despite being outweighed by his professional opponents.

Burns continued to wrestle for the rest of his adult life, fighting an estimated 6,000 matches and losing only seven. He weighed a relatively modest 175 lbs. yet had a 20" neck. Pure muscle, Burns credited his development to a youth spent at hard labor and wrestling practice. He later came into demand as a trainer, and taught champion wrestlers such as Frank Gotch.

In the early 20th century, Burns published a mail-order fitness manual that he sold for the then-tremendous sum of $35. It covered weightlifting, calisthenics, and self-defense using wrestling and jujutsu. It also described the "deep breathing" that he believed was so critical. These breathing exercises and the benefits Burns claimed for them were almost indistinguishable from Chinese *qi gong*. Unlike jujutsu, qi gong was unknown in the West. Burns' explanations didn't mention *chi,* but rather the invigorating and strengthening effects of deep breathing!

Chapter 2 -- Characters

When it came to bulking up during the playtest, this was the only chapter that seriously challenged Chapter 4. At the request of the testers, we added a lot of notes on advantages and how to use them in ***Martial Arts*** campaigns, as well as several perks. Not everything made it in, though, and a few items had to come out to make room. The largest outtake was one of our sample NPCs.

João Dias (150 points)

João spent his childhood in a half-dozen Brazilian cities, dragged around by his mother, Ana, as she searched for "something better" -- which, as far as João could make out, meant "somewhere his father wasn't." Eventually, Ana got the cash to take her boy and move to the United States. Unfortunately, the money ran out shortly thereafter.

João's teenage years went by in a half-dozen *American* cities in which being a poor immigrant was grounds for prejudice and violence. Los Angeles was the low point -- Ana found work, but the gangs found João. He spent over two years not exactly on the street but not exactly doing anything with his

life.

The day João's best friend, Roque, was shot by a fellow gang member was the day he vowed to get out of the life. As luck would have it, his roots provided the means: a Brazilian Jiu-jitsu school owner saw a bit of himself in João and decided to get him off the street. João trained with the dedication of a madman, and learned more about his culture during his training than he ever did busing between cities in Brazil.

Today, João is a serious contender. He's fast, hard to catch, and *excellent* at grappling. He has won seven local tournaments -- most by triangle choke -- and is ready to tackle a regional event. He plans to fight his way to the top through hard work, and refuses to do anything remotely questionable. His secret weapon against second thoughts is the ringing in his right ear . . . it's a constant reminder of the shot that killed Roque, and only training seems to drown it out.

João is his early 20s, and stands a fit 5'9" at 153 lbs. He was designed using the Contender template (p. 32), and practices Brazilian Jiu-jitsu (p. 167) with the "Street" lens (p. 145).

> **ST** 11 [10]; **DX** 13 [60]; **IQ** 10 [0]; **HT** 13 [30].
> Damage 1d-1/1d+1; BL 24 lbs.; HP 11 [0]; Will 10 [0]; Per 10 [0]; FP 13 [0].
> Basic Speed 7.00 [10]; Basic Move 7 [0]; Dodge 11; Parry 12.

Social Background

> *TL:* 8 [0].
> *CF:* Latin [0]; Western [1].
> *Languages:* English (Accented) [4]; Portuguese (Native) [0].

Advantages

> Enhanced Dodge 1 [15]; Fit [5]. *Perks:* Ground Guard; Style Familiarity (Brazilian Jiu-jitsu). [2]

Disadvantages

> Obsession (Win a title and get off the street) (12) [-5]; Overconfidence (12) [-5]; Pacifism (Cannot Kill) [-15]; Stubbornness [-5]; Workaholic [-5].

> *Quirks:* Believes that most people are lazy, not that he pushes himself hard; Curses in English around Brazilians and in Portuguese around Americans; Hates being called "Joe"; Minor Addiction (Guarana); Minor Handicap (Tinnitus in right ear). [-5]

Skills

> Brawling (E) DX [1]-13; Fast-Talk (A) IQ [2]-10; Intimidation (A) Will [2]-10; Judo (H) DX+5 [24]-18; Knife (E) DX [1]-13; Lifting (A) HT-1 [1]-12; Running (A) HT-1 [1]-12; Streetwise (A) IQ+1 [4]-11; Urban Survival (A) Per+1 [4]-11; Wrestling (A) DX+2 [8]-15.

> *Techniques:* Triangle Choke (Judo) (H) [5]-18.

We also decided to cut one of our Innate Attack examples, since we felt that it was somewhat redundant with Flying

Fists (p. 45). Still, it shows up in plenty of video games, and illustrates that not all chi attacks have to be "hard," damaging abilities.

Chi Shove (-50%): Crushing Attack 1d (Blockable, -10%; Costs Fatigue, 1 FP, -5%; Double Knockback, +20%; Low Signature, +10%; No Blunt Trauma, -20%; No Wounding, -50%; Variable, +5%) [3]. *Notes:* You can push around a distant target by miming a shove or a Judo Throw. If the victim has never witnessed this ability, he must make a Sense roll at -4 to realize that he's being attacked! (He may defend normally against later uses.) This is a standard ranged attack with Acc 3, 1/2D 10, Max 100, and RoF 1. It requires an Attack maneuver and a roll against Judo or Push to hit. On a hit, roll damage, double it, and assess knockback but no injury. *3 points.*

The playtesters proposed a *lot* of additional Style Perks, and many of them went into the book -- including Clinch (p. 51), Neck Control (p. 50), and Strongbow (p. 51). Some didn't make it in, though. In most cases, this was because the testers felt that the proposed perk was unbalanced, or at least needed more testing than we could give it. One perk lost out by only a slim margin, largely because the playtest ended before the debate as to whether it was balanced.

Focused Fury

Unlike most fighters, you can combine *Mighty Blows* (p. B357) with Committed Attack (Strong), raising the damage bonus to +1 per die or a flat +2, whichever is better -- like All-Out Attack (Strong). You can also "stack" it with All-Out Attack (Strong), improving its damage bonus to the better of +2 per die or a flat +3. Either use costs 1 FP per blow.

Chapter 3 -- Techniques

This chapter was jam-packed even in the first draft, and the few techniques that the playtesters really felt needed to be added all ended up playtested and shoehorned in. Still, there was one outtake, cut mostly because not everyone agreed that we needed it in light of *Counterattack* (p. 70), *Stop Hits* (p. 108), and *Riposte* (p. 124).

Deceptive Parry

Hard

Default: prerequisite skill Parry-4.
Prerequisite: Any unarmed or Melee Weapon skill; cannot exceed prerequisite Parry.

This technique involves a risky defensive maneuver that opens up your attacker to a counter. In effect, you start your own attack early to take advantage of your parry . . . at the risk of failing to defend! You must declare this gambit before you defend against a given opponent. It gives you -4 to all defenses against that foe. Deceptive Parry lets you buy off this penalty for Parry, but not for Block or Dodge. If you successfully parry your enemy's melee attack, he has -4 to defend against your *first* attack if he tries to parry with the weapon or limb that you just parried. This has no effect on his other defenses, including parry attempts with other weapons or limbs.

Chapter 4 -- Combat

We were strongly opposed to outtakes here. Whenever several styles in Chapter 5 required the same special combat rule, it was more efficient simply to add it once in Chapter 4 . . . so as with Chapter 1, every word cut here meant

several new words later on. Another way to put it would be to say that this part of the book represented a lot of research and rules design, and everything in it was something that we *really wanted* to include.

This was also the chapter that grew the most due to playtester-requested additions -- mostly, we agreed and added things. We decided not to include controversial items, though. The following optional rule is just one example.

Practice Makes Perfect

When rolling to hit with a technique, how you achieved your skill level is unimportant; e.g., a karateka with Karate at 18 and Jump Kick at default and one with Karate at 14 and 5 points in Jump Kick both have Jump Kick at 14. But constantly practicing one move toughens body parts and provides hard-won experience that accuracy doesn't really reflect. For every two *full* points in a technique, you get +1 on rolls to avoid any negative consequences it has (falls, self-inflicted harm, etc.), and on non-combat skill rolls required to set it up or recover from it. For instance, if you raise Flying Jump Kick from Karate-7 to Karate for 8 points, you get +4 to the DX or Jumping roll to set it up and the DX or Acrobatics roll to avoid falling if you fail. This bonus never modifies attack or defense rolls -- only incidental rolls.

Chapter 5 -- Styles

By now you're probably sensing a trend: "If the playtesters convinced us that something was necessary to make *Martial Arts* a complete work, we added it." Guilty as charged! And even with the extra 16 pages that a 256-page book gave us, we had to make space for all of this somewhere. Chapter 5 bore the brunt of the cutting simply because it was the longest chapter by far, and many of the styles it described were very similar to other styles.

Here are the missing styles in all their glory. These first two were originally part of *Stickfighting* (p. 157).

Egyptian Stickfighting

4 points

Ancient Egyptian tomb murals depict stickfighting done for the amusement of the pharaoh. They also show boys practicing stickfighting -- either as training for war or as a combat form in itself. Shields aren't in evidence, but warriors of that era would have used them in warfare.

Skills: Shield; Smallsword; Wrestling.
Techniques: Arm Lock (Wrestling); Armed Grapple (Smallsword); Disarming (Smallsword); Feint (Smallsword).

Optional Traits

Advantages: Combat Reflexes.

Tapado

3 points

Tapado is a form of Filipino stickfighting that uses a jo-like stick wielded in two hands. Practitioners usually study it in conjunction with other Filipino martial arts.

Skills: Staff; Two-Handed Sword.
Techniques: Disarming (Staff or Two-Handed Sword); Feint (Staff or Two-Handed Sword).
Perks: Form Mastery (Staff).

Optional Traits

Advantages: Enhanced Parry (Staff).

The third and final style we removed was part of *Jujutsu* (p. 166). As a matter of trivia, it was also the original inspiration for the *Styleô* box on p. 27.

Small-Circle Jujitsu

4 points

Small-Circle Jujitsu is the style of Hawaiian judo and jujutsu master Wally Jay. It depends more on stand-up locks than on ground fighting and throws. Its name refers to the art's basic principle for manipulating an adversary's limbs or joints: the practitioner pushes the opponent with the thumb and hand while pulling with the arms, the resulting motion describing a small circle. This simultaneous push-pull action uses the victim's body to provide the leverage needed to throw him or place him in a lock.

Small-Circle Jujitsu emphasizes controlling the opponent via joint locks, finger locks, arm bars, and pain compliance. The stylist counters an assailant's strikes and grabs with locks and throws. He rarely lets go after a throw, instead holding on and following up with a painful lock. In a lethal situation, he might incapacitate his foe with chokes and damaging locks -- but the style stresses rendering the adversary helpless, not crippling him. This defensive emphasis is evident in the stylist's preferred maneuvers: Wait, All-Out Defense (Increased Parry), and Defensive Attack.

Cinematic Small-Circle Jujitsu masters have little access to chi abilities. They should have remarkably high levels of Judo, Arm Lock, and Finger Lock, however, and use the Technique Mastery perk to exceed the normal limits of those techniques!

Small-Circle Jujitsu has both combat and sport aspects. Fighters train for self-defense and uncontrolled conditions, but also learn to control or choke out an opponent safely in a dojo. Training covers reviving a partner rendered unconscious by jujitsu techniques, and many students go on to learn full-fledged first aid as well as basic CPR. Because of these factors -- and the style's emphasis on controlling an opponent with pain instead of injuring him -- Pacifism (Cannot Kill) suits many stylists.

Skills: Judo; Judo Sport; Savoir-Faire (Dojo).
Techniques: Arm Lock; Breakfall; Choke Hold; Finger Lock; Leg Lock.
Cinematic Skills: Mental Strength.
Perks: Technique Mastery (Arm Lock); Technique Mastery (Finger Lock).

Optional Traits

Advantages: Empathy.
Disadvantages: Pacifism (Cannot Kill).
Skills: First Aid; Judo Art; Karate.

> *Techniques:* Leg Grapple.

As in earlier chapters, not *every* idea that came up during the playtest made it into print. Here's a small box that didn't quite make the grade. We thought it was kind of neat, because it really suited certain kinds of martial-arts fiction. The playtesters assured us that it was also rather *obvious* . . . so we quietly set it aside for this article.

> ## Balanced Development
>
> Meditation, Philosophy, Theology, and even Mathematics are core skills for styles with a strong intellectual element. In a game that favors this angle over violence, the GM may forbid warriors to learn combat skills at a higher level than their style's more intellectual skills. In return, Mental Strength and Tactics default to such cerebral skills at no penalty -- as does the Feint technique, making wise masters as tricky as agile ones.

Chapter 6 -- Weapons and Equipment

Needless to say, given Man's gift for coming up with new and brutal ways to kill his fellow man, weapons could have filled all 256 pages by themselves. The abbreviated glossary format let us include a *lot* of weapons. Then the day after we submitted the final draft, Sean saw a picture in his local paper and realized that he had left out one of his favorites . . .

> **Haladie --** *India, Sudan.* A knife with blades above and below the grip. Treat as a LARGE KNIFE (pp. B272, B276) that lets the user choose freely between the rules for a normal grip and a Reversed Grip (p. 111), as best suits the task at hand. It cannot pummel and gives -1 to skill. $80, 1.5 lbs.

Nothing Constant but Change

I remember when *The Matrix* was released. (Writing the previous sentence strikes me as funny, but I realize it came out almost a decade ago, so anything in that time frame starts entering the foggy realms of "memory" for me . . . really, as does anything from before the previous commercial break[1].) At the time, I remember being relatively dismissive of *The Matrix* (that's what we were talking about, right?), a movie whose word-of-mouth advertising existence seemed to revolve around the shocking mystery of "What *is* the matrix?" . . . a question which turned out to be answered within the first 20 minutes of the movie. (Answer: The matrix is a computer program we're all trapped with . . . not unlike Microsoft Office.)

Worse, the revelation of the questions raised more answered than were answered. Why did the heroes ever need to re-enter the matrix, once they found The One? If the Agents were willing to modify reality to catch the rebels, why didn't they just drop an a-bomb on Neo Tokyo or wherever they were? Why were the heroes so willing to mow down so many innocent battery-humans in their quest to free humanity? Why did the computer reforge reality in the form of an era where questioning reality is practically the norm? Why not, say, Middle-Ages Europe, where everyone was too terrified to question the establishment? If the Agents were trying to find the rebels, why didn't they just do a global search for everyone in the matrix wearing a leather jacket and shades, and send a jillion agents there? You'll either mow down rebels or goths, and either one is a win.

Anyway, I remember being derided by many of my friends for my own relative lack of enthusiasm for the film. Which isn't to say I hated it . . . but for many ensorcelled by the film's charms, anything less than prostrate fawning was seen as a declaration akin to "Isn't your religion kinda fruity?"

Fortunately, the second movie was pretty much a wake-up call to the world that maybe this wasn't the greatest movie franchise of all time. (Curiously, I enjoyed the second one about as much as the first, although I haven't even gotten around to seeing the third one yet.)

Anyway, in a span of four years between the release of *Matrix* and *Matrix Reloaded,* the franchise found itself crashing and burning in a most spectacular way. I was reminded roundaboutly of this fall from grace in a comment I read in a Newsarama interview with comic-book writer Jeph Loeb about the recent funeral for Captain America. (It made major network news, so I don't think a spoiler warning is in order.) In that interview, Jeph said, "It wasn't that long ago that [Captain America's] title was instantly forgettable. But, who would have guessed two years ago that the Avengers group would eclipse the X-Men?! You'd think I was crazy if I made that statement." (Captain America was the leader of the Avengers super-team.)

Indeed, for those who work or worked at a Friendly Local Comic Shop -- which often occupies the same time-space as a Friendly Local Game Shop -- the notion that any comic series could supplant the all-powerful X-Men's numbers was one that's been ludicrous for a decade.

And, bringing it to the world of gaming, I note that nothing is permanent on a long-enough timeline.

On the retail side of things, games that seem unstoppable can eventually fade or stumble. The most quintessential example of this is the purchase of TSR, Inc. by Wizards of the Coast in 1997 (a true decade ago!), which was the nadir of a long decline for the once-mighty company. This itself was made possible by ***Magic: The Gathering's*** meteoric rise, a game that came almost out of nowhere to become the cornerstone of a new genre.

On a more personal level, I've learned first-hand that campaigns players once enjoyed can find their interest dwindle, either one bad decision, a general string of ill-enjoyed decisions, or even by other commitments from the gamers. Likewise campaigns that started out having a hard time getting gamers would eventually develop a waiting list of requests to join.

Star Wars went from being the backbone of West End Games to nothing more than a fond memory. A different little game about being a vampire went on to form the foundation of one of the largest RPG publishers. Baseball was once

America's pastime, but has since been supplanted by football.[2]

The point of all this? Simply to note that nothing is certain, and even the most unmovable rock can be whittled away by the rain and . . . um . . . rock-eating birds. If you enjoy a game that isn't popular currently, it might become so some day (perhaps partly because of an effort of yours). If you're part of a gaming group that everyone enjoys, don't take it for granted that it will always be such; take the time to maintain levels of communication with your fellow gamers to help ensure the future, and enjoy the present for the fleeting pleasure that it is. If you're trying to get a game going but you can't find the players or the interest, revisit the issue periodically; tastes might change, as may your circle of associates.

And always beware of sequels of beloved movies . . . consider spending that time instead watching a [RiffTrax](#) version of a semi-loved film instead.

* * *

Some of you might have noticed that we've run Murphy's Rules for two weeks in a row, after a week's hiatus two weeks ago. Yes, we rejiggered its release schedule for a couple of weeks in order to bring up to speed the Murphy's Rules Committee -- a team of experts whose job it is to read through, check, rephrase, and polish Murphy's Rules submissions. As a result, hopefully Murphy's Rules will contain 135% less wrongness than they have before.

So, from the bottom of my heart[3], I wish to thank Roger Burton West, Reverend P. Kitty, Franklin Cain, and Fred Brackin for their efforts. The revised submissions are already generating buzz, and artist extraordinaire Greg Hyland has also been impressed with the Committee's efforts.

(And for those of you submitting your own found Murphy's Rules, nothing's changed; keep sending 'em to murphy@sjgames.com.)

Star Wars Miniatures: Space Battles CMG

Published by [Wizards of the Coast](#)

Designed by Rob Watkins, Ryan Miller, & Bill Slavicsek

Sculpture by Mark Goetz & Paul Hebron

Illustrated by Jeffrey Carlisle, Daniel Falconer, Langdon Foss, Matthew Hatton, Jonathon W. Hill, Warren Mahy, Christian Pearce, Chris Trevas, & Anthony Waters

Cartography by Marc Goetz

Starter Set: 10 Pre-Painted Miniatures, 10 Full Color Double Sided Stat Cards, 22 By 34-Inch Full Color Double Sided Map Sheet, Damage & Command Counter Sheet, Two Fleet Command Sheets, Play Summary & Set Checklist Sheet, 40-page full-color & 20-Sided Die; $39.99
Booster Set: Seven Pre-Painted Miniatures & Seven Full Color Stat Cards; $21.99

With all of the current Collectible Miniatures Games still stuck on the ground or at sea, it is pleasing to see one take to the stars, and the Star Wars universe, no less. Having already done ground battles with *Star Wars Miniatures: Rebel Storm* and it many expansions, Wizards of the Coast take the same format and apply it to the spaceships and starships of the same franchise. There are certainly similarities between that game and this one, but then both are based on the *d20 System* version offer *Star Wars RPG.* What this means is that *Star Wars Miniatures: Space Battles* is both easy to learn and easy to play, and because the miniatures are based on inanimate objects rather than individuals, all of the spaceships look pretty good.

The first thing you need to know about *Star Wars Miniatures: Space Battles* is that it draws from the Classic and the Prequel trilogies for its ships, so you can pit the Millennium Falcon and a Jedi Interceptor against a Sith Infiltrator and a TIE Fighter. (Just as long as you no problem mixing the time periods, that is . . .) The second thing you need to know is that none of the ships are in scale with each other and with each figure representing a single vessel; a starfighter looks really big alongside the largest, a fleet flagship -- or the other way round, of course . . . The last thing you need to know is that this game is collectible, and comes packaged in the standard Starter and Booster set format -- both of which are difficult to actually open. The downside of this being that getting the figures that you want is either going to be very expensive unless you hit the singles market.

The *Star Wars Miniatures: Space Battles Starter Set* comes with everything necessary for a two-player game, most obviously the 10 figures divided equally between the Light Side and the Dark Side. Two miniatures are exclusive to the Starter Set, the Mon Calamari Star Defender Viscount and the Super Star Destroyer Executor. These are large models, 6¾-inches and 7¼-inches long respectively, representing each side's Flagship. The remaining eight ships are randomly determined. The ships of both sides are easily differentiated by their bases -- circular for the Light Side, octagonal for the Dark Side. Ships are divided into four categories: Class 1, Fleet Flagships like the Executor; Class 2, warships and armed transports such as the Imperial Star Destroyer; Class 3, shuttles, transports, and light warships,

such as the Millennium Falcon and Slave 1; and Class 4, starfighters such as the Y-wing. The miniatures vary in size, from an inch to three inches long. All of the miniatures are nicely detailed, decently painted, and mounted on inch-tall stands. On the base of each is marked its set icon and number, cost for fleet construction, faction, name, along with its rarity. Like the ground miniatures game, rarity is determined by size and status within the Star Wars universe -- if it is large or belongs to a named character, then it is rare.

Each ship has an associated double sided Stat Card. One side gives its information when at Full Strength, the other at Reduced Strength. Besides duplicating the information from ship's base, a Stat Card lists its weaponry; Defense values for front, rear, and sides; and two numbers for its Hull value. The lower number represents the amount of damage a ship can take before its effectiveness is reduced and the Stat Card flipped over. The higher number is the amount of damage it takes to destroy the ship. Class 4 ships do not have a Reduced Strength and are destroyed when flipped over.

Larger vessels can also have a PD or Point-Defense value (enabling them to attack adjacent starfighters), and a Command number. A player can use these to give specific orders to one class of vessel under his command each turn. For example, the "Evasive" command gives Class 4 ships or starfighters an extra defensive bonus against Point-Defense during attack runs. Many ships also have their own special abilities. The most common is "Fighter Launch," which lets larger vessels deploy starfighters; but others include "Interceptor" (a fighter can avoid intercepting fighters unless they also have the "Interceptor" ability); "Anti-fighter Targeting"; "Tractor Beams"; "Damage Reduction"; "Droid Control"; and "Long Range Bomber." These abilities simulate the feel of things seen on screen. For example, Slave 1's "Bounty Hunter" ability gives a targeting bonus against "unique" or named ships like Luke Skywalker's X-wing or the Millennium Falcon; while the Rebel Transport's "Sensor Array" awards a bonus to adjacent Class 4 ships, so it's useful to keep them close as in the evacuation sequence in *Empire Strikes Back.*

The game's other components include the large Stellar Grid, or star map, which is marked in two-inch squares and depicts deep space above a planet on both sides; a play summary and set checklist sheet; a Fleet Commander sheet for each player; and a sheet of Command and Damage counters. These do feel flimsy and the Stellar Grid has a lot of folds in it. The last item in the Starter Set is the rulebook, of which less than half is devoted to the rules, one third to describing the vessels in the base set; and rest to a glossary for the game. The rules themselves take 15 minutes to read through and are easy to understand.

A game begins with the players selecting a side, choosing their ships, and setting them up, bar starfighters, on opposing edges of the Stellar Grid. A game lasts until one side eliminates the other, and each turn has four phases: initiative, movement, combat, and damage. Following the initiative roll, the loser moves his ships first and fires last, while the winner moves his ships second and fires first. Movement is dependent upon ship class; the lighter the class, the faster and the more maneuverable it is. Class 1 ships literally lumber along in comparison to Class 3 and 4 vessels. Class 4 ships do not start play on the Stellar Grid, but form a pool of starfighters that are deployed from Class 1 and 2 ships in play. Once deployed, a starfighter can move next turn.

Combat is done weapon system by weapon system, a weapon's bonus added to a die roll to beat the target ship's Defense value for that facing. A successful hit inflicts damage equal to the weapon's damage rating, damage counters being placed beside the target ship's Stat Card. After all combat has been resolved, damage is applied to take effect simultaneously. If the number of counters beside a Stat Card equal or exceed a ship's current Hull value, it is either flipped over to its Reduced Strength or is destroyed. What this combat system ignores is range and line of sight. Every weapon in ***Star Wars Miniatures: Space Battles*** can target any vessel in play, whatever the distance and even if it is behind another ship. Class 4 ships are the exception, being able to target adjacent vessels only, and in return are the only ships that can be targeted by Point-Defense weapons.

The advanced rules cover fleet construction, using the Command Counter options, team play, and scenario creation. A single scenario, "Clash over Coruscant," is included. Using the special abilities is also classed as part of the advanced rules, but since they are there on the Stat Cards, players will want to use them anyway. Unfortunately, neither fleet construction nor playing the given scenario is possible straight out of the Starter Set, and at least two booster packs (each of which contains seven randomly determined miniatures) are required if the players are going to enough ships to create and play a fleet based on the suggested 300 points. And certainly a whole lot more are required if a player wants to customize his fleet or create scenarios.

Actually, ***Star Wars Miniatures: Space Battles*** is attractive, fun to play, and easy to play from the Starter Set. The game's most difficult aspect is the various special abilities, and they are not a challenge. What will be a challenge is getting enough figures to create fleets and scenarios, particularly if you want to concentrate on one era, and all that takes is buying more Boosters. In the long term though, the game is too simple, lacking the depth that something like ***Attack Vector,*** *[Battlestations,](#)* or *[Federation Commander](#)* definitely offer, though with accompanying complexity.

Star Wars Miniatures: Space Battles has a video game quality that will appeal to the younger player. Its simple mechanics and ship special abilities work hard to get the feel of the battles we have seen in the movies, with swirling fighters and lumbering Star Destroyers, but the numbers required do call for some investment. For the more demanding player, ***Star Wars Miniatures: Space Battles*** is a ready source of Star Wars starships for the rules of his choice.

--Matthew Pook

Pyramid Review

Mysteries of Hungary (for *Call of Cthulhu*)

Published by [Chaosium, Inc.](#)

Written by László Dózsa

64-page b&w softcover; $14.00

I am a complete, unabashed sucker for all things */Call of Cthulhu.* Whatever it is, I buy it, bookmark it, collect it, wear it, plaster it on my bumper, you name it. So when three new monographs went up on the Chaosium website in mid-May, I faithfully whipped out the credit card and ordered them. Upon their arrival, I immediately picked up the first one and began to read. As luck would have it, fate chose for me *Mysteries of Hungary.*

I can't begin to describe how disappointed I am . . . but I'll try. I do not believe it was written by someone who speaks or writes English. Not doesn't speak or write it well, but doesn't speak or write it *at all.* Okay, maybe not "not at all," but it clearly only barely qualifies as a second language. My guess is it was originally written in the author's native Hungarian, and then he translated it into English, using his rudimentary skills and extensive use of either a Hungarian-English dictionary or a translation program.

(Remember the Monty Python sketch with the deliberately mangled Hungarian-to-English phrasebook? The one where the Hungarian for "Cigarettes, please," is translated to "I will not buy this record, it is scratched," and "I would like some matches, too," becomes "My hovercraft is full of eels!" The author -- and I believe us readers -- may have been better served had he used that book instead of whatever he actually did take in hand to create this monograph.)

Think I'm exaggerating? Check out these sentences:

- "The abbot didn't allow to give the manuscript to the library, that's why you can find only one, later the librarian got it."
- "The signs are graved in the wall, a draw about each of them can be found in the Academy, mixed with the other artifacts, but is more simple if the searcher goes to the place copy the original."
- "The Yithians didn't use this system, because the chambers were separated, and it issued too later, when they had their resting place."

I realize I'm coming across as mean here -- I'm sure Mr. Dózsa is a big *Call of Cthulhu* fan and wanted to add something to the growing Mythos canon. And the inherent tradeoff in Chaosium's monograph series is the author(s) do nearly all the editorial, layout, and graphics work, with minimal help or input from the publisher, which allows Chaosium to affordably print the short print runs books like these require. But there's a difference between minimal help or input and *no* supervision, and I can't believe Chaosium let *Mysteries of Hungary* out the door with their name on it.

It's much more than just the author's lack of command of the language. Long before I considered writing this review, I contacted an old friend of mine who works at Chaosium about this book, and he told me that they "wrestled" with the decision whether or not to publish the book, but ultimately decided not to "discriminate against non-[E]nglish speakers." If that was the only problem, maybe -- just maybe -- I could buy that. But it isn't.

Mysteries of Hungary is also full of typographical errors, with multiple mistakes per page. There is also some special character (an accented vowel or something) that is universally converted to an underline, so that a major NPC (among others) is referred to throughout the book as "Tamás Gy_z_." In the full writeup of this same character, we get a list of his 24 spells, and his major artifact . . . but not his Cthulhu Mythos score. In another section, a description of a new

Mythos tome includes the not-so-helpful, "the following spells are available:" . . . and then lists no spells. Since the book boosts Cthulhu Mythos by 18% and has a 1D10/1D20 SAN loss for reading it, I can only assume those spells must be humdingers; if only Dózsa had remembered to put them in.

But those are the glaring omissions. What about the things he put in? Well, I can say a few nice things here. The book's organization is good; he starts with the history of Hungary, from the second-century Romans up through WWI and into the '20s and early '30s. He includes the myths and legends of the area, including the hidden burial place of Attila the Hun and a Mythos-based idea I really liked about what should happen if it is ever found and opened. The next few chapters cover the economics of the time; Budapest; specific countryside locations that may be of interest; adventure-related information (how hotels work, how to obtain a car, how to catch a train, how to bribe a cop); and Mythos activity. This last chapter was disappointingly skimpy. If you're going to bother to write a Mythos supplement about a place, wouldn't you want a lot of Mythos stuff going on? But Hungary isn't exactly a hotbed of evil, and a lot of what is there is trying hard to stay underground.

And then there's the one Mythos tie-in the author missed: the Black Stone. Taken from the Robert E. Howard story of the same name, the Black Stone is an obelisk with strange markings (now mostly weathered and chipped away, thankfully) raised up outside the town of Stregoicavar, west of Budapest. Suleiman himself wiped out the cult village that was practicing human sacrifice and other evils when he swept through the area in 1526, but the obelisk still stands. Those who gaze at is too long are driven mad. Those who sleep too close to it are visited by disturbing dreams for the rest of their lives. It's a legitimate, living breathing literary tie-in to the Cthulhu Mythos, and there are a bunch of wonderful scenario ideas you can connect to the Black Stone -- unless you don't bother to put it in your sourcebook about the Mythos in Hungary.

The book wraps up with an adventure I didn't care a lot for, as it seems the party has a very small chance of picking up the clues they need to figure things out without a deux ex NPC, and then a very small chance of surviving the encounter with the Big Beastie at the end without similar help. After that are a few pages on Hungary in gaslight and modern-day roleplaying, and a system for wizard dueling that seemed overly complicated and completely unnecessary (and didn't seem to have a whole lot to do with the Mythos, either).

Oh, and the book is remarkably art-light, even for a monograph. And it really could have used a map. A book called **Mysteries of Hungary**, that described the geography, neighbors, major cities, and dozens of locations within Hungary, really, really needed a *map of Hungary.* C'mon, Chaosium -- if the author didn't provide one, you had to step up and do it. Or send it back and tell him to.

It seemed like nobody at Chaosium actually read this manuscript before it was printed. Now I've been told that's not true, so I'm going to make another guess: The folks at Chaosium read it, but the grammar and writing was so bad, they never got into actually reading what the author was saying, and thus missed the typos, the tome without a spell list, the NPC without a Cthulhu Mythos score, etc. I know monographs are designed to be low-budget efforts, but there is no excuse for publishing something this incredibly shoddy under their corporate banner. I am totally appalled.

--Scott D. Haring

The Terrifying Plot of Dr. Z!

Episode 4: The Hordes of Mongolia!

by Matt Riggsby

When we [last left our heroes](), they were fighting a reanimated mummy. Khuthmet is faster than he lets on, quite durable, very strong, and very focused on killing the PCs.

Mummy to Burn Before the Trip to Ulan Bator

The reanimated Khuthmet is a mindless killing machine. He can be deceived, but he won't listen to (and probably can't understand) anyone speaking to him. He has a contraption of metal and crystal on the back of his head, the device which Dr. Z has used to reanimate him. If it is destroyed (-7 to hit, DR 4, 6 HP) or yanked out (Grapple from behind and win a contest against ST 14), Khuthmet stops moving immediately.

Khuthmet

If the PCs didn't learn Dr. Z's destination from Miss Papillon, they'll have to dig around the Cairo underworld, break into the German consulate, or find sympathetic ears in British intelligence. Once they find out, regularly scheduled flights to India area available and charters can be arranged from there to Mongolia.

Ulan Bator is a jumble of brick and mud-walled structures. The few nods in the direction of modernity are some embassies and concrete buildings housing the government, and a primitive aerodrome at which the PCs land. There is, alas, no airship to be found there. However, anyone the PCs can get an answer out of can tell them that it was there briefly a few days earlier, then left. The aerodrome's administrator, who is equally fluent in the English language and American dollars, could be bribed to provide them with exact times of arrival and departure, but no one bothered to ask the SS zeppelin to file a flight plan. The airship simply touched down, refueled while the commander talked to a few local German diplomats and expatriates, and took off in a more or less northerly direction.

The PCs also learn that if they had arrived a little earlier, they might have talked to the men the zeppelin left behind: two Chinese men in Western clothing (the PCs might identify them as some of Dr. Z's thugs). They bought some

barrels of aviation fuel and left in a hired Fokker trimotor, heading northeast a few hours ago.

The thugs are long gone, but tracking down the diplomats and expatriates won't be hard, since there aren't many in Ulan Bator, and the job can be made easier by tracking down the workers who helped refuel the zeppelin. A few aerodrome workers, who are happy to talk to anyone willing to buy them drinks, will identify a man in a military uniform and an angry man wearing a tweed jacket and a funny-looking peaked green cap.

The man in uniform is Colonel Heinrich Urike, the prickly military attaché to German consulate. The angry man is Herr Doktor-Professor Siegmund Dorfwaller-Jennsen, an archeologist and historian working on an authoritative biography of Ghengis Khan. Urike is potentially dangerous. Reitermann briefed Urike on the peculiar circumstances under which he picked up Dr. Z, and if he spends any time with the PCs, he may suspect their true identity. If he does, he'll alert Reitermann and suggest to the local officials that the PCs are dangerous criminals.

The professor is a different story. He's upset at the SS for what he sees as a perversion of science. He'll take some coaxing to get into details, but will eventually talk to someone who he can regard as a fellow scientist. The professor, who can be found at informal gatherings of Ulan Bator's tiny community of intellectuals (engineers, missionaries, and academics of all nationalities), believes he has found nothing less than the legendary lost tomb of Ghengis Khan. And what does the SS intend to do? They intend to dig it up and give the priceless riches no doubt buried there to some mad scientist in return for a bit of technological frippery. He has no idea what it is, but, if pressed, will relate the vague impression that it's some far-fetched weapon. And they've taken his notes as well! PCs inclined to larceny can learn as much from sneaking into his home office and reading his almost obsessively detailed diary, but they'll notice that there are several obvious gaps on the professor's otherwise jumbled shelves and except for a single new journal going back only a week or two there are almost no records of a personal nature more recent than five years ago.

Asking around the aerodrome or keeping tabs on what's going on around the German embassy, the PCs can discover that the Germans are hiring trucks and buying food supplies. Though technically a secret, the locals hired to drive will let slip that they're heading to Batshireet, a town about 200 miles to the northeast; once there, they'll pick up a guide to show them to their final destination. The PCs could follow in their own vehicles, stow away, or even bribe the drivers to let them ride along. The PCs might discover the name Batshireet among Dorfwaller-Jennsen's papers, though he'd only reveal the name by mistake and would refuse to elaborate; he's more concerned with credit for his discoveries than the Furher's state secrets. Whatever they find out, it appears that whatever the Germans are up to, that's where it's happening.

The Long and Winding Road

The trip is long and difficult. The trucks are in poor repair, roads are few, authorities at checkpoints are uncooperative, and terrain forces the drivers to take a roundabout route. With stops for repairs, new tires, and asking directions, the trip takes nearly two days. The drivers pick up a guide in the nondescript town of Batshireet and head east for another day of more difficult terrain. Towards the end of the day, sharp-eyed PCs may catch glimpses between the hills of a long gray shape: the zeppelin.

And that's not the worst of it. Beyond a few hours travel from Ulan Bator, authority belongs to those strong enough to enforce it. And out here, just a few more hours away from their objective, they find one of those people with enough strength: Alexei Borovitch Koskov, terror of the plain.

The heroes catch glimpses of individual horsemen, even small groups, through the trip. Usually, they're just travelers or herdsmen. Sometimes, they're scouting for bandits, as is the case here. With the hills and scattered patches of trees to hide them, the supply caravan suddenly finds itself outnumbered and surrounded by forty to fifty armed men on hoses (see sidebar for stats).

Alexei's band makes a brave and threatening display, but doesn't open fire on the convoy unless fired upon, which the drivers aren't stupid enough to do. When the convoy has stopped and the drivers have had a chance to surrender -- which they do, -- Alexei comes forward, a larger, paler-skinned version of his men. He cheerfully announces that he and his band will relieve them of any valuables, giving them a lighter burden for the remainder of their journey.

The drivers are happy to escape with their lives (and the trucks; the horse-riding nomads aren't interested in them). The adventurers are likely to feel differently about it. Alexei will happily make a bargain with the PCs: their valuables in return for their lives. He's impossible to intimidate but he's got a sporting streak. He probably won't suggest it, but he'll allow PCs who win a "manly" contest against him or a champion (wrestling, drinking, riding, etc.) keep a valuable item of their choice.

However, they'll see a tremendous change in his attitude if they convince him that they're pursuing a German airship. "German? I am hate the German! Karl Marx is the German! Come, we go!" And with that, he and his men are off in a flurry of dust and enthusiastic shots into the air.

Living a Chased Life

Once started, Alexei is nearly impossible to stop. That's just fine if the heroes just want to attack the Germans, but one of the PCs might still be a hostage on board, and they might want to find out what Dr. Z's thugs are doing with a mid-size aircraft and extra fuel. If they want a chance at getting onto the airship, they'll have to hurry, racing the fragile trucks cross-country over rough hills rather than taking the easier but more roundabout route Alexei and his men are taking.

With a mad dash and a few Driving rolls, the PCs can reach the valley ahead of Alexei's horde, though they may lose a tire or two and the transmission near the end. The zeppelin is moored at the bottom of a broad valley surrounded by several low, lightly wooded hills. A number of natives are apparently being employed as diggers a bit up a hill near the zeppelin, lazily supervised by a few German officers. The PCs also see a small group of tents (lodging for the diggers) and clusters of crates and bundles (provisions and other supplies, mostly for the diggers); they do *not* see the plane chartered by Dr. Z's thugs. The hillsides around the valley have sufficient cover that stealthy PCs could get fairly close to the zeppelin or the diggings before there was a significant chance

In-Flight Entertainment

If one of the PCs was captured in the previous episode, he is greeted cheerfully on board the zeppelin by Miss Papillon, wearing a cute aviator's outfit, and then more condescendingly by Reitermann. He's then thrown in irons in the airship's small but extremely well-guarded brig for the duration of the journey. He'll find out that Dr. Z has sold the Germans an untested but allegedly functional concentrator in

of being seen, though that's as much due to an almost complete lack of vigilance. They could also ride a truck straight downhill and get there very quickly, though they'd attract a lot of attention and render the truck undriveable. Very fast PCs could make it as far as the zeppelin's gangway or into the relative cover of the diggings.

Whatever of their destination, the PCs get there around the time Alexei's band comes into sight in a gap between hills, guns blazing if not terribly well aimed. Initial German resistance is confused and chaotic. It eventually focuses on the noisier, more numerous Mongolians, though Reitermann, who happens to be in the zeppelin's control cabin, surveys the entire battlefield. Recognizing the PCs, he taunts them over the zeppelin's intercom system and orders to them to lay down their arms.

Soon, as the zeppelin's engines start up for a quick takeoff, a bright beam of light stabs up into the hills from the control cabin into the hills, burning trees and the occasional Mongolian. Dr. Z has sold the Germans a functional concentrator.

An ambush gone wrong! A fearsome weapon in the hands of a new enemy! Come back next time for another episode of The Terrifying Plot of Dr. Z!: Shadows in Siam!

return for buried gold and has flown on to Bangkok. The chaos caused by his companions' arrival may be enough of a distraction to the guards to allow him to escape.

Henry's America

by Paul Drye

James II fled west from the oncoming armies of the Dutch William and his English wife -- James' daughter Mary -- eventually embarking on a ship in Portsmouth bound for the American colonies. With him was his favorite John Churchill, better known on Homeline as the Duke of Marlborough. Churchill's military brilliance showed on this timeline too, as he forged the outnumbered Stuart loyalists in Virginia, Maryland and Carolina into an army. The Spanish to the south and the supporters of William and Mary in Pennsylvania and points north were defeated or cowed, and the Stuarts could take control of the southeast corner of North America.

By 1691, James was ruler of a large (if under-populated) American kingdom. Showing his typical bull-headedness he swore to return to Britain one day and reclaim his three lost thrones, but even Churchill couldn't turn a country of perhaps 100,000 citizens into a threat to the British. William and Mary, for their part, were more occupied with the machinations of Louis XIV and remained content to leave James alone on the far side of the Atlantic.

Once James was safely established in America, his young heir and namesake was brought across the Atlantic as well. The older James II died in 1703, the throne passed to his son, and that was the last peaceful transition of power in the Kingdom's history.

James III had four sons and, in an attempt to stabilize the Stuart hold on America, gave them wide holdings and powers in the nearly empty country. By his death in 1768, those lands were no longer so empty and each of the four had a power base from which to contest the succession. Three did, the fourth being the legitimate heir Robert I; the new king was, unfortunately, an imbecile and his brothers used this as a pretext to move. Robert himself was supported by other nobility interested in a weak head of state. After three years, the First Succession War ended with the second son, "Edward VII of England, Scotland, Ireland and America" assuming control.

The three surviving branches of the family -- Edward's Stuart-Carolina and his brothers' Stuart-Albemarle and Stuart-Fairfax -- have continued to contest each succession, even intermarrying in futile attempts to stave off the next conflict. The latest king is the young Henry X of the Stuart-Fairfaxes, a figurehead for his more elder relations.

Infinity in Henry's America

Homeline made contact with this timeline in local year 1888; it is now 1893. On Quantum-7, Carolina-2 (as it was named) is relatively difficult to reach, but Infinity keeps an eye on it as a possible front in the war with Centrum. This was particularly true until two years ago as the timeline was embroiled in an early World War; there were worries that Centrum would try its usual trick of backing one side in an attempt to produce a world government. However, the war ended in 1891 and Infinity's operation has shrunk considerably as their attention shifted to other candidates for trouble.

Trade and other contact with Homeline is minimal. Apart from Infinity's Centrum-related interest, Carolina-2 has no notable resources or technologies, nor is it a magical timeline. There is a little evidence that psionics may work here, but if so they are rare and weak and so no attention has been paid to it.

The Kingdom

There are seven provinces in the Kingdom. Three are roughly the same as they are on Homeline: Virginia, Maryland, and Carolina (which was never split into north and south here). To the southwest of Carolina as far as the Altamaha River is Jacobia, while the lands on the far side of the Appalachian watershed are divided into Westmarch in the north and New Dorset in the south. The country is hemmed in by sparsely populated Mexican territories to the southwest, swampy and nearly uninhabited Florida to the south and the British subsidiary nation of Middle America to the north and northwest. The Kingdom does have an outlet to the Gulf of Mexico at the mouth of the River Idle (or, as it's known on Homeline, the Mobile River) thanks to a purchase of land from Spain about 50 years ago.

Each of the provinces is divided into many boroughs, which send representatives to the closest thing the kingdom has to a democratic government, the House of Burgesses. The franchise is quite restricted, only covering 15% of the male population; further, boroughs in older areas are smaller than newer ones and are tending towards becoming "rotten" -- permanently in the hands of the elite. Most of the burgesses are members of the noble class set up by James III to cement his connections to the rich and powerful of his new kingdom. The House has been growing in power over time, generally gathering more powers to itself whenever another succession war breaks out, but the king has several sources of extra-parliamentary income that let him ignore his raucous council if he thinks it's important enough.

The total population of the kingdom is about 10,000,000, but it's hard to say exactly. Stuart America has never had a formal census, and the recurring wars make it hard to get good estimates.

Carolina-2's rate of technological development has been about the same as Homeline's, meaning that the Industrial Revolution has spread to much of Northern Europe and the east coast of North America. The Kingdom of America lags behind Britain and France, and even Middle America and New England. Though there are industries in the large cities, the kingdom is geared towards agriculture and produces bulk goods hard to grow elsewhere in the developed world such as rice, tobacco, ribbon cane sugar, and cotton.

One major difference between the Kingdom and many other American Souths on other timelines is a relative lack of slavery. Whenever the Stuart monarchs got too strident in their claim to the British crowns, the British Navy would blockade the Kingdom's ports for a while and plantations dependent on export would suffer. Additionally, Stuart Catholicism and political necessity made the Kingdom legally tolerant to different religions to an extent unusual in the 18th and early 19th centuries. As a result, rather than having to rely on African slaves, cheap labor was available from Irish Catholics and Protestants from Great Austria escaping persecution.

In all, the Kingdom's slave population never exceeded 10%; pressure to segregate the races was much lower, and freedmen regularly intermarried with poor whites. In the modern, late 19th century era, Carolina-2's South is more like Homeline Brazil than it was in the period following the American Civil War. There's little legal discrimination, and Americans see a nuanced continuum of color from black to white. Socially, color is important and the new members of the middle class work hard to cover up any black ancestry, but there is little overt hatred.

Middletown

The capital of the Kingdom of America is on the same Virginian ridge as Homeline Williamsburg, though obviously that House of Orange-derived name was never destined to be applied to it on this timeline. Instead, the former settlement of "Middle Plantation," near Jamestown yet on much drier and sunnier land, became James III's seat and eventually the home of the Stuart monarchy down to this day.

The actual center of power is Huntingdon Palace, which is (to the amusement of those with historically oriented senses of humor) near the site of Homeline's College of William and Mary. It sits on the edge of a large ridge running

northwest to southeast; the main road to Jamestown -- Middletown's port -- is just to the southwest and runs directly towards the north shore of the James River three miles away. The bulk of the city itself is north of the ridge, though there are a few warehouses and shops to the south so that entire loads of goods don't have to be hauled up the ridge's relatively steep face.

Middletown is the largest city in the Kingdom, but still barely exceeds 150,000 people. In the last 50 years it's nearly doubled in size and is finally starting to look like the capital of a civilized nation. Gas lighting spread along the major streets in the 1850s, and the last dirt roads were paved in the 1870s.

The Patriotic Bands

Recently ended, the Great War pitted Britain and France against the Great Empire of Austria and their Italian allies. Naturally the Dominions of New England and Middle America sided with Britain, but eventually so did Stuart America. When Austria teetered on the edge of defeat in 1886 after a year of slashing cavalry attacks driving deep into Bavaria, the Kingdom jumped in looking for a share of the spoils. Instead, her troops were caught in another three years of war following the unleashing of Austrian poison gas at the armies and the stabilization of the front.

When the Kingdom's export trade collapsed in the aftermath of the war (much of France and Germany lacking in ready cash), plantations and mills closed or cut back and soldiers returning from Europe were unable to find work. Disaffected men with training in arms formed groups based around their former units, which were in turn scouted out by the noble families. On the death of James V in 1891, they were pulled into the new succession war. It rapidly became the worst one yet and the "Patriotic Bands" (as they came to be known) have stumbled into a position of political strength because all the contestants for the throne needed them so badly.

The Stuart-Fairfaxes control Middletown and much of Virginia, as well as the Carolina and New Dorset coasts. They're accordingly better off for cash and stick to paying regular troops. However, in the months that it took Henry X to secure Middleton he had to use the mercenaries, and now he's beholden to them for cash and titles.

The main opponent of the Stuart-Fairfaxes is "Stephen III" of the Stuart-Carolina line, who controls the interior of Carolina, Jacobia, and New Dorset; while physically larger, his area is less-populated and less-developed, and so he uses Patriotic Bands paid with spoil to raid Virginia. When that fails, he raids his own people -- it's a long-term failure as a strategy, but he hopes to overthrow Henry X before he runs out of loot.

Stuart-Albermarle's traditional base in Maryland was overrun early, but they still hold a spoiler position in the west across the Appalachians. His Patriotic Bands are less mercenary, primarily protecting the villages from which they sprang and generally expressing their dissatisfaction with the world by striking out against authority. "David III" stays ensconced in Gloucester (roughly on the site of Homeline Chattanooga) and hopes that neither of the other claimants pays him any attention until they've ripped each other apart.

Characters

King Henry X: A young man of 14, Henry has been king for two years, despite his Stuart cousins' attempts to dispute this. To most people, he's a cryptic figure controlled by the toxic figures of his mother, Charlotte of Portugal, and his chancellor George Capshaw.

Henry doesn't even want to be king, having been thrust forward as a candidate by his handlers. His life was much happier before the death of the previous monarch, when he was heir apparent to the Duchy of Fairfax. However, his father (styled "James VI") was killed early in the latest round of civil war and he was the new head of his family. Chancellor Capshaw is a political genius (if unscrupulous, and progressively more hated by the general public) and widely rumored to be Charlotte's lover, and he has used his control of Henry to propel the Stuart-Fairfaxes into visible power and himself into de facto rule. Henry remains largely cooped up in Huntingdon Palace far away from the semi-rural fields and forests of his earlier days.

He is a young, slight man of 14, with a thin-boned face and wispy blond hair. The last few years have left him with a profoundly introverted personality, though occasionally he flares up petulantly when his will is thwarted in something minor. He stutters under pressure, and is more likely to go along with anyone expressing a strong opinion that object.

Nathan MacCallum: Major MacCallum leads a Patriotic Band of minor. He was an NCO during the Great War where he served in the hills to the west of Augsburg, one of the more brutal stretches of front and one that stayed pinned in place for nearly three years. He and the core of the Gloucester 3rd Company were from the farms near the Kingdom's western border, and many of them kept in touch after the war ended. When they couldn't find jobs or found their farms foreclosed, they were fused into a mercenary band by the NCO (soon self-promoted to major) they knew from Europe.

MacCallum now serves half as an employer and half as a father figure to some 70 men (even though he's the same age as they are). He is very much the antithesis of the romantic, gentlemanly ideal of the Kingdom soldier -- utterly practical and dismissive of sentiment, even cruel if that's what it takes to keep himself and his band afloat. At first he stuck to working in the Westmarch, but as his ties to his home have eroded away he marched towards the coast and has since fought in several battles at the direction of Stuart-Carolina. He'd have no qualms about switching sides to Henry X if the young king were to pay him for it. He's descended to the point that he now worries about the day the latest succession war ends, and wonders if he wants to -- or even could -- go back to working on a farm.

The Major is a lean, wiry man about 35 years old, with a full black moustache and goatee. His hair is starting to recede slightly, not enough to really notice but giving him a high forehead and an air of intelligence -- which he earns.

If the adventurers ever fall afoul of a Patriotic Band in a way that makes an everyday grunt suspect there's something particularly odd about them, Major MacCallum is exactly the sort of person they will eventually meet as the buck is passed up the chain of command.

Rachel Gipson: A young Romani woman (or to use the more common term, a gypsy), Rachel is twice an outsider: from the majority society of British descent in the kingdom, and from her own people. Breaking away from the conservative attitudes of the Roma towards women and extended families, she "liberated" a vardos wagon and struck out on her own.

She works as a small-scale trader, carrying what goods she can in her wagon and wandering the extent of the Kingdom making enough profit to live. What keeps her afloat is her encyclopedic knowledge of the provincial highways and byways, and her ability to guess where trouble will arise -- then go in the other direction. She is also an excellent shot with her rifle and a nasty fighter up close with her knife. Other Roma have learned the hard way not to try and reclaim her and her home, and American ne'er-do-wells know she's a hard target.

Rachel is a chubby woman in her mid-20s, with brown skin and curly brown hair. She dresses in male Romani fashion -- breeches, loose shirt, and head scarf -- to the scandal of other Romani and the bemusement of other Americans.

Her role in any adventure is to be a talented local guide and outsider able to comment on the peculiar ways of the majority. Alternatively, if the GM wants to follow up on the mention of psionics earlier in this article, her ability to avoid trouble she can't beat might be more than hunches. In that case she becomes a potential object of interest to Homeline researchers.

Adventures in Henry's America

The Great Pretender: Henry X only became a candidate for king because of his father's death. A coronation for "James V" was nearly a foregone conclusion when the last king died, but he was killed himself . . . in battle while moving to take Middletown.

Now, remarkable events have occurred in the Carolina hills. Someone claiming to be James has appeared in the west of the Kingdom and is threatening the Stuart-Fairfax position. Remarkably, any investigation will suggest that he is who he claims to be. The would-be king's body was never conclusively identified, and the impostor certainly looks like him. Several important people who knew him have accepted his claims and defected.

On that basis, Infinity is worried that there may be a parachronic reason for his appearance. Centrum has used out-time doppelgangers before, though admittedly starting a civil war is not their usual modus operandi. There is also the possibility that he's been brought here by a Homeliner running a long con of some sort.

It's likeliest that the pretender is just some in-time farmer dressed up as the dead candidate, but Infinity hasn't got where it has by ignoring potential threats to the Secret. Someone is going to have to get to the bottom of this.

Laying Low: A glitch in transit has stranded the adventurers in a rural area of the Kingdom. They're dressed for success if they'd arrived at their actual destination of 1940s Cairo on Khedive, but they stand out rather well here. On the other hand, they do have weapons and equipment somewhat more advanced than Carolina-2 has to offer, even if it's not up to Homeline's cutting edge standards.

Complicating the situation is the continuing strife over Henry X's accession. The area where they've landed is flaring into violence as Stuart-Fairfax forces smash into Stuart-Albemarle partisans who've been making the surrounding hills and forests their base of operations. Both sides will view unusual folks with suspicion. The castaways will have to break their way out of the area without arousing suspicion if they want to re-establish contact with Homeline via the small Infinity safe house in Middleton -- and that's assuming they can even figure out that they've ended up on Carolina-2.

A Knight on the Town: Lee Heyworth is an Englishman from Homeline, one fascinated by lost causes like the House of Stuart and the Confederacy in the American Civil War. He's emigrated illegally to Carolina-2 in search of his ideal world, and managed to cover his tracks well enough that it took Infinity more than a year to catch up to him. Lee is no-one's fool and has managed to work up through a Patriotic Band supporting Henry X. After successfully attracting the notice of the king's regents, he has joined the court in Middleton and is living the life of a latter-day Cavalier in the Kingdom of America.

Unfortunately for those looking to apprehend him, he has the ear of those in power and has set up for a "deadman brief" of information about The Secret and Infinity's agents on the timeline. If he is arrested and spirited away from Carolina-2, it will come to the attention of the king, the court, and their police apparatus. This is a far more serious crime than mere carpet-bagging, but he's guessing Infinity will leave him alone rather than risk a security breach. It is up to agents on his case to figure out the location of the cache of info, defuse or destroy it, then move in for the kill.

To Your Health: On Homeline, DDT was discovered relatively early, then languished for 60 years until its insecticidal properties were discovered. Lambright Chemicals specializes in selling the stuff to timelines where technology is in the 1880 to 1930 range, where it can be synthesized yet is considered unimportant. They "discover" its use then patent it wherever they can, investing the profits in goods that can be shipped back to Homeline.

Their main difficulty is getting the authorities to come on board with a supposed cure that's being proposed by a previously unknown company. Certainly Lambright knows it's going to work, but it's impossible to explain how they know without giving away The Secret. To increase their chances of success, they wait until a capital city is experiencing an outbreak of typhus, dengue, or yellow fever, then put forward their solution to desperate authorities.

At base this adventure is a political one with a grim background as Middleton experiences fear and mortality while adventurers battle conservatism in an attempt to end them. Easy variations to play include machinations by Lambright Chemicals -- could they be the ones who introduced the plague in the first place? -- or Infinity moving to shut down an operation that was licensed to use something environmentally friendlier but less-profitable, but switched to DDT once Lambright thought they were away from oversight on Carolina-2.

Using Henry's America in Other Settings

The Kingdom of America turns on two real-world romantic notions: the return of the Stuart dynasty to the throne of England, and the genteel upper-class society of the pre-bellum American South. Regardless of truth, they attracted people of similar mindset for long after they ceased to be relevant. Both follow streaks of stubbornness and high-

minded political conservatism to the exclusion of comfort or expediency.

GURPS Traveller players can transplant this set-up with only a few changes, thanks to its setting's feudal government. The Third Imperium isn't long past a period of dynastic war and victorious usurpers comparable to the deposition of the Stuarts. It's 500 years in the past rather than 200, but the base **Traveller** setting is notorious for its slowly developing history. Since very little has been said about the defeated Flag Emperors, any one of them could have descendants ruling some backwater, endeavoring to keep every event following the year 620 at bay.

The various "weird western" settings, from **Deadlands** to **Aces & Eights,** could take up a version of Henry's America too. During the transplant procedure, the main difficulty encountered in most of these will be coming up with a substitute for the Revolution of 1688; an independent "Confederacy" prior to the existence of the USA throws a wrench in the works. GMs inclined towards the interesting more than the likely will want to give thought to founding a House of Lee. Robert E. had three sons, you see, which makes for an excellent graft if one can put him on a throne -- even if it's not one in name.

The Red Caps

for the *d20 System*

by David Moore

Speak of bounty hunters and you think of them: peerless trackers, tireless adversaries, savage cannibals. Fierce, cruel, and clever, the Red Caps are amongst the most feared creatures in the world. The princes of the world of Men might long ago have united to wipe them out were they not so useful; as it is, no duke or king of human lands can say he has not once called on these mercenary hunters.

History

Legend tells that in the earliest days, goblins and elves were numbered among the Fey; one Seelie House and one Unseelie House, noble, cunning and powerful. The two tribes left the Courts, however, eschewing immortality to live among Men and their ilk. Whether there is any truth in the legend -- and whether they left willingly or were exiled -- they cannot remember and the ageless Fey refuse to say.

It is true to say that they share many beliefs and practices with the Courts. The Midsummer festival, the Burning Man, the Green Witch and the Dance of the Long Night are all celebrated in some form or another among both peoples. The most notorious of their inherited revels, however, is the Sacred Hunt. Once a year, on the last new moon before Midwinter, all elves and goblins form hunting bands and go abroad; by dawn, each band must have tracked and killed one sentient and tasted his flesh. They cannot explain why they must hunt, or what would happen if it were neglected, but not one of them refuses. The courtly high elves in their forest cities conceal their shame under elaborate costumes and refuse to speak of it by daylight; goblin slaves languishing in orcish pits break their bonds to do murder in secret and return to their chains by morning.

The Red Caps *live* for the Hunt. Since time out of mind, this pack of goblins has devoted themselves to the rite, training and honing their abilities throughout the year. They wore the trophies of their hunts with pride, dying their caps with the blood of their victims. In time, their hunts ranged beyond the prescribed night; they rode abroad dozens of times a year to kill, each hunt a sacrament. Eventually, their depredations earned them the attention of the princes of Men. Two hundred and fifty years ago, the high priest of the chief God of the lands announced that the murderous band must be stopped. Several of the most powerful kings combined their efforts, sending war parties to harry the goblins to their lair. For two years they searched in vain. Finally, alarmed that their own hunting parties would be targeted by the pogrom, delegates from the high elven king and the most powerful goblin chieftain found the Red Caps' leader -- the Huntsman -- and demanded his cooperation.

With elven mediation, an amnesty was finally broached. The Sacred Hunt was a holy observance, and could not be stopped without inviting both the worldly wrath of the Elvish nations and a divine backlash the human kings were unwilling to provoke. The human priest was mollified by the promise, by the high elves, that they would build a great temple to his god in their chief city and invite him to send priests there to study and pray. In return, the Red Caps would return to following the Hunt but once a year, as did all of their kind.

This truce held until one 110 years ago, when the then-Huntsman, a canny bugbear called Tishkhan, hit on the idea of selling their services as bounty hunters. By working for human employers and accepting human gold, the Red Caps could return to their hunting with some legitimacy and make themselves wealthy from it besides. Initially wary of the mercenaries, lords and wealthy men soon found them to be true to their contracts and unnervingly effective; before long, they were well-established and earning a fierce reputation. "Only three deaths are certain," runs the saying, "old age, divine judgment, and the Red Caps."

Organization

Today, there are 80 goblins, hobgoblins, and bugbears in the Red Caps, about a fifth of them female. Many more come from warbands and slave pits across the world every year to join them, but very few survive the tests and earn admission. Most are trackers and warriors, although a few specialize in stealthy assassination, and some are skilled in magic. Particularly eerie are the *blood trackers* (see below), who have found strange insight in the flesh and blood they consume.

They only run as one group on the night of the Sacred Hunt; in general they form packs of between three and 20, according to the needs of each mission. A senior Red Cap is made *Zelvakhi* -- hunt leader -- for the pack, responsible for ensuring that the mission is fulfilled. In the extremely rare instance that a hunt is called off, it is the zelvakhi who will make the decision and accept its consequences. The title exists only as long as the individual pack, although a handful of the Huntsman's oldest and most able lieutenants are made leaders of every pack they join, and one or two lead more-or-less permanent packs with standing missions.

Aside from the zelvakhi, the only rank in the Red Caps is the Huntsman himself, whose authority is absolute. Any Red Cap can challenge him for the leadership of the band -- death is the usual price of failure -- but short of that the band's leader is the final authority. The current Huntsman is a cruel and powerful hobgoblin called Arhazag (see box), who took the role seven years ago. He is clever and ambitious, and has been pursuing the more lucrative contracts within cities over the band's traditional cross-country manhunts. Unlike his predecessors, Arhazag rarely leads packs himself, preferring to coordinate the group's actions as a whole.

The goblin hunters recognize no religious leaders: within the loose animistic goblin faith, *all* Red Caps are considered shamans due to their dedication to the ceremonial hunt. A few of them take this role further, training in the rites and ceremonies of goblin druidism, but this devotion does not guarantee deference or respect. Most Red Cap druids call on dark spirits of death and the hunt for their rituals -- such as Wolf, Snake or Winter -- although some pay honor to the fierce cannibalistic goblin ancestor Balor.

Joining the Red Caps

Entry into the Red Caps is an informal if dangerous process. First of all, the applicant has to be able to find the band, which is a challenge in itself, and ask the Huntsman to be admitted. The Huntsman will question the goblin as to why he thinks he is worthy of the honor -- bragging is allowed and expected, but a goblin who is unable to back up his claims of prowess is likely to suffer for it -- and may set the applicant tests. Finally, the goblin is sent away to be hunted by a pack formed for the purpose; if he survives until dawn, he is admitted to the band as a squire, to join packs and prove himself. After his first midwinter Sacred Hunt with the band, he is inducted as a full Red Cap, and may wear the gruesome badge from which the group receive their name.

Making a Contract

Feared and hated as they are, the Red Caps prefer to keep themselves hidden. The first obstacle to contracting their services is knowing how to reach them. One or two members of almost every goblin tribe -- not necessarily the most influential or prominent -- know how to get a message to the band, if the enquirer can talk to them safely and has something to trade for the favor. Strangely, some of the oldest elven princes and rulers also have means to contact the Huntsman, although the price in this case will most likely be much higher and the need for tact greater. In a bizarre twist, the temple of the humans' chief god in the elven capital -- consecrated to the "Hunter" aspect of the god -- is known to be able to get a message to the Huntsmen, by means of

Arhazag

The current Huntsman is cruel, ruthless and cunning. Dedicated as he is to the Hunt and the Red Caps' part in it, he also sees the band's potential to make itself -- and him -- wealthy and powerful through its dealings with the guilds and nobles of the human cities. Under his guidance, the Red Caps have been pursuing assignments in cities, getting involved with the politics of mercenary companies and underworld gangs, and increasingly taking assignments to spy on or capture targets rather than kill them, denying his hunters the kill and the feast. Some of the Red Caps resent his apparent disregard of tradition, but none have as yet

their own.

Increasingly, Arhazag has been trying to make ties in the human cities, to pick up richer contracts. The very largest cities have goblin communities -- servants, criminals, thieves and beggars -- living among them, and he has been using these channels when available. In other cities, he has made contacts within crime families and thieves' guilds. In general, the people who need to know can get a message to the Red Caps; in game terms, this may take some roleplaying and Gather Information skill rolls (Difficulty Class 15 to 30 depending on the size of the city or the channels available) but should be possible.

The Huntsman personally authorizes all contracts. If the request is acceptable, he will send word back to the client and arrange a meeting, either in person or with the zelvakhi of the pack who will take the mission, to negotiate the price. The sum varies according to the perceived risk of the mission: a Challenge Rating 1 target might cost as little as 200 gp to 300 gp, while a contract on a CR10 opponent would run to at least 5,000 gp and a CR20 target could cost 70,000 gp or more. Note that a high-profile or well-guarded target will be considered a riskier target than his personal competence might indicate. Of course, a cheaper contract might be secured if the Huntsman underestimates the target, but this is both unlikely and dangerous, since Arhazag would take a dim view of being deliberately misled as to the abilities of a contract.

The terms can also be negotiated: by preference, the target is killed and eaten and a trophy returned to the employer, but the Red Caps will retrieve a fugitive alive for a greater cost.

Red Cap Characters

By rule and tradition, all Red Caps are goblinoids: goblins, hobgoblins or bugbears. The band has been known to hire orcs, ogres and trolls for individual missions, but such outsiders are never permitted to take the tests to join, or to take part in the Sacred Hunt. All Red Caps are morally evil-aligned, although they are more or less evenly divided by ethical alignment.

The band traditionally finds strength in versatility, and its ranks include creatures with a broad range of training and resources. No particular class is required, as long as the Red Cap has useful skills for missions. Tracking, information gathering, combat and stealth are essential for bounty hunting, and most are rangers or rogues; magic is also useful, and there are several wizards and druids. Multiclassing is common. Candidates must be competent and experienced in order to be considered for entry; it is very unlikely that an applicant without at least three character levels would survive the initiation.

By the same token, there are few specific requirements regarding skills or feats, although versatility and self-sufficiency are encouraged. All Red Caps must have at least three ranks of knowledge (religion) by the end of their first year. While not required, most have the tracking feat and at least a few ranks in survival.

Blood Tracker

The dozen or so blood trackers are considered strange and grotesque even by their peers. Initiates into a secret as old as the Red Caps themselves, blood trackers gain insight by eating the flesh and blood of their victims, learning their weaknesses and gaining strength from their stolen souls. Worshippers of the goblin ancestor-god Balor, they dedicate every kill to his name and are given gifts in return.
Hit Dice:d8.

had the courage to confront him, as he is known as a doughty warrior, and his cruelty is legendary.

Although he rarely expects people to underestimate his intelligence, Arhazag plays up a bluff and direct demeanor and affects a deep ignorance and mistrust of magic of all sorts, although he is in truth politically able and well-educated. Standing nearly seven feet tall, Arhazag is a rangy, muscular hobgoblin with deep rust-colored skin, reddish-grey hair, and a narrow face marred with a poorly-healed scar -- said to be from the clawed foot of a griffon whose elvish owner he had murdered -- down the left side of his face. He favors matte black studded leather armor and boots, and carries two shortswords (one *unholy* and one *ghost touch*) at all times. He has trained as a ranger, and is dedicated to the cannibal goblin ancestor-spirit, Balor, from whom he is rumored to have gained powers as a blackguard.

Requirements

To qualify to become a blood tracker, a character must meet all the following criteria.

Race: Any goblinoid.
Alignment: Any evil.
Feats: Tracking.
Skills: Survival (10 ranks).
Special: Blood tracker initiation is only available to members of the Red Caps. In addition, applicants must have killed and eaten the flesh of a sapient for no reason other than to take this prestige class.

Class Skills

The blood tracker's class skills (and the key ability for each skill) are Climb (Str), Craft (Int), Disguise (Cha), Heal (Wis), Hide (Dex), Jump (Str), Knowledge (Dungeoneering) (Int), Knowledge (Geography) (Int), Knowledge (Nature) (Int), Listen (Wis), Move Silently (Dex), Profession (Wis), Ride (Dex), Search (Int), Sense Motive (Wis), Spot (Wis), Survival (Wis), Swim (Str), and Use Rope (Dex).
Skill points gained at each level: 4 + Int modifier.

Class Features

All the following are features of the blood tracker prestige class.

Weapon and Armor Proficiency: Blood trackers are proficient with all simple and martial weapons, light armor, medium armor, and shields.

Table I: The Blood Tracker

Level	Base Attack Bonus	Fort Save	Ref Save	Will Save	Special
1	+1	+2	+2	+0	Scent, Favored Enemy
2	+2	+3	+3	+0	Taste of Blood
3	+3	+3	+3	+1	Death Vision
4	+4	+4	+4	+1	Baneful Strike +1d6
5	+5	+4	+4	+1	Blood Trail
6	+6	+5	+5	+2	Blood Scrying
7	+7	+5	+5	+2	Baneful Strike +2d6
8	+8	+6	+6	+2	Soul Stealing

Scent (Ex): Blood trackers gain the scent ability, as per the monster special quality (see *MM,* p.314).
Favored Enemy (Ex): At first level, a blood tracker may select a type of creature from the following list: aberration, dragon, fey, giant, humanoid (choose one subtype), magical beast, monstrous humanoid, or outsider (native). Due to his extensive study of his chosen type of prey, the blood tracker gains a +2 bonus on Bluff, Listen, Sense Motive, Spot and Survival checks when using these skills against creatures of this type. He also gets a +2 bonus on weapon damage rolls against such creatures.
The bonuses from this ability stack with those from the ranger ability of the same name.
Taste of Blood (Su): From 2nd level, the blood tracker can gain information by tasting the blood of sapient beings. By tasting at least a single drop of fallen blood and concentrating for one round, he can determine the race, gender and age category of the creature who shed it. On a successful Survival (DC 20) roll, he can also detect any poisons and diseases the subject had been afflicted with, as well as the state of injury and general emotional condition the creature was in when he shed the blood.
This ability, and the blood tracker's other supernatural and spell-like powers below, can only be used on living, sapient creatures with blood and souls. It will not work on animals, constructs, elementals, oozes, plant, undead or vermin, on non-native outsiders, or on aberrations or magical beasts with Intelligence scores below 3.
Death Vision (Sp): From 3rd level, the blood tracker can experience a vision of a creature's final moments by eating his eyes. Immediately after eating the eyes, the blood tracker experiences the last (1d6 + blood tracker level) minutes of the creature's life as he saw it. The vision is limited to the creature's own senses (eg. the blood tracker sees nothing if the creature died in the dark and did not have dark vision) and is silent. While experiencing the vision, the blood

tracker is blind and concentrating as though on a spell; if the vision ends prematurely, the blood tracker is unable to resume it later.

Baneful Strike (Ex): At 4th level, the blood tracker's knowledge of his chosen prey allows him to deal particularly deadly strikes against them. When attacking his favored enemy with a light or one-handed weapon in hand-to-hand combat, the blood tracker adds 1d6 to damage; at 7th level, this damage increases to 2d6. This bonus doesn't apply to attacks of opportunity, and creatures that are immune to critical hits do not take the extra damage. The bonus applies only to the favored enemy selected as part of the blood tracker prestige class; favored enemies gained as part of prior ranger levels do not grant the bonus.

Blood Trail (Su): From 5th level, the blood tracker may locate any sapient creature whose blood he has tasted, anywhere in the world. He does not know the creature's current whereabouts, but always knows the direction of the swiftest, surest path to it and can follow it at his standard move. If the creature is dead or on another plane, he can trail it to the location where it died or left the blood tracker's current plane; he will not know that the creature is dead or offworld, only where the trail ends.

Blood Scrying (Sp): From 6th level, the blood tracker gains the ability to see and hear any sapient creature whose blood he has tasted once per day. The power functions as the fourth level druid spell *Scrying*, cast at the blood tracker's class level. Note that the blood connection automatically qualifies for the -10 "Body part" connection modifier to the target's Will save.

Soul Stealing (Su): At 8th level, blood trackers can gain some of the strength and skill of their victims by eating their vital organs. After eating the heart or other vital organ of a sapient creature with a Challenge Rating of half his character level or higher, a blood tracker gains 5 temporary hit points and a +1 to his attack bonus and all saving throws; if the victim's CR is greater than the blood tracker's level, he gains 10 temporary hit points and +2 to his rolls. These bonuses do not stack and last for a maximum of one hour.

Adventure Seeds

Target! The obvious use of the Red Caps is to make one (or all) of the PCs their target. This will immediately generate both combat and roleplaying opportunities as the party runs into the first packs, and the questions that arise -- Who hired them, and why? How can the heroes get the contract lifted? -- can prompt whole quests on their own. It's even possible that the PC is not the intended target at all, but has been mistaken for someone who looks the same, or has the same name. In this case, the players might decide that it's easier and safer to track down their real target and hand him over rather than fight the implacable goblin hunters off.

Guard Duty: Just as obviously, the PCs can be hired as bodyguards for someone who has been targeted by the hunters. This could be as simple as an honest trader or young nobleman whose death has been contracted by pragmatic rivals, or the PCs could discover that the "honest trader" is himself a criminal and murderer and that the Red Caps have been hired by lawmen whose hands are tied by corruption or jurisdictional issues.

Turning the Tables: The PCs could be sent to deliberately seek out the Red Caps; either to drive them off, or to bring them back to face justice for a killing. They'll find the goblins extremely adept at concealing themselves, and apt to start hunting the players in turn . . .

Recruitment Day: Evil and cruel, the Red Caps are intended as an enemy group, but a group interested in playing evil-aligned humanoids could derive an adventure out of the tests and ordeals required to join the pack (see *Joining the Red Caps*, above). Alternatively, a goblin PC could *feign* a sincere desire to join the pack in order to get close to a fugitive or wanted criminal who had already joined.

Pyramid Pick from the Past

The Burning Wheel Fantasy Roleplaying System - Revised [2003]

Published by [Luke Crane](#)

Written by Luke Crane with Don Corcoran, Radek Drozdalski, Ian Marshall, Thor Olavsrud, Rich Soto, and Peter Tierney

Front Cover by Kev Sather

Back Cover by Jin Kwan

The Burning Wheel System Book 304-page softcover & *Character Burner Book* 304-page softcover; $25

First published in 2003, ***The Burning Wheel*** is a self-published indie game that focuses not on narrative structure like ***[My Life With Master](#)*** or narrative control like ***Under the Bed,*** but is instead a fully worked fantasy RPG with an emphasis on detail and roleplaying. Both simple and complex, it is a game for the more experienced player and GM, with expectations to match. Released to great acclaim, its author has not only revisited the game for a revised edition but also published supplements like the *Monster Burner* and a science fiction version, ***Burning Empires.***

The game comes in two thick volumes. The *Character Burner* lets players "burn," or create, detailed characters with a past from one of four races -- Dwarves, Elves, Men, and Orcs. ***The Burning Wheel*** *System Book* provides the rules, covering magic, combat, NPC creation, and a small bestiary. (More monsters and more detailed monsters can be found in the *Monster Burner.*) Both books are well laid out, engagingly written, and entertaining to read. Both include an index.

The four races are markedly different from each other and quite Tolkien-esque. Man has the greatest range of skills and can use sorcery; Dwarves are long-lived and clannish; Elves are immortal, which weighs upon them; and Orcs, while also immortal, are nocturnal, brutal creatures whose vicious lives are often short and injurious. Additionally, each race has an emotional state that can grant power. Mankind has Faith for Divine magic; Dwarves are subject to Greed; Elves suffer Grief, which they can stave off with Song; and Orcs smolder with Hatred, which can drive them to perform blasphemous rituals.

Character burning is a lengthy and involved process, in which the player runs his character through a series of "lifepaths," right from his origins to his current occupations. The process is a cross between ***Traveller***'s career tables and ***Warhammer Fantasy Roleplay***'s careers, with each lifepath aging the character, and granting resource points (spent on spells, possessions, and relationships) and statistic bonuses. The lifepaths also recommend skills and traits to buy, some of which are mandatory. Traits represent quirks, advantages, and disadvantages. Unlike other RPGs, there is no bonus to taking a negative trait; they are more roleplaying hooks born out of life experience. For example, "Tasting the Lash," common to ex-galley slaves and many Orc lifepaths, forces a character to carry out an order when whipped.

The range of lifepaths enables the burning of almost any character type, from nun and knight to plumber and village

idiot. The burning process itself is enjoyable, reminiscent of rolling up old *Traveller* characters. Determining the lifepath ends with the character's starting age, which determines the points available for both mental and physical attributes (everything being purchased after a character history has been created). A player also needs to set his character's beliefs and instincts at this time. Beliefs set player priorities -- what he wants from the game. Thus, if a knight has "I value fealty to my liege above all else," then the GM should be writing it into the game. Instincts are minor game breakers, representing what a character will always do under certain circumstances. Thus, if an instinct is to "draw a sword at the first sign of trouble" or "always agree with my superiors," then these will always take precedence. Instincts allow a player to retain some control over his character, but as with beliefs, they can land the character in hot water, too.

Mechanically, *The Burning Wheel* is a dice pool system using only six-sided dice. At its most simple, the dice are rolled and results equal to or greater than a target number are counted as successes. The target number for successes is termed a "Shade," which for most characters is Black (with a target number of four). Grey Shades need results of three or more, representing powerful aspects of the setting, like Giant strength or a potent magical item. White Shades need a two or more and are for legendary creatures like dragons. It is possible for a character to alter the Shade for a skill or statistic, but it is expensive. During a game, the Obstacle (or number of successes required) is more likely to change, with an average task only needing two successes.

Combat, or at least melee combat, is different in that it is scripted. It works in a series of Exchanges, each broken up into three volleys. Each combatant notes down what action he wants to do in each volley, and these are compared simultaneously one-by-one to determine the outcome. If a character has high enough Reflexes, he can have more actions than volleys. Having more actions is advantageous when a character wants to change an already scripted volley in reaction to an opponent because he has to forfeit an action to do so. Positioning is also important in combat because longer weapons have an advantage, although if a character can get inside an opponent's weapon, his shorter weapon can prove deadly. Trained characters have an advantage over the untrained, as they have access to a wider range of actions. Ranged attacks works slightly differently, but they still require characters to maneuver to gain an optimal shot.

Melee weapon damage depends upon an attack roll's success, but the defender actually decides where he is going to be hit, the idea being that he tries to put his best protection in the way of the blow. The attacker can counter this at the cost of a single success. Armor blocks attacks rather absorbing damage, with a protection test being required to do so; better armor has a lower Shade and more dice. Failed protection tests can damage the armor.

Once damage gets through, it is recorded on the "Physical Tolerances Grayscale," a complex-looking circle upon which each wound is marked. It is a means of recording the wound types. Each has a separate effect, either raising the Obstacle or decreasing the number of dice rolled. Wounds do not add, but their effects stack; bleeding wounds increase these effects.

The effect of the scripting and comparing actions (all of which are listed and explained) is to keep combat grittier and more chaotic, forcing a player to think about his actions rather than relying upon an exchange of dice rolls as in other games. Though this method does have a learning curve as it is not as slick as other games, it is more detailed.

Combat's concept of exchanges is also used in the Duel of Wits mechanics, new to the revised edition. Nearly identical, Duels of Wits handle verbal rather then physical arguments. Although simpler, they feel more constraining than the game's combat system.

Also new are the rules for resources, reputation, and the Circles attribute, a method of generating contacts, usually drawn from the lifepaths a character has been burned through. If a character wants power within a Circle, then he buys Affiliations with his resource points. These new rules broaden the original game's scope and make it more complete.

Experience is interesting in that it is not abstracted into points. A character has to use his skills, traits, and other attributes in order to learn from them. Conversely, if they are unused, they deteriorate. Worse, they can actually be totally lost. "Artha" or luck is rewarded for good play, and spent on the usual things. It can also be used to shift a statistic's Shade.

Physically, both volumes of *The Burning Wheel* are decently put together and the art reasonable. Where they stand

out is in the excellent set of indices that make finding everything so easy, and in the wealth of examples and advice for the GM. This comes together as a whole in an extended example of play in **The Burning Wheel** volume's final few pages.

The Burning Wheel does not come with an actual setting, but a setting is implicit in the rules. The characters created through the Character Burner are, bar the Halfling, almost out of Middle Earth, but the game as a whole could be used in any Medieval-like setting. It is easy to imagine the game being used to run a ***Warhammer Fantasy Roleplay*** or ***Iron Kingdoms*** game, or the mechanics being adapted to *Dune,* ***Tékumel,*** or ***Fading Suns.*** Indeed, **The Burning Sands: Jihad** supplement is very *Dune*-like, and the recently released **Burning Empires** is reminiscent of **Fading Suns.** Of course, the rules can easily be used for the reader's own setting.

What the author is striving for with **The Burning Wheel** is a balance between detail and roleplaying. The detail is certainly present, which means a certain learning curve, but it is heavily supported with a wealth of examples and engaging writing. The roleplaying is also there, provided in the entertaining character creation process, in the flavorsome treatment of the four races, and in the social mechanics. Combined in the two volumes of **The Burning Wheel,** the result is a gritty, low fantasy RPG that, for a self-published title, is extraordinarily complete and comprehensive.

Reviewer's Note: The publisher was kind enough to send me a copy of the original version of **The Burning Wheel** to review, which unfortunately I could not get to due to time constraints. For this, I offer Mr. Crane a sincere apology. I would also like to thank him for releasing this new edition, which afforded me the opportunity to purchase it anew and give his game the fair review it deserved.

-- Matthew Pook

Pyramid Review

Scion: Hero

Published by [White Wolf](#)

Written & designed by Kelley Barnes-Herman, Carl Bowen, Bill Bridges, John Chambers, Ken Cliffe, Ned Coker, Conrad Hubbard, Michael Lee, Matt Milberger, Rich Thomas, Mike Todd, Aaron Voss, Justin Achilli, Alan Alexander, Peter Schaefer, James Stewart, & Andrew Watt

Edited by Carl Bowen

Art and Design by Matt Milberger, Anthony Carpenter, John Christopher, Oliver Diaz, Andrew Hepworth, Jeff Holt, Imaginary Friends Studio (with Kendrick Lim, Lan Jun Kang, Kevin Chin, Ray Toh, Yinah Goh, Derrick Chew, Djoko Santiko, and Marc Lee), Jeff Laubenstein, Brian Leblanc, Ron Lemen, Adrian Majkrazk, Pat McEvoy, Justin Norman, Ted Pendergraft, Stephanie Roberts, Klaus Scherwinski, Rich Thomas, Cathy Wilkins, and Michael Komarck

336-page b&w hardcover (with 48 color pages); $34.99

Once upon a time, White Wolf seemed content with its fabulously popular World of Darkness and the lines supporting it. Having blown that up and started a new one, it continues, by degrees, to poke its toe into new roleplaying waters. Since it depends more on *Exalted* for its rules, *Scion: Hero* doesn't seem even tangentially connected to White Wolf's more traditional gothic-punk plotlines.

Make no mistake, characters are still powerful beyond the pale but on a new playing field. They are children of the Gods - literally. They've all, at some point, enjoyed a Visitation by Mom, Dad, or a trusted agent who revealed the divine heritage (and how they came to bed the mortal parent). Depending on the pantheon, the character's old man may have been Zeus or Thor or even Set . . . or if mater was the heavenly one, the demigod might be Aphrodite's tot. They've also bequeathed a Birthright or two: Thor, for example, gave his kid a gun, the hammer of which utilizes a sliver of Mjolnir, the lucky sod. If Father was a trickster, he may have infused the character with wild levels of charisma and guile, and a sky god could imbue someone with the ability to fly or call down the winds.

What they expect in return isn't always clear, of course, and characters must contend with Fate and their own Legends. The former is the World's way (yes, it's another of those books where anything mildly important seems to be capitalized) of explaining a predestined life. Worse, those with whom the adventurer has truck become Fatebound to that person, a vicious cycle in which those in the character's social orbit play a part, becoming more tied to the destiny. Legends are the names characters make for themselves in this modern world -- personal mythologies -- and the higher that goes, the closer a person comes to apotheosis. (That's gamespeak for achieving godhood -- they call it Godhead, and for whatever reason apotheosis isn't uppercased.) Legend points charge most unique abilities.

Things start off with six pantheons: Aztec, Greek, Japanese, Egyptian, Norse, and Voodoo. Each has several Gods from whom the heroes may be descended, and the book gives an overview of the powers they may offer, the guises they might take, and the roles in which they and their offspring operate in mortal society. Not coincidentally, there's a sample Scion for each, and these make a Band suitable for the included quest:

[SPOILER ALERT!]

The adventure is the first part of a cycle in which a Band of new Scions gets its first assignment. A convocation of various Gods in Las Vegas demands security, so it brings along the freshest faces to make sure the deities aren't disturbed. Vexed by an overly curious hotel liaison and dogged by, among other things, rival Scions of opposing Gods, the team finds itself in possession of a potentially devastating relic that could alter the Overworld hierarchy.

[END SPOILER ALERT]

And what's a heroic cycle without enemies? The Gods, born of the Titans, replaced their sires as the dominant force in the universe, binding them into the Underworld in ages past. These great beings have escaped, leaving the classical afterlife kind of bollixed and the Scions at the center of their renewed war. Did the Gods have children just to create an army with which to fight their ancient foes? Or would they really let the kids become powerful enough to replace their parents?

With this book, White Wolf straddles the line between the bleak politicization of the World of Darkness and the comic-book sensibilities of ***Exalted.*** Even the artwork bears this out, with exciting action sequences showing Scions putting their elevated powers through their paces. They have the "cool" factor, mixed with the shadows-in-the-doorway sexiness of a secret history.

On the downside, the index is a bit simplistic and the "tick" system (for determining timing in combat) isn't terribly intuitive. The advice section is a bit thin, concentrating more on descriptions of Fate (but hey, it's not dry or boring) before launching into the adventure. The refreshingly conversational approach in this book's writing spills into that tale, making some of the dynamics and relationships hard to follow by the story's end, and players may feel railroaded by some events.

The book has a quick feel about it, lingering none too long on any one subject, which is good most of the time. Clearly the intention is not to fill the world with plans and schemes, and it's assumed the Storyteller has the tools needed to pull off the less-moody action. Machiavellian plots aren't the heart and soul of this world; play with the petty backstabbing of the Overworld or focus on the mortal coil as you prefer. The pantheons are concise, giving a lowdown on the Gods without making them an inseparable element. The research is impressive (would that the bibliography used to do it were included!), and the modern interpretations of the mythological essentials are clever and even witty at times. The "bestiary" (for want of a better word) capably covers most of the strange things player character going to fight with or against, ranging from mere mortals to Titanspawn to regular animals (that can be perverted into fouler things). And it all kicks off with an excellent piece of fiction by Carl Bowen.

Scion: Hero may be closer to the games most players used to enjoying, at least in terms of accessibility, but readers won't sacrifice the hallmark playability, characterizations, or depth the Wolf is known for. Look for the two companion books, ***Demigod*** and ***God,*** before year's end to see if the line's lofty goals keep up with the elevation of both the PCs and their fascinating game world.

Stop Right There!

Sneaks and Watchmen for *GURPS*

by Paul Stefko

This is the simple truth: combat is deadly. That's why most sane people avoid it whenever possible. This is particularly true in GURPS, which prides itself on realistic combat. If your players are smart, at some point they are going to try to accomplish their goal without being noticed. This may mean scaling a wall and crossing a castle's yard unseen, trekking through wilderness, or picking the lock on a back alley service entrance.

But, as a GM, you want to make things a little tougher for your PCs, even if they are trying to use their brains instead of just brawn. So here's a few NPCs to throw in their way when they're trying to be sneaky. Each includes options for strictly historical games, standard fantasy games and modern games.

Angus, Master of the Hounds   *46 points*

ST 11 [10]; **DX** 11 [10]; **IQ** 10; **HT** 10.
HP 11; Per 11 [5]; Will 10; FP 10.
BL 24; BS 5.25; Move 5; Dodge 8; Parry 9.

Social Background

TL: 3 [0].
CF: Native [0].
Languages: Native (Native/Broken) [-2].

Advantages: Allies (Ben and Max) [4]; Animal Friend +2 [10]; Patron (very powerful, 6 or less) [8].

Disadvantages: Dependent (wife, 9 or less) [-4]; Duty (to Patron, nonhazardous, 12 or less) [-5]; Compulsive Gambling (9) [-7]; Status -1 [-5].

Skills: Animal Handling-12* (A) IQ [2]; Falconry-12* (A) IQ [2]; Shortsword-12 (A) DX+1 [4]; Veterinary/TL3-12* (H) IQ [4]. * Includes +2 from Animal Friend

Equipment: Baton (dmg 1d+1 cr; 1 lb.); cloth armor (torso, groin; DR 1*; 6 lbs.); leather leggings (legs; DR 1*; 2 lbs.); heavy leather sleeves (arms; DR 2; 2 lbs.).

Ben and Max, Guard Dogs

ST 10; **DX** 12; **IQ** 5; **HT** 12.
Will 10 [25]; Per 12; Dodge 10; Move 10.
SM 0. 90 lbs.

Traits: Combat Reflexes; Domestic Animal; Discriminatory Smell; Quadruped; Sharp Teeth.
Skills: Brawling-14; Tracking-14.

Historical: Angus is the master of hounds for a powerful noble, responsible for training and maintaining his master's hunting dogs. At night, he lets his own large guard dogs out to patrol the castle grounds. He also deals with his master's falcons. Angus is a sullen man with a nagging but loving wife and a taste for dice games.

Fantasy: Angus can be used fairly well as presented in a fantasy campaign, although a GM might consider adding Speak with Animals (Dogs Only, -60%; Magical, -10%) [8] as a magical knack. This would raise his point total to 54 points.

Modern Horror: In a modern horror campaign, Angus is now an independent businessman running his own junkyard in the seedier section of town. He has had some limited exposure to the supernatural. Remove his Patron and Duty as well as his Falconry and Veterinary skills. Lower Animal Friend to +1 (and therefore Animal Handling to 11). Increase his literacy to Native. Shortsword becomes Guns/TL8 (Shotgun)-13. Add Merchant-11, Occultism-11, and Streetwise-10. He carries a 12-gage pump shotgun and wears a ballistic vest.

Cautus, Mage-Scout *115 points*

ST 10; **DX** 12 [40]; **IQ** 12 [40]; **HT** 10.
HP 10; Per 12; Will 12; HT 10.
BL 20 lbs.; BS 5.5; Move 5; Dodge 8.

Social Background

TL: 3 [0].
CF: Native [0].
Languages: Native (Native) [0].

Advantages: Fit [5]; Less Sleep 2 [4]; Magery 2 (Solitary, -40%) [17]; Signature Gear (Ranger's Cloak - Hide Path item, Power 15) [12].

Disadvantages: Duty (to lord or commander, 9 or less) [-5]; Loner (6) [-10]; Poor [-15]; Sense of Duty (those in his domain) [-10].

Skills: Area Knowledge (domain)-12 (E) IQ [1]; Bow-14 (A) DX+2 [8]; Observation-12 (A) Per [2]; Stealth-12 (A) DX [2]; Survival (Woodlands)-12 (A) Per [2]; Tracking-12 (A) Per [2]; Traps/TL3-12 (A) IQ [2].

Spells (1 point in each, unless noted, for a skill level of 12, including the +2 for Magery): Find Direction; Haste-15 [8]; Keen Vision; Night Vision; Pathfinder; Quick March; Seek Earth; Seek Pass; Sense Danger; Sense Foes; Watchdog.

Equipment: short bow (dmg 1d-1 imp; 2 lbs.); cloth armor (torso, groin; DR 1*; 6 lbs.); cloth sleeves (arms; DR 1*; 2 lbs.); shoulder quiver (1 lbs.); 4 standard arrows, 8 "bodkin" arrows (1.2 lbs.)

Note: Cautus uses the suggestion on p. 131 of **GURPS Fantasy** that Signature Gear can buy magic items at 1 character point per 25 energy. If you use a different ratio, adjust Cautus's point total appropriately. Also, he uses the option from p. 26 of the **Basic Set** that allows a wanderer or Poor character (both in this case) to spend all of his starting wealth on adventuring gear.

Historical: Remove Magery, Signature Gear, and spells. Increase Observation, Stealth and Tracking to 14. This reduces his point total to 86.

Fantasy: Cautus is a ranger for a noble or organization with control over a wide-ranging woodland domain. He is tasked with patrolling this region for poachers and bandits. This lonely lifestyle suits him quite well.

Technomancer: With some minor tweaks, Cautus (now Private James Cautus) makes a fine fit for a military Technomancer campaign, especially one set during the Vietnam conflict (see e23's Funny New Guys). He is now a patrol scout for a firebase or other military outpost in a wilderness area; his Area Knowledge and Survival skills should reflect this area. Bow should be replaced with Guns/TL7 (Rifle)-15. Change Signature Gear to a frag vest of

Missile Shield, increase Duty to 15 or less, decrease Poor to Struggling, and change Sense of Duty to (Americans). Add the following skills: Cartography-12 [2]; Electronics Operation/TL7 (Comm)-12 [2]; Forward Observer/TL7-13 [4]; Guns/TL7 (Pistol)-14 [2] (from Rifle default). He carries a 5.56mm assault rifle and a .45 caliber auto pistol sidearm. This increases his point total to 120.

Old Luke, Drunken Master   *60 points*

ST 9 [-10]; **DX** 10; **IQ** 10; **HT** 9 [-10].
HP 9; Per 12 [10]; Will 10; FP 9.
BL 16 lbs.; BS 6.00 [25]; BM 6; Dodge 9 (10 when drunk); Parry 10.

Social Background

TL: 8 [0].
CF: Native [0].
Languages: Native (Native) [0].

Advantages: Enhanced Dodge (Only when drunk, -20%) [12]; Striking ST +3 (Only when drunk, -20%) [12]; Reputation ("crazy but harmless", everyone in the neighborhood, all the time) [5]; Trained by a Master (Only when drunk, -20%) [24].

Disadvantages: Alcoholism [-15]; Curious (12) [-5]; Dead Broke [-25]; Pacifism (Cannot Kill) [-15].

Skills: Boxing-14 (A) DX+4 [16]; Fast-Talk-12 (A) IQ+2 [8]; Scrounging-14 (A) Per+2 [4]; Wrestling-12 (A) DX+2 [8].

Techniques: Arm Lock (Wrestling)-16 [4]; Disarming (Boxing)-17 [4]; Feint (Boxing)-17 [4]; Finger Lock (Wrestling)-16 [4].

Historical: Old Luke would find a nice home in a GURPS China game. Possibly add some Philosophy and Theology skills.

Fantasy: The kung fu monk has become a staple of many fantasy games, so Luke would fit fairly easily into most campaigns. A reasonable change would be to switch his Boxing over to the Staff skill, and maybe add the Sweep technique in place of Finger Lock.

Modern Cinematic: Old Luke has been written off by society. He lives on handouts and out of dumpsters, scraping together enough each day to buy food and alcohol. The food he eats quickly, but the liquor he hordes. He has a milk crate stashed in nearly every alley. What no one knows is that when the booze takes hold of him, Old Luke is a flurry of fists. When he sticks his nose in the wrong places (something that happens with alarming frequency) he is quite adept at working his way back out.

Little Hell On The Prairie: The Bloody Benders

"The end of the Benders is not known. The earth seemed to swallow them, as it had their victims."
-- Kansas Historical Society marker on U.S. Highway 160, now missing

It is important to keep in mind at all times, while reading the following Transmission, that there is no proof whatsoever, or no solid proof anyway, of cannibalism in that isolated Kansas house. Blood there is aplenty, and missing limbs, and mutilated corpses, and vanishments and sorcery. But if there were bite marks on the flesh, they rotted away, and if there were bones split for marrow, they were burned or hastily reburied by the good Kansas people who found them. And there's no proof that it happened at all, or at least none we can find.

"In the early days, while that region was sparsely settled, this family, consisting of an old man and his wife, and a son and daughter took up their abode at the place referred to . . . There they kept a sort of wayside inn, making a business of keeping travelers over night, and we might add, to see that they never proceeded any further in the direction of their desired destination."
-- "The Old Bender Family," *Topeka Daily Capital,* January 13, 1886

In the fall of 1870, two men speaking with thick German accents arrived in southeastern Kansas, settling in Labette County where four other families of Germans -- all Spiritualists -- had staked out claims. Calling themselves John Bender and John Bender, Jr., they set up their own farm and built a combination cabin-grocery store on the Osage Trail, a major road southwest from St. Louis. They wintered over on their claim, and the next spring brought two women to join them, "Ma" Bender and Kate Bender. Although "Ma," with her herbs and boiling stew pots and "evil eye" was never popular, Kate -- a self-proclaimed healer and medium, and perhaps more significantly a stunning redhead -- soon became a fixture on the local social scene. Kate's charms, medical and otherwise, proved a strong attraction to weary travelers on the Osage Trail, many of whom stayed the night at the Benders' grocery store.

Oddly enough, the weary travelers with no family in the area, the ones carrying substantial sums of cash money, and (one imagines) the ones who expressed suspicion of the Benders' seeming prosperity in the middle of nowhere didn't leave. A canvas curtain divided the store from the Bender family living quarters; behind it, John Bender, Sr., waited with a sledgehammer, and in front of it, Kate served dinner. When one of the chosen guests sat down at the table, his attention would be on his food (or Kate's bodice) and his back would be to the curtain. One hammer-blow from John, Sr., was enough to kill some guests; those he merely stunned, Kate finished off with her carving knife. And then nobody knew what became of the bodies. This merry arrangement went on until the spring of 1873, nurturing a growing concern in the surrounding towns about the increasing number of missing wayfarers. Finally, the March disappearance of the prominent Independence physician William York (the brother of both Colonel Edward York of Fort Scott and the well-connected state senator Alexander M. York) triggered a town meeting on April 8, 1873. As respected local businessmen, the male Benders attended it. The town agreed to institute a pattern of regular searches, both of campsites and local buildings. There is no record of how the Benders voted on this measure.

"The searchers are puzzled by strange designs and figures scrawled upon the floor. In the floor beneath the dining table is found a door, which opens with a leather strap. A horrible stench drifts upward. Those who served in the late war recognize the smell of rotting blood."
-- Rick Geary, *The Saga of the Bloody Benders*

On Sunday, May 4, 1873, a neighbor of the Benders named Billy Tole discovered animals wandering loose on the Bender property. Investigation revealed that the Benders' team and wagon were gone, along with the Benders themselves. The next day, a posse went out to the Bender place and discovered a trap door in the floor of the grocery, leading down into a cellar lined with stones and choked with clotted blood. An underground passage led out to the Benders' garden and orchard, where apparently random digging uncovered either eight, nine, or eleven bodies (sources differ). Among them were the missing Dr. York, a young girl buried alive, and the mutilated corpse of a man not even thought to be missing. Curiosity-seekers quickly pulled the house to pieces, even breaking up the foundation stone, leaving only a gaping hole in the earth. Some sources put the Benders' total haul at $6,000 in cash -- plus lots of personal possessions, horses, gear, and so forth to sell at pure profit -- and the toll of the missing at 20, 35, or 40, or

even 104.

The Benders were never seen again. A wagon, shot full of holes and carrying a broken "Groceries" sign, turned up in Thayer County. A private detective uncovered word of four German-speaking people -- two men and two women -- buying tickets in nearby Thayer for the north-bound train to Humboldt. And that was it. Despite a $2,000 reward offered by the governor of Kansas -- and a tidal wave of "Bender sightings" that followed -- the Benders had vanished off the face of the earth. Their names, it transpired, weren't even Bender, and their personal relations could only be guessed at. Two women (with alibis and without prominent German accents) were arrested in Michigan and brought to Kansas for trial, but the case was dismissed before it began. A man in Mexico claimed to be John Bender, Jr., the sole survivor of his family's desperate flight over the Pacific Ocean by balloon. One theory, out of two given rather more credence, is this: the Benders made their escape by rail into the wilds of Texas, settling in an "outlaw colony" on the border of New Mexico, or even further West. The other is that the posse deputized to track their flight caught up with the Benders in Oklahoma, and gunned them down, burning Kate alive as a witch. This last theory has as its main support the peculiar silence of the posse after the fact -- although why they should be reticent, if the Benders were merely murderers, is left unspoken. Kate Bender's ghost supposedly haunts the murder site now, and her family became bogeymen to children in Iowa: "Be good or the Benders will get you!"

"Up the close and down the stair,
But and ben with Burke and Hare,
Burke's the butcher, Hare's the thief,
And Knox is the boy that buys the beef."
-- traditional Edinburgh street rhyme

That's not quite as good as their fellow murderous innkeepers William Burke and William Hare, who became the subject of four movies, a Robert Louis Stevenson novel, and of the nursery rhyme above. These two partners in crime killed (mostly by smothering) 16 tenants and transients at Hare's Edinburgh rooming house. They sold the bodies to Dr. Robert Knox for dissection, but their scheme went awry when Knox's students began to recognize their class assignments. Hare turned state's evidence on Burke, who was hung in 1829, and vanished Bender-fashion. Burke and Hare were probably not cannibals, as Dr. Knox would have noticed any missing sweetbreads from the corpses he paid good pounds sterling for. Although -- how would he complain if he did find a kidney or two gone? And I do compulsively note the rhyme's intuitive pegging of Burke as "the butcher" and the discussion of Knox' "beef." It's as though the cantosphere -- the realm of story and legend into which the Benders vanished in 1873 -- seeks to impose the pattern it discerns. Likewise, the Benders' death toll, while impressive, probably falls behind the sixty-plus of our old acquaintance H.H. Holmes, proprietor of the Englewood Castle in Chicago. Like Burke, Hare, and the Benders, Holmes committed the sin of guest-murder, but not the sin of cannibalism. That we know of -- although not all his victims were found, either, and like that of the Benders, his lair was utterly destroyed before it could be thoroughly searched.

"Several innocent innkeepers were executed for no other reason than that persons who had been thus lost were known to have lain at their houses, which occasioned a suspicion of their being murdered by them and their bodies privately buried in obscure places to prevent a discovery. . . . This on the other hand occasioned many great inconveniences to travellers, who were now in great distress for accommodation for themselves and their horses when they were disposed to refresh themselves and their horses, or put up for lodging at night."
-- "Sawney Bean," in the *Newgate Calendar*

Another bloody trail in our so far murky pattern is the tale of Sawney Beane. Beane, or "Bean," was born in East Lothian, Scotland, some time before the year 1600. (Exactly when is a fraught question.) Being of low and indolent inclinations, he ran away from home and settled in a cave near Galloway in the wilds of South Ayrshire on the west coast of Scotland. Here, he took up the practice of murdering passersby and eating them. Like Cain, he somehow found a wife, and raised up a troop of cannibal spawn unto the third generation. The Beane clan eventually numbered 48, and their victims were literally numberless. The locals could never track the killers, who moved along the shingle at low tide and hid behind their cave's submerged entrance at the high. It wasn't until the Beanes attacked a man and wife on horseback -- killing and devouring the woman before her husband's eyes -- that they were discovered, and that only because a party of fair-goers rescued the husband from their pursuit. King James VI mounted a personal attack on

the cannibal clan, discovering their cave himself and seeing to the entire family's extirpation by noose and pyre -- all but one daughter, Elspeth, who had earlier fled to Girvan. But the townsfolk of Girvan discovered her secret and hung her from the "Hairy Tree" that she had planted in the town square.

This story, historians agree, is bollocks. There are no records in any Scottish court of such a proceeding (although the legend says King James hung them without trial) or of any Scottish royal manhunt in Ayrshire (although the King may have taken credit for his sheriff's zeal). And besides, it wasn't King James VI anyhow, but King James I. (Montague Summers confidently gives the date of the Beanes' destruction as 1435.) Or still earlier, "in the time of Bruce or [Macbeth](#)," two Scottish kings not incidentally also guilty of guest-murder. But historically based truth or mere slavering folklore, Sawney Beane lives on. And the Benders, remember, were absolutely real, grounded in print and purchase in the prosaic 19th century -- until they vanished utterly. The myth these clans embody, the myth of the "murderous family," complete with underground lair, disturbing hints of incest, exceptional daughter, and predation on travelers, links Beanes and Benders, remotest Kansas and wildest Scotland, with an incarnadine thread that "not all Neptune's seas" will wash out.

"Maybe Indians. Or escaped convicts. Or mental patients, or part of a hippie killer clan, or mutants -- this is a test range, you know. They could be some sort of mutants."
-- "Bobby Carter" (Robert Houston), in *The Hills Have Eyes* by Wes Craven

And indeed, Neptune's seas wash at least one other famous cannibal family, the Laistrygones of the *Odyssey.* Descended from Poseidon, the Laistrygones lurk -- like Benders and Beanes -- "in the West, where dwells always abundant desolation," in the words of the Hellenistic poet Lycophron. (Wes Craven set his own Sawney Beane tale, *The Hills Have Eyes,* in the "abundant desolation" of the Nellis Air Force Range in Nevada.) Is it this westward -- and plural -- pull of the myth that led Tobe Hooper to transpose Wisconsin loner Ed Gein into a Texas cannibal family when he took up the tale himself in *Texas Chainsaw Massacre*? And isn't it interesting, in that leather-faced context, that the word *laistrygones* means "skin-reapers" in Greek? (On the subject of human skin, William Burke's skin was used to bind a notebook for dissection students. He literally became his own legend.) Like the wild, skin-clad Beanes, Homer says the Laistrygones are "not like men but like lawless giants," and they too dine on passing strangers, in this case, Odysseus' luckless crew. John Bender Sr., you'll be interested to know, was described as "a beetle-browed giant of a man" and "wild and woolly looking." To the Greeks, the giants (and hence the Laistrygones) barked -- they, and all cannibals, were tied to the man-eating wolf. By lineage, at least, since Lykaion -- who attempted to betray his guest Zeus by feeding him a human-meat pie -- was turned into a wolf by the offended god. Thus [werewolves](#) enter our mix, via guest-violation and cannibalism, just in time for us to mention the "sudden appearance of two large and vicious-looking dogs" that frightened away a Jesuit missionary from the Benders' home, he later reported. The Benders, as far as anyone could tell, kept no dogs.

"If one assumes that cannibalism . . . is part of a larger pattern . . . then the evolutionary view is that cannibalistic behavior can be adaptive under certain conditions, as it is in the reproductive strategies of some species of beetles, bees, and other invertebrates and of various fishes, amphibians, birds, rodents, and nonhuman primates."
-- Christy G. Turner II and Jacqueline A. Turner, *Man Corn: Cannibalism and Violence in the Prehistoric American Southwest*

The Benders, if they were pulled by the same myth, went west, into the wilds of New Mexico and Arizona, from which [fractal valleys](#) the Anasazi had mysteriously disappeared themselves 600 years before. The Anasazi, as it happens, were also cannibals, who lived in extended family communities in caves and rock cellars. Like the Benders and the Beanes, their cannibalism was "exogamous," meaning it was directed at outsiders. Interestingly, the archaeological evidence seems to support the notion of the Anasazi falling under the cultural domination of a small cult of cannibal warriors around 950 A.D. A group of Laistrygones, perhaps, dog-giants in the West, in the "abundant desolation." Perhaps the Benders -- never born, never died -- went back home. As H.P. Lovecraft reminds us in "The Picture in the House," cannibalism can do that. It can prolong your life, even remove you from time, as the Beanes seem to have been removed.

Lovecraft's undying fictional ogre gains his lore from studying woodcuts and reading about the Anziques, a real, historical tribe who lived in the western Congo in the 15th and 16th century, until they, too vanished to become the

bogeymen of neighboring tribes. I'm sure any homophonous similarity between the isolated, cannibalistic Anasazi of Arizona and the isolated, cannibalistic Anziques of the Congo is pure coincidence. After all, the name "Anasazi" comes from the Navajo *anaasázi,* meaning "enemy ancestor" or "enemy ghost," while "Anzique" is a Portuguese variant on the Bantu *an-t'eke,* meaning "remote" or "distant," or perhaps on the Kikongo *nziku,* meaning "to run away." Good advice, especially when dealing with enemy ghosts in a remote or distant house.

"Sixth, he slew Damastes, whom some call Polypemon. Damastes had his dwelling beside the road, and made up two beds, one small and the other big; and offering hospitality to the passers-by, he laid the short men on the big bed and hammered them to make them fit the bed; but the tall men he laid on the little bed and sawed off the portions of the body that projected beyond it."
-- Apollodorus, *Epitome,* I:4

Lovecraft's ogre is another slight riff on the theme. He is hairy and bearded, like John Bender or the Laistrygones or Sawney Beane, but he lives alone in a lonely house off the main road, luring in a solitary traveler now and then with conversation about food. (An eerie parallel with the Little Red Riding Hood tale, it occurs to me now.) He is the inheritor of the mantle of Polyphemus, like Laistrygon a son of Neptune, the Cyclops who lives in a cave by the sea and preys on those of Odysseus' men who have escaped the Laistrygones (and the doglike, man-eating Scylla, who also lives in a sea-cave). He, too, vanishes in a sense, killed "by Nobody" as the Benders may have been. His name is eerily like Polypemon, the name given to Procrustes -- the murderous innkeeper slain by Theseus -- by Apollodorus in our quote above. *Polypemon* means "many miseries," an interesting hint that the "family" ogre and the "solitary" ogre may be the same thing after all, a mere collapse of the quantum wave function. And Procrustes is himself an interesting fellow. He's tall (we know this because Theseus cuts off his limbs in the myth), he keeps a roadhouse, and perhaps most intriguingly of all, he is, according to Ovid, the son of Poseidon (like Polyphemus, like Laistrygon) and, according to Apollodorus, the father of Theseus' other foe Sinis. Who is perhaps better known, though not much better, as Pityocamptes, the Pine-Bender. Yes, the original murderous innkeeper in all Western lore is not only first cousin to cannibals, but the father of the first Bender.

"You glimpse things out of the corner of your mind, same as you glimpse things out of the corner of your eye. You encase 'em in solid circumstance and they're not so bad. That is known as the Growth of Legend. The Folk Mind in Action. You take the Carkers and the things you don't quite see and you put 'em together. And they bite."
-- Anthony Boucher, "They Bite"

The Benders were mystics -- they said it themselves. Like all mystics, they took false names, and like all magical names, they were compelled to be true names. They were of the blood of the Bender, sons of Procrustes. (Like the Benders and the Beanes, Sinis also had an alluring daughter, who survived by seducing Theseus. They had a son. He vanished.) They spoke with the dead. They carried out their purpose in the blood-choked cave they dug below their inn, under the gaze of the primordial Indian mounds across the prairie from them. (Now called the "Bender Mounds." No, really.) And then they went into the West. Perhaps they were not actually cannibals. Perhaps they left those morsels in the cantosphere with the skin-rags they wore in Galloway. Perhaps the sterile Kansas land -- so far from their father Poseidon -- kept the song ("Burke's the butcher and Hare's the thief") at a remove. Perhaps the cold light of Ulysses S. Grant's conventional America, with its 19th century faith not yet gnawed by the terror famines coming in the Anziques' Congo Free State or Baba Yaga's Ukraine, stripped the Benders down to the bare minimum. John Bender, Sr., was a realistic ogre for newspapers and wanted posters, not a full-blown hairy, stinking, frozen wendigo. The Bender clan didn't strip the country clean, or fight to the death against the sacred king on a white horse, like the Beanes. They merely killed their guests, and threw them into the cellar, and buried them in a grove at the dark of the moon. And then they vanished. And they -- probably, most likely, realistically speaking, when all is said and done -- didn't eat human flesh. Not so we can prove, anyway.

Irregular Webcomic

by David Morgan-Mar & Steven Marsh

Irregular Webcomic

Harry Today, Goney Tomorrow

The media machine has been in full-tilt mode for months, as the teeming millions waited in line to be the first on their block to experience the magic . . . to heed the call of wonder . . . and to expose the long-tantalizing secrets. But for everyone who couldn't afford an iPhone, hopefully something else interesting will come along to wait up 'til midnight for.

Speaking of Harry Potter, one of the interesting things about *this* round of all-encompassing hype has been that there's been an air of finality about the whole affair. Of course, this is for good reason; by all accounts, this is the last book (which makes sense, what with Harry and Voldemort falling off the edge of Reichenbach Falls[1], presumably to their deaths). And, seeing as how JK Rowling has more money lying around the house than the Queen, it's not like she needs to bring Harry back or anything, unless she's looking to expand her summer home by buying . . . France.

Anyway, part of the appeal of the series -- at least to me, as a relative outsider fan -- is that it is a "closed" series; there won't be umpteen billion sequels, each with them the possibility of sullying the previous volumes. (*Hitchhiker's Guide,* I'm looking at you.) This closure is made possible by the one-year-per-book structure of the series, which means that -- at the end of Book 7 -- he'll presumably either graduate, die, or both (unless he decides to extend his academic career by flunking out of a few courses and changing majors, a la Your Humble Editor).

A closed structure with predefined milestones is an excellent structure for many campaigns, since it gives the players something to look forward to (or at least anticipate), while also giving the GM a good number of hooks to base future episodes on. In fact, this has been a successful structure for a large number of television shows:

- *24:* Each day is going to take place over the course of a day; each season will have a "high noon" involved . . . possibly many, depending on the time zones involved.
- *Saved by the Bell:* Set in a high school with each season representing a year of school (loosely), so there are certain certainties you're going to encounter: homecomings, proms, summer vacations, college entrance exams, etc.
- *Playmakers:* This ESPN original show chronicled the adventures of a football team, with each season representing a season of the sport. (It only lasted a year, so it didn't exactly explore the concept to the fullest.)
- *The West Wing:* Again, occurring in real time with a real political landscape, so you know there's going to be a primary season, a period when Supreme Court decisions are handed down, and so on. In addition, since the show follows a president starting with Year Two of his presidency, and since you can't be elected president for more than eight years, you knew that this guy's era was destined to have a finite timeline.
- *Star Trek (The Mod Years):* A "five-year mission" implies some kind of conclusion to the mission. Again, the show's early demise kept this aspect from being more fully explored (I would've enjoyed a "Welcome Home, Heroes" season ender, m'self).

Schools provide the most obvious swipable example of a structure that can be stolen, since practically every player will have attended an educational institution of some sort. Other human-made schedules are also good, such as the "five-year mission" or a four-year election cycle. Also interesting are universal or natural schedules, such as the one-day structure of *24.*

Once you know the *type* of structure(s) you'll be using, it's relatively trivial to fill them out with specifics that the heroes can look forward to (or dread), by putting them on a calendar that the players (and heroes) know and understand.

So let's mash up a few ideas and see what results. Let's take a world that's like our own, only promising pupils are carted off and trained in paranormal research; for whatever reason, getting trained younger provides a real edge in fighting the darkness, so there's an excuse for placing tikes in mortal danger. The campaign opens up with our PCs entering their final year of school -- Veritas University -- which -- assuming a collegiate level program -- would put them in the 21-22 age range. Now, our World of Wickness also happens to be on a 10-year sinister cycle, with the evil

reaching an apex in the middle of this range and ending at the nadir. (Sort of like an El Niño of Evil.) This is on year two of its cycle, so the evil is ramping up (quite coincidentally, along the same power curve the heroes will be growing up into). Finally, let's toss in some real-world politics here; the University is funded entirely at the mercy of the government, and has been under pressure for decades to close its doors; the only thing stemming the tide is the university's president, who's up for reelection in three years. The heroes will have graduated by then, but presumably they'll still maintain some contacts to enable them to fight the good fight.

The GM declares that the focus of the campaign is to ensure the cosmos survives this current wave of evil . . . ideally with the world being a better place than it was before. Thus the campaign will last five to six years in game time (with whatever resultant compression the GM would like in game time).

Okay; let's put our pieces together:

Year One: College

- "Career Counseling"
- University programs (dances/formal affairs?)

Year Two: Post-College Training

- Teaching Assistant possibilities for incoming classes

Year Three: Reelection

- Political intrigues

Year Four: The Rise of Evil

- More opportunities for the heroes

Year Five: The Pinnacle of Evil

- The big enchilada

Year Six (?): Crawling from the Wreckage/Putting Pieces Together

Note what other patterns emerge once we engage in this thought exercise: presumably the game world saw its last apex of evil seven years previously, meaning that the world was pretty cruddy for our heroes when they were 14 or 15, and again when they were four and five . . . just the sort of thing to tie into flashbacks or origins. Likewise, this structure would be known from the beginning of the campaign by both the GM *and* the players; no one may know specifics, but the broad strokes -- "there will come political intrigues," "the world will get worse before it gets better" -- would be common knowledge. Likewise since it's set in the real world, the GM could toss in whatever other events he'd like (such as an Olympic game or two.)

Done correctly, such a campaign can provide players with loose map they can plan for accordingly, much like the real world. It's also easier to motivate players to be more daring and proactive when they know the game world won't progress on an infinite timeline. Regardless of whether or not the campaign *works,* it should at least feel a lot different than the open-ended "one year blends into the next"-style campaign.

Because eventually, even the best things come to an end . . . like the ringing of an iPhone.

--Steven Marsh

* * *

[1] Just kidding. I haven't read any of the books, and only seen two of the movies. So I can't possibly offer any spoilers.

Icosahedron Adventures

Unusual Objects (Part One: A-D)

by Owen K.C. Stephens

Unusual items play a part in a large number of adventure stories. In many cases they're simply a McGuffin, the thing sought because the plot is about seeking a thing. Others have real power to affect the course of events, either as tools or as characters in their own right. Some willful items have at best pseudo-personalities, such as a *ring of invisibility* that slips off its owner's finger at an inopportune moment. Others are blatant unliving entities, such as sapient robots or cars that talk and hold their own opinions. As tools in RPGs, they work best when they help the GM move the course of events toward adventure, either as goals (for the PCs or their foes), or as manipulators of circumstance in their own right.

Even if they think, talk, plot, and have emotions, objects aren't the same as people, and shouldn't think the same way. A singing sword doesn't suffer hunger, exhaustion, or thirst in the same way a biological entity does. (Of course, it might thirst for blood, which is a cool personality quirk and very disturbing at the same time.) Most have no urge to procreate, little fear of aging, and no family to influence them. (An item that does have these baser drives may be set apart from other items by them.)

If they have desires at all, they are likely to be programmed (established by the biological creatures that created them), or based purely in philosophical or ethical concerns rather than biological needs. For some objects this may free them to act only for the greater good, with no distractions such as greed, avarice, gluttony, or lust. Other may become forces of pure evil, willing to take any steps to achieve whatever goals they do have. (Does either a computer or a magic ring have a soul? If not, need they fear punishment in the afterlife? If not, does that impact their morality?)

The following unusual objects are all designed to have an influence on a party of player characters, but may or may not actually talk. They can be useful as McGuffins, but also give a GM subtle ways to influence where a party goes. Indeed, such influence can be an acknowledged in-world method for giving out-of-game information. ("Guys, I don't have anything written up for the abandoned hospital. It's a great idea, I just didn't think of it. Let's say the Enigma Van broke down again, this time in front of the old high school, and you all went in looking for a phone to call help.") A total of 26 items are planned, with cross-setting notes to fit them into a broad range of genres. Only the oddest of games would include all these items, though a game that focused on these being the only 26 items of power in existence (or 26 of the 42 known to exist, or whatever numbers you find meaningful) might well work.

Amityville Doorknob

They say it came from a place long known to have been haunted. It could be the actual doorknob of a haunted house long burned to the ground, but there are other options: an ancient alien artifact, last remnant of a long-dead civilization; An old garage-door opener from a company no one has ever heard of, built in a town not on any map; a rusted key with runes of the dead and damned, rumored to come from a vampire's castle; a passkey for Human Engineering Life Laboratories that someone became attuned to another reality, rather than a mundane security system. Whatever its form or genre, the Amityville Doorknob is an object that traditionally gives you access to a portal of some kind.

When used, the doorknob can activate any door, gate, portal or opening, but not to gain access to the other side. Instead, the object creates a pathway to a reality of terrors and supernatural threats. Anyone daring to pass through this place can come out somewhere else, allowing a form of limited teleportation. However, every trip always includes an attack by terrifying creatures of horrifying visage and powers.

In a game with magic the doorknob may take its users through an actual haunted location, though the location seems

to be nothing but rooms and hallways with no end. In less mystic settings, the doorknob needs more hand-waving. It grants passage to an alien transport terminal, long since abandoned but filled with the psychic impressions of a thousand species that died in some calamity. It actually accesses the user's own innate psychic abilities to teleport, but also taps into subconscious fears that must be faced in mental conflict.

In *d20 System* game terms the doorknob is a lot like a limited *teleport circle* spell. It can only go from portal to portal. It can only go to and from locations that aren't "shielded," meaning whatever you need it to in your campaign -- the doorknob may not work with doors protected by abjuration spells, or not in intense magnetic fields, or only with doors 20 or more years old. And every time it's used, the PCs must fight a battle of their CR +1 against whatever horror-themed creatures the GM feels like throwing at them. Worse, these fights are the price of the doorknob, and have a nightmarish quality once over, rather than clean crisp memories of battle. As a result there is never treasure present, and no one gains experience points for these battles. (This is the only way to prevent some players from using the doorknob as a quick replacement for seeking adventure.)

Bloody Typhoid Mary Celeste

In principle, it sounds like a perfect mode of transportation. A massive enchanted seagoing ship named the Celestial, with phantasmal crew and colorful background. The BTMC-01X, a prototype starship with a unique jump warp engine. A massive semi truck and trailer run off some kind of nuclear power plant with no need of fuel, pure water as a by-product, and plenty of spikes to keep road raiders from claiming it as their own apocalypse APC, nose art of the Virgin Mary with machine guns and fishnets covering the cab. The BTMC is fast, tough, durable, and spacious. There are just two problems.

First, the craft is a deep, blood red color and everyone knows it. The legend of the Bloody Typhoid Mary Celeste is well known, and includes that detail about its appearance. Efforts to repaint it are overwritten by magic, or make the solar panels useless, or are pointless because the color really comes from its molecular stability field, not any pigment slapped on the hull. The ship is recognizable, and most people have heard of it.

By itself, that's not too much of a problem. After all, the BTMC has defenses strong enough to repel most attackers (especially boarders), and some level of notoriety can be good for a group of adventurous PCs. However, the second problem ties into the first. The BTMC is a well-known harbinger of disaster. According to legend, plagues follow every port it visits. Wars break out when it's seen entering a kingdom. The ether becomes violently nonconfluent when the ship orbits a planet, and other ships are lost. And, of course, the crew keeps disappearing.

You haven't seen any of those things. Or, at least, no more of them than before you found the BTMC. Oh sure, the ship was empty when you ran into it. There was no sign of the crew, just a log book that suggests the previous crew found the craft empty just as you did. And yes, things often go wrong wherever you travel to. But that's always been true. That's why you go to these places.

There are just a few things that make the BTMC's legend seem more than superstition to you. First, you sometimes go off course and arrive at places with far more trouble than the destination you wanted to head toward. This can be useful -- you've tracked down some old enemies and put right some vile wrongs as a result -- but you do wonder what force takes over the ship's navigation. To make things worse, once you show up at any location with serious trouble, you can't leave. The wind dies down. The jump warp engine has a glitch, and needs 72 hours to reboot. The unobtanium power plant overheats. Until the problem blows up beyond all repair, or you hunt down the problem and fix it, the BTMC may move you around a little, but it doesn't take you away from the troubles.

In game terms, the BTMC has two functions. First, it serves as an easy way for a GM to introduce location-based encounters to a group of adventurers. Second, it can grant boosts of luck to its crew and owners, at the price of even more trouble later on. Once per game session, any PC that owns or rides on the BTMC can re-roll any one die roll and take the better of the new or original result. However, each time this is done the GM gets a luck token, which can also be spent on a re-roll. The GM must use the token by the end of the current game session, or it is lost.

Canopic Leftovers

It'd be funny if it weren't so sad. Okay, maybe it's funny anyway. The grand architect and prophet was mummified long ago, his organs removed, burned and placed in canopic jars as was custom. When the graverobbers broke into his tomb, they took the jewel-encrusted jars and mummified remains. Since they were heavy already, the robbers eventually decided to dump out the ashes within. A gardener's pile of wood ash, to be used as fertilizer, was handy, and in went the burned remains.

The spirit of the grand architect is understandably upset, and wants its canopic jars restored to his tomb. Unfortunately, with his mummy broken apart for aphrodisiacs, the only connection the spirit has left is the product of the gardener's efforts. Food grown from that plot was enriched by the spirit's ash, and now any such food is a potential vehicle for its spirit.

The canopic leftovers may be a can of string beans not yet opened, with the label slowly turning to hieroglyphs over time (though still clearly showing the green beans). It may be a hambone from a pig fed off the farmer's grains. Anything likely to survive long enough for a spirit to inhabit it may be a vessel (unless the spirit can retard spoilage in its buffet body, in which case everything from the half-eaten rhubarb pie of Horus to the cheese of ages becomes possible). The spirit must have that physical link to communicate with the real world, and aids anyone who comes in possession of his tasty talisman as long as they promise to aid in recovery of his canopic jars, and don't try to eat him.

Though a talking fruitcake may not seem that useful, the spirit is still an architect and prophet, and knows many secrets modern man has lost. In ***d20 System*** game terms, the oracle of ort has high checks in many Knowledge skills (including arcana, architecture and engineering, dungeoneering, the plains, and religion), and can cast *augury* occasionally and *divination* rarely. More common divination spells, such as *detect magic* may be available freely (and make a good way to introduce such options into a modern horrors game with a low level of seriousness), and of course it can detect spoiled food at will. The goals of the spirit are clear enough, and it becomes a McGuffin searching for its own four McGuffins -- a recipe for many potential adventures and nemeses.

Draupnir Jr.

Odin has a ring of gold. Each ninth night, it makes eight perfect duplicates of itself. Thus, Odin always has money for a mug of ale. There, the legends end on Draupnir's qualities. As a mythic item of divine power and value, it's not unreasonable to think Draupnir has thoughts, goals, and perhaps even powers of its own. Forged as part of a wager Loki lost (and defaulted on), Draupnir is a force for law, order, and wealth.

But what about all those poor rings it makes?

There have been many Draupnir Juniors (thousands over a few years, hundreds of thousands if it's been a few centuries). Most have been melted down, and indeed form a surprising percentage of the world's gold supply. But a few remain intact, and hold within them a surprising secret. With the exception of the ability to duplicate, each little Draupnir is a duplicate of their circular sire. They, too, can think and feel, and each knows what all the others know. They are also agents for wealth and order, though they also have issues with authority as a result of their absentee prolific progenitor. Since they know what Draupnir knows, the location of that ring may be among their secrets, but if so the Juniors aren't saying. They refuse to talk about their filigree father, and get insulted if someone suggests the original would be preferable to any of them.

The same idea can apply to items for different genres. A piece of self-copying alien technology might well be code-named Draupnir, and while the original is under government lock and key, one of the hundreds of copies might find its way into the wider world. A mater-replicator gone wild might produce hundreds of knock-offs of everything from starship captains to alien probes working for space-whales. A superhero with hydra powers might find each time he's killed, two of him return to life. Whatever the cause, the Jr versions of all these are linked, driven toward a goal, and touchy about the original.

Lacking any other special ability, and ignoring the potential lore a ring forged for a Norse god might pick up, the Juniors do form a perfect communication network. Each knows not only what Draupnir knew when it made them, but what the original and all copies have learned since (or at least what their seven clutch-mates have learned, if you want to tone down the madness). Thus what you tell one Junior, they all know and can pass on to others. Since the knowledge propagation is instant among the rings, they can beat the speed of light (and cause paradoxes if they more at relativistic speeds). Since no actual transmission takes place, the communication can't be intercepted or altered. Of course, the rings only aid those who work for their ultimate goal -- a world of riches and lawful behavior.

Pyramid Review

Secrets of San Francisco: A 1920s Sourcebook for the City by the Bay (for [Call of Cthulhu](#))

Published by [Chaosium, Inc.](#)

Written by Cody Goodfellow with David Conyers, Brian M. Sammons, Elizabeth A. Wolcott, Hilary Ayer, Janice Sellers, & Badger McInnes

Cover by Paul Carrick

Illustrated by Earl Geier, Paul Carrick, Badger McInnes, & Tom Sullivan

Cartography by David Conyers & Janice Sellers

190-page perfect bound black and white book; $24.95

Secrets of San Francisco: A 1920s Sourcebook for the City by the Bay is the third in the *Secrets of . . .* supplements published for *[Call of Cthulhu.](#)* The first was *[Secrets of Japan,](#)* the second *Secrets of New York,* and the fourth will be *Secrets of Kenya.* The city of San Francisco has been visited before by *Call of Cthulhu,* most notably in the classic campaign, *Day of the Beast* (originally *The Fungi From Yuggoth*), in Games Workshop's *The Statue of the Sorcerer & The Vanishing Conjuror,* and for *Cthulhu Now* in "This Fire Shall Kill" from *[The Stars are Right!](#)* Although *Secrets of San Francisco* includes details that mark the early appearances of elements that occur in *The Stars are Right!* and the modern day campaign, *At Your Door,* the emphasis for this supplement is firmly in the 1920s.

Secrets of San Francisco details the City by the Bay, the Golden gate to the Pacific, and the inheritor to the wealth of the California Gold Rush, going into detail about its (surprisingly long) history, geography, climate, information on San Francisco city and the Greater Bay Area, transport links, museums, legends, celebrities, and things to do. It explores Chinatown, the Asian ghetto within the city; the 1906 Earthquake and the subsequent fire, the effects of which have enabled the city to both rebuild and shed its chaotic, sometimes lawless past; and its secret organizations. Some are realy (such as the Masons and the Theosophists), but others -- such as Lang-Fu's Deep One cult (more fully detailed in *Day of the Beast* and *[The Keeper's Companion](#)*) and the "Mater Tenebrarum" -- are fictitious.

The "Mater Tenebrarum" is only one of a number of elements drawn from fiction. Among the sources are authors Fritz Leiber, Clark Ashton Smith, Michael Shea, and David Conyers. Clark Ashton Smith is also one of several notable literary figures given write-ups, the others being Ambrose Bierce and Dashiell Hammett. Other well known figures described include William Randolph Hearst and [Joshua A. Norton](#), along with various more local persons.

Some of the supplement's best chapters detail Chinatown, the cosmopolitan -- even seamier -- side of San Francisco, and the Bay Area's various legends and folklore. In fact, the description of the Greater Bay Area is better and more interesting than that of the city itself. There is enough detail given on every topic without being overdone, though in places more information would have been welcome. For example, details and advice on how create and play Chinese investigators would have made for a positively intriguing addition and game given their status and history within San Francisco. The guide to San Franciscan legends and folklore takes in Drake's Treasure, the Cat People of Mount Tamaplais, and the Winchester Mystery House, while the Mythos is used to explain the tunnels under Mount Shasta and the Bay Area's long history of shipwrecks.

Throughout the book, scenario hooks suggest how the supplement's contents might be used. This is a nice touch, though not all will be to every Keeper's taste or campaign. The four scenarios, which take up half of the book, open with the short introductory adventure, "The Ferry Ride." Becalmed on the last ferry ride into San Francisco, the characters may encounter a seemingly abandoned Chinese junk. (Or not, because there is no real reason for the party to investigate the junk.) If they do, the situation presents more of an experience and a mystery with answers to be developed by the Keeper. Certainly, more information upon Chinatown would have helped towards that.

[SPOILER ALERT!]

The first full scenario is Elizabeth A. Wolcott's "The Westchester House" in which the investigators are hired by an eccentric heiress. Obsessed with constantly adding to her home, she wants them to look into recent psychic manifestations. Pleasingly, this scenario has a very mundane solution. It has two problems though. The first is that it is a reprint, originally appearing in *The Asylum & Other Tales,* and this is not mentioned. Second, the scenario is clearly inspired by the Winchester Mystery House, which is in San Francisco. So why not mention this? Why continue calling it the Westchester House, when it is so clearly based on such a noted local landmark?

Brain M. Sammons' "The Colour of His Eyes" is the first of two lengthy scenarios in *Secrets of San Francisco.* The bizarre death at an asylum puts the investigators on the trail of an escaped inmate, a former astronomer driven both blind and mad by his observations. More of a detailed framework than a conventional scenario, it is let down by a weak method of introducing the PCs. Having them encounter the incident at the asylum is far more effective than trying to get them involved in the situation afterwards. However, this adventure provides an interesting and entertaining take upon a well-known Mythos entity.

Although "The Colour of His Eyes" is good, the supplement's highlight is "Beyond the Edges" by David Conyers. Based on the author's short story "Vanishing Curves," the scenario begins as a missing person's case that leads them into the Tenderloin, an area of the city known for its houses of ill repute and its high number of homeless. Designed for experienced investigators, this is a challenging affair that draws upon the Bay Area's pre-colonial history and will likely drive the investigators into a homeless state before the problems it presents can be solved.

[END SPOILER ALERT]

Physically, behind Paul Carrick's fine cover, *Secrets of San Francisco's* reasonable layout is let down by two factors. A series of dreadful thumbnail portraits mar the book's otherwise excellent artwork, while its maps are once again let down by inconsistent handling. This isn't the case with the period maps (though better ones could have been included of San Francisco itself, particularly street maps), but rather those created by Chaosium themselves. Although a bibliography is given, it is a pity that it lists no gaming material.

Where *Secrets of San Francisco* succeeds is in imparting a feel for the city, especially its cosmopolitan or seamier underside, but without overwhelming the Keeper with information. It also does a good job of tying the city's Mythos connections into *Call of Cthulhu* cannon. However, it does not impart a good geographical sense of the city in comparison to the Bay Area, and it leaves some areas underdeveloped, such as the chapter on Chinatown. Similarly, notes on running the material here in the game's other eras would have been welcome. Overall though, *Secrets of San Francisco: A 1920s Sourcebook for the City by the Bay* is a reasonably done supplement that does a decent job of introducing the city to *Call of Cthulhu.*

--Matthew Pook

A Mélange of Magical Creatures IX

for *GURPS*

by Eric Funk

Our continued exploration of the odd world takes us through fields, across planes, and under water, all the while gazing upward.

Tumblers

*"Some historians point to these round, fast-moving omnivores as the inspiration for the wheel. This is just as improbable as getting fire from dragons. Although they **did** have it first, mankind had nothing to trade for it."*
-- Talorius, *Origins of Technology*

These fast, round-bodied land animals have a dark brown rough skin. Always in motion spinning end over end, these wheelform creatures can see in all directions due to their widely-set eyes. Though rarely resting long enough to be observed, the tumbler looks like a cross between an otter and an armadillo. On four legs, they waddle uncomfortably. Their digestion system requires the spinning motion; a tumbler that is tied up will grow sick and die. Moving faster than any human, early cultures described these omnivores as messengers for the gods. Tumblers are always moving, even when asleep, stopping only to eat. As herbivores and opportunistic scavengers, they will eat almost anything smaller than they are. Fortunately, *most* tumblers are small.

Encountered

In the wild, tumblers enjoy roads, straight paths, and dry river beds. They also enjoy playing tag and other social games. Rarely caring where they wander, tumblers can end up anywhere. Usually found in groups of three to 18, the larger they are, the smaller the social groups they keep. Their squeaky yips are distorted by a doppler shift due to their rotation. This results in a machine-like whir. Many cities gamble on tumbler races, as they are much faster than dogs, although they can make some people sick from their mode of locomotion.

Industrial Uses

"Okay, true story: We were marching across the flats. Jerry here was eating a sandwich, spilling scraps of his lunch as we walked -- bad show. A few tumblers showed up to pick up the scraps. Then more showed up, and they all started to circle us, ever increasing in speed. It eventually got to the point that Karl was so nauseated that he lost his lunch."
-- Lord Everett Bronmyr, *Plains of the Amazons*

A few organizations have declared that they have successfully put tumblers on treadmills for power. Turning millstones or generators, they never seem to tire. It is difficult to stop or redirect the beasts to service (or to sabotage) bridled mechanisms, although a good lure and a roll against Animal Handling at -2 works. Some messenger companies have had success training tumblers to come when called. Unfortunately, this requires ultrasonic whistles that annoy nearby canines. Enchantment uses include items of body sense, toughness, and energy recovery.

Adventure

A horse messenger company seeks to prove that horses are better than tumblers. They believe it to the extent that they want a non-equestrian to ride their best horse and compete in a set of contests. The question is, will either party play fair? Will this bet between nobles spiral out of control between their underlings?

Tumbler

Appearance: Wheelform mammalian with rough dark skin. Its sides have short, stiff fur.
Category: Mammal.
Diet: Omnivore.
ST 2; DX 14; IQ 4; HT 14.
Will 10; Per 11; Speed 7; Dodge 12; Move 7.
SM -2 (1' diameter); 5 lbs; DR 1 (+DR 3 vs. Crushing).
Traits: 360° Vision; Catfall; Chummy; Combat Reflexes; Enhanced Move 2 (Ground Speed 28); Night Vision 2; Perfect Balance; Reduced Consumption (Cast-Iron Stomach); Resistance to Disease +3; Sleepwalking (6); Super Jump 2 (Bouncing); Telescopic Vision 1; Temperature Tolerance 3; Ultrasonic Speech; Vermiform; Very Fit; Wild Animal.
Skills: Body Sense-16.

Giant Tumbler

ST 4; DX 13; IQ 4; HT 15.
Will 10; Per 12; Speed 7; Dodge 12; Move 7/28.
SM -1 (2' diameter); 20 lbs; DR 2 (+DR 5 vs. Crushing).

Humungous Tumbler

ST 8; DX 12; IQ 6; HT 16.
Will 10; Per 13; Speed 7; Dodge 12; Move 7/28.
SM +0 (3' diameter); 40 lbs; DR 3 (+DR 7 vs. Crushing).

Gargantuan Tumbler

ST 12; DX 11; IQ 4; HT 17.
Will 10; Per 14; Speed 7; Dodge 12; Move 7/28.
SM +2 (5' diameter); 160 lbs; DR 4 (+DR 11 vs. Crushing).

Immense Tumbler

ST 16; DX 10; IQ 4; HT 18.
Will 10; Per 15; Speed 7; Dodge 12; Move 7/28.
SM +3 (8' diameter); 320 lbs; DR 5 (+DR 17 vs. Crushing).

Bloodbat

"The first recipient of a bat-borne blood transfusion accepted it last week with no signs of rejection. While that procedure was a resounding success, the patient died today when he failed to yield right of way to an elephant."
--Biotech Today, Year XXXIV of His Majesty's Reign.

The blood-bat is a strangely cuddly creature, genetically engineered from a mix of vampire bat and snake stock. It is designed as a blood cleanser, with a powerful immune system to filter blood drawn from a host before re-injecting it free of pathogens. This large bat has brown to white fur with a red raindrop pattern on its chest.

It has an instinct to keep its prey alive, by returning the previous batch of processed blood back after taking some. It can take blood from one source, clean it over a minute, and transmit most of it back to the same being, or -- if shooed away -- give it to the next after processing. If the victim seems too low on blood, the bloodbat will take blood, and put all back in.

This trait was bred into it at the Pamito clinic, and as the species was being transported between various hospitals, escapes happen. Fortunately, they are not interfertile with normal bats. Bloodbats actually contain a system not unlike a snake's, which consists of hollow fangs and a bladder for liquid.

The design also called for a kidney-like organ to filter incoming blood, storing it in the other side of the organ for reinsertion. As a side effect, the bloodbat takes foreign agents, nutrients, and specific enzymes out of the blood, rendering it neutral and easier to accept. The bat's own immune system adds antibodies and removes impurities from the blood.

Encountered

Officially, the only place where bloodbats can be encountered is in a hospital, but an unknown number have escaped to the wild over the years. These hardy animals can survive in almost any climate, and thus can be found anywhere from temperate to frigid environments. Wilderness outposts are likely to have one or two bloodbats on hand to ease blood donations, and to help victims of snake bites. Nobles might keep one around just in case a victim is poisoned. Some athletes and warriors cache blood until just before a battle to keep their edge. They say smarter warriors keep some blood for *after* the battle. Some people even feel more alert after a transfusion, since increased blood supply offers greater oxygen capacity.

Industrial Uses

"The accursed Count Vald and his cohort had swooped down on me in the dark of night, and nearly drained me dry. I don't mind saying I feared that if I died from the vampires' wounds, I might rise cursed as they, and in their thrall. As my vision faded, I saw something grey and red fly at me. The last thing I remembered was something bit me. Then morning's light awoke me. What a wonderful feeling it was to see the sun!"
-- Overheard in the tavern *The Sphinx's Tail*

Some medical corporations have found that bloodbats make excellent sources for antivenom for snake bites, as well as cures for many puzzling diseases. In addition, these bats can be used to hold blood transfusions for patients receiving operations or recovering from trauma. Peculiar enzymes enable the bats to preserve the blood almost indefinitely. As a side effect of the storage of human blood, the bats themselves have near-human blood chemistry. This is in some ways unfortunate as they now qualify as food for certain classes of undead. The upside is, of course, that fewer humans will suffer, at least until the numbers of undead grow. Magical uses include the preservation of food, the warding of vampires, healing magic, and the transmission of energy.

Adventure

The heroes are hired to capture a bloodbat that escaped from a lab. They are given a simple tracking device that will give them the direction of the bat. What their employers don't know is that there are no fewer than three other organizations after this creature; the employers also neglect to tell the PCs is that the bat was carrying a blood sample from a sick noble. One competitor wants the tissue sample, while another wants a sample of the pathogen. The third is after the bat itself.

Blood Bat

Appearance: Medium-large bats with brown to white fur with a red raindrop pattern on the chest
Category: Mammal (Or avian in some taxonomies).
Diet: Omnivore, primarily vegetarian.
ST 3-4; DX 12; IQ 4; HT 13.
Will 8; Per 10; Speed 6.25; Dodge 10; Move 6 (1-2 on the ground).
SM -4 (15" long) (SM+0 with wings unfurled); 1-2 lbs.
Traits: Combat Reflexes; Flight (Winged; Air Move 12); Peripheral Vision; Perk (Human Blood); Regeneration (Slow); Resistance to Disease +8; Resistance to Poison +8 (Natural Poisons only); Sanitized Metabolism; Scanning

Sense (Sonar); Temperature Tolerance 2; Wild Animal.
Skills: First Aid (Blood Loss)-15.
Knack: Preserve Food.

Giant Blood Bat

ST 5-8; DX 11; IQ 4; HT 14.
Will 8; Per 9; Speed 6.25; Dodge 10; Move 6 (3-4 on the ground).
SM -2 (3' tall) (SM+1 with wings unfurled); 5-10 lbs; DR 2.
Notes: HP loss is 1-2 on a bite, but should be restored in the same minute.

Chest Ghost

"The moving corpse commonly called a chest ghost is considered one of the most disturbing beasts in these parts -- a force that animate corpses. They are disgusting and unsanitary, and cannot be stopped by common wards against undead. Even if they are thwarted, there is still the problem of cleanup."
-- Knights of the Living Undead

The archetypical "chest ghost" is a limbless, floating torso from a human-sized being. It is home to an insect that fills it with lift gas and slowly devours it from the inside. Keeping the "vehicle" floating about a yard off the ground, the "pilot beetle" pokes its wings out the back and steers the form. The pilot insect seeks more carrion to feed on, and will maneuver its current host close. If the new target has more meat (and no competition), the parasite will switch hosts, the inflation process taking a day. Every day, the pilot exits to coat the body in a preservative enamel excretion.

Encountered

Chest ghosts seem to be attracted to large battles, as well as the smell of cooking meat. As can be expected, the sighting of a chest ghost is almost universally considered a bad omen. The scene is increased dramatically if the host is recognizable.

Industrial Uses

*"We were camping in the woods. Then, some weird-looking furry blobs started floating at us from over the hill. Jake said we should, put all our food up the tree, like the ranger guy showed us. We did that, and as the floating things got closer, we got the feeling that we should, you know, get **ourselves** up the tree too. We split, and could only watch as the things got close to the fire . . . Real spooky. They got no heads! Wow, bad karma, man."*
-- Sonny Tiefer, *Magic Years*

There have been few known industrial uses for these creatures. The pilot beetle's saliva can be distilled, it could make an excellent preserving agent, and the lift gas could be worth investigation, but the press on the creature is currently so poor that research is very difficult. Reclusive enchanters and alchemists are working on projects, but refuse to comment at this time. One project that was leaked is that chest ghosts can actually disassemble fresh undead, which can be applied in undead-infested areas.

Adventure

There are an unusual concentration of chest ghosts spotted in an outlying town near a swamp, and the heroes are charged with determining what causes them to all be there. In fact, a necromancer is digging up bodies, looking for one in particular.

Chest Ghost ("Vehicle")

Appearance: A limbless torso with a glossy sheen over its skin and fur.
Category: Inanimate.
Diet: N/A.
ST 3; DX 6; IQ -; HT 12; 6 HP.
Will -; Per -; Speed 3; Dodge 6; Air Move 3.
SM -1 (4' tall); 60 lbs; DR 2.
Notes: From the torso of a SM+0 creature.

Chest Ghost (Pilot Beetle)

Appearance: A largish beetle-like insect with a rusty coloration. It has large, armored wings.
Category: Insect.
Diet: Carnivore (Scavenger).
ST 2; DX 14; IQ 2; HT 14.
Will 12; Per 12; Speed 7; Dodge 11; Move 7.
SM -4 (18" long); 1-2 lbs; DR 2.
Traits: Acute Sense of Smell +2; Combat Reflexes; Create (Air); Flight (Winged; Gliding; Air Move 14); Wild Animal.
Skills: Pilot (Lighter-than-air)-15.

Giant Chest Ghost ("Vehicle")

ST 6; DX 5; IQ -; HT 12; 12 HP.
Will -; Per -; Speed 4; Dodge 4; Air Move 4.
SM +0 (6' tall); 80 lbs; DR 4.
Notes: From the torso of a SM+1 creature.

Giant Chest Ghost (Pilot)

ST 4; DX 13; IQ 2; HT 15.
Will 12; Per 13; Speed 7; Dodge 11; Move 7.
SM -3 (2' long); 4-5 lbs; DR 4.

Sylvan Starfish

"It was certainly a strange evening to come out and find that every tree looked like it had been hit by an ocean wave. There were what appeared to be starfish on every tree. Very strange. On close inspection, they appeared to be crawling . . ."
-- Vil Kinza, Tree Surgeon, *First Encounters with Sylvan Starfish*

These unusual arboreal parasites resemble otherwise normal starfish that can climb trees, and even crawl around. The sylvan starfish thrives on tree sap, preferably that of deciduous trees, particularly beech wood, although it can survive on conifer sap. It can float in water or creep slowly between trees. These starfish are generally considered to be a blight in orchards.

Encountered

Adventurers will most likely encounter this creature while camping out in the woods. It likes to latch onto warm mammals for a short time to move between trees. If a first encounter with these somewhat friendly herbivores involves one dropping on a head, a Fright Check may be in order. These animals can stick to cloth almost indefinitely.

Industrial Uses

"Our wood plantation could have been in trouble after we lost the teak orchard to the flash fire of naught-six. All we had was our beech. Then, looking out to sea, we hit upon the idea of using the sylvan starfish to carry medicine to all the trees . . ."
-- Thaddius Ropp *Starfish on the Beech*

Sylvan starfish can be used to carry inoculations for plant diseases. In addition, farmers can use them to find the weakest point on a tree trunk to tap sap, such as for maple syrup, and expand on the hole they bore. Uses in enchantment vary from regeneration to clinging to sleep.

Adventure

The PCs are required to infiltrate a local group which uses tattooed sylvan starfish as living badges for their meetings. The starfish are kept in an orchard between meetings under light guard. The day before the meeting, they are gathered and kept under medium guard.

Sylvan Starfish

Appearance: A medium-sized starfish.
Category: Invertebrate (Aquatic).
Diet: Herbivore.
ST 4; DX 8; IQ 1; HT 12.
Will 8; Per 8; Speed 5; Dodge 8; Move 1/2.
SM -4 (6-10"); 1-4 lbs; DR 1.
Traits: Acute Sense (Vibration) +4; Chameleon 1 (Always on; Only between white and dark brown); Chummy; Clinging; Damage Tolerance (No Vitals); Extra Arms (5 total); Flexibility (Flexible); Infravision; Metabolism Control (Hibernation); Regrowth; Wild Animal.

Giant Sylvan Starfish

ST 10; DX 8; IQ 1; HT 14.
Will 9; Per 9; Speed 5.25; Dodge 8; Move 1.
SM -2 (2'); 10-15 lbs; DR 2.

Slipgrass

"As outsiders, we watched the ceremony of ascension from the edge of the clearing. A large black stone block was rolled off the poles, onto the grass. Then the youth grabbed a rope, scaled the block and began to put all his strength to it. The block started, ever so slowly, to accelerate."
-- Lord Everett Bronmyr, *Skating Tribes of Zukon*

This green-blue grass seems to be covered in a near-frictionless secretion, making it hard to chew while it is green. Conversely, the roots are sticky, and can starve worms and insects. This herb grows best on hills, causing animals, and other seeds to keep going past the patches of slipgrass. It is hard to cut, as the grass blades simply bend out of the way.

Encountered

Dells tend to collect branches and other debris, and adventurers who do not pay attention. Some cultures use fields of this grass as a skating rink in off seasons. Adventurers are likely to encounter slip-oil as a "dirty trick" item or mechanical aid.

Industrial Uses

"Loose railing. Oiled stairs above. Stuffed cat. Note close to the victim's handwriting to put life savings in escrow. Hand of solitaire. This leaves me with just one question: is this the work of our man, or a copycat?"
-- Lieutenant Brickers, before his disappearance.

Pre-industrial societies have found that properly tended grass can aid in the moving and coordination of huge stone blocks. Recreational parks and commercial transportation companies can "pave" paths with slipgrass to aid in moving land barges and to portage boats. Some militaries are trying to perfect coating armor with slip oil. In this, they have had some success, as the impaling and cutting damage is changed to crushing, at the cost of double knockback. Industrial plants have had some success employing this herb to aid assembly line flow. Industrial usefulness is limited by the fact that large items resting on the lawn for more than a few days will injure the grass. Therefore, the line must either move quickly or clear itself in the middle of the day. Distilled slipgrass oil can make for a salve that minimizes contact between items. As it cannot abide heat well, it is good for cooler clockwork and steam items. In fact, pretty much any low-use temperature joint can benefit from this treatment. Wizardly uses include enchantments to make a surface repel items, as well as eliminate friction.

Adventure

The heroes are hired to oversee the planting and cultivation of a rink of slipgrass. Opposition can include local neighborhood groups, roving undead cattle, hooligans, gangs of children, and so on. The mastermind is a local entrepreneur who wanted to develop the land himself.

Slipgrass

Appearance: Slightly blue, glossy grass.
Category: Plant.
Diet: Photovore.
HT 12.

Giant Slipgrass (1 blade)

ST 8; DX 8; IQ -; HT 13.
Dodge 12.
SM -2 (3' tall); 4 lbs; DR 2.
Traits: Damage Tolerance (No impaling; No Cutting; no Vitals);

Eyeshot

"The eyeshot is not the prettiest creature, but it is one of the most used by intelligence agencies of all stripes. Beauty may be in the eye of the beholder, but it is certainly not on the outside!"
-- Issue of *Minions Today*

An archetypical example of a lab creature gone feral, the eyeshot is a human eyeball on eight thin tentacle-like legs. Each leg ends in a small mouth, which it can use to manipulate objects and drink blood. The tentacle ends in a suction cup with a syringe-like proboscis at its center. They "attack" by jumping on a person's head, and then transmitting a horrifying picture to the victim's mind, stunning him while it taps some blood (FP). Assuming the person is still alive, the creature then will stay latched on and continue taking a small trickle. With practice, a person can use two eyeshots on the sides of his head to gain the benefits of Peripheral Vision, and with four, 360° vision (see Easy to Hit, pages 35 and 74 of the ***Basic Set***).

Encountered

These spider-like creatures are normally encountered as a spy tool, used to look around corners and see in different spectrums. Frequent users often develop different mental disadvantages, and pass along illnesses if the eyeshots are shared. Eyeshots can be used to let someone see while they wait for an eye to regenerate normally. In such cases, the eyeshot should be put on the patch so as not to disturb the patient's sense of parallax. Escaped units will record traumatizing video, and try to feed it to its victims. Reruns can be scary.

"We laughed, and concluded our deal. We failed to notice the small eye watching us from the shadows under the end table. Later, we were all shocked to encounter a strange ninja with an eyeshot on his face."
-- Tib "Hooks" McGraw

Industrial Uses

Researchers continue trying to breed variants reliably that can see in different ranges (e.g. Infrared, Ultraviolet), and these individuals are very expensive. No one yet has developed a breed that can see in one of those ranges *and* normal light. The latter could make for an excellent McGuffin in an intrigue game. These creatures were engineered not to resist spells, psionic contact, or other mind-probing to extract their visual memories. Enchantment opportunities include the preservation of the eyeshot so that it can be used without giving blood.

Adventure

The heroes are contracted to hunt down eyeshots that witnessed a meeting. The employer has tagged or otherwise acquired a lock on the roaming cameras and can supply the adventurers with an item that will let them track down one eyeshot at a time to within about 25 to 50 feet. They also will be issued a wand that lets them check one single time frame in history to confirm that it is one of the dozen they are seeking. The search leads across the city, requiring not only social engineering, but fighting off roving gangs in the dock districts and monsters in the sewers. Surely adventurers can find a bloodhound or an equivalent somewhere.

Eyeshot

Appearance: An eyeball on eight extra flexible legs. Each leg ends in a complicated suction cup so that it can drink blood.
Category: Insect/cephalopod hybrid.
Diet: Carnivore.
ST 2; DX 12; IQ 3; HT 12.
Will 7; Per 7; Speed 6; Dodge 9; Move 6.
SM -9 (2.5" wide) (SM-10 curled up); 1/4 lbs.
Traits: Acute Vision +5; Appearance (Ugly); Affliction (Advantage: 360 degree vision; Accessibility: requires 4 in tandem); Clinging; Domestic Animal; Double-Jointed; Extra Arms (Eight in all; Nuisance Effect: Not when walking); Extra Legs (Eight in all); Extra Mouths (Eight in all) ; Hard of Hearing; Horizontal; Regrowth; Resist Disease +3; Restricted Diet (Blood: Super Jump 2; Walk on Liquid.

Knack: Death Vision (see p. 149 of ***Magic***).
Skills: Jumping-16; Photography-14.
Special: Roll 1d: 1-4 Normal vision; 5: Infrared; 6: Ultravision.
Notes: Death Vision save is at IQ-2.

Giant Eyeshot

ST 5; DX 10; IQ 3; HT 14.
Will 8; Per 8; Speed 6; Dodge 9; Move 6.
SM -7 (5" wide) (-8 when curled up); 2 lbs; DR 2.
Notes: As above, but 2× blood absorption. Death Vision save is at IQ-4.

Humungous Eyeshot

ST 8; DX 8; IQ 3; HT 16.
Will 9; Per 9; Speed 6; Dodge 9; Move 6.
SM -5 (10" wide) (-6 when curled up); 5 lbs; DR 3.
Notes: As eyeshjot, but 4× blood absorption. Death Vision save is at IQ-6.

Flame Trout

"These fish are both an angler's dream and nightmare. On one hand, they provide a lot of meat, and come pre-spiced. On the other hand, they envelop themselves in flame, likely destroying line, rod, net, and perhaps the boat. Still, the expression on the new guys' faces is priceless."
-- Anglers Today

These game fish ward off predators and leeches by encircling themselves in flames when exposed to air. In fights with other aquatic creatures, the flame trout tries to lead the opponent near the surface, and then jumps out, engulfing itself in flame. The sudden conflagration spooks most opponents. Fortunately, the flame trout is distinguishable by its grey skin with red stripes, and the black speckles on its back.

Encountered

Flame trout can be seen jumping out of the water, sheathing itself in flames, and diving at opponents. As a species of trout, they can be encountered anywhere from fresh water streams to the deep ocean, antagonizing swimmers, sailors, and fishermen almost anywhere.

Industrial Uses

*"So, the dolphin we hit held a grudge. I guess we were too busy trying to keep control of the boat that we forgot to apologize. Thus, the fins rounded together a few flame trouts, and then ran them toward us, and caused the fish to jump into our boats. The sails and rigging went up almost immediately. That's how we lost the **Esperanto.**"*
-- Overheard in the tavern *The Drunken Minnow*

Gourmets claim that the fish has a unique taste as if it possessed its own barbecue sauce. Although the practice is deemed inhumane, a few organizations have found that a simple piston system can elevate the trout out of a trough, and into the air as a heat source in fuel-starved areas. The most cruel part is that the fish need only be returned to the water for a few moments to recover their breath. Enchanters are happy use flame trout to make flame weapons and items of breath holding and jumping.

Adventure

A tall entertainer approaches the heroes with a problem. The clown is missing part of his act -- the flame trout that he juggles have were stolen last night. Prime suspects are a local gang, the Jinx, with which he had an altercation last week. Warned about the troubleshooters' approach, the gang is not helpful, and somewhat antagonistic. Several of the group seem to be sporting recent injuries. With some convincing, they will deny knowledge of the theft, happy to hear of the man's misfortune. The cause for the injuries was a skirmish by a "big" gang of toughs called the "Razors." Now that the heroes mention it, they seemed to head toward the circus, and back. in exchange for the opportunity to get a kick in at those who injured them, the Jinx will guide and accompany the adventurers to the Razor hideout. There, the Razors are very indifferent, perhaps amused or annoyed to find intruders in their lair. After some persuasion, they will admit that it "was just a job" for a local crime boss. They don't know which one, but the transaction was behind a local tavern.

Flame Trout

Appearance: A medium-sized grey-brown fish with red stripes and black speckles.
Category: Fish.
Diet: Carnivore.
ST 3-5; DX 11; IQ 2; HT 12; +3 HP.
Will 10; Per 10; Speed 6; Dodge 9; Move 6.
SM -3 (2' long); 20-30 lbs; DR 1 (ablative) (+DR5 vs. Flames).
Traits: Aquatic; Burning Attack 1d (Accessibility: Environment: Air; Always On; Aura; Melee Attack); Enhanced Move 1 (Water Move 12); Ichythoid; Peripheral Vision; Pressure Support 1; Temperature Tolerance 1 (Cold); Temperature Tolerance 5 (Heat); Wild Animal.
Skills: Breath Holding-14; Jumping-16.

Giant Flame Trout

ST 6-10; DX 10; IQ 2; HT 14; +4 HP.
Will 10; Per 11; Speed 6; Dodge 9; Move 6.
SM -1 (4.5' long); 60-120 lbs; DR 2 (ablative) (+DR 10 vs. Flames).

* * *

Beyond Fantasy

This article describes seven creatures, most of which could appear to physically exist in a hard-science world, even if the more wondrous aspects could not. Tumblers are just wheelform mammals; bloodbats could have kidneys to process the blood; chest ghosts could use lift gas and external balloons to fly; sylvan starfish could simply be oddly-shaped herbivores; slipgrass can be really slippery, but not supernaturally so; eyeshots could just a kind of spider that look like they have an eye as their body; and perhaps flame trout can naturally excrete a flammable gas and ignite it for a tiny flame effect.

Murphy's Rules

Dork Tower!

Dork Tower!

Pyramid Pick from the Past

Cartagena [2000]

Published by Rio Grande Games

Designed by Leo Colovini

Six isomorphic board segments, 30 pirate pawns (six each in five colors), 103 movement cards, one boat counter, rules; boxed, full color, for two to five players; $27.95

We're drowning in an ocean of pirate-related materials these days, and it can't all be laid at the feet of Johnny Depp, curse his charismatic performances. He certainly wasn't around in 2000 when the board game *Cartagena* came out (okay, he was, but filming *Chocolat* hasn't thing one to do with the high seas), so it's just further proof that the world's love affair with all things swashbuckling is a long-standing arrangement.

The object of *Cartagena* is to be the first player to get all his pirates into the waiting escape boat.

The year is 1672 and the fortress at Cartagena, built to protect the island from the predations of seaborne marauders, now houses a number of them in its dungeon. One night, a group of these desperadoes crawl into the tunnels beneath the structure and make for the shore where a sloop awaits. Designed for two to five players, each person gets a set of six pirates, clustered at one end of the board, and a hand of cards. At the other end, the boat that stands ready to takes the brigands to freedom. In between, though, is a skanky old tunnel filled with bits of scattered junk. These pictures are actually the "spaces," and a pirate moves by playing cards that match the symbols.

There are six possible pictures, various pirate-themed items like rum bottles and a skull and crossbones, and these are staggered along the escape route. If a player plays, for example, a dagger card, he may move one pirate to the first dagger symbol in the passageway. If that space is already occupied by a piece, he can skip it and go to the next dagger emblem further down. Even if the obstructing pawn belongs to the current player he can leapfrog his way over his own crewmates, but that makes it easier still for the next person in line to go the distance as well. If a captain exhausts his hand, he may get new cards by falling back to the closest space with pieces occupying it. He gets a card for each meeple there, and he may fall back with any unit he wants, but too many pawns prevent backtracking to a space -- it may be necessary to lose even more progress to get a refill. By balancing their advancement and the loss thereof, the crews creep down the hall until someone gets all six of his pieces into the dinghy. The first to do so wins.

The board comes in sections and has symbols on both sides so the arrangement is different each time. The segments fit together nicely and allow users to control, to some extent, the size and shape of the board (in case they're playing on a card table or in a Denny's or something). The pieces are good as wooden pieces often are, though there is sometimes some fumbling with them (they're not too small, but it's tight quarters and they may fall over). The cards are small -- not unusual for a European import -- but this time that works as an advantage. There's not much they need to do save direct the movement, so having the petite ones lets all the stuff fit neatly into the undersized square box, and they're easy to cup in the hand and play.

Game play is fast. The rules state it takes about 45 minutes, but even with a full complement it can be completed in half an hour if the participants are having fun (read: "are playing it"). Before play even begins the give and take of the mechanics make themselves plain, and that the gears are already turning is plain from the look on players' faces. Oddly, the struggle isn't to be first, it's to not be last; anyone trailing behind has only his own pirates upon whom to depend for added cards.

Although a seven-year-old artifact in the gaming industry, *Cartagena* is still popular enough that it's readily available

from brick and mortar stores, the publisher, on-line auction houses, and several distribution sources. Better still, the sequel is due out any day, and chronicles what happens after the breakout as the pirates attempt to secure safe haven in their secret base of operations on the island of Tortuga. Like Depp's pirate movies this is a great way to start in on the pirate life, with a sequel waiting in the wings. Even if the follow-up isn't all it's cracked up to be, the original is smooth sailing and doesn't stem the industry's thematic tide.

--Andy Vetromile

Destiny and Fate: Limit One Per Customer

I confess a certain fascination for metagaming concepts, especially as to how they relate to character creation and PC actions. This isn't too unusual; I suspect that many people indulge this aspect of their gamerly selves, even if it seems somewhat at odds with character development or ideals. For example, if they learn that choosing the Flying Leap Advantage means the character gets +1 to all combat rolls, then it's quite possible for the player to take a Flying Leap, even if it's not in the original concept for that PC. In fact, it may even be somewhat justified; if the character concept is a buff combat mage, then the combat boost such a decision enables may be in character even if leaping wizards aren't.

But some games go beyond this minor metagaming to try to mold character actions. In many cases this is on a macro scale. For example, *Exalted* encourages players to come up with interesting ways of attacking or expressing their sword-flashing hacks upon hapless foes, rewarding such clever cleavers with bonuses to their rolls. But other games tweak this to encourage specific actions over others.

The first game I know of that made extensive use of this was *Torg,* which -- through the Approved Action line of the Drama Deck -- rewarded players with more cards if they had their characters perform certain actions. For example, if the Approved Action was "Taunt" for this round, then anyone who attempted and succeeded at some kind of Taunt roll would get another card. One of the most interesting aspects of this system -- indeed, one of the biggest points of it -- is to encourage a different flow to the action beyond the "10 ATTACK; 20 GOTO 10" rut that many games fall into.

As another ponderable I've been mulling over, what if one attempted to structure a game such that the GM attempted to influence players' actions, *without* telling them what those actions are?

The example I considered when devising this possibility was your standard dark-soul-tainted anime-type character; whenever he gives into his baser instincts -- for example, by lashing out in anger -- he might get a bonus of some sort (unknown to the player). However, this seemed too subtle or too overt; if the player knows about the bonus, then he should figure it out pretty quickly, while if he never learns about it, how would he even know? So what if, instead, the player got extra experience points for that character as a result of those actions? (Or, in games with other reward points -- such as Willpower or Hero Points -- perhaps the player gets bonuses of those instead.)

For this method to to work, I'd recommend splitting up experience point rewards to be at the end of a scene instead of at the end of an adventure; that way, it's a bit easier for the player to figure out what might be guiding the extra boost he's receiving. In mulling over this possibility, I've considered that each character might have some kind of destiny or fate, which the character isn't obliged to follow but which will provide a cosmic "boost" if guided down toward.

In fact, a game like *In Nomine* which has both Destiny *and* Fate -- where Destiny is the greatest good the character could achieve while Fate is the grandest evil -- would be incredibly well-suited for such a system, since it would provide two possible action paths which could guide a PC.

Likewise these bonuses should require escalation in deed and understanding as the character progresses, such that doing the same thing multiple times doesn't provide any bonus. For example, if a character is Destined to save the world from the machinations of Lord Valtimore, then maybe he gets extra experience the first time he defeats one of Valtimore's mooks; future encounters with those mooks wouldn't provide an experience bonus (or, in systems with larger numbers of experience points -- such as the *d20 System* -- smaller bonuses for future deeds), but if the player defeats one of Valtimore's more powerful lieutenants, then that should provide another bonus.

This idea is similar to those found in other games -- most notably *World of Darkness'* Natures, Virtues, and Vices -- but differs somewhat owing to the unknown-to-the-player nature of the condition that provides the power-up.

So let's envision a fantasy campaign where we ruthlessly swipe the *In Nomine* idea of Destiny and Fate, and come up with some characters along with sample Destinies and Fates.

Apprentice wizard, with familiar that the player quite enjoys

Destiny: Protector of the Animal Kingdom (bonuses for defending animals, defeating enemies intent on harming enemies, and so on, perhaps with an ultimate Destiny of defeating some great threat to all of nature)
Fate: A reclusive nature seeks to push the wizard along a Fate where the character hides from all contact with the physical world; bonuses would come from cutting off contact with humanity, making plans that separate the wizard from the rest of the world, and so on.

Con Man, rogue trader with a gray morality

Destiny: Unknown to the rogue, he's actually a noble; his Destiny pushes him toward reunification with his lost kingdom. Likewise acting nobly -- commanding others, resolving disputes among those of lesser standing, engaging in battles of wits -- would warrant a boost.
Fate: A streak of mammon running through his soul drives him toward ultimate acts of greed; getting "big scores" provides bonuses, as do acts of betrayal for personal gain.

Warrior, wanderer exploring the earth, looking for his fortune

Destiny: To be the father of a great hero; bonuses would include finding, wooing, protecting, and providing for the Destined mother, as well as raising, protecting, and training the offspring
Fate: To become a ruthless conquerer of a neighboring kingdom; bonuses would stem from treating the denizens of that kingdom with contempt (or worse), plotting to strike against that kingdom or its interests (especially if done with a cruel bent)

Priest, diplomatic adventurer sort

Destiny: In fact, the priest's religious order is irredeemably corrupt; the priest's Destiny is to discover, overthrow, and reforge the order, either by destroying all its corruption or by becoming the head of a new splinter religion
Fate: To become a high-level official within the priest's religious order, ultimately becoming a pawn for some great evil

Part of the appeal of this technique is that, by sorting out Destinies and Fates ahead of time, the GM can make the campaign seem like it has a larger structure from the very first adventure. In addition, it could provide situations where the player performs actions that advance him along *both* his Destiny and Fate at the same time. For example, if our apprentice wizard from above were to forsake saving endangered humans in order to save a family of endangered birds would be both defending animals *and* cutting himself off from humanity . . . double-score!

Of course, there are a few obvious problems with this idea. Primary among these is, what if the players' ideas of what their characters' Destinies and/or Fates are varies wildly with what the GM picks for them? (Answer: I dunno. Before I sprang this on a group of players, I'd probably try to make sure they were okay with experimentation in general, and ideally I'd have them come up with character histories that provided enough hooks that I could hopefully make an educated guess. Then, if I chose something wildly inappropriate *and* unenjoyed for a player, I'd work with him to see if I couldn't tweak or modify their Destinies or Fates to better suit their visions.) Also problematic is the potential imbalance provided by unbalanced experience-point rewards, especially once a player figures out what his Destiny (or Fate) is and acts along its guidance for the bonuses. Such inequities usually aren't a problem in games I run, but they might be problematic for some groups. Finally, I note that these rewards should be provided in such a way that the Destinies or Fates are neither too obscure nor too obvious to determine; in much the same way that Luke Skywalker's own journey took him strangely afield of where he thought he would end up, so too should the Destinies try to be those things that are subtle but obvious, in retrospect.

Even given these problems, I suspect that many players have visions of there being Destinies and Fates for their characters, and providing an in-game mechanism for players (and PCs) to try to determine what the stars have planned for them could well provide a campaign that is memorably different. Of course, whether it will be Destined to be a fondly remembered campaign or Fated to crash and burn remains a mystery hidden in the stars . . .

--Steven Marsh

The Omniscient Eye

How Long Can I Live in an Airtight Box?

If characters are trapped in an airtight chamber (say, two cubic yards per person . . . an airlock, or a van trapped underwater), and breathing normally, how long do they have before the oxygen runs out and/or the carbon dioxide buildup becomes a problem? Which will affect them first, and how?

While the answer to this question relies heavily on underlying assumptions as to what kind of metabolism the characters have, the Omniscient Eye will try to address the question in as broad a fashion as possible.

Ambient air at sea-level and room temperature is a mixture of gases. On Earth, it contains 78.1% nitrogen, 20.9% oxygen (around 270 grams oxygen per cubic meter), 0.9% argon, 0.03% carbon dioxide, and 0.04% other gases.

Partial pressure is a good way to express the oxygen (and carbon dioxide) content of air since it can be used regardless of the total atmospheric pressure. While under 1 atmosphere pressure (101.3 kPa, the air pressure at sea level) 20.9% oxygen equals 21 kPa; under lower pressure the relative amount of oxygen could be the partial pressure is much lower. For example at 50kPa air pressure the relative amount of oxygen could be still 20.9% but the partial pressure (and therefore the amount of available oxygen in the same volume) is just around 10kPa. Most people will lose consciousness in a few minutes at oxygen levels of around 10kPa, equivalent to about 20,000 feet altitude.

All aerobic organisms need oxygen in order to keep their metabolism going. Oxygen is introduced into the circulatory system via the lungs and then transported (bound to heme proteins) into all other organs. Our organs need different amounts of oxygen in order to function. Most oxygen is taken up by the heart muscle followed by other muscles (especially under work), the kidneys, the brain and in a lower amount in all other organs. The oxygen in our body is, among other things, used to break down metabolites (macronutrients like carbohydrates, fat and proteins) in order to produce chemical energy (in the form of ATP) which is necessary in almost every physiological process.

An oxygen partial pressure of 16kPa is generally considered the minimum safe working level of oxygen; below this, hypoxia starts to set in. The exact effects of hypoxia are variable and depend on factors like pre-conditioning, health status, fitness, genetics, activity and active body mass (see the sidebar on animals for representative figures). The numbers given in this discussion are therefore heavily rounded to represent average values for gaming.

Effects Of Hypoxia

21kPa O$_2$: No symptoms

16kPa O$_2$: Faster and deeper breathing due to shortage of oxygen

12-14kPa O$_2$: Respiratory volume and frequency is increased further.
Accelerated pulse. Problems maintaining full concentration on a task at hand. 50% worsening in reaction time.

11kPa O$_2$: Breathing rate increased by 65%, severe symptoms: weakness, light-headedness, confusion, lethargy, slurred speech, degraded color vision.

Isn't That A Radio Station?

For those not familiar with the units used in this article, the Pa (Pascal) is a standard measure of pressure, the equivalent of one newton per square meter (kPa, of course, is kiloPascals). Rather than a cookie in this context, the newton is a unit of force, specifically the amount of force necessary to accelerate 1 kilogram with an acceleration of one meter/second^2. In American units, a Pascal is equivalent to a mere 0.00232 ounces per square inch, and a pressure of 101.3 kPa is about 14.7 pounds per square inch.

10-6kPa O_2: Gasping for air. Feelings of nausea; precise muscle movements become impossible. Characters may lose the ability to speak, hear or see. Permanent brain damage and loss of consciousness are very likely. Probable death if exposed more than a few minutes without pre-conditioning.

Lower than 6kPa: Convulsions, coma and certain death (but see discussion on hibernation below).

Extremely fit people acclimatized to low-oxygen conditions can sometimes cope well beyond the 10kPa threshold. Although the 7kPa level at the peak of Mount Everest was once considered suicidal, Reinhold Messner and several other mountaineers have managed to complete the climb without supplemental oxygen. (But probably not without harm; subsequent research suggests that this is likely to cause subtle long-term brain damage even among those who remain consciousness.)

Extreme cold can cause a hibernation-like condition that drastically reduces oxygen consumption; stowaways in aircraft wheel wells have survived altitudes as high as 39,000 feet (oxygen pressure approximately 5kPa), and there are several documented cases of people surviving as much as an hour with no air at all after falling into freezing water. However, recovery after these conditions is only possible with medical assistance, and far from guaranteed; death or brain damage are likely.

For an example calculation we will use 10kPa oxygen as our threshold. This translates to around 130 grams O_2 per cubic meter; in other words, each cubic meter of fresh air gives us 140 grams (270-130) before we run into trouble. A more general formula is given below.

A 70-kilogram adult consumes roughly 0.3 grams O_2 per minute while sleeping, around 0.6-0.8 grams/minute during light activity, and around 4 grams/minute for short periods during peak exercise, assuming average fitness. A top endurance athlete might be able to use as much as 8 grams/minute.

If we forget about CO_2 toxicity for the moment, for an ordinary person working his hardest to escape and consuming 4 grams/minute, a cubic meter of air will last around 35 minutes (140/4). In practice, fatigue and falling oxygen levels make it unlikely that he'll sustain that level of activity for the full time; 45 minutes to an hour would be a more realistic estimate. Asleep, he might expect a bit over 9 hours; in practice, it's likely to be a bit less, because falling oxygen levels mean he needs to breathe faster, requiring more effort and more oxygen consumption than ordinary sleep. Here's a general formula to calculate oxygen depletion time under other circumstances:

$Po1$ = initial partial pressure of oxygen, in pascals. In normal air at sea level, this will be 21,000Pa (21kPa); otherwise, calculate as total air pressure multiplied by atmospheric % oxygen.

$Po2$ = lowest tolerable pressure of oxygen, in pascals (7-10 kPa for humans, taking unconsciousness as our threshold).

V = total volume of airspace, in cubic meters.

C = oxygen consumption rate (around 0.3 to 8 grams/minute for a single human).

T = absolute temperature, in degrees Kelvin.

R = universal gas constant = 8.31 $Pa \times m^3/(Kelvin \times mol)$.

M = weight of oxygen (32 grams/mol).

Total moles oxygen present (initially)	=	$Po1 \times V/(R \times T)$
Total moles oxygen present (at exhaustion)	=	$Po2 \times V/(R \times T)$
Moles oxygen available for consumption	=	$(Po1-Po2)V/(R \times T)$
Weight oxygen available for consumption	=	$(Po1-Po2)MV/(R \times T)$
Survival time	=	$(Po1-Po2) \times M \times V/(R \times T \times C)$

Another concern is the rising concentration of carbon dioxide. The metabolization of macronutrients also leads to the

production of CO_2. A high concentration of dissolved CO_2 in the blood (hypercapnia) would change the body's pH value which, in time, would significantly reduce or even shut down the activity of enzymes. To prevent this from happening CO_2 is exhaled and thereby eliminated from the body.

The amount of CO_2 produced per O_2 consumed depends on the type of food that is metabolized. This ratio is called the respiratory quotient (RQ). Carbohydrates have a RQ of 1, this means one molecule of CO_2 is produced per molecule of O_2 consumed in order to metabolize these substrates. Proteins have a RQ of 0.8 to 0.9 and the oxidation of most fats produces 0.7 CO_2 molecules per O_2 molecule consumed.

Since nutrition varies greatly and most diets are composed of food mixtures rather than single groups of macronutrients, human RQ is usually in the range 0.8 to 0.9. Note that CO_2 molecules are 37% heavier than oxygen, so the weight of CO_2 exhaled is more than that of oxygen consumed. But partial pressure of a gas depends on its concentration (number of molecules per unit volume), not molecular weight; consuming enough oxygen to reduce partial pressure by 10kPa would only raise partial pressure of CO_2 by 8-9kPa (10kPa × RQ), even though the carbon dioxide weighs more than the oxygen consumed.

CO_2 Toxicity

Smaller than 0.1kPa CO_2: no symptoms.

0.1kPa: Carbon dioxide starts to cause discomfort.

0.2-0.5kPa CO_2: lung ventilation increases, breathing becomes harder. Nausea and headaches are likely.

1kPa CO_2: symptoms similar to alcohol intoxication begin to emerge. Characters get fatigued and have a hard time breathing.

2kPa CO_2: lung ventilation is increased by 50%, headaches and metabolic acidosis (which changes the pH value in all bodily tissues) are common after exposure of a few hours. Symptoms of metabolic acidosis are headaches, lack of energy, sleepiness, fast and shallow breathing, nausea, vomiting, diarrhoea, dehydration and loss of appetite. These symptoms take a few days up to a week to fully go away.

3kPa CO_2: lung ventilation increased by 100%. Characters get dizzy and nauseated. Strong headaches, vision starts to blur. Heavy panting after exertion, characters are likely to pass out.

5-10kPa CO_2: Heavy panting, completely exhausted merely from respiration; close to unconsciousness, severe headaches. Prolonged exposure will result in irreversible damage to health and is likely to result in death.

10-15kPa CO_2: Severe headaches, rapid exhaustion, respiratory paralysis and death within a few minutes.

Higher than 15kPa CO_2: instant coma, convulsions and certain death within less than one minute of exposure.

This set of formulas outlines CO_2 survival time:

Pc1 = initial partial pressure of CO_2 (in pascals; effectively zero for fresh air).
Pc2 = highest tolerable CO_2 pressure (in pascals; as per data above, 5-10kPa is probably a reasonable cutoff).
V = total volume of airspace (m^3).
C = oxygen consumption rate (grams/minute).
T = absolute temperature (Kelvins).
R = 8.31 $Pa×m^3$/(Kelvin×mol).

M = weight of oxygen (32 grams/mol).
RQ = respiratory quotient (0.9 is a reasonable approximation.)

Total moles CO_2 present (initially)	$= Pc1 \times V/(R \times T)$
Total moles CO_2 present (at exhaustion)	$= Pc2 \times V/(R \times T)$
Moles CO_2 generated in this time	$= (Pc2-Pc1) \times V/(R \times T)$
Moles O_2 consumed in this time	$= (Pc2-Pc1) \times V/R \times T \times RQ)$
Weight O_2 consumed in this time	$= (Pc2-Pc1) \times V \times M/(R \times T \times RQ)$
Survival time	$= (Pc2-Pc1) \times V \times M/(R \times T \times RQ \times C)$

Assuming Pc2 as 5kPa, C as 4 grams/minute, and leaving other variables at default values, CO_2 survival time for a $1m^3$ airspace works out at around twenty minutes. In an airtight room, the rate at which CO_2 pressure rises is equal to RQ multiplied by the rate at which O_2 pressure falls; in the time that O_2 pressure falls from 21kPa to 10kPa (unconsciousness), a drop of 11kPa, the CO_2 pressure has risen to 9-10kPa (11kPa multiplied by RQ), quickly fatal. From those numbers, we can guess that CO_2 toxicity is slightly more important than O_2 depletion.

Unfortunately, the effects of O_2 depletion and CO_2 production are synergistic. As CO_2 builds up, the blood becomes more acidic. The body responds by breathing faster, trying to remove CO_2 dissolved in the blood. But faster breathing means more muscular effort, causing a vicious cycle where oxygen depletion and CO_2 build-up accelerate as the oxygen supply is slowly diminished. For characters who are already working hard to escape, this doesn't make too much difference; for people keeping as still as possible and waiting for rescue, it might be reasonable to reduce calculated CO_2 survival time by a fudge factor of 25%.

Furthermore, acidosis reduces haemoglobin's affinity for oxygen, exacerbating the effects of a poor oxygen supply. This is most important when CO_2 and O_2 survival times are similar; in that situation, raise the lowest tolerable oxygen pressure (Po2) by 2kPa or so and recalculate. (The Omniscient Eye's attempts to obtain more accurate data have been thwarted by a shortage of volunteers.)

Various factors will affect this process. Carbon dioxide dissolves in water, far more easily than oxygen; for characters trapped in an air pocket underwater, the effects of CO_2 buildup can probably be ignored, leaving only oxygen depletion to worry about. CO_2 scrubbing technology can achieve the same end.

So what happens if you're not at sea level? Compressing air raises gas pressures accordingly; if you take a $1m^3$ diving bell 10 meters underwater (ambient pressure = 2 atmospheres), the airspace will compress to $0.5m^3$ and the oxygen pressure will increase to 42kPa. If you run this through the formula above, you'll find that this actually increases O_2 time by around 50%; there isn't any more oxygen than there was before, but compressing it means we can use more of it before reaching a dangerously low concentration. On the other hand, rate of CO_2 production is unaffected, and since the airspace is halved, CO_2 pressures will rise twice as fast. If it weren't for the water, our CO_2 survival time would be halved. In general, at pressures greater than 1 atmosphere, your main problem will be CO_2 unless you have plenty of water or some form of "scrubbing" technology. At pressures lower than one atmosphere--perhaps your spacecraft got holed, and you lost most of your air--the situation is reversed. CO_2 builds up at the same rate as before, but starting levels of oxygen are lower, so oxygen depletion becomes more of a problem.

All else being equal, larger creatures have slower metabolisms. While they consume more oxygen (and generate more CO_2) than their smaller counterparts, it's less in proportion to their body mass; 50kg of Chihuahuas will consume air faster than a 50kg Rottweiler. Oxygen consumption mostly goes to "burning" food, so you can estimate a creature's

oxygen requirements by looking at how much it eats and comparing that to a human living on similar food. Reptiles use much less oxygen than mammals of comparable size, and birds use more.

Creatures with faster metabolisms also tend to be less tolerant of poor air quality (higher Po2 and lower Pc2); this is the basis for the old "canary in the coal mine" trick. Animals that live at high altitudes or hold their breath for extended periods (whales, penguins etc) often have lower consumption rates than would be expected for their size; hibernation drastically reduces oxygen demand along with the need for food.

Burning wood consumes roughly its own weight in oxygen, with an effective RQ close to 1.0; paraffin or gasoline consumes roughly 3.5 grams of oxygen for each gram of fuel consumed (effective RQ 0.67). A midsized candle, burning 5 grams paraffin per hour, uses almost as much oxygen as a sleeping adult; a flaming torch will use up far more, but in a confined space the smoke may well be a bigger problem. As oxygen levels drop, you'll have more trouble keeping those flames alight. And if you do, you may end up producing carbon monoxide, which only adds to your troubles.

For your convenience, then, we present a reference table telling you how long you've got to live if you're trapped in a confined space (assuming maximum activity, with death due to CO_2 toxicity):

Description	Volume [m^3]	Survival Time
trunk of an average car	0.6	12min
garbage skip	1.0	20min
interior of an average car	4	1.4h
small room in a flat	10	3.4h
Interior of a cargo truck	20	6.8h
40' shipping container	70	23h
Large swimming pool	100	34h

Under light activity multiply these values by 5 and if the characters are sleeping they will last approximately 8 times longer. For every character beyond one divide the survival time by the number of characters. All this assumes that the space is completely airtight; even very small openings will change things considerably.

Designer's Notes: *GURPS Supers*

by William H. Stoddard

GURPS Supers is designed to work with *GURPS Powers* the way *GURPS Fantasy* works with *GURPS Magic.* One book defines a range of capabilities that characters can acquire; the other analyzes a genre where those capabilities are useful, and suggests ways to run campaigns in that genre. *GURPS Fantasy* focused on historical high fantasy and quest stories; *GURPS Supers* focuses on four-color adventures and battles with supervillains.

But making this focus work was a bit of a challenge. Even with all the new options in *GURPS Powers,* its basically realistic approach to exotic and supernatural abilities wasn't an easy fit to the sheer scale of high-end supers—not without spending tens or hundreds of thousands of points in creating them! In fact, the playtesters' reaction to the first draft focused mainly on its not being "super" enough—for example, on its super-strong characters not being able to fight tanks, let alone battleships. After long debate, and many queries to *GURPS* line editor Sean Punch, we came up with a set of additional rules that brought higher power levels within reach. Many of these rules take off from the Super-Effort option for Lifting ST in *GURPS Powers,* offering the same option for Binding, Compartmentalized Mind, Duplication, Striking ST, Telekinesis, and various other abilities. Another set, inspired by the Quick Gadgeteering rules, defines ways for characters to achieve one-time super-feats in emergencies. These and other new rules produce a version of *GURPS* where things work the way they do in superhero comics.

As a test of concept, I decided to build a template that *could* go up against tanks: The Archetype, inspired by Superman, Captain Marvel, and the many heroes modeled on them. The design came out to 2,000 points, so I took that as the high end of the power spectrum for templates, and built lesser templates on 1,000, 500, or 250 points, to cover a range of power levels. Since I had to verify how such a character's abilities would play out against a tank, I included the analysis in Chapter 7, and I turned it into a new opening vignette for that chapter, a fight between Stalina, the Woman of Steel, and a German tank force during World War II.

So, as an example of character creation in *GURPS Supers,* here's a full character writeup for Stalina!

ST 33/320 [100];† **DX** 14 [80]; **IQ** 14 [80]; **HT** 20 [100].

Damage 3d+2/6d (33d/35d with Super-Effort); BL 218 lbs. (10 tons with Super-Effort); HP 33 [0]; Will 20 [30]; Per14 [0]; FP 40 [60].

Basic Speed 10.00 [0];‡ Basic Move 20 [0];** Dodge 14.††

6'2"; 180 lbs. (SM 0).

Social Background

TL:6.

CF:Russian/Soviet [0].

Languages:French (Accented) [4]; German (Broken) [2]; Russian (Native) [0].

Advantages

Appearance (Attractive) [4]; Charisma 1 [5]; Damage Reduction (100) (Super, -10%) [270]; Damage Resistance 100 (Super, -10%) [450]; Doesn't Breathe (Oxygen Storage ¥25, -50%; Super, -10%) [8]; Flight (Cannot Hover, -15%; Super, -10%) [30]; Legal Immunity [5]; Longevity [2]; Nictitating Membrane 15 (Super, -10%) [14]; Regeneration (Slow; Super, -10%) [9]; Resistant to Metabolic Hazards (+8; Super, -10%) [14]; Sealed (Super, -10%) [14]; ST+13/+300 (Super, -10%; Super-Effort, +300%) [507]; Status 2 [10]; Temperature Tolerance 16 [16]; Very Fit [15].

Perk: No Visible Damage [1]; Penetrating Voice [1]; Striking Surface [1].

Powers

Speed (Super, -10%); Speed Talent 1 [5].

- *Hyper-Reflexes:* Basic Speed+1.5 (Speed Power, -10%) [27] + Enhanced Time Sense (Speed Power, -10%) [41].
- *Super-Flying:* Enhanced Move 4 (Air Speed 320; Speed Power, -10%) [72].
- *Super-Speed:* Basic Move +10 (Speed Power, -10%) [45].

Disadvantages

Clueless [-10]; Code of Honor (Soldier's) [-10]; Duty (Red Army) (15) [-15]; Hard of Hearing [-10]; Sense of Duty (The Russian people) [-10]; Truthfulness (12) [-5]; Workaholic [-5].

Quirks: Genuinely likes and trust Joseph Stalin; Humble; Loves march music; Quotes Communist Party catch phrases. [-4]

Skills

Aerobatics-15 [8]; Area Knowledge (European Russia)-15 [2]; Brawling-16 [4]; Current Affairs (Headline News)-14 [1]; Engineer (Combat)-12 [1]; Flight-21 [4]; Forced Entry-16 [4]; Games (Chess)-12 [1]; Housekeeping-12 [1]; Leadership-14 [1];‡‡ Mathematics (Applied)-12 [1]; Military Science-13 [2]; Observation-15 [4]; Philosophy (Marxist-Leninist)-14 [4]; Running-21 [4]; Singing-20 [1]; Soldier-11 [1].

Techniques: Human Missile (Aerobatics)-15 [4].

† Includes +13/+300 points of super-strength bought as an advantage. ‡ Includes +1.50 Basic Speed from Speed Power. ** Includes +10 Basic Move from Speed Power. †† Includes +1 from Enhanced Time Sense. ‡‡ Includes +1 from Charisma.

When the Tunguska explosion took place in 1908, the young naturalist Semyon Alexeievitch Vlasov was close enough, and dedicated enough to the progress of science, to travel to its center—where he found a sphere of a mysterious alloy holding a female infant, apparently human. He raised her as his adopted daughter, Alissa Semyonova Vlasova, keeping her origins secret. Unfortunately, after the Revolution, no secrets were safe. Alissa matured slowly, and was still seemingly a young child, though already inhumanly strong, when Joseph Stalin learned of her, and saw her as a potential weapon. The child grew up on an isolated base in the far north, raised by scientific researchers and military trainers. She had no normal human contacts after her father's "accidental" death in 1922, other than Stalin himself, who deliberately played a paternal role in his visits to her. When the Germans invaded the Soviet Union, he asked her to fight for her country and the Revolution, and she agreed, naming herself after him. Her existence was kept secret as long as possible, but in 1943, as the war turns against the invaders, Stalin has decided to send her into action openly as a propaganda move. The Russian government was unaware that German intelligence has already learned of her existence, and German technology has designed weapons intended to counteract her powers.

Stalina's battle with a German tank force in **GURPS Supers** takes place at this point in her life.

* * *

Once I was satisfied with the new version of the Archetype template, I rebuilt the other templates on 250, 500, or 1,000 points, keeping the Archetype at the top of the spectrum at 2,000 points, and adding a new template, the Weatherworker. But to make room, I decided to cut one version of the Mesmerist template, as being a bit too far from classic comics heroes: the hero whose theme was social influence. I also cut the powers that supported that template. For GMs who want to explore characters along the lines of the Envoy in the *Wild Cards* universe, here are versions of both.

Influence

Sources: Biological, Divine, Magical, Moral, Mutant, Psionic, Savant, Spirit, Super, or Weird Science.

Focus: Social interaction with your own species.

This power enables you to get other people to do what you want. It may be based on subtle modulations of your voice, on pheromones, or even on the sheer animal magnetism of your presence. In any case, it requires face-to-face contact to establish the initial relationship; you can't reach out over a distance and snare people you've never met - though you may be able to reach people who are already bonded to you. Abilities of this power that directly affect other people should be Sense-Based.

Charisma   *5 points/level*

Influence Abilities

Allies (recruited as groups from passersby), with Environmental, Minion, and Summonable; Cultural Adaptability; Empathy or Sensitive; Elastic Skin, with Glamour; Fashion Sense; Gizmos (borrowed from passersby), with Environmental; Illusion, with Mental; Indomitable; Invisibility, in the Deception variant; Legal Immunity; Mind Probe, usually with Onset; Mind Reading, usually with Onset; Modular Abilities, Social only; Security Clearance; Social Chameleon; and Terror.

Physical attacks are always inappropriate. You "attack" people with Afflictions that cause incapacitation, irritation, mental disadvantages, or DX, IQ, Per, or Will penalties, or with Rapier Wit. Afflictions must be Based on Will. Some versions of this power, especially those based on animal magnetism or other mysterious forces, allow Leech, usually against FP or IQ.

Mesmerist   *500 points*

Attributes: **ST** 10 [0]; **DX** 11 [20]; **IQ** 16 [100]; **HT** 11 [10].

Secondary Characteristics: Dmg 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 16 [0]; Per 16 [0]; FP 11 [0]; Basic Speed 5.50 [0]; Basic Move 5 [0].

Advantages: A total of 10 points from Acute Detection [2/level], Animal Empathy [5], Fit [5], Reawakened [10], Sensitive [5], Single-Minded [5], Special Rapport [5], or Voice [10].

Powers: Influence (Influence Power, -10%); Charisma 3 [15].

- *Identity Theft:* Elastic Skin (Glamour, -25%; Influence Power, -10%) [13] + Mimicry (Glamour, -25%; Influence Power, -10%) [7]
- *Persuasive Inquiry:* Mind Reading (Exposure Time, 1 minute, -30%; Hearing-Based, -10%; Hearing-Based (Reversed), -10%; Influence Power, -10%) [12] + Mind Probe (Exposure Time, 1 minute, -30%; Hearing-Based, -10%; Hearing-Based (Reversed), -10%; Influence Power, -10%) [8].
- *Power of Suggestion:* Mind Control (Extended Duration, x30, +60%; Hearing-Based, -10%; Independent, +70%; Influence Power, -10%) [105].
- *Recruitment:* Allies (21-50, 25% point total, 15 or less; Environmental, in crowds or populated areas, -20%; Influence Power, -10%; Minions, +50%; Onset, 1 hour, -20%; Summonable, +100%) [60].
- *Social Blending:* Cultural Adaptability (Influence Power, -10%) [9] + Honest Face [1] + Social Chameleon [5].
- *Venomous Tongue:* Rapier Wit [5].

Two of the following abilities:

- *Emotional Induction:* Mind Control (Area Effect, 4 yards, +100%; Emotion Control, -50%; Influence Power, -10%; Vision-Based, -20%) [60].
- *Entrancement:* Affliction 4 (Based on Will, +20%; Contact Agent, -30%; Incapacitation: Ecstacy, +100%; Influence Power, -10%; Melee Attack, Reach C, -30%) [60].
- *Frightfulness:* Terror -9 (Accessibility, -10%; Influence Power, -10%; Nuisance Effect, Obvious as cause of panic, -5%) [60].
- *Inconspicuousness:* Invisibility to Electromagnetic Vision (Can Carry Objects, Heavy encumbrance, +10%; Glamour, -25%; Influence Power, -10%; Switchable, +10%) [60].
- *Reprogramming:* Mind Control (Conditioning Only, -50%; Exposure Time, 1 day, -50%; Extended Duration, Permanent, +150%; Hearing-Based, -20%; Influence Power, -10%) [60].

Disadvantages: A total of -30 points from Charitable [-15*], Chummy [-5] or Gregarious [-10], Loner [-5*], Pacifism [Varies], Supersensitive [-15], or Xenophilia [-10*].

Wildcard Skills: Fake! or Psychology! (VH) IQ [24]-16.

Ordinary Skills: Any three of Autohypnosis (H) Will-1 [2]-15, Carousing (E) HT+1 [2]-12, Diplomacy (H) IQ-1 [2]-15, Expert Skill (Psionics) (H) IQ-1 [2]-15, Judo (H) DX-1 [2]-10, Observation (A) Per [2]-15, Savoir-Faire (E) IQ+1 [2]-17, Sex Appeal (A) HT [2]-11, Shadowing (A) IQ [2]-16, and Urban Survival (A) Per [2]-16.

*Multiplied for self-control number; see p. B120.

In this design, the limitation "Hearing-Based" applies to powers for which the mesmerist has to talk with the subject. The limitation "Hearing-Based (Reversed)" applies to powers where the subject has to answer by speaking, rather than having his mind read. "Exposure Time" involves situations where the mesmerist has to interact with the subject for a minute, an hour, or a day before the power takes effect: for Persuasive Inquiry, the mesmerist has to chat with the subject for a couple of minutes to start getting answers to his questions, while Reprogramming takes a full eight-hour day of intense interaction.

* * *

Another topic that got cut in final edit was an idea that Brian Rogers suggested during the playtest: the concept of flux levels.

There's a long-established distinction in **GURPS** between traits of characters, which cost points and travel about with the character from setting to setting, though their application may change in different worlds (for example, Magery 0 costs 5 points where the setting has Very High Mana, Normal Mana, or No Mana), and traits of worlds (such as mana level or gravitational field), which are external to the character and don't cost points. In one case, a rule may apply to one character, but not to a different character in the same world; in the other, it may apply to all characters in one world, but not to the same characters in a different world. But there seems to be a third basis for deciding whether to apply a rule: play style. If a campaign is in cinematic style, or four-color style, the GM will apply different rules, such as making wildcard skills available or allowing characters to turn injuries into flesh wounds; but those rules will pervade the entire campaign - characters who enter a different world won't suddenly find their wildcard skills not working. So **GURPS Supers** treats style as a third factor, distinct from both characters and setting.

Brian suggested that some GMs might want to run campaigns where different styles applied in different parts of the campaign world. He suggested defining a quality called flux, which altered the superheroic nature of a setting in the same way that mana alters the fantastic nature of a setting. In a no-flux area, for example, wildcard skills wouldn't work; no one would have superpowers; and none of the cinematic options for combat, gadgeteering, or other activities would be available. In a normal-flux area, things would work the way they do in four-color comics. In a very-high-flux area, everyone would have at least minor superpowers, and would have nearly unlimited fatigue points to power high-end uses of those powers. In comics terms, this would define a spectrum from the noir near-realism of *Sin City* to the wide-open humor of *Normalman.* A GM could say that his entire campaign had low, normal, or high flux, but he could also have different flux levels in different places.

In some campaigns, the players would be aware of the different flux levels, but the characters wouldn't. When the heroic Archetype visited the grim streets of the Nightstalker's city, he could lift a compact car, but not a skyscraper, and wouldn't try; and if he hit normal people with his full strength, they would end up in the hospital or the morgue. When the Nightstalker went to the Archetype's brightly lit city, he could be smashed through a wall and come back to trade punches, and he wouldn't say, "Wow, if I were back home, that would have turned me into a thin smear on the bricks." Changing the setting or the choice of focal hero would change the style to match.

In other campaigns, traveling to a different dimension, or even a different city on Earth, would change the flux level, and the adventurers, or even ordinary people, would be aware of the difference. (The concept of "axiom levels" in the game *TORG* worked along roughly similar lines, though with four variables rather than one.) Ordinary people might travel to superheroic cities, gain superpowers, have adventures, and then have to decide whether to go back to their normal lives. Superheroes and supervillains might agree to meet in no-flux sites where they couldn't use their powers against each other, letting them negotiate peacefully. Corporations might seek out promising young researchers to attend schools in normal-flux areas where they could learn wildcard skills, and then move them into laboratories where they could do gadgeteering or even quick gadgeteering. A campaign run with these rules would have a somewhat postmodern feel, with characters being consciously aware of the narrative conventions of the worlds they inhabited.

Handling this sort of mixture demands a lot of judgment calls; it's much trickier than running a campaign with one style, whether realistic, cinematic, or four-color. And the concept of "flux" doesn't have as many literary or folkloric precedents as the concept of "mana." For both reasons, we decided not to make flux levels part of the standard rules of *GURPS.* But it s an ingenious idea, for which Brian Rogers deserves recognition, and I offer it here to any GM who feels experimental.

Zagadka

by Stephen Dedman

Zagadka is a world similar to Homeline in many ways, but with slightly different natural laws -- or at least, loopholes in the laws that were first discovered and exploited in the early 20th century. It is named after one of the aliases of the individual who made the greatest difference to the world: Glakuna Innokentyovich Kandelaki, also known as Zagadka (Enigma), also known as Stalin (Man of Steel).

World Name and Current Year: Zagadka, 1999

On June 30, 1908, a massive explosion flattened trees in Tunguska, Siberia. The airburst was generally thought to be the result of an asteroid breaking up approximately six kilometers above the ground, though no debris was ever recovered from the center of the blast zone. Pieces did, however, fall at various places in the Soviet Union: one started a fire in a Siberian prison camp, killing several inmates, and a coffin-sized lump of an unknown metal was discovered the next day in Gori, Georgia. When the local kulak, Innokentiy Ivanovich Kandelaki, investigated, he found a baby boy inside, wrapped in a red blanket. When no-one in Gori claimed the infant, Kandelaki's childless wife adopted him, naming him Glakuna after her father.

By 1913, young Kandelaki's feats of strength and endurance had earned him the nickname Stalin (Man of Steel) and the OGPU codename Zagadka (Enigma). In 1921, he and his father were involved in a riot in Tblisi, at which a high-ranking commissar who had come to address the crowd, Josef Vissarionovich Dzhugashvili, was killed.

After an investigation cleared him, Kandelaki was sent to Dinamo to train in athletics and boxing and to be studied by scientists. In 1936, he became a Soviet hero and earned the undying hatred of Adolf Hitler when he triumphed at the Berlin Olympics. After this, he rose through the ranks of the Red Army, but the extent of his powers did not become widely known until Axis forces invaded the Soviet Union in 1941 and Captain Kandelaki was seen single-handedly destroying German panzer batallions. He then led a successful Soviet invasion of Germany. By November, Italy and Japan had also surrendered to the USSR.

Kandelaki was made mayor of Berlin after the Soviet invasion, but by this time he had inspired other countries to begin their own programs to create super-soldiers and other weapons. In 1954, after a mysterious explosion in the Pacific, a 150-foot-tall dinosaur-like creature who exhaled radioactive plasma emerged from the Pacific Ocean and attacked Japanese fishing boats. When it headed for the Kuril Islands, Colonel Kandelaki attacked it, but proved vulnerable to the creature's chemical-loaded breath, and was swallowed alive. The creature soon died, supposedly from internal injuries; Japanese scientists are rumored to have recovered Kandelaki's body from its corpse, but it was never returned to the Soviet Union.

Without Kandelaki to rely on, Soviet control of Western Europe diminished gradually between 1954 and 1991, and the political map of Zagadka in 1999 is almost identical to that of Homeline at the same time (except for the non-existence of Israel). The main difference between the two is the prevalence of metahuman, tech-assisted, or otherwise superpowered individuals on Zagadka -- possibly as many as one in 100,000 people, or more than 60 million on the planet! While none of these are as powerful as the legendary Stalin or his nemesis Daikaiju, the existence of Zagadka is of great interest and some concern to Infinity.

Another puzzle is that many things known to have happened on Zagadka since 1941 defy the laws of physics (as they are understood on both Homeline and Zagadka). Whether Zagadkan metahumans will retain the same powers if they are taken to other parallels, no-one in Infinity Tower will say. There is no evidence that anyone from Centrum or Reich-5 has discovered Zagadka -- yet.

While most individuals with unusual abilities are law-abiding, others have gone rogue. Many from the former Soviet Union, in particular, have become mercenaries or criminals. Some metahumans have also become prominent in politics, particularly in former Soviet republics, and the governor of California is rumored to have been created by a

special breeding project. Even in Zagadka, however, most power still comes from inheritance, nepotism, a large bank balance, or the barrel of a gun.

In some other countriess, metahumans are either conscripted or suppressed; many who cannot flee, or disguise themselves effectively, do their best to keep their abilities a secret. In many cities on Zagadka, however, freelance metahumans are feted as celebrities, and they are particularly visible in New York (where many act as bodyguards for UN delegates), Stalingrad (formerly Minsk, renamed in 1954), Tokyo, Los Angeles, and Mumbai.

Some Zagadkan scientists believe that the 1908 and 1954 explosions were actually banestorms, or triggered banestorms, and that Stalin and Daikaiju are themselves outtimers. These have formed an international group known as the Ring of Saturn (after the Roman God of Time), who investigate anything suggestive of an intrusion from other worlds. Infinity operatives visiting Zagadka have had frequent run-ins with the Ring, and have had to go to great lengths to preserve the Secret. The Ring includes a number of metahumans and others with special abilities: this group is informally known as the Cassini Division.

Zagadka can be used as a setting for a Supers campaign: if so, GMs may decide that physics and biology there are more suited to four-color comics or a cinematic version of reality than to the world we know. Knockback may be increased, NPCs may be hard to kill but more likely to fail HT rolls to stay conscious, etc.

Current Affairs: With the collapse of communism, the United States is the world's only remaining military and economic superpower, though China, Russia, India, Britain, and several former Soviet Republics have nuclear weapons. While there are currently no wars between nations, metahuman forces and experimental ultra-tech weapons are in use in conflicts in Peru, the Balkans, Chechnya, several African countries, and parts of India.

Divergence Point: June 30, 1908. First known appearance of Kandelaki/Stalin.

Major Civilizations: Western (multipolar), Chinese (empire), Orthodox (empire with rivals), Indic (empire).

Great Powers: United States (representative democracy, CR3), People's Republic of China (dictatorship, CR5), United Kingdom (representative democracy with constitutional monarchy, CR 3), India (representative democracy, CR 4),

Russian Republic (Oligarchy, CR 4), Switzerland (representative democracy, CR 4).

TL: Zagadkan technology is TL8 with some ultra-tech anachronisms.

Mana Level: Low

Quantum: 7

Infinity Class: R

Centrum Zone: Orange

Eric Carter, codename Major Dare   *700 points*

Eric Carter is a USMC super-soldier, the result of 1950s experiment in eugenics, biochemistry and controlled mutation, enhanced by life-long training and some surgical procedures. Carter is the first real long-term success of Project Lifeforce, and the prototype for and leader of a platoon of elite special forces, the new Marine Raiders. To reduce the chances of any of the Raiders going rogue, however, the surgeons built in a fail-safe: implants that will release a biotoxin into their brains if they miss a quarterly medical check. Carter is not aware of this, though he has been told that his experimental implants require regular maintenance.

Carter was told that his father, a USMC sniper, died in the Korean War, and his mother in childbirth: his foster parents were an army doctor and a child psychologist. He spent much of his youth in military academies, enlisted in the

Marines at 17, served in Vietnam until after the evacuation of Saigon, then commenced Special Forces training. After serving as a scout sniper in Operation Urgent Fury, he was sent to college to study languages and military history, then to OCS. In 1990, he was assigned to the 3rd FAST (Fleet Antiterrorist Security Team) Company as CO of a rapid response team specializing in hostage rescue, and combat against metahuman and ultra-tech threats.

Major Dare has been trained since birth to serve in his nation's military, and is ready to give his life to protect his country. However, he is neither suicidal nor a warmonger; he believes that a soldier's job is to keep bloodshed to a minimum, and that the best way to avoid dying in vain is to avoid dying. The troops under Major Dare's command have similar attributes and abilities, except for lower levels of Military rank and leadership skill. As most large nations on Zagadka have their own super-soldier programs, the PCs may encounter similarly powerful individuals almost anywhere.

Ht 6'3", Wt 210 lbs, Size Modifier 0, Age 44.

Appearance: Tanned complexion, chestnut hair, gray eyes; a broad-shouldered athletic-looking man with a crewcut and a slightly crooked nose.

Languages: English (native) [0], Vietnamese (accented) [4], Spanish (accented) [4], Russian (accented) [4]. TL: 8. Cultural Familiarity: Western. [12 points]

Attributes: ST 18 [80]; DX 16 [120]; IQ 12 [40]; HT 20 [100]. [340 points]

Secondary Characteristics: Dmg 1d+2/3d; BL 65; HP 20 [10]; Will 14 [10]; Per 16 [20]; FP 16 [20]; Basic Speed 10 [20]; Basic Move 10 [0]. [100 points]

[90 points]

Special Gear: TL9 Auto Pistol, 9mm, with select switch for full autofire (RoF 15), and 25mm Grenade Launcher.

Raider Knife (Fine Large Knife with Brass knuckle hilt; memory metal folding blade extends to Good quality shortsword with saw back. Sheathed, usable as baton, or extends for use as Light Club; may also be fitted to rifle as bayonet. Sheath contains mini-flashlight, lighter, compass, and mirrors (for signaling or use as periscope); sheath and knife together usable as wire-cutter. Knife 2 lbs, Sheath 1 lb.

1d+1 assorted 25mm grenades.

TL9 Ballistic Suit, assault boots, ballistic gloves, TL9 Ballistic Helmet with Visor (DR 18/15).

Standard gear: 2 clips and silencer for pistol; small folding knife; EOD multi-tool; web gear; satellite phone with GPS; personal basics. Off-duty, wears jacket (modified for concealed carry: gives Holdout +2), tactical pants, and reinforced boots.

Hugh Tran (Tran Qui Huy), codename Janus, aka Remplacant   *300 points*

Tran Qui Huy came from his native Vietnam to Australia as a baby in 1976, and had never intended or expected to become a cop. His ambition was to be an actor, but despite his excellent memory and a talent for mimicry, including an ability to pick up new skills as though by osmosis, his Eurasian appearance limited the roles offered to him. Despite this, he eked out a living, mostly as a voice actor, until his girlfriend became pregnant and he decided to get a real job. Hearing that the police were looking for immigrants fluent in foreign languages, he joined up.

Tran had knowingly encountered a few metahumans, and become accustomed to a vague tingling sensation when near them. He felt the same sensation one day when walking through a parking lot outside a mall, and noticed a man removing items from a parked car. The man ran as he approached; Tran caught him, and the man's fingerprints and DNA were found to match those of the "locked door rapist," a metahuman able to phase through transparent solids while naked.

Acting on a hunch, Tran privately approached a specialist in metahuman genetics, saying that he thought he might have an instinct for identifying non-obvious metahumans. The geneticist discovered that Tran could, indeed, pick metahumans out of a crowd reliably enough to be of interest to the Ring of Saturn's scientists.

Tran continued to work as a cop in Sydney, often going undercover to investigate drug dealers, people smugglers, and the sex industry. His life took a drastic turn when a drug lab exploded and he received third-degree burns over much of his body. The Ring came to his rescue by replacing his melted skin with an experimental synthetic intended for androids. For a while, it seemed that his body was rejecting the transplants, but the doctors discovered that the color changes were not a sign of infection, but a response to Tran's body temperature and emotional state.

After extensive experimentation and training, Tran learned to control his metabolism well enough that he could disguise his features and even camouflage himself. The scientists discovered that his chameleon-like talents went even further: though he had been unconscious of this, Tran also had a near-telepathic ability to mimic the skills of people he observed, as well as their voices and appearances. He was given the code-name Janus, which he dislikes: on the occasions when he works with other metahuman teams, he calls himself Remplacant (French for 'stand-in'). His metahuman friends call him Remy.

Officially, Tran works for the UN Interregional Crime and Justice Research Institute (INICRI) as an interpreter. In reality, most of his time is spent undercover, investigating organizations suspected of illegally using (or creating) metahumans.

Tran's abilities will not enable him to detect ultra-tech devices such as parachronic conveyors, but he has tracked down world-jumpers and snatchers, and infiltrated the lower levels of a crosstime Triad. Heroes from Infinity may find him a useful, if wary, ally against common foes.

Ht 5'9", Wt 130 lbs, Size Modifier 0, Age 23.

Appearance: When not in disguise, a handsome, lightly built man with a fair complexion, black hair in a Clooney cut, almond-shaped hazel eyes, and an honest face.

Languages: Vietnamese (native) [0], English (native) [4], French (accented) [2], Cantonese (accented) [2], Khmer (Accented) [2], Arabic (Accented) [2]. TL: 8. Cultural Familiarity: Western. [14 points]

Attributes: ST 11 [10]; DX 12 [40]; IQ 13 [60]; HT 12 [20]. [130 points]

* +2 for Voice

† +1 for Smooth Operator

Gear: Usually TL8 Holdout Pistol, .380, in ankle holster holster; TL8 ballistic vest; boots; cell phone, reversible ordinary clothing (one side black or dark gray), as appropriate to the role he's playing.

Adventure Seeds

No Way In: After blundering into a White Star safehouse on Zagadka, Lieutenant McKenzie, a former Marine Raider, has joined ISWAT rather than be sent to Coventry or have his memory erased. A month later, however, he begins to weaken, and Infinity's doctors discover the implant leaching biotoxin into his body. They send the PCs to Zagadka to try to find a cure for the toxin -- which means breaking into the Zagadka Pentagon's classified R&D files.

Going Native: A PC visiting Zagadka discovers that he has latent metahuman abilities. Unfortunately, they're Invisibility (Always On, Medium Encumbrance), Ultrahearing [0] and Ultrasonic Speech [0]: he can not be seen, nor converse normally. Whether this proves to be an advantage or a nuisance depends on the nature of the mission and the PCs' ingenuity.

The Monrovia Effect: When the second civil war breaks out in Liberia, the PCs are sent to rescue Infinity researchers stranded in Monrovia. There are metahumans fighting on all sides, and Major Dare and a squad of Marine Raiders are defending the US embassy. The researchers (one too badly wounded to walk) are hiding in a besieged hotel, along with several nosy journalists: the challenge for the PCs will be to get them to safety without endangering the Secret.

Ticket to Ride: When a bunch of wealthy sex tourists from Homeline are arrested in Zagadka, the Ring becomes suspicious by some of the gear they're carrying, and Remplacant replaces him in the group. The PCs are tipped off that one of the group is a fake, but have to identify which one before they return to the conveyor -- and without revealing the Secret.

Desert Storm *(GURPS Space)***:** The PCs' ship is engulfed by a banestorm and crash-lands on Zagadka, in the desert in Iran. The PCs have to defend the ship from Iranian forces, including metahumans, until the engineer can get the ship off the ground -- or decide to destroy it to prevent its technology falling into the wrong hands, then escape as best they can. If they want to get home again, they may need to wait for another banestorm -- or generate one.

Triad, You Might Like It *(GURPS Supers)***:** Remplacant leads a small group of metahumans (including the PCs) into the lair of a crosstime Triad. When the fight turns against them, the Triad bosses flee into their parachronic conveyor. The PCs barge in just before the conveyor door shuts, and are transported to another timeline with the bosses -- a timeline where their exotic or supernatural advantages and powers no longer work.

If the PCs can defeat the gangsters without using any superpowers, they should be able to convince one of them to take them back to Zagadka. If not, they'll be dumped somewhere dangerous, or at best unpleasant.

The Planning, the Cut Scene, the Plan

Capers in RPGs

by Brian Rogers

"Ever notice how planning scenes in heist movies tend to jump straight to the plan without ever showing the hours of thinking, debating, etc. that went into creating the plan?" This is true, and it poses a problem when trying to run a caper in an RPG. There are some players who enjoy the complexities of advance planning, but many more just want to get to the exciting part. So what could one do in game to better emulate heist films and other capers in a game setting . . . other than hours of tedious planning that would certainly hit the cutting room floor?

To start, let's break the caper into segments to see how to tackle each, with an example.

1) Define the Objective

What are the PCs trying to do? In some cases this is obvious, in others it will be directed by the PCs' patrons, but it is important to identify this as being something different than the strategy. The objective of *the Sting* is to get revenge on the mob boss Lonnegan for killing a popular grifter. Now, our PCs are grifters themselves, so it's only logical that they would turn to an elaborate money con, but they might also have tried to con Lonnegan into revealing himself to the Feds. The *Mission Impossible* team is told to get a scientist out of a foreign power, but their employers don't say *how* . . . just *what.* GMs can somewhat control the situation by defining the Objective but leaving the strategy up to the PCs.

In my prospectus for *Sterling's Game* I pitched a caper where the objective was stealing money during the transition from the Pound to the Euro. Originally that was the objective. If during PC creation one or more players decide that their PCs are looking to get even with the shady MP who individually betrayed them, framing or embarrassing him with the money theft becomes a profitable strategy to attain this new goal. Let's run with that.

2) Define the Strategy

No surprise, this is how you're going to accomplish your Objective. It's easiest for the GM to define this as well, as it limits PC options to a manageable level. Still, in games where the GM is comfortable winging things or has lots of detail, he can leave this to the players. A PC-selected Strategy should be one of a few "best ways" to reach the Objective, and the PCs can be active doing research to identify their choices. Such research should either have the stealth-driven tension or be handled by quick research rolls. Either way lays out two to four of the target's vulnerabilities -- taking as writ that the PCs are more skilled at this than the players so inherently bad ideas are discarded before they even hit the table. The degree of success determines the difficulty of a *good* plan due to quality/quantity of information and degree of target awareness -- it will not indicate the PCs have developed an entirely inoperative plan, as that runs counter to genre.

One Strategic aspect to consider is a deadline. The grifting of Lonnegan didn't have one, and the PCs could take their time and control the planning. *Ocean's 11* had one -- in order to maximize the take they had to rob the casino on fight night. Strategies without a deadline have less tension, which might make the players more comfortable but also might make the game drag or let players indulge in over-complication. It's probably best that about half of the good Strategies have deadlines, so the players have a real choice on the issue, but the GM can dodge it by setting the Strategy up front.

The premise of *Sterling's Game* is the currency conversion theft, so that has to be the Strategy. If this hadn't been decided, research would show that their enemy MP has some secretive but dangerous ties to the mob (so they might be able to turn the mob against him or somehow expose him) and that his wife has heavily invested in Renaissance art that they could steal. The currency change is the most lucrative option, but it is also the one with the hard deadline.

3) Recruit Your Principals

Sometimes this happens first, or after the Objective has been stated, but it needs to be done early. With a GM-stated Strategy one PC could be the leader who developed the Objective and who then recruits the rest of the team. If the Players develop the Strategy they could do so out of character and ascribe this plan to the leader, or set the recruiting after the Objective but before they look for a Strategy. Of course, in ongoing games recruitment might not be an issue, but not only are these scenes classic to the genre but they also provide snippets of spotlight time in the ensemble cast. One thing to remember is that all the recruits must provide some tactical advantage to the plan. This may be designing PCs around the caper or designing the caper around the PCs, but everyone should have something to do.

The players in *Sterling's Game* decide to let the titular character claim the Objective and Strategy and play out Sterling recruiting the team after that (even though the players all had a voice). Sterling's player builds him as a grifter who knows everybody. The other players go for a femme fatale hacker (okay, clearly fiction), an aging pickpocket made unrecognizable to the man who betrayed him after his time in jail and a former spy whose status as an MI-6 double was compromised by the MP as part of a political move, nearly getting the spy killed.

4) Identify Obstacles

Capers have a lot of moving parts, both to capture the mood and befuddle the target. To make this easier, break the caper down into discrete obstacles and plan how to attain each. The GM should have obstacles for the chosen Strategy, but PC strengths might suggest others (if you have a hacker you need a computer problem). Depending on the Objective, Strategy, and deadline the PCs might need to tackle all obstacles in rapid succession or might be able to overcome some in advance, worming their way in before the big play. The first obstacle is usually a deeper reconnaissance to identify other obstacles (this might have been covered in Strategy selection). The degree of success lists later obstacles so they can plan for them -- bad luck will result in unexpected obstacles that will force the PCs to adapt the plan while it's in motion. (if you're running a *Mission Impossible*-style series of capers consider running each in two sessions -- one planning and recon, the other the day of the event -- to keep the feel.)

To keep things simple, I'll set the obstacles for *Sterling's Game* as the initial reconnaissance (with some computer work, some tailing the MP and some questioning contacts), setting up a false bank account tied to the MP as a holding shell for the money; getting the MP's security codes as their door into the conversion system; entering the secure banking facility on the day of the currency conversion; hacking the computer system at that time; getting out safely. The first two must be done in advance while the last three are done on the big day; getting the security codes might be a "do before" or a "day of" event.

5) Develop Tactics

Now the PCs have to figure out how to get over each identified obstacle. Here's where the players may have the urge to overcomplicate, but by breaking it down into discrete objectives we can keep things moving. Each PC will have skills that are a crucial Tactic for at least one obstacle. Tactics can require the distraction of multiple moving parts, but should only be distracting to the target - not too complicated for the players to follow.

Many players will, at this point, either try to build too many counter contingencies (until they declare it too complex to be workable) or assume that the target already knows they've been targeted. The GM should not hesitate to provide some certainty to the PCs ("No, you are certain that there is no one who might see you open that door at that time.") to mitigate this. The goals should be to control the target's perception movements (and Psychology rolls should let the PCs accurately guess the target's reactions) and play to the heroes strengths. Capers with initial planning parts give the players a chance to stretch their wings and get used to the genre conventions before the big night.

Sterling's Game's first post-recon Obstacle is setting up the implicating shell account. To do so the PCs will need to get and plant financial data on the MP's locked off home computer, and his home has a state of the art key card security system to both his house (remember the Renaissance art collection?) and his study. Plus, he and/or his wife are home

much of the time. The party has to find a time the house is empty and get the MP's key card at that time (his wife's card won't open the study, but a bad recon might not tell them that) to do the hacking. It seems complicated, but this is pretty standard for a caper.

Posing as another Renaissance art dealer Sterling invites the wife out to lunch on a day when the MP is giving a policy speech. That empties the house, and plays to Sterling's con man strength. The pickpocket does a brush pass on the MP as he enters the parliament chamber to secure the key, playing to the pickpocket's strength and giving them some security on the MP's location. The pickpocket rushes the key back to the house, which the hacker uses to get in to the computer and begin her work, again playing to her strength. When the MP heads home the pickpocket has to return the key card before he hits his front door. This plan includes three of the four PCs, leaves the 4th as a back up, plays to the party strengths and is really not that complicated and only has 1 moving part: getting the key there and back.

Now, the players may decide to add more steps to improve their sense of security -- the spy might be dressed in clothes that match Sterling and the hacker could quickly dress to match the wife's clothes so an outside observer would see the homeowner and the man who met her for lunch re-entering the house -- but they aren't really necessary. The GM ratchets up the tension with unforeseen problems -- it takes longer than expected for the hacker to get into security forcing Sterling to keep the wife occupied longer, someone is with the MP when he returns to make the return pass harder to do -- but cut scenes will also work to raise tension even if everything goes flawlessly as Sterling is forced to keep chatting with the wife as the hacker keeps working as the pickpocket and spy watch the MP's speech and then keep watch for his approach.

The heroes could also try some other way, like a nighttime sneak into the study through the windows, but the initial tactics should always play to the PCs' strengths, and those that don't should involve a higher degree of risk. The caper is one of the genres where combat is a very bad tactic because it is so uncontrolled.

6) Get Tricky

Another big problem with translating capers to gaming is that the movie is built for the audience to guess what tricks the heroes have while in a game the players have to develop those tricks. Although some systems allow PCs to edit the flow of events with metagaming techniques ("I spend a hero point and recognize the mob goon as a guy I knew in the clink!"), many don't, and some players derive more satisfaction if they "play the cards as dealt". In those cases players should keep an eye out for things they can improvise off of later, and try to arrange one PC to act as a potential distraction for others. The PCs can also set general purpose distractions that they can make use of later (i.e. setting a bomb on the generator).

In the above example, Sterling put an ace up their sleeve with his new connection to the MP's wife. He can use her to ingratiate himself later, distract her husband, or have another PC drop his name to her (though that's a stretch). If the players had really planned ahead, the spy might have taken his time in the house to set a radio-detonated smoke bomb somewhere -- if anyone needs to distract the MP at any point later they can signal for the bomb to blow and the security system will alert the MP immediately that his house is on fire. They don't know why they'd need that yet, but sometimes it helps to load a revolver and put in on the mantel in act one . . . just in case.

7) Introducing yourself

A classic Tactic is meeting the target (or otherwise making the target aware that something is going on) in a way that his responses play into your plan. Doing so requires making some good reconnaissance and psychology checks to find out what the target has done in the past and what he is likely to do in the future, followed up by bluff or acting rolls to set the scene, but it is one of the best ways to subvert an otherwise insurmountable obstacle. If there's no way you can get through that door without the target's complicity, give the target a reason to put you on the other side of the door. In the caper genre these reactions are pretty reliable -- reliable enough that whole capers are built around themselves so the players shouldn't hesitate to try them.

Bad luck for Sterling: The invitations to the gala bash above the computer center to celebrate the currency conversion

have proven too complex to forge without a sample (bad roll on the spy's part) but the team still needs at least one. Sterling makes use of his earlier meeting with the MP's wife to introduce himself to the MP. He knows the MP is both jealously possessive and manipulative of his wife, and he surmises that the MP might invite him to the party to show the wife that she has no secrets from him. Sterling's psychology and bluff rolls are successful and the MP graciously hands over an invitation to the party. Sure, he's now suspicious of Sterling, but for all the wrong reasons, and is unaware that copies of the invitation will also let in the spy and the hacker.

In Conclusion

As the caper builds to climax expect more simultaneous obstacles to ratchet up the complexity. The players should remember that the NPCs only know what they could have discovered rather than what the GM knows. This should cut down on the urge to over-complicate. The caper is a genre where the PCs are an active force vs. an unaware target, and an unaware target will usually take what they see at face value. If everything goes to plan, the targets never even hear you say "Shall we dance?"

Red Hand of Doom (for the *d20 System*)

Published by [Wizards of the Coast](#)

Written by Richard Baker & James Jacobs

Cover by David Hudnut

Illustrated by Wayne England, Randy Gallegos, Des Hanley, Ralph Horsley, Howard Lyon, Lucio Parillo, Eric Polak, Scott Roller, Francis Tsai, Franz Vohwinkel, & Eva Widermann

Cartography by Mike Schley

128-page full-color softcover; $24.95

The appearance of ***Red Hand of Doom*** is interesting in that it runs against two trends. The first is that it is from Wizards of the Coast, who have a policy of leaving scenarios to third party publishers. Second is that it is a "modern" fantasy scenario, that is, it is not an exercise in nostalgia for ***Advanced Dungeons & Dragons, First Edition.*** Further, it is more a "mini" campaign and not a scenario, which makes it "official"; the nearest that the latest version of ***Dungeons & Dragons*** has previously gotten to an official campaign is Paizo Publishing's ***Shackled City Adventure Path,*** which collected the campaign run in *Dungeon* magazine.

Designed for a party of 6th to 12th level characters, ***Red Hand of Doom*** pits them into a desperate race against time in an attempt to slow a goblinoid horde rampaging through a previously quiet backwater. It is generic, designed to be slotted into almost any campaign setting. Suggestions for placing the campaign's self-contained locale include the ***Forgotten Realms, [Ebberon](#),*** and ***Greyhawk*** worlds. It is also designed to be played using just the three core books, but many of the campaign's NPCs make use of various other official supplements, including ***Complete Divine, Draconomicon, Frostburn, Complete Adventurer, Complete Arcane,*** and the ***Monster Manual II.*** All these supplements are entirely optional, and the various abilities taken from those books are explained in the NPC write-ups where they appear.

That said, two supplements are of particular importance to ***Red Hand of Doom.*** One is ***[Heroes of Battle,](#)*** useful because the adventure does involves several large battles. The other is the ***Dungeons & Dragons Miniatures Rules,*** the use of which enables several of the adventure's encounters and skirmishes to be played out using miniatures. To facilitate this, the book includes a double-sided full color map sheet that gives three different battle maps. The DM is under no obligation to use either the ***Miniatures Rules*** or the battle maps, although they do help to bring certain locations alive. Other than this, the adventure is self-contained.

The setting for ***Red Hand of Doom*** is the Elsir Vale, a quiet frontier region once the centre of the fallen kingdom of Rhestilor. Now it is only important for the Dawn Way, an ancient Dwarf trade road. East of the vale lies the Wyrmsmoke Mountains, home to numerous goblinoid tribes who have been no more threat than the occasional raid. Now the Vale faces a threat form the mountains, the like of which it has never seen.

Located deep within the Wyrmsmoke Mountains is ancient and evil temple, the Fane of Tiamat. Cleared out long ago

by adventurers from Rhestalor, it has been recently re-established by a half-dragon hobgoblin warrior, who has taken up worship of the Queen of Evil Dragons. In the decades since, Azarr Kul has not only converted the local goblinoid tribes, but also gathered around him powerful allies, including his own dragon father! Now High Wyrmlord Azarr Kul plans to lead his horde out of the mountains and conquer the lands beyond as Harg Kulkor, or "Land of the Dragon."

Following their first encounter with a hobgoblin ambush, each further encounter with members of the horde reveals more information about their plans, yet it is only a matter of time for the player characters. Not only do the characters have to convey the severity of the threat to the local inhabitants but also render aid to them. Initially this is not by actively defending them, but in determining what the horde is up to, and in gaining allies for both the party and the locals. Additionally, the character's actions cannot stop the horde though, only delay it. Their efforts will be crucial in the routing of the horde, and this will provide the opportunity to make an assault on the Fane of Tiamat itself in the adventure's final chapter.

If all this sounds familiar . . . well, it is. Certainly the idea of having a town facing a threat that cannot initially be stopped, only delayed, is not new; for example, it appeared in Atlas Games' excellent **_Splintered Peace._** As such, a writer has to do something a little different to make the formula feel fresh. To be honest, the authors never try to achieve this, bar the suggestion that parts of the adventure can be run with miniatures.

So what then is the appeal of **_Red Hand of Doom?_** Simply put, it is well executed with plenty of advice to handle both the adventure's set pieces and various random events. Actually, most of these come about as a result of player actions, the worst of which detail the horde's response to the party's actions. Eventually they send out a squad to kill the player characters, although capture is also a possibility. In addition, space is given for the authors to dispense advice to the DM and to explain how a particular encounter is supposed to work.

Physically, **_Red Hand of Doom_** is very nicely put together, with some excellent illustrations (particularly the monsters) and very pretty maps. That said, some of the illustrations are a little gruesome, including a warrior's arm melting from the effect of a dragon's acid breath, and city defenders being roasted by a dragon's fire breath.

This is a tough adventure, intentionally so, and it does not get any tougher than in the final assault on the Fane of Tiamat. Here it gives the players the opportunity to almost face one of **_Dungeons & Dragons'_** old-school foes. Remember in the First Edition of **_Advanced Dungeons & Dragons_** how you were nothing until you had beaten Lloth, Queen of Spiders; Asmodeus; or Orcus? **_Red Hand of Doom_** has an aspect of that, but feels a little more like the original Dragonlance scenarios in the party facing ever more powerful and varied wyrmlords. It is a thorough modern scenario as written, providing the detail to cover most eventualities.

To be fair, then, **_Red Hand of Doom_** has a little of the Old School to it, but not too much. It is a big, bad adventure that is heavy on combat, which should provide some very tough encounters. Its more modern feel, though, shows in the degree of detail and the wealth of advice, both of which can only help the DM make **_Red Hand of Doom_** a memorable adventure.

Citadels (With Dark City Expansion)

Published by [Fantasy Flight Games](#)

Designed by Bruno Faidutti

52 District Cards, 8 Noble Cards, 8 bonus Quick-Reference Cards, 35 Plastic Gold Coin Discs, 1 Wooden Crown Token, Eight-Page Full Color Letter-Sized Rulebook, plus Dark City Expansion (14 District Cards & 10 Noble); $25

Designed by Bruno Faidutti, co-designer on the highly regarded *[Shadows Over Camelot,](#)* *Citadels* is a card game of city building in which the players must enlist the help of the Nobility. Each Noble grants the player a special power, but since each player can gain the aid of only one Noble at a time, he must be careful to enlist the help of the right one at the right time. The goal is to have the most valuable, and thus highest scoring, city by the time any player's city contains eight districts.

At the heart of *Citadels* are the District and Noble cards. The Noble cards are numbered from one to eight and are marked with a color. Most of them are a neutral gray, while others are yellow, red, blue, or green (associated with the Royal, Military, Religious, or Trade portfolios, respectively). Every Noble card has a special ability. For example, the Warlord card can destroy a building in a rival's city by paying the cost to build it minus one, while the Priest provides protection from the Warlord. Each District card represents a place, such as a Treasury or a Poor House, and is marked with a monetary cost from one to six, usually equal to the Victory Points it grants at the end of the game. Some also grant abilities, such as the Park, which permits its owner to draw a card if he has none at the end of his turn.

Districts are purchased with gold, represented by the thick, whorled coin-shaped plastic discs. The yellow-colored wooden Crown token, slightly larger than the coins, is used to indicate the player who chooses the Nobles first each turn. The full color rulebook describes how the game is set up and played for combinations of two to nine players. The last four pages are devoted to a detailed explanation of how the Nobles' powers work. All of *Citadels'* components are of decent quality and the game is nicely packaged and presented, the latest edition being compact enough to be extremely portable. The deck comes with a bonus eight cards with the turn steps on one side (Take an Action, Build, and Special power), and the victory point rules on another (four bonus points to the first player to reach eight districts, three for having districts of all five colors at the end, and so on). The latest edition of the game comes with the *Dark City* Expansion included. This adds an extra 14 District cards and 10 new Nobles to call on, although only nine can be in play at a time.

Setup starts with each player receiving two gold coins and four District Cards. The player to go first is randomly determined, as it is an important position. He holds the Crown token.

The round begins with the first player choosing one of the Nobles to help him. He puts the card face-down in front of him, and passes the rest face-down to the next player clockwise. The final player then has a choice of two cards, and puts the last face-down in the center, not to be used. The rules clearly explain how to keep the distribution fair for two to eight players, eight requiring the expansion. Excess cards are removed at the beginning of each round, to increase the uncertainty of who has what. With three or fewer players, each player receives two Nobles, with the extra card discarded from the "hand" as it is passed around the second time.

Then someone calls out the numbers in order ("Is there a number one?"). The player with that card flips it over, and begins their turn with "Take an Action," either taking two gold from the bank, or drawing two cards, looking at them, and putting one of the two drawn at the bottom of the deck.

Then, *most* Nobles can then permit their players to build one district from their hand by paying the gold cost to the bank. When a player takes a turn with the aid of one of the four colored nobles, he can claim an extra gold piece for every district in his city that bears the noble's color. These colors associate the nobles with similarly marked districts and certain special powers (although the purple neutral buildings do not produce gold).

Finally, once at any time in the player's turn, he may use the special ability granted by the Noble. For example, one of the Merchant powers is to gain one extra gold for each green district in his city; a player with two green districts could choose to claim two gold at the beginning of his turn to help build a large district, or wait until near the end of his turn after having built a third green district in order to collect three.

The "end of turn" is an important designation. It is the point at which a player can no longer call upon his Noble's powers, build Districts, and so on. At this moment, the abilities of some purple districts activate, and some Noble powers (such as the Tax Collector from **Dark City**) take effect. Then the turn is over, and the next number is called. The game ends at the end of the round in which someone possesses eight districts, if even for a moment. That player gets a bonus four victory points. Anyone else who finished eight districts at some point after him gets two bonus points. Any players who ended the game with at least one district of each of the five colors gets a bonus three points. The victor is the one with the most points in all. Scores will likely vary from 20 to 35, even through some buildings are worth up to 9 points on their own.

Strategy can vary, as it may be possible to build eight cheap buildings costing one gold each, but that entire city could be out-classed by a single 9-point building (such as a Beautified Dragon Gate). The choice of Noble can be important, as it is based on what other players expect you to choose. The powers and turn order are also a factor, as the lowered number cards act first in each round. Some powers involve stealing the gold, or turn from another *Noble,* by number, not player. Thus, a player with three yellow districts is likely to choose the King, and is thus is a prime target for powers. Other powers target players, such as the Magician's ability to permit the player to exchange hands with another specific player. The Purple districts do not have a "patron" that will give income for them (such as the green districts and the Merchant), instead, they are very expensive and valuable at four to eight points each, and half of them provide some extra ability. For example, the Park permits a player to draw a card if he has none at the end of his turn.

The Noble cards must be shuffled every round, and thus seem to wear out very quickly, making a combination light-dark game trickier, unless card protectors are used to protect the cards.

The **Dark City** expansion used to be separate but is now included in the box. It adds 10 new Noble cards (1-8 and two 9s) as well as 14 new purple districts. All **Dark City** cards are marked with a star for easy retrieval later.

Thus, one can intermix the Nobles between the two sets, or play with all new people. The Dark City Nobles are much more interactive than the previous bunch. Before, only half the Nobles interacted with others: two with players, and two with Nobles. Now, almost everyone does. Before, the King could virtually sit on his Crown, going first every turn until other players had him assassinated and robbed (in that order), forcing him to capitulate. Now, the holder of the Emperor card must move the crown to another player that is not him.

The new purple districts add new powers, such as a Lighthouse that, as it is placed in their city, allows the player to look through the deck and pick any district. Likewise, the Bell Tower optionally changes the end condition to seven districts instead of eight.

Citadels is good for a modest pastime. It plays smoothly, and a person is never stuck with cards. Instead, they can easily be stolen, and there will be chances to give them away or trade. This game is fun for all ages, and can keep players coming back again again, though care must be taken to protect the condition of the Noble cards so they don't wear out. It's a fun game that is easy to learn yet difficult to master. The option of up to 18 different Nobles means that there are up to 512 different combinations to start with, more than enough to change the challenges in each game, which should keep the gameplay fresh after hundreds of matches.

--Eric Funk

Same Idea, Different Results

Eagle-eyed perusers of the contents beneath this week's table of contents might notice a somewhat similar thread connecting two articles. In fact, anyone who's actually read the two articles and didn't suffer a soap-opera-esque bout of amnesia in between will note that they share a pretty big similarity: the creation of a super-powered alien who crash-landed on Earth as a baby in the 1908 Tunguska explosion, becoming the first Soviet super-hero.

Now, if I'd already run one of the articles previously, then I might well have told the other, "Sorry; we've already run an article like that." But the fact that they were both sitting in my slushpile made me think it was some kind of kismet, so I thought it'd be interesting to run them both. After all, they have enough similarities to be useful to each other (in particular, the stats from William Stoddard's article can be dropped whole-cloth into Stephen Dedman's Infinite World with hardly a name change), while being different enough to not be in direct competition.

And it gives me fodder for a column, which is always a good thing.

There's fertile ground in starting out with the same kernel of an idea, but taking it your own way. For example, if I were to tell two authors to come up with something along the lines of, "Write an adventure that starts at the bottom of a dungeon, and works up toward a climax at an inn" (a reversal), I'm pretty sure I'd get two greatly different results . . . especially if I picked two folks whose style varies considerably. (Such thought games are similarly played in the Iron Ref competitions we've held previously, where authors are given the same plot "ingredients" and end up with results where the ingredients can barely be found.) There's even a rich heritage in the literary world, with Mary Shelley's Frankenstein and the ancestors of the modern vampire tale evolving out of Lord Byron's horror-writing challenge in the winter of the Year Without a Summer.

And, of course, it's a rich idea for gaming.

If you think about it, these similarities are the backbone of every class, race, or "splat" book. After all, players are given base assumptions about these groups -- elves are distant nature-lovers; Nosferatu are hideous monsters; thieves are shifty-eyed tricksters who steal anything that isn't nailed down -- and need to come up with an interesting character that is true to those assumptions but (ideally) allows room for the PC to grow and become distinctive. So, for example, one player might craft a Nosferatu who is hideous because he has almost no features on his face . . . his visage is a featureless slate with two pupil-size black holes where the eyes would be, which leak a brown-black viscous material that streaks down the face. Another player might craft a Nosferatu who draws more on the spiritual-mental aspects of hideousness, and have his character be utterly plain-looking but radiate an aura that reminds anyone looking at him of the most foul, degenerate, evil person they know (a childhood abuser, a nightmare face created during a fever dream, or maybe Don Knotts).

Or perhaps one player's pickpocket is attempting to steal enough to purchase his family back from slavery, while another player's thief has a fanatical antagonism toward secrets, and thus steals from others only that which is necessary to reveal things they have been keeping discreet.

In addition, similar starting points can be a great way to encourage party unity or starting plots, all the while providing enough room for diversity in its members. For example, in a supers campaign the GM might issue a mandate that says all characters had their parents or other loved ones killed on July 13th, and this loss is what pushed them to a life of crimefighting. Or perhaps each player has been told that they must find some way to represent their own color of the rainbow (the "red" character is a former Soviet official; the "orange" character is the daughter of a citrus farmer; the "yellow" character suffers from chronic cowardice, and so on). While the energy may vary from group to group, I know that among the players I generally attract there would be incredibly creative ways to remain within the boundaries. ("My character is an AI given an animate body, who was disconnected from the world he knew -- including his simulated family -- on July 13th . . .")

I've written before about how there are no new ideas. But human minds are designed to devise links between possibly disparate elements, and ideas that don't seem like they should be new can be given the breath of life by the simple fact

that different folks are poking them. Rather than attempting to make sure that every element of your creation is totally new and unique, perhaps you might try starting out with elements that you *know* aren't original. From those similar acorns might sprout unique oaks.

Of course, those oaks might have gotten destroyed in the 1908 Tunguska explosion . . .

Anima: Shadow of Omega

Published by [Fantasy Flight Games](#)

Designed by Carlos B. Garcia

Art & graphic design by Wen Yu Li, Salvador Espin, Raul Rossell, Luis NCT, S. Melero, Sergio Almagro, Carlos B. Garcia, & David Ardila

Edited by Jose M. Rey, Edge Entertainment Translated by Brant McFarland & James Torr 110 cards, five colored counters, two six-sided dice, rules; full-color boxed set; $19.95

With a title like *Anima: Shadow of Omega,* little doubt is left who the villain of the piece is. Omega is a powerful being, and not one inclined to use that might for the betterment of anyone who isn't Omega. He was long ago imprisoned by a group of other gifted beings working in concert. They placed him in the Tower at the End of the World, and left him chained where he supposedly could do no harm. That sort of thing never works out. Each time he relieves himself of a shackle, Omega shakes the planet's foundations and causes upheavals only heroes can meet.

The object of *Anima* -- designed for two to five players -- is to be the first to complete the Final Mission.

Players begin with a Character, a colored counter, two Missions, and a handful of Advantage cards. Advantages provide Skills, Organizations, and other weird effects to assist on one's journey (or to hinder a rival). Characters are rated for their Combat and Speed, and they may have a Special Ability or be rated for Skills. If someone hasn't the matching symbol, they cannot use that suit of Skill cards. The Character or party with the highest total Speed goes first in every phase, and other players follow in descending order.

A number of Areas are turned upright so there's someplace to begin exploring. On his turn a player's party explores the available Areas to boost their membership or uncover valuable aids to their quest. New places have hidden dangers, so a Preliminary Encounter card precedes initial expeditions. Each site has an Area Level from one to three, and Encounter cards drawn there that exceed this are discarded (so everyone can balance risk and reward). In a fight, party members combine their Combat scores and a six-sided die while their foe does the same. Winning means survival (or, against another party, spoils from their hand), while losing ends the turn or even kills a member of the troupe, if the loss is egregious.

The colored counters show which Area a team occupies so others can target or trade with them. Location is important because each Mission card names an Area the party must visit. If it hasn't shown up, they must Seek New Horizons to uncover it. The number of Areas in play is limited, so the landscape changes as players compete. The journey's results come from the card's chart: Encounters, the completion of a Mission, or special rules (perhaps a scholar offers new Advantages, or a Character dies) are all possibilities.

Mission cards have encounters printed on them, usually great villains or creatures to be defeated. Only after a player completes one of his two Basic Missions can he move to the Final Mission, but since success with these freshman cards gives the party a permanent boost there's an advantage to performing both before graduating to the finale. The Final Mission involves combating Omega or his minions and sabotaging his power, and the first to complete it wins.

The card game is a precursor to an upcoming roleplaying game, *Anima: Beyond Fantasy* (there's also a miniatures game in development), and already the anime element is evident. The artwork ranges from . . . let's call it "intriguingly

compact" . . . to sharply drawn portraits that look like cels right off a film thread. The amount of information presented on each is impressive, allowing the game more depth and direction.

Because the cards are so tightly interconnected, there's plenty of card recycling. Discards can be pulled back in by those players at the bottom of the roster; if they couldn't, it would be too easy for, say, an important Area to come and go before its Mission benefit was reaped. This also keeps weakened players from falling too far behind through evil maneuvering by their opposition. Card play is fast . . . almost too fast. Game play stumbles a bit as it walks a line between uncomplicated, snappy action and clunky, too-easy reversals that make one's best-laid plans hit-or-miss. Clever optional rules allow further customization.

The simple but important layers in the rules are a marvel of brevity, and Fantasy Flight's estimate of 20-30 minutes per player is, if anything, highballing it. It's a colorful set, and even the short introductory paragraph leaves one wanting to know more about the RPG. The names and effects of various cards, if they're a real reflection of the tie-ins to come, evoke enough imagery and style that *Anima: Shadow of Omega* is just the first of a successful troika of games.

--Andy Vetromile

The First Rule of Sandbox: We Don't Talk About Sandbox

"I could be bounded in a nutshell and count myself king of infinite space . . ."
Hamlet, Act II, Scene 2

There's a tendency in RPGs to want to make the scope of available world space as large as possible, presumably in an attempt to craft as large a canvas as possible for would-be explorers of that background.

But there's fertile ground to be had in keeping a campaign limited to a smaller scope . . . keeping them in the "sandbox," so to speak. *Babylon 9* and *Deep Space Five*[1] both explored this, as have such masterpieces of western civilization as *The Prisoner* and *Gilligan's Island* . It's also a hit in the RPG world with settings such as **Over the Edge** and . . . um . . . **GURPS Prisoner.**

I've written [previously](#) about the technique of limiting access to different areas of a game world, in an effort to keep the campaign from getting out of control. This time around, I'm going to give you some specifics as to *how*.

Understand the Scope of Your Sandbox. In other words, what are the boundaries that the players are not expected to go beyond . . . at least for a while? For *Deep Space Nine,* for example, this sandbox initially consists of the space station, the planet Bajor, the wormhole, and what's in the immediate vicinity of the opposite of the wormhole. Likewise, in most **Vampire: The Masquerade** games, the sandbox is presumed never to extend beyond the outskirts of the city.

Knowing the scope doesn't mean that this will never be breached. (That determination will come later.) Rather, it's important to have the initial boundaries firmly in mind, so everyone's expectations are met. While it may seem like an obvious question, it's easy to overlook; for example, one could envision an RPG based on a *Deep Space Nine*-esque space-station-orbiting-planet scenario, and never take into account that the heroes might want to visit the planet.

Know When the Sandbox Will Be Breached. In other words, when will they will escape the limited environment? The question needs to be firmly defined according to the scope (as determined above), and the answer to this will dictate the course of the entire campaign. Possible answers include:

- Never
- Never, except maybe as the series completion (*Cube, The Prisoner*). (In this case, it's likely the point of the series is to escape from the sandbox.)
- Hardly ever, except as a special event (*Quantum Leap*[2], *Gilligan's Island* TV series)
- Occasionally, once the formula is established *(Deep Space Nine)*
- Frequently; the sandbox exists more as a base of operations (Superman and Batman comic series)

In the case of *Deep Space Nine,* I'm guessing that the answer was calculated by the series creators' to be along the lines of, "Not for a season or two, but then we'll open it up a bit."

Know Where Your Plots Are Coming From. This is probably the most important rule, since it's the meat and potatoes of any adventure. Basically, in your limited environment, it's important to know from what vector complications are going to be arriving, and fleshing out that aspect as much as possible. Thus in a campaign set on a space station with limited resources where everyone has their own agendas (good day, *Sunshine*) would require complications to come in the form of the personalities and desires of the others aboard . . . after all, [everyone wants something.](#)

In *Gilligan's Island,* there were two general avenues for new adventures: a complication seeks to disrupt the status quo -- usually in the form of something arriving from off-island -- and the various personalities of the castaways interact in

ways that result in them ending up *not* leaving the island. In this case, the prospective GM would be well-served in coming up with a list of plots, while the players would be advised to make sure they develop and play their characters for maximum (amusing) plot conflict potential.

In *The Prisoner,* plots came in the form of the PC attempting to escape and/or thwart the plots of the warders to break him. (Interestingly, one of the main plot thrusts recommended by **GURPS Prisoner** is in suspicion and conflict between PCs . . . necessary because party dynamics weren't a part of the original formula.) In this case, the GM would need to have a strong understanding of the capabilities and limitations of both the PCs and the warders, as well as a good understanding of the environment.

So, to make up our own example, I could envision a campaign built around the premise of *Ghostbusters* meets *Die Hard,* with the heroes serving as ghost-hunters charged with keeping a massive office building -- with lots various businesses, big and small -- safe from paranormal infestations (forbidden to leave by contract, pact, or choice). Conflict would come from the various weirdness paying a visit, of course, but also from interactions with the various companies within the complex. One company might want to use the latest supernatural oddity to lash out at a rival, another might be trying to keep the ghost of a murdered employee from revealing secrets to the PCs, and so on.

With this campaign, the GM would need to have a good idea of the layout of the building (number of floors, approximate size, etc.), the heroes' headquarters (no doubt an office in the building), the most prominent businesses, the general scope of the spectral threats the heroes will face, and so on.

Be Creative. Think of things that you might not have thought of before. Include mysteries that you don't necessarily have solutions for.

So, as an example, *Star Trek: The Next Generation* (a show that could be re-envisioned in a more restricted format) introduced the idea of a bar and a barber shop. Neither one was exactly obvious to have aboard a spaceship, but neither one was antithetical to the idea, either.

To adapt this to our example, let's say the ghost-office campaign has a snack/vending section. And let's say that the person who's responsible for restocking the machines (and there will be someone responsible) has an interesting back story . . . maybe a tough-as-nails attitude and an artificial limb. Why's he got either? Who knows! Sort it out later. (My guess? He was a former office-ghost hunter, and took this job to keep an eye on future holders of the title.)

As another example for our campaign, maybe there are rumors of a 31st floor (the mysteries of the 13th floor were solved years ago). However, all efforts to go to that floor have so far proven abortive (the elevator doesn't go there, stairwell doors don't open on that floor, attempts at climbing outside the building and back in result in the wrong floor being picked, and so on). Why is this happening? Who knows? However, since you're designing a closed system, it's better to add things you don't quite understand than to make things too tidy and not leave yourself any future plot possibilities later.

Be Adaptable. It's entirely possible that the sandbox idea will need to be rethought or buried after a few adventures, if it proves to be unworkable or too limiting. One way to avoid this step is to try to come up with as many ideas as you can that remain true to the ideals of the sandbox. If you can come up with a good number -- say, at least half the number of adventures as you expect the campaign to last for the first six months or so -- then you can feel pretty secure in your ability to utilize the sandbox (even if you don't end up using all those ideas).[3]

Regardless, you can always give more freedom later. For example, if our office/ghost campaign feels too limited for the players, you might have them expand early on to having a city-wide mandate that permits them to do their ghost-hunting . . . which would vary the available locales considerably.

The limited sandbox can be one of the most fun styles of campaign to run, and players often love them; they're easy to visualize, and a pitch of "You're all super-heroes forced to remain on a cruise ship!" sparks certain emotions more than "You're all super-heroes working in a city." With some simple consideration and brainstorming, you can find it's pretty darn freeing to be trapped.

--Steven Marsh

* * *

[1] That's a . . . I say, that's a joke, son. A joke.

[2] In the case of *Quantum Leap,* the "sandbox" is the premise of "limited to travel within one's own body, within one's own lifetime."

[3] As I understand it, this is the exact technique that ended up being utilized by Sherwood Schwartz, when he came up with the *Gilligan's Island* idea. His bosses told him that it sounded unworkable, but if he could come up with at least a dozen ideas, they'd let him proceed. He did so, and many of those ended up being used in the series' lifetime.

Mercenary Code Monkeys

Computer Hacking in *Feng Shui*

by Brian Rogers

As a game, **Feng Shui** emulates the world of Action Movies. In it kung-fu kicks fly, guns are drawn, cars scream down crowded alleys . . . and Techies work on their computers? With the ubiquity of computer technology in the last decade, it's impossible to do any sort of modern or futuristic game without taking computers and their interconnectivity into account. The *Mission Impossible* movie franchise now blends the old cerebral show with action movie ethos, but even in a world where the secretive double-crossing IMF agents engage in motorcycle chases and martial arts duels one of the returning cast is a computer geek.

One main problem with this is, well, watching someone program a computer is boring. There's only so much you can do with camera angles and tense music before the audience realizes that it's a guy, sitting in a chair, bathing in the light of a cathode ray tube. Hence, the paradox: your players -- especially anyone playing a Techie or contemporary Scrappy Kid -- are going to expect to make use of the computers (especially in an investigative style game), but you don't want to drag the game down with extended keyboard clattering.

Fortunately, the big brains in Hollywood have already developed solutions to this problem. Okay, they're solutions that feel something like chewing tin foil for anyone with actual programming experience, but since **Feng Shui's** highly stylized granularity already tramples over serious martial artists, gun nuts and auto aficionados, what's one more group?

The Hollywood Operating System (or HOS) is the default platform for contemporary **Feng Shui** adventures: it somehow incorporates lots of funky graphics, scrolling text, pop-up windows for security programs, and the like, without compromising the computer speed in the slightest. The basic security programs not only require passwords but also navigation around onscreen obstacles. Why? Because obviously no teenage hacker would have the hand-eye coordination to maneuver an icon through a virtual maze, so the world's computers are safe . . .

Computer Hacking, in an action movie context, is paced in the same fashion as an assassination: some prep work, some sneaking to the target's location, a fight, and then trying to escape without being detected. The prep work can be glossed over with a montage of the hacker looking at engineering schematics, picking up new programs from connections and wiring new hardware into his computer; it's enough to know that work is being done, and that the Hacker looks cool doing it.

The sneaking in can be handled just like any other stealth sequence, with the Hacker's Fix-it or Info/computers filling in for Evasion when it comes to not being detected. Depending on how much time you want to spend on the scene it will be either a single roll or a sequence of increasingly difficult intruder-detection programs. Unless everyone wants to spend a lot of time watching the Hacker roll dice, three detection programs should be the limit, with each roll being 3-4 points more difficult than the last. The usual starting difficulty is 8-10, so that the baseline Scrappy Kid still has even odds of Hacking into school computers. With 4 point jumps over 3 rolls, it takes a skilled Techie to reliably make the difficulty 18 required for a major corporate database. A failure at this stage means you can't go any farther, a botch means that the target system can quickly backtrack your location.

Once you get to where the data is, you have to kill it. The act of removing the data is treated as a fight scene, with the added problem of a time limit: the viewing or downloading of data is sure to set off security, so the Hacker has to kill, or more precisely disable or subvert, the final layer of security in two sequences (this number is kept low to keep the other players from getting bored). Fix-it and Info/Computers also double as the combat skill in these fights.

The HOS generated environment works great for computer combat sequences. Mook Security software exists as pop-up windows (so if your attack roll isn't high enough to take one out, it pops back up!), and overall the screen is much

more visually interesting than lines of code. Most of the security programs of the HOS are Mook level, with Action Values of 8-12. Well defended sites will have several (3-5) parallel security programs. Security programs don't damage the hacker with a hit, but they do slow him down - each successful hit costs the Hacker 1 shot. Even a highly skilled Hacker can be mobbed by security programs, and even if he never gets hit, he can run out of time.

Assuming time does run out, the Hacker has been detected. Access to the desired data is shut off, and the Hacker gets nothing of value. Many Hackers will maintain the data download as a continuous action while fighting the last round of security, noted as a little red process bar on the bottom of the screen. While this does slow the hacker down in the fight, doing so gives him something for his troubles - somewhere between 25% and 75% of the target data, as determined by the GM.

Once the Hacker has been detected or decides it's time to leave, it's time for the final check: Did the target manage to locate my position? This is generally a single roll. If the Hacker has been undetected to this point, it's against the lowest security difficulty so far encountered. If the Hacker has been detected, it's against the highest (or the lowest +3, whichever is higher). On a success, the target either does not detect or is unable to trace your exit. On a marginal failure, they have traced you to your immediate neighborhood. On a major failure, say, 5 points or more, they have your exact address. On a Botch, they detected you when you entered and have already called the police. Better hope your friends have been loading their guns while watching you play at the computer . . .

Of course, once the PCs get involved in the Secret War, the information on the Internet is small potatoes. They'll want to hit the Innernet (where the Ascended keep their high security information) and its 2056 analogue. To do that, they'll have to avoid getting HOS:Ed. The Encrypted version of the Hollywood Operating System is much like the conventional version, but much more dangerous. Assume that any HOS:E difficulties are 3 points higher than the standard versions and the reaction speed of the defense is one sequence rather than two. Plus, HOS:E sites are the ones most likely to scramble physical response teams when their defenses are breached: all the threats of summoning security if the intrusion is detected get carried to your home, and the Ascended and Architects both have the resources to get highly armed and dangerous people to your supposedly safe computer in much less time than you'd like to think.

New Computer Shticks

Code Monkey (Prerequisite = Fix-it or Info/Computers 12+): You have a +2 on any roll that involves coding, hacking or otherwise programming computers. Plus, computer programs of all sorts count as "tools" for you, so you can produce the appropriate programs when needed with a Fix-it roll. (Alternately, you can use Info/Computers to produce programming tools, but this doesn't let you produce more conventional equipment with the Info skill. You still need Fix-it for that!)

This shtick exists so that the Code Monkey can have code-breakers, identity theft software or anything else that suddenly becomes necessary in the course of the adventure conveniently on hand without having a long list of programs cluttering up the character sheet. The +2 bonus covers most of the computer combat functions, meaning the Code Monkey always has generic offensive and defensive programs at the ready. I mean, who wouldn't?

Arcanowave Uplink: Recently the Architects have discovered a way to modify natural chi flows with a slight carrier Arcanowave, letting them use Chi for wireless data transmission. This device lets you "log on" to that carrier Arcanowave. Outside of 2056 you can use it for telepathic contact with anyone with an AI/O port, though the contact will be slow and unclear unless the recipient is either has a Cerebral Grepper (making the A-UP an ideal way to command Abominations from a safe distance) or is also wearing an A-UP. Inside of 2056 you can also access the network, letting you use all of the hacking tropes you'd like. This is a seashell-like device that you put over your head, controlled by voice and eye movement. Icky Virtual Reality, Batman! Of course, at a mutation point per sequence, you better know where you want to get to and what you want to do when you're there.

Chi Avatar: This is a superior version of the Arcanowave Uplink: one where you can project your actual chi-based consciousness into the worldwide Chi flow, crossing Netrunning with Astral projection. You can now directly project your consciousness into the network, letting you also use Fu powers, sorcery and other chi-based abilities in the carrier Arcanowave network environment (or within your Magic/3 in meters from a suitably Arcanowave connection point,

such as any computer connected to the carrier Arcanowave or any living Arcanowave adept creature). Again, this gives 1 mutation point per sequence, but it can be worth it if you're prepared.

Help from on High

A Monotheistic Power System for *GURPS*

by Reverend P. Kitty

RPGs have traditionally featured priests and clerics who wield the powers of one God among a pantheon of many. A follower of Ignit, the God of Fire, may be able to summon a pillar of fire from the heavens, while one who worships Brooke, the Goddess of Rivers, can quell storms and guarantee safe passage.

For many gaming groups, this approach seems sensible for a polytheistic setting, but isn't right for settings in which there is only one true God. In settings with the Abrahamic God (of the Jews, Muslims, and Christians), this is sometimes out of a wish not to offend. However, the holy texts of these religions clearly support the existence of pious men who can call upon their god for miracles. A more pragmatic concern is one of power and balance -- with the gods in a polytheistic setting having clearly defined spheres of influence, it can seem unfair to let a priest in a monotheistic setting have access to a deity who covers *all* spheres of influence.

The key is to maintain balance. A god with far-reaching influence will cost more as a Patron than a more narrowly defined one. In addition, while the gods of a polytheistic universe are often very active and interventionist, it is more traditional for the god of a monotheistic universe to take more of a "hands off" approach, preferring to let us stand or fall on our own merits. Miracles will thus tend to be subtle or on a small scale, which prevents them from unbalancing the game.

The following system is influenced equally by the Good Power in **GURPS Powers,** Divine Favor from **GURPS** *Third Edition,* and the system for *Blessed* characters in **Deadlands.** Divine Favor is based on *Patron (True God; Highly Accessible; Special Abilities; Minimal Intervention; Pact)*, with the new Frequency values interpolated and the cost rounded off. The Learned Prayers are, of course, Alternative Abilities to Divine Favor, with the prerequisite level set to ensure the prayer is always the less expensive ability.

Power and Prayer

Only the pious and faithful can hope to successfully call upon a monotheistic god for miracles on a regular basis. In game terms, the character must have Vows or Disciplines of Faith worth at least -10 points, after which he can purchase the Divine Favor advantage. A character with both traits is known as a *paragon,* a person deeply connected with his faith. Clerical Investment and Religious Rank are optional in most settings -- one does not have to be a priest to be a paragon. (The GM may change this, of course, and may also set additional prerequisites or an Unusual Background for being a paragon.)

Divine Favor: Variable

You can reliably get God's attention to ask for miracles. Only a truly holy person (-10 points or more in appropriate disadvantages) may take this advantage. The cost depends on your attention roll; see the table below. It requires at least 1d6 seconds of prayer (the GM rolls in secret). Praying for at least five minutes adds +1 to the attention (not reaction) roll; praying for two hours or more adds +2.

Attention Roll Table

Roll	Cost	Roll	Cost
4	15	11	90
5	20	12	110

6	25	13	130
7	35	14	150
8	45	15	170
9	55	16	200
10	70		

At the end of the prayer, the GM makes an attention roll to see if the deity acknowledged your request. If so, the GM then makes a reaction roll modified *only* by previous requests that day, the circumstances, and your recent behavior -- standard reaction modifiers do *not* apply! The circumstances modifier could be as high as +2 for a situation in which multiple people may die and you have tried all other options or as low as -4 if the request is one of convenience instead of need. Your behavior can provide up to +1 if you have been 100% faithful to your religion, truly living up to the name "paragon," or as low as -6 for recent sins and other acts against your faith.

On a roll of **Very Good** or better, the god sends an undeniable miracle -- a quake may swallow your enemies, a spring may bubble up from nowhere to slake your thirst, or a dead friend may be brought back to life. A **Good** reaction causes a more subtle miracle, similar to the effects of Serendipity, such as a wound not being as bad as it looks or an enemy's gun jamming. On a **Neutral** reaction, you receive a minor blessing, in the form of a bonus to a roll (or a reroll) or a minor beneficial coincidence. Nothing happens on a **Poor** reaction. On a **Bad** reaction, the deity makes his displeasure known in a non-harmful way (an ominous thunderclap is traditional), you cannot make further requests or use any learned prayers (see below) for the rest of the day, and any negative modifiers for your behavior are *doubled* for the next 1d6 days. A **Very Bad** or worse reaction is similar to a Bad one but also results in the god smiting you in some manner best left up to the GM's imagination.

Regardless of the reaction rolled, if your prayer is acknowledged, all further prayers that day are at -1 to both the attention roll *and* the reaction roll. Note that if nothing happens, the GM does not tell you whether it was the attention roll or reaction roll failing. Among other things, this means a failed prayer will always require at least six seconds of praying before you know it had no result.

Miracles and Learned Prayers

A paragon can pray for whatever help his god is willing to send him, or he can ask for a specific miracle. A list of sample miracles is provided below, along with the minimum reaction required for the miracle to be granted. The predictability and control of asking for a specific miracle is offset by the "all or nothing" aspect -- if you achieve the minimum reaction (or better), you get the miracle. If not, you don't.

A few miracles offer an *enhanced* version. The paragon need not specifically request the enhanced version; he will be granted it with a sufficiently high reaction roll.

The miracles below can also be *learned.* This represents the paragon being granted a special prayer which is a "hotline" to one particular miracle. Once learned, the miracle can be invoked without making an attention *or* reaction roll -- the paragon simply wills it to be (taking one second of concentration) and it is! Note that the power is never truly in the paragon's hands, however. God can remove it in an instant, and will do so on any Bad or worse reaction roll, or if the paragon breaks the Vows or Disciplines of Faith which represent his piety.

Each example below includes a *Learned Prayer Cost,* which is how many character points it costs the paragon to buy the miracle as a learned prayer, as well as a *Learned Prerequisite* which is the level of Divine Favor that *must* be purchased before the learned prayer can be purchased. If the paragon is using a learned prayer, ignore the *Minimum Reaction,* as there is no reaction roll involved.

Blessing

Minimum Reaction: Neutral
Learned Prayer Cost: 3 points

Learned Prerequisite: Divine Favor 4

This miracle may be prayed for *before* making any appropriate roll (page 66 of the ***Basic Set***); roll three times and take the best roll. If this is a learned prayer, it may be used every half-hour of game time. Otherwise, it applies to one roll.

Statistics: Ridiculous Luck (Active, -40%; Pact, -10%)

Protection from Evil

Minimum Reaction: Neutral or Good
Learned Prayer Cost: 3 or 5 points
Learned Prerequisite: Divine Favor 4 or 6

For as long as you brandish a holy symbol in front of you or otherwise assert your faith, you can prevent any malign supernatural entity from approaching within one yard. If you are granted the enhanced version of this miracle, roll a Quick Contest of Will; if you succeed, they cannot come closer than your margin of victory (in yards).

Statistics: True Faith or True Faith (Turning, +65%)

Sermonize

Minimum Reaction: Neutral
Learned Prayer Cost: 4 points
Learned Prerequisite: Divine Favor 5

Your reaction rolls, influence rolls, and Leadership and Public Speaking rolls are all at a +5 bonus, as long as you are open and honest with your words. This miracle lasts until you lie or hide the truth.

Statistics: Charisma 5 (Cannot Lie, -10%; Pact, -10%)

Sense Evil

Minimum Reaction: Good
Learned Prayer Cost: 7 points
Learned Prerequisite: Divine Favor 7

This prayer grants you knowledge of where all nearby evil beings are. It will only detect those with evil supernatural abilities or those who are (in the GM's opinion) completely devoted to or taken over by evil (though without distinguishing between the two). Range varies from a few miles to a few hundred miles depending on where the worst evil is.

Statistics: Detect (Truly Evil Beings; Cannot Analyze, -20%; Cosmic, No Die Roll Required, +100%; Long-Range 1, +50%; Pact, -10%; Precise, +100%)

Smite

Minimum Reaction: Good or Very Good
Learned Prayer Cost: 8 or 16 points
Learned Prerequisite: Divine Favor 8 or 11

When this miracle is invoked, every malign supernatural being within four yards immediately takes 2d-1 damage. They will see the attack clearly, while normal people will see nothing. If this is a Learned Prayer, it can be used repeatedly; otherwise, roll 1d+1 to see how many seconds the paragon retains this ability. The enhanced version of this miracle is identical, but does double damage.

Statistics: Burning Attack 2d-1 (Accessibility, Malign Supernatural Beings Only, -50%; Affects Insubstantial, +20%; Area Effect, 4 yards, +100%; Cosmic, Irresistible Attack, +300%; Low Signature, +10%; Pact, -10%) or Burning Attack 4d-2 (Same Modifiers)

See Evil

Minimum Reaction: Very Good
Learned Prayer Cost: 11 points
Learned Prerequisite: Divine Favor 9

You are granted the ability to single out "evil" people in a crowd. Anyone truly wicked and sinful to the core will register to you, as will anyone possessed or under the influence of evil supernatural forces. By making an IQ roll, you can gauge just how much evil lies in anyone's heart. This miracle lasts long enough for you to size up those around you (GM's option.)

Statistics: Detect (Evil; Cosmic, No Die Roll Required, +100%; Pact, -10%; Vision-Based, Reversed, -20%)

Faith Healing

Minimum Reaction: Very Good
Learned Prayer Cost: 13 points
Learned Prerequisite: Divine Favor 10

Divine power channels through your hands, healing whoever you touch. The strain costs you 1 FP for every 2 HP healed and can even repair crippled limbs. See page 59 of the **Basic Set** for healing diseases; you can cure any disease with a penalty of up to your IQ-3. The miracle will stay with you long enough for you to heal whoever you need to or until you fall unconscious.

Statistics: Healing (Cosmic, No Die Roll Required, +100%; Faith Healing, +20%; Pact, -10%)

Holy Glory

Minimum Reaction: Very Good
Learned Prayer Cost: 22 points
Learned Prerequisite: Divine Favor 12

Invoking this miracle causes everyone who can see you, human, demon, or otherwise, to immediately roll against unmodified Will or against a 13, *whichever is lower.* All evil supernatural beings who fail must roll on the *Fright Check Table,* while all humans must roll on the *Awe Check Table* (**GURPS Powers,** page 85). Fearlessness, Unfazeable, etc., have no effect, but anyone who resists is immune for an hour.

Statistics: Awe (Cannot choose version of Terror, -30%; Cosmic, Irresistible Attack, +300%; Pact, -10%)

This list is far from exhaustive! GMs are encouraged to create their own miracles. One way to do so is to make note of any improvised miracles -- the kind the GM comes up with on the fly when the paragon successfully prays for nonspecific help. If the gaming group finds one of these miracles enjoyable enough that it keeps coming up in play, the GM should write it down using the above examples as guidelines, and let the paragon add it as a learned prayer.

Above all, have fun. The tone of the divine help should fit the flavor of the campaign, from subtle and realistic to over the top and campy. These rules will let you build everything from a beleaguered but faithful local priest dealing with spiritual evil to a superprophet who parts the central city river on his way to fight crime. As long as the campaign's deity approves, it's all right either way.

The Seven Mysteries of the Magus Bruno Alamarach

for *GURPS*

by Mark Gellis

One of the traditional approaches to magic in film and literature is the magician who spends years learning his craft. Magic is usually rare and often secret. Each spell can take months or even years to master. Once the spells are learned, they can be used as often as the magician wishes, but learning them in the first place often requires one to gain access to a book of spells, more commonly known as a grimoire.

In *GURPS,* one way to model this is to treat each spell as an advantage, requiring Magical, -10%, and sometimes combining one or more of the following: Requires Material Components, -10%, Requires Gestures, -10%, and Requires Incantations, -10%. (See *GURPS Powers,* page 116, for details.) Some spells may also require one or more levels of Takes Extra Time for long incantations and some level of the Maximum Duration limitation for advantages that would normally last as long as the character wanted (e.g., Flight).

Generally, whenever an advantage represents a spell that has to be learned, characters must have Magery 0 or better to use it outside of a high mana or very high mana zone. According to *GURPS Powers,* page 131, where such advantages require rolls to determine success or a degree of success (e.g., Afflictions), those rolls will be at -5 in low mana zones, but, in all zones where there is any mana at all, levels of Magery above 0 will increase the likelihood of success. (These rules may or may not apply to creatures with innate magical abilities like vampires and fairies; they are, after all, not using magic as much as they are simply being magical. A detailed discussion of such creatures is, however, beyond the scope of this article.)

It is sometimes assumed that campaign worlds where magic is rare and perhaps secret are probably low mana ones, but this does not have to be the case. If Magery is an extremely rare trait, and if it takes years of study even for those gifted with Magery to learn spells, most people probably never meet someone who is capable of using magic. If obviously magical beasts like dragons are also rare, and perhaps careful to keep out of sight (and to make sure the few people who do meet up with them either have no proof or simply do not make it back alive to tell the tale), then it would be natural for most people to assume magic is simply superstition, even if the local mana level is normal, high, or very high. It would be entirely possible to design a campaign world where magic is rare and almost unknown, but extremely potent.

Often, a grimoire may only contain a relatively small number of spells. Much of it may consist of discussions of thaumatology, occultism, alchemy, and other topics, and gaining access to such books of magic would justify gaining expertise in magic-related skills.

Frequently, the grimoire itself is not necessary to cast a spell once it has been learned; once its contents have been mastered, the book may be passed on to a new student or a new group of students.

Naturally, all this makes such books of magic appropriate as quest objects around which a GM could build a long and detailed campaign before one or more of the characters even learns magic (and sometimes before the characters even know that magic even exists in their world). An example of this kind of adventure appears the film *The Ninth Gate.*

In general, assuming one works at it eight hours a day, a month of study with a teacher will yield about one character point; with self-study, it requires about two months to gain one character point. Thus, a spell represented by a 9-point advantage will usually take between nine and 18 months of study to master.

It is a 0-point feature of these advantages that one must first gain possession of a good copy of the grimoire, written in the original language, and know that language at the native level, to learn these spells properly. Magical incantation is so dependent on the interactions between the nuances of language, the will and personality of the magician, and the

ebb and flow of the magical energies of the universe for any lesser arrangement to be efficacious. Even the shapes of the letters and the position of words on a page may be crucial. Thus, translations are generally useless for actually learning spells (although they are usually adequate as philosophical treatises and for learning skills like Occultism).

Imperfect copies in the original language -- including those "corrected" by helpful editors -- are sometimes still useful to magicians; they will often contain sufficiently good sections to allow someone to learn one or more spells. The GM should roll once for each spell in any particular imperfect copy of a grimoire, after determining if it is a "fair" or "poor" copy of the book; with a fair copy, on 9-, the spell can be learned and used; with a poor copy, the roll is 6-. On a successful Thaumatology roll, the magician who owns the grimoire can tell if a spell will work before he dedicates months to learning it. If he fails, he will not be able to tell, and must simply spend the time to learn the spell and hope that it will actually work once he masters it. The GM is free to determine whether mass-produced copies are good, fair, poor, or useless.

There is no reason why this approach to magic cannot be used in conjunction with the standard spellcasting system described in *Magic,* but it is not balanced with it; in some cases, standard spells will be able to replicate the effects of a grimoire spell for fewer points; in others cases, the grimoire spell will be far cheaper. As a result, it may be easier for a GM to simply use one or the other rather than using both at the same time in a campaign world.

A Grimoire of the Air

One grimoire is *The Seven Mysteries of the Magus Bruno Alamarach.* Alamarach was fascinated with the properties of air and its magical potential. He carefully recorded his achievements and then made two additional copies of his work. Eleven imperfect -- some fair and some poor -- copies also exist. A good copy of the grimoire is worth at least one million dollars; even an imperfect copy is likely to be worth one or two hundred thousand dollars.

It is a thin volume, less than 100 pages, and it only contains seven spells. Not surprisingly, they will only function in the presence of some kind of air, not in space or underwater. (It is left to the individual GM to handle any bizarre special circumstances, such as a voyage to Titan, where the air consists of a lethally cold mixture of nitrogen and methane.) Of course, even with the grimoire, actually learning the spells will take months or years, but the powers granted by the Magus are impressive.

It is assumed that the grimoire is written in Latin, but this can be altered to another language if that would be more suitable for a specific campaign world. The spells are listed in the order in which Alamarach came to master them; none are prerequisites for any of the others and they may be learned in any order. No material components are required for the spells -- the components used are air and sound and vibration -- but mages casting them must have their hands free and be able to speak.

Obviously, the time involved to normally learn these spells makes it problematic for a player character to learn from the grimoire during an adventure. In addition, the value of the grimoire makes it difficult for someone to own a copy without having high levels of Wealth. However, one does not need to own the grimoire to have gained access to it and have studied it, so player characters might know some or even all of the spells; if they have paid the points for the abilities, one may assume they had the opportunity to study and master these occult mysteries. (In fact, if a character had only mastered one or two spells and then lost access to the grimoire, regaining that access or gaining access to another copy would provide a potent motive for that character.) Whether such abilities requires an Unusual Background advantage depends entirely on the specific campaign and the individual GM.

It would also be possible for the character to learn from the grimoire over the course of a campaign if the campaign itself took place over a long period of time. Months or even years might pass between individual adventures. During this time, a mage might learn a new spell. (A variation on this approach would be if the mage was played by someone who could only join the gaming group on a sporadic basis, perhaps because of work or family responsibilities. When the player could not make it to the game, it could be explained by saying his or her mage was busy studying a new spell. If a sufficient amount of game time had passed when the player was able to join the group again, the mage could return to the campaign knowing the new spell.)

For GMs seeking adventure seeds, one may assume that of the three good copies of the grimoire, one is in a restricted rare books collection of a university library and impossible to access for a long enough period to learn the spells unless one was an employee trusted with rare documents (or unless one simply stole it), another is in the hands of a wealthy private collector (who may or may not know exactly what he has in his possession), and one is missing and presumed lost. However, if the third good copy had actually survived and its location became known, it would immediately result in interested parties trying to get their hands on it. Even a poor copy of the grimoire, which could allow someone to learn one or two spells, would be a prize for which men and women might be willing to lie, steal, or even kill.

The Seven Mysteries

This section includes descriptions of the seven spells and their write-ups as **GURPS** *Fourth Edition* abilities.

The Incantation of the Spirit of the Air

This is perhaps the most difficult of the spells. No matter how well one learns it, there is always the small possibility of failure. At the same time, it was the foundation for the other spells, for it was only when Alamarach was able to commune with the airy spirits that he was able to penetrate the mysteries of their realm. It takes a minute of continuous incantations and gestures to summon an elemental spirit who will remain for an hour to serve the magician in any manner that it can, acting as a spy or a servant, answering questions about the airy outer realms, and so on. It does not mind helping a human wise enough to summon it, but there are limits; it will balk at requests that might put it in danger, it will not be as helpful to those who treat it rudely, and, after an hour, when the spell breaks, the spirit will return to its native realm and it cannot be called again for the remainder of the day.

The Incantation of the Spirit of the Air: Ally (75% value of character, Summonable, +100%; Magical, -10%; Requires incantation, -10%; Requires gestures, -10%; Maximum duration, up to an hour, -10%; Only when there is air, -10%; Appears on 15-) [14]

(Normally, the length of the incantation would provide a Takes Extra Time limitation, but according to page 41 of *Powers,* time-related limitations are not appropriate for Allies, so the minute-long incantation is treated as a special effect of the ability.)

The Incantation of Armor

This spell summons the air to surround the person casting it with a protective barrier of wind. This is, not surprisingly, somewhat inconvenient and noisy (especially if one is in an office full of loose papers) but quite effective at turning aside almost anything less powerful than a rifle bullet.

The Incantation of Armor: DR 10 (Force field, +20%; Magical, -10%, Only when there is air, -10%; Requires incantation, -10%; Requires gestures, -10%; Maximum duration, Up to one minute, -65%; Nuisance effect, surrounds user with noisy winds, -5%) [10]

The Incantation of Lifting Winds

This spell, which requires an eight-second incantation, allows one to fly, lifted into the air and then directed through it by powerful gusts. The winds are not so powerful as to qualify as a nuisance effect. The spell lasts for up to an hour. A person casting the spell can lower themselves back to the ground at will; the winds simply slowly diminish until the person has safely landed.

The Incantation of Lifting Winds: Flight (Magical, -10%; Requires incantation, -10%; Requires gestures, -10%; Takes extra time 3, eight seconds, -30%; Only when there is air, -10%; Maximum duration, Up to one hour, -10%) [8]

The Incantation of Burning Air

The fourth spell in the grimoire is perhaps the most dangerous, both to the enemies of the magician casting it and to the magician himself. It summons a bolt of lightning, which flies from his extended hand to strike down his foes. However, it is no light matter to channel such lethal energies. Each use of the spell costs the spellcaster two HP. In addition, the abilities to summon and cast a bolt of lightning does not automatically grant the ability to aim it; the magician must learn, separately, the Innate Attack (Beam) skill.

The Incantation of Burning Air: Burning Attack 6d (Surge, +20%; Magical, -10%; Requires incantation, -10%; Requires gestures, -10%; Only when there is air, -10%; Costs two HP per use, -20%) [18]

The Incantation of Kind and Cruel Air

One of the most powerful spells in the grimoire, and the one with the longest and most complex incantation, this ability lets one influence winds, air temperature, and precipitation for a radius of three tenths of a mile. A mage casting this spell could summon or dispel fog, winds, storms, and so on.

The Incantation of Kind and Cruel Air: Control Weather 3 (Natural Phenomenon, +100%; Magical, -10%; Requires incantation, -10%; Requires gestures, -10%, Takes extra time 8, 256 seconds, -80%; Only when there is air, -10%; Maximum duration, Up to 30 minutes, -25%) [33]

The Incantation of Airy Voices

This spells allows one to listen to distant sounds. After casting the spell, the mage can listen to things as far as a thousand yards away as if he was standing next to it. For gathering information for and about both friends and enemies, this is an invaluable ability.

The Incantation of Airy Voices: Clairsentience (Clairaudience, -30%; Increased range, x100, +60%; Magical, -10%; Only when there is air, -10%; Requires incantation, -10%; Requires gestures, -10%; Maximum duration, Up to 10 minutes, -50%; Takes extra time 3, eight seconds, -30%) [10].

The Incantation of Airy Form

The last spell in the grimoire is perhaps its most remarkable miracle, and one that often takes years to master: the ability for a being of flesh and blood to become like unto air itself. For an hour, the magician can float as an airy form, almost totally immune from injury, able to fly, and so on.

The Incantation of Airy Form: Alternate Form (Body of Air, Magical, -10%, Requires incantation, -10%; Requires gestures, -10%; Only when there is air, -10%; Maximum duration, up to one hour, -10%) [44]

(The Body of Air meta-trait is described on page 262 of the *Basic Set.*)

An Incomplete History of Alamarach and His Book

Bruno Alamarach was a 15th-century alchemist and sorcerer. Little is known about his life; some of the information that is available seems at odds with other historical facts, suggesting that certain details mentioned here could be anything from legends and folklore to the lingering aftershocks of a reality quake.

His origins are obscure. He appears to have been the son of a minor nobleman, born in the 1430s, and sent to Paris for a university education when he was about 15. The few letters mentioning him during this period (none of his letters seem to have survived) describe him of being of a scholarly bent -- one letter claimed that he had mastered not only Latin but several other languages even before he had arrived at the university -- but also handsome and not averse to either drink or the company of young women.

He graduated and for the next 30 years moved around Europe, studying and earning a living as a court astrologer,

physician, and alchemist. As best as scholars can tell, most of his grimoire was written in the late 1470s, while he was living in Rome; there is some indication that two young men lived with him, the three of them studying medicine and other subjects together. One letter from a nobleman treated by Alamarach mentions the two men as being rather sinister and wolfish in appearance, but adds they were excellent doctors despite this; beyond this, almost nothing is known of the men who may have helped author the *Seven Mysteries.*

Sometime around 1481, Alamarach appears to have moved to England; he is mentioned as having one assistant at this time, one Carlos de Seville. It is unknown if de Seville was one of his assistants in Rome; de Seville is one of those figures in the history of magic who is mentioned by various persons, frequently with loathing, but about whom almost nothing is actually known. There are hints that Alamarach may have found employment in the court of Richard III. After this, he disappears again, and nothing else is known about him with any certainty. In 1492, an alchemist named Amlarka is mentioned as living in Jerusalem, predicting the discovery of new worlds across the sea, but scholars are divided on whether this was Alamarach. Even so, the mention of airy spirits guiding his prophecies lends some credence to the possibility that Alamarach spent part of his later years in the Holy Land. There is also a grave in a small town outside Berlin, with a marker dated 1507 that simply reads Alamarcke.

At no time did Alamarach formally announce to the world that he had written a book of magic and made three copies of it; that sort of behavior got people burned at the stake in those days. In fact, the forbidden nature of the book has led to many details of its textual history being so obscure that there is little hope of the entire story ever being known. The existence of three perfect copies (and 11 imperfect ones, most apparently written by de Seville after he and Alamarach had a falling out, and the rest written by one Eduardo de Lisbon, who worked with de Seville in the early 1500s) has been deduced only by careful textual scholarship in the 20th and 21st centuries.

No mention of the book appears until 1527, when it is received a playful mention in a letter from Thomas More to Henry VIII; there are hints that Alamarach made a gift of one copy to Richard III and it fell into Tudor hands after Henry VII seized power. The Tudors knew about it, possibly had possession of one copy during the reign of Elizabeth I, and then possibly lost it to French or Spanish spies sometime around 1584.

One copy is mentioned in a coded letter from the Count of Zaragoza in 1622 and in another letter in 1628. Zaragoza seems to have been trying to teach himself the spells and may have had some success; certainly he drew enough attention to himself to be imprisoned by the Inquisition in 1631 and burned at the stake in 1633. It is uncertain whether his arrest was arranged by the French and Italian cardinals with whom he had sparred while serving the Spanish king as a diplomat (and, most likely, a spy).

The suggestion that pirate queen Black Annie O'Hara learned at least two spells from one of the imperfect copies and used magic to sink British and French ships in the 1670s is viewed as suspect, but the legend made its way into popular songs from the period.

There are mentions in letters by Mather in the 1690s of a second book, the "Latter Mysteries," in which Alamarach had turned his attentions to the element of Water, but there seems to have been only one copy of it and it does not appear to have survived -- Mather refers to it as a "lost book." Of course, he may have been mistaken about the book, or perhaps deliberately obscuring its whereabouts.

There are rumors that, in the 18th Century, Benjamin Franklin or Joseph Priestley may have owned one of the perfect copies (or one of the imperfect ones). There are letters in the archives of the British government suggesting that a British noble - - the letter is in code and it is impossible to tell for certain whether or not it was Lord North -- was very interested in gaining possession of the book. Whether they did or not is unknown.

By the Victorian period, the book was no longer considered anything more than a curiosity, and it is mentioned several times in personal catalogues between 1840 and 1900. The two copies mentioned by Graf Berlinker were certainly both imperfect ones. By 1920, one copy appears to have made its way into a university library in Austria, but was stolen before the Nazis could retrieve it and deliver it to Hitler. No one knows who was behind the theft, but the difficulties faced by the Nazis in their invasion of Russia because of bad weather suggests that Stalin might have had a hand in the operation.

The activities of two groups in Nevada and Colorado associated with mystic and radical survivalist Paul Zoefield in the 1960s and 1970s suggests that Zoefield at least read parts of it and perhaps even owned a copy. More than 20 years later, his daughter Chloe continues his work (Zoefield, who loved taking long hikes in the wilderness by himself, was reported missing in 2001 and is presumed dead; foul play is not suspected). She now runs a commune in northern Arizona dedicated to living close to both nature and the mystical forces of the universe.

If Zoefield did possess a copy of the grimoire, it is entirely possible that his daughter now owns it. In fact, it is possible that this is the long lost third perfect copy. Most likely, the only way to find out would be to visit the commune. How Chloe Zoefield will respond to this is left to the individual GM; she may be a powerful magician as she has certainly had years to study the spells if the rumors about the book are true.

Murphy's Rules

Pyramid Review

Gatsby and the Great Race (for *Call of Cthulhu*)

Published by **Chaosium, Inc.**

Written by Paul Fricker with Rik Kershaw-Moore & Mike Mason

Cover by Paul Fricker

Illustrated by Paul Fricker

120-page b&w tapebound book; $20

> If you are going to attend a convention in the near future and sign up to play any *Call of Cthulhu* scenario entitled "Hesitation," "Repetition," "Deviation," or "Machination," do not read this review. It will greatly reduce your enjoyment of either of those four scenarios, each of which offers an atmospheric and unnerving -- if not scary -- playing experience.

Gatsby and the Great Race is a wonderful title for a scenario for *Call of Cthulhu.* Not quite on a par with *On the Trail of the Loathsome Slime,* but not far off. It is pity, then, that this Miskatonic University Library Association monograph does not involve the Gatsby of F. Scott Fitzgerald fame. Similarly it does not involve the Great Race. Think what an interesting scenario that would be if it did? Nevertheless, the scenario does involve someone called Gatsby, does involve a race, which, if not great, is at least memorable, and is written for *Call of Cthulhu.*

So what then, is Gatsby and the Great Race? It is a *Call of Cthulhu* scenario set in the 1920s that could be run in the United States or Great Britain. Designed for an optimum number of six investigators plus Keeper, it comes with pre-generated characters and is designed to be played in a single session. Players take the roles of couples, friends, and acquaintances invited to attend a weekend party given by a mutual friend, Julian Gatsby -- the Gatsby of the title.

Unfortunately Julian has fallen on hard times, but has recently hit upon a scheme to restore his family's fortunes. Time travel. Using an artifact and a ritual he plans to travel back in time, place a bet on the winning horse in a race with long odds, then return to collect his winnings. Naturally things go awry, during the ritual the artifact is broken, rending the veil between worlds and casting the pieces across four almost identical parallels, and catching the party goers in rather short time loop.

In order to escape this time loop, the party goers must reassemble the artifact, but this requires traveling between the four now very close parallels. Not by means of physically traveling from one parallel to another, but by mental transference. At the beginning of each time loop the characters can jump to into the bodies of their parallel selves, and once there they find not only a world, or at least a version of Gatsby's mansion, slightly different to their own, but a whole new body too. This is done via a snapshot of the mansion frozen in time between the worlds, and this leaves the transferee open to possession by avatars of the Outer Gods. It is also possible for the partygoers to contact their parallel selves, this being done by a séance.

Initially, the characters are merely enjoying a party, but as time loops, they go beyond mere interaction and learning of

each other's quirks and secrets. Memories of events in previous time loops linger and even trickle through, eating at the Sanity of both characters and the NPCs. This can even be of injury and death as the characters are restored to health or life at the beginning of the next loop. Bringing the four parts of the artifact together does not end the scenario though. Rather it initiates a period of chaos that lasts as long as the current time loop has left, and it is during this time that the characters again fall open to possession.

As a one-shot scenario *Gatsby and the Great Race* is a decent affair that is a variation upon an old theme, that of one or more locked rooms frozen in time. Yet to be honest, the scenario is not outstanding enough to run on its own, except as a rehearsal for the monograph's main purpose, which is to be run at conventions, which explains its full title, *Gatsby and the Great Race: One Night of Horror for Many Players.*

[SPOILER ALERT!]

In order to get the utmost out of *Gatsby and the Great Race,* you will need five copies of the monograph, 32 players, several blindfolds, and a German castle. Actually, you can get away with not having the latter, but the scenario has been run at the Tentacles convention, which takes place in a German castle. In its place, you instead need four or five rooms, and a connecting corridor. The players are divided into four groups, each with a Keeper, and each playing in one of the rooms. The remaining four Keepers help control the flow of events over the course of the scenario and what happens in the corridor and the fifth room. It can be run with fewer players and fewer groups, but with four groups it is easier to organize and run.

In the single one-shot version of the scenario, the characters as a group travel mentally from one parallel to the next. In the full version, each of the groups plays a different version of the party-goers in the four parallels. Instead of each group as a whole being transferring to the next parallel, only one character is transferred at a time. This is done by physically taking the character's player out of one group, blindfolding him, and while in this nervous state allow him to interact with the space between the worlds and its denizens, before moving him into the next room and group. Over the course of the scenario, several of the players will be moved between the rooms in this fashion.

The differences between each parallel are made obvious because although the transferred character has the same name as the character he replaces, the photograph of the character on the table that everyone can see differs from the one on his investigator sheet. To that end, half of the monograph is devoted to just the investigator sheets for the four groups. The point of transferring the player through the in-between space of the corridor and into another version of the game he is playing is to create an unsettling atmosphere.

Only when the artifact has been restored and the scenario ended will the participants have a chance to understand what has gone on. In fact, they are encouraged to get together after the scenario has ended and discuss their experiences. Only then might the players grasp the full scope of *Gatsby and the Great Race.*

If run, it is best to disguise the fact that each of the four games is more or less the same. This is done by giving a separate title for each group, the suggested titles being "Hesitation," "Repetition," "Deviation," and "Machination," as run at Continuum. Certainly the first three titles are as much a reference to the long running British Radio 4 series, *Just A Minute,* in which the aim is to speak on a subject for 60 seconds without hesitation, repetition, or deviation. Machination is not part of the radio series -- well not much anyway -- but all four titles certainly are appropriate for *Gatsby and the Great Race.*

[END SPOILER ALERT]

This being a Miskatonic University Library Association monograph, its production values have been left up to the author. They are surprisingly good for *Gatsby and the Great Race,* and it is clear that the author (who as a potter has created some very nice Cthulhu-themed ceramics) has had some help to make it as presentable as it is. The Keeper(s) will still need to make a close read of the scenario as although its concept is simple, it is not easy to run as he has (they have) to run the characters through the four parallels. Understandably, this difficulty escalates as the extra groups added to get the greater effect of the scenario's scope. If the scenario has a downside, it is that it uses very little of the Mythos, but this also means that it could be run using any other game system.

In one way, I am very sorry to have read and reviewed this monograph. I still want to play *Gatsby and the Great Race,* but its full effect will be greatly diminished because I know its secrets. Then again, I would not want to run the scenario for a single group as I do not think that it is as interesting as other one-shots available for *Call of Cthulhu.*

Ultimately, what sets *Gatsby and the Great Race* apart from other scenarios is purely its staging. It is this that makes the most of the scenario's events, allowing them to be played out as much as is possible given the roleplaying format. Although it has high demands, if carefully handled, *Gatsby and the Great Race: One Night of Horror for Many Players* should deliver a very memorable playing experience.

--Matthew Pook

A Certain Sinking Feeling

"Captain, you are very young and inexperienced, but you will learn that there were some matters that both nations have agreed to not discuss, and one of these is . . . our K-129 loss."
-- reported 1987 remark of Soviet Adm. Piotr Navoytsev to USN Capt. Peter Huchthausen, former U.S. naval attaché in Moscow

Let us go down to the sea in boats. Not ships; submarines are "boats." And don't you forget it. Also, don't forget to check the hydrogen vents on the batteries, or the seals on the nuclear missile hatches, or the attitude of your dive planes, or whether you're trespassing on the subaqueous turf of the Gill-Men. Or else the devils will drag you under, and your wreckage will scatter the silt until the end of life on the surface. It's all happening, as the talking crab says before he rips your periscope out, and the water comes smashing in at 1,000 pounds of pressure per square inch, under the sea.

"K-129 had broken into two major pieces, probably on impact since the sections were so close together. The forward section was approximately 136 feet in length . . . the interior of the recovered section appeared much like an archaeological site with everything compacted into a dense mass. . . . [T]he recovered section was radioactively contaminated with what turned out to be weapons grade plutonium. This would certainly indicate that some sort of catastrophic event took place."
-- unnamed Lockheed engineer, describing the *K-129* wreckage

On February 24, 1968, the Golf II-class Soviet Navy diesel-electric submarine *K-129* left Kamchatka on a seemingly hasty patrol mission. He (Soviet subs take the masculine gender) had only had eight weeks of refit and repair time since the previous 70-day patrol in the punishing North Pacific. Under the command of Captain First Rank Vladimir Ivanovich Kobzar, the *K-129* set sail with a strangely over-stocked crew of 98 (rather than the normal 83), 40% of whom were new to the boat. It reached the deep water of the North Pacific, dived, surfaced, and reported in by radio. And that was (almost) the last anyone heard from *K-129*.

When the boat failed to check in, the Soviet Pacific Fleet became concerned, then panicked. Starting on March 8, an increasingly frenetic stream of ships, submarines, and aircraft began to quarter the North Pacific looking for the missing sub -- and for its three nuclear ballistic missiles. American subs harvested a rich crop of intelligence intercepts, and while checking those search patterns against submarine sonar net (SOSUS) recordings, U.S. Navy Special Projects Office chief scientist John P. Craven decided the key find was a "pop" that didn't sound like an explosion, but didn't sound like anything else. It happened on March 7, 1968, and the submarine *USS Halibut* was sent to the sound's likely origin point to look for the downed Golf II.

"There was a hole blown nearly 10 feet wide, just behind the Golf's conning tower. There must have been an explosion, probably on the surface, given the quiet recorded by SOSUS, and it probably came from hydrogen buildup . . ."
-- Sherry Sontag and Christopher Drew, *Blind Man's Bluff: The Untold Story of American Submarine Espionage*

Craven's math was correct: In August of 1968 the *Halibut* found *K-129* broken in two but otherwise surprisingly intact on the ocean floor. *Halibut* took 22,000 pictures of the wreck, and sent them to Washington for analysis. The initial Navy estimate was that hydrogen gas, produced during the charging of the Golf II's 450-ton lead-acid battery, caught fire on the surface during venting, blew a hole in the sail, and a panicky dive finished the sub off. The eventual Soviet theory, on the other hand, was that the American submarine *USS Swordfish* collided with *K-129* and knocked it into a dive below crush depth. (Prior to the declassification of SOSUS, this was also how the Soviets thought the Americans found the *K-129* wreck when the Red Navy couldn't.) *Swordfish* did enter Yokosuka on May 17, 1978 with "cosmetic" damage to its sail, but non-Russian sub experts generally agree that the thin sail of the *Swordfish* couldn't have torn such a hole in the steel hull of the Golf.

Another, rather more plausible, possibility is a leak in a missile tube hatch seal that allowed seawater to enter the tube. If the missile propellant also leaked, the two fluids could combust explosively, detonating first the propellant, then the

arming explosives, and finally the missile detonator. This is what happened to the *K-219* on October 3, 1986, and would have been even more likely on the more-primitive *K-129*. The *Halibut* pictures apparently show one tube blown out, with no sign of its missile, another compelling argument in the "leaky tube" case.

"The discovery of a high probability that the Soviet submarine was some kind of rogue, and that at the outset the Soviets had no idea that its loss was not just an accident, was made to order for Kissinger. Moreover, our disclosure to the Soviets of what we had learned about their submarine would likely raise an unanswerable question in Brezhnev's mind . . ."
-- John P. Craven, *The Silent War: The Cold War Battle Beneath the Sea*

But Craven toyed with, and in *Red Star Rogue* Kenneth Sewell and Clint Richmond pursue, the theory that the missile tube was opened for another reason. Sewell and Richmond believe that the *K-129* was hijacked by KGB forces loyal to Party ideologist Suslov and new-fledged KGB head Yuri Andropov. Their plan was to launch a nuclear attack on Pearl Harbor that the increasingly paranoid and Vietnam-obsessed Lyndon Johnson would blame on China, triggering a nuclear exchange between the Soviet Union's two rival superpowers. While Sewell and Richmond take their theory well beneath its own crush depth, one can't help but admire the Clancy-ish nature of this potential alternate history. Within the silt cloud that Sewell and Richmond stir up, though, is an interesting nugget, to wit: Around March 15, the University of Hawaii research vessel *RV Teritu* discovered a radioactive oil slick north of Hawaii. Where and when, exactly, remain mysteries, as the *Teritu's* log has gone unaccountably missing -- along with, come to mention it, the crew roster of the *K-129*. But any plausible reconstruction puts the sinking site around 350 miles closer to Hawaii than the *K-129's* official patrol zone, and a considerable distance from the CIA's carefully leaked coordinates for the wreck.

"Give them my assurance that I will do my utmost to help them in their mission, and anytime they don't receive the cooperation they think they ought to, be in touch with me and I'll see that they get it."
-- Howard Hughes memo to Hughes Tool Company CEO Raymond Holliday, on the CIA's Project JENNIFER (August, 1970)

And what, exactly, is the CIA doing leaking coordinates of a derelict submarine? Isn't that the Navy's job? Well, that's what the Navy thought, but CIA Director Richard Helms spotted a chance for bureaucratic turf-building that would take some of the luster off the Navy's great intel coup. The Navy just wanted to use deep diving suits, mini-subs, and cutting torches to explore the *K-129,* salvage its missiles, lift its cipher machines and code books, and get out again. But the CIA came up with a grandiose plan to build an immense sea-going crane ship that would lower a giant claw 16,000 feet to the bottom of the Pacific, grab ahold of the wrecked sub, and fish it up from the ocean floor to rest in a sub-sized "moon pool" amidships. And who better to subcontract the construction out to than super-patriot (and pliable drug-addicted madman) Howard Hughes? The cover story was that Hughes intended to jump-start the entirely theoretical industry of sea-bed mining.

The CIA code-named the operation Project JENNIFER, and Hughes' prime contractor, Global Maritime, laid the keel of the 63,000-ton, 619-foot *GloMar II* (later the *Glomar Explorer* or the *Hughes Glomar Explorer*) in November of 1972. By spring of 1974, the ship was ready, and operations began on July 4. On August 12 (or 7), 1974, the ship's claw (known as "Clementine") snapped while lifting the *K-129,* sending the entire stern (including the code books and cipher machines) tumbling down to the bottom where the fragments buried themselves deep in the silt. Project JENNIFER was a $350-million boondoggle that didn't even stay secret until the *Glomar Explorer* returned to port. On June 5, 1974, unknown professional burglars broke into Hughes' corporate offices in Los Angeles and stole most of his files, including a memo detailing the CIA role in funding the *Glomar Explorer* and the JENNIFER mission outline; Jack Anderson broke the story a year later.

"But no one gives an answer, not even one goodbye
The silence of their sinking is all that they reply
Some have chosen to decay and others chose to die
But I'm not dying, no I'm not dying
Tell me I'm not dying
The Captain will not say how long we must remain
The phantom ship forever sails the sea

It's all the same."
-- Phil Ochs, "The *Scorpion* Departs But Never Returns"

But why all the fuss over *K-129?* It wasn't the only submarine to vanish in 1968. The *USS Scorpion,* a top-of-the-line nuclear submarine returning from a Mediterranean deployment, went down on May 22 about 400 miles southwest of the Azores. It was lost for almost five months until John P. Craven (and the *USNS Mizar*) discovered it. It, too, went down under murky circumstances: theories include accidentally torpedoing itself, a battery explosion, or a Soviet retaliatory strike for the loss of *K-129.* And it gets still creepier. Two other submarines, both like the *Scorpion* on Mediterranean deployments, vanished in 1968 -- only two days apart. The Israeli submarine *INS Dakar* sank on January 25, 1968 and stayed lost for 31 years until turning up off the coast of Crete. And the French submarine *Minerve* left the port of Toulon on January 27, 1968 and was never seen again.

"Perhaps stories of turtle-backed objects of large size relate to submersible vessels. If there were no submersible vessels of this earth, in the year 1883, we think of submersibles from somewhere else. Why they should be so secretive, we can't much inquire into now, because we are so much concerned with other concealments and suppressions. . . . There have been suggestions of an occult control upon the minds of the inhabitants of this earth. Let anybody who does not like the idea that his mind may be most subtly controlled, without his knowledge of it, think back to what propagandists did with his beliefs in the years 1914-1918. Also he need not think so far back as that."
-- Charles Fort, *Lo!*

Fed by CIA spin, conspiracy theories abound about *K-129* and the *Glomar Explorer.* Some (including the indefatigable Sewell and Richmond) say that the "breakup" story is a cover, and that Clementine salvaged the whole Golf II intact, code-books and all. Or maybe it was a diversion entirely? In *Underwater and Underground Bases,* Richard Sauder makes a great deal of Navy plans for, well, underwater and underground bases drilled and dug into the seamount, and notes that the whereabouts of the *Glomar Challenger* (a slightly less flamboyant vessel) are unknown during the summer of 1974. My favorite is the theory that Project JENNIFER was a Rainbow or Moon Dust op, the recovery of a UFO downed (according to solemn, if anonymous, report) by a U.S. Navy destroyer in June 1973 near Hawaii. Cue radioactive "oil" spill.

Such a UFO would be, technically, an Unidentified Submarine Object, a USO. Reports of such things (or combo craft that emerge from, or dive into, the sea) go back to the 19th century at least: crewmen on the brig *Victoria* saw three bright, luminous objects trailing streamers (or fins) emerge from the Mediterranean near Malta on June 18, 1845. (Another witness saw the same USO in Antalya, Turkey -- just north of where the *Dakar* eventually turned up.) A lot (18 reports between 1879 and 1962) of glowing undersea wheels (in fine Ezekiel style) tend to appear in Nommo country, roughly the Persian Gulf to the Gulf of Siam. Other cases include a red glow that flew over Dong Hoi in Vietnam in 1909 (the French submarine *Phenix* sank in nearby waters on June 15, 1939), the yellow glows and sonar contacts that led a 30-ship NATO fleet on a futile search in Norway's Sognefjord in 1972 (not unreasonably far from where *K-278* sank on April 7, 1989), and the USO that delivered the amphibian aliens from the planet Iarga to their pseudonymous Dutch contactee in July 1967.

Perhaps more relevantly to our search, sailors and marines on board the *USS Monrovia* sighted a glowing orange oval under the ocean near the Azores the day after the *Scorpion* disappeared. It moved with the ship and blanked out compass, radar, and radio. And a different sort of connection surfaces when we learn that Bob Lazar's famous UFO fuel "[Element 115](#)" can be extracted from "magnetite" nodules (code-named "LODESTAR") found in deep ocean trenches, and at entrances to the Hollow Earth. Is there any connection to the actual *manganese* nodules on the seabed that the CIA and Hughes perhaps not-incidentally used as the cover story for Project JENNIFER? Who can say?

"In the vastness of the oceans there is not just room for all manner of enormities but -- at least according to the new maps of these vast areas -- what might be called an open invitation for residence upon their bottoms for all manner of 'things.'"
-- Ivan Sanderson, *Invisible Residents*

But if the LODESTAR magnetites are as excellent as all that, doesn't it seem reasonable that Someone, or Something, doesn't want us down there harvesting them? The rumored existence of underwater OINTs (Other Intelligences) goes

back as far as mermaids, of course, in which connection it's interesting to note that a fake mermaid is called a "Jenny Hanniver." And a fake deep-sea (anti-mermaid?) operation is called "JENNIFER," by sheer coincidence. The Deep Ones seem to come in waves: our four subs lost to the wrath of Dagon in 1968, three in three weeks in prewar 1939 (although the *USS Squalus* and the *HMS Thetis* were both eventually raised again), two in the spring of 1970 (*K-8,* like *Scorpion* leaving the Mediterranean; and *Eurydice,* like *Minerve* sunk off Toulon). But they also pick off targets of opportunity (or dangerous threats), like the *USS Thresher,* sunk on April 10, 1963, 220 miles off of -- Cape Cod. Or should I say, off of Innsmouth? (The *Thresher* vanished for some 14 months before its wreckage reappeared.) Although the Deep Ones guard Y'ha-Nthlei and the Bermuda Triangle (and the Dragon's Triangle that swallowed the *K-129*?), they flourish in the ruins of Mu in the South Pacific, where the *USNS Eltanin* photographed an underwater antenna on August 29, 1964. Killjoy oceanologists later explained away the image as a Cladorizha sponge. Unless They grow their antennas in a spongiform shape -- or bred Cladorizhae to send psychic signals.

"I know the actual truth about the submarines Thresher *and* Scorpion, *and I know what happened to them and why. The story, if it could be told, would make cold chills run up and down your spine, but the time is not yet. There are many things which could be told, but, well, these books circulate everywhere . . . and there are many people who should not be aware that certain people know what is really going on . . . The mystery of the* Thresher *and* Scorpion *is a stranger thing than you would ever believe."*
-- T. Lobsang Rampa, *Feeding the Flame*

Since 1900, over 250 submarines have sunk or vanished due to "accident or error," and there have been over 1,400 lost subs ascribed to "enemy action." In no case do the investigating parties have much incentive to tell the truth -- and if the Truth is Down There, then maybe that's reasonable. Subs disappear, and then the wreckage -- or some wreckage, anyway -- is "found" months or years later. Covert salvage, disguised by overt salvage, pulls up the LODESTAR cores or the Atlantean sea-charts to the Inner Earth. (Or, as researcher William R. Lyne would have it, to recover Nazi anti-gravity technology smuggled out on U-boats and sunk in the last days of WWII.) The ufologist "Branton" claims that both the *Thresher* and the *Scorpion* -- first-rank nuclear attack submarines -- were sent into the flooded ocean tunnels beneath the American West, to fight the aliens from below and break on through to the other side. Perhaps the whole Cold War submarine contest was nothing but a giant JENNIFER-Hanniver, a coverup sewn together below which the Rainbow warriors could run silent and dead to the world.

The Omniscient Eye

Can I Find Treasure Under a Big, Red X?

What's the deal with treasure maps (pirate or otherwise)? They're omnipresent in pirate-y lore, but several minutes of searching has shown almost squat for Real World precedent. Did pirates (or anyone else) ever actually use treasure maps? If so, why? If there were treasure maps, did others ever find or acquire these maps? (If so, what's the biggest haul that a map-finder found?) Finally, is there any scoop that we would-be real-worlders can use to make treasure maps more believable in our games (whether or not such maps actually existed)?

Buried treasure. The leprechaun's pot of gold. Doubloons and pieces of eight and treasure galore. The treasure map is a staple of the adventure narrative. It provides motivation, instructions and a natural plot hook. The only problem is that, despite all expectations to the contrary, there is only one verified occasion when a pirate buried his treasure in hope of returning to it one day.

In June 1699, the Scottish privateer (or pirate, depending on who you believe) Captain William Kidd landed on Gardiner's Island, a small island at the eastern end of Long Island. Knowing that he was a wanted man and on his way to Boston to clear his name, he buried gold, silver bars, gems and valuables worth approximately $30,000 on the island. It did not stay safe for long. The Governor of New York ordered the island's owner to recover the treasure and ship it to England for Kidd's trial. The trial was politically motivated and on May 23, 1701, Kidd was hanged at Wapping in London having been found guilty of murder and five counts of piracy.

But treasure maps were not only the preserve of pirates. Treasure hunts have taken place for thousands of years and still take place today. "Treasure maps" per se may be rare or non-existent, but a collection of documents and clues that lead to fabulous wealth and could certainly be termed a treasure hunt are very much a reality throughout history.The answer to the question about treasure maps can be split into two parts: Was treasure buried; and were maps or clues left to the whereabouts of the treasure?

Buried Treasure

Buried treasure can be divided into four categories:

1. Hoards buried for safekeeping
2. Wealth buried with an important personage, also known as votive hoards
3. Ill-gotten gains hidden, typically to be recovered after pressure from the relevant authorities has passed
4. Treasure lost in an accident, in particular in storms at sea.

An additional category includes entire lost (or mythical) cities. Examples include Troy, Machu Picchu, Atlantis and even the Valley of the Kings in Egypt.

Hoards Buried for Safekeeping

For most of history, wealthy individuals had to look after their money themselves. Although banks have been around since the 12th century, they could (and did) fail. Banks make their money by providing useful services to depositors who place their money in the bank's vaults (possibly paying interest, but both very early and very recent bankers might just provide safekeeping and easy transfers of large sums) and then lending that same money to borrowers who pay a higher rate of interest. Because most of the money at any bank is on loan at any one time, banks rarely have enough liquid finances to satisfy the demand if a high proportion of depositors ask to withdraw their money all at once. If this

happens (known as a "run" on the bank), the bank could go bust, leaving their depositors with only a fraction of their original capital. And that's just for the wealthy; members of the poor and middle classes didn't have enough spare cash to make it worth their while to deposit it or for bankers to deal with such trifling sums. For this reason, many individuals would keep their wealth hidden at home, and at times of civil unrest, war, or invasion they would bury it to hide it from looters.

In modern times, a number of these hoards have been found. A prime example was the Cuerdale Hoard which was found on 15th May 1840 at a bend in the River Ribble in Lancashire. Local tradition had long held that anyone who stood on the South bank of the river at Walton le Dale and looked up river toward Ribchester would be within sight of the richest treasure in England. Many searched but it was a group of workmen repairing the river bank in 1840 who discovered over 8,500 silver coins and valuables in a lead-lined chest. The British Museum speculates that the coins were buried by the Vikings after they were expelled from Dublin in 902 and were traveling back along an overland route to York, the Viking capital.

Other similar finds include the Hoxne Hoard in Suffolk, the Canoscio Hoard in Umbria, the Mildenhall Hoard in Suffolk and the Harrogate Hoard which was found in early 2007 and announced on 19th July, with an estimated modern day value of $1.5 million. The hoards contain many coins which give archeologists detailed information on the likely date of the burial. Many of the hoards that have been found can be dated to the late Roman and Viking periods in British history ranging from the fourth to the tenth centuries, and typically correlate with periods of violent upheaval or civil unrest. Similar finds have been made across Europe, often correlated with times of significant unrest; for example, the Roman side of the Danube saw many coin hoards hidden in the face of Ostrogothic invasion.

Burial Goods and Votive Hoards

Many societies throughout history have interred valuables with their deceased, whether as a sign of status, to help them in the afterlife or for other spiritual reasons. Such deposits provide some of the most spectacular hidden treasures which have come down to us. Perhaps the most famous example is the tomb of King Tutankhamen, found by Howard Carter in 1922 after decades of patient research and excavation. At the Anglo-Saxon burial grounds at Sutton Hoo in Suffolk important people, including probably King Raedwald of the East Angles, were buried in 20 barrows alongside grave goods that included jewellery, weapons, valuables, and an entire Anglo-Saxon longship that measured 90 feet in length and 14 feet in the beam. In China, historians had long known of accounts of jade burial suits, believed by the Chinese to prevent the decay of the body. It was not until 1968 that archeologists discovered proof of their existence during building works in Hebei, a province of China approximately 100 miles outside Beijing. The bodies of Liu Sheng, a prince of the Han dynasty who died in 113 BC, and his wife Dou Wan were encased in a jade suit that consisted of 2,498 plates of solid jade connected with two and a half pounds of gold wires. At least two more graves containing jade suits have subsequently been found, and archeologists now speculate that jade suits may have been relatively common but subject to depredation at the hands of grave robbers.

Grave robbers were and continue to be a genuine historical threat. With such wealth buried with the dead, searching for tombs and plundering them was a remunerative pursuit. In the 16th century, a robber pit was dug in the apparent centre of Sutton Hoo; it was only the fact that agricultural activity had altered the shape of the primary mound that saved the votive hoard. The pit was off-center and missed the real treasure by a narrow margin. In Italy, tomb raiders known as "tombaroli" have been looting Roman ruins for decades, often operating in broad daylight by posing as construction workers complete with bulldozers and cranes. And of course, much pillaging was conducted as the spoils of war as European countries carved out their global empires, perhaps most famously the Elgin marbles, which were hacked of the Parthenon and transported to Britain by Thomas Bruce, Seventh Earl of Elgin, in 1806. Even now, searching for lost tombs is a lucrative profession in a number of antiquities-rich countries.

Ill-Gotten Gains

A criminal on the run with the authorities closing in has a strong incentive to hide the money. Modern criminals launder it (see "Where's the Nearest Money Laundromat?"). Historical criminals buried it. Although Captain Kidd is the only pirate known to have buried his wealth, other examples include train robbers in the Old West. Myths and

legends have grown up around certain areas believed to contain significant wealth. The Money Pit on Oak Island in Nova Scotia is a good example. People have been digging for buried valuables since 1795 in over 13 different attempts to get at the buried valuables. No one even seems clear on what is buried here, although the clear assumption is that is valuable: millions of dollars and at least six lives have been lost in the search. For further details, look no further than [Suppressed Transmission](#).

Treasures Lost

Valuables are heavy. Gold and silver mined in far-flung lands needed to be transported across oceans and manufactured valuables of great beauty and enormous value were sent between states and wealthy individuals. Before the railroads, the sea was the only way to move them. But the sea is fickle and demanding. Not only were there pirate raids to contend with, but storms and navigational errors could lead a ship to founder without trace. The Genovese steamship *Polluce* sank in 1841 near the island of Elba off the west coast of Italy, possibly after an attack by Neapolitan pirates. In 2007, a vessel codenamed the "Black Swan" was found in Mediterranean waters near Spain and coins and valuables worth approximately $500 million were recovered.

The sea is a fertile ground for this type of search because valuables are likely to have lain undisturbed for centuries, rather than discovered by farmers with a plough in agricultural lands or by dilligent archaeologists. However, since lost ships were usually lost in storms or sunk by pirates during periods with poor navigational equipment, records of the exact location where they foundered are sketchy and making a search for a wreck is an expensive and frequently frustrating task. For that reason, although there are reasonably good records of the *approximate* position of most valuable historical shipwrecks, treasure hunters tend to restrict their searches to shallow waters.

Treasure "Maps"

The discovery of buried treasure is often down to as much luck as judgment. It is a key theme that local legends often contains tales of untold wealth (like the Cuerdale myth), perhaps combined with intimations of a dark fate befalling any who disturbed the treasure -- the supposed curse of the Valley of the Kings springs to mind. That has never stopped adventurers from looking.

Leaving aside mere serendipity, there are clear examples of treasure hunts taking place throughout history, even if a treasure map per se did not exist. In the case of the sunken Black Swan, a NASDAQ-listed company called Odyssey Marine Exploration found it. Using teams of historians and archeologists they scoured the archives for the likely location of the vessel when it sank. Once they had narrowed down the area, they switched to a high-tech sonar search of the sea bed to map out potential search sites combined with a magnetic anomaly detector to find cannon and other metal objects. The Black Swan is not their only success, and the company is billed as an exploration investment similar to companies that seek out precious metals or oil.

The story of the *Polluce* is straight out of an adventure. In the late 1990s, a French historian identified the location from documents uncovered in state archives. He sold the information to a group of English adventurers who decided to dive on the expected location of the wreck without permission from the Italian authorities. In 2000, they found the wreck, removing 2,000 coins and a few jewels. The Italians discovered the theft, alerted the British police and when the coins came up for sale in a London auction house, the police seized them all. A second recovery attempt, authorized by the Italians, is now underway.

Similarly, investigators from Rome trying to trace a priceless collection of antique manuscripts and books that were looted by the Nazis from the synagogue in Rome in 1943 have stated that they believe that they are closing in the final location. Some of the volumes were returned shortly after the war, but 7,000 items are still missing. The current belief is that they are lost in a former Soviet military archive and the Italians are working with the Russions to locate them.

The sources of information on buried treasure are legion and in the absence of a map, there are alternatives. Local folklore may contain hints that there is something worth investigating, although the real meaning has frequently been obscured by the passage of time. A treasure hunt could involve a painstaking search through the libraries, archives and

knowledge depositories of the world. And nor does treasure need to be gold. Value can be found in many places: in recovering ancient knowledge, recovering a religious symbol or reliquary of particular significance (the hand of John the Baptist recently resurfaced in Montenegro having been lost when the Knights of St John, otherwise known as the Hospitallers, abandoned Malta in 1798), or in the proof of a historical fact, particularly when this fact supports the nationalistic or political objectives of a government or ideology.

Even if the location of a treasure hoard is accurately identified, there is no guarantee that the valuables remain in place. Many graves have been looted over the centuries, and some were even looted by the workers who constructed the tomb in the first place. It would be entirely possible for a painstaking treasure hunt to lead to the correct place, only for the investigators to discover that someone has beaten them to the punch. The number of known occasions when a pirate buried his treasure in order to return for it at a later date is precisely one. But treasure maps and treasure hunts have been with us forever. All that has changed is that the technology is better.

You Need a Metaphor Like a Literary-Word List Needs Metaphors

The ships hung in the sky in much the same way that bricks don't.
--Douglas Adams, *The Hitchhiker's Guide to the Galaxy*

The metaphor is one of the most powerful concepts in humanity's universe. It enables us to perceive the imperceptible, understand the incomprehensible, and explain the unexplainable. (And, yes, I know the title is a simile. Don't confuse me with facts.)

In fact, metaphors are some of the earliest learning concepts we possess. It is through metaphor we realize that there is a link between the number of apples when we combine a pile of two apples and one of three apples, and the equation *x = 2+3*.

And it's useful in gaming. One of the earliest, most vivid ideas I remember about metaphors in an RPG world is in the original **Star Wars RPG,** which gave a transcript of a GM trying to dissuade the PCs' vessel from attacking a Star Destroyer: "Here's their ship [draws a large triangle covering most of a piece of paper], and here's your ship [puts a tiny dot on the outside of the triangle]."

Metaphors were also utilized by our long-running **Vampire: The Dark Ages** campaign, giving everyone a handle on some of the more abstract concepts and making sure everyone was on the same page. For example, when describing a werewolf's Rage, he once offered a metaphor that went along the lines of: "Imagine that, for as long as you can remember, you've been kicked, prodded, poked, and antagonized by a small child that you're not allowed to touch. And this child is creative, so he keeps coming up with new and different ways of annoying you, so it's not like you can just ignore him. Now imagine that giving into temptation and lashing out at this child doesn't make the child go away, but instead gives him even *more* ideas for how to tick you off, at least in the short term. Now imagine that you're reliant on this child and his techniques for powering most of your special abilities. That's Rage."

Likewise when I ran an **Aberrant** campaign, I gave what I thought were a couple of good examples as to what it felt like to have the more abstract mega-attributes -- versions of the regular attributes that are entirely beyond those capable of normal humans. "Mega-Wits doesn't mean that you're smarter, but that you're faster at sorting out the options you *do* have. It's like playing a [timed game of chess](#) against a grandmaster where you have an hour for each move and he only has a minute; if you're a lousy chess player, even having an hour between moves won't be a huge advantage. To envision Mega-Appearance, think of the most beautiful or handsome celebrity you know. Now, that celebrity is certain to have photos taken of him when he doesn't look particularly appealing; maybe he's walking hungover on the beach after eating a big meal, or maybe he just woke up. Now, someone with the Mega-Appearance attribute doesn't have those photos; they simply don't exist. If he were photographed when he just woke up, he'd have cute kitten-y eyes or some other appealing aspect."

Of course, the real core books for the **World of Darkness** line are chock-full of metaphors of their own. And the reason is simple: Not only do metaphors do a good job of conveying the nuts-and-bolts, they also do a good job at giving an idea of how it *feels.* For example, saying that a campaign's new super-jet is "20 times faster than flying coach on a 747, but only 1/20th as comfortable" should cause all players to wince at the prospect.

Likewise a metaphor can provide a means of differentiating between otherwise similar worlds or ideas. For example, if I give my players a campaign prospectus that says, "In this world, magic is rare but powerful, and wizards can accomplish great feats with sufficient research," that doesn't give a lot of indication as to what magic is *like* in that world. Compare that with the following excerpts from possible campaigns, all of which utilize a metaphor to give an idea about what the underlying essence of magic:

- In this campaign, performing magic is like a doing a moderately challenging calculus exam, except that for every answer you get wrong, a piece of your soul dies. It's not difficult if you pay attention and are meticulous, but

eventually those slight miscalculations will doom you to eternal torment.

- For this series, calling upon the powers of magic is like calling up a cold, distant, mildly frightening uncle for a sum of money. It will probably involve research (to find the right spell or phone number), it may involve bargaining, and results can vary anywhere from a gift to a loan that must be repaid in kind or favor later, to "no." Regardless, each such call carries with it the risk of learning more about your family or heritage than you wanted to know.
- In this world, using magic is like passing gas. It's something just about everyone can do, but no one *wants* to do; it's hard to do on command; the results vary from day to day; and even if you're successful, you haven't done anything you're particularly proud of.

In all three, magic is probably rare in the world, but the reason behind that rarity varies . . . and that's hopefully conveyed by the metaphor.

Metaphor can also be useful to players trying to give an idea as to what a character's powers or limitations are like. For example, a character with flight might describe it as "being carried by an invisible hand, complete with the uncertainty, the uneasy freedom of the legs and arms, and the uncomfortable pressure on the chest." Or a character with danger sense might describe it as feeling to him "exactly like the harsh ringing of the old rotary phone . . . especially the way it sounded the day it rang with news of my father's death." And this use of metaphor enables vary different effects from otherwise identical powers; the phone-ringing danger sense would seem quite different than one which felt like a sense of unnatural calm and peace. (Coming up with a good metaphor could also lead to interesting plot possibilities; for example, the peace-and-calm danger sense might mean that the character tries to get into increasingly dangerous situations, in an effort to feel that euphoric calm.)

Whether giving information, providing an emotional guide, or delivering dramatic effect, the metaphor is an amazingly efficient -- if somewhat imprecise -- means of evoking player response.

--Steven Marsh

Into the Réduit Schweiz

by Paul Drye

Reich-1's Third World War is dominated by the vast spaces across which Germany and the United States are battling; even the nominal flashpoint in the British Isles is dwarfed by the armor battles in Siberia and the naval blockade from Murmansk to Gibraltar. Fortunately neither side has yet developed nuclear weapons, but apart from that the war is as bad as it could be in many parts of the world. The battle for Switzerland is tiny by comparison, but it's a place where Infinity is making its presence known on the timeline. Pushed back into the mountainous and fortified Réduit Schweiz, the Swiss armed forces have been taking a stand for almost a year, hoping against hope that they can make the cost of occupation too high for the Nazis to keep up, or at least hold out until the Americans come.

The Réduit Schweiz

Since the end of the beginning of the Second World War (which on this timeline ended with a post-Dunkirk Anglo-German armistice), the Swiss strategy has been to fortify the Alps to protect the upper river valleys of the Rhône, the Limmat, the Aar, and the Reuss where they flow through their most rugged terrain. The defenders had more than a decade with which to work between the armistice and the start of the Third World War in 1950, and then the German invasion in 1952 after Britain was occupied. Despite this time and effort, there was simply no way that the populous lowlands of Switzerland could be defended; the Réduit is about pulling back into impossible terrain and defending it until the Germans go away. The tricky question is what would make the Nazis want to do so. Unless the Swiss can keep some offensive pressure on them, the Germans can just ignore the Réduit and carry on their occupation forever, or until some outside factor comes into play. Unfortunately, coming out of their holes to apply that pressure puts the Swiss Armed Forces up against the full might of the Third Reich.

Their problem is compounded by a lack of economic resources. The Réduit has only one town with more than 20,000 people, and the rest are almost entirely less than half that size. The war's disruption makes it hard to be sure, but there may be less than 250,000 Free Swiss civilians out of a pre-war population of 4.6 million; on top of that about the same number of Swiss soldiers have retreated to the Réduit.

Within the Réduit, the Swiss have constructed a series of fortresses to act as centers of resistance, laid down mines and reconstructed roads to prevent armor attacks, and placed innumerable camouflaged pillboxes along routes that could be used by infantry. The stronghold's towns are protected by anti-aircraft artillery, and there are two aerodromes based around cave systems that protect the Swiss Armed Forces' American-built P-80s -- their air arm is purely fighters as not even the Swiss are suicidal enough to try strategic bombing on Germany from their position. There are even a few Swiss torpedo boats on Lakes Lucerne and Thun, though they venture out only in desperate situations (such as when the Germans attempted an amphibious assault on the lakeside town of Stans in the spring).

Visitors to the Réduit will, at first, find it almost stereotypically Swiss. The river valleys house numerous villages and

small farms, while mountains surround them on either side. However, closer examination makes it apparent that things are less pleasant. The region was dependent on trade with the rest of Switzerland, barely able to feed itself, and with the comparatively huge number of soldiers requiring some supplement to their canned foods and powdered milk, the civilian population is starting to feel the pinch. Similarly, technological items like trains and radios are beginning to wear out, with civilians again having to do without so as to support the war.

Thun

The original plans for the Réduit didn't include this city, but of all of Switzerland's important centers it was closest to being within its borders. With the breathing space brought by the Anglo-German armistice and the Nazis swallowing and pacifying Russia, the Swiss decided to extend their fortress building just a little bit out into the Swiss lowlands. Despite the extra defensive difficulties it would bring, the city's small industries and its military college (the largest in the country) were considered worth the effort. It is by far the largest town within the Réduit.

By the time of the German invasion, Thun was quite possibly the most heavily defended city in Europe. The approaches to it are relatively narrow, as the city is nestled in the foothills of the Alps and the point where the river Aare leaves Lake Thun and flows in the direction of Bern. As well as the usual anti-aircraft batteries and pillboxes, two enormous berms have been set up to the north of the city to act as nearly indestructible city walls; the "city gate" is literally a tunnel through them more than 100 feet long as the crow flies and 175 in actual length because of the hairpin bend in its middle. The river itself is heavily mined -- the Swiss have left no channel for their own ships to go north in favor of making it impossible for the Germans to come south. Similarly, more than three miles of track just north of Thun were torn up by the retreating Swiss in order to make it that much more difficult for the Nazis to approach. Even the graded bed was disrupted with explosives. The tracks continue south of Thun to the heart of the Réduit along the western shore of the lake, and are a major factor in the Swiss defense of the city. Many of Thun's citizens have put in time repairing damage to their part of the railroad after German bombing runs.

The city is roughly circular, tucked within a bend of the river. Two streets make "spokes" by running from the small river island of Bälliz (where the town's market is found): The Allmendstrasse in the north, and the Frutigenstrasse in the south. The latter branches off a third spoke, the east-west Hohmadstrasse at the town hospital (now flooded with casualties). In the south of the town, an airfield has been built in the Schadaupark along the north shore of the lake, but it is mostly used for reconnaissance planes. The Swiss armed force's jets are far too vulnerable to land here except in emergencies. The town castle, Schloss Schadau, is on the eastern edge of this, and is used as the headquarters of the local garrison.

As important as it is to the Swiss war effort, Thun is too exposed for the Swiss High Command. They are in Gampel instead, a town on the far, Italian side of the Alps that is that much harder for the Germans to bomb. From there they can pass through the Lötschberg Tunnel to the northern side of the Alps and visit Thun as needed, as well as other important fronts in the north. While the need for extra distance is understandable, the people of Thun do have a bit of resentment about this, and feel like they've been left out in the wind.

(Not So) Secret

As Homeline began to suspect that Reich-5 had developed parachronic capabilities, they became worried that the Nazis there might want to ally with victorious Nazi Empires elsewhere. Infinity has started working to prevent them from teaming up with known Nazi timelines, where possible using the most obvious strategy: If they cause the downfall of a Third Reich on another timeline it can't become an ally. On Reich-1, the war for world domination is still in the balance, and a little judicious help might tip things. This aid is going primarily to the American/Commonwealth alliance, but Switzerland is home to a fight in the heart of the Reich that might be a spoiler for the Germans if the Americans invade.

The plan was to provide intelligence to the Swiss in their mountain zone, enough to make their pinpricks against the occupation forces down in the lowlands a little more sting. Unfortunately, the Secret has leaked on into the Swiss officer ranks, and Infinity has found itself drawn into the conflict far more than they would like solely to protect

parachronic knowledge from reaching the Germans.

The source of the leak is an unsolved mystery, though Infinity is convinced it was deliberate. Someone told the Swiss commander-in-chief (General Henri Guisan, detailed below) about parachronics, Homeline, Infinity, and Coventry. The general then arranged for a "dead man's dossier" among himself and his leading subordinates, so that if he disappears, or something goes suspiciously wrong in the Réduit, the information will be leaked to his army at large. If Switzerland then falls to the Germans, it will be impossible to prevent the Third Reich from discovering the Secret from prisoners.

Similarly, if Infinity refuses to co-operate with his requests for help, he will leak the information in the same way; the general's plan is to blackmail Infinity into helping him. For now, the Secret is relatively safe -- Guisan has kept his circle small so that Homeline will not simply decide the situation is uncontainable and cut their losses. He wants the strange visitors motivated to give the Réduit's forces supplies and military help. He likewise avoids asking for too much.

Infinity Operations in the Réduit Schweiz

The patrol has two main tasks in Reich-1's Europe. First, they work to meet enough of General Guisan's demands that the Secret remains safe while also trying to minimize how much interference that is. Ideally, their involvement would drop to zero. Second, they try to find out who leaked the existence of Homeline to the Swiss, and figure out which natives know about it. Ultimately they would like to identify everyone with the knowledge, so they can be captured simultaneously and sent to Coventry. Those heading the investigation know they have their work cut out for them, and that's even before they have to hide their work from a disapproving Swiss high command while also having to rely on the Réduit as a base.

The former goal has Infinity agents running small-unit military operations designed to hurt the Nazi occupiers. Bern, for example, is only 15 miles from the border of the Réduit, and is often a target of raids. Similarly, the General has asked for and received quite a bit of military equipment (ammunition and parts for repairs, as well as food).

Characters

General Henri Guisan: The man on the spot for the Swiss Army is a French-speaking Protestant from Mézières near Lake Neuchatel. In 1939 he was selected to be the General of the Swiss Armed Forces, and he was responsible for formalizing the réduit concept and getting it built and manned over the next ten years.

The General is a thin, of average height, and has thin white hair that comes to a cowlick high in the center of his forehead. He has a toothbrush moustache, also white, but is otherwise clean-shaven. He is 76 years old and until the start of the latest war looked younger; now he looks his age.

He is a desperate man. His goal is to never surrender, but he worries about the war ending another way; his forces could eventually erode into nothingness due to lack of supplies. Since discovering the existence of Homeline, he's taken it as a godsend that will prevent this from happening. He avoids using the connection when he can, for fear that he will come to rely on it only to have it disappear. On the other hand, he doesn't have many other options.

Robin Leadford: Leadford is a spy without a home office; he was with the British Special Operations Executive based out of Switzerland who was stranded after the Germans invaded across the Pas de Calais and took the United Kingdom. Other men in the SOE have managed to establish links with Commonwealth nations, but Leadford had to flee east from his post in France and Switzerland's land-locked position left him no obvious route to get back in touch.

He's signed up with the Swiss Armed Forces since, for lack of anything better to do. While officially only a soldier, he hasn't lost his intelligence training. Groups trying to maintain secrecy about some missions while also working overtly in the Réduit run the risk of being uncovered if they tickle his old instincts. This is made likelier as he's the one who will be assigned as a liaison between English-speaking Homeliners and the Swiss (he knows French extremely well,

and rapidly learned Schweizerdeutsch after making it across the border into Geneva).

Leadford has a broad, guileless face marred by a nose that's been flattened and bent a bit to a left after a close-up bit of wrestling with a German commando several months ago. He has sandy blond hair, and dark brown eyes, and is clean-shaven.

Frederick Kurtenbach: The man to see when first posted to Thun, Kurtenbach is the publisher of the *Thuner Zeitung,* the local newspaper. Though reduced to a single sheet printed on both sides due to paper shortages, it is still printed every day and used to keep the people of the town informed. Kartenbach is fanatical about his self-imposed mission to do this. He knows everything to know about what's going on in Thun, or if he doesn't he can direct you to someone who does.

When he isn't in his printing room or offices getting the next edition ready, he can be found in the Alte Brauhaus -- a smoky pub in the Bälliz district of town. There he smokes his pipe and downs the local fruity beer while thinking of ways to help the war effort. Journalistic integrity isn't high on his list of priorities. He considers himself a Swiss patriot, and is willing to do quite a lot to help the Swiss Armed Forces.

Kurtenbach looks vaguely like Teddy Roosevelt, with his stocky build, walrus moustache, and glasses. He wears a tradesman's short-sleeved white shirt and dark pants, and his left hand is stained with ink. The right is stained with both ink and tobacco.

Adventures in the Réduit Schweiz

Things That Glow Bump In The Night: Forced to hide in a small, out-of-the-way shelter by a Nazi patrol, the team finds themselves in a place apparently unused since the war started. If you need a hideout, it's kind of nice: water, some canned goods, cots, some struggling batteries to dimly power the electric lights. There are also some intensely radioactive crates marked with the sun symbol of the Imperial Japanese. In some nearby filing cabinets are shipping manifests from Fukuoka to Salonika and scientific papers -- most in Japanese, some in English -- belonging to Dr. Yoshio Nishina. The refugees have stumbled across the uranium of the Japanese nuclear program, lost when the United States smashed Japan flat in the Pacific War. As the Empire collapsed, it was spirited out of the Home Islands and placed in hiding in Switzerland, apparently by someone imagining a comeback after the occupation ended.

The characters have two issues to handle: simply getting through the night without receiving a couple of hundred rems of radiation or being shot by the SS outside, then figuring out what to do with the uranium. Though not fully enriched (otherwise it would have been used to make a bomb) it's still dangerous. In the hands of the Swiss, it could be a weapon of sorts; in the hands of the Germans it advances their nuclear weapon program by a fair bit.

I Hate Myself: General Guisan (or, if Infinity's uncovered one, another Swiss with knowledge of the Secret) has been kidnapped by Reich-1's Otto Skorzeny and a band of SS Commandos. They don't know what they've got, thinking they've "just" absconded with the head of the Swiss Resistance, and are headed to the Nazi-controlled lowlands and then Germany proper. ISWAT got wind of the operation just in time to send some agents, at the direction of Infinity's copy of Skorzeny, and the outtimers have orders to end the escapade before the Secret is extracted from the captive general. If they get the chance to put down Reich-1's Skorzeny like a dog, so much the better.

This One You Can Feel Good About: General Guisan has been punctilious about asking for favors only on behalf of his forces. However, he has finally brought himself to ask for some personal help. He is married, and his wife is in hiding in the Canton of Vaud north of Lake Geneva. The plan was to bring her with him when the German invasion came, but this was foiled by the speed with which the Wehrmacht overran the Swiss Lowlands. The backup plan was to have her assume a new identity and go into hiding. Now the general has received word that this worked. Possibly in response to his own near-kidnapping outlined in the previous seed, he wants a return commando raid aimed at extracting his wife.

If the mission succeeds, a GM who has previously painted Infinity in the right shades of gray will have one possible twist to throw at the commando team. Now that Mrs. Guisan is in Infinity's possession, she could make an interesting

bargaining chip with the General. If the setting has been too "white," this couldn't happen, while if too "black" the players might be inclined to go along. In the middle, though, they have an interesting moral dilemma if ordered to hand her over to Homeline.

You Know That I Know That You Know: The Swiss Armed Forces have an interesting problem to deal with while fighting the Reich: its three main languages are the languages of its enemy and the enemy's two (reluctant) allies. They've been forced to set up an elaborate system of personal vouching to ensure that no moles implanted themselves into the Réduit in the chaotic days as lowland Switzerland fell, or came with the soldiers who filtered through German lines in the days to follow. It's unhealthy to not know the name of, say, the prettiest widow in one's supposed home village.

While on a mission, the team is given accommodations in a large, isolated strongpoint. Typically undermanned, the Swiss have assigned a small group (coincidentally about the same size as that of the outtimers) so there will be enough unused bunks that it will served as a good base of operations. However, the adventurers have had the bad luck to walk into a new wrinkle on German infiltration of the Réduit.

The current occupants of the strongpoint are Nazis who have killed the legitimate Swiss soldiers and taken their identities. From this position, they intend to act as a small fifth column. The arrival of the outtime group has made them extremely wary. Their plan is to act as the people they are replacing as long as it takes for them to murder their guests. Not being Swiss, however, they will make subtle mistakes -- what they are depends on the skills of their opponents, but could be dialect differences, cultural quirks, or military knowledge -- that betray their true allegiance. At this point the situation becomes one of two heavily armed sets of people, neither of which knows how much the other suspects, living in a concrete bunker the size of a small apartment.

Using the Réduit Schweiz in Other Settings

The réduit maps strangely well onto fantasy games, though the strangeness evaporates when one remembers that they're largely based on Tolkien's ideas and -- his protestations to the contrary -- there's a strong whiff of World War II to his most famous work. For story purposes, Nazis and orcs have become largely interchangeable as the former fade in memory. The situation in Reich-1's Switzerland maps onto a wave of evil humanoids surrounding a mountain kingdom, the Corps becomes magically mobile dungeon-delvers, and the Secret becomes anything the adventurers want kept away from the orcs and about which the besieged kingdom knows but could not care less.

Pulp and WWII campaigns suffer from the annoying fact that the Nazis never did invade Switzerland, though there is another possibility to use. Yugoslavia has similar terrain, and if one squints at it the right way the Partisan areas in Bosnia resemble the Réduit Schweiz; the role of Infinity can be filled by the British SOE. There are also some lesser similarities between the strategic position of the réduit and the early stages of the Siege of Madrid during the Spanish Civil War.

Pyramid Review

Ingenious: Travel Edition

Published by Fantasy Flight Games

Designed by Reiner Knizia

Graphic design by Fine Tuning/Michaela Schelk, Stuttgart, & Scott Nicely

U.S. version developed by Christian T. Petersen

Plastic playing board, 57 tiles, 12 scoring pegs in six colors, cloth bag, & rulebook; full-color boxed set; $17.95

It's summertime, and the living is easy. 'tis the season, and there's plenty of traveling to do: to game conventions for the lucky ones, or to the in-laws' house for the less fortunate. What makes motorvating and high gas prices bearable in either case is a good book for the beach, some rockin' tunes, and a compact version of a favored game. Yes, they still make those, and the *Ingenious: Travel Edition* is ready for the road.

Most things about the original *Ingenious* game remain the same. Points are scored by placing tiles printed with colored symbols into rows on a limited play area; the longer the row, the more points it's worth. Separate point totals are marked for six such symbols and only the lowest of these scores counts for the purpose of winning, so keeping any one score from lagging behind the others is the key to winning.

Since Fantasy Flight Games is trying to shove a lot into a little package, there must obviously be changes. Foremost among them, this is only a two-player game. This allows them to dispense with the two extra hex rings and make a tighter board. Instead of the plastic racks for displaying and selecting your tiles, there are small indentations in the board itself shaped to allow the tiles to sit in them. They slip into the slots and are tilted at a slight angle, enough that the players can see their selection without slouching in their chairs, but not so much that the other player gets a gawk.

There's no room for the scoring boards, either. These, too, are incorporated into the playing surface. The scoring tracks start at either end of the board, next to the respective player, and they meet in the middle at 18 (the highest score; a player who gets one of his colors here gets to call "Ingenious" and take a second move). There are 12 small plastic pegs, two for each color, and holes in the scoring track to accept them. A row of numbers along the edge tells players what the current scores are.

The components are paramount when you're trying to fit fun in a box, and the *Travel Edition* pulls it off pretty well. Since it's only for two players there are fewer tiles, but the good news is the set still comes with one of those dandy little cloth sacks from which to draw them. (Truth be told, these sacks are better than the original game's sacks.) The scoring tracks are the most disappointing feature: The plastic base for all the action is a uniform gray, and the numbers are just raised figures on that surface. The designers sprang for the expense of coloring the "starting line" so it was obvious what peg went where, but no effort was made to tint the numbers. Just to make that a bit more irksome, all the pictures provided of the board show idealized computerized illustrations in which the holes are sharply enumerated. But for something this unremarkable in presentation, it must be said it's still fairly easy to see whose score sits where. Nonetheless, only the even numbers through 18 are raised thus (add the odd numbers and the script used would have to have been smaller still).

Stability is another issue, and itÕs all good news. The pegs and the tiles (both those in their slots and those that have

been played) sit still. Tilting the board is still an issue -- nothing clicks or locks into place here, so gravity is no one's friend -- but several solid bumps and smacks of the table did not dislodge a single thing. In spite of the reduced scale, picking things up is no worry save for the pegs (there are some things that simply cannot be deftly snagged).

The whole shebang fits into a sturdy box no more than eight inches square and less than an inch and a half deep (and it actually fits properly . . . another claim the original couldn't make). Play remains quick, with games lasting only 20 to 30 minutes depending on the caution of the individual gamer and the consideration he gives to his moves. Using the tinier pieces doesn't slow things up much if at all, and unless the participants are going four-wheeling on a rocky mountain road or bouncing up and down on turbulence or heavy waves, this thing's got game. Calling this the ***Ingenious: Travel Edition*** is right on both counts.

Hollow Earth Expedition: Pulp Adventure Roleplaying

Published by Exile Game Studio

Written & Designed by Jeff Combos with Bruce Baugh, Brannon Boren, Patrick Bradley, Eric Cagle, Jason Carl, Jim Cook, Chris Goe, Tyler Running Deer, & Steve Winter, plus Ed Matuskey, Melissa McNally, & M. Sechin Tower

Cover by Stephen Daniele

Illustrated by Stephen Daniele, Mike May, Mark Selander, & Jeff Slemons

Cartography by Stephen Daniele

258-page b&w hardcover with color inserts; $39.99

With four genre RPGs new in 2006, it is a good time for the Pulp gamer. *Hollow Earth Expedition* is one such new RPG, which -- instead of encompassing the entire Pulp genre -- concentrates upon a single theme. Where other games cover every Pulp aspect and archetype, bringing together costumed adventurers, men of science, private eyes, barnstorming aviators, and big game hunters in a mix never destined to gel, *Hollow Earth Expedition* takes only those suited to the one Pulp sub-genre: that of the lost world.

Inspired by Jules Verne, Sir Arthur Conan Doyle, Edgar Rice Burroughs, and even a little Doug McClure, this RPG explores a lost world of 1936, right inside our planet. The Hollow Earth is accessed only from certain secret points -- at the North and South Poles, the Bermuda Triangle, and even on Mysterious Island. Once inside, the adventurers discover a world still home to dinosaurs, 18th-century pirates, Amazon warrior women, ape men, and the vestiges of Atlantis. The Nazis (of course) directed by the Thule Society want the secrets the Hollow Earth; the ancient Terra Arcanum wants to keep both Hollow Earth and its secrets from becoming known on the surface world; while both British and American intelligence want to keep the Nazis in check; and the Royal Geographical Society wants to explore this new unknown. The characters can become involved in these feuds and conspiracies, hunt big game, explore, shoot a movie, and even discover the secrets within in this RPG of high adventure.

From the outset this is an attractive-looking book, starting with the alternate world map circa 1936 showing the various entrances to the Hollow World. Indeed, the map was enough of a hook (particularly its inclusion of Mysterious Island) that Jason, a gaming friend who avidly peruses my new gaming and reviewing purchases, wanted to play the game; after looking through the rest of the book, he wanted to buy a copy. It is cleanly laid out with excellent artwork both pencils and color; the color is used to illustrate the character archetypes in a nicely judged lurid fashion, while pencils are used everywhere else. These depict the Hollow Earth's ruins, peoples, mega-flora, and mega-fauna, plus various scenes of high action, including Pterosaurs attacking a balloon, a lone hunter facing down a Tyrannosaurus Rex, and Nazis looting a ruined city.

Character generation involves dividing 15 points between six attributes and another 15 between skills. The range for both attributes and skills is one to five, two being the human average, but can go higher for exceptional men and women, and some non-human species and creatures. Optionally, a character can take a skill specialization, which costs

just half a point, so a character starts with two. The skills list is relatively short, expanding with the inclusion of specializations. One curious omission is the Archaeology skill, but this is easily added.

Characters also have either a single Resource, such as Allies, Fame, or Mentor, which can be lost during play, or a Talent, like Dual Wield, Iron Jaw, or Total Recall, innate abilities that cannot be lost. Some Talents have more than one level, others are available only during character generation, and many are combat or action orientated. Also optional, is taking a Flaw such as Disfigured, Lame, or Obsession, which grants the character an extra Style Point. Finally, Previous Experience grants the character some Experience Points to spend immediately on attributes, skills, Resources, or Talents.

Alternatively, a player could take a ready-to-play archetype. These include the Imperiled Starlet (where better to make that authentic jungle movie with realistic creatures?), the Big Game Hunter, the Mad Scientist, the Occult Investigator, the Fortune Hunter, the Jungle Missionary, the Dying Moneyman, and the Snooty Professor. These suggest that characters arer focused toward their role rather than being generalists, and this is borne out in the few points available for skills, and also in the mechanics.

One of the first steps necessary is choosing a Motivation, intended to be a character's primary goal or driving force. Ten are given, all tied into the included archetypes, but a player is free to choose or create his own. Both Motivations and Flaws are really roleplaying tags, and roleplaying either will gain a player further Style Points. A character begins with five, plus one for any Flaw, and they can be spent to gain extra dice, to temporarily boost a Talent, or to reduce damage taken.

Mechanically, Hollow Earth Expedition uses the "Ubiquity System," which uses dice pools derived from attributes and skills to roll successes, these being even results on the dice. It can use any type or mix of dice, but the publisher also makes available a Ubiquity Dice set for the game. These are eight-sided dice effectively rolled as one, two, and three-sided dice. Their aim is to reduce the number of dice rolled; for example, instead of rolling 6d6, a player could roll 3d2 or 2d3, the number rolled being the actual number of successes. That said, it is just as easy to roll ordinary six-sided dice. Overall, the "Ubiquity System" feels like the Storyteller system for the new ***World of Darkness,*** but simplified and easier to run.

One interesting mechanic that handily speeds play is "Taking the Average," which is similar to the ***d20 System's*** "Take 10." Because there is a 50/50 chance of a success on any dice roll, a player can calculate the average number of successes ahead of time. This average represents the degree of skill possessed by a character has without making much of an effort. If the number of successes is equal to that required for a task, no roll is needed.

The setting is supported with plenty of material. This starts with the opening journal entries telling of a 19th-century balloon flight to the North Pole that goes awry. It provides a handy description should a GM have his players enter the Hollow Earth that way. A gazetteer provides an excellent overview of the surface world of 1936, from culture to politics to its many nations to its prices, although it should be familiar to any Pulp gamer. If there is one aspect not fully detailed here, it is that of Pulp or weird science. Just five items are given, but at least they can be used by the characters, unlike in other Pulp RPGs.

The Hollow Earth itself is described in some detail. From Hollow Earth theory and getting into this unknown world to its time dilation effect (how else could dinosaurs survive inside to this present day?) and the difficulty of telling time, the basics cover everything a GM needs to know. Its many denizens, from cargo cults to lizard men are given full write-ups, as are the many beasts to be found within. Secrets are hinted at, particularly of Atlantis' heritage, but also those of Surface world organizations that take an interest in the Hollow Earth. A nice touch in the write-up of these organizations' leading figures is indication of their Mentor rank, which is the Resource level a character must buy to have one of them as his Mentor. What this volume manages to do is give the GM enough information to run a game without feeling the he is still lacking, despite the fact that the Hollow World's exact geographical and political details have not been tied down. Essentially, he is being given room to make the Hollow Earth his own, the source material providing both things to put there and a font of ideas.

The game is rounded out with a starting scenario, which sends the characters on an US government sponsored expedition to foil a Nazi plan to locate Ultima Thule. Naturally, it has the characters aboard a dirigible flying into the

Hollow Earth where they discover secrets and a lost explorer. Although feeling as if it pitches the characters into the setting too early, it touches upon the setting's core ingredients and should be good fun. Finally there is a decent bibliography and a useful glossary.

More specifically for the GM though, is the Gamesmastering chapter. It covers not only the genre's conventions, such as the cliffhanger, but also several particular to **Hollow Earth Expedition,** such as being able to get in easily (but not out), a reliance on brains over guns, mixing science and magic, and character separation as a storytelling device. Much thought is given to campaign structure, both long and short, and there are plenty of tips for evoking a better atmosphere. This is an excellent essay on how to run a Pulp action game tailored to a lost world setting, and worth reading by any Pulp game GM.

There is a great deal to like about **Hollow Earth Expedition.** The mechanics feel slick if not overly original; the setting is evocative while leaving room for the GM to make it his own; and it is an attractive looking volume. Further the writing is evocative, dripping with ideas, and is written with brio. For an initial release from a new publisher, **Hollow Earth Expedition: Pulp Adventure Roleplaying** more than succeeds at presenting a very playable entry in the Pulp genre.

The Terrifying Plot of Dr. Z!

Episode 5: Shadows in Siam!

by Matt Riggsby

When we last left our heroes, they were in the middle of a fight between a Nazi zeppelin and a Russian-led Mongolian horde. The concentrator mounted in the control cabin is deadly, but not very accurate, so it will ultimately create more chaos than actual damage. The Germans are ill-organized, so PCs can, with a good sprint, get into the zeppelin, or at least grab one of the mooring ropes and climb up.

Once aboard, PCs can fight their way up to the bridge and duke it out with Reitermann and his officers. Given a chance for conversation, one mentions that Dr. Z has left for Bangkok to meet with jewelers. However, they don't intend to let the heroes get away. This may lead to dangling from ropes far above the ground, running down gangways while the zeppelin begins to burn, struggling for parachutes, or escaping by the biplane mounted near the back of the gondola. Particularly able and lucky PCs might even be able to take control of the zeppelin temporarily and recover the concentrator, though they'll face serious problems if they try to keep it once they return to civilization.

Living a Chased Life

When the fight is over, the PCs will be Alexi's dearest friends for fighting the Germans. If the PCs haven't hijacked the zeppelin, the Mongolians can provide an escort back to Ulan Bator, where they can start arranging transportation. Alternatively, Irkutsk, a few days travel overland to the north, is a stopover for regular service to Hong Kong and Kuala Lumpur, whence the PCs can arrange transport to Bangkok.

Once they reach Bangkok and start searching the jewelry district, they'll hear reports of Dr. Z searching jewelers' inventories for any large, flawless gems. They also get Vision rolls to recognize some of Dr. Z's thugs from Anytown, USA. Dr. Z, whom no one has seen the day the PCs start looking for him, has already gotten most of what he's after, but his men are still picking things up. If they're lucky, they'll see Dr. Z's men in the company of Japanese military officers, and if they're very lucky (say, a critical success on a Streetwise roll), they'll also learn that Dr. Z bought a range of electrical and fine metalworking supplies to be shipped to the port town of Trat.

The heroes may also spot Dr. Z if they pick up a newspaper. Perhaps while reading a paper over breakfast some morning, a PC (on a Vision roll) spots a picture of Colonel Pibul, the prime minister, delivering an address. Dr. Z is visible in a crowd of dignitaries behind him. If they bother reading the article, it concerns a visit by a delegation of Japanese diplomatic officials and military officers. Any journalists or minor government officials they approach won't know who Dr. Z is, but can say that the Japanese had been in town and doing little more than sightseeing and hanging out at a local night club before disappearing into 24-hour negotiations just a few days ago. Their business appears to be done, and they're now preparing to return home.

The PCs should not be surprised to discover that there's a club in town called Seven Happiness (yes, that's where the Japanese dignitaries were going), and should they visit, they will be even less surprised to find Miss Papillon

Stats!

The concentrator has these stats:

Dmg: 6dx5(10) burn ex[3d]; Acc 1; Range 800/2000; Weight 60; RoF 1.

It's poorly assembled, and its Acc could be improved several points with a purpose-built mounting. Moreover, it uses Gunner/TL6 (Beams) skill, which hasn't been invented yet, so gunners are at default. It requires considerable power input, like a large vehicular power plant.

For generic soldiers, use these stats:

ST 10; **DX** 11; **IQ** 11; **HT** 11. Damage 1d-2/1d; BL 20 lbs.; HP 10; Will 11; Per 11; FP 11. Basic Speed 5.5; Basic Move 5; Block 0; Dodge 8.

performing. To her credit, if the PCs reveal themselves, she won't be a bit surprised to find them alive.

During their investigations, the PCs must step carefully, since a bunch of Westerners asking around the notoriously secretive gem trade are likely to attract attention. In addition to any influence skill rolls they make to locate Dr. Z, or at least learn his business, the PCs must make similar rolls to convince the people they talk to not to say too much about them. If they fail, word of their survival and pursuit will come as a nasty surprise to the doctor, who will dispatch assassins to finish them off. Dr. Z's style in this runs towards lone gunmen or small bodies of martial artists (he gets a much better class of them here; use the thugs from Part 1 and increase their Karate skill to 13 or 14). The PCs still have a reasonable chance of fending off attacks, but it will become an issue if they're discovered.

Dr. Z, Where Art Thee?

The message they will eventually get, if they're good enough at interrogating their sources, is that they've missed Dr. Z yet again. He's left Bangkok just ahead of them with extensive and expensive technical supplies; the Japanese are buying up electrical parts as well. They can reasonably suspect (and Miss Papillon can confirm) that Dr. Z has, at the very least, sold the Japanese plans for a concentrator, if not a functional model. Dr. Z is clearly up to something big, but only his own people know just what he's doing and where.

With one exception: Miss Papillon. Her relationship with Dr. Z is not looking so lucrative now that she knows what he's doing with his gems. Her contact among the PCs can talk her into helping, but her price is that they take her along when they follow Dr. Z. If they agree, she fills them in: Dr. Z has retreated to a secret island base in the South Pacific to build an array of fiendish devices. With the technology he has sold to the Germans and Japanese, he believes that they will start a global war and defeat their western enemies. However, they will soon turn on one another and destroy the empires they have built. When that happens, Dr. Z will emerge from his lair with a full range of terrible weapons. The death ray on the zeppelin is just one possibility. Concentrators could provide anti-gravity, warship-destroying lightning projectors, and other devices which would make Dr. Z unstoppable against the reduced forces of the rest of the world.

So, then, if our heroes are to save the world (and at the moment, they're the only ones in a position to do so), Dr. Z needs to be stopped, but so does the Japanese military delegation. Fortunately, both tasks take them in the same direction. If the PCs scramble, they can get tickets on the east-bound train the Japanese will be taking to return home across Cambodia and Vietnam. The same train takes will take them through the town of Sa Kaeo where they can hire transport to Trat.

Trained Adventurers

The train leaves Bangkok in the late afternoon, heading into the eastern hills to arrive at Sa Kaeo the next morning. The PCs can get accommodations of any class, though even the best is a bit cramped by Western standards. The Japanese have taken exclusive control of the first several cars in the train. They've put a freight car in the very front, which presumably contains the supplies they've acquired. Behind it is a passenger car containing soldiers, clerks, and junior diplomatic delegates. That car is connected to a more luxurious passenger car for the senior delegates, and that in turn to the rest of the train, starting with a publicly available first-class lounge car.

The more luxurious passenger car is partitioned into eight small compartments (with a narrow hallway down the length

Skills

Climbing-10; Driving/TL6 (Automobile)-10; Driving/TL6 (Halftrack)-10; Gunner/TL6 (Machine Gun)-11; Guns/TL6 (Light Machine Gun)-12; Guns/TL6 (Pistol)-12; Guns/TL6 (Rifle)-13 (DX+2); Guns/TL6 (Submachine Gun)-12; Soldier/TL6-12; Swimming-11 (HT+0).

Ranged Weapons

Auto Pistol 9mm (TL 6)
Dam:2d+2 pi Acc:2 Range:150 / 1850 RoF:3 Shots:8+1(3) ST:9 Bulk:-2 Rcl:2 Wgt:2.4
Self-Loading Rifle 7.62mm
Dam:7d pi Acc:5 Range:1000 / 4200 RoF:3 Shots:8(3) ST:10 Bulk:-5 Rcl:3 Wgt:10

German airshipmen have Airshipman/TL6-12 and Brawling-12. Japanese soldiers have Karate-12; some may have Broadsword-12.

of the left side) providing a modicum of privacy for the occupants, minimal toilet facilities, and built-in couches which convert into comfortable beds. The other passenger car contains rows of double seats on either side of a central aisle; the seats convert into upper and lower bunks for sleeping (any old movie with Pullman cars, such as *Some Like It Hot*, can provide a useful model). The Japanese delegation consists of about twenty-two soldiers, fifteen clerks and junior officials, and seven officers and senior officials.

Most of the clerks and off-duty soldiers spend the trip sleeping. The senior officials stay up most of the night drinking and congratulating themselves at a table they monopolize in the lounge car, making a point of freezing out anyone else who might try to talk to them, though Miss Papillon might be talked into providing a distraction (and, if need be, drinking them under the table; a PC femme fatale could attempt the same thing with a reasonable chance of success).

The door from the first-class lounge is guarded by two alert soldiers carrying sidearms. The door from the Pullman car is guarded by a pair of possibly dozing soldiers, these carrying rifles. If the PCs can slip into the senior delegates' car, they'll find conditions conducive to stealth. No one will come down the hallway for several minutes at a time, the sound of the nearby engine provides a -1 penalty to Hearing rolls, and anyone in an occupied room is likely to be sound asleep. Anyone coming off the roof will even discover that most windows have obligingly been left slightly ajar for much-needed ventilation. A search of the senior delegates' compartments turns up any number of papers detailing diplomatic protocols, joint military exercises, tariff issues, and the like (useless to anyone who doesn't speak Japanese, deadly dull to anyone who does). It will not, however, turn up recognizable documents concerning the concentrator. Everything of any strategic importance is in the baggage car.

There are six soldiers, with rifles *and* a few grenades, in the lightly-packed freight car, and they've got a machine gun set up near one of the side doors, although it isn't constantly manned. They're supposed to be in pairs distributed through the car, but some might gather to play cards. If any PCs are ambitious enough to check, they'll discover that it's possible to climb onto the roof of the train and, once there, make it nearly up to the front of the freight car without being seen. If the guards in the baggage car see anyone who isn't supposed to be there, they'll shoot first and ask questions later.

Any shooting will awake the soldiers in the Pullman car. If there's extended gunplay, an unlucky shot might (which is to say, will) punch through the wood of the car's forward wall and strike the engineer or the train's controls, or at least damage the brakes; any explosion is likely to do the same. And, of course, this happens just as the train is starting down a slope to a broad curve taking the train along a cliff overlooking a stream in a deep ravine. If the train can't be stopped or at least slowed significantly, it will jump the track and dive into the valley below.

A runaway train! A headlong rush towards a fatal crash! How will our heroes escape? Come back next time for the final episode of The Terrifying Plot of Dr. Z!: Headhunters of the Pacific!

Pyramid Review

Gene Pool: The DNA Card Game

Designed & Published by [Mark Goadrich](#)

12 Base Pair cards, 14 Gene Research cards, 2 Player Reference cards, 7 by 11-Inch Full Color Double Sided Rules leaflet; $9

With the PDF format providing the perfect avenue to self-publishing, even for some board and card games, it is a little odd to come across a self-published card game . . . especially as one as nicely put together as Mark Goadrich's *Gene Pool: The DNA Card Game.*

This is a two-player card game in which the players take the roles of genetic engineers working with the building blocks of life to fight rare genetic diseases such as Osteogenesis Imperfecta (Brittle Bone Disease) and Huntington's Disease. They compete to repair gene sequences of varying length and complexity by manipulating the Base Pairs within the sequence. As rivals, what is at stake after years of research is the ultimate in recognition, a Nobel Prize for either Medicine or Physiology.

The game consists of 28 cards and a double-sided rules sheet, all in full color. The rules are clearly written and easy to understand, and play is eased by the inclusion of a pair of Player Reference Cards. The remaining 26 cards are of two types, each further divided into two types. The 12 Base Pair cards are marked with the four chemicals that make up the building blocks of life: Adenine, Cytosine, Guanine, and Thymine. Six cards are marked A/T and six are marked G/C. These cards can be read along the top and the bottom of each card. The Gene Research cards are divided by the length of time it takes to find a cure described on each card, either one or two years. Besides describing each disease, each card gives a link to its support site. At the top of each Gene Research card is a string letters, corresponding to a gene sequence. Thus for Cystic Fibrosis, the sequence of the letters is "AGTT."

Set-up for Gene Pool is simple. The Gene Research cards are separated and shuffled into two piles face down corresponding to year length. Each player selects one as his initial project. He also receives one A/T and one G/C card. One more Base Pair card of each type is placed face up beside the Gene Research cards. The remaining six are laid out face up. This is the gene sequence manipulated by both players to correspond to the letters on their Gene Research cards. There must always be six Base Pairs in the sequence.

On his turn, a player performs a single action, ensures that six Base Pair cards remain in the sequence, claims for any completed Gene Research cards, and if he has no Gene Research card in his hand, draws a new one of either length. For his single action, a player has six options. He can Insert a Base Pair from his hand between two cards in the sequence, but must remove a card from the end of the sequence onto its appropriate pile. He can Delete a Base Pair from between two cards in the sequence, before adding a Base Pair from his hand to either end of the sequence. He can Mutate a Base Pair in the sequence, discarding and replacing it with one from his hand. He can Invert one or more adjacent Base Pairs in the sequence, rotating them as a whole group. If this directly counters the other player's Inversion, he must discard a Base Pair from his hand. Finally, he can either draw a new Gene Research card (up to a maximum of two in his hand) or a new Base Pair card.

If after a player's action, the letters on the gene sequence match those on his Gene Research card, he has succeeded in repairing those genes and helped find a cure for that disease. Thus if a player has manipulated the sequence to read "AGTT," matching that for Cystic Fibrosis, he has completed the research project into that disease. The sequence can be read left to right or right to left along either the top or bottom of the sequence. For each completed Gene Research card, a player earns either one or two years of successful research. The first player to complete nine years worth of research wins both the game and the Nobel Prize.

It all sounds so simple, and it is. Yet *Gene Pool* is also infuriating to play because as you manipulate the cards to achieve the sequence on a Gene Research card, your efforts are countered and altered by your opponent, who of course, is trying to do the same with a different Gene Research card. This is made all the more difficult because of the way in which the letters/Base Pairs are paired on the cards. For example, to get the sequence "AGTT," a player needs one G/C card and three A/T cards. There are no other types of Base Pair.

The Gene Research cards are also nicely balanced. There are just six worth two years each, and eight worth a single year. The single year cards are easier to complete, but it is not possible to score nine years without completing Gene Research cards of both lengths. In our games, it usually came down to just a single Gene Research card apiece that would win either player the game. Initial playing time was 30 minutes, but practice easily halved this.

The first player I tried this game with is the equivalent of a high school science teacher, and in terms of educational application, he was most impressed with *Gene Pool.* As an educational tool, he found the basic idea sound and wanted a copy to have in the classroom. In particular, he was taken by the disease descriptions on each of the Gene Research cards and knew that he could use then as part of a lesson plan. Further, he wanted to show the game to a friend who is a genetics researcher.

Both of us were impressed by the simple game play that was both fun and felt like you were really manipulating gene sequences. Of course, what we were really doing was recognizing and manipulating patterns. And like anything else, this got easier with practice.

The bad news is that *Gene Pool: The DNA Card Game* is out of print. The publisher only made available a limited edition print run of 200 copies. I can only hope that Mark Goadrich finds a home for his design. It merits consideration by any number of publishers, because it comes complete and needs no further development. *Gene Pool: The DNA Card Game* is cleverly designed, enjoyable to play, and a good two-player card game.

--Matthew Pook

A Melange of Magical Creatures X

for *GURPS*

by Eric Funk

"X" marks the spot for this, the tenth installment of oddball creatures, suitable out of the box of a fantasy campaign, or tweakable for inclusion in a myriad of other settings.

Plastic Guard Dog Golems - Wild Dolems

"Among the oddest magical creatures to escape to the wild were a pack of canine-shaped golems. Designed and built by a hobbyist who was experimenting on getting a more playful (if less intelligent) golem, they display an unusual degree of cooperation and independent thought. They listen."
-- Sage Camius, *Golems and You*

These dog golems, or dolems, appear to be medium to large-sized canines with a glossy, flowing coat. Despite the fact that they do not represent life as we know it, they do meet the basic criteria: they consume magical energy, and somehow reproduce. While at first glance, these caninoids appear to be ordinary dogs, a telltale lack of apertures or details in the eyes, nose, and ears reveals their nature. The color of wild dolems range from a light gray to a pitch black.

Encountered

Heroes are most likely to encounter them as pets of the wealthy, or while wandering different ruins. In the wild, they are likely to come to the aid of humanoids, should they hear cries of alarm or fear. If it is a case of humanoids fighting humanoids, then a GM should make Reaction Rolls for both parties. If one roll is 6 more than their opponent the dolems will intervene. Otherwise, the dolems will hold off until combat is over, and then the effects of the Reaction Rolls will take place.

A GM is encouraged to make a Reaction roll with the animals. A roll of 19+ means that the dolem automatically impresses upon one of the PCs, if it has no current master. It is a Contest of Will at -5 to impress one's will upon a creature. The roll is at an additional -10 if they currently have a master.

Industrial Uses

*"So there we were, locked in combat with the duke's men, just for carrying a tree we had felled on **our** lord's land. A glancing blow had felled our tracker, Deborah. Just then, combat stilled for a moment, as a chorus of barking was heard nearby. As half the combatants worried about who was coming, everyone was surprised to see a pack of dogs circle the combat, but not approach. Combat picked up, and a kick roused Deborah d'Forrester. Knifing one of the mercenaries, the tracker rose to a crouch. Recognizing the canines as dolems, she called out to them. Her animal magnetism did something, as they closed in and helped us win the day! The pack still follows her to this day."*
-- Kanih, Sentinel of the West Wood

Many organizations have found uses for dolems as guard dogs that do not need to eat, sleep, or breathe. Unfortunately for them, dolems are too playful to make effective border guards. These canines seem to have a minor aversion to permanently harming people. They can grapple, and (if trained) cause pain. Enchanters have found some use in melting down the "corpses" of dogs and forging a single man-sized golem. Research continues into how they reproduce. It is suspected that a mated pair of canines performs the equivalent of a Slow and Sure enchantment ritual on the "unborn" pup, for 65 days, the minimum cost of a smaller golem (130 energy, page 59 of ***Magic***).

Adventure

The adventurers happen to impress upon a free dog or two. An honest man seeks to purchase them to help protect his cattle. The problem is that the man has a weak will, and cannot impress himself on them, no matter how hard he tries. What will the heroes do to try to aid the process? Perhaps the heroes could get someone to cast spells to increase the man's will and lower the PCs' for a few minutes. If that does not work, could the hero be brought to the point of death so that the dogs become masterless for a few critical moments? And if this crazy scheme is tried, what enemies will be waiting for the opportunity while the PCs' defenses are down?

Wild Dolems

Appearance: Medium-sized canine of various pedigrees, with a silky, glossy coat.
Category: Golem.
Diet: Manavore (Ambient).
ST 8 to 10; **DX** 11; **IQ** 4; **HT** 13.
Will 10; Per 10; Speed 6; Dodge 9; Move 6.
SM -1 to +0 (4.5' to 6') (1 to 2 hexes); 100-200 lbs; DR 2 (+DR4 vs. fire).
Traits: Claws (Blunt); Doesn't Breathe; Doesn't Eat or Drink; Doesn't Sleep; Domestic Animal; Dependency (FP; Mana: In Low Mana, cannot recover above 1/3 FP); Injury Tolerance (Homogenous); Night Vision; Pacifism (Cannot Harm Innocents); Sealed; Sleepy (100% (over 7/8); No Mana Zone Only -80%); Teeth (Sharp); Weak Bite.

Note: Different materials will affect the statistics of a dolem. As presented, the dolems can swim, retaining air. If made of a denser material, such as gold, they would quickly sink.

Giant Wild Dolems

ST 15-20; **DX** 8; **IQ** 4; **HT** 16.
Will 12; Per 12; Speed 6; Dodge 9; Move 6.
SM +0 to +1 (6' to 9') (2 hexes to 6 hexes); 200-300 lbs; DR 5 (+DR7 vs. fire).
Traits: As above, plus Enhanced Move 0.5 (Ground Move 9).

Variant: What happens when the dolem "parents" roll a "critical failure" or "critical success" is up to the GM, whether it be an insane, large, and aggressive golem, or a hole in space/time.

Combat Symbiont

"For centuries, the secret nature of this controversial creature has been known to no fewer than two dozen secret agencies and societies, from the peaceful Shan-Yo-Shin monks to the bloodthirsty Crimnerin berserkers. Each sect discovered that burning certain herbs in the right order will attract and pacify the fertile adult insect, and when the mother insect is pressed against the subject's body, inject it with an egg."
-- Insect Warriors, Insect Warfare Book IL

This biomod is actually the side effect of the chrysalis stage of a large winged insect. The side-effects are actually part of its life cycle, designed to enhance a mammalian life form while the young is vulnerable. A host's skin is toughened, his reflexes heightened, and combat injury is healed quickly. In the wild, natural creatures can sense the approach of an adult insect, and will react accordingly. Humans no longer have these instincts, but can take advantage of the boost in ability the incubation brings. In *GURPS* terms, the temporary advantages gained are Damage Resistance 1 (Tough Skin, -40%) [3], High Pain Threshold [10], Combat Reflexes [15], and Regeneration (Slow) [10] for a total of 38 points. (The number of points is fewer if the PC already possesses any of these traits; as presented, these advantages follow the Affliction rules in the *Basic Set* that only traits missing are added. A generous GM might make the process *additive.* Thus someone who already possesses Regeneration (Slow) might temporarily be blessed with Regeneration (Regular), and someone with Combat Reflexes gains the benefits of Enhanced Time Sense. In English, this means that

the host gets a lot tougher to protect the larva.)

To perform the safest implantation requires a successful roll against Physician-3, Physiology, or Animal Handling (Combat Symbiont). A failure still results in a successful implantation, except that the damages inflicted when exiting and recovery times are doubled. A failure is easily visible on medical examination rolls afterward. On a critical failure, it is not obviously in the wrong place, but the values will be tripled. A critical failure's flaw is detectable on a critical success on an appropriate medical roll. Any of these causes 1HP of damage.

The victim and the symbiont must compete in a Quick Contest of **HT** every 20-HT days (minimum 1). If the victim wins, the symbiont loses 1 point of HT. If the symbiont wins, it steals one HP from its host. Regeneration does not recover this. On a tie, there is no effect this week. If the creature's **HT** is reduced to 0, it dies. If it has absorbed HP equal to its original **HT** score (normally 10), it will begin to hatch, taking one week to do so. Animals seem to be able to sense when the symbiont is about to hatch. Starting a week before the event, the victim gains a cumulative -1 to reaction rolls toward animals each day. These penalties are gone 1d hours after the creature leaves. When the egg hatches, it leaves painfully (1 damage, plus 1d FP damage, and 1d "stunning" damage that lasts for 2d seconds.) Furthermore, the victim's pain receptors are heightened for 20-HT days (effectively Low Pain Threshold, or canceling the High Pain Threshold advantage, if the victim had possessed it). To curb eager players (or PCs), a GM should enforce the Healing Fright Check rules from *Powers,* p. 194. Gaining mental disadvantages might also curb use. Heroes who change their mind can have a surgeon remove the creature, but this process causes 3d damage to the patient, less the degree of success of the surgeon. If the surgeon has a diagnosis on hand that shows the location and internal linkage of the creature to remove (such as X-ray or vision spell), then the damage is roll reduced to 2d, less the degree of success. Extra time can be taken in the process, unless it is in he final day of hatching, of course. Lost HP is recovered normally.

Encountered

This is another creature that adventurers may first meet in combat, likely encountering host bodies. Alternatively, the heroes could be the natural victims of the creature in the wild. Either way, they will have the difficult decision to make as to whether to continue to make use of this amplification of abilities. Another way inject this creature into a campaign is to bring in an NPC that needs counseling and support to recover from an addiction to the high the symbionts bring.

Industrial Uses

"Yez, it iz meszy, but vhat biomods come vithout a price?"
-- Mme. Ethervocce, Clinique Noire

These creatures have seen some use in protecting work- and war-horses, but the animals are skittish when the adult creatures are around. Some dictatorial organizations have started to treat all soldiers with this treatment up until they are not augmented at all. Comparing the soldier's performance before and after injection finds performance goals. This is a double incentive for most soldiers to train hard. Popular enchantment uses include booster items and animal wards. Competitive research is likely taking place in keeping the larvae dormant as long as possible without draining HP (or slowing the drain as to be unnoticeable). If such drugs are available, then PCs should have to pay for such advantages, with a limitation -10%, Biological.

Adventure

The adventurers awaken one morning, perhaps in town, and find themselves bitten. The heroes encounter some woodcutters who also found themselves drugged to sleep. These men have no signs of attack, however. The heroes soon find that their moves are being watched from afar. From town to town, there are similar men in gray. If cornered somehow, or a PC hits the one-week countdown, the mysterious men will confess to interest in the symbionts, and offer to take them off the heroes' hands, and pay for the creatures. They do not know their patron, nor who actually implanted the creatures in the PCs.

Unborn Burst Bug

Appearance: An egg or cocoon.
Category: Insect.
Diet: Carnivore (Host).
ST -; **DX** -; **IQ** 1; **HT** 10.
Will 10; Per -; Speed -; Dodge -; Move -.
SM -6 (6"-7"); 1 lb; DR 2; 1 HP.

Hatchling Burst Bug

Appearance: A cross between a winged ant and a mosquito.
Category: Insect.
Diet: Carnivore.
ST 2; **DX** 12; **IQ** 2; **HT** 12.
Will 8; Per 8; Speed 5; Dodge 10; Move 5.
SM -5 (10" long) (-4 with wings unfurled); 2 lbs; DR 2.
Traits: Attack (Single Attack: Bite; Armor Piercing (2); Link); Enhanced Move 1 (Air Move 20); Flight (Winged; Air Move 10); Frightens Animals; Sealed; Teeth (Impaling); Weak Bite; Wild Animal; *Skills:* Animal Handling (Combat Symbiont)-12.

Adult Burst Bug

ST 3; **DX** 11; **IQ** 3; **HT** 13.
Will 12; Per 12; Speed 6; Dodge 10; Move 6 (Air Move 24).
SM -4 (18" long) (-3 with wings unfurled); 3 lbs; DR 2.

Fire Blossom

"The Yosird Alchemist's Guild is first credited with the discovery of the effects of evoking all of a fire blossom's heat at once. Great study was made with the retroscope to piece together what happened and to studiously copy their notes from the crater that was once the site of their guild house and lab."
-- *Flowers of War,* Book II

These heavy plants grow low to the ground and their dark bloom has almost-black petals arrayed radially outward. The blossom and petals radiate almost no light, making it difficult to judge a person's distance from a group of them. While this plant absorbs most of the radiation the environment gives out, it emits heat. This makes it very visible to infrared, and causes weaker nearby plants to wilt. Despite these dramatic effects, it is the mundane qualities of the fire blossom that get the most attention. The roots and stem of the fire blossom are very thick, naturally flame resistant (Highly Resistant 20, page 433 of the ***Basic Set***) and are able to support a lot of weight and sheer stress before breaking. This makes the fire blossom useful in the fight against erosion.

Encountered

These plants like to grow in temperate climates where there is slightly sandy soil. The overall growth of the plant is proportional to the amount of sunlight it receives. Naturalists who have studied fire blossoms may know them as plants to camp near on cold nights.

Industrial Uses

"Hey dude, do you have unsightly tree stumps or fish in your yard? Blast'em out of there! It's flower power, man!"

-- Slogan of the Daisy Demolition Company

The incredibly tough fibers in the plant's growths are used to temper many other papers and filter products. The stalks make for excellent crossbow bolt shafts. Some military researchers are trying to harness the light-absorbing (or perhaps perception-distorting) properties for a stealth system. It was noted that enough stalks in the same area can cause paper to ignite! There is some research into using the plants to heat boilers, although it is difficult to give them enough sunlight to keep alive. While analysts are mainly looking into the enchantment of spells of darkness and protection from sunburn, others are dabbling in the effects of transmutation and fusion. A use for fireblossom byproducts might be to construct paper balloons from them . . .

Adventure

As a reward, the heroes are given a milk-run mission to transport a cart of young fire blossoms to a border lord's castle and attend a banquet celebrating the lord's achievements. While at the ball, they overhear a plot to steal the shipment and kill all the plants to turn them into crossbow bolts and magic wands.

Fire Blossom

Appearance: Fat plants, low to the ground with dark, almost black leaves. The flowers are pitch black, not unlike a carnation, with a small yellow patch in the center.
Category: Plant.
Diet: Photovore.
HT 10; 1 HP.
SM -3 (2' tall); 5 lbs; DR 2 (DR vs. Fire).
Notable Characteristics: Environmental Control (Heat; Always On); Temperature Tolerance 1 (Cold); Temperature Tolerance 40 (Heat);

Giant Fire Blossom

HT 12; 4 HP.
SM -1 (4.5' tall); 20 lbs; DR 4 (DR 10 vs. Fire).
Notable Characteristics: As above, but the Environmental Control trait has the Extended Range 2 enhancement.

Fanbird

"These big geese make for good eating. I have had to let more than one man go for claiming that the engines were bad, just to get a good meal out of it."
-- Captain Argin of the fan-cutter *Mar-Turin*

These goose-like flightless birds have large blunt beaks. Although they usually possess gray plumage, they can come in a rainbow of colors. What makes these birds stand out is their ability to actively flap for hours at a time. It is believed that this is a defense against predators, and it aids to draw insects toward itself. With its goose-like instinct, when one fanbird starts fanning, the rest of its flock moves in sequence. The rest of the flock then helps, frightening off predators with debris, or fanning prey into the other birds' mouths.

Encountered

Fan-bird wings are a favorite menu item in businesses and industry as one wing can feed a whole family, and is low in fat. Small and medium towns will likely find these birds more energy efficient than magical enchantment for air movement. Rural bicycle messengers have found some success in keeping one fanbird on a rear basket as a supplemental engine. A power-assisted departure certainly gives the impression of speed.

Industrial Uses

"These fanbirds never worked a day in their life. Now you don't have to, either! De-Luxx Fried Fowl brings you hot wings right to your door!*

* Some restrictions apply. Not available in some areas. Check flyer for details."
-- Billboard in the *Worik* bazaar.

Some enterprising companies have sought to employ fan birds as an alternative to sails on boats. Air flow is critical in mines and industrial plants; these birds can serve that purpose well, as they suffer fewer ill effects of industrial pollution than those humans and animals employed at such facilities. Fanbirds open enchantment possibilities throughout most of the air college, but items that work with air golems and items that increase stamina are also aided. Finally, birds that have worked less have more fat on them and thus are perceived as more tasty.

Adventure

The adventurers are hired to lead a flock of fanbirds to a stalled ship. When they get there, they are ambushed by pirates who seek to steal all the birds and use them for food.

Fanbird

Appearance: A heavy, goose-like bird with small legs and a large, blunt beak.
Category: Avian.
Diet: Carnivore (Insectivore).
ST 5; **DX** 12; **IQ** 4; **HT** 16.
Will 12; Per 10; Speed 7; Dodge 10; Move 4/7* (Water 3/6*).
SM -2 (3' tall) (SM+0 wings unfurled); 20-30 lbs; DR 1.
Traits: Amphibious; Extra FP 3 (Only to power Knack; Can only be depleted by knack); Filter Lungs; Flight (Winged; Gliding*; Air Move 14); Knack (Air Jet, Self-Power 1); Pressure Support 1; Temperature Tolerance 2; Domestic Animal; Very Fat.
* Full move requires flapping wings.
** Can fly in gravities under 0.4G

Giant Fanbird

ST 10; **DX** 11; **IQ** 4; **HT** 16.
Will 13; Per 11; Speed 7; Dodge 10; Move 5/7* (Water Move 4/7*).
SM +0 (6' tall) (+1 with wings unfurled); 40-60 lbs; DR 2.
Traits: As above, but the Energy bank is 10 FP, and Knack is self-power 3.

Housegoat

"I was warned that the coastal dwellers of this low-lying country were unusual. I recall my first visit to 'the pond,' a residential quarter composed of dozens of floating homes lashed together. The sparkling walls of the dwellings glistened in the sun. There appeared to be one or two drifting, about to collide with the shore. I hope to never forget that sense of amazement when it stepped up the ramp onto shore."
-- Alinus the Bard, *My Winter in Ilisgrad*

This creature appears to be a cross between a gargantuan goat, turtle, and snail. Found in almost any color, housegoats range from two yards in length to about 10 or 20 yards after about fifty years of age. As far as anyone knows, none have ever died of old age; they just grow larger. Those left to graze tend to be luminous, even mother-of-pearl. Company-grown housegoats are often black or white, depending on the climate. Different hormones cause different color hair and chitin to grow. If fed the same diet throughout its life, a housegoat would take on a deep, complete

color. Fed a slowly changing regime of a rainbow of colors, it will be reflected in its skin and shell. At the rate they move, they can slowly strain the water for food, or graze on grass. By spraying different hormones on the shell, growth can be inhibited to ensure floors remain floors, and walls caused to grow faster.

Encountered

Housegoat pods can form floating cities, so people might live their entire lives without ever seeing the living side of one of their "buildings," or setting foot on solid ground. These creatures are also popular wandering homes for hermits and recluses. Various militaries are also trying to use these gentle giants as outposts to monitor borders. It might also make for a floating lighthouse by a shoal or reef.

Industrial Uses

*"There is **nothing** as spectacular as the Winter Palace of the Eternal Emperor of Rinshalnd. This magnificent creature is over 14 centuries old, a gift from the 43rd King of Atlantica. The opalescent palace on its back towers over 10 stories in the air. What a sight, folks. It is said that this shining jewel can be seen from a hundred miles away, over the horizon. For that reason, it is usually escorted by two battleships. Today, on this momentous occasion, I spot four cruisers alongside the palace."*
-- Lady Jeria, to her public journal, *On the Royal Jubilee*

Commercial interests have found uses for these creatures as floating platforms. Those corporations that can plan long far enough ahead tailor these creatures to their own goals. Various interest groups link pods of creatures to form floating or roaming cities. Housegoats might make for powerful land fortresses in low-tech battles. The amphibious nature of the beast makes them equally useful when attacking by sea. Enchanters are giddy with this long-term investment. If the entire non-living shell is enchanted with a spell, and it lasts as the creature grows, the entire shell still remains enchanted with the same spells. The ethical problem remains that these ancient, majestic creatures do not seem to die of old age.

Adventure

The house goat the PCs are on has been hijacked. Who is controlling the beast? How can they afford the energy to affect a creature this large? Where are they headed? Will they wait to find out? If the housegoat is already heading out to sea, can the adventurers call for help?

Housegoat (Typical 50-100 year old, depending on diet)

Appearance: A large mammal-reptile with a shell on its back.
Category: Hybrid (Mammal-reptile-mollusk).
Diet: Herbivore.
ST 100; **DX** 8; **IQ** 5; **HT** 12.
Will 12; Per 8; Speed 5; Dodge 8; Move 5 (Water Move 1).
SM +5 (35-45' long); 50 tons; DR 10 (DR20 shell).
Traits: Amphibious; Appearance +2 (Awe); Domestic Animal; Horizontal; Night Vision 4; Peripheral Vision; Scanning Sense (Sonar); Sealed; Temperature Tolerance 3; Unaging (Nuisance effect: grows larger); Very Fit; Weak Bite.
Skills: Survival (Plains)-12; Survival (Open Ocean)-12.

Newborn Housegoat

ST 10; **DX** 10; **IQ** 4; **HT** 10.
Will 10; Per 7; Speed 5; Dodge 8; Move 1.
SM +2 (15' long, 4 hexes); 500 lbs; DR 2 (DR 5 shell).

Gongbird

"Arriving at the inn late in the evening, I was awakened just before dawn by a cacophony of gongs and cymbals. Opening the window and squinting into the twilight, I was surprised to see a flock of parrots with cymbals on their chests. Banging their armored discs with their beaks, the birds made a great ruckus. At this, my hopes of a good night's sleep flew the coop. The birds are back in town."
-- The Bard Izind, *My Stay in Westdover*

This parrot-like bird has a light, strong, porous armor plate on its chest. The popularity of the gongbird waxes and wanes among music-lovers and pet connoisseurs. For centuries, orders of monks trained these birds to ring on command, or even to follow a tune. They beat on their armored chest with their beak, and the resonance sounds like a gong. The sound scares pests, and warns off predators. It also seems to be a form of communication with others of its species. Finally, predators leaping at a gongbird hope to avoid encountering the armor plate on the bird's chest. Adolescent gongbirds train themselves by diving headlong at each other. The defender must dodge entirely, or else try to interpose its armor plate square at the attacker. The latter, of course, results in a noisy display.

Encountered

Some zoos and traveling merchants have taken on a variety of these birds to for a musical composition. Whether part of an all animal show, or supplementing live players, the main complication that orchestrators encounter is that the creature's sounds grow deeper as the birds grow. Thus, the birds are normally trained for what ranges their parents played. This is always somewhat of a risk. Oddly enough, some rich merchants use these birds for a specialist form of target practice. The target shooting is only for experts, as a shot must be directly in the center of the gong or the bird could be injured (the Torso hit location on a winged quadruped is at no penalty; see page 552). As guard animals, they can be trained to sound whenever anyone approaches.

Industrial Uses

"The procession of the archcardinal marched by the eager crowds. Whenever someone riding was waving at the crowds, they cheered back. Between carts, there were musicians. The most unusual were those striking the chests of perched birds. It sounded like a deep gong. I wonder how they train them to sit so still? Perhaps they're stuffed." -- *Parade of the Firebrands*

Some farmers have been training these birds to scare crows and other pests from their orchards. Gongbirds make adequate guard animals, greeting any newcomer, be it friend or foe, with a particular sound. Music critics see bells, hubcaps, and alchemical devices in their future. Gongbirds can simplify the manufacture of magical alarm clocks and sentry items.

Adventure: For a Song

The Heroes are sent to find a bird with one key characteristic: it must make a particular note, and be able to do so for years to come. Complications in finding this elusive adult bird can include competition, chases, theft, and even chasing the bird from rooftop to rooftop.

Gongbird

Appearance: A brightly colored bird that superficially resembles a parrot, but has an armored plate on its chest.
Category: Avian.
Diet: Omnivore.
ST 4; **DX** 13; **IQ** 4; **HT** 15.
Will 10; Per 11; Speed 7; Dodge 10; Block 10; Move 3.
SM -3 (2' long) (-2 with wings unfurled); 6-8 lbs; DR 5 (torso, front only).

Traits: Flight (Winged; Air Move 14); Night Vision 1; Peripheral Vision; Piercing Cry; Stun (Link; Environment: Air); Wild (or Domestic) Animal.
Skills: Shield-14.

Giant Gongbird

ST 8; **DX** 12; **IQ** 4; **HT** 15.
Will 11; Per 12; Speed 7; Dodge 10; Block 11; Move 4.
SM -2 (3' long) (-1 with wings unfurled); 4-6 lbs; DR 2 (DR 10 torso, front only).

Humungous Gongbird

ST 12; **DX** 10; **IQ** 4; **HT** 15.
Will 12; Per 12; Speed 7; Dodge 10; Block 12; Move 5.
SM -1 (4.5' long) (+0 with wings unfurled); 4-6 lbs; DR 4 (DR20 torso, front only).

Glare Bug

"We were lost in the dark; our lantern had gone out. Just then, Ray spotted a glowing object moving quickly toward us. Grabbing a net, he tossed it across the path, ensnaring the object. It was revealed to be a luminescent blue beetle. The net started smoking and was becoming brittle. Jan was wearing the thickest gloves, so she grabbed the beetle, and shoved it through the open lid of an empty bull's eye lantern. A bright blue light shone out the lens, brighter than torchlight. The mission was a success, but Jan's hands needed healing from the frost burns."
-- Autobiography of Lord Daryn, *Adventuring Years*

These insects are often mistaken for a will-o-wisp, they use the light like an angler fish to attract prey insects. Similar in appearance to a large, blue firefly, these insects glow bright blue. If these creatures are kept in a box, they will lower its temperature by a number of degrees. Their body is so cold that the damage they inflict through contact is called Cold Fire. Inflicts the same damage with the same mechanics as flame, but it is cold burning.

Encountered

Nocturnal, glare bugs are a common sight around campfires and electric lights. They consume insects that are attracted to the light. They can be a nuisance for travelers, as well as people who collect moths. On the other hand, the glare bugs can be useful when they double as a light and an insect devourer.

Industrial Uses

*"Under the cover of darkness, two thieves entered the museum through the skylight. At the appointed time, the leader turned to the other and nodded, making a fishing signal with her hands. This was the signal to release a 'red herring' -- a glare bug. Once out of the bag, it composed itself, fluttered its wings, and immediately flew off toward the jewelry display, while the criminals closed in on their goal. This, of course, messed up **our** heist, already in progress."*
-- Franklin "Hacksaw" Murzin, *When Heists Collide*

The food service industry has found a few niches for this creature. Some applications include freeze-drying food, and cooling heat exchangers. While alive, these creatures can work as powerful headlights, area lighting, and semaphores. "Spent" bugs can go to feed large spiders and snakes. Giant versions are useful as powerful light sources for headlights and ships. Cold flames are not contagious, simply chilling the materials affected. Militaries seem to like the idea of a cold light that does not show up on infrared detectors. Enchanters have had success in making items to duplicate a stealth light, while researchers are furiously trying to figure out how to replicate the "cold fire" effect. The military are trying to figure out how to make cold fire weapons, as the fire cannot spread at room temperature. There has been some progress made on the construction of primitive thermopiles using the thermoelectric effect.

Adventure

The heroes are hired in an unofficial capacity by a captain of an eleven border guard. It seems that orcish patrols are normally easily spotted by their huge torches and bonfires. Recently, however, some forces have been able to sneak up on his patrols and eliminate them. If pressured, he will admit that he is beginning to fear treachery in his midst. The truth is that an orc shaman is collecting and distributing glare bugs for the nearby raiders to use, for a heavy price. The success is being made known, and the price for the bugs is skyrocketing, especially as supplies grow thin. The orcs like to eat the bugs after the patrol.

Glare Bug

Appearance: A large, blue, glowing firefly.
Category: Insect.
Diet: Carnivore (Insectivore).
ST 3; **DX** 10; **IQ** 2; **HT** 14.
Will 11; Per 9; Speed 6; Dodge 10; Move 6.
SM -4 (16" long); 2 lbs; DR 2 (ablative).
Traits: Affliction 1 (HT; Vision; Daze; Sense-based); Burning Attack 1 (Emanation; Always On; Cold; Living Creatures Only); Claws (Sharp); Combat Reflexes; Environmental Control 1 (Cool Only; Always On); Faz Sense (1 foot); Feature: Flashlight; Flight (Winged; Air Move 12); Peripheral Vision; Quirk (Phobia (Fire: *Pyrophobia*)); Teeth (Sharp); Wild Animal

Giant Glare Bug

ST 6; **DX** 9; **IQ** 2; **HT** 15.
Will 12; Per 10; Speed 6; Dodge 10; Move 6.
SM -2 (3' long); 6 lbs; DR 10 (ablative).
Traits: As above, but Faz Sense (1 yard)

Beyond Fantasy

This article describes seven creatures, most of which could appear to physically exist in a hard-science world, even if the more wondrous aspects could not: Dolems could be robots gone loose; Combat Symbionts are simply painful, short-lived biomods; Fire Blossoms are plants that give off heat; Fanbirds can be heavy birds with powerful wings; Housegoats are meta-engineering incarnate; Gongbirds are not that unusual, with armor plates; Glare Bugs could exist as large fireflies, even if they could not emit flames, much less cold flames.

Not Steven's Gen Con Report

This would ordinarily be the week where I'd issue my post-Gen-Con report. Unfortunately, my Gen-Con report is going to be a bit sparse, for a list of reasons.

1) I seem to be suffering from some kind of physical ailment that entails the contents of my insides to seek the porcelain comfort of the external world, so things are somewhat a fevered blur at present.

2) My current Day Job schedule is Thursday through Sunday, which of course aligns perfectly with the current machinations of Gen Con, and so for the second year in a row I find myself little represented at the event despite living in the same city as it; in fact, my attendance record has gotten *much worse* since moving here. My efforts at getting North America's largest gaming convention to change its schedule have come to naught so far, so I'm once again wistfully longing for a real Day Job.

3) Nevertheless, I pressed ahead and took Sunday off. Sadly, the exhibit hall -- my own personal preference -- was only open from 10:00 a.m. through 4:00 p.m., leaving me six hours to navigate 14.3 square parsecs of exhibits.

4) My back-of-the-envelope plan was to try to cover as much material as I could, by spending five minutes at each gaming booth that seemed to be offering new material. Sixty minutes divided by five minutes times six hours equals 72 exhibits . . . enough to cover almost one full row.

5) Sadly, I failed to take fully into account the penchant for game developers to talk about their own products, even when asked for the "five-minute spiel." I had also not developed a means of saying, "Time's up!" or other means of indicating that I needed to move on. I was at the point where I was considering a punch in the stomach to distract my interviewees.

6) However, although I'm sure it would be effective at distracting those I was talking to, I wasn't sure my stomach could handle my punching it for every booth.

7) I also forgot to bring a backpack or other means of carrying more than two fliers and a matchbook. Unfortunately, most booths had interesting folders, pamphlets, promo items, and so on. Four booths later, my own private juggling festival was dealt a fatal blow by the acquisition of an interesting-looking review copy (a full review of which will appear in the next few weeks). At that moment, I couldn't move easily because of the excess stuff; even if I did find someone to talk to, I wouldn't be able to take notes, acquire fliers, or do anything reporterly.

8) Did I mention I was there on a Press Pass as a reporter?

9) And so, almost one hour into the con, I'd visited five booths, was completely unable to move, and waited pitifully for my wife to find me, all the while crying like Travis in *Old Yeller.*

10) . . . on the inside.

11) My wife did, indeed, find me, and I loaded her up with the stuff I had already acquired. I also took the sack that she had thoughtfully brought.

12) . . . for herself.

13) And so, leaving my now-laden wife with our 10-month-old child in the middle of the exhibit hall alleyway, I continued on my investigatory way.

14) Ten minutes later, I ran into a dear friend of mine (as well as part of my wedding party) who I hadn't seen in over a year. We decide to do lunch together.

15) The restaurant we chose was quite busy.

16) Stars expelled their last photons in the time it took to order and consume my turkey burger.

17) "Brief lunch" + "convention crowd" = "two hours"

18) And so, fully invigorated and refreshed, I was ready to begin my convention reporting.

19) Sadly, it was now 2:00 p.m.

20) Anyway, I proceeded to peruse the hall using my Jedi senses to find the most interesting and noteworthy exhibits.

21) Amazingly, this technique seems not to have been the worst idea I had.

22) Coming to the convention late provides a very different view of the whole thing. For example, I noted nothing earth-shatteringly new in the world of RPGs. (Some neat supplements, yes, but nothing new-game-wise.) However, I really don't know if this is because there wasn't anything neat/new/nifty, or rather if it's because there *was* something that fit the bill, but has now sold out. (As a mini-example of the latter, I note that the final issues of *Dragon* and *Dungeon* magazines were available for sale from Paizo's booth, but sold out early Friday morning.) It's an interesting conundrum, because I'm sure there are a large number of "pretty-big-but-not-so-big-they-can-devote-four-plus-days-to-gaming" gaming fans who only come for the weekend, or even Friday through Sunday. If the Next Big Thing arrives and sells out before those would-be consumers even learns of its existence, how big of a lost opportunity does that present to that consumer?

Still, practically every booth I spoke with had nothing but high praise for the event, and if selling out of the Next New Hotness is the biggest obstacle a booth has . . . well, I suppose those are the kind of problems you *want* to have.

Unlike the problems you *don't* want to have, like not being able to attend the full four days of the gargantuan gaming convention that's a 20-minute drive from your front door. Or having one's innards violently decide they wish to be outards.

Hopefully I'll have a better report next week . . . at least, as better as I can make it, having only spent four hours at the event itself.

--Steven Marsh

GURPS Accelerator

The Modular Magician

by Matt Riggsby

The blessing and the curse of *GURPS Magic,* as with any other large catalog, is its size and scope. It contains spells covering a vast range of effects and power levels, letting you build mages who can do as little as produce an annoying noise or as much as level a city with an earthquake. The problem, if you're a beginning player, is that it can be difficult not just to find the spells you really want to be able to cast, but also to figure out what prerequisites you need in order to cast them. The spell prerequisite charts are one useful tool for figuring that out. This article presents another shortcut: spell "modules."

The modules presented here are lenses which can be applied to just about any character or template capable of casting spells. They contain pre-selected batches of spells grouped according to a functional theme, giving the magician basic ability in a particular area: healing, fighting, and so on. In addition to a few major "effective" spells, they contain a complete chain of prerequisites, so the character can be fitted out with a given set of spells and be ready to go.

The module cost assumes that all spells are bought at IQ + Magery - 2, or 1 point for each Hard spell and 2 for each Very Hard spell, indicated in the spell list with a (vh). For example, a character with IQ 12 and Magery 1 would, paying the listed cost for the lens, have skill-11 with all of the spells. Double the cost to buy a lens at IQ + Magery - 1 or multiply by 4 to buy it at IQ + Magery; after that, add another +4 points per spell.

> ### What You Already Know
>
> This article assumes that you already have a vague idea of how *GURPS'* basic magic system works and are looking to start buying spells but don't know where to begin. If you don't, go read chapter 5 in *GURPS Basic Set: Characters* or chapter 1 in *GURPS Magic* first.

Basic Modules

In the interests of keeping costs low, these lenses do *not* provide comprehensive ability in any area. For example, the Utility lens doesn't include Manastone; although the ability to make one's own magical "batteries" is immensely useful, the spell requires a lot of largely unrelated prerequisites. Most of theses lenses, unless otherwise noted, won't make a character a master wizard, but if you say to yourself, "I don't want my character to be completely helpless in a fight/in the wilderness/if I need to run away," they'll give your magician something he can use.

Basic Fire (6 points)

This lens, containing a number of fire-related spells intended for offensive use, lets a magician stand in the back of a group and hurl destructive spells, usually past a line of warriors protecting him. It requires at least Magery 1, and remember to buy Innate Attack skills so that you can actually hit things with the Fireball and Flame Jet spells. The big spells here are Fireball (which will damage one target), Explosive Fireball (takes lots of energy, but damages an area), and Flame Jet (good for close-in combat). The others manipulate fire in less spectacular ways, which is good for starting campfires or making your way out of burning buildings.

    Ignite Fire
    Create Fire
    Shape Fire
    Fireball
    Explosive Fireball
    Flame Jet

Basic Air (7 points)

Similar to Basic Fire, this lens provides a slightly different flavor of offensive capability. In addition to direct damage-dealing with Lightning, the lens provides spells to push around or otherwise interfere with opponents, using Air Jet and Windstorm. It requires Magery 1 and, like the Basic Fire lens, be sure to buy Innate Attack skills.

    Air Jet
    Create Air
    Lightning
    Purify Air
    Shape Air
    Wind
    Windstorm

Beastmaster (8 points)

This lens lets the magician communicate with and, if need be, control animals. The important spells here are Beast Summoning, which will call the nearest animal of a given type to the caster, (Animal) Control, which can let the caster control a nearby animal, and Beast Speech, which allows communication with animals. For (Animal) Control, the magician must specialize in one of five categories of animals (see Magic p. 29 for details). However, a magician may learn different variants as separate spells. To learn all five variants, increase the cost of the lens to 12 points and take (Animal) Control five times.

    Beast-Soother
    (Animal) Control
    Persuasion
    Rider
    Sense Emotion
    Sense Foes
    Beast Summoning
    Beast Speech

Buffing (16 points)

This lens doesn't do much on its own, but it allows the magician to increase his physical abilities or those of his companions. Might, Grace, and Vigor raise ST, DX, and HT and extended period, while the Boost spells, which are much cheaper to cast, raise their respective attributes for a single die-roll. The lens also includes a few sense-boosting spells, Haste and Great Haste (which increase the subject's move), and a few prerequisites which can be used offensively. It requires at least IQ 12 and Magery 1.

    Boost Dexterity
    Boost Health
    Boost Strength
    Clumsiness
    Grace
    Great Haste (vh)
    Haste
    Itch
    Keen Hearing
    Keen Vision
    Lend Energy
    Lend Vitality
    Might

Spasm
Vigor

Craft (18 points)

This lens gives the magician spells which let him repair and even create mundane objects, with illusion and basic elemental skills as a useful side-effect. It requires at least Magery 2. The most powerful spell here is probably Create Object, which you can use to create a short-lived mundane object, but Repair is a great help in fixing things.

Complex Illusion
Create Earth
Create Object (vh)
Earth to Stone
Find Weakness
Ignite Fire
Perfect Illusion
Purify Air
Rejoin
Repair
Restore
Seek Earth
Seek Water
Shape Earth
Simple Illusion
Sound
Weaken

Defense (10 points)

This lens provides a range of physical defenses. Missile Shield and Reverse Missiles eat a lot of energy, but they're excellent for defending against archers and gunmen, while Shield, Armor, and Iron Arm are good against melee attacks. This lens requires at least Magery 2 and DX 11.

Apportation
Armor
Iron Arm
Itch
Missile Shield
Pain
Resist Pain
Reverse Missiles
Shield
Spasm

Druid (12 points)

This lens allows the caster to deal with manipulate plants in a number of ways. A magician with these spells may not be terribly useful in the city, but hard to beat in the wilderness. Some of the more useful spells here are Animate Plant, Plant Speech, and Tangle Growth. It requires at least Magery 1.

Animate Plant
Bless Plants
Forest Warning

Heal Plant
Hide Path
Identify Plant
Plant Growth
Plant Sense
Plant Speech
Seek Plant
Shape Plant
Tangle Growth

Healing (5 points)

This lens provides spells appropriate for basic field medicine, patching up mundane wounds, though not stopping poisons or regenerating lost limbs. It's a good idea for every adventurer to invest in First Aid spell, but since a magician with these spells is likely to be a group's de facto medic, it's probably an even better idea to buy that skill along with this lens. It requires at least Magery 1.

Lend Energy
Lend Vitality
Healing
Major Healing (vh)

Information-Gathering (12 points)

This lens lets the magician gather basic but important information about his surroundings. Requires at least IQ 12 and Magery 1. The Sense spells are good for instant spot-checks of the environment, while Seeker is good for a more concerted search for a known object.

Aura
Detect Magic
Pathfinder
See Secrets
Seek Earth
Seek Water
Seeker
Sense Danger
Sense Emotion
Sense Foes
Sense Life
Sense Observation

Logistics (11 points)

This lens might seem tedious, but it allows the magician to sustain a small group of adventurers in the absence of a ready supply of provisions and help them get to their destination quickly. It requires at least Magery 1.

Cook
Create Fire
Create Food
Create Water
Haste
Ignite Fire
Purify Water

Quick March
Seek Food
Seek Water
Test Food

Stealth (9 points)

This lens contain spells which help the caster move around undetected. Blur and Mage-Stealth are good for moving around undetected, while Silence and Hide are good for remaining stationary.

Blur
Continual Light
Darkness
Hide
Hush
Light
Mage-Stealth
Silence
Sound

Utilities (5 points)

This lens provides a number of unrelated but exceedingly useful simple spells which no magician should be without. It requires at least Magery 1.

Apportation
Continual Light
Lend Energy
Light
Recovery Energy

Master Modules

These lenses provide more comprehensive abilities in their areas. Between the cost of the spells in the lens, prerequisite lenses, and required levels of IQ and Magery, these lenses represent a major specialization for most characters.

Great Healing (22 points)

This lens contains spells which will cure disease, wounds of any magnitude, and just about anything else short of death. It requires IQ 12, Magery 3, and the Healing lens.

Cure Disease
Daze
Foolishness
Great Healing (vh)
Healing Slumber
Itch
Keen Vision
Neutralize Poison
Regeneration (vh)
Relieve Sickness
Remove Contagion

Resist Disease
Restoration (vh)
Restore Sight
Restore Speech
Sleep
Spasm
Stop Paralysis
Strike Dumb

Fire Mage (14 points)

This lens gives the magician broad powers over heat and fire. It's largely geared toward combat, allowing the caster to add a touch of fire to melee, missile weapon, and bare hand attacks, but provides some protection as well. It requires Magery 2 and the Basic Fire lens.

Burning Touch
Cold
Create Air
Essential Flame
Extinguish Fire
Fireproof
Flaming Armor
Flaming Missiles
Flaming Weapon
Fire Cloud
Heat
Purify Air
Resist Fire
Shape Air

Seer (11 points)

This lens gives the caster the ability to look into the past and future, and delve deeply into the nature of magic. If using a crystal ball is inappropriate to the campaign, there are a number of other Divination variants, each of which has its own special prerequisites. This lens requires the Information-Gathering lens.

Analyze Magic
Ancient History
Apportation
Divination (Crystal-Gazing)
Earth Vision
History
Identify Spell
Keen Vision
Shape Earth
Trace
Wizard Eye

Shaper and Creator (20 points)

This lens gives the caster considerable powers over physical matter, allowing him to create and shape raw matter, and even create magical servants. It requires at least IQ 12, Magery 3, and the Craft lens.

Create Animal
Create Mount
Create Plant
Create Servant
Create Warrior
Create Water
Heal Plant
Identify Plant
Perfect Illusion
Plant Growth
Purify Water
Reshape
Seek Plant
Shape Metal
Shape Stone
Shape Water
Shatter (vh)
Transform Object (vh)

by Greg Hyland

Murphy's Rules

Yippie Kiai AH! Alternate Martial Arts

"A campaign's location and period largely determine the available martial arts. . . . This consideration needn't be rigid, though -- a globetrotting game can include styles from all over, a time-travel game can feature the styles of any period, and the Infinite Worlds setting knows no limits!"
-- Peter Dell'Orto and Sean Punch, **GURPS Martial Arts,** Third Edition

Oh, the satisfying "whack" of a new **GURPS** hardback hitting the table. Can even the "thwotch" of a mook's skull being stove in with the shin of a master compete with it? That is the question that Peter and Sean address in the brand new **GURPS Martial Arts,** and who better? Which leaves me to address the question I always address on such occasions, namely, what about the "glurgle-urgle-urble" of boiling brandied awesome, the "skreeeonk" of history being twisted aside, or the "cruncha-cruncha" of sheer nutty goodness? We have one of each in the three campaign frames that follow, so break the tiresome pine boards of normalcy, and kick up your heels with me.

"The first of these was Spartacus, a Thracian of Nomadic stock, possessed not only of great courage and strength, but also in sagacity and culture superior to his fortune, and more Hellenic than Thracian. It is said that when he was first brought to Rome to be sold, a serpent was seen coiled about his face as he slept, and his wife, who was of the same tribe as Spartacus, a prophetess, and subject to visitations of the Dionysiac frenzy, declared it the sign of a great and formidable power which would attend him to a fortunate issue."
-- Plutarch, *Life of Crassus,* 8:2-3

It was centuries ago that the Master of the Gladiatorial Arts founded the Temple of Spartacus, high in the remote mountains of the Alps. He had fled the arena, they say, because his teacher had been killed by an evil official, or because his sister had been violated. But all knew that he brought the pure *Ars Draconis,* the Art of the Dragon, with him, or within him. He trained pupils to master the *pneuma serpens,* the "dragon breath" that powers all attainment, and their gifts grew mighty. But the Master did not hold all the keys to the Art, and other schools grew up: the Crane and Monkey schools (*scholus grus* and *schola simia*) of Mercury, the Mantis school (*schola mantodea*) of Vesta, the Tiger school (*scholus tigris*) of Mars, and even the Drunken school (*schola ebria*) of Bacchus. Inevitably they taught their secrets for pay or preferment; inevitably they became vain and arrogant and clashed in duels and tournaments all across the Empire. Commodus was not the first Emperor to proclaim the *Propugnatorus Ultimus* in the Colosseum, but he was the first to open it not merely to Roman schools but to Greek pankrationists, Egyptian stick-fighters, Indian wrestlers, and even practitioners of bando from the Golden Chersonese. The Ars Draconis became confused, and the Spartacus Temple withdrew from the land. Now, under the Severan dynasty, the Empire falters, as Elagabalan eunuchs channel the dark flows of Cybele for their own martial arts, dependent on corrupt, poisoned *pneuma.* Perhaps the Aegis of Heaven has fallen from the Emperor's shoulders -- or perhaps the 36 Masters of Spartacus Temple can restore the dragon energies to the Eternal City!

This **GURPS Martial Arts-Imperial Rome** campaign frame is a quick gladius stab at a wuxia Rome. (Consider my dog-Latin the equivalent of muddy Shaw Brothers subtitles.) It's about as historically vague as most wuxia films are -- the Emperor is (probably) good, but evil officials have choked the land with taxes and imposts. Foreigners strut around, terrorizing farmers and overconfident in their own martial arts. (These parts aren't even that inaccurate.) With Cybele-worship, you can even have evil eunuchs with mysterious death-touch powers! Add a few tournaments, de-emphasize sword-play (or emphasize it, for a weird *Swordsman II* kind of feel), and emphasize that every martial artist knows each other ("I've heard of you -- your *cunctor furialis* is pretty good") and of the legendary mountain Temple of Spartacus, and you have a recipe for Romanizing anything from *Dragon Inn* to *Curse of the Golden Flower.*

"And they came gotten up as they are gotten up up there; they wear something like an ornamented jacket, doublet, or long blouse, which they tie at their middle, their waist; there they place a katana of metal, which counts as their swords. . . . They seem bold, not gentle and meek people, going about like eagles."
-- Chimalpahin Quauhtlehuanitzin, *Annals of His Time,* December 16, 1610

It began with Cosmas and Christopher, two Christian Japanese swordsmen who sailed first with a Spanish galleon and then with the English sea dog Thomas Cavendish, who captured their *Santa Ana.* They were at loose ends when

Cavendish returned to England, and picked up a few shillings here and there demonstrating Japanese sword-fighting on stage, becoming very popular after Marlowe's *Fideioxi, The Tyrant of Xipan* featured them in a starring role. (Shakespeare's company used kendo-trained English actors for his own later *Tragedie of Minamotus.*) Other swordsmen (beached crewmen from un-captured galleons) played similar roles in the plays of Lope de Vega and his contemporaries, and likewise trained Spanish actors -- and eventually bravos and the wilder hidalgos -- in kendo and kenjutsu, along with judo and other dramatic stage combat arts. Meanwhile, the 1610-1611 embassy of Tanaka Shosuke to New Spain and of Hasekura Tsunenaga to Madrid and Rome in 1614-1617 further familiarized Europe and Japan with each other, as did the myriad of trade and pilgrimage voyages in their wake. Jesuit missions worked hard to spread Christianity in Japan, converting a number of samurai families as well as commoners and the poor. But the Tokugawa saw the rise of Christianity as a threat, and promulgated strict anti-Christian edicts.

Finally, in 1635, Tokugawa Iemitsu ordered Japan closed to Christians, sending a wave of refugees to Mexico and Spain. Samurai on the losing side of the Shimabara Rebellion of 1637, the Keian Uprising of 1651, and other political struggles fled to Europe, as did the 800 ronin of Sado Island and the rebellious Date family. Most of the samurai became members of the Spanish royal guard, granted estates either in the New World or seized from Protestant rebels in Germany. A few (those who converted to Protestantism, and most of those who remained Shinto or Buddhist) settled in London or Holland, mostly working as Masters of Defence until Charles II recruited his own Japanese Guards. Only Spain's rival France declines to form such units, hoping that its Musketeers are the equal of any exiled samurai.

Excitingly enough, Cosmas and Christopher, Tanaka Shosuke, and Hasekura Tsunenaga are all real historical characters. (The Christian penetration of Japan (and the persecuting backlash) were likewise historical.) I've vastly inflated their influence on European culture, obviously, modeling it after the "Japanoiserie" fad that blew through Europe and America in the late 19th century -- in our history, a fad that produced, among other things, "baritsu." Transposing it to the early modern era produces a truly awesome **GURPS Martial Arts-Swashbucklers** crossover campaign setting. PCs might be ninja warriors sent by the shogun to kill prominent opponents of the regime, Dutch or Spanish pirates raiding Japanese coasts (or Okinawa . . .) to succor persecuted Christians, French musketeers battling Hapsburg samurai in Germany or Belgium, or samurai nobles building their own New Nihon on the northern edge of New Spain.

"Houdini is doomed, doomed! A terrible future awaits him. He has done untold harm. It will not be long first. . . . In the fearful crisis which is soon to come, America in her sore need will find that she has here a sure and well tested bridge to that spirit world . . . They will play a great part in the crisis and it is then that they will fully come into their own."
-- the spirit 'Pheneas,' as channeled through Lady Jean Conan Doyle, September 1926

Perhaps it all began with Houdini's impulsive trip to the Far East in 1901-1904, following his successful tour of Europe. Here (according to his later stage banter, at any rate) he learned wing chun from Chan Wah-Shun, hung gar kung fu from Wong Fei-Hung, karate from Anko Itosu, and aikijutsu from Takeda Sokaku, blending them all with boxing and escapological breath control to form his own style, hou din do. He added board-breaking, fire-walking, the "Japanese Bullet Dodge," and occasional "against all comers" one-round bouts to his stage act, becoming the father of American martial arts. He plowed his stage, film, and dojo profits into a full-throated campaign against Spiritualist frauds, enlisting the popular author H.P. Lovecraft as a ghost-writer and amanuensis. He was easily the most popular entertainer in America when he died mysteriously on Halloween night, 1926.

As Sir Arthur Conan Doyle wrote in a letter to a friend, Houdini's death "was most certainly decreed from the Other Side." He had been killed with the *dim mak,* the fearsome Death Touch mastered only by the greatest Manchu practitioners. Houdini had revealed too many of the secrets of the Nine Unknowns -- not just the trickery of the Spiritualists, but the techniques of the Black Ocean Masters. Those who attained the highest degree of hou din do learned the truth: There are, indeed spirits and powers in the world, and they are inimical to life. The Spiritualists and many of the rising martial arts societies in the East were puppets -- or allies -- of the Outer Ones, and used vile necromancies to empower their disciples. They have their "sure and well tested bridge" to America in bootleggers' smugglers' runs and secret Lemurian pathways alike. Only the principles of hou din do, the true kung fu knowledge, can keep America, and the world, safe from the powers of the dead and the never-alive. Can you escape the fate that

killed Houdini?

This **GURPS Martial Arts-Spirits-Cliffhangers** campaign frame begins by recasting Houdini as Bruce Lee, and running from there. (Treat hou din do as a dodge-heavy version of jeet kune do with dollops of the "ultimate style.") The setting is a secret wainscot world of high-powered chi fighting and death-magic, where Fu Manchu meets Golden Harvest, complete with the occasional tommy-gun duel and the lurking Lovecraft Mythos in the background if you like. PCs can be plucky Midwestern youths from a Houdini Fan Club fighting increasingly terrifying foes in their idyllic hometown, a squad of "Un-hittables" putting down the tongs and the Outfit in Chicago or L.A., globetrotting adventurers battling the local necromantic martial arts masters in the jungles of Brazil or the slums of Bangkok, or a touring group of professional "Houdinists" who, lucha-style, solve eerie crimes and debunk Spiritualists in between bouts of martial arts and fine dining.

Pyramid Review

Coloretto

Published by [Rio Grande Games](#)

Designed by Michael Schacht

90 cards (five scoring reference, five brown row, three green row, one last round, 10 +2, three jokers, & 63 color -- nine cards in seven colors), & rules; full-color boxed set; $11.95

Rio Grande Games' new entry into trick-taking card games puts players in the role of someone sitting at a desk in the tropics collecting lizards. Okay, so *Coloretto* probably doesn't have the most compelling back story for a game, but that doesn't mean the game itself isn't an agreeable pastime. And who doesn't like a good lizard?

The object of *Coloretto* is to score the most points for a lizard collection.

In the regular game, three to five players place as many row cards on the table as there are participants. Everyone starts with a scoring reference card and one playing card of a different color and the rest are shuffled together. There are three kinds of card: those with a picture of a chameleon (these come in seven colors), those marked with a "+2," and the three wild "jokers" (the same as the lizard cards, but with a rainbow arrangement of the colors). Fifteen of these are placed facedown on the table, a "last round" card is set on top of that small portion, and the rest of the cards placed on top of that (all to keep anyone from counting cards).

Each turn a player either draws a card or takes a row. If he draws, he places the card by one of the row cards. There's a limit of three cards per row card, and if those are all full he has to take one. When he takes a row card he gets everything played on it, and arranges them by color in front of him. Ideally he wants exactly three colors, but it seldom works out so. Once everyone has gotten a row and laid out their colors, rows are returned to the center of the table and the process starts again. When the "last round" card shows itself, that round is over and the colored cards tallied.

The reference card describes scoring. The more cards a player has in a single color, the more that suit is worth: one brown card, for example, scores one point, while two are worth three points . . . up to 21 points for six cards. This is where those jokers come into play. The chameleons can be counted as any hue, boosting the count on that color. The +2 cards add two to the score. Now the bad news. Only three colors may count toward the total, and anything beyond that lowers one's score. The reference card's scoring pattern still holds, but now one card of a fourth color subtracts one point from the score, two matched cards subtract three . . .

Those sums are written down, and another round begins. Whoever has the highest score at the end of four go-rounds wins. Once used to these mechanics, the players can get really nasty by playing with the other side of the summary score card. On the "gray" side the score goes up sharply at first, then drops quickly if there are too *many* cards of one color in front of someone. For a two-player game there's a separate set of three row cards; unlike the uniform three-card limit on all the brown rows, the greens each list their own limit -- one, two, or three cards (once both players have chosen their row card, the third is discarded).

The best feature of these components is that everything is done in simple terms: color recognition, rainbow splashes, adding +2. Easy cards usually equal easy play, and the rules fit on a simple strip of paper. All four rounds only take about half an hour to play, even with all five seats occupied.

Being forced into this kind of card management is pleasantly perplexing. No one completely controls which cards end up on which rows, and second-guessing the opposition or trying to force them into a play is engrossing. Ignoring the

game's profound metaphor, the rules to **Coloretto** stack nicely atop one other, creating an interesting and uncertain game that gives enough command to maintain some direction over the action but not enough to give the smart player or the intuitive one an edge on each other. If the card game shows itself to be engaging enough, it has a thematic board game sequel, **Zooloretto,** though that one has players building a zoo and represents a more concrete setting that proponents of this one's ambiguity may find off-putting. For fans of trick-taking games and aficionados of collecting a menagerie of color-changing lizards, this game is worth adding to the collection.

--Andy Vetromile

Icosahedron Adventures

Unusual Objects (Part Two: E-H)

by Owen K.C. Stephens

We continue our tour through items designed to guide, change, spur, or even create campaigns and adventures. Loosely designed for *d20 System* games, the core ideas can be adapted to other systems.

Enigma Van

The Enigma Van is a vehicle that find secrets and clues, aiding its passengers in the solving of mysteries. In a modern setting, it's most likely to be a van, but could also be a ship (the *Riddleboat*), plane *(Puzzle Prop),* or even a submarine *(Dilemma Diver).* In a more primitive setting it may be a wagon *(Conundrum Conestoga),* chariot *(Quandary Quadriga)* or even just part of a saddle (the Clue Cantle is stretching things, but the principle is the same). In more advanced settings, it could easily be a starship *(Curiosity Cruiser),* teleporter *(Predicament Portal),* or antigravity sled (Secrets Sleigh).

The original source of the Enigma Van is long since lost, but its more recent history can be well documented. Small bands of friends, often older teens or young adults, find themselves in possession of the vehicle and use it to travel from adventure to adventure. Most of their exploits are centered on some mystery or secret, which takes courage and cunning to unravel. While the group's jaunts seem random at first glance, a careful study of after-action reports shows the Enigma Van is responsible for finding many of their cases, and often uncovers critical clues during each investigation. If the van breaks down in a town, the town is haunted. If it needs a specific machined part, the nearest machinist able to make it is being threatened by a masked criminal. If its fuel gage gets stuck and it runs out of gas, the station on the horizon is base of a group of smugglers.

The use of the Enigma Van as a plot device, to start adventures or move along an adventure that has bogged down, is obvious. To reward a group of heroes for putting up with the vehicle, it also has script immunity from casual damage. Unless it advances the plot, the Enigma Van is never so badly damaged it cannot continue to move, and if the plot does require it to be defunct for a time it can always be repaired. Additionally, a group's ownership of the van gives them a moderate bonus (+2) to all Gather Information and Research checks (as well as any other skills designed to represent investigation, depending on the game system).

If the game includes an action point or hero point mechanic, spending a point allows a group to bypass the current stage of the investigation and go to the next planned encounter. (In games lacking such a mechanic, simply allow the group to use the ability once per adventure.) This bypass should be a result of dumb luck, preferably based on actions of the Enigma Van, but the GM should do whatever makes the most sense in context of the adventure. Of course the more often the heroes use the van's probability manipulation to solve a case, the higher the chance someone will notice their meddling is preternaturally enhanced. And how will the PCs solve the mystery of who stole the Enigma Van?

Freakshow Ticket

This item works best is a modern setting, though it can be adapted to any genre that included roaming carnivals that take tickets. If moved to a more medieval background it can be changed to a writ of passage for the Freak Court, or a title or patent of bloodline announcing the bearer as a member of the Family deFreak. In futuristic settings it can just be a piece of mysterious metal or textile or unknown origin.

The bearer of the Freakshow ticket has access to a hidden realm, existing in parallel with the known world but hidden from it. This world may be the ethereal plane, or the dreamlands, or just an alternate reality (possible one caused by

any number of Suppressed Transmission articles). The tone of the item is intended to be more Pan's Labyrinth than Oz, but a GM can make it match whatever weird travel needs his campaign calls for.

While holding the ticket in hand, the bearer can see and interact with this otherwise invisible, intangible world. The drawback to this is that one hand must always be occupied with the ticket (unless some creative player character glues it to the inside of a glove, or takes other unusual measures to leave the hand free). The advantage is that if the bearer gets into trouble in the hidden world, he has but to drop the ticket to return to normal reality (though he may return in the middle of a ladies' locker room, or a prison exercise yard).

Additionally, the ticket can be torn into multiple pieces, to give others the ability to see and interact with the hidden world. However, only the largest ticket piece is reusable. Any smaller piece torn off disappears after the traveler returns to the "real" world, and the largest piece regrows that much surface area. And, of course, the smaller a piece is the harder it is to hold onto during action scenes. Indeed, while the largest piece sticks with its bearer until willfully dropped, smaller pieces require a Reflex save or concentration check to be retained any time the bearer takes damage or makes a Strength or Dexterity-based skill check. (The DC of the save or check is 15 + the number of pieces torn off the ticket.)

Of course, such a portable portal to parallel worlds is much sought by the powerful and devious from both worlds. It may have powers the current bearer is unaware of (perhaps given access to dozens of worlds if used properly), or it may be the key to the paranormal lock that keeps the worlds separate. Until the current owner figures out who wants it and why, neither world is safe if the ticket is lost.

Grid's Hairpin

Designed as an overlooked item of Norse mythology, Grid's Hairpin is unlikely to have an equivalent in magic-free settings (though it could perfectly well show up in modern fantasy). A magic hairpin forged and owned by the same giantess who gave Thor his girdle and gloves, Grid Hairpin (or the Gridharnal) makes the wearer's hair indestructible. Not just tough, but literally impervious to damage from any form. (According to legend, the last known owner was the Princess Gothel, who apparently came to a bad end.)

For a person of typical hair length, Gridharnal is largely just a helmet of some value (increase armor bonus to AC/defense by +1, grants +1 energy resistance to all damage types). However, if the hair is grown long it can become greater defense, to a maximum of the value of an indestructible suit of plate mail (+8 armor bonus to AC, 3 points of DR, 5 points energy resistance vs all energy types) for an individual wrapped in a body-suit of their own hair. However, Girdharnal only works with the living hair of its wearer, so this benefit is much more likely to apply to a horse or other animal companion than a human.

The generally modest benefit more humans gain from the hairpin is less relevent to its overall importance than who created Girdharnal and how. It is made of the same iron as Thor's girdle and gloves, and thus may hold the secret of allowing mortals to forge such items for themselves. Whether it is sought by dwarven forge masters or Nazi war-mongers, once its location is known there will be those who want it out of proportion to its individual value.

Historic Artifact

It may be the Tunisian Hawk, or the mock-up of the Tunisian Hawk used to shoot the famous movie of the same name. Or it could be the Shaft of Destiny (all that's left of the Spear of Destiny), Bacon's first draft of Love's Labor Won, or the last copy of Action/Adventure Comics #1. It may even just be a briefcase no one can open, a lottery ticket with no indication of what lottery it's for, or a beat-up car due for repossession. It is the MacGuffin. Its form is irrelevant. It's the thing everyone wants, either just for financial value, or for no reason whatever.

In fact, the Historic Artifact does have one power: It's desirable. It can be anything appropriate to the campaign, from a pop cap to a shiny pebble. Anyone who sees it has a chance of wanting it. Normally a DC 0 Will save is made (meaning failure only occurs on a natural roll of "1") when a character is first exposed to the item, but even that means

about 5% of the people who see it decide they'd like to own it. Many of those people will offer to buy it, and simply be disappointed if they can't. Other will go to any lengths to acquire it. And right now, the player characters have it.

Game mechanically, you want it because it gives you (and your allies) bonuses to wealth and experience. The bonus need not be large (+10% exp, +10% to all treasure rolls, or +10% to the value to treasure received), but it should be enough to make players want to keep the artifact despite offer to buy it and attempts to steal it. Of course the thing may have sentimental value, as a father's last gift or a god's holy symbol. But it serves no other purpose than to cause trouble by tempting people with its existence, and as a result players must be rewarded for keeping it.

The Omniscient Eye

How Much of a Hassle Is It to Wrastle the Vassals in the Castle?

We all know that castles were used as a basis for military power in the Middle Ages in Western Europe. But what sort of garrisons did they have?

Taking the British Isles and France in late 1200s as an example, could you tell me if the garrison was just the lord of the manor and his vassal knights carrying out their feudal obligation, or were there men at arms and archers stationed there permanently? If so, how many of them were there on average and how were they armed and armored?
--Alistair Dunbar

A good castle, well situated, strongly built, and fully supplied, was the ultimate Medieval weapon. Before the development of gunpowder, a small castle could hold off surprisingly large and powerful armies. But to paraphrase a modern idea, walls don't defend people; people defend people. Without soldiers actively defending the walls, a castle was just a pile of rocks. Let's look at who they were and how they did it.

Size Isn't Everything

Of course, the size of a garrison varied considerably with the size of the castle, the wealth and power of the owner, conditions of war and peace, and the specific tactical and political conditions of the castle in question. For example, when it was initially built in 1284, Caernarvon Castle, on the northwest coast of Wales, had a permanent complement of 40 men. These were mostly men-at-arms, but it included a few specialists: a smith, a carpenter, and a craftsman for siege engines. At the same time, Conway Castle, a somewhat smaller castle some miles along the northern Welsh coast from Caernarvon, had a garrison of 30, of whom 10 were not men-at-arms. These included a chaplain, a mason, a smith, janitors, and a few others. By the beginning of the next century, Caernarvon's garrison had grown to 100 men (20 men-at-arms and 80 archers) while Conway's had grown to 75 (15 men-at-arms and 60 archers). At that time, Harlech Castle, another Welsh castle similar in design to Conway, had 40 men (10 men-at-arms and 30 archers), while Beaumaris Castle, a relatively large fortification, had 155 fighting men (15 men-at-arms and 140 archers).

That may not be the entirety of the fighting force, though. A gray area here is the possibility of "semi-combatants," people closely assisting the troops but not necessarily participating in the fighting themselves and rarely accounted for in official records. For example, the basic later Medieval and Renaissance fighting unit was called a lance. It evolved considerably through time, but at this point a lance consisted simply of one or two men-at-arms and another man (or, often, boy, such as a knight's page or squire) looking after additional horses and equipment. The third person could step forward quickly and provide the fighting men with a fresh horse to replace a tired one, a new lance to replace a broken one, and so on. Such people would certainly be present, but their numbers would almost never be specified. One man-at-arms might have no assistants, while another could have two or three. Likewise, crossbowmen were sometimes accompanied by one or two loaders who would stand behind the archer to cock and reload additional weapons, vastly increasing the archer's rate of fire. These support troops would not be as well armed or well trained as their principals, but they would probably fight (if not very effectively) in an emergency, so adventurers scoping out a castle might want to count them as part of the castle's troop strength.

> ### Ground Plans
>
> To give an idea of the size and layout of the castles mentioned in this section, here are some scale plans.
>
> - Beaumaris Castle
> - Caernarvon Castle
> - Conway Castle
> - Harlech Castle

Moreover, we can't take those raw numbers as representative of what you'd find at any given fortification at any given time. The castles and their garrisons were established in response to a specific threat. King Edward I spent a lot of time and money in the late 13th and early 14th centuries building castles and setting up garrisons in northern Wales to subdue a rebellious population. Two of them, Caernarvon and Beaumaris, were intended as important administrative centers. All four of the castles we've mentioned here so far are on the large side (Beaumaris covers nearly an acre of land) and represent something close to the final evolution of the European castle before the appearance of gunpowder artillery changed the equation. They were also built and staffed if not for a war footing, then at least with the expectation that they would be overseeing potentially hostile territory.

During wartime, such castles might have had more troops on hand, with the exact number depending very much on strategy, tactics, and resources available. In the early 1200s, Dover Castle was defended by at least several hundred men when it was attacked by the French despite having a regular garrison of probably less than 10 knights. However, if not directly threatened in wartime, such castles might have *fewer* defenders, as troops who might usually defend it were moved to more vulnerable locations.

Middle-rank noblemen wouldn't have many vassals in their castles most of the time. In the first half of the Middle Ages, knights regularly provided their lords with short terms of service. One to three months a year was common, but subject to considerable individual variation. One knight was required to come to war with a haunch of venison, which he would eat during his service; when the venison was finished, so was he. If no war was in the offing, the knight provided castle service, acting as a guard in his master's stronghold. Through the course of the 12th and 13th centuries, however, service gave way to the new institution of scutage, paying a fee in lieu of actual service. This was convenient both for the knight, who didn't have to spend a quarter of the year working for somebody else, and the lord, who could do something useful with the money if there wasn't a war on. By the end of the 13th century, scutage had entirely replaced personal service in a number of regions in England. Scutage was known on the continent as well, and while it was slower to take root and followed a somewhat different trajectory, the French (and Germans and Spanish) were also well on their way to replacing personal service with monetary payments. Any guards in such places, therefore, wouldn't be knights discharging their feudal obligations. Rather, they'd probably be professional men-at-arms or poor knights working for hire.

Kings and the top-ranked noblemen would be a partial exception to this rule, for political rather than military reasons. Feudal dependents would naturally be attracted to centers of power, since that's where they'd need to be to increase their own power and influence. Many of the troops on hand in a royal or other powerful nobleman's castle would be hired men-at-arms, but they'd also have a number of lesser noblemen around of their own free will, acting as bureaucrats or simply courtiers.

A knight or other minor nobleman is unlikely to support any full-time troops, as such. Such a lordling likely had his hands full (and pockets empty) just supporting himself, his close relatives, and personal servants and retainers. However, though they may not have been maintained in the capacity of fighting men, many of the residents of a castle would nevertheless have been capable of fighting. The very smallest of "castles," which would be simply three- or four-story towers or just houses made of stone, might have, depending on time of day and familial structure, five or six people capable of fighting, but with precious little regularity in their ability and equipment. For example, such a small manor house could house a knight or bailiff, an early teenage son, and a couple of elderly servants or relatives from the previous generation, providing warm bodies but vanishingly little fighting ability. On the other hand, it might house a few sons almost old enough to leave home as men-at-arms and with knightly training fresh in their minds, and a brother or two in the prime of life, providing a lot more fighting ability despite no difference in numbers.

One must also consider the general needs of the region the castle is in. For example, Salisbury Castle, southwest of London, was at one point the seat of the Earl of Salisbury, and for a considerable period thereafter the headquarters of the sheriff. From the 12th through the 14th centuries, it was regularly garrisoned, initially by knights (apparently between 20 and 30) and later by a mix of men-at-arms and archers. By the late 14th century, though, while the garrisons in the king's Welsh castles were being increased, the Salisbury garrison vanished, and funding for maintaining the fortifications evaporated. The castle wasn't abandoned (not immediately, anyway; it was eventually declared uninhabitable and demolished during the reign of Henry VIII), but it did stop being used as a military facility. Rather, it was used as a jail and administrative office by the sheriff. No doubt he maintained a staff which included

some men capable of fighting, but they weren't necessarily professional fighting men. The southeast of England had become relatively peaceful by that time, so the need to maintain troops and active defenses had passed. Similarly peaceful areas in other periods would see similar drops in garrison size.

Hello To Arms

So much for the men. Now what are they using? In the period in question, most of the troops would have had mail of greater or lesser quality. Better-equipped men would have had their mail reinforced by small metal plates, probably around the knees, shoulders, or hands; full plate armor is only starting to emerge during this time. However, it's not impossible for someone to have somewhat better plate coverage or to be wearing an early brigandine (metal plates sewn into a leather or cloth coat). Poorer troops would have to make do with leather or thick cloth. Helmets would probably be simple metal skullcaps (or similar small helmets, perhaps with nose guards) and/or mail coifs, with a sprinkling of barrel-shaped, completely enclosed helms. Like heavy plate armor, elaborate helmet designs are only starting to emerge.

So far as weapons are concerned, nearly everyone would have a sword. However, they wouldn't come into play immediately; the whole point of being in a castle is to keep your enemies out of range for hand-to-hand combat. Men-at-arms were men equipped and trained as if they were knights, which, in fact, many of them were. They would be primarily equipped as heavy cavalry. In addition to superior armor, they'd have horses and long, heavy lances. Neither would be particularly useful defending the wall of the castle, but a mobile force could be very important in interfering with an enemy's siege works. They might also be equipped with a variety of pole arms to push away ladders and otherwise keep enemies from storming the walls. When push came to shove, though, the primary weapon of non-archers would be rocks. Heavy stones are cheap, easy to use, easy to stockpile, and quite effective when dropped on attackers from a great height.

In some English castles, the archers would be using longbows. However, for the most part through western Europe, they'd be using crossbows, which had become the primary battlefield missile weapon during the previous century. Smaller regular bows, perhaps commoners' hunting bows pressed into service, might be used by particularly poorly equipped, ad-hoc archers (though members of the nobility would often hunt with crossbows themselves).

Though some siege engines placed on top of towers might have been in use, defensive siege weapons weren't as diverse as those for offense. There's little point, for example, in a defensive battering ram or mobile siege tower, and larger siege engines such as trebuchets require a great deal of room, something notably lacking in the smaller castles and freestanding manors occupied by lesser noblemen. The siege engineers with which some garrisons were equipped were more concerned with repairing walls, installing temporary galleries from which missiles could be better dropped on attackers, and countering an enemy's miners. Nevertheless, some castles would have the parts for rock- or dart-firing artillery in a storeroom, ready for quick assembly if a large enough force threatened the castle. Placement atop the castle's towers would give them an almost unrestricted arc of fire and usually superior range as a consequence of increased height.

So what does this mean to the average adventurer, then? Assuming a world which looks like our later Middle Ages, large castles will have substantial garrisons of troops working for hire (though they may be knights and minor noblemen working for someone with whom they also have feudal ties rather than pure mercenaries). Up to 150 men, weighted heavily towards archers, would be reasonable for a very large castle on the order of a royal palace in somewhat hostile territory, probably with a matching number of support troops who might provide additional resistance as a last resort but who aren't terribly skilled or well-equipped. Higher-ranked noblemen in more modest castles will still have some soldiers on hand, probably working for hire, with the number in direct proportion to their wealth and social standing. At the bottom of the scale, the manors of individual knights and other minor noblemen won't have professional defenders, but they probably will have a handful of well-armed and reasonably competent residents anyway.

Sages theorize that the Omniscient Eye might actually be composed of a panel of Experts chosen through mysterious and arcane means. Regardless, the Omniscient Eye is benevolent, and every other week it is willing to share its lore with all. Or, at least, with all with valid *Pyramid* subscriptions.

The Omniscient Eye seeks to answer questions that are tied to knowledge of the real world, providing information with a perspective that is of use to gamers. The Omniscient Eye does not concern itself with specific game systems or statistics.

Do you have a question for the Omniscient Eye? Feel free to send it to pyramidquestions@yahoogroups.com, and the Omniscient Eye might answer it!

First Cousin of Stupervillians!

Yet More Nuisances for Supers Games

by J. Edward Tremlett

Welcome back to Stupervillians, where we explore the world of inept, loser supervillians: special guest stars whose powers are overshadowed by their ineptness, disorganization, or stupidity. In previous episodes we've looked at [individual nemeses](#) and [Terrible Team-Ups](#). And this time, we will investigate the Weird Menace.

What's that, you ask? There are strange and baffling things that defy easy explanation. Puzzling dangers that come from nowhere, strike without warning and vanish just as quickly, leaving our heroes to pick up the mess and wonder aloud "what the hell was that?" Such eldritch encounters can only be described as Weird Menace, and that is our focus, this episode.

As always, these strange things have notes on powers, strengths and weaknesses (if applicable) and are listed in increasing order of power. Stat guidelines go Poor – Average – Medium – Impressive – Powerful - Way-Powerful. Just add game mechanics and your own setting, stir, and bake at "weird" for an hour.

The Beer Fairy (The Inhuman Cost of Downsizing)

"Hey! How about a can of The City's Best, ya stupid %^&?"*

Let me tell you a secret: The Tooth Fairy is real.

Got that? Well, here's another: there isn't *one* Tooth Fairy. There's a whole army of them out there. And while we're spilling the beans, you should know that they don't take teeth for money so much as they arrange for teeth to fall out, and parents to hand over money, when the child needs the cash the most. It's Karma, baby.

But the spirit world is ultimately ruled by the physical, for good and bad. So with a downturned world economy, and less pocket money to go around, the number of tooth fairy visits has become sadly numbered. And the Karma Department can't afford to have workers sitting around, can it?

So some Tooth Fairies had to be let go. Most were quietly rehired somewhere else. But some were flat-out thrown out, such as Fairy #999: a hard-drinking slob who sometimes "delivered" money to the wrong houses, and "took" teeth from winos, pensioners, and grizzly bears. And since it's almost impossible to fire a Fairy for mere incompetence, his superiors leapt at the chance to be rid of him.

What does an out of work, alcoholic Tooth Fairy do? In this case, steal cheap beer from liquor stores, get ripped, and make a general drunken nuisance of himself. That wouldn't be so bad, but he also persuades folks to "party" with him, as he's lonely and in need of cheer. And when he's really good and blasted he teleports clothing from the cute ones, just to get the good times going.

So, remember that multi-sorority strip tease that broke out at City University last year for no reason whatsoever? That was him. Remember when the late night shift at the 5th Precinct had a boozer with the drunk tank inmates, liberated a van, and all played chicken on the freeway? Him again.

He claims its all in good fun really. He thinks it's all a funny game. Maybe if he has a moment of clarity, sobers up, and gets another job, he'll stop his shenanigans. Until then, avoid drinking any floating cans of beer, and try to resist any spontaneous urges take off your costume.

Powers: Tooth Fairies have Average powers of persuasion, telekinesis and apparition, as well as Impressive invisibility, flight and teleportation.

Tooth Fairy #999: Unemployed and Loving It

Stats: Average Body; Average Mind; Poor Spirit

Appearance: Short and elfin, with pink, translucent wings and wispy, white hair down to his shoulders. His eyes are bloodshot from over-intoxication, and he looks tired and run down.

Costume: None. He used to have an official Tooth Fairy costume and wand, but they took them away when they fired him. Now he wears a stinky, old "Guns & Roses" t-shirt he apparated off of some bum. It comes down to his feet, like a bathrobe.

thE boinG (Annoying Enigmatic Force)

"boinGGGGGGGGGGGGGGGGGGGG.."
*"Oh no . . . not **again!**"*

They say thE boinG is a ghost. They say it's a mad scientist's dying curse. They say it's some anonymous supervillain's idea of a joke, or a trick of the mind.

They say lots, but no one knows. All they know is that thE boinG is a massive pain in the rear.

The story goes back to the 1940s. An evil Nazi genius named Dr. Von Bongg held The City in a grip of terror. After suffering several distractions from his henchmen, the Liberty Brigade finally learned of his secret headquarters. They launched an all-out surprise attack, just as he was about to unleash a strange, new weapon for his German allies.

Unfortunately, the Brigade got there too late, and the device went off with an odd "boinGGGGGGGGG" noise. But Von Bongg alone bore the full brunt of its force, and vanished, atomized. The machine melted into slag, defying scientific analysis.

Ever since then, various heroes of The City have been victimized by a strange occurrence. Ever so often, one hero -- and one hero alone -- will hear the same strange "boinGGGGGGGG" noise that Dr. Von Bongg's device made when it went off. And for the next 18 days, almost everything that can go wrong for the hero *will*.

Powers: Anyone targeted by thE boinG is doomed to suffer indignities, embarrassments, surreal hassles, and the brunt of others' stupid mistakes. The effects are never lethal or dangerous -- merely annoying and frustrating, with the occasional moment of comedy.

Heroes with some kind of luck-manipulating powers might be able to soften the blow a bit, but even they must patiently ride out the 18 days of bad fortune.

Stats: None. Anyone pitting their luck manipulation against the thE boinG, either for themselves or someone else's behalf, is up against an Impressive ability to make things go wrong.

Appearance: "boinGGGGGGGG"

The Ichthyarchy (Strange Invaders)

"Um, why is there a giant school of fish floating down Bank Street?"

There are many different directions that life on Earth could have gone. Some are tragic.

In one version of our world's story, the water level was so high that land species never evolved. Over the centuries, an intelligent aquatic race evolved, developing strange, water-manipulating technologies as they ascended. Within an aeon, they went from simple-minded schools of hunter-gatherers to great, swarming empires ensconced in cities of coral and solidified water. Who knows what they may have done if given time?

Unfortunately, they killed themselves. Some strange invention -- perhaps for war, perhaps for peace -- shattered their minds, and left them dead, one and all. Worse than that, it put their Earth out of phase with their universe, dooming it to wander aimlessly through the dimensions.

Bits and pieces of this alternate world appear from time to time, here and there, in varying states of molecular cohesion. Sometimes enormous, ethereal jellyfish are seen in the sky, and mistaken for flying saucers. Sometimes schools of fish materialize in midair and plummet to their deaths -- creating the "fishfalls" Charles Fort was so fond of.

But every so often, when the galactic tides and forces are in perfect alignment, larger pieces of the doomed world overlap our own, creating strange "borderlands." Sometimes our planet's cities play host to a multitude of displaced sea creatures, suddenly able to swim in our air as though it were water. And sometimes our cities are turned into great, coral necropoli, and its inhabitants are able to breathe -- but not swim in -- the water that's suddenly surrounded them.

On such occasions, both Earths' inhabitants are still not able to fully affect one another. But neither side really understands that. Many a pedestrian has been chased to the point of cardiac arrest by a school of hungry sharks, or driven mad by the sight of things undreamed of.

Fortunately, such overlaps eventually end themselves in exactly nine hours. And in that time there's more than enough horror and danger to keep a city's heroes occupied.

Powers: None to speak of, but the creatures' phasing in and out makes them hard to damage or drive off. It also makes it hard for them to do any actual damage. Most of their threat comes from the confusion and insanity their appearance causes.

When a "borderland" manifests, the area seems enveloped in a giant wave of water. The barrier between worlds is Way-Powerful, so only the mightiest of entities have a chance to enter or leave an affected area. There might be a way to speed up the time it lasts, too, but that would require more knowledge of the alternate Earth, and what happened to it.

Stats: The underwater denizens of this world mostly mirror our own, but there are genuine sea monsters to be found. Some are dinosaurs that never died out, some are creatures we have yet to discover (or their descendants), and some are strange beasts the now-dead race bred for labor, sport and war. The Body of such colossal entities goes from Medium to Powerful, but none of them have a Mind or Spirit higher than Poor.

Appearance: Everything from common fish, right out of a Mutual Geographic special, to massive, monstrous things that would have given H.P. Lovecraft the willies.

#9 (Little Shop of Changes)

*"A pair of pants, you ask? Why yes, we have a pair of pants, one just for you. We also have a pair of eyes, perhaps more befitting your soul. Or a pair of wings, so as to fly away? Or how about a **paradise,** where you could walk silken beaches barefoot and see the days slip by into inconsequential strings of sea and sky, Sun and Moon? It's all waiting for you, behind the changing room door just take hold of the knob and turn, and go on in and **paradise."***

Every so often, The City plays host to a truly weird store. The sort of place where everyone truly gets what they want, or deserve. It might cost you everything you don't know you have, and it just might bring you your heart's secret desire.

But don't try to get a refund, because #9 is never there when you go back.

The store sneaks through cities. One day the vacant storefront for rent will be painted day-glo orange and green with a big, red "#9" over the door. It will have flashy-dressed dummies in the front windows, with a promise of "PRAXIS" on signs behind the glass. And when you walk in The Beatles' "Revolution 9" will be playing, ever so softly, from speakers you can't see. Over and over, like clockwork.

Inside the smallish, gaudy boutique there is row upon row of outrageous clothing no one in their right mind would wear. There are smiling and attentive -- but very non-verbal -- employees dressed in sloppy, moth-eaten suits and skirts. And running them all is a tall man in an equally-dilapidated suit. He eats shiny, green apples, one after the other.

Not the owner, nor the manager, he insists: just the Keeper. Keeper of what? The keys! he announces, producing a ring from his coat with a flourish (and a few flapping moths). The keys are to the changing room, where he tries his best to usher all customers, with or without something to try on. Praxis must be experienced!

And inside the changing room is what?

Well, for example . . . Mildred Purgle was 47, overweight, divorced, and recently fired when she came across #9. The Keeper got her into the changing room with some outrageous, paisley miniskirt that couldn't have possibly fit. When she woke up she was at the quirky antiques store her long-dead crazy, spinster aunt had owned when Mildred was a child. When Mildred looked in the mirror behind the register she discovered that she *was* her beloved aunt, somehow returned to the world along with that wonderful, long-gone store.

And no one -- not even her ex-husband -- had any idea who this "Mildred" person was.

There are scores of "Mildreds" out there, and so its legend grows. But no one can prove any of it. Because #9 is never there when you go back . . .

Powers: The Keeper has an Impressive persuasive technique: a pointed temptation towards something the target really wants, even if he doesn't know it. The store's ability to rewrite reality to conform to that desire is Way Powerful.

What's more, only the person who goes through the changing booth door knows that they've been altered. Everyone else thinks this is the way it's always been because it is, now. And the only way to get changed back is to find #9 again, and go back through the door.

#9: Praxis in Action

Stats: Impressive Body; Impressive Mind; Impressive Spirit. The store and its Keeper are one and the same: if one is damaged, so is the other. It prefers to vanish before serious damage is done, leaving behind an empty store and bewildered super-heroes.

All the menial workers in the store have Average Body and Mind and Poor Spirit. If attacked they break apart, revealing themselves as animated showroom dummies full of bright green goo that smells like apples.

Appearance: The Keeper looks like a tall, bedraggled refugee from the swinging side of the late 1960s. His clothes are loud and moth-eaten, his hair seems molded about his head and his long mustache has enough wax to make a candle from. There's something of a sad, knowing smirk in his eyes, which makes his velvet voice seem dangerous, and yet strangely inviting.

Costume: "I wear no mask."

The Sinister Bag (Parasitic Monster from Beyond the Unknown!)

"Well, who are you supposed to be, friend? The Unknown Bank Robber . . ."
Sound of The Negation Man being knocked into orbit

The Sinister Bag, as it's come to be known, is one of the odder entities to threaten The City, as well as the world. The Liberty Brigade had a run in with it in the 1930s, and the Liberty League has had several encounters since then. And in all those epic fights, no one has ever gotten any sense of motive or aim in its rampages. This may be because The Sinister Bag never talks.

And that may be because no one cut a hole for a mouth in the bag.

The story always goes exactly the same. Some ordinary citizen feeling down on his luck, put-upon, and desperate for an escape comes home to find a plain paper bag on his bed. The bag has two eye-holes cut into it, as though someone wanted to make it into a mask of sorts. And he feels a strange compulsion to pick it up and put it on.

If he throws it away, it re-appears the next day. It will re-appear a total of nine times before disappearing for good, at least for that mortal. And he'll never get another chance, either.

But if that mortal should put the bag on his head, for whatever reason, the bag takes him over: body, mind, and soul. And, blessed with super strength, the host goes on a destructive rampage of massive proportions: the sort of rampage that requires several first-tier super-heroes to stop. The last time the Bag came to Earth, it took all of the Liberty League, including their reserves, to contain the threat, and even then they had no idea how they fought it off.

Oddly enough, in all the times The Sinister Bag has manifested, it has never once killed or caused someone to die . . . not even in the heat of battle, or busting buildings wide open. It's as if it knows exactly how much damage an opponent can take, and only does that much, and no more. (It's almost as if it were just play-fighting to let off steam . . .)

Powers: In addition to the attack and defense that his Powerful Body provides, the Bag regenerates damage to its host so well that it's often healed completely a split-second after the blow hits. It can't fly, per se, but can leap long distances, and can hold its breath for extended periods of time.

The Sinister Bag has only one weakness, but it's a doozy: someone has to get close enough to physically yank the bag off the head of whomever it's attached itself to. That, in itself, is a great feat, as getting too close to the head is asking to be pile-driven into the ground, or near-Earth orbit. But one good tug and it comes off as easy as a cheap Halloween mask.

However, what's truly extraordinary is that *no one* -- not even people who've fought and vanquished the Bag before -- can remember that particular weakness. Once the Bag is removed, it vanishes, and everyone stands around unaware of what's just happened. So when it comes back, no one can truly remember how they defeated it last time, "knowing" only that they had to sock the hell out of its host for what seemed like hours before it just gave up and left.

As for the mortal it selected, he doesn't remember any of what happened after putting on the bag. But each and every one goes right back to their miserable life, no better or worse off for having been possessed.

The Sinister Bag: Unknown Trans-cosmic Entity; Indeterminable in Earth Years; ???

Stats: Powerful Body; Average Mental (Defends and Attacks as though Powerful); Powerful Spirit

Appearance: It looks like an ordinary, plain paper bag that someone cut holes into. Once it's on someone's head, the "eyes" behind the holes are dark orbs that reflect no light, show no pity or fear, and seem to be the embodiment of timeless, alien rage.

Costume: None to speak of, unless its appearance as a paper bag is some kind of disguise.

Appendix Z

What Else Is in the Cards?

by Nikola Vrtis

In the "What a Card" article, GMs and players were offered a way to find inspiration in a deck of cards. This article adds two more tables to help users include additional details in their quick character descriptions. They can be employed in conjunction with those presented in "What a Card," or they can stand alone.

Note that the names listed in this article were chosen for their gender neutrality and commonness in the modern era. GMs should adjust this table to reflect popular names in their own worlds, or even add columns for separate male and female names. One place that GMs can visit for tables of most common first names and surnames for the United States according to the 1990 census is Mongabay.

To use the tables, shuffle a deck of poker-style playing cards (without jokers). Next, deal three cards. Using the first card, consult the first two charts to reveal the character's hair and eye color. Then, refer to the third chart to learn the name, using the second card to find the first name and the third card to determine the last name.

The same selection of cards can also be used with the "What a Card" tables to specify the adventurer's gender and significant physical and mental characteristics. See that article for details on how to go about getting that information.

Example: The three of diamonds, three of spades, and ten of hearts are dealt. According to the first chart, the character has blond hair, while the second chart reveals that he has blue eyes. His name is Tracy Green. (His gender and key characteristics were suggested in the "What a Card" example.)

If the suit of the first card is . . .	the character has . . .
Diamonds	blond hair
Hearts	red hair
Spades	black hair
Clubs	brown hair

If the rank of the first card is . . .	the character has . . .
2-4	blue eyes
5-7	green eyes
8-10	black eyes
J-K	brown eyes
A	something exotic (different colored eyes, albino, etc.)

Pyramid Review

Bull in a China Shop

Published by Playroom Entertainment

Designed by Michael Schacht

Art & graphics by Steve Nazar, Elisa Anya Jaeger, & Jessica R.E. Bethke

99 cards (30 Bull Cards, 40 China Cards, 10 Starting Cards, 10 Money Cards, five Pass Cards, four Score Cards), score pad, rulebooks in English, Spanish, & French; full-color, boxed, three to five players, 30 minutes playing time; $10

It's an old simile, and a scenario not likely to happen, but when you have a colorful phrase like ***Bull in a China Shop*** you do the English language a disservice if you don't get at least a little mileage out of it.

The object of the game is to have the highest score from your fine china.

Game play involves collecting sets of valuable china, all the while trying to avoid the attentions of a bull conveniently but inexplicably loose in town. Everyone starts with a couple of pieces in their assortment and some seed money in the form of a Money Card. It uses two decks, one for the Bull Cards and one for the China Cards, and a row of five cards is dealt from each.

On his turn, a player either pays a Money Card to add one of the China Cards to his set, or takes a Bull Card. If he takes a Bull Card he gets a Money Card for his troubles. He also gets a one-ton bull rampaging through his shop (that's the "troubles" part). The shards on the card have colored bull heads in different sizes that determine which suits of china are trashed in the ensuing chaos. A Bull Card with one red bull head and two blue heads takes out one red and two blue pieces of pottery, for instance, and one large green head destroys all the green items. Most gray cards let the player choose his losses, but a few list point values and take those specific numbers out of play. No one may have more than two Money Cards at a time, so a full wallet means he must take china, and no money means you have to take the bull by the horns.

Stuck in the china deck at regular intervals are four Score Cards, and if one of these sits atop the draw pile when either row is exhausted, the shop owners must do some accounting before refilling that row. There are four ways to gain points, and each player must choose for himself a different one each time. The player may count his highest card in each color, the lowest in each, everything in one color, or all cards currently in his collection. Once a method has been used that player may not repeat it. After the last Score Card has been dealt with, all four subtotals are added up and the high score wins.

Speaking of scores, chalk up another one to simplicity. The bull portraits are pleasant, the china competently rendered with a computer, and the rest of the card sets informative without being busy (though telling buyers a large bull head always appears alone on a card would have cleared the difference up). A small pad for scoring is also included, listing the scoring methods. The pad has about 50 sheets, but each accommodates the scores for two players (the backs are blank, so if the issue is convenience that space is just as serviceable).

The game's German title references elephants, not bulls, apparently the same saying but from other regions. Such provenance may be why Playroom Entertainment this time provides the rules in Spanish, French, and English but, oddly, not German. Also worth noting is the rules are in pamphlets this time, a separate one for each language instead

of the usual all-in-one booklet with staples. Perhaps it's a cost-saving measure, though the booklets got mangled a bit drooping between the top and bottom of the setup box.

This has more card types than usually come out of Playroom's playpen, but they're necessary and after the first game their functions become clear. The system works out precisely but it's still unpredictable. There are 10 cards between each Score Card, but that doesn't always mean two rows of china before scoring occurs because refilling the bulls may force an early (and empty-handed) round. A turn in which one gains no points at all can be devastating and a player might never recover from it, but the game also allows players to interfere with one or more rivals' actions if they just use their noodle. Someone could win simply by making everyone else's total as bad as theirs.

Bull in a China Shop is a game in need of somewhat closer attention from its participants than others from this company, but its effects and game play are also much more manageable, making it a fine occupation for those looking for the energy of the head-to-head competitive element.

Pyramid Review

Cold City: A Game of Hidden Agendas, Trust, And Monster Hunting

Published by [Contested Ground Studios](#)

Designed & Written by Malcolm Craig with Steve Dempsey

Cover by Paul Bourne

Illustrated by Stuart Beel

128-page b&w digest-sized softcover; $23

Although ***Cold City: A Game of Hidden Agendas, Trust, And Monster Hunting*** -- like the publisher's better known *a|state* -- is another city-based RPG, it is a much smaller, less commercial affair. Indeed, it could be seen as a bridge between the mainstream commercial type of RPG and the independent self-published title that explores and pushes at the RPG format's boundaries. For while the theme is purely commercial, the mechanics do owe something to the indie game, but not too much, and it is written with less of an author's voice than in many indie titles.

The theme is simple: Agents from the four occupying powers hunt monsters in an Underground War in post-war Berlin. Can once-great allies learn to look beyond the national stereotype and learn to trust their colleagues? The indie-style mechanics show in the handling of this "trust" element, and in the slight degree of narrative control that the players can gain during play.

The year is 1950 and with the Cold War hardly settled in, the former allies in war must work together again. Abominations born of Nazi science and experimentation, and things not born of this Earth, but of occult research, still haunt, lurk, and stalk the ruins, streets, and tunnels of a Berlin being rebuilt following its wartime aerial pounding. "Alternatives," warped humans and animals; "Incursors" torn through time and space by fantastic technology; and the dead, returned to harass the Red Army until they drop. To deal with these threats, the four governing powers -- France, Great Britain, the U.S.S.R., and the United States -- have established the highly secret Reserve Police Agency or RPA. Its task is not only to investigate and eliminate these remnants of twisted science, but prevent it becoming public knowledge.

The players take the roles of RPA agents sent out on various missions. The game is best played with four characters, one from each nationality, though the option to play a German national allows a fifth player. Each has a reason to be in the RPA. It might be a simple assignment, but or that the agent has had an encounter with something outré. Nor need the character be military, ex-military, or a spy, although many RPA agents are. A civilian or female character is perfectly acceptable if a player can justify their assignment to the RPA.

Each character is lightly defined with three statistics -- Action, Reason, and Influence -- rated between one and five, with two being the average, plus three positive and two negative traits. A Trait is a cross between advantage or disadvantage and a broad skill. For example, "Keeps his cool in the face of danger" or "Hates the political machinations that his masters play." He has a Draw (or reason for being in the RPA), and two agendas.

One is a national agenda, similar to that of his country. France wants to destroy all abominations and prevent any from reaching French soil; Germany wants to redeem herself by destroying all signs of Nazi science; cash-strapped Great Britain wants to shut the RPA down; and the USA wants to turn the new technology to military ends, as does the U.S.S.R. The other is a personal or Hidden Agenda. For example: "Uncover any black market rackets in the RPA" or

"Keep secret the Communist loyalties I have held since my days at Cambridge."

Players must also determine the degree of trust held between the agents. The character sheet has space to record the trust an agent holds in his colleagues and an explanation why, and also to record the trust they have in him. Rated from zero (no) to five or more (absolute) trust, initially a character only has enough to assign one or two points to his colleagues. Of course, when combined with the initially stereotypical beliefs held about each nationality, some colleagues will be favored over others. Similarly, the initial reasons for an agent's trust or distrust in another should be heavily influenced by these stereotypes.

Mechanically, **Cold City** is light, employing pools of 10-sided dice to resolve conflicts where dice rolling only would drive the story forward. Before any conflict, the stakes and what the desired outcome is must be agreed upon. The pool is constructed from an appropriate core statistic, dice being added for suitable traits, agendas, and then trust values from another character. So for example, US Army Captain Delvecchio wants some information from a British Army racketeer after his German colleague, Horst, has already tried. Delvecchio starts out with Influence 3, adds a die for his "Bureaucracy is a pain in the ass" trait, and then plays the national stereotype card in pointing out that Germans are bureaucratic, thus gaining two more for the Trust 2 Horst has in him. This gives him a total pool of 6. The GM will roll for the racketeer, who has two dice, plus one for Horst's failed attempt.

Both dice rolls are compared and any matching numbers between the two pools are discarded. Of the remainder, the pool with more dice higher than the other succeeds and gives successes. Which means better results. Further, the winner gains the stakes set out prior to the conflict being rolled for, which in this case would be to getting the racketeer to talk. Stakes become really important when two or more characters desire opposing outcomes because the winner narrates the outcome.

In addition, a conflict's outcome can have consequences that will directly affect a character through his stats. If a positive outcome, one of a character's negative traits can become positive, a new trait gained, or a core statistic can be temporarily increased. If negative, the reverse happens, and if two statistics should be reduced to zero, an agent is on the way out.

Similarly a conflict's outcome can change the trust levels between agents, either improving it by one, or decreasing it by any amount. How much depends upon the actions of the agents and how the players feel about those actions. These changes only become apparent during subsequent scenes when the agents call upon the trust of others to succeed in a conflict. The change in trust between the agents models their changing attitudes towards each other after being put in dangerous situations and seeing them as more than a stereotype.

Yet trust works the other way and can be used to betray, usually when an agent feels that his hidden agenda is more important. When such a situation arises, the trust that the agents have in the betrayer adds to his dice pool.

The game is supported with a set of ready-to-play agents, a description of post war Berlin, a list of contemporary weapons, and several monsters. There is also a bibliography that includes links to several websites. And Steve Dempsey adds the introductory scenario, "Prisoner #8," in addition to the book's trio of adventure seeds. To be honest, I have not read either the scenario or the seeds, as I really really want to play the game. In my defense, I do expect the scenario to be good, having gamed with Steve before.

In addition, numerous supplements will be useful to the **Cold City** GM. **Delta Green** and its companion volume, **_Delta Green: Countdown,_** should inspirational, or at least a darned good read. **Tour of Darkness** for **_Shane Lacy Hensley's Savage Worlds_** could take the game to post war Indochina, while any **GURPS World War II** title could add detail or color. In particular, Ken Hite's **GURPS World War II: Weird War II** is a veritable smorgasbord of ideas and suggestions, and that is before you get to the delights of his Suppressed Transmission.

Initially **Cold City** was slightly disappointing because it was not pulpy enough. Actually, on the surface, it *is* pulpy enough, but the game is meant to be more than just monster bashing. The GM advice suggests giving missions depth and even a moral dimension that in exploring should reflect the agents and their decisions. The multi-national nature of the RPA and the Cold War gives the setting inherent tensions and rivalries, even paranoia, which comes to the fore with the trust rules that intentionally start with misunderstood stereotypes. Both GM and players should be using the

characters' agendas and trust levels to drive the game as much as resolving conflicts.

As a game, **Cold City** grabbed my attention immediately; I wanted to play it after finishing reading it. It is not perfect, the GM advice is a little light and the mechanics underwritten and slightly awkward, but it even has an immediacy in that having read it through once I was not only ready to play, I was even ready to run it. Everything is easy about this game: the mechanics which drive the roleplaying; the roleplay because the characters begin as stereotypes and then mature; and above all, the hook. **Cold City: A Game of Hidden Agendas, Trust, And Monster Hunting** is a game that begs to be played, and makes it all too easy.

Irregular Webcomic

by David Morgan-Mar & Steven Marsh

Irregular Webcomic

Irregular Webcomic

Snow Crash, Sans Snow

Yesterday afternoon I decided to accompany my coworkers at my Day Job to lunch. This is somewhat rare; usually I'm one of those guys content to sit in the break room, munching my leftovers or sammiches. But I figured I'd be social for a change. We didn't end up taking my car because apparently the seat adjustment is as complicated as transforming my Chevy Cavalier while removing a bra one-handed; instead, my coworker was the driver, and we all piled into his car.

Anyway, long story short, within five minutes of our leaving work to go eat, we were in a car accident. No one was hurt (as near as I can tell), but neither car was remotely drivable, and the wheels on our vehicle were turned sideways like *Back to the Future II.*

So that's why I'm punting on my GenCon mini-report for another week.

It was my first accident (at least, the first one with a vehicle going over five miles an hour), and it shook me up more than I was expecting. I'm presuming my muscles are undergoing a level of tightness and ache that is the reason why you're not supposed to frighten meat-mammals before you kill them for food. So, 90 minutes later, we were back at work . . . shaken and still hungry.

All things considered, I consider us having gotten off very lucky, given the number of people who are seriously hurt or worse in accidents every year. Even so, since it was my first accident (and since I knew I'd have a column due a handful of hours later), I've been taking a more analytical aspect of the whole incident.

What's struck me most about the accident is that how much comes down to a matter of seconds. A couple of seconds in either direction -- if I'd stopped to pick up a penny on the way out the door, or if we'd sprinted to the car -- and we wouldn't have gotten hit. (We hadn't hit any traffic lights up to the point of impact, so I feel fairly justified in saying that.) By the same token, I'm amazed that it literally took a second of impact to change the course of the rest of my day. If anyone had been seriously injured, it would have changed things even longer. And, of course, the worst outcomes can change whole lifetimes . . . or cut them too short.

In a perverse way, I find these random events to be fascinating; on a macro scale you can predict them (number of accidents in a city per year, divided by number of days, etc.), but on the micro scale it's highly unlikely to achieve any degree of certainty when dealing with these events. So, for us gamers -- or those with looming column deadlines -- the question arises . . . how do you work things like this in?

Unfortunately, there usually isn't much of a good way to determine in a roleplaying game when such an event will happen, without GM fiat: "Okay; you got a critical failure on your driving roll, so . . ." There also often isn't a way to incorporate it in that truly spontaneous random way that can throw the entire campaign for a loop (which can be a good thing, depending on your style); I suspect many GMs -- myself included -- are reluctant to disrupt an otherwise orderly game with something bizarrely random.

Speaking of bizarrely random -- and I'm spoiling a movie from the last millennium, so skip this paragraph if you don't want to read about *Magnolia* -- one of the most striking things about *Magnolia* is its (in)famous "rain of frogs" event. From a narrative standpoint, it comes out of left field, but it completely encompasses all other action in the film, sending it diverging to something completely different.

So, if I'm a GM who wants to incorporate a specific random scene in such a way that it feels (and ideally is) truly random, how could I do that?

Well, if I were feeling experimental, and my players were willing, I'd be tempted to use a deck of cards. For example, say I've decided that a super-hero's dear frail Aunt Shall is destined to have a heart attack sometime soon. I decide on a card that encompasses this possibility -- say, the Queen of Spades -- and, at the beginning of each scene I draw a card. If it's the Queen of Spades, the event happens that scene; otherwise, I draw another card from the deck next scene, keeping aside the cards already drawn. If I wanted to go for the truly shock-value aspect of "such-and-such happens

right now," I could draw that card at a specific time (say, five minutes into each scene), or at a specific event (say, the third die roll in each scene). Then I don't even need to worry about incorporating the timing of the event; the second I draw that card, the event happens.

Unlike rolling dice, a deck of cards "remembers"; presuming you don't reshuffle, those 52 possibilities get whittled down to 51 as soon as a card is drawn . . . or down to 0, if the anticipated possibility is the one drawn. That makes them very intriguing to me as a GM; if I'm assuming a one-deal event, and I don't reshuffle between adventures, then I know that my scripted surprise event will happen sometime between 1 and 52 scenes from now.

The beauty of this, in my mind, is that it forces a spontaneity that can be as pre-planned as the GM wants (if he wanted Aunt Shall to have a heart attack earlier, he could declare any Queen to serve the purpose).

This technique could be used for rarer, extended events. For example, let's say that the heroes have a demon trapped in a glass jar in their basement, and it *really* wants to escape, and when it does, all hell is gonna break loose (literally). So let's say that the GM has decided this is going to happen a fairly long time in the future, but he doesn't have a firm time in mind; ideally, it will happen during the middle of another adventure, to force the heroes into crisis-control mode rather than "deal with a problem while it's still small" mode. So he picks a card that will serve as the trigger . . . say, the Six of Diamonds. But he decides that it will happen the sixth time he draws that card. So, every scene, he draws a card; once he gets the Six of Diamonds, he reshuffles the deck and starts over, until the sixth time. That means that the event *will* happen; it could be as quickly as the sixth scene (if he draws that Six on the first draw all six times) but no later than the 312th scene from that moment.

As a final note about this technique, I also note that it's possible to use the same deck concurrently, provided each event has its own card. Thus the demon could be threatening to escape at the same time that Aunt Shall's ticker is about to conk out. In fact, with enough random events in the cards (so to speak), it's possible for one event to happen right after the other, forcing the heroes to drive all over town in an effort to put out various fires.

As for me, I think I'm going to do as little driving as possible for the next few days. Just in case.

--Steven Marsh

Wildfires!

for the *d20 System*

by Michael Tresca

Fires happen all the time in fantasy campaigns: wizards blow things up, archers dip their arrows in flaming pitch, and dragons breathe the stuff all over the place. But what happens when things get out of hand?

Starting the Fire

The majority of spellcasters give little thought to the consequences of their pyrotechnics, an oversight that can have deadly consequences under the right conditions. Whenever an area effect spell that inflicts fire or lightning damage strikes suitable terrain, consider the possibility of starting a fire. Light undergrowth actually has the highest likelihood of being set ablaze because it is often very dry and prolific enough to fuel the flames.

Terrain Type	Likelihood of Wildfire
Light Undergrowth	15%
Heavy Undergrowth	10%
Typical Trees	5%

There are also modifiers for the climate of the terrain. Cold climates are less likely to start fires than warmer climates, and more arid climes are conducive to fires than moister ones.

Climate Type	Likelihood of Wildfire
Cold	-5%
Warm	+5%
Marsh	-10%
Desert	+10%

Once a fire erupts, it spreads in the direction of the wind. To determine the direction the fire takes, roll 1d8. This determines the direction of the fire, with 1 being straight at the character and 2 through 8 counting clockwise around the source of the fire. The direction of the fire generally moves in the direction of the wind, but that might change depending on the wind's severity.

Wind Force	Roll for Direction Change
Light	Every hour
Moderate	Every 10 minutes
Strong	Every minute
Severe	Every round

The leading edge of a fire moves at the speed of the wind that drives it. Depending on the severity of the weather, it can move at a leisurely pace or flash past the fastest characters, trapping them.

Wind Force	Wildfire Speed
Light	60 feet/round
Moderate	120 feet/round
Strong	180 feet/round
Severe	240 feet/round

Once a particular portion of terrain is ablaze, it remains so for 2d4×10 minutes before dying to a smoking smolder.

Once a wildfire has erupted, it transforms the surrounding terrain into an inferno. For purposes of determining the effects and strength of the wildfire, its effective character level is equivalent to that of the caster or creature that started it. Thus, a wildfire ignited by a 15th-level sorcerer with an errant fireball spell is considered 15th-level for determining all effects.

Dangers of Wildfires

Extreme Heat

Breathing the air of a wildfire causes the character to take 1d6 points of damage per round (no save). In addition, the character must make a Fortitude save every 5 rounds (DC 15, +1 per previous check) or take 1d4 points of nonlethal damage. A character that holds his breath can avoid the lethal damage, but not the nonlethal damage. Those wearing heavy clothing or any sort of armor take a -4 penalty on their saving throws. In addition, those wearing metal armor or coming into contact with very hot metal take fire damage. On the first round, it suffers 1 point of fire damage, 1d4 points on the second round, and 2d4 points of damage for every round thereafter. A character takes full damage if his armor is affected or if he is holding, touching, wearing, or carrying metal weighing one-fifth of his weight. The creature takes minimum damage if it's not wearing metal armor and the metal that it's carrying weighs less than one-fifth of its weight.

Catching on Fire

Characters engulfed in a wildfire are at risk of catching on fire for every minute they are within the leading edge of the fire. Characters at risk of catching fire are allowed a DC 15 Reflex save. If failed, the character's clothes or hair catch fire and he takes 1d6 points of damage immediately. In each subsequent round, the burning character must make another Reflex saving throw. Failure means he takes another 1d6 points of damage that round. Success means that the fire has gone out.

A character on fire may automatically extinguish the flames by jumping into enough water to douse himself. If no body of water is at hand, rolling on the ground or smothering the fire with cloaks or the like permits the character another save with a +4 bonus.

Those unlucky enough to have their clothes or equipment catch fire must make DC 15 Reflex saves for each item. Flammable items that fail take the same amount of damage as the character.

Smoke Inhalation

Wildfires naturally produce a great deal of smoke. A character who breathes heavy smoke must make a Fortitude save each round (DC 15, +1 per previous check) or spend that round choking and coughing. A character who chokes for 2 consecutive rounds takes 1d6 points of nonlethal damage. Also, smoke obscures vision, providing concealment to characters within it (20% miss chance on a successful attack). Wildfire Terrain

Terrain Features	Category of Wildfire			
	Light	Moderate	Strong	Severe
Firestorm	5%	10%	15%	20%
Fire Tornado	1%	2%	3%	4%
Crowning Wildfire	10%	20%	30%	40%
Crawling Wildfire	10%	20%	30%	40%
Jumping Wildfire	20%	30%	40%	50%
Burning Debris	20%	30%	40%	50%
Fire Gout	5%	10%	15%	20%
Fire Gate	--	--	--	1%

Firestorm

Firestorms occur when conditions become so hot due to the burning gases that all flammable material in the area ignites simultaneously. The effect is a firestorm spell as cast by the wildfire's equivalent level that lasts for 2d4×10 minutes.

Fire Gate

The wildfire becomes so hot that it opens a temporary gate to the elemental plane of Fire. The gate lasts only for 2d4 rounds. Fire creatures are likely to come through the gate, including azer, fire elementals, efreeti, fire giants, hell hounds, magmin, fire mephits, magma mephitis, steam mephitis, pyrohydras, rasts, salamanders, red dragons, and thoseua.

While within 100 feet of the fire gate, spells and spell-like abilities with the fire descriptor are both maximized and enlarged (as if the Maximize Spell and Enlarge Spell had been used on them, but the spells don't require higher-level slots). Spells and spell-like abilities that are already maximized or enlarged are unaffected by this benefit. Spells and spell-like abilities that use or create water (including spells of the Water domain and spells that summon water elementals or outsiders with the water subtype) are impeded. Fire Tornado

Whipped about by the superheated air of a wildfire, fire tornados spring out of the wildfire like devious imps. All ranged attacks are impossible (even with siege weapons), as are Listen checks. Large-sized or smaller creatures must make a Fort save (DC 30) or be sucked towards the fire tornado. Creatures on the ground are knocked prone and dragged 1d4×10 feet towards the fire tornado, taking 1d4 points of nonlethal damage per 10 feet. Flying creatures are blown 2d6×10 feet towards the fire tornado and take 2d6 points of nonlethal damage due to battering and buffeting. Huge creatures must make a Fort save (DC 30) or be knocked down. Huge creatures are knocked prone by the force of the wind. Huge flying creatures are instead blown 1d6×10 feet towards the fire tornado. Gargantuan or larger creatures must make a Fort save (DC 30) or be checked. Checked creatures are unable to move away from the fire tornado against the force of the wind. Checked flying creatures are blown 1d6×5 feet towards the fire tornado.

Those who come in contact with the actual funnel cloud of the fire tornado are picked up and whirled around for 1d10 rounds, taking 6d6 points of bludgeoning damage and 6d6 points of fire damage per round, before being violently expelled (falling damage may apply). While a fire tornado's rotational speed can be as great as 300 mph, the funnel itself moves forward at an average of 30 mph (roughly 250 feet per round).

Crowning Wildfire

Crowning wildfires leap across the tops of overhead terrain. This means that the fire may not actually cause heat damage but instead move over and past the characters. Crowning terrain burns from the top down instead of the bottom up, inflicting the equivalent of smoke inhalation damage (see above) without any smoke as the oxygen is sucked upwards. Encountering crowning wildfire requires a direction roll to determine where it will spread next.

Crawling Wildfire

Crawling wildfires are the usual means in which wildfires spread, burning scrub and brush. It has all the heat and smoke effects of a usual wildfire. Encountering crawling wildfire requires a direction roll to determine where it will spread next.

Jumping Wildfire

Jumping wildfires are the most dangerous. Burnt embers sail through the air ahead of the leading edge of the wildfire, igniting another fire. Treat the effect just as a splash weapon with the character at the center to determine where the fire springs up. 1d8 spotting wildfires can appear in this fashion, spread out amongst the available characters to determine where the fires appear.

Burning Debris

Burning debris falls due to the strong drafts created by a wildfire as well as the weakened structure of burnt trees. Characters must make a Reflex save (DC 15) or be knocked prone by the debris, suffering 2d6 points of bludgeoning damage and 1d6 points of fire damage. If the character fails the Reflex save by 5 or more, he is considered pinned and takes an additional 1d6 points of fire damage a round.

Characters who aren't buried can dig out their friends. In 1 minute, using only his hands, a character can clear debris equal to five times his heavy load limit. The amount of wood that fills a 5-foot-by-5-foot area weighs 1,500 pounds. Armed with an appropriate tool, such as a pick, crowbar, or shovel, a digger can clear loose debris twice as quickly as by hand. A buried character can free himself with a DC 25 Strength check.

Fire Gout

Sometimes wildfires find particularly flammable materials; other times the winds hit the wildfire just right. Whatever the case, the fire blasts instantaneously across an area where the characters are standing. The flame deals 1d4+1 point per effective level of the wildfire in a 10-foot wide line that is as long as the wildfire's speed (see above).

Prevention

Spotting a Wildfire

A wildfire can be spotted from as far away as 2d6×100 feet by a character that makes a Spot check, treating the fire as a Colossal creature (reducing the DC by 16). If all characters fail their Spot checks, the fire moves closer to them. They automatically see it when it closes to half the original distance. Characters who are blinded or otherwise unable to make Spot checks can feel the heat of the fire (and thus automatically "spot" it) when it is 100 feet away.

Controlling the Wildfire

Spells that affect the wind can help control the path of a wildfire, including: control weather, control wind, gust of wind, wind wall. These spells can move the fire in another direction or be used to create conditions such that the fire goes out.

Dousing the Wildfire

The following cold and water spells instantly put out a fire in there area of effect: cone of cold, control weather, create water, freezing sphere, ice storm, quench, sleet storm. Note that this does not necessarily extinguish a wildfire completely.

Firebreaks

The following spells can create firebreaks, or gaps in combustible material that prevent the wildfire from spreading: *animate plants, diminish plants, earthquake, move earth, repel metal or stone, soften earth and stone, stone shape, transmute rock to mud.* These spells do not prevent jumping wildfires, which can only be protected against by a combination of both a firebreak and magical wind.

Wildfires in Fantasy

Most medieval and even Renaissance-era cultures simply do not have the means to combat a wildfire. After the first few minutes, a wildfire rapidly spreads out of control, burning a huge swath of vegetation in the direction of the

prevailing winds. If characters are present at the beginning of a wildfire, they have little time before it spreads beyond their ability to stop it.

Beyond attempting to directly quench the fire or prevent its spread, most locals will simply gather as much of their valuables as they can and flee for their lives. Animals will certainly follow suit and instinctively know how to survive wildfires that occur naturally due to lightning storms.

On the other hand, some creatures intentionally set wildfires as part of their tactics. Certainly, red dragons and fire giants will begin blazing infernos to give them an advantage before beginning a raid. Some beings, like magmin, mephitis, and salamanders, are merely capricious and enjoy the effects of a wildfire. Still others can't help but set the place on fire merely by showing up, like fire elementals.

Of all the creatures most likely to work with characters to stop wildfires, treants are the prime candidates. They use their animate trees ability to create a firebreak, commanding the animated trees to shore up dirt while other trees move away from the conflagration. The problem is that treants move very slowly and wildfires move very fast, making it nearly impossible for treants to effectively stop a wildfire without the help of druidic magic.

Druids are not necessarily implacable enemies of wildfires and may even see them as beneficial. Wildfires can clear out unwelcome visitors as well as spark regeneration in barren areas; indeed, wildfires are an important part of the lifecycle of many forests. To prevent wildfires from raging out of control, druids might create controlled fires, intentionally burning off the debris that helps wildfires spread.

As you can see, wildfires are serious business. The next time a spellcaster decides to blow up the surrounding terrain around a group of hobgoblins, he might think twice before reaching for his trusty fireball.

Sylvania Unbound

Tree-Spirits as Characters in *GURPS*

by William J. Keith

Following the trail blazed by the Omniscient Eye and the Suppressed Transmission, this article provides one possible *GURPS* template for a race of sentient trees. Rooted in distant soil, the wandering spirits from this sylvan race awaken their inner magic and send their minds exploring, learning, and talking with the legged creatures of their world. Whether the tree-race is a secretive enemy of the unrooted meat-things, or an ally of man that patiently drinks sunlight and contemplates human history as it rushes by, using the description below will allow trees at moderate point levels as PCs, villains, supporters, or many other useful and interesting NPC niches.

Sentient Tree template

Racial (-208 points): This is the base racial template.

Attributes: **ST** 0 [-100]; **DX** 0 [-200]; **IQ** 11 [20]; **HT** 10 [0]

Secondary Attributes: Dmg 0d/0d (1d-1/1d+1 with TK), BL 0 lbs (20 lbs with TK), HP 20 (Size, -30%) [28], Will 11, Per 11, FP 10, Basic Speed 2.5, Basic Move 0 [0], SM +3

Social Attributes: Treetongue (Native/None) [-3], TL0 [-15 in a generally-TL3 world]

Advantages: 360 Degree Vision (Magical, -10%) [23]; Deep Sleeper [1]; DR 2 (Semi-Ablative, -20%) [8], Doesn't Breathe [20], Doesn't Eat or Drink [10], Extended Lifespan 3 [8], Injury Tolerance (Homogeneous, No Eyes, No Head, No Neck) [57]; Resistant (environmental syndromes) [15]; Sanitized Metabolism [1]; Subsonic Hearing (also normal human range; Magical, -10%) [5]; Telekinesis 10 (Magical, -10%) [45]; Telecommunication (Telesend) (Magical, -10%; Racial, -20%; Broadcast, +50%) [36]; Temperature Tolerance 4 (15 to 110 degrees) [4]

Disadvantages: Cannot speak (Mute) [-25]; Dead Broke [-25]; Dependency (fertile soil and sunlight, very common, daily) [-15]; Fragile (Combustible) [-5]; No Legs (Sessile) [-50], No Manipulators [-30], No Sense of Smell/Taste [-5], Numb [-20], Phobia (Fire) (12) [-5]; Vulnerability (Fire (Common), x2) [-30]

Features: Affected by Plant spells (though not Animate Plant); awake for 2/3 of the year and hibernate in winter; subject to diseases and poisons, albeit mostly *different* from those of humans; Taboo Traits: Fixed ST and DX [0]

Skills: Brawling-10 (DX/E) DX+10 [39]

Variants: The Size Modifier, Temperature Tolerance, and Extended Lifespan are all selected for typical oaks or pines found in temperate environments. GMs may prefer that tree PCs sleep daily rather than yearly; this may lead to difficulties re-establishing contact with a party on occasion (a difficulty alleviated if the entire group are trees), but will allow the PC to be active in winter. Substituting Innate Attack (TK), a new innate attack specialty, for Brawling will reduce basic damage, but will allow mage PCs to buy spell-attack skills from their racial default instead of from 0. An intriguing line of cultural development could use this as the base skill for a martial art (Tree Kei?) that makes good use of the fighter's bodiless state, complete with holds, throws, and even a related Trained by a Master advantage and exotic techniques like Power Blow and Pressure Points.

As this template stands, a sentient race of trees is more capable of self-defense than a mere plant but can still see much use in human allies. . . or minions. For a number of possible settings with different relationships between man and tree, see the Suppressed Transmission article mentioned earlier.

Adventuring Tree (+258 points, for a total cost of 50 points)

A number of sentient trees choose to interact with the walking creatures. Those that do not already express Magery naturally undergo a regimen of training to hone their species' innate powers of vision, first awakening their native senses' underlying magical talent and then focusing it into the ability to project their viewpoint completely away from their body. They stretch their species' mental communication to enable contact with other sentients. The training takes a very long time, but trees have the years to spend. (It's possible for mage-trees to interact with humans without learning a projection ability, through spells like Dream-Sending or Communication, but this interaction is necessarily limited by the number of spells they can cast and maintain.)

Once the training is complete, their options are open. They learn a local species' language, and usually how to read and write in it, as well as a regional Cultural Familiarity. Some even acquire material possessions, usually held in legal trust or as letters of credit. Add the following traits to the racial template:

CF: Add one foreign cultural familiarity [1]

Language: Add one language, spoken and written [6]

TL: Increase to campaign normal [15 for a TL3 campaign]

Advantages: Buy off the Racial limitation to Telesend [6]; add Magery 1 [15]; and Warp (Magical, -10%; Projection (affect substantial) -0%; Blind, +50%; No Strain, +25%; Reliable 10, +50%) [215]

Magery is Magical Talent, and affects the IQ roll to move the projected viewpoint; in the normal run of things, a sentient tree initially makes a projection at some penalty for a long distance projection done blind, and then moves in short-distance hops to points within its projected arc of vision. Theoretically, this requires many IQ rolls, but a character with IQ 11 and Magery 1 is rolling against a 17 with a single second of concentration to move 10 yards in a direction he can see, and the No Strain enhancement means only a bit of wandering even on a critical failure, so as a practical matter moving around at walking speed can be safely assumed. Note that the tree's senses, as well as its projection, are subject to magical shielding: Scryguard, Scryfool, Astral Block, and the like all resist its abilities.

Trees who wish to become skilled mages must overcome the limitations of their inability to gesture and speak. Some first seek a means to possess bodies -- willing or not. Others turn to a tradition of tree lore kept by the mystics of their kind. These trees turn *themselves* into symbol tokens. The gnarled, ancient priests of the runes carve the eldritch letters into their very trunks, and the recipients study diligently the Symbol Drawing and rune-skills needed to activate their powers.

Use the Ogham alphabet, with runes purchased by character points: in a low-magic campaign, these cost 4 for Easy runes, 12 for Average, and 24 for Hard. Campaigns with more common enchantments will decrease these values. Each prominently carved rune also counts as an Unnatural Feature for a tree. As usual, 5 Unnatural Features is the maximum, but only nonadventuring trees will likely be such generalists in these difficult studies -- however, such hermits are probably masters of many strange lores indeed. With divinatory, communicative and manipulative spells, they might well exert influence on cultures both rooted and mobile.

* * *

A sentient tree can function in a number of capacities given its ability to sense and act -- invisibly, inaudibly, and intangibly, without endangering its physical body any more than the dangers a normal tree faces -- at a remote location anywhere on the world. With a 50-point template, 50 points remain for customization for a 100-point character. Some possible adventuring tree characters, and the epithets their countrymen have given them:

Awan, Who Delights in Paper   *100 points*

To the Adventuring Tree template, add:

Attributes: **IQ** 13 [40]

Advantages: Comfortable [35]; Ally ("marker" manservant; 0-25 points, constantly) [4]; Reputation ("that intriguing spirit with the eye for trade," +1, everyone in the city, all the time) [5]

Disadvantages: Honesty (6) [-20]; Overconfidence (12) [-5]; Xenophilia (12) [-10]; Pacifism (Self-Defense Only) [-15]; Likes to hover invisibly over crowded bazaars or bars [-1]; Responsive [-1]

Skills: Connoisseur (Literature)-13 [2], Games (Chess)-13 [1], Law (local business law)-12 [2], Literature-13 [4], Merchant-14 [4], Politics-13 [2], Savoir-Faire-14 [2], Search-12 [1]

Equipment (no "settled" assets): Cash and credit at local banks, $500; shares of a local import/export firm, $1000; a small office for private discussions and mailing address, $250 and a small monthly rent paid from his earnings; $250 worth of rare and antique books, for reading as well as trade, kept in his office.

Awan deeply enjoys interacting with the nuances of human society and began exploring the world when he was younger. For years, he traded on his reconnaissance abilities with adventuring bands, earning a little money in letters of credit that he occasionally used through attorney intermediaries. Having earned some disapproval for poking behind one too many locked doors, he has publicly done penance and is now known for his ethical standards. Looking for a bigger challenge than invisibly scouting old ruins, he's recently decided to take on serious commerce and politics, seeing if he can ultimately gain legal ownership of the land on which he resides. He is just starting to be a political force in the nearby city. His fellows find Awan's desire for cash and real estate quite odd, despite Awan's attempts to explain the advantages of having humans agree one owns the land one lives on.

The manservant varies, but is generally a local teenager who cleans up nicely, will be on call 24/7 for a Struggling wage, and can keep quiet while Awan does the talking. Most of the time, his or her purpose is simply to prominently display Awan's sigil and alert people that Awan is near. (He could carry it himself, but he finds that people react better when they're given warning before the obvious magic starts in.)

Awan works best in a world where sentient trees are at least not completely unknown to humans, so that foresters know to avoid a tree that pushes them away and whispers to them; that way, "Who Delights in Paper" doesn't become a rather disturbing epithet. Adventurers might have need of one of Awan's old books, could use him as a local business or high society contact, or might have adventured with him as a scout in his early days (decrease his Wealth to Poor, remove Honesty, remove Law, Merchant and Savoir-Faire skills, and add 4 points to Innate Attack, 1 point to Search, and 1 point in Professional skill (Mercenary scout)). A higher-point version could have Merchant Rank or even an elected office, display more political savvy, be richer, and have a wider knowledge of rare and curious tomes.

Errad, Who Eats Darkness   *100 points*

To the Adventuring Tree template, add:

Attributes: **IQ** 12 [20]

Secondary Attributes: FP 12 [6]

Advantages: Muin (Food) [4]; Straif (Weaken) [12]; Uath (Body) [24]

Disadvantages: Careful [-1]; Chronic Pain (Severe, 9 or less) [-10*]; Obsession (destroy the ruling family of the Duchy of Melhanne) [-10], Secret (physical location; possible death) [-30]; Uncongenial [-1]; Unnatural Features (3 prominent carved runes) [-3]

* Muin, carved as the bramble rune, occasionally flares up where it is cut on Errad. For color's sake, it is suggested that

the rhythm of rolls be yearly instead of daily, with the interval being not 2 hours (1/12 of a day), but one month (1/12 of a year). During these painful weeks, Errad hunkers down, biding his time.

Magic: Symbol Drawing (Ogham)-14 [12], Muin (Food)-14 [4], Straif (Weaken)-14* [4], Uath (Body)-14 [12]

* Includes +1 since Errad is a blackthorn.

Skills: Area Knowledge (Duchy of Melhanne)-12 [1], Current Affairs/ TL3 (Regional, Duchy of Melhanne)-12 [1], Farming/TL0-11 [1], Poisons/ TL3-12 [4]

Decades ago the forest in which Errad lived was deliberately burned; the Duchy was soon to be obliged to turn it over to border rivals due to developments at court, and rather than let their foes have use of its bounty, the Duke ordered it torched. Errad lost family as well as acres of carefully-tended landscape and human serfs he had watched over from afar; he survived thanks to his native telekinesis and a nearby spring. Wrathful, he sought out shunned hermits of the rune-lore willing to teach him the killing magics of poison and rot. Now he harasses the Duchy from afar and has sworn to eliminate his tormentor's entire extensive family, which is gaining a reputation for mysterious illnesses and disastrous accidents. The latest Duke (Errad has already assassinated two) has employed mages to seek his family's unseen foe, so Errad must act cautiously: if his Secret is revealed, he will gain an implacable and powerful Enemy.

Errad, with this or any similar foul obsession, is almost certainly going to enter play as a nearly undetectable villain, to be hunted by specialized mages and stories of dangerous depths of the once-burned forest. Such a plot works in a campaign where the trees have kept themselves distant from humans, and at most only a few forest folk know certain trees are to be left alone. A higher-point version of Errad may have received Muin carved as the vine-rune, Control, as well, giving him a wide variety of dangerous spells.

Tyrol, Who Jokes   *100 points*

To the Adventuring Tree template, add:

Attributes: **IQ** 12 [20]; **HT** 9 [-10]

Secondary Attributes: HP 13 [-9]

Advantages: Ailm (Create) [24]; Ailm (Sound) [4]; Beth (Image) [12]

Disadvantages: Curious (6) [-10]; Dreamer [-1]; Imaginative [-1]; Impulsiveness (15) [-5]; Habit ("Pfft, it's just money. What do we need that stuff for?") [-1]; Sense of Duty (Adventuring companions) [-5]; Trickster (6) [-30]; Unnatural Features (3 prominently carved runes) [-3]

Magic: Symbol Drawing-15 [16], Ailm (Create)-15* [12], Ailm (Sound)-15 [8], Beth (Image)-15 [12]

* Includes +1 since Tyrol is a fir.

Skills: Artist (Illusion)-13 [8], Fast-Talk-11 [1], Intimidation-11 [1], Mimicry-10 [1], Musical Instrument (Illusion-based "synth")-12 [4], Performance-12 [2]

Tyrol is barely an adult as trees go, and is even a little bodily fragile due to growing up in some poor soil. Still, that hardly matters as she wanders mentally. She has a quick wit and a deep curiosity about the world of fast-living, mobile humans. Things really *happen* out there!

She makes a useful addition to an adventuring party, being a specialized illusionist with a legitimate job -- performing artist -- and a number of support skills. She can conjure up entire backgrounds, casts, and symphonies from empty air, maintaining a complex illusion, usually a singer or an actor, indefinitely as long as she is not "heckled" (deliberately disbelieved). She also has a yen for tweaking the noses of over-serious humans with a well-placed illusion, which has

gotten her and her friends into trouble more than once.

Tyrol is by far best off in a campaign where sentient trees are a known race, though as a mysterious wandering spirit she might gain interesting notoriety. A higher-point Tyrol has grown up a bit, increased her performance skills, settled down a little, and would certainly like to bring her HT and HP closer to racial norm, possibly through careful self-horticulture.

The Labyrinth of Five Essences

An Adventure for *GURPS*

by Matt Riggsby

Character development. Social interaction. Grand strategy. Internal conflict. These are all well and good, but sometimes you just need to kill things and take their stuff. This adventure is appropriate for a small number of modestly powerful characters (say, four to six characters built on 100-150 points).

In this adventure, the heroes become aware that an important magical artifact is at the center of the ruins of a stronghold built by a now-defunct magical brotherhood. That artifact is behind a series of magical barriers. The barriers can be deactivated by gathering talismans, one for each of the brotherhood's mystical "essences," contained in their respective chambers, and inserting them into niches in a series of pillars around the protected zone. When all five are in place, the barriers will drop and anyone can enter or exit the area at will. To reactivate the barriers, the talismans must all be removed from the niches, though the PCs may not know that. Once they're through the barriers, they can retrieve the artifact, but they have to face a ferocious demon first.

The Labyrinth

The Labyrinth of Five Essences was constructed by a mystical brotherhood devoted to the study of certain magical forces. They devoted themselves to the study of shadow, stone, water, wind, and wood. The labyrinth was built as a combined refuge, treasury, and safe place for research. Long ago, it became the site of a battle between a demonic army and the wizards of the brotherhood. The fight destroyed the stronghold which once stood over the labyrinth, wiped out the brotherhood, and eliminated most of the attacking demons. The most notable survivor was the ferocious demon prince who led the army. He was lured into a trap and confined. By the time the battle was over, anyone who knew how to release him had either fled or died. And so he has been waiting there for countless years.

In the intervening centuries, it has decayed somewhat. Some of the finest treasures were carried off by the last remaining members of the brotherhood or their servants, others were destroyed, and yet more have crumbled away. Of what remained, some have been taken away by animals fascinated by shiny objects and others looted by members of the occasional band of orcs or goblins which have found temporary shelter there. Still, a few durable valuables remain in the darkness, and several powerful artifacts can still be found at the center of the labyrinth. Unfortunately for prospective treasure hunters, the center of the labyrinth is where the demon is confined . . .

1. Chamber of Shadow

This chamber and its surroundings are in constant darkness. Lights burn less brightly, or the light is simply swallowed up around the room. The outermost shaded two rings of hexes around the chamber impose a -3 darkness penalty, the next two rings -6 and the chamber itself -9; lights provide only half of their usual bonus against darkness. The blind bear sleeps in this chamber. Unless the PCs are completely silent as they approach, he'll be awake and grumpy. He's also wearing the talisman for this chamber on a chain around his neck.

The room also contains the scattered pieces of a suit of armor: chain arms and legs and a well-decorated breastplate. It provides no more protection than

The Map

The numbers here refer to locations on [the map](#). The pages can be printed out (it'll take a lot of ink on a color printer, but it'll be worth it), taped together, and used as a tactical map with miniatures, Cardboard Heroes, or whatever markers you desire. The map includes art kindly provided by

regular armor and is not magical, but the sculpted, gold-chased breastplate would sell for $3,000.

2. Chamber of Stone

The corridors around this chamber are littered with stones, half as tall as they are wide on the map. None of the passages are completely blocked, but getting around requires some climbing, and sprinting is impossible. The chamber is inhabited by three small earth elementals, each of which has a swarm of fire bees living in them. The stone talisman floats on the surface of a pit of lava in the center of the room. Even a slight touch does 1d6 burning damage, and falling or stepping into it does 6d6 burning damage/turn.

Sharp-eyed adventurers may notice that some of the rocks in the chamber contain opals. On a successful roll on an appropriate skill, such as Jeweler or Prospector, characters may recover 1d6 opals (doubled for a critical success) of 1d6 carats each (roll size separately for each opal).

3. Chamber of Water

The floor of the water-covered area drops of sharply, 3 feet per hex away from the water's edge, down to a depth of 21 feet. The talisman is at the bottom of the center of the chamber, on a necklace pinned to the floor by a large knife made out of transparent glassy material. The knife provides no magical bonuses, but it performs as though it were a Fine quality metal knife; the unusual weapon would be worth at least $1000. The chamber is also occupied by six leech snakes.

4. Chamber of Wind

This chamber and its surroundings are filled with a howling whirlwind (blowing clockwise, should it come to matter). Hearing rolls are at -3 in any hex adjacent to the clouded area on the map, -6 within the area, and -9 in the chamber itself. Anyone in the chamber must roll against ST each turn to avoid being knocked over. The room also has two flickering columns of lightning (the blue symbols on the map). Anyone passing through either hex must Dodge or take 2d burning damage; metal armor provides no protection.

The talisman for this chamber is being tossed around with an effective Move of 8. Any character facing the talisman can attempt to catch it (roll vs. DX-3) at it passes through his hex (or vice versa). The room is occupied by four air elementals who will use their Air Jets to knock other characters down or into the lightning columns, or just keep the talisman out of their hands. The room contains nothing resembling treasure.

5. Chamber of Wood

Despite being deep underground, this chamber and its surroundings are filled with plant life, from tangles of vines and high grasses to a tree in the chamber itself. Each turn a character moves through the overgrown area, roll 1d6. On a 6 (or on a 4, 5, or 6 within the chamber itself), he steps into a patch of trapper vines somewhere along his path. The talisman in this chamber is embedded in the old tree growing in the center of the chamber. It has to be cut out to be recovered; the tree will do its best to prevent that.

Scattered through the plants, characters may find the pages of a "book," with dense text engraved on thin sheets of bronze. The entire text contains complete instructions on how to cast five spells (these should be spells which are typically rare or restricted in the campaign; if there are no such spells, it may teach five unusual skills, such Enthrallment or cinematic martial arts skills and maneuvers). It could be a valuable resource for PCs to learn rare skills, or at least be a salable object worth several thousand $. However, the entire text, made up of sheets nearly a tenth of an inch thick, weighs about 450 pounds.

6. Orcish Lair

A group of orcs has temporarily set up a refuge in a section of the northeast section of the labyrinth, reaching it through a hidden, natural fissure in the earth and a collapsed section of ceiling. There are about twelve orcs in the band, adjusted to the size and power of the PC group; at any given time, just under half of them will be asleep (unless awoken and sent out to fight the heroes) and at least two will be wandering the maze, picking over the ruins for lost treasure but not having a great time of it. The orcs have been using their corner of the labyrinth as a hideout for several weeks and have settled in fairly well. They know the labyrinth reasonably well, and they learned enough not to enter any of the chambers (there used to be twenty orcs). If they become aware of the PCs, they'll attempt to surround them and, as is appropriate for this kind of adventure, try to kill them and take their stuff.

The orcs have few possessions beyond their weapons and some unpleasant but technically edible provisions. Most of the orcs have coins and small trinkets with a total value of $2d6×5 each, while the leader has goods with a value of $3d6×10. Ironically, since they have no mages with them, they've overlooked an actual treasure. PCs may find a small and somewhat tarnished but nicely decorated tin box tossed into a corner. It has a false bottom, which reveals a cubic foot of space created by Hideaway and enchanted with the Preserve spell. In addition to the innate value of the item, it contains a pair of healing potion and several ounces of spices with a value of $2500.

Wandering Monsters

The corridors of the labyrinth aren't packed with critters with nothing better to do than fight with wandering adventurers. However, there are a few treasure-hunting orcs on hand who might stumble over the PCs and vice versa. Assuming the orcs haven't already been found and defeated, roll 1d6 every half hour of in-game time. On a 6, a pair of orcs have come close enough to see or hear the PCs. The orcs will, by preference, get close enough to see how formidable they appear and then retreat to get their companions. If they can't get away, they'll fight to the death.

7. The floor is unstable in this section, undermined by subsurface erosion over the centuries. Every character who walks through must roll 13 or less on 3d6. On a failed roll, a section of floor collapses and, if the PC fails a DX or Acrobatics roll, he falls 6 feet onto a hard surface, leaving an open pit in the floor. Once the PCs have been through the area, assume that the un-collapsed sections of floor will continue to hold weight.

8. There is nothing in this section; the number is here simply to distract players looking at the map.

9. This section of corridor is also unstable, as per #7.

10. This section of corridor is crawling with shock worms. There are at least 20 (no more than one per hex). They're disinclined to fight, but PCs who step on them inadvertently will be shocked.

11. There's nothing here, either.

12. The Prison

The central circle is very well protected, with the equivalent of Utter Dome and Pentagram (enchanted with a skill of 25, in case anyone tries to challenge it). The artifact the heroes have come for is inside the barrier, as is demon prince, and he's *very* grumpy. The demon prince is armed with a pair of enchanted Fine thrusting broadswords. One is enchanted with Flaming Weapon and has Armor Devisor 2, the other is enchanted with Icy Weapon and can effect insubstantial objects. His first impulse is to kill anyone he sees and he will fight to the death if it comes to that. If the PCs flee, he'll escape the labyrinth and lay waste to the countryside. If that happens, people in the effected region may or may not know that the PCs are responsible, but one hopes that they'd have the decency to feel guilty about it.

The Monsters

Air Elementals

ST 6; **DX** 12; **IQ** 8; **HT** 8
HP 8; Will 8; Per 8; FP 8; Basic Lift 7.2; Damage 1d-4/1d-3; Basic Speed 6; Basic Move 6; Air Move 12

Advantages: Doesn't Breathe; Doesn't Eat or Drink; Doesn't Sleep; Flight (Lighter Than Air); Immunity to Metabolic Hazards; Injury Tolerance (Diffuse)

Disadvantages: Callous; No Fine Manipulators; No Legs (Aerial); Vulnerability (Vacuum and wind-based attacks) (Occasional) (x2)

Skills: Innate Attack (Beam)-13

Spells: Air Jet-15

The Blind Bear

ST 25; **DX** 10; **IQ** 4; **HT** 13
HP 25; Will 11; Per 10; FP 13; Basic Lift 125; Damage 2d+2/5d-1; Basic Speed 5.75; Basic Move 5

Advantages: Claws (Sharp Claws); Damage Resistance (3); Discriminatory Smell; Sonar; Teeth (Sharp Teeth)

Disadvantages: Bad Temper (12 or less); Bestial; Blindness; Cannot Speak; Hidebound

Skills: Blind Fighting-14; Brawling-12; Stealth-14; Tracking-13

Earth Elementals

ST 13; **DX** 8; **IQ** 6: **HT** 13
HP 13; Will 6; Per 6; FP 13; Basic Lift 34; Damage 1d/2d-1; Basic Speed 5.25; Basic Move 5

Advantages: Damage Resistance (2); Doesn't Breathe; Doesn't Eat or Drink; Doesn't Sleep; Immunity to Metabolic Hazards; Injury Tolerance (Homogenous); Pressure Support (3); Vacuum Support

Skills: Brawling-12

The Demon Prince

ST 18; **DX** 13; **IQ** 14; **HT** 14.
HP 26; Will 14; Per 14; FP 14; Basic Lift 65; Damage 2d-1/3d+2; Basic Speed 6.75; Basic Move 6; Aerial Move 12; Block 7; Dodge 5; Parry 8.

Advantages: Claws (Sharp Claws); Damage Resistance (3); Doesn't Eat or Drink; Doesn't Sleep; Extra Arms (2); Extra Attack (1); Flight (Winged); High Pain Threshold; Immunity (All Mind Control); Immunity to Metabolic Hazards; Magery 0; Night Vision (5); Status (Demonic) 4; Striking ST (2); Teeth (Sharp Teeth)

Disadvantages: Appearance (Monstrous); Bloodlust (12 or less); Bully (12 or less); Callous; Fragile (Unnatural); Lifebane; On the Edge (15 or less): Pacifism (Cannot Harm Innocents) (Prevents direct harm of truly good or holy folks); Sadism (12 or less); Selfish (12 or less); Social Stigma (Monster)

Skills: Acting-13; Brawling-15; Broadsword-16; Fast-Talk-15; Hidden Lore (Demon Lore)-13; Intimidation-18; Leadership-15; Shield-14; Stealth-13

The demon prince started out unpleasant, and having been trapped in a small room for centuries, his mood has not improved. He speaks several demonic languages which are still current, but the only human tongues he knows are several centuries out of date. He may be able to communicate with linguistically skilled adventurers, but he's probably

disinclined to do so.

The demon prince is wearing full plate armor (90 lbs.) and is carrying a medium shield and two broadswords, for light encumbrance.

Fire Bees

See here for stats for fire bees.

Leech Snakes

Leech snakes are dangerous aquatic parasites which drink their victims' blood. Treat them as rattlesnakes (p. B458), but instead of a toxin follow-up, they automatically latch onto any living target after any attack which penetrates DR and do 1 HP of damage every subsequent turn. A leech snake can be ripped off (treat as breaking free of a grapple), but the target takes an additional HP of damage if successful.

The Old Tree

ST 22; **DX** 11; **IQ** 10; **HT** 12
HP 40; Will 10; Per 10; FP 12; Basic Lift 146; Damage 2d/4d; Basic Speed 5.75; Move 0.

Advantages: Claws (Blunt Claws); Damage Resistance (4) (Semi-Ablative); Doesn't Breathe; Extra Arms (3); Injury Tolerance (Homogenous); Lifting ST (5)

Disadvantages: No Legs (Sessile); Numb

Skills: Brawling-15

Orcs

For orcs, use the templates here. Most are armed with broadswords and axes in equal proportions, carry small shields, and wear leather armor. The leader has a sword, chainmail, a medium shield, and a pot helm.

Shock Worms

The stats for shock worms can be found here. The shock worms in the labyrinth are all regular sized.

Trapper Vines

Trapper vines are animate plants which entangle their prey, kill them, and live off of the nutrients their bodies provide. When someone steps into a hex of trapper vines, the vines will attempt to grab the character (treat as a Binding attack), pull him down (treat as a Takedown), and fully immobilize him (treat as a Binding attack with the Engulfing attack). An immobilized target then suffers the effects of suffocation. Trapper vines have a ST of 1 per vine; most hexes contain 1d6+6 vines, but those in the Chamber of Wood contain 2d6+8.

Pyramid Pick

Numbers League

Published by [Bent Castle Workshops](#)

Game designed by Ben Crenshaw & Chris Pallace

Graphic design by Ben Crenshaw

Characters & illustrations by Chris Pallace

Rules & translations by Tina & Chris Pallace, Janet & Ben Crenshaw, Emily Durstewitz, Anne & Rien Visser, Ricardo Arguello, & Word Magic

120 cards (25 heads, 25 bodies, 25 legs, 24 double-sided villains, & 21 devices), four miniature *Numbers League* pads; full color, boxed, for two to four players, 30 minutes to play; $19.95

Now is the time for heroes. Infinity City is under siege by several supervillains, and they need to be brought to justice. Who will answer the clarion call? The ***Numbers League*** is ready for their "adventures in addiplication."

The object of the game is to collect the most points worth of supervillains.

The villains spread throughout the city, though they're pretty orderly folks who do so in a six-by-four grid pattern. They're even in numerical order, if the heroes want to make things easy on themselves. Players get a hand of cards from the play deck, and three more are played into the sidekick beside the rogues' gallery. The rest form the Hall of Heroes (the draw deck, in plainer terms).

A player's turn consists of the action, capture, and energize phases. (Just to kill the suspense, the energize phase means to refill one's hand; the others are more involved.) Everyone gets two plays during their action phase, and this is how heroes are born. They never do things by half, they do them by thirds. To be a functional member of the team, he (or she, or it) needs legs, a body, and a head; devices can make them into more capable crime fighters. If the hand isn't sufficient, cards can also be traded one-for-one with the three sidekick cards, or one may return to headquarters and trade any number of cards in the Hall of Heroes. In the latter case, the hero forfeits his capture phase.

During the capture phase, villains are rounded up and packed off to jail. Each card in a hero has a number, and every criminal has a weakness number. Capturing it requires matching that number, so apprehending the villain with a vulnerability to 12 takes a hero whose total is 12, or two heroes built on six points apiece, or any other combination. The devices can be activated to adjust this further; the little robotic buddy at ×2 turns one "six" character into victory. Anyone can make use of the sidekick in a fight to bolster his ranks, so long as he's currently a complete three-piece partner. If he's just a couple of legs cards and a device he's no good until someone trades out parts with him. With this many variables, there's no way to accurately predict an opponent's plans and little direct inter-player rivalry.

The game can be played at two levels, hero and superhero, with cards identified by yellow or green dots respectively. Once the group graduates, cards can be mixed and the other half of the double-sided villains may be employed, adding variety and some tougher math. Now no total, even negative numbers, is useless. When the last baddie has been packed into the paddy wagon, everyone scores their captures. Villains are worth one to three points each, a number separate from their weakness. This plus the number of devices used throughout the game give the final totals, and the

highest is the winner.

Some of the artwork is a masterpiece of gender ambiguity (getting all three segments to work together without having a woman's head on a man's body is tough), but even if it falls short it's not always that noticeable. The pictures on both the play and villain cards are just too darn colorful and endlessly creative. The vast array of super-stuff shows a wondrous penchant for funny-book features and foes . . . if Bent Castle Workshops came out with a comic book based on this property tomorrow, it would come as a surprise to no one.

Any parents who haven't dealt with negative numbers since junior high might want to bone up before their kids have to school them. The mechanics may just boil down to math, but the interconnected play works in such elegant ways (note one's score is higher if one opts for variables like equipping one's hero with a device) it's hard to remind oneself that this is an instructional exercise. Many games make the educational claim, noting the opportunities for color recognition or memorization skills or whatnot, but few can say they took leisure activities and arithmetic and, adding two and two together, got a game that's so involving there's virtually no difference in the challenge offered to kids and adults.

Sometimes choices become too diverse to recall at a glance which heroes add up to what, so keeping a pencil and paper handy is a useful workaround to prevent recounting one's team members for the umpteenth time. The game actually comes with four tiny pads bearing the game's logo at the top (the rules say pencils are included, though the claim appears only there, but the plastic tray does have space for storing utensils).

Just to pack the learning to maximum density, the rules are also provided in German, French, and Spanish (and these aren't photocopies with new text -- the graphic background design differs for each language). Adding optional rules and play aids for teachers at the website shows Bent Castle is serious about their dedication to the learning experience *Numbers League* provides. The publishers have more than done their job; now it's time for gamers to stand up and be counted.

--Andy Vetromile

Is Gaming on the Right Trek?

Many many moons ago, my group of friends managed to get together for the ***How to Host a Mystery Star Trek: The Next Generation*** edition. This wasn't a non-trivial proposition, as some of those who ended up participating had passing interest (at best) in *Star Trek,* or had passing interest (at best) in gaming. (I've [mentioned before](#) that I believe the ***How to Host a Murder*** series to be a clear and obvious relative of tabletop gaming; the biggest difference is that it's at least somewhat likely to get one's grandma involved in a murder-mystery party compared to a rousing game of ***Underground.***)

Now, for those who haven't played this particular story -- and I'm sure that's about 99.8% of you -- let me tell you about what I *expected* it to be.

In my mind's eye, the game should have revolved around the crew of the *NCC1701-D* trying to work together to solve a mystery, akin to those episodes where folks are standing around the holodeck or sitting around the table of the Ready Room, figuring stuff out.

In reality, the game did *not* provide that experience. Oh, sure, the players were ostensibly dressed as Captain Picard, Data, Troi, and the rest, and that's what the nametags said. But the game instead revolved around a plot contrivance that relied on all members of the show to act like they hated and distrusted each other, and should actively withhold information from the rest of the crew. (For those curious, I seem to recall that the whole plot revolved around nanites -- this was the '90s, remember; everything had nanites -- that made people paranoid and distrustful.)

In other words, not only did players have to roleplay the characters of the *Star Trek: The Next Generation* television show, they had to roleplay them acting like versions of themselves they'd never seen before!

Frankly, the strength of this concept is amazing. I would look forward to playing a Conan game where I play someone named Conan who's actually a waiter at a swanky fantasy restaurant. Or a Superman video game where the titular hero doesn't get to act like Superman, but instead has to fly through endless rings, one touch of which results in instant death. (No wait; they'd [never try that](#) . . .)

Matters were made worse by the fact that the *Star Trek* mystery was so challenging and obtuse (at least, for the 90% of us who had never participated in one of these games before), that even if we *had* cooperated, sat down, exchanged booklets, and actively worked together, there's still not a very good chance that we would've figured it out. (I don't know if I'm giving a SPOILER here, but I seem to recall that a major plot point centered around whether or not an orb --yes, really, a plot-device orb -- was going Weeble Worble Weeble Worble or if it was rather going Warble Weeble Warble Weeble.)

Although the notion of "Why are we playing?" has been discussed here [before](#), I expect the battle to really heat up over the next half-decade or so . . . and how the industry as a whole and its fans react to that question will shape things from here on out. For example, the upcoming ***Dungeons & Dragons Henceforth Edition*** seems to be taking the tack that gamers are playing in an effort to recreate a fast-paced tabletop wargame experience with minis and other goodies, either in person or virtually, creating an environment akin to ***World of Warcraft*** only without kick-butt graphics. Other games have been going in other directions, delivering faster play, more intense roleplaying, more diverse genres, and so on. Still other games (such as ***Battlestations***) seem to be going in the direction of "boardgame that can involve roleplaying."

There are two broad directions that I can see products going here, and it'll be interesting to see how it shakes out. On the one hand, RPG-like games could provide an experience that is up to the players to taylor to their own tastes. This is what they've done for years already, and it's worked okay; whether folks want to play ***Hero System*** like a tactical miniatures game akin to ***Car Wars*** or a dice-only-when-necessary roleplaying experience, they're certainly able to do so if they want. On the other hand, it seems just as likely that games will attempt to reign in player freedom and present a more "official" version of their view of what their games should be played like. While this may seem draconian ("Who're they to dictate how I play my games?") in reality this is how games have traditionally been played

for thousands of years. For example, there's a generally accepted idea of what Chess or cricket or **Boggle** or **Magic: The Gathering** will play like; while people can play with other rules or ideas -- "We're playing **Scrabble,** but with all vowels counting as any vowels!" -- it's almost universally accepted that such folks aren't playing a "true" version of the game. (Even in games with lots of variants there are those who insist on a "pure" form of a game; for example, among diehard poker players, mention of any games involving wildcards will elicit rolled eyes.)

As such, it's at least feasible that, at some point, the idea of playing a game of **World of Darkness** will have a structure akin to other games, perhaps with a set time length, goal structure, or storyline. Whether audiences will accept or even welcome such structure depends on a lot of factors, most notably on whether they give enough of an audience what they want (for example, if folks want to pretend to be members of the *Enterprise,* let them do it!) as well as how much fun it is to play, regardless of audience desire (there's not a lot of outside-the-box player freedom in **World of Warcraft,** but Blizzard seems to be doing okay for themselves.)

And hopefully and of these future mutant games will be more fun to play than our *Star Trek* mystery.

--Steven Marsh

Pyramid Review

Battlestations Supplement #1: Galactic Civil War

Published by [Gorilla Games](#)

Written by Jeff Siadek

Cover by A.D. Hamilton with Patrick Morgan & Mario Zavala

Illustrated by A.D. Hamilton

96-page b&w softcovers & 30 double-sided full-color fighter/mine markers; $24.95

It's **war!!**

Actually it is civil war, and on a galactic scale. As hinted at in the end of *Battlestations,* the sci-fi board game from Gorilla Games that combined frantic roleplaying and personal action with ship-to-ship combat, trouble is brewing in the Universal Republic. Not that war is unknown within the Universal Republic, but in an age when cheap cloning means that lives are disposable, such conflicts tend to be petty and last only until one side decides that it can no longer afford to replace both lost clones and lost ships.

This war is not petty. The very future of the Universal Republic is at stake. Best described as a benign dictatorship, it is happy to monitor these small wars, all while imposing a sizable tax burden that funds the massive fleets of the U.R.E.F. -- or Universal Republic Expeditionary Force -- that are tasked to prevent them from escalating. Of course, the Universal Republic has its detractors and dissenters, but their protests are to no avail. So what happens when a whole race objects?

The Whistlers are a newly discovered species, balls of feathery appendages capable of "puffing" across open spaces, who were readily and happily admitted to the Universal Republic. Unfortunately the newly arrived and accepting Whistler senator represents only a minority on his home world. When the Whistler leader finally appeared, it politely declined to join the Universal Republic. Therein lies the rub; once offered, an invitation cannot be refused. In the ensuing constitutional crisis, the Whistler refusal galvanized the dissenters into action as they reclaimed the sovereignty of their worlds and seceded from the Universal Republic. In response the loyalist forces of the U.R.E.F. are moving to put down this rebellion that threatens both the very nature of the Universal Republic and its tax revenues.

Battlestations Supplement #1: Galactic Civil War enables the players to decide the future of the Universal Republic. It includes a new species, new equipment, and new rules for both shipboard and ship-to- ship action. All are supported with new Ship Modules and new counters. Two thirds of the supplement is devoted to a complete campaign, comprised of 36 individual missions. By winning each mission, the players can influence various factors that will determine the outcome of the war and thus the Universal Republic's future.

The new additions can be divided between the personal and the ship related. Characters can now perform the coup de grâce, quick draw, and grappling maneuvers, and possess new special abilities, most of which revolve around the supplement's new fighter rules and Ship Modules. A character can now be an Ace Fighter Pilot (+1 to advanced fighter maneuver rolls), a Fighter Jock (roll to avoid damage done to his fighter), or Wingman (participate in any dogfight within a hex and help determine which fighter takes damage). A ship's stores can be filled with new, interesting, and probably more lethal equipment. Guns can be upgraded to heavy status and fitted with bipods and scopes, but pride of

place goes to every character's friend, Power Armor. Both bulky and clumsy, it is also very tough, a stable weapons platform, and can be upgraded with several different functions. Although an easy process, in keeping with the game's offbeat nature, any upgrade attempt runs the risk of destroying the armor.

In addition to detailing the new species -- the Whistlers -- the standard layout is given for all of their ships, allowing them to be added to a game. The home worlds of each of the Universal Republic's major species are also given a one-page description. These are not only informative, but in-keeping with *Battlestations'* light background.

The first of the supplement's three new Ship Modules is the plainest, the Cargo Bay. This is a general purpose space in which various items can be stored or installed. These include Power Armor suits, Mine Sweepers, Targeting Computers, spare Fighters, and Capacitors that enhance other Modules on the ship. Like other Ship Modules, the Mine Layer needs an operator, someone with the Engineering skill, who can then lay up to six mines per round. A Mine attacks any vessel that passes through its hex, and come in three other flavors besides the standard explosive version.

Finally, the last new Ship Module is the Fighter Bay, capable of carrying and launching a single fighter. Ships can carry more fighters, two per Cargo Bay. Once launched a fighter can attack other ships or engage in dogfights with other fighters. Weak, but maneuverable, a fighter can also board or ram an enemy vessel, pick up anyone floating in space, and even be grabbed by a ship's tractor beam. Although not made explicitly clear, a fighter carries a crew of two. One should be a pilot with that skill, the other the copilot with the Engineering skill to conduct in-flight repairs. Just as with all ships in *Battlestations,* each species builds its fighters with a different benefit. For example, Whistler fighters make for excellent dogfighters, whilst Zoallan fighters are armored. Fighters can of course be upgraded.

However, at the supplement's heart is the Galactic Civil War campaign. It is designed to be flexible in almost every way possible, enabling the GM to tailor the campaign to his players. To start with, it can be played from either side -- as freedom fighters railing against the oppressive tax regime of the Universal Republic, or as loyalist Republicans suppressing a rebellion. There is even an option for the players to play against each other, one side controlling the secessionists, the other the loyalists. Tables allow for the random determination of enemy strength as well as any plot twists and personalities involved in a particular mission. Essentially, the plot twists -- such as Sabotage and 'Bot Revolt -- and the personalities are a handicapping method, enabling the GM to balance a mission against more capable player characters. The personalities also add a roleplaying element to the campaign.

Although each mission has its own objective, such as capturing escaping prisoners or preventing enemy investigation of a super nova, it also has a campaign objective, the modification of a Campaign Indicator. These come in four flavors -- economic, military, political, and scientific. At campaign start each possesses a value of zero. Successfully complete a mission and its associated Campaign Indicator is raised by one, fail and the enemy's is raised by one. When an Indicator reaches three, it provides a bonus for that side. For example, the bonus for the Military Indicator adds to requisition rolls after a mission, but for the other side, all equipment is upgraded. Once a Campaign Indicator is raised to five, its associated victory scenario can be played and the final outcome of the campaign determined. The GM should not necessarily be informing his players as to the value of the enemy's Indicators, but he should at least be hinting at it, so that the players can react and not be totally surprised. Several suggestions are made as to possible sequels to the campaign, including turning pirate, going into the private sector as merchantmen, or being sent off on deep space exploration. None of the supplements detailing these campaigns are yet available.

Finally, appendices provide surprisingly slight errata for the core game, suggestions as to which of the core game's missions make suitable additions to the Galactic Civil War campaign, four ready-to- play characters, and a short piece of fiction. Physically, the supplement matches the quality of the core game, with decent writing, fun art, and a combined index/glossary that puts many other RPGs to shame. It does mean that the new counters and stand-ups for the game are too ordinary.

There is a lot to like in *Battlestations Supplement #1: Galactic Civil War.* On one level it provides more options for the players. Certainly any Marine player will want to get his hands on the Power Armor and go metal claw to organic appendage with the enemy. Plus anyone wanting to be a Pilot aboard vessel with that role already filled can instead become a budding fighter jock, engaging in dogfights and strafing runs on the enemy vessels that the GM has laid out on the table. But really what a group should get the most out of this book is the campaign itself, which offers many,

many sessions of play, and even then it is unlikely that all of its missions will be used up, offering further replay value. ***Battlestations Supplement #1: Galactic Civil War*** is excellent support for ***Battlestations,*** giving something to fight with, someone to fight, and most importantly, something to fight for!

--Matthew Pook

The Terrifying Plot of Dr. Z!

Episode 6: Headhunters of the Pacific!

by Matt Riggsby

When we [last left our heroes](), they were hurtling towards a cliff in a runaway train while fending off Japanese soldiers in an attempt to destroy duplicate plans for Dr. Z's concentrator. The first order of business is probably to stop the train. Mechanically inclined characters can probably succeed with a desperate attempt to jury-rig brake controls which can bring the train to a halt just in time, but they'll have to do it leaning upside-down out of the freight car, probably with angry Japanese soldiers shooting at them from the Pullman car immediately behind and possible crawling towards them atop the train in order to attack from the other side. Of course, they'll also have to fight off the remaining Japanese once they've stopped the train. However, if they've taken control of the freight car, the machine gun (treat as the TL6 7.62 LMG on p. 281 of the *Basic Set,* with plenty of ammunition) should help immensely.

Failing that, the PCs *could* foil the Japanese by jumping off and attempting a soft landing (using improvised parachutes made from a bale of silk bought by one of the Japanese officials? Spotting a muddy pool before the train gets going too fast?), and letting the train and its cargo plunge into the gorge below. However, there are other passengers farther back on the train, so letting them die would hardly be heroic. Perhaps derailing the train -- making it jump the tracks, and plow through the jungle on either side -- would (unrealistically but appropriately for the genre) result in any number of injuries but no fatalities.

After Cliff-Hanging

However they resolve the struggle, they end up not too far away from Sa Kaeo. The trip to Trat is another one to four days away, depending on whether they can hire a car (very expensive), stow away on a truck (cheap, but with a danger of getting kicked off), or hitch a ride with a friendly peddler and his water buffalo (cheap *and* safe, but requires some influence rolls).

Arriving at Trat, Miss Papillon tells the PCs they must get a ship to take them to Dr. Z's headquarters on Skeleton Island, chartering one from among the many small tramp freighters in the harbor. Her advice is *not* to tell the ship-owner where they're going; they'll refuse to take anyone. Their best bet is to hire a ship for Borneo, and either get their own small boat they can take to their final destination or make sure their course takes them in the vicinity of Skeleton Island and jump ship when they get close. Miss Papillon doesn't know the exact coordinates of the island, but can get a skilled navigator close enough to find it. If the PCs were foolish enough not to bring Miss Papillon along, they may be able to find out where Dr. Z's ship was headed, but it'll take a lot of work and a large stack of bribes. Moreover, they won't know anything about the layout of Dr. Z's hideout, which Miss Papillon has visited.

The Road to Skeleton Island

Sailors speak of Skeleton Island, northwest of Borneo, in hushed tones. Its name comes from a notorious tribe of headhunters, who strung the bones of their victims up along the shores of the island as a threat to visitors. Rumors abound about the deadly cannibals, who use poisoned darts and shamans' curses to confuse and capture visitors. Those few who know that Dr. Z has taken up residence on the island believe that he has convinced them to leave his laboratory alone. Miss Papillon has never seen any natives and, for her part, isn't even sure they still exist. She wouldn't be at all surprised if Dr. Z used his electronically controlled baboons (yet another of his fiendish experiments) to wipe them out.

The island, covered entirely in thick jungle growth, is shaped like a broad-brimmed hat cut in half. The outline is semi-circular and the terrain mostly flat, but with a half-domed hill rising near the center of the "cut" side, falling off

suddenly in steep, rocky cliffs. The water-side approach to the cliffs has a maze of underwater mines which will sink any ship not piloted by someone who knows the way in, and the narrow, rocky shore on that side is watched by hidden sentries. Survivors of a sinking ship will be intercepted and captured. Do remember, and possibly remind your players, that capture is not the end of the world for adventurers, though it may be useful to have at least one or two PCs escape Dr. Z's clutches.

Miss Papillon doesn't recommend an approach from that direction, and heroes who aren't good climbers would probably agree. An easier approach would be to pull up on the semi-circular section of the shore and make their way through the jungle to the dome, under which Dr. Z has his hidden base.

As they approach the hill, PCs face two obstacles. The first is the headhunters, who do exist (despite what Miss Papillon thinks). Their initial approach is as quiet as possible to attack with poisoned darts. If possible, they'll pick off stragglers and quietly drag them away to their village. Once they're discovered, they attack in a screaming horde. Their goal is to take prisoners to turn over to Dr. Z, who has convinced them that he's a god (captured PCs will awake not long after capture and may have a chance to talk to the headhunters or even escape). However, they can be frightened off with a sufficiently flashy display of technology and pyrotechnics.

The next challenge is the baboons. They're another experiment of Dr. Z's, chemically and surgically modified for ferocity. They're also implanted (rather obviously) with transmitters allowing Dr. Z to track them on a radar screen in his hideout. The baboons are fierce and can scare off casual trespassers (like the headhunters), but determined PCs can make their way through. However, if the PCs stay in one place too long trying to kill the baboons instead of pushing their way through, Dr. Z will send some guards down to see why so many baboons are congregating in one place.

The Doctor Is In

Dr. Z's hideout is well-hidden from a distance, but if the PCs climb the hill, they'll find chimneys, small radio towers, and other signs of habitation, including hatches into the underground lair. His island hideout is much like his hideout under Anywhere, USA: tunnels containing barracks, storerooms, and laboratories. However, it's far larger and better equipped, with better lighting, wider hallways, and more facilities (a kitchen and mess room, surgical theaters, and so on). Snooping PCs may run across more of Dr. Z's superscience achievements, such as documentation of the volcanic power plant which powers the facility, radio-controlled guided rockets, super-radar which produces television-like images, and some clumsy, approximately human-shaped robots. The hideout is also well-staffed and regularly patrolled (where ever Dr. Z happens to be will be particularly busy), so the odds of intruders being discovered are about the same as in the hideout under Anywhere, USA.

During all of this, it's possible that some of the heroes will be captured. If so, they'll be brought in chains to Dr. Z, who is once more surprised at their persistence and ability to survive. This time, he's determined to see them dead, but not before one last monologue about his evil plans: Dr. Z is preparing to accelerate the start of his global war. He has constructed a radium-powered submarine capable of circling the globe without refueling and mounted a death-ray concentrator, like the one he sold to the Nazis, on it. Soon, he'll attack unsuspecting naval vessels in tense and sensitive areas of the globe. The

incidents will increase international tensions, leading inevitably to massive conflict. He has also completed a concentrator-based defense system which will create a vast network of lightning around the island, detonating incoming explosive shells before they reach the island and shorting out electrical systems in any vehicle which approaches too closely. Even if the PCs sent for help (which, if they had contacts in some major nation's military, is possible), it will do no good. With his gloating out of the way, he puts the captives into another deathtrap, but this time, he stays on hand with a number of guards to make sure that this time, they don't escape.

Once More, With Killings

Sooner or later, any free PCs will be spotted or make themselves known, and prisoners will have a final chance to escape. Dr. Z has no intention of backing down or escaping, so this is the final showdown. Though they may not adopt much more sensible tactics, guards will start shooting to kill, and anyone who previously enjoyed any kind of "plot protection" (Dr. Z, Miss Papillon, and the PCs themselves) is fair game. Although the PCs are greatly outnumbered, they've got some things they can turn to their advantage:

- A skillful social character might turn the natives against their fearsome oppressor.
- The volcanic power plant is unstable if not properly tended and could be made to explode, though the PCs had best make themselves scarce before it goes off.
- There's a lot of ordnance around the hideout (guided rockets, experimental guns, etc.). Perhaps he's even got an ultrasonic gadget which attracts enraged baboons.

The last battle is likely to be very noisy and very destructive, and the unstable nature of the volcanic power plant puts a definite time limit on hanging around the island. The heroes need to make sure they've got Dr. Z definitively dealt with or risk global war, but they won't have any time after it's all over to loot his lair once they've finished him off. That'll be a problem for one recurring character: When it becomes clear that things are falling apart, Miss Papillon's greed gets the better of her, and she runs off to find Dr. Z's cache of gems. If the heroes want to keep her around or take her with them if they leave the island in a hurry, they'll have to knock her out or tie her up.

With any luck, the fight will end either with the PCs going out in a blaze of glory or escaping in the nick of time (in a headhunter's canoe or the radium-powered sub) while a volcano erupts behind them. They're unlikely to get out with many souvenirs, but they'll have avenged their friend . . . probably. If the PCs don't have time to confirm that they've killed Dr. Z, it's possible that he'll survive and make his own escape (the same could be true of Reitermann in episode 4). And if Miss Papillon gets away from them, she might surface again. But if they persevere to the end, they will at least have defeated . . .

Monster Mayhem

Published by [White Wolf Publishing](#)

Designed by Ken Cliffe

Art & layout by Richard Thomas, Steve Ellis, & Mike Chaney

Full-color boxed game with game board, five monster figurines (mummy, poltergeist, vampire, werewolf, zombie), five monster reference sheets, five craving point markers, 30 victim chits, 30 victim cards, 20 hex tiles, 50 event cards, 36 escape cards, five six-sided dice; $44.99

The blood is the life, or so says Bram Stoker's *Dracula.* What do they know? If you're a werewolf, it's more likely a nice bone to gnaw on, while a ghost . . . heck, who knows what they (un)live on. To codify it all, White Wolf has produced a new board game, ***Monster Mayhem,*** to clear up these little questions.

The object is to have the most Craving Points at the end of the fifth turn.

The game is played on a hex-based map of the city, with movable location markers for customizing the layout. The game supports two to five players, and each player takes a monster: Werewolf, Vampire, Zombie, Poltergeist, or Mummy. A monster begins with Event Cards, Craving Points, and three victims singled out from the herd for his feeding pleasure. They can employ a special ability (most seem to focus on controlling unwieldy victims), and may fall prey to their weakness; the Werewolf, for example, may become so incensed that he savages his target without reaping a proper reward. Once everyone has their starting position (the Zombie begins in the Graveyard, the Vampire in the Old Manor . . .), Initiative is rolled and the hunt begins.

The mechanics resolve most actions by rolling six-sided dice equal to a trait and taking the highest result. For instance, the Vampire's Stalking is 2, so he rolls two dice to get his movement points. Only one die is used when determining Initiative, but most rolls can be improved by spending Craving Points for extra dice.

A turn has two steps, running and hunting. Victims do most of the former; their Escape Cards show a number against a colored backdrop, and they flee that many spaces in that color-coded direction. Everyone moves their first victim, then their second, and so on until they've scattered throughout the city.

Then comes the chase. When a monster lands on a victim's space, he tries to feast. Each creature wants something different -- Organs, Blood, Bones, Spirit, or Brains -- and victims resist with that same stat, rolling dice equal to the trait. The high roll wins. Failure sends the prey fleeing again (though they may bounce into another monster or escape the game entirely through a Safe Haven like the Police Station), whereas success kills the target and adds their trait to the victor's Craving track, with a bonus if it's that monster's own victim and not just some target of opportunity. If nothing presents itself, violence against a fellow creature of the night might help. The loser suffers a deduction of points, which could take a successful player out of the lead. Wise use of interconnected Subways, Hunting Grounds, and Lairs (the monster's own or someone else's) can grant quick movement or the restoration (or theft) of Craving Points and Event Cards.

The components are what one would expect from White Wolf (and the price tag). Everything is colorful and creepy -- at least in a *Mad Magazine* sort of way -- and the artwork is well painted. The Victim Cards are without complaint, but

the Victim Chits, at reduced size, are not as easy to pick out. The name is also printed on a red ring around the edge to assist. The markers used to indicate a monster's Craving Point level and the current turn are terrible; they're incredibly tiny, and easy to lose with even a little carelessness. The best parts are the individual characters. The figures are a simple but pleasant bits of sculpting (with varying success -- hunched werewolf yea, too-busy poltergeist nay), and the reference sheets could stop a bullet.

There are issues to be considered. Game setup can take a while (matching one of the published maps and agreeing on an original arrangement are both time-consuming); there's a high element of luck; several small "Oh, by the way" rules lie in wait; and while it keeps things orderly, doing everything in rounds feels a little awkward when, say, only two of the five monsters have the last three victims.

Beyond that, it's a simple but tight game. The victims run low right about the fifth round, almost forcing monsters to turn on each other eventually (and optional rules may replenish the supply). The Event Cards can be both burden and boon to any player but no one's going to win on the basis of a single play, so they're a useful tool that doesn't trump skill or short-term planning (the only kind open to any monster). Craving Points (an odd thing to call them since one builds them up by sating one's appetites) are a great equalizer in most cases, and balancing their expenditure against saving them toward victory is another good tactical wrinkle. The titular protagonists are evenly weighted; those bad at hunting also have wimpy rewards to reap, but they're also the ones that excel at beating up other monsters, giving the whole thing an equitable ecosystem.

The quick turnaround on *Monster Mayhem's* playing time (about 45 minutes a game) means numerous games can happen in a few hours, and while a bit pricey for the variety of action offered, the nicely brokered advantages and disadvantages make an even-tempered game.

--Andy Vetromile

Staying Outside Your Window

Reining in Super-Heroic Ultra Tech

by Brian Rogers

In the article "Retro Techno" we discussed ways to curb the Internet's effect on hyper-tech proliferation in supers games. After all, the world of the major comic books is almost always superficially the world you see out your window . . . or when using Windows. Neutering the instantaneous information transfer of the net might be one solution of keeping ultra tech from making the comic book world deviate from that, it is not the only one. So what other ways do we have to keep ultra tech in line?

Repair, Yes; Build No

One way to keep high technology in line is to stress that it is the output of many predecessor systems. Yes, with the right parts a moderately skilled person can repair a computer or even build one from scratch, but someone had to build those parts, and the parts needed to make those parts, and so on. This puts a practical limit on how far ahead of the curve an inventor can be without a lot of time, a huge bankroll, a large support structure or some combination of the three.

This explains why alien tech doesn't proliferate on Earth: while the moderately skilled can possibly repair glitches or modify it with other alien parts, the predecessor tech is just not available. It also explains why someone with a gunsmith's shop wouldn't be able to replicate a government super-agent blaster. This is a good explanation for people being able to keep ultra-tech working, and for agents to be able to repair it in the field while keeping it rare and hard to reproduce.

But it doesn't solve all our problems: in the comics lone inventors are able to build something one or two generations ahead of the curve in their basements, so predecessor systems have to be at least somewhat accessible. We might not see someone making Iron Man's armor in the school engineering lab, but he can probably make a bulky repulsor-ray cannon to threaten Speedball or Spider-Man. And if someone can build one of those easily, why isn't that level of tech available?

You Aren't Looking in the Right Place

Other complaints about the supers environment include how the devastation from super-battles gets repaired overnight. Or that comic book heroes are so isolationist when there are catastrophes across the world they could be dealing with. Or that more people aren't killed in massive supers battles. Why do we assume that these points are illogical while looking for where the ultra tech went? These enigmas obviously have the same source.

Posit: A Soviet genius code named Architect developed ultra-tech building materials and logistical structures just after WWII. Not only did this let Stalin quickly rebuild the damage done to his country's infrastructure (with some neat designs), but the Soviet Construction Directorate became an idea propaganda tool in a world as catastrophe-filled as the averages Supers setting. India has an earthquake? The SCD has people on the ground in days, and new buildings up in a month. The West was forced to follow suit, pouring money into replicating the Soviet designs. This was a huge advantage during the giant monster attacks of the 1950s, the alien invasions of the 1970s, and the great quake that all but destroyed LA in the 1980s. High-speed, crisis-resistant building material is a natural place for ultra-tech development, and the visible impact on the viewpoint Supers is negligible.

Then there is treating those wounded in supers battles or crises. We gather that -- based on super-soldier serums in the 1940s and cybernetics in the 1960s -- funds not going to construction are going to medicine. The human genome was

cracked in the 1960s, just by hard work and a few super brains with lots of computer time.

What does this mean? Not all injuries are curable (a bullet through the brain is as fatal there as it is here) but advanced medical technology means that normally fatal trauma cases can be dealt with in a supers environment. Prosthetic limbs will be orders of magnitude better, but likely only the very wealthy will be able to afford full cyber-wear, if only because of the cost of the batteries (see below). It also means that the US had a stem cell debate in the 1970s when the pendulum was swinging towards the pro-choice camp and stem cell therapy is now used worldwide, for good or ill.

They Don't Want It to Exist

There are plenty of people who have reason to keep the status quo, for the purposes of safety, money, or control. Why don't the batteries used to power cybernetics give us electric cars? We already have a vast infrastructure in place for gasoline-powered vehicles -- who wants to make the investments to replace that, while fighting big oil as it attempts to legislate in additional auto-battery safety standards? What's better for the shareholders: spending a fortune to retool the plants to make electric cars that might not even have an infrastructure to support them or do some extra advertising about the horsepower, speed, and cost advantages the old models have? Sure, you'll regret it in the long run, but who in the stock market looks long term?

Major, rapid changes in technology will only occur when no one expects it to happen (such as the Internet . . . and some entrenched media powers are still fighting that), when government backs it (as with the anti-Soviet construction example or the space program), or when everyone wants the benefits (which is why medical science is always advancing). Even then, the invisible hand of the market changes the balance; medical advancement is focused on high profit drugs rather than antibiotics, advanced procedures instead of preventative care. If you're wondering why some tech doesn't exist in a supers world, follow the money.

Or follow the control. For example, we might have a much better space program today if the government didn't exercise such control over it. Without the hurdles of regulation some billionaire inventor might have gotten Mars Direct off the ground in 1990 (or sooner, if some super-genius had put together that or a better plan in 1980) and we'd have Mars bases by now. However, even with billionaire techies and super-geniuses, government regulation and entrenched interests could slow development to a crawl.

*Maybe There's Little Flow Through

To be honest, most people won't see the effects of hyper-tech. Access to energy rifles rather than slugthrowers isn't going to affect daily life, and if ultra-tech has been around for a little while there's probably already been a boomlet that has everyone evened out with better weapons and armor. It's the tipping point where everyone in the world has access to the technology -- where smart paper puts book stores out of business -- that is the important dividing line for supers. Knowing that the tech exists won't change the world, but everyone having it will.

Not Everyone Has What It Takes

A common stance taken by those writing about supers (even if it doesn't appear much *in* comics) is that part of a super's powers is the ability to activate his own ultra-tech (as in *Wild Cards*), or that only people with some special trait can invent ultra-tech (i.e., being a Spark). As with other logical structures using it will make the GM's life easier, but it will reduce some of the free wheeling aspects of the supers world.

Rather than a genetic barrier, comics seem to combine aptitude, training, and equipment access as the bar for ultra-tech creation. With a moderate level of all three, anyone can maintain existing tech (the trick with alien gear is getting the right equipment). An inventor's ability improves the more he has access to any of those three, but there are limits. Better technology costs either money or time to recreate precursor engineering; Aptitude is something you're born with, so getting more of it is not an option; Training is easy until the point where it matches your aptitude, but past that it gets labor intensive to improve, and isn't as broad as general aptitude (scientific aptitude might be a Bang skill in

GURPS *Fourth Edition* which inventors then improve in specialized areas).

This gives us several classes of characters: the Nick Furys with moderate training to maintain their advanced tech; the Peter Parkers with mid-level aptitude but limited training and resources; the Tony Starks with mid-level aptitude, advanced training, and resources who can invent ultra tech within several fields; the Kitty Prydes with huge aptitude, some advanced resources, but next to no training; and the Reed Richards with immense aptitude, broad training, and the best in high tech, who can invent ultra-tech in several fields.

Infantiano's Syndrome

Then there are the victims of a form of autism first identified by Julius Infantiano in the 1980s. Similar to [Asperger Syndrome](#), those with this problem have an incredible ability to focus on a single topic, sometimes to the deficit of their well being.

IS patients lock onto a problem in adolescence or early adulthood and obsess over it until they have mastered it (which they will never believe they have; there is always one more puzzle in their minds). This will often lead IS sufferers with minimal aptitude to attain great training within specific fields, such as refrigeration or sonic vibration. Given any resources they build upon conventional tech on their own path of precursor equipment until they produce ultra tech to support their obsessive quest. They are not doing anything superhuman, but their individualized precursor technology appears incomprehensible to people with more conventional training.

Socially, IS victims are prickly and difficult to get along with -- they generally see those who do not share their obsession as "fools," and they don't suffer fools. They also make grudges quickly and hold them forever, keeping a catalogue of those who have wronged them. Unfortunately, these social traits don't appear until early adulthood, so IS sufferers aren't identified as being "mad" until they reach university. Unable to hold down jobs they will often turn to crime. Dr. Infantiano has been trying for years to find a way to treat this condition, and persists in the face of partial deafness, freezer burn, arachnid toxins, chemically induced baldness, and other patient-generated ailments. Almost like he was obsessed . . .

Much as we like to think that the wave of technological progress is unstoppable, some inventions will wait years or decades before the right circumstances prove their value, and it is possible to hold your supers game inside that moment of calm. While one of the joys of running an game means you can deviate from the source material -- if your players want to change the world with their cheap hand-held teleporters than you have the option to let them -- there are ways you cant try, like King Canute, hold back the tide . . . at least until the campaign is over.

Fists of Infinity

Martial Arts and the Infinity Patrol

by Phil Masters

GURPS Infinite Worlds came out long before *GURPS Martial Arts,* and isn't primarily concerned with matters of low-tech combat. As such, the question of martial arts in Infinity Patrol games hasn't been addressed very much. However, now that both books are out, it's possible to look at the options.

Homeline is similar to our present-day Earth in many ways, which means it must have as full a collection of martial arts being studied and used as we have. In fact, there are probably a lot more. Since crosstime travel was developed, explorers, tourists, and entrepreneurs have visited dozens of timelines, and it's a fair bet that some of them took at least a passing interest in the martial arts. Even if they don't get much chance to study with local teachers, these people will have visited exhibitions, gladiatorial arenas, and battlefields, and even if they weren't expert observers, they can have come back with secretly shot videos for Homeline experts to analyze at leisure. Visits to echoes and close parallels could resolve any number of detailed arguments about "lost" historical techniques and even generate some footage of legendary masters in action, while similar trips to more divergent timelines could generate fascinating data on subtly divergent developments in the arts, and even whole new arts from cultures which didn't exist in our past. For example, there are the infamous *Si Lei Li* developed by the Irish Triads of Ming-3 (see *GURPS Alternate Earths 2*), the authentically oriental Baritsu of Sherlock-1, or the intricately brutal Savate variants of Bonaparte-4.

Naturally, as soon as these styles were reasonably documented, people would come along and try to recreate them on Homeline, albeit often in more or less sanitised "sport" forms where the originals were unrestrained killing arts. In any case, crosstime travelers can encounter any number of fighting arts on other timelines. Hence, there are numerous possibilities for incorporating martial arts action into Infinite Worlds games, from bruising encounters with unexpectedly skillful local thugs or duelists during undercover missions, through the inclusion of extraordinary "cinematic" fighters in ISWAT teams, to complete campaigns of martial arts crosstime tourism or research, with PC fighters seeking to learn the fighting secrets of a hundred worlds without attracting either the anger or the curiosity of the local experts who they necessarily have to meet.

However, this article deals with a particular aspect of this subject which can be brought into almost any Infinite Worlds game, and which can add color and detail to such games without overcomplicating things too much; the study of martial arts within the Infinity Patrol. What follows is designed to remain consistent with everything in *GURPS Infinite Worlds,* while permitting some interesting expansions.

The Basics

Although the Patrol isn't particularly obsessed with martial arts, it teaches its cadets some useful fighting skills, and it's certainly not without a few remarkably competent martial artists. To start with, its agents all had lives before they were recruited; some were cops or soldiers, while others were exactly the sort of people to make a study of some martial art as a serious hobby (and in quite a lot of cases, these were those "out-time" arts which have been recreated on Homeline). Hence, a Patrol member may know almost any art in addition to the standard "template" training -- and sensible patrol officers track the known special abilities of their agents, and sometimes try to assign people to tasks for which they're especially well suited. Furthermore, the Patrol can generally afford to hire the best instructors and experts to teach its recruits, and in the case of basic close combat training, that means some very good fighters, usually with police or special forces backgrounds. Hence, the Academy staff include a handful of people who can be really quite seriously dangerous in a brawl, and who pass a fraction of their skills onto new agents.

Prior and Basic Training

All I-Cops and Scouts receive intensive and *efficient* training in unarmed combat, represented by Karate skill; the Scouts, who are more likely to spend time undercover on low-tech worlds but who are initially selected slightly more for smarts over physical abilities than the I-Cops, receive more instruction. But in both cases, this is severely un-artistic stuff, partly intended to make them adequately dangerous in a pretty basic sort of way on those hopefully rare occasions on which they have to fight unarmed, and partly just to instil a degree of aggression and confidence. In addition, I-Cops are trained with the police-style baton, with the logical justification that they're cops and may have to function as such, using a training regime that conveniently also enables them to handle the sort of generic shortsword which visitors can often take to low-tech timelines as part of a local-style costume. Likewise, the Scouts, who as travelers and explorers are rarely without a standard survival knife, are trained in knife fighting.

None of this amounts to a style, though standard Infinity close- combat training is arguably analogous to a style with one of the lenses from pp. 144-5 of **Martial Arts** -- especially the Self-Defense lens. Most students *don't* acquire a Style Familiarity perk, but GMs who want to introduce this concept and emphasize the standardized nature of Patrol training can permit instructors and advanced students to acquire this perk for "Patrol Training." This gives a Claim to Hospitality of sorts among the instructors at the Patrol Academy (who'll remember a keen student), and grants the bonus to defend against feints and Deceptive Attack when fighting anyone who learned his combat skills there.

Also, cadets who take a special interest in combat skills, and who can somehow find the time (perhaps treating this as their Academy sport of choice) can usually persuade an instructor to teach them a style in addition to their basic training. This often means a Military Hand-to-Hand variant (see **GURPS Martial Arts,** pp. 182-5), but some of the instructors are dedicated students of other arts themselves, and in any case it's easier to claim a martial art as a competitive sport if it has some sort of appropriate rules and at least optional constraints, so students can also pick up various other arts if they wish -- though advancing very far in such things, in the limited free time available to a Patrol cadet, requires exceptional dedication and some natural talent.

And optionally, a GM can assume that the skills included in the Patrol templates reflects initial training towards a rather simple but effective martial art, pulled together by the Academy instructors to meet the requirements they'd been given and consolidated to make teaching easier. The full version of this art is as follows:

Infinity Patrol Martial Arts Program *3 points*

"IP-MAP" (still an unofficial name, but increasingly widely known, and naturally pronounced "ipp-map" by any ex-US Marine instructors or agents) may be taught to students who show particular aptitude or enthusiasm in their basic combat classes. It's based on the skills which all agents learn, with a focus on techniques which are especially useful to field agents (close-quarters fighting in all situations and directions, weapon retention) and to those functioning as *cops* or needing to take prisoners (basic control-and-restraint methods). It adds options and Style Adaptations which many of the instructors are able and willing to pass on -- a mixture of close-quarters grappling methods, military-style fight-ending tricks, and less brutal police-style techniques. Users may also draw on contemporary police training for use of the side-handled baton. Anyone who acquires the associated Style Familiarity perk can apply it in combat against any product of the Patrol's standard training courses, as discussed above.

Even as an advanced, optional course, this is uncomplicated stuff, with no great associated mystique; while there are some colorful legends about Patrol fighting skills developing on Homeline, they're (supposedly) associated with a handful of freelance crosstime agents and strike teams, not the newest products of the Academy. On the other hand, it does permit quite a lot of cross-training! The Optional Traits given below are things *especially* closely associated with IP-MAP training, but it would be perfectly reasonable to add anything in the core I-Cop and Scout templates, or the Academy, Special Operations, or Search and Rescue Division Skills lists, to this section.

Skills: Karate; Knife *or* Shortsword.

Techniques: Back Kick; Back Strike (Karate, Knife, or Shortsword); Disarming (Shortsword); Ground Fighting (Karate); Handcuffing; Knee Strike; Low Fighting (Karate); Retain Weapon (Pistol or Shortsword).

Perks: Armor Familiarity (Karate); Ground Guard; Style Adaptation (Boxing, Dagger Fighting, Krav Maga, Kyokushin Karate, or MCMAP); Suit Familiarity (Vacc Suit).

Optional Traits

Advantages: Fit or Very Fit.

Disadvantages: Code of Honor (Patrol); Overconfidence; Workaholic.

Skills: Whichever of Knife or Shortsword wasn't taken as a mandatory skill; Boxing; Brawling; Fast-Draw (Knife, Pistol, Sword, or Tonfa); Liquid Projector (Sprayer); Tonfa; Wrestling.

Techniques: Arm or Wrist Lock (Wrestling); Breakfall; Retain Weapon (Rifle); Stamp Kick; Uppercut.

Optional Further Developments

Despite some rivalries (not always friendly, but never actually *lethal*) and some highly technical debates about comparative fighting styles, the close combat instructors at the Patrol Academy have built a fair degree of camaraderie and mutual respect, mostly based on being similar people stuck on an Ice Age world with a few hundred students to knock into shape. Naturally enough, they sometimes exchange ideas about their skills and compare experiences.

This has put these people on the way to synthesizing a comprehensive if bluntly straightforward fighting style. While this is still developing, a number of senior Patrol officers are actively encouraging the idea, and advocating that time should be allotted to teaching the style to some current field agents. In particular, some Special Operations actions might go off better as subtle "commando raids" rather than head-on assaults, for which purpose close combat skills are useful, while members of several other divisions, notably Nexus Oversight, Search and Rescue, and Survey, have also expressed an interest. Investigation, Infiltration, and Extraction would definitely also be potential users. The "art" under development will probably take something like the following form:

Infinity Patrol "Commando" Program   *6 points*

This style owes something to virtually every military style known to Homeline, and a bit to various advanced police training courses. Like most modern military styles, it concentrates on putting the opponent out of action as quickly as possible, with little regard for delicacy; however, because of its origins, it offers a *lot* of options -- possibly making it more complex and harder to teach than the Patrol really needs. The police training influence and the emphasis on taking prisoners shows up in some of the "softer" elements and the choice of optional weapons. Some people might call it over-refined for what it's meant to do, but others would call it impressively comprehensive. The art's creators assumed that users would usually be wearing high-tech armor, and so felt that no special attention to defense was necessary; fighters will often opt for All- Out or Committed Attacks, unless they can see that their opponents are as well equipped as themselves.

While this is a new, functional style with no body of legends, the Academy instructors have acquired a little mystique of their own, and anyone who learns it is going to be a tough member of an elite organization; there are a number of cinematic options listed below, and credible masters should also have good ST, DX, and HT.

Skills: Judo; Karate; Knife; Stealth; Wrestling.

Techniques: Arm or Wrist Lock (Judo); Breakfall; Choke Hold; Disarming (Judo); Ground Fighting (Karate); Handcuffing; Retain Weapon (Knife, Pistol, or Rifle); Stamp Kick; Targeted Attack (Knife Thrust/Neck); Targeted Attack (Knife Thrust/Vitals); Targeted Attack (Stamp Kick/Skull).

Cinematic Skills: Mental Strength; Power Blow; Pressure Points.

Cinematic Techniques: Binding; Lethal Kick; Lethal Strike.

Perks: Armor Familiarity (Judo or Karate); Ground Guard; Style Familiarity (IP-MAP); Suit Familiarity (Vacc Suit); Sure-Footed (Uneven).

Optional Traits

Advantages: Combat Reflexes; Fit; High Pain Threshold; Patrol Rank.

Disadvantages: Bloodlust; Code of Honor (Patrol); Fanaticism (The Secret); Overconfidence; Sense of Duty (Patrol or Homeline).

Skills: Boxing; Brawling; Guns/TL9 (Pistol); Intimidation; Liquid Projector (Sprayer); Spear; Tonfa; Shortsword.

Proposed Variations

All of the above ideas are essentially unofficial or semi-official extensions of the Academy's basic training program. But the Patrol itself is seriously looking to go further.

The standard training regime is occasionally subject to review, ironically with a view to making it either more restrained and discreet or broader and probably more deadly. The contradiction arises from the ambiguous nature of Infinity's mission.

On the one hand, I-Cops especially tend to function as *cops,* arresting suspects and dealing with minor infractions of rules around Infinity installations. While they have to deal with far more than a regular police share of violent and dangerous offenders, there are a lot of cases where they have to restrain rather than cripple, for good legal, PR, and moral reasons. Even field agents -- I-Cops or Scouts -- on other timelines often have a bias in favor of minimum force, looking to capture opponents for interrogation or deal with merely inquisitive or misplaced locals without a bloodbath. This has led to several suggestions that the Academy should teach "softer" fighting styles, focusing on grappling and efficient defense rather than aggression; in *GURPS* terms, Judo or maybe Wrestling rather than Karate, and maybe specific Techniques such as Arm or Wrist Lock. The Academy instructors would certainly be capable of teaching such a revised curriculum, but have their own cultural bias which says that a good offense is the best defense, and are cautious about the danger of producing mediocre all-rounders rather than effective straightforward fighters. Still, there may be moves in that direction in the future, possibly leading to some future agents learning, say, styles such as Aikijutsu or Judo with the Police lens (*GURPS Martial Arts,* pp. 144-5) applied instead of the current template-standard Karate skill.

And on the other hand, there is a perceived growing need

Infinity's Enemies and the Martial Arts

Infinity's primary enemy across the Infinite Worlds has rather less interest in the martial arts than Infinity itself. Centrum is notoriously technocratic and rather prosaic by nature; doubtless that timeline and those which it now controls produced their share of martial arts in the past, but they appear mostly to have been smothered by the Centrum cultural hegemony. Ordinary Centrum agents can be effective enough in close combat, but they prefer to achieve this by using appropriate weapons and very basic brawling methods -- and the occasional cybernetic implant. However, Infinity agents who hope to take advantage of this by turning every encounter with Centrum into a fistfight will sooner or later suffer a painful reminder that those weapons *are* better than unarmed combat, all else being equal, and Centrum agents know how to use them. Furthermore, it's not impossible for an individual citizen of Centrum to pick up the equivalent of at least basic military/commando training; an Unattached agent especially might pursue this, for himself or as part of a project to give Interworld additional weapons for use against Infinity. Individual Centrans who've spent extended periods on low-tech timelines may also pick up local fighting styles for self-defense, as part of their cover story, or even out of simple curiosity.

Similarly, the troopers of SS Raven Division see themselves as high- tech soldiers, not "martial artists," the peculiarities of their service notwithstanding; most are competent bar-room brawlers but no more. Their timeline's SS has some elite commandos with quite deadly personal combat training, but these valued specimens don't get assigned to Burgundy. However, that said, Reich-5's Germany enthusiastically preserves much of the

for Patrol agents to function as *soldiers.* Centrum has long been a ruthless enough opponent for any tastes; now, with Armanen Order Nazis loose on multiple timelines, a number of Patrol high-ups and Interworld Council politicians are muttering about the gloves being off, and looking for an increasingly militaristic regime at the Academy. This isn't moving very fast as yet -- in truth, the Academy produces pretty good soldiers as it is, and an outright crosstime war on any front would mean the involvement of contingents from national militaries rather than the militarization of the Patrol -- but the politics of the debate could, say, lead to the formalization and more widespread teaching of the IP-MAP style (above).

The Infinite Art

But all of this is rather elementary stuff. What is sometimes pointed out, at least in TV dramas and movies featuring square-jawed Infinity Patrolmen or suave crosstime spies, is that some *interesting* Patrol missions can call for really advanced knowledge of some kind of martial arts, armed as well as unarmed. Agents on many timelines have to dress as natives, which can sometimes mean no visible anachronistic firearms but maybe a functional sword or knife; they may also have a very special need for capture-for-interrogation techniques. And somehow, the heroes of those dramas are forever having to pass as knights, hoplites, duelists, samurai, or greenwood- dwelling Merry Men; this may or may not be typical of real Patrol missions, but it's widely seen as a possibility. Certainly, knowing how to handle local weapons with some conviction is a useful trick for any agent.

paraphernalia of traditional German militarism, including Schläger dueling and a certain amount of boxing and suchlike; the stereotypical university-educated Gestapo Amt Z agent knows how to use a broadsword or his fists, and some of these individuals, along with some Raven Division officers and their personal bodyguards and sidekicks, may demonstrate unexpected competence in hand-to-hand combat.

Lastly, the Cabal are a group of scholarly wizards at heart, not "vulgar brawlers"; they also display a peculiar disdain for *oriental* mysticism, including most theories about focused chi and suchlike. Apparently, their own concept of magic is explicitly European in its origins, and many of them are downright chauvinistic about it. All of that said, though, some of them seem to associate disciplines of the mind with disciplines of the body -- like many religious traditions, they may see physical fitness as a prerequisite for effective extended meditation -- and the classical European Hermetic tradition has some association with refined fencing styles such as La Verdadera Destreza (*GURPS Martial Arts,* p. 158). Thus, a few Cabalists are deft swordsmen, and most can deliver a quick dagger-thrust or staff-blow when the need arises. Some of them also employ guards or assistants whose job is to handle low-tech combat, and they're usually very good at it. More to the point, though, certain spells can make the scrawniest Hermetic wizard deadly at close quarters, at least until he wears himself out.

Whether or not this really has led to the secret development of a specialized, ultra-flexible Patrol martial art is up to the GM and may depend on the grittiness level of the campaign, but the following can represent what such an art *might* look like.

"Infinity-Fu"   *11 points*

The key features of this training regime are versatility and sophistication. It applies the most advanced fighting techniques known to Homeline to a wide range of weapons and situations, and teaches the student to use anything in his environment to win the fight. Some agents are also said to have studied exotic combat styles on other timelines. In a game where Patrol agents achieve near-mythic status, they'll also look *good* in combat -- but very cool. The stereotypical Patrol super-agent is an analytical fighter -- essentially a scientific fencer, whatever weapon he's using -- but with a talent for humiliating clumsier foes. Even if it isn't available to the Patrol, this style might suit ISWAT agents whose extraordinary status derives from highly advanced martial arts training.

"Infinity-Fu" (an unofficial name, obviously) is a rather cinematic concept by definition, and so it naturally offers a variety of cinematic options. Despite that name, these tend to be a matter of formidable, uncanny skill rather than use of *chi* or other outright mystical concepts. ISWAT at least may include martial artists who *do* use "chi powers," but they should use another appropriate cinematic art.

Skills: Acrobatics; Boxing; Expert Skill (Hoplology); Judo; Karate; Knife; Main-Gauche; Rapier; Smallsword; Staff.

Techniques: Acrobatic Stand; Back Kick; Back Strike (Rapier); Back Strike (Staff); Bind Weapon (Main-Gauche); Bind Weapon (Rapier); Breakfall; Counterattack (Rapier); Disarming (Rapier); Elbow Strike (Karate); Evade; Feint (Any); Kicking; Quick Mount; Retain Weapon (Any); Spinning Strike (Rapier); Sweep (Staff).

Cinematic Skills: Mental Strength; Pressure Points; Sensitivity; Throwing Art.

Cinematic Techniques: Dual-Weapon Attack (Karate); Grand Disarm; Pole-Vault Kick; Pressure-Point Strike; Roll with Blow; Whirlwind Attack.

Perks: Acrobatic Kicks; Armor Familiarity (Rapier); Form Mastery (Spear); Ground Guard; Improvised Weapons (Any); Off-Hand Weapon Training (Any); Quick-Sheathe (Any); Quick-Swap (Knife); Suit Familiarity (Vacc Suit); Sure-Footed (Slippery or Uneven); Technique Adaptation (Any); Weapon Adaptation (Broadsword to Rapier); Weapon Adaptation (Polearm to Staff); Weapon Adaptation (Shortsword to Knife); Weapon Adaptation (Shortsword to Smallsword).

Optional Traits

Advantages: Charisma; Combat Reflexes; Cultural Adaptability; Enhanced Block (Shield); Enhanced Dodge; Enhanced Parry (All); Fearlessness.

Disadvantages: Code of Honor (Patrol); Overconfidence; Secret (Out-Time Super-Agent).

Skills: Armoury/TL4 (Melee Weapons); Axe/Mace; Broadsword; Crossbow; Fast-Draw (Knife or Sword); Cloak; History (Martial Arts of any one region or culture); Saber; Shield; Shortsword; Sleight of Hand; Stealth; Thrown Weapon (Knife).

Perks: Grip Mastery (Katana); Naval Training; Style Adaptation (Any); Style Familiarity (Any).

Pyramid Review

Cold Space

Published by Flying Mice Games

Written by Clash Bowley & Albert Bailey

Illustrated by Clash Bowley

178-page b&w softcover; $21.99
186-page full-color PDF; $10

At its heart, *Cold Space* explores a simple question: "What would happen if interplanetary -- then interstellar, travel became possible at the dawn of the Cold War?" In answering this, what *Cold Space* does is present an age, beginning in 1949 and ending in 1989, the beginning and the end of the Cold War, altered by the discovery of the contra-gravity drive. Adopted not only by the superpowers of the USA and the USSR, but by many other nations, this device not only enabled them to establish colonies first throughout the Solar System, and then beyond. By the 1960s interstellar travel was cheap, and getting to the Moon was as easy as taking a bus. Yet as mankind spread to the stars, it carried his politics with him. The worlds within and beyond the Solar System become a broader battleground for the dark nasty wars of propaganda and proxy fought between East and West, red and blue, Stars 'n' Stripes and Hammer and Sickle.

The new technology dominated this battleground. At first quite literally, with anti-gravity gunships dominating the skies above Korea, and later, Vietnam. But the Swiss team developing the new physics theorized that it could be used to lift bodies beyond the Earth. The USA adapted one of the first nuclear submarines, intending to get her to the Moon. This became a race when the Soviets stole the technology and built their own vessel. The USS Starfish landed on the Moon in October, 1951. Unfortunately, the Russian W-137, a converted Whisky-class submarine had already been there an hour. The race escalated, when newly formed United States Rocket Corps sent the Flying Fish on a slingshot course around Jupiter bound for Alpha Centauri where her crew would found the Roosevelt colony. The Soviets followed suit, sending the Kosmos to Barnard's Star. Over the decades the space race and the colonies became not only an extended battleground, but a means of escape. Fallen governments on Earth, such as those of South Vietnam and the Shah of Iran re-established themselves off-world. To date, only one alien species has been discovered, the pre-sapient ape-like natives of Tau Ceti. The United Nations has declared them a protected species, this after the Bolivian colonists were found to have exploited them.

Cold Space is written to be played in four different periods of the Cold War, "Beginning," "Early," "Middle," and "Late." Each offers differing campaign and character types. For example, the Vietnam War, running subsidized supply vessels, science and exploration, espionage, and civil rights during the "Early" period of 1955 to 1965. These though are undeveloped suggestions and the GM will need to extract the background to more specific events from the background, such as the Polish Mars colony's bid for freedom in 1976 or the hunt for Refuge, the Soviet Politburo's last home following the collapse of the USSR.

Characters can be generated by rolling two six-sided dice four times for five characteristics, and percentile dice for a character's IQ rating, Luck points, and starting Cash. Alternatively, using the Directed Method these attributes can be purchased using two different pools, one for the stats rated between two and twelve, and another for the percentile-based stats. Skills are acquired by putting the character though education, from junior high to graduate school, and then into employment. There is a table for each type of school and employment, a player checking to see if his character's IQ and Cash meets the entry requirements. If so, then he rolls or selects a skill for each year in the school or career from its accompanying table. The idea with the generation system is that after initial creation, a player can

easily push the character along to play during a later stage in his life. Certainly the process enables this easily, but although it feels almost *Traveller*-esque, the process feels all too flat, colorless, and complex given the end result.

Surprisingly, there is a third and quicker method, but this is kept in a separate section. Following a nicely done method of creating NPCs, there is an option for taking a template and modifying it. Both this option and the guidelines for creating NPCs handle character creation almost instantly, very much at odds with either the standard Random or Directed methods.

Mechanically, Cold Space uses the Flying Mouse Games house system, the "StarCluster 2" engine. This is a simple percentile system. An attribute check is the attributed multiplied by a difficulty factor to give a percentile under which the player must roll. A skill roll is made against a base of 40% plus 5% per skill level and any attribute and situation bonuses. Combat works in a similar fashion, but with one interesting aspect -- a character can trade percentile points between his initiative, to-hit, and damage rolls, granting him a wider range of options. For example, initiative points can be traded to improve aim or better react to an opponent's actions.

Space combat lends itself to the abstracted narrative format pioneered by FASA's *Star Trek Role Playing Game,* each player taking a role aboard ship and making the appropriate rolls for that position. Thus Radio Communications Control handles internal communication, co-coordinating all actions; Radar acquires the targets for each weapon; the Gunners pull the triggers; Pilot handles ship maneuvering; Maintenance handles damage control; Engineering carries out repairs; and Security counters boarding attempts. Although potentially dramatic, it can also be cumbersome with lots of dice rolls.

Beyond the history, the game is supported with a little more background. In the back of the book is a travel log written by a Time magazine journalist, which takes us to many of the major colonies, giving a thumbnail description of each. It includes maps of the worlds visited, but the descriptions feel all too brief. Two nice touches are use of newspaper articles to get across events of the time and song lyrics by well-known musicians. Two actual ships are described in detail, the Grumman Atom Cat and its successor, the Consolidated Vultee Catalina II, both receiving a page that adds some necessary color to the game's ships.

Physically, **Cold Space** is reasonably well written and illustrated with a series of quite effective blurred photographs. The layout though, is very pedestrian, and it is a pity that the newspaper articles could not been made to look like the real thing as this would helped lift the book above the leaden layout. The character sheet is not only pedestrian, but also ugly. Fortunately, there is a decent index.

Originally released as a PDF, the electronic version differs in several ways. One, it is slightly cheaper. Two, it is in color, improving the book's art by clarifying both illustrations and cartography. Three, it comes with a file that can be read by NBOS' AstroSynthesis program that depicts a sphere around the Earth some 20 light years in radius. This is a nice tool, but not immediately useful and a more obvious interface would really have helped. Plus, it really does not help with the distance and travel time problem.

Unfortunately, Cold Space suffers from a number of problems, all of them stemming from a lack of development. The mechanics are often explained poorly, being either garbled or underwritten. In other places they are near obtuse, specifically the rules for interplanetary and interstellar travel. Employing an arcane formula to determine travel time, the rules are moot given the lack of interstellar distances. Character generation is spread over several sections and is too lengthy a process given the end result. It is also only really applies to American characters. The GM advice is also scant.

Worse still, the very thing that underpins the game's core concept is woefully underwritten. The very technology that triggers the re-writing of the Cold War is never given the treatment it deserves. Mere ordinary equipment, from weapons to tool kits to space suits is relegated to a generic list, the only recognizable item being a gyrojet pistol. Beyond two vessels, the actual space ships are only described in terms of their manufacturers, ship name, type, size, fuel type, and tonnage, crew number, and when first available. And nothing more. What do these ships look like? What sets one model apart from another? What armament do they carry? And why, if this is a game set during the Cold War, is not one single Soviet vessel described?

The truth is, I did want to like this game. I do like the premise. It is something that I would want to play. Unfortunately, the game never quite lives up to, or supports its premise. Almost everything else is a disappointment after reading through the background and if I were to run or play this game, it would be with another set of mechanics. Even then, **Cold Space** is an expensive buy for just the background and that is if you buy the PDF version which has the benefit of color and an extra or two. Underdeveloped and underwritten, the retro-future depicted in **Cold Space** deserves better.

Grand Canyon Sweetness: The Kinkaid Enigma (Part One)

"I swear the earth shall surely be complete to him or her who shall be complete,
The earth remains jagged and broken only to him or her who remains jagged and broken.
I swear there is no greatness or power that does not emulate those of the earth,
There can be no theory of any account unless it corroborate the theory of the earth."
-- Walt Whitman, "The Song of the Rolling Earth"

It's not the deepest, or the longest, but the Canyon of the Colorado River in northern Arizona is certainly the Grandest. The Anasazi liked it well enough to build their first pueblos there around 500 A.D. -- and hated it enough to vanish 700 years later. Coronado's lieutenant Garcia Lopez de Cardenas found it in 1540 while looking for the Seven Golden Cities of Cibola, but he turned around and went back, leaving the Canyon alone for three more centuries until the Americans started extending their grids and rules into it. So far, the Americans haven't vanished. Rather the opposite; the Canyon attracts five million eager tourists every year. But despite hosting scenery-starved hordes, the Grand Canyon still hoards some of its secrets. The Canyon's 277-mile length was not even fully mapped until 1971, and even today, some of the 1,900 square miles of arroyos, mesas, crevasses, and caves in the Canyon's immediate drainage area have only been charted from the air. It has killed at least 600 people since the 1870s. And in 1909, either nothing happened except a slow news day, or . . . well, we'll let the newspapers tell it.

"The latest news of the progress of the explorations of what is now regarded by scientists as not only the oldest archaeological discovery in the United States, but one of the most valuable in the world, which was mentioned some time ago in the Gazette, *was brought to the city yesterday by G. E. Kinkaid, the explorer who found the great underground citadel of the Grand Canyon during a trip from Green River, Wyoming, down the Colorado, in a wooden boat, to Yuma, several months ago."*
-- "Explorations in Grand Canyon," *Arizona Gazette* (April 5, 1909)

Those are the first words of a singular news story published in the *Arizona Gazette* with no byline. In prose alternately methodical and breathless, it tells of G.E. Kinkaid's descent of the Colorado and his discovery of a cavern entrance about two-thirds of the way (2,000 feet) up the cliff at a location that can be guesstimated as Marble Canyon, around river mile 56 in modern map-talk. Inside was a full-on temple complex, complete with two massive chambers, radiating passageways, idols, a crypt of bark-wrapped mummies, stone tablets bearing mysterious hieroglyphics (including a depiction of an animal "of prehistoric type"), vases, copper tools and weapons refined with "the lost art of hardening this metal, which has been sought by chemists for centuries without result." That wasn't the only alchemical wonder; there was also a "gray metal" similar to platinum "which puzzles the scientists, for its identity has not been established." And in a final delightfully random note, "strewn promiscuously over the floor everywhere are what people call 'cats eyes,' a yellow stone of no great value. Each one is engraved with [a] head of the Malay type." And that was the last the *Arizona Gazette,* or anyone else, heard from G.E. Kinkaid.

"The Smithsonian's Department of Anthropology has searched its files without finding any mention of a Professor Jordan, Kincaid, or a lost Egyptian civilization in Arizona."
-- Smithsonian Institution form letter

Kinkaid (or Kincaid, as his name is usually spelled by post-hoc researchers) claimed to have been the first white man born in Idaho (a provable lie) and to have been in the employ of the "Smithsonian Institute" for the last thirty years. He had, according to the article at any rate, already removed some of the relics and sent them to Washington from Yuma, with the apparent result that "Professor S.A. Jordan" came west to pursue "the most thorough explorations," including stringing electrical wires throughout the complex to make mapping and study more convenient. Almost needless to say, the Smithsonian disavows any knowledge of this discovery, of Kincaid, or of "Professor Jordan." One senses that the Smithsonian, in common with most hidebound and reactionary slaves to conventional fact and logic, would tell you to look at the date of the paper and see if maybe somebody's April Fool story ran on a slow news day.

But to accept that kind of thinking is to surrender to the great Smithsonian cover-up. The Smithsonian has a deserved reputation for "losing" finds in its vast basements, although the rumors of curators dumping anomalous artifacts out at sea are probably just that. At least one researcher has located a Professor "S.A. Jord*o*n" (apparently a European field archaeologist), in a Smithsonian publication no less! And it's certainly interesting that the person who founded the Smithsonian Bureau of Ethnology (which would surely have been involved in the Kinkaid-Jordan Expedition) was the first man to descend the Grand Canyon, the one-armed martinet John Wesley Powell.

Powell launched his expedition with nine men in May of 1869. (One of them, George Bradley, declared that he would "explore the River Styx" if need be to get out of the Army.) Three of his men (two brothers Howland, and one William Dunn of murky background) left the expedition in August of 1869, and were reported killed by the Shivwit Indians. Powell, intriguingly, accepted the Shivwits' tale of mistaken identity. William Hawkins, a scout accompanying Powell's expedition, noted that "the account in [Powell's] Report which accuses them of cowardice is entirely wrong, and that it was made to cover up the real causes of their leaving." Powell's Report is also missing a day (June 18-19, 1869), recording events a day after their occurrence.

Before and after the expedition, Powell displayed a constant interest in Indian legends, lore, and gods, the more esoteric and obscure the better. In 1875, he hired one Clarence Dutton to map the Canyon; Dutton dipped into the wide well of myth for intriguing place-names such as Isis Temple, Diana Temple, and Holy Grail Temple. Powell headed not only the Bureau of Ethnology but also the U.S. Geological Survey, and became one of the 33 founders of the National Geographic Society in 1888. Later in life, he wrote a work of philosophy "treating of matter, motion, and consciousness as related to the external universe or the field of fact," which very few of his contemporaries understood. He died in Maine, as far from the Canyon as he could get.

"After investigation by a number of scientists, first announcement was made here today of the excavation near Tucson of cast lead swords, crosses and other objects bearing Latin and Hebrew inscriptions which, taken at their face value, are held to mean that Roman Jews crossed the Atlantic in the Dark Ages, penetrated to Arizona and founded a kingdom which lasted from about 700 A.D. to 900 A.D. . . . The combination of Christian cross, Moslem crescent, Hebraic seven-branched candlestick and Freemasonry emblems has imposed a heavy tax on the credulity of investigators, but their appearance of having been covered and embedded in stone by natural processes has puzzled skilled archaeologists. Some have arrived at the opinion that, whatever their origin, the objects lay for centuries in the earth where they were found."
-- Puzzling "Relics" Dug Up In Arizona Stir Scientists, *New York Times* (December 13, 1925)

Another great rannygazoo of a controversy, one that made it into many more papers than the *Arizona Gazette,* also concerned Arizona archaeology. To wit, the discovery, beginning in September of 1924, of thirty or so artifacts on Silverbell Road near Tuscon. Most of the pieces were lead, including swords, arrow heads, and spear shafts. Crosses and plates inscribed with Latin told the tale of the Roman consuls Actius and Theodore, carried on the sea to the city of Calalus. They "won over" Toltezus (the Toltecs?) and Silvanus (the woodland tribes?) and brought reinforcements from Rhodes. Theodore (a Christian name matching the crosses) was succeeded by Iacobus, Israel, and Benjamin, but there were plenty of Jewish emblems in the finds as well. The whole megillah was dated "880 Anno Domini," however, to throw the whole question open again. Interestingly enough, if the chronicle on the plates can be trusted, the Romans must have left Europe in around 750 A.D., which is just when the seven bishops were (according to Coronado's favorite legend) supposed to have fled suddenly-Moorish Spain and founded seven golden cities in Cibola far to the west.

It would be easy to dismiss the Tuscon trove as Glozel-style forgeries, and many experts did, especially East Coast experts at the Smithsonian (them again!) and New York's Museum of the American Indian. They pointed out that all of the Latin texts came from standard works such as Virgil's *Georgics,* two commonly available Latin grammars, and the back of a dictionary, *Rouf's Standard Dictionary of Facts*. (All the text except "Seine," which would have been the "Sequana" to Latin-speakers, and "A.D.," which apparently wasn't used in the West when the putative Roman Jews left Europe.) Likewise, they noted that lead is a terrible material for swords and spears, no matter how desperate your clan of Roman Jews might be. Prime candidates for the forgeries included local Masons, Lost-Tribe-seeking Mormons, and (best of all) the classically-educated Mexican sculptor and lead-worker Timotio Odohui, who lived on Silverbell Road in the 1880s, and who was fingered by another Mexican gentleman of the area as the forger after the

kerfuffle blew up. But all that said, the artifacts had been unmistakably found covered in caliche, a lime deposit that (normally) takes centuries to build up. At least one top-flight archaeologist, Byron Cummings of the Arizona State Museum, vouched for their authenticity. But if genuine, the artifacts' "Romans" seem almost as ecumenical as Dutton's map of the Canyon, which includes The Tabernacle, Roma Shrine, Solomon Temple, and Lancelot Point. Or as transnational as the Canyon Temple find, with its hieroglyphics and mummies, "possibly from Egypt, tracing back to Rameses" and its worship that "most resembles the ancient people of Thibet."

"The Great Canyon beyond the Eastern Sea [the poem called Ts'ang Shan Wu says that in the east there is a stream flowing in a bottomless ravine. It is supposed to be this canyon. The 'Dissipation of Sorrows' calls it Kiang Shan's Great Canyon] is Shao Hao's Country. [The emperor Shao Hao, of the "Golden Heaven" family, gave it this designation.] Shao Hao's Descendant, the emperor Chuen Suh [of whom no further description is given], left there his lute and lyre. [It says that his lute and lyre are in this canyon.] It has a beautiful mountain, from which there flows a delightful spring, producing a charming gulf."
-- Liu Hsiang, *Shan Hai Ching* or *Classic of Mountains and Seas,* Book XIV [brackets are 4th century A.D. notes in a later text]

The idol in the 1909 Temple was "sitting cross-legged, with a lotus flower or lily in each hand." Although that pose also recalls, among others, the Egyptian god Bes, the *Gazette* and Kinkaid felt that it "most resembles Buddha." (Just in case, though, Dutton named various Canyon landmarks not just Buddha Temple but Zoroaster Temple, Manu Temple, Deva Temple, Confucius Temple, Brahma Temple, and Krishna Temple.) The mummies in the crypt were wrapped in bark-paper, a Chinese technique (although Chinese mummies are either lacquered or dried out naturally, like the Anasazi mummies found in Arizona). Buddha and bark can both thus be chalked up to a Chinese visit to Arizona, or somewhere "20,000 *li* across the sea to the east," by the Buddhist missionary Hui Shen in 499 A.D., beating the Roman Jews by 250 years or so.

"Fusang," the land Hui Shen visited according to the 7th-century *Liang Shu,* encompassed a country, the Kingdom of Women, where the people ate beans and lived in round clay houses. A very nice coincidence with the proto-pueblos of the proto-Anasazi. (The Hopi are matrilineal, to boot.) Admittedly, Fusang also had horses, which Arizona didn't between the Clovis Point and Coronado. (But it didn't have iron, which the Indians also didn't.) And weirdly enough, the description of Fusang doesn't mention a canyon -- but the *Shan Hai Ching,* the *Classic of Mountains and Seas,* does so in fairly unmistakable, if still murky, terms. For instance, the "emperor Shao Hao" mentioned above is ahistorical, although his name can be translated as the "son of the sun." (Elsewhere, the *Shan Hai Ching* calls the "Great Canyon" the "Valley of the Manifestation of the Dawn" or the "Birthplace of the Sun.") And the book itself is mysterious; sadly, nobody quite knows where the *Shan Hai Ching* came from. Its first known editor, Liu Hsiang, was a scholar of the Han Dynasty, but the book likely predates him by at least 200 years. During this era, ca. 380-250 B.C., Ssu-ma Chien states that a number of expeditions left China to sail east in search of the mountains of paradise. At least one expedition, that of Hsu Fu in 219 B.C., never returned. (What, exactly, is Chinese for the Seven Cities of Cibola?) Part of the *Shan Hai Ching* may have originated in the 13th century B.C. And if the chronicle was actually set down by its legendary author, the Emperor Yu, it predates not just Liu Hsiang, but the Buddha -- Canyon idol or no Canyon idol -- by as many as 1500 years.

In Part Two, we go further back and farther in.

My GenCon Report: Part I of Howevermany

And so, many weeks later, my GenCon report surfaces, washing ashore like . . . oh, something that would wash ashore.

Sadly, another minor flu-like illness has again surfaced in my life as well; I suspect this comes with fatherhood, since my traditionally healthy household has been infiltrated by a stranger who collaborates with others, trading biowarfare agents with other pint-sized generals, and returning home with his ill-gotten goods for getting ill, drooling and inserting objects into his mouth all the while.

Green Ronin Games had about a jillion new books. They had new material for *Mutants & Masterminds,* including *Hero High* and the setting book and an adventure for *Paragons* (the former book, I should note, includes a contribution from me); new goodness for Freeport in the form of the *Pirate's Guide to Freeport* and the *True20 Freeport Companion,* a couple of new *Bleeding Edge* adventures, and *Faery's Tale Deluxe.* Oh, and they also had a neat book called *The 100 Best,* containing 100 industry luminaries discussing 100 games (one game per pro) that they think is . . . well, "The best." It's a neat conversation-starter book -- the kind that's common in the comics world but less so in the gaming arena -- and it's already generated some comment on various blogs. According to the booth bunnies at the Green Ronin book (okay . . . it was Steve Kenson), this book sold a *lot* better than they were expecting, which warms the cockles of my heart.

Also of note from Green Ronin was their announcement about a *Mutants & Masterminds*-powered version of the *Wild Cards* license, due at a GenCon near you (well, me) in 2008. That one should be neat (I'm a long-time *Wild Cards* fan, having been inspired to pick up both the series and *GURPS* by holding a copy of *GURPS Wild Cards* in my hands in the late 1980s), although my pulse is ridiculously off the book-readers of the world to know how much buzz or interest there is; upon hearing of the license, I headed over to Amazon and noted that a good number of the books seem out of print or hard to get.

Goodman Games had one of those games I mentioned a month ago, a cool little number that was sold out by the time I got there. In this case, it was #50 of their *Dungeon Crawl Classics* line, *Vault of the Iron Overlord,* written by none other than Monte Cook. The coolness of this adventure is that the whole thing takes place on a map that consists of those concentric circle things held together by a paper fastener (a professional binding job, not one of those "bendy metal jobs" you get yourself); as explained by the good man Goodman himself, the heroes need to manipulate the maze to get it into position. It inspired the same kind of, "Oh, neat!" reaction to a map that may have first registered decades earlier upon gazing at the castle maps with the original *Ravenloft* adventure. (Although this adventure sold out very early in the con, they were smart and kept a copy aside to show folks like me.) I can't say if it was any good or not (although it was written by Cook, so my money's on "yes,"), but if unique *d20 System* adventures are your cup of tea, you may want to check it out.

Goodman Games also let me in on a little behind-the-scenes "secret": Their annual dungeon-crawl tournament -- which started out at 114 competitors vying for the title -- was apparently the closest that they'd ever seen; apparently, any misstep by the folks in the top ranks -- one more trap, one more hit point lost, one more critter killed -- would've resulted in a shifting of position. It sounds like everyone involved had a good time, and I consoled myself in my own dungeoneering skills: I'm one of the bottom-ranked folks who makes the top 90% of contestants possible.

I stopped by the bustling Paizo Games booth, trying to see how they were doing. My original notes to myself includes a phrase along the lines of, "Sadly, they weren't able to spare anyone to talk with me because they were too busy ringing up scads of customers," but before I wandered off Phil Lacefield Jr. was able to spare a few minutes with me. Their big news -- the beginning of the *Pathfinder* monthly "not a magazine" series of adventures for the *d20 System* -- had been exceeding their exceptional expectations. Oh, and they sold out of the last issues of *Dragon* and *Dungeon* magazines by Friday (meaning I now need to scour the local bookstores to find 'em). They were also doing gangbuster business with their *GameMastery* line of goodies -- adventures and supplemental material -- and, in general, looked like they were having a grand show.

At some point in all this, I had it reemphasized how much diversity there was in the *d20 System* world; the offerings

from Green Ronin, Goodman Games, and Paizo were all exceptionally different, but they were all tapping into different segments of that game's market. The creativity and variation shown by these three publishers (let alone the dozens of other top-notch houses) exceeded even the most vibrant era of TSR's own diversity, when ***Spelljammer, Ravenloft, Dark Sun,*** and ***Planescape*** all duked it out on store shelves. I know that if I had a ***d20 System*** gaming group together, my wind would be whirling with possibilities at the same time my wallet would be groaning with dread. And it made me wonder what would happen if other companies were somehow a bit freer in letting others play in their games' sandboxes . . . although I suspect that [Sturgeon's Law](#) would uphold for the output of such ruminations.

I have more notes here, but my first round of "the Big Guys I Got to Talk to" took more than I was expecting, so I'll probably continue my never-ending ruminations on the Big Con, using it as a springboard for whatever other grandiose thoughts spring to mind. Presuming, of course, that my throat doesn't keep feeling as rough as a cat's tongue come next week.

--Steven Marsh

Erebos

by Paul Drye

Some timelines are difficult to decipher. It's not that they're apparent impossibilities like, for example, Brekilien or Madland. Instead they diverged in human prehistory and have no historical inertia forcing them in a particular direction. With no common cultures, and languages as distantly related to Homeline's as English is to Aleut, it's very hard to pin down how one of these worlds progressed . . . especially if historical record-keeping is spotty. On the other hand, to some extent it doesn't matter how a world has diverged, but instead what it's diverged to. A world with the same physical laws as Homeline but utterly differently in history often produces valuable exports and opportunities for research.

Erebos is one of these. While its history is murky, Infinity's explorers have reached the preliminary conclusion that writing was invented quite soon after agriculture here, rather than lagging until the fourth millennium B.C. as it did on Homeline. With a 5,000 year head start, Erebos reached industrial, information, and biotechnological revolutions long before most timelines made it past ancient empires. From there they seem to have developed nanotechnology, and eventually made it to a difficult-to-understand melding of bio- and nanotechnology that turned the planet into a virtual Eden.

Somehow, though, the "Edenites" regressed and lost control of their world. The tamed Earth was unstable and soon entered a greenhouse phase that increased temperatures more than 50 degrees Fahrenheit. The poles became tropical, while the rest of the planet was rendered uninhabitable by anything except bacteria. The uncivilized remnant humans tried establishing themselves further and further away from the equator, following the rapidly speciating life forms their own ancestors had developed (and possibly aiding the new biosphere's progress with the little knowledge of their advanced civilization that remained). Eventually the southern societies went extinct as they hit the water barrier between South America and Antarctica -- South Africa and Australia already being too hot. The northern fragment, though, managed to gain a foothold in the steamy-but-habitable lands of the Arctic Circle.

It's been approximately 2,500 years since then (give or take five hundred years) and the Erebans have started to climb back up the ladder of technology. Steamships are plying trade lanes across the pole, the Arctic Ocean now being an oversized analog for the Mediterranean. Homeline's astronomical observations suggest that the current year is 1855.

Living with the Midnight Sun

The inhabited part of Erebos is north of the line where July's average temperature is less than 110° Fahrenheit. This is approximately the Arctic Circle, with large bulges outward into the Bering Sea and the North Atlantic south of Greenland and Iceland. The climate is fairly uniform across the whole area, with not even the northernmost land dropping below 85° in summer.

Winters are relatively harsh because of the Arctic's months of darkness -- land above latitude 80 sees no sun for four months. As well as dropping average temperatures by as much as 40 degrees (Northern Greenland averages 55° Fahrenheit and has a frost every few decades), the long nights shut down life and long-distance travel when they happens, rather like an actual snowy winter. In the northernmost lands, vitamin D deficiency is a problem for the inhabitants too.

Prevailing winds are to the south as cold air moves that way, displacing hot air north at altitude. It's much easier to sail parallel to a line of latitude (essentially, along the coast instead of across the open ocean). Similarly, the Earth's rotation bends the winds a little to the west, so it is also a little easier to sail clockwise around the ocean -- looking down from above the north pole -- than counterclockwise. In this case, though, it's feasible to wait for a more favorable breeze if one wants to tack a sail craft to the east. The north wind, however, is essentially constant, and it's only since the introduction of steam-powered craft that getting from Northern Canada to Siberia directly became easy.

The People of Erebos

Ereban legends talk of people made radically different from the human norm. Some were four-legged and stupid, used for beasts of burden. Some were reduced to nothing more than tons of brain tissue encased in enormous plastic silos. While these examples and many others are gone (assuming they ever were more than legends), and most people in modern-day Erebos are substantially similar to Homeline humans, there are other types that have managed to survive the fall of the civilization that created them.

The minims are humans of unusual size, about the size of a spider monkey. While not nearly as smart as standard humans, they're certainly smarter than chimpanzees, and have ousted rats from many of their urban environmental niches. Infinity agents have told of disconcerting nights spent listening to minims talking to each other under the floorboards. Occasionally, a genius of the species re-invents the spear and the locals will be forced to fumigate the dock district for fear of an uprising that will cost them warehouses full of food.

Far rarer than minims but better integrated into Ereban society, farseers were designed for purposes unknown. Whatever those were, though, with their large eyes and acute eyesight farseers carved a modern-day niche for themselves as lookouts on Ereban ships. Their guild is partly a source of pilots for mainstream humans, and partly a bloodline matching agency to prevent interbreeding in their small and often-sterile population.

The Lands of Erebos

Ethukut: Greenland lives up to its name on Erebos, and is home to the most important country in the timeline. Ethukut is based around the island's inland sea, where the ground has been pressed below sea level by the now-vanished ice. Rich in resources, separated from the country of Atis by the Kennedy Channel, and otherwise well away from any other land, Ethukut is a bit like medieval China: big, isolated, and not very interested in the world outside its border.

That said, also much like old China the rest of the world is profoundly interested in it as a source of trading riches. To the extent that they can get the Ethukutians to open up their ports, other nations sell them goods in exchange for spices and hand-crafted goods. Until recently, this trade was unimportant to Ethukut's overall economy, but they've fallen behind Atis technologically and have started importing some industrial items.

Infinity enters the picture because there's been a recent fad back home for Ethukutian textiles. Homeliners arrange for cargos of early industrial items to be shipped in to Erebos (usually through Murmansk, or Churchill in Manitoba), after which they're steamed to Ethukut. As always, there's a need to police the trade, protecting the outtime traders and watching for illegal activity.

Syelehann: As mentioned previously, most people on this timeline are standard-issue humans. Syelehann, contiguous with the islands of Homeline's Franz Josef Land, is the sole nation of note that has variant humans in the majority. Syelehannians are tall and pasty, sensitive even to the dim light of the arctic but well-adapted to the months of dark so

near the pole. In particular, they can produce vitamin D from food sources, and so don't need nearly as much exposure to the sun as humans that need ultraviolet for the job. Unfortunately, the best sources of precursors to the vitamin are morally unpalatable to regular humans. The lower classes let grains pick up fungal infections and the inevitable ergotic hallucinations that implies. The upper classes are even worse, eating raw skin to get at the precursors in animals. The very rich are loathe to use animals for religious reasons, and so engage in cannibalism. This willingness makes them profoundly unpopular in the rest of the world.

That religion also makes the Syelehannians as antipathetic towards outsiders as outsiders are to them. It's a complex of body and behavior taboos that make them wrap up in heavy black cloaks, hats, and other clothes, and disdain music, loud voices, and eating and drinking with others. The first Infinity agent to make contact with Syelehann (or at least the first one to make contact and not be eaten) called them "Puritan vampires."

Despite their urge towards isolation, Syelehann is one of Erebos' maritime powers. Their home archipelago is small and not particularly rich, so they've been forced to turn to the sea for trade. As Syelehann does have plentiful supplies of coal their steamships are found in many ports, where they have their own enclaves and traffic in slaves when they can or other goods when they can't.

Atis: Not so much a country as a region, Atis encompasses the Canadian Arctic archipelago as well as northern Hudson's Bay. Once an empire that controlled the entire pole, that's five hundred years past and Atis is now a squabbling collection of small states united only by language. Despite the constant low-level wars, the need for ocean trade and the constant competition have done them some good: Atisian city states are the most technologically advanced places on the planet.

Paradoxically, this level of achievement makes Atis the least-interesting of Erebos' major nations to Homeline traders. What its citizens do best is make things which are well behind the technological standards of outtime visitors, so there's no market for them. On the other hand, claiming to be from Atis is the standard technique for Homeliners in other Ereban countries. With dozens of Atisian cultures and accents with which to blend in, some of them quite obscure, no one in the rest of the world can be sure that the strange visitors aren't what they say they are.

K'i: The islands of Svalbard are home to the K'inanae, a troublesome hill people who've occasionally fallen to outside invaders but always managed to regain their independence. They're free in the present day, but it may change in future as the islands have some of the richest mines in the high Arctic, including coal pits that have become strategically important on Erebos during the last fifty years.

The K'inanae are noted for their men's elaborate facial hair (though weirdly, they can't grow moustaches and so tend to look leonine), and their billowing shirts, Phrygian caps, and colorful sarongs. Many are miners, working blisteringly steamy tunnels far below the surface; others are engineers. Steam power may not have been invented here, but there are many engines pumping the mines or raising cars of rock.

K'i itself is hilly and windy, as the arctic breeze can career across open ocean for hundreds and thousands of miles, gathering strength before finally hitting the coast as rampant storms. The east of the island is treeless because of this, while the west is more pleasant and forested. However, the west is also where the coal seams sometime run to the surface, and in places empty stone scars have replaced the woods.

Eastern Siberia: There was only one place on Erebos where jungles could migrate all the way north as the climate heated up (the Mediterranean, Himalayas and the isthmus of Panama getting in the way for most). The forests of southeast Asia faced several mid-sized highlands along the way, but managed to re-grow themselves successively further and further to the northeast until they reached the open lands north of Manchuria. There they looped back to the west and eventually spread as far as the Urals. The Lena and the Yenisei Rivers, both substantially similar to Homeline's despite 10,000 years of differing history, were transformed into analogs of the Congo River.

The area between the two river mouths, dominated by the rugged Central Siberian Traps, is the "heart of darkness" of this underexplored timeline. It's just about the most inhospitable place where humans can conceivably survive on Erebos, and traveling there is very chancy. Homeliners will often go, however, as its jungles contain wild samples of the Edenites' lost biotechnology, such as the species of tree discovered five years ago that has useful amounts of

ribavirin (used by Infinity against yellow and hemorrhagic fevers) in its leaves. Based out of the under-civilized and otherwise uninteresting coastal state of Gyudlay (on the Taimyr peninsula), several outtime missions set off each year. Most suffer fatalities at the hands, hooves, teeth, and other parts of the jungle's outsized fauna and aggressive natives.

Infinity and Erebos

Erebos is on Quantum 3, and so is safe from influence by Centrum. As it has both natives and desirable products, Infinity has classified it as a Protectorate timeline, open for trade and research but not for colonization. However, the Protectorate was reduced to only the northern hemisphere four years ago, when the United States applied to UNIC for a status change to the timeline. With their blessing, it was opened for settlement as long as the Americans stay away from the inhabited north.

Though far more ecologically impoverished than the north, Erebos' Antarctica has many small Edenite animals like birds, and plants like grasses and flowers. In return for the smaller chance of finding useful biotech as compared to Erebos' Central Siberia, it's much tamer, even pleasant, and entirely uninhabited by native humans. Further, as interesting items are found up north, they can likely be grown down south as well. Based around the small settlement of New Florida, there are already plantations of the ribavirin-laden "fever trees," and the colony's backers think the potential for profit is very high.

Besides the colony, Erebos is mostly visited for trade, picking up the aforementioned unusual animal and plant products. Infinity's main base is in Thras, a mildly important Atisian city of 50,000 people on the southern coast of Baffin Island. There is also some medical research being run out of Thras because of a new theory about the Gotha virus: though not directly related to Erebos, some think it may be based on a similar mix of biotechnology and nanomachines. While this is not a wildly popular supposition, the Gotha virus has been so relentlessly mysterious that Infinity is willing to throw some resources at the work in the hopes of some insight.

Characters

Gjalkila Apauh: Master of the *Njeshtje Zgjekoh* (or, as Infinity's local agents have taken to calling it, "the good ship Unpronounceable"), a steamship in the Arctic tramp trade based out of Wzarni on Wrangel Island. The concept of a captain never being gainsaid on his ship is foreign to Erebos, so Apauh is a master of crew politics; he largely gets what he wants out of his men and women by playing their desires and fears off of each other. When that fails, he'll resort to bribery or petty violence. In the end, he's a useful contact for outtimers looking to travel around Erebos, as he can set his own itinerary if they can pay him to care about theirs.

The captain knows that the travelers from "elsewhere" are up to something, though he doesn't even have a glimmer of just how strange they are. In any case, he simply doesn't care and views Infinity's secrecy needs as just another business opportunity. To be honest, he even enjoys the skullduggery.

Maakiawaro: His name is a pseudonym, in the style of K'inanae who devote themselves to a cause. His means "the abolitionist," and that's what his life is all about. Sold into slavery as a teenager, he spent a year living in fear on Syelehann before managing to steal a small boat and escape back to K'i. The kind of determination that let him row the 400 miles from one island to the other is still with him, driven by fear and hatred of the Syelehanni that's difficult to fathom.

He's moderately rich now, entirely because he thinks he needs to be to continue his crusade and nothing was going to stand in his way until he was. He spends as much time as he can trying to convert others to his viewpoint that the slave trade needs to be ended and, then, Syelehann invaded or the island blockaded until its inhabitants starve to death. He's not an easy companion.

What he is, for Infinity agents, is an occasionally useful cover. He pays for agents to perform missions related to his cause; they give Homeliners an excuse to move around and an entré to the sketchy underworld of Erebos.

Adventures

Can't Follow the Drinkin' Gourd: Agents tracing criminal activity elsewhere in the multiverse find evidence of human trafficking pointing to Erebos. Someone associated with the American colony has been engaging in some trade with Syelehann, shipping slaves down south and using them for labor on distant agricultural projects. While they're technically manumitted and paid -- the most important law about-time employing an intelligent creature that's been a slave -- they're essentially prisoners, so isolated from their homes they can't possibly leave. Whoever is doing this knows they're well on the wrong side of the law and is hiding their activities . . . but now the investigators have noticed.

The complication is that these people were likely to be food if not purchased. Even if the current batch are freed, the economic incentive to buy and free more of them into what is, after all, at least some kind of life goes out the window. Hundreds, maybe thousands who might have lived will die.

The Feejee Mermaid: A strange and twisted creature mounted and displayed on the wall of an Ereban dockside tavern turns out, on examination by a Homeline biologist, to be the cadaver of a once-living thing. Investigation of local stories will suggest that it's one of a race of humans, now degenerate, that claims to be the original Edenites. There aren't many left, and they live far to the south around one of the islands in the blazingly hot and largely inaccessible Aleutians. Legend has it that they live their youth as relatively normal but amphibious humans, then enter a sessile existence anchored to the sea floor where the heat is not so much an issue. Whether or not they're the Edenites, this kind of modification to the human form is so radical it's worth investigating; agents who can breathe underwater would be very useful on several timelines.

Security Concerns: The problem with getting to Eastern Siberia on Erebos is that so little overlaps between it and Homeline's civilizations. Until now transitions to Erebos had to take place in European Russia or Canada. Long sea voyages to the Taimyr Peninsula then ensued, followed by even more arduous battles down the region's rivers. Infinity (at the urging of Russia, perhaps stung by the American colony) has decided to cut out the middle men and set up a parachronic gateway directly into the heart of Erebos' most dangerous and interesting jungle. The chosen site is the town of Mirnyy in Central Siberia, which has a small airport and is on the large Vilyuy River that runs through similar beds on both Homeline and Erebos.

The trouble is that the destination, while now much easier to reach, is going to be difficult to hold. The temperature often exceeds 120 Fahrenheit, the trees and other vegetation are machete-dulling thick, and the wildlife and subhumans are deadly. No-one is going to live on the far end permanently, but someone is going to need to secure the perimeter. Guess who?

Using Erebos in Other Settings

Erebos is, in many ways, a pulpy setting in the key of Poe, or at least the bastard child of Poe and Olaf Stapledon. Strange tropical lands at (or in) the pole are commonplace to American fiction in the decades surrounding 1900. For GMs, the issue then becomes one of accenting the tones he needs for his campaign, heading in one of more of super-scientific, hard-boiled action, or horrific directions.

It's not very far from there to an Erebos suitable for fantasy campaigns. Most worlds haven't got anything canonical at their poles, so it's not overly difficult to plop this version of Earth's arctic down after a few judicious changes are made to the coatlines. The steam ships will need to go, but they're only a grace note. Those who think they'll miss them can rely on the redefinition of technology as magic and replace coal with imps or djinns; that's what's going to need to be done to the biotech of the East Siberian jungle anyway.

A science fictional setting needs a fallen civilization before Erebos works. However, it doesn't need to be a human one as assumed here. If *Traveller's* First Imperium or the like isn't available, the Edenites can just as easily be a lost alien civilization, and the various types of Ereban humans successor races on a strange alien world.

With a bit more work, Erebos can even be used in a superhero setting. Antarctica or someplace similar is home to a Burroughs-like lost world in many heroic universes, so why not yours? Whip up a "dimensional barrier" the heroes can cross south of the 80th parallel and you're ready to roll. What? You didn't think Amundsen actually made it to the pole, did you?

The Omniscient Eye

Do I Need Pirate Insurance in Space?

I'm in a science fiction campaign where the PCs are merchant adventurers. In this campaign, they often have to fight off pirates and deal with destinations in or near war zones. Realistically, will they have to have insurance on their ship if they want to do business outside of the black market? Do they need separate insurance on their shipments? What's their choice of destinations going to do to their insurance rates?

Whether the ship needs insurance will depend on the type of trading she's engaged in, but almost certainly she will. *Traveller* and its imitators have led many gamers to consider speculative cargo as a major mercantile activity, but in the real world it represents a very small fraction of cargo traffic; the vast bulk of cargo is sent with the full knowledge of the eventual recipient, at standard freight rates. With this in mind, no reputable factor will consign his cargo to an uninsured ship. If he did so, depending on the conditions of the contract, he might find himself liable in the case not only of piracy or shipwreck but of misconduct by the ship's crew. Even a ship carrying illegal goods needs a public reason for going somewhere, and that reason is usually a legitimate cargo.

Since modern cargo ships rarely if ever have owners aboard, those owners want to make sure that the substantial investment they have made is protected. The crew may be swapped as needed, but a ship is an asset that, even if she is entirely typical of her class, cannot usually be replaced quickly (and most freight is booked several months in advance). Historically, rather than skimp on insurance, shady owners have tended to insure a ship for *more* than she is worth, hoping that an accident will occur (or in some cases making sure that it does) so that she can be replaced with a better one.

This is a special and extreme case of what is technically known as moral hazard: the knowledge that an insurance policy has been taken out can influence the behavior of the policy-holders. For example, an owner may call on his crew to push on even through severe weather, in the knowledge that whether or not the ship makes it *he* will not be worse off.

Insurance is, of course, expensive. The simplest calculation multiplies the insured sum by the estimated probability of the insurable event: if one trip in a hundred sees a ship lost to pirates, the basic price of insurance against piracy for one trip will be 1% of the value of the ship and her cargo. There might also be partial-loss scenarios (a pirate attack is beaten off, but consequential fire damages some of the cargo), and their probability and loss rates would be factored into the basic premium. Even this is only to insure against a single event; more comprehensive insurance will look at all the risks that are being covered, adding together all the premia.

Of course, these odds cannot be calculated precisely, and insurance companies are in business to make a profit; the actual premium is likely to be anywhere from 20% to 60% higher than this amount. Factors that modify this percentage are the inverse likelihood of the event (the more rarely it happens, the harder it is to estimate the probability accurately; also, the higher the variance in the insurer's outgoings, which means there must be more profit to satisfy risk-averse investors); the scale of the insurance (there will be a smaller percentage premium charged for insuring an entire fleet than for insuring a single ship); and the liquidity of the insurance market (if only one insurer deals in a particular sort of risk, then as in any other monopoly he can charge more or less whatever he likes, while a competitive market can reduce the margin).

The primary skill of insurers lies in estimation of risk. Once in a while, an insurer will get this substantially wrong: If his premium is too high, he loses business to his competition or strangles a particular industry. If it is too low, he may well do very well for a while, but be bankrupted when several big claims come in quick succession.

While house and car insurance for individuals varies hugely in price based on the usual location of the insured item,

maritime insurance pays rather less attention to this. Normal insurance covers a ship (and sometimes a set maximum value of cargo) for all normal hazards -- storms, collisions, and so on -- anywhere in the world, as long as she stays out of certain designated "war risks areas." These areas now include places such as the Malacca Straits that are considered to have a particularly high risk of piracy; they are designated by the Joint War Committee at Lloyd's of London.

One might think that no insured ship would go into those war zones, but this is not the case; War Risks Insurance is a very great expense, in part because it is very difficult to estimate the likelihood of losing a ship when conditions change so quickly, but it *will* be bought, and where there exists a demand for insurance there will arise people prepared to sell it. Oil supertankers have continued to traverse the Shatt al'Arab and other hazardous waterways even during recent hostilities in the region; they remain helpless against even the lightest of naval vessels, but demand for oil is such that almost any premium will be paid. Risks that are similarly excluded from standard policies, such as terrorism, piracy and dock strikes, can all be insured against, as long as the ship-owner is prepared to pay the premium.

In the modern, liquid, shipping market, he probably is. There will always be competition from other ships that *are* insured; they will charge more than the hypothetical uninsured carrier for transport, but they will guarantee that nobody loses his shirt if things do go wrong.

Cargo coverage will probably be a separate contract (or several separate contracts, if war risks are also involved). The cargo insurance will compensate the owner for losses other than those that can be recovered from the carrier's insurance. The "time element" component of a cargo policy compensates for losses incurred by late delivery. Cost calculations are on the same basis as for the ship's own insurance, but the policy will normally be purchased by the cargo's owner; as far as ship-owning traders are concerned, this cost is simply a reason for them to be paid less than they'd like for the job.

Just who that owner is at a particular time can sometimes be a tricky question: ownership of cargo can change hands at any point between the time it leaves the seller's premises and the time it enters the buyer's, and this will be specified in the freight contract. Most commonly, it is formally transferred just after the goods have been imported into the destination country. This becomes particularly relevant when one party has to file for bankruptcy while goods are in transit; while the cargo insurance contracts are in theory normally transferred with ownership, there may sometimes be two separate policies that apply at different stages of the shipping process. With the right contracts, the question of *exactly* when during shipping the cargo was damaged or lost can be a matter on which large sums of money will hinge.

Historically, some recognizable form of shipping insurance has been available as long as money and shipping have existed; the Code of Hammurabi allowed merchants to pay a premium against the loans they took out to pay for shipping, in return for a promise to cancel the loan if the shipment were stolen. Insurance contracts with independent existence (separate from the shipping investment) seem to have arisen in 14th-century Genoa; these allowed for a broadening of risk by getting more people involved on the paying-out side, lessening the potential liability to each.

Lloyd's Coffee House in London started as a place to exchange shipping news, and rapidly became a market for insurance. It is important to bear in mind that Lloyd's has never been in itself an insurance company: it is simply a venue where multiple backers can meet to pool and spread risk. In spite of this (indeed, perhaps because of its neutral position), the spin-off organization Lloyd's Register became instrumental in the publication of lists of ships, including their rating as insurance risks; a ship with both hull and equipment in prime condition would be rated "A1", and thus a better risk than one in poorer condition. (Of course, the master and the crew would not be included in this evaluation, and would be subject to change.)

Ultimately, it depends on the resources of its investors, not its own assets, to pay out on its policies. Lloyd's still acts on an unlimited-liability basis (i.e. it can call on its members to pay well beyond what they may have been expecting), making it one of the most sound of all insurers, where more

What Shape of Universe?

One of the principal reasons for the shift from the 14th-century risk-spreading model to the modern insurance system, and indeed the shift from speculative trade to contract freight, is the existence of communications that are faster and more reliable than cargo ships. Some science fiction

conventional companies can be bankrupted by an excess of claims (as nearly happened to several after the New Orleans flooding in 2005). One prevention strategy against this is reinsurance: once an insurer has written a suitably large number of policies, he can package and pass on the collective risk, effectively buying insurance against having to pay out on many of the policies at once.

A sufficiently large owner may of course not bother with insurance at all; the British Crown does not insure its properties, because it has sufficient monetary reserves to pay for any possible damage. In the case of shipping, the possibility of substantial third-party damage claims has made this an unfeasible option (and keeping a large cash reserve is in any case frowned on by modern business practice).

What could modify all of this in a science-fictional setting? Firstly, an illiquid shipping market: If there are some destinations that are simply too dangerous to be served by normal commercial shipping, there will be no way for the few risk-takers who are prepared to try to get through to get insurance for their attempts. In terms of the pirate-merchant ecosystem this is not a state sustainable in the long term, though; many pirates cannot live off the few cargoes that are still put through the dangerous area, and eventually some of them will have to go elsewhere. While it lasts, a sensible shipper may well want his cargo treated as speculative: he will sell it to the ship-owner or crew, and if they survive they will reap the profits when they sell it at the destination.

Secondly, the entire current insurance system rests on the relatively modern concept of limited liability. It was still common practice until about the 18th century for a shipper's backers to expect to pay all losses out of their own pockets; shipping is a sufficiently uncertain business that setting insurance premiums is particularly hard, compared with more conventional domestic and commercial policies. Furthermore, it is subject to domain risks: a sufficiently large storm, for example, can damage many ships at once, leading to a run on and possible ruin of the insurers. (If it can be predicted that such things will sometimes happen, they are likely to show up as policy exclusions.) It seems quite plausible that a different society might take the Babylonian approach and simply regard shipping losses as part of the cost of doing business, to be borne by the investors in a project rather than by insurers.

When insurance is unavailable or too expensive, there may be some less formal alternatives to guard against the risk of losses to piracy and war. These could include things like:

- pooling risks (which can be thought of as a kind of insurance, and is the historical origin of the more formal sort): whoever is bearing the risk of loss can band together and each bear a little of the common risk. For example, they may each pay premia to a pool, and then the pool pays for any losses; additional losses over the pool premia are probably going to come out of everyone's pocket. A few losses will affect everyone moderately instead of a few of them badly . . . though if a large event affects many of the insured ships at once, everyone's still out of pocket.
- arming (and armoring) vessels and/or stationing armed guards on board (with the cost that there is less cargo space and greater expense, and an increased likelihood of major loss of life if the crews do have to fight).
- banding together into convoys, which are protected by ships and mercenary marines (with attendant costs of more restricted schedules and the expense of the protection).

It may be that -- even where insurance is available -- risks are such that an insurer may insist on such additional protection as a condition of the policy (in the same way that they insist on door locks or security systems), or even charge enough to pay for some themselves, in order to reduce the risk.

--Roger Burton West

universes, notably *Traveller,* do not have such communications; someone arranging for a cargo to be shipped cannot be sure that it is wanted at the other end, that the recipient is solvent, or indeed that a war has not broken out since the contracts were signed.

Messages carried by courier ships can make up much of the difference, particularly in a setting with mature computing and substantial shipping traffic where such messages are likely to be very cheap, but the possibility of sudden and extreme changes should still not be ruled out. This may well account for an unduly large amount of speculative trade, or insurance practices unconventional to the modern mindset, as the GM sees fit.

Sages theorize that the Omniscient Eye might actually be composed of a panel of Experts chosen through mysterious and arcane means. Regardless, the Omniscient Eye is benevolent, and every other week it is willing to share its lore with all. Or, at least, with all with valid *Pyramid* subscriptions.

The Omniscient Eye seeks to answer questions that are tied to knowledge of the real world, providing information with a perspective that is of use to gamers. The Omniscient Eye does not concern itself with specific game systems or statistics.

Do you have a question for the Omniscient Eye? Feel free to send it to pyramidquestions@yahoogroups.com, and the Omniscient Eye might answer it!

The Shadow of Yesterday (Revised)

Published by Anvilwerks

Written by Clinton R. Nixon

Cover by James V. West

Illustrated by Andrew Navaro, Jennifer Rodgers, Keith Senkowski, & James V. West

220-page undersized b&w softcover; $24

Near is a world recovering from a disaster. Centuries ago it was dominated by the Empire of Maldor, known for its cultural diversity and universal tongue. A century (or is it three? The book is unsure) ago, the "Sky Fire" fell, shattering Near, causing years of darkness, and placing a moon in the sky where there had been none. Without the universal language's unifying factor, new nations have arisen along cultural lines and rivalries, leading to war, famine, and enslavement. Primarily, this is over valuable resources such as the metals needed to create weaponry, but the ownership of the ruined cities of Maldor and the ancient secrets they hide, are reason enough.

Near is not without faith nor religion, but there are no gods. Most religions concern themselves with the "Sky Fire's" true nature. Nor do monsters exist in the traditional fantasy gaming sense. Instead the focus is upon Near's four races. Humans are known for their emotions, primarily fear and aggression mitigated by love and passion. Near has several different human cultures, each very different, and whilst you can draw analogies with our own history, they definitely lean more to weird rather than Tolkien-esque fantasy. The five cultures are not just different in terms of society, but also in terms of secret abilities that a player character can learn. Maldor remains, but with the Emperor long gone, it is ruled by feuding nobles who each claim royal blood, with the lower classes caught up in the feuding and fighting for day-to day survival. Maldor was also home to the Three-Corner Academy, a great school of magic. The Zaru are a slave people under the yoke of the Ammeni. Once rich farmers, the Zaru understand Zu, the language of creation which can give them great power. The pacifist Zaru see themselves as caretakers of Zu, not wanting to misuse it even though it could win them their freedom. The Ammeni are divided into rival merchant houses, whose decadent ruling class is known for their use of drugs, poisons, and assassination. The Khale live in deep forests, a tribal people who revere nature and have knowledge of the "Green World," travel routes inside the forest's giant trees. The Qek are the most primitive of the human cultures, jungle dwellers often able to contact the spirits of both the living and the dead.

In comparison, Elves are aloof loners, unaging and immortal and very much concerned with the self. Capable of powerful magics, Elvish attitudes mean that they are either revered or mistrusted. Goblins are the most hated species on Near, often regarded as debased creatures. Doglike and warty, their mentality and physiology is capable of adapting to any environment, the poly-sexual Goblins suffer from an addictive personality, either to a substance or behaviour. There are connections between the three races, but these are part of the game's secrets. The world's newest species are the Ratkin, who are often thought to be thieves. Actually very loyal to their friends, Ratkin have a unique attitude to personal property and are happy to borrow their friend's. Ratkin are most often found in the dead cities of Maldor.

This is the setting for *The Shadow of Yesterday,* a post apocalyptic RPG of low, but pulp fantasy. The creation of Clinton R. Nixon, responsible for the well-received *Donjon,* it is sketched in broad detail, enough to gain the feel and substance of Near, but with plenty of room to add your own detail. Indeed, the author actively encourages this, the aim

being to create a world to explore and adventure in that the GM makes his own as much as it is the author's. Originally published in 2004, the **Revised Edition** has moved from linear mechanics to using **Fudge** dice. The first edition is available to download for free from the publisher's website.

Characters are defined by three pools, rated from one to 10 -- Vigor, Instinct, and Reason -- which are refreshed through physical exertion, social pleasure, and intellectual stimulation respectively. Associated with each pool are various abilities or skills. Three are innate and reactive, and protect the character: Endure (Vigor), React (Instinct), and Resist (Reason). Others, a player is free to select. Abilities are rated from Unskilled (0) through Competent (1), Adept (2), and Master (3) to Grand Master (4). In addition, a character possesses Secrets, special abilities fuelled by points from an appropriate pool. He also has one or more Keys, each a goal, emotional tie, or vow, which is both a roleplaying hook and a means of gaining Experience Points. For example, a character with the Key of Bloodlust gains 1XP every time he defeats someone in combat and 3XP if the defeated is his equal or tougher. A player can create his own Key or select from the book's long list. Interestingly, a Key can be changed under the right circumstances and with a little roleplaying in a Buyoff process. In relinquishing one Key, a player gains enough points to buy another and is encouraged to do so, allowing his character to change and grow. As to the Experience Points gained from a Key in play, it is up to the player to remind the GM rather than have him just hand them out.

To create a character, a species (and culture, if human) is selected, and 11 points are divided between the three pools, no more than seven points per pool. One innate ability is set at Adept level, one at Competent, and the last at Unskilled. Three other abilities are selected at Competent level, and one at Adept. Finally, one Key and one Secret are chosen in addition to any species compulsory ones. Overall, not a difficult process, but it requires some thought. Especially the choice of Key, as this determines the primary method of advancement.

Mechanically, **The Shadow of Yesterday** uses **Fudge** dice. A simple ability check involves rolling three dice and adding it to ability level. This gives a success level, which can never be less than zero. Bonus dice to the check can be drawn from the appropriate pool or granted by another player as a gift if the task is dangerous or fraught. Every player begins a session with a number of gift dice equal to the number of players. Bonus dice actually remove any minuses rolled from a check, whilst penalties remove pluses. An ability check actually involves four steps: Intention, Initiation, Execution, and Effect. It sounds more complex than it really is, but the aim is clarify the check's purpose, necessary because the simple check handles the one task in that roll. Win a chess game, slight a rival, or defeat an enemy in a duel, the outcome of these is handled with the one simple roll.

This allows for quick and easy play, but can be too broad an effect. It means, for example, that a player character can be summarily defeated by an enemy, which might be unfair. In that instance, any player can call a halt and resort to Bringing Down the Pain. This can only be initiated by a player, not by the Story Guide, although he can request it of a player. On the downside, this could derail the Story Guide's game, so some trust is required on both sides. In this mode, a task becomes a series of simple checks giving a more detailed step-by-step outcome. The obvious effect of Bringing Down the Pain is that it enables a player to focus upon an event important to him, whether winning a debate, breaking into a castle, or surviving a brawl. This is highlighted by it being the only way that a Story Guide character can be permanently hurt or defeated. Like the core ability check it handles mental, physical, and social tasks with ease, including harm; plus it enables a game to avoid becoming bogged down in unnecessary detail unless a player wants it to. Of course, its outcome can really hurt a player character, so knowing when to resort to Bringing Down the Pain is a learning process.

Physically, **The Shadow of Yesterday** feels like an independent game, but is well put together and some of the artwork is quite good. A nice touch is that each race and culture has a different art style. Also, the examples are very useful, especially for Bring Down the Pain. Although lacking an index, the content pages do a good job, and actual content is neatly organised.

Most games have the GM retain narrative control, more experimental titles hand it over to the players. **The Shadow of Yesterday** finds a point between the two, with player control over how Experience Points are earned, when to focus upon a particular event, and when to award bonus dice. The rules are simple mechanically, but handle some complex ideas. The setting has familiar elements, but feels very different, the rules ably supporting the differences. Overall, **The Shadow of Yesterday** is an accomplished low fantasy, intriguing in terms of both rules and setting, with room still for

the participants' input into both.

Dunwich Horror (Expansion for Arkham Horror)

Published by [Fantasy Flight Games](#)

Designed & developed by Richard Launius, Kevin Wilson, & Greg Benage

Edited by James D. Torr

Artwork by the Call of Cthulhu CCG artists

Cover illustration by Henning Ludvigsen

Graphic design by Scott Nicely

Full-color boxed set with rulebook, expansion game board, eight investigator sheets, markers, & plastic stands, 152 investigator cards, four Ancient Ones, 180 Ancient One cards, 28 monster markers, three Dunwich Horror tokens, four gate markers, & seven rubble markers; $39.95

Arkham can't catch a break, constantly under siege as it is by the horrifying Mythos. The good news: This boxed set, ***Dunwich Horror Expansion,*** is technically another town. The bad news: It, too, was part of Lovecraft's body of work, and he didn't write about idyllic vacation spots. Things Man Was Not Meant to Know are now Things We Didn't Want to See Cross the County Line, and players must deal with events in both locales. Misery shared . . .

There's a new map for the new town, a smaller one that lines up with the main one from the core game, and trains allow investigators to travel between the two. It has its own set of cards for the additional locations including two new dimensions full of mind-stopping weirdness. While the Ancient One is still a looming threat and the game objectives remain the same, this small berg has its own problems, what with Wilbur Whateley's roommate threatening to totter about town stepping on things.

Vortices have opened up about the area, places the investigators cannot go (a good thing, in this case). If monsters stumble into that space, the nexus sucks them up. This keeps the board from getting busy, but every disappearance adds a counter to the Dunwich monster's track. If it fills up, the creature rises and must be put down according to stats drawn from a small deck. He's not as tough as an Ancient One, but he's worse than the average counters wandering Arkham and he raises the terror level every time he moves.

This set doesn't just add a new board, characters, Ancient Ones, and plotlines; it throws several wrenches into the works. Instead of simply going to the hospital or asylum when injured or unstable, an investigator may suffer a specific malady from an Injury or Madness card, pumping flavor and mechanics into the recovery process. Some creatures actively stalk the heroes, elder signs may now burst under dimensional pressure, and Tasks and Missions are shuffled into the Item decks. With these, visiting various locations around town (and sacrificing Items or Allies) draws big rewards . . . like winning the game immediately. Yes, that powerful, and requiring that much effort. And they may be needed, given the deadliness of these new trappings.

There are only so many ways to say Fantasy Flight puts out one heck of a fine product with only top-quality pieces, so

suffice it to say it's good work from markers to board. The artwork was culled from the ***[Call of Cthulhu Collectible Card Game](#)*** and serves just as well here as there . . . even better when some of the pieces have a larger canvas upon which to stretch their tentacles. Like other supplements in the line, the pieces all have a small symbol in the corner so the sets can be separated later.

The game does a lot of housecleaning, too. The original ***Arkham Horror*** board was dark and hard to read, so when they reissued it Fantasy Flight went with more of a wan yellow. The new board segment is the same suffused color. The rule book has information on combining the products; errata and Q&A for both; and an index that makes finding salient points between the two sets much easier. Not only are there corrections for the basic game, replacement cards are provided with the altered text and values printed on them.

If there are too many more supplements for this game, people are going to have to move house just to play. ***Dunwich Horror*** is the first with such extensive component add-ons, though, so while the decks bloat they mostly grow up, not out. It doesn't so much change the way the game is played as add potential threats that split the party's concentration. Learning certain patterns or investigator combos in the original made it easier to anticipate gate appearances and monster effects, but now there are two systems working in tandem to vex anyone who thinks they know all the tricks (along with those merciful new ways to win).

Players can pick and choose the options they'll employ from the ***Dunwich Horror Expansion,*** and that's a wise idea. Using all of it can be a little overwhelming even for veteran investigators (and solo play . . . pfft, good luck), so increasing the bad guys' chances by degrees is like a dial they can set as their skills demand it. The time required gets reset as well, so players are back to over two hours playing time. Not everything here is mandatory, but if the game seemed tough before it's going to regain that nightmare feel. Strange to say, with these Old Ones, ***Arkham Horror*** feels new again.

--Andy Vetromile

by Greg Hyland

Murphy's Rules

Dungeon, Dragon, Castle, Bookshop

At the end of the classic Nintendo video game *Super Mario Bros. 3,* having traversed eight worlds trying to rescue Princess Toadstool (just like he was trying to do in the first volume of the series), Mario is greeted by a classic line of text: "Thank you Mario! But our princess is in another castle. Just kidding." And then the figure you're talking to reveals herself to be, in fact, Princess Toadstool. Happy music, closing credits roll.

To explain the joke for those who didn't live the experience the first time, the original *Super Mario Bros.* has the player traversing eight worlds, each with four levels, with the last level being a difficult castle. At the end of the first seven of those castles, one of the Princess' retainers is there, saying, "Thank you Mario! But our princess is in another castle." The game continues, on to the next world, 'til the game is completed (or, as was probably more common, you were defeated and had to start all over again.)

But that "Thank you Mario!" was withheld in the third game of the series until that last level. So the player, who -- by this point -- has been playing for probably hours and hours straight (remember that this game was before save games became commonplace) sees a message that he will immediately associate with the need to begin the process again . . . possibly seven more times. And then it's revealed to be a joke.

Now, I was using a hint book when I played it the first time, so I wasn't fooled ("I'm on the last page; there can't be more game!"), but I wonder how many kids got that game as soon as it came out, devoted however many hours to get to the end, and burst into tears of frustration at the prospect of *continuing* to play.

To be honest, that entire anecdote was mere side-track prelude to my true anecdote.

Anyway, I was reminded of this tale this week when I decided to go on my own personal quest. See, writing my column last week reminded me that I meant to track down the last issues of *Dragon* and *Dungeon* since I'd missed purchasing them at GenCon. In fact, due to illness, work, deadlines, and the demands of vocal offspring, the whole thing had slipped my mind until I was recounting my GenCon experiences.

My delay made my stomach sink; I realized that the final issues had been shipped to distributors weeks ago, and -- if I was to have any chance at getting them -- I would need to act *fast*.

Anyway, three days later, I finally got enough time aside to go on my quest. (I'm learning that "fast" has a different meaning when you have kids.) I don't bother trying to track down any Friendly Local Game Shops, since the nearest ones were a good half-hour away at best. (My reluctance to start a game-related search at a game shop is probably fodder for another column . . .) No, instead I checked out the Periodical racks of my local bookseller; I have a Borders less than five minutes from my house, and if you squint and look at it at just the right angle, it almost resembles an actual bookstore. So I checked it out, and scoured the magazine section. Nothing.

I asked for help from a clerk . . . a decision that will no doubt strike many of you as a futile gesture. Many of you would be absolutely correct. After 15 minutes of inquiry, I was able to get a half-hearted notice that, indeed, the shop probably did stock the two magazines in question. They weren't sure when the new issues were coming in. ("Don't hold your breath" was my internal annotation.)

Anyway, having struck out completely, I realized that they probably *did* have the magazines, but were sold out. This renewed my efforts to try *another* shop. Fortunately, we have a Barnes & Noble about 15 minutes away from us. Amazingly, this one had the *Dragon* but not the *Dungeon.* I realized that I was on the right track, and knew that time was of the essence if I was going to have any shot at buying it. The Barnes & Noble had two copies of the magazine in question, and -- collector that I am -- I picked up both of them. Then I noticed that the cost was $12 per issue. I put one back.

About 20 minutes away from the Barnes & Noble is a Waldenbooks, a shop that, if you quint and look at it from just the right angle, almost resembles a Borders. They didn't have anything. About 20 minutes from *that* store, I stopped at

the biggest Barnes & Noble that I've seen in town -- a shop that, to this point, had escaped my radar -- and searched their magazines. They had the *Dragon* (which I already had).

Finally, we found ourselves on the side of town with a Borders next to the game shop (which is located inside a mall). I stopped in there, and -- to my amazement -- there was one copy each of the *Dragon* and *Dungeon* left. I snatched up the single issue I needed, and darted for the door, pausing only to pay. (That one was $12 as well . . . meaning that, were I to have followed through on my original plan to buy two of each, I would've spent almost $50 to buy support material for a game I have never played.)

And so, two and a half hours later, I returned home, having successfully completed my quest that I had originally assumed would take about 10 minutes.

Anyway, I've written [before](#) about how it can be very useful to have motivation be as small as possible for the adventure to proceed. By the same token, it can be useful for a GM to have the *progression* of an adventure be as small as possible to ensure continued advancement. In my own quest, if the second bookshop hadn't had either magazine, I probably would've given up and gone home. If the fifth bookshop and the game shop hadn't had the *Dungeon* issue, I would've gone home partially successful. I achieved *just* enough success to keep me going.

Finding that sweet spot of advancement in an RPG is a challenge; if there's too little forward progress, the players will justifiably grow bored and probably stop showing up. But if it's too fast, then the GM makes more work for himself, needing to continue coming up with additional steps down the road which may hasten the campaign's conclusion (or, at least, getting it closer to a point where it'll jump the shark). Even worse, the GM might provide too much forward momentum initially, only to try to rein in the campaign later . . . which can lead to frustration to players who are used to more rapid progression.

As a thought exercise, think of which television series have advanced too quickly for your tastes -- shows that revealed their secrets too quickly, and perhaps found themselves needing to "backpedal" or come up with other contrivances. Or think of those shows that revealed themselves too slowly (*Twin Peaks* springs to mind for me), probably resulting in their cancelation. *The X-Files* is almost certainly a show that can be used as an example of something about revelatory pacing.

Regardless, rest confident knowing that, if you go to enough castles, your princess will eventually be there. The only question is: Will you care when you find her?

--Steven Marsh

GURPS Accelerator

Basic Armed Combat Options

by Matt Riggsby

Obviously, one of the things you want to do in combat is to hurt your opponent. However, it's equally important, if not more so, not to get hurt yourself. *GURPS* provides a number of options to help you do both, going beyond the basics of just hacking away at your enemy. This article provides a brief beginner's guide to what they are and when to use them, with particular attention to armed melee combat rather than unarmed or missile combat. This article is limited to the most versatile maneuvers in the Basic Set, so it should be applicable across the widest possible range of campaigns and situations. *GURPS Martial Arts* provides a wide range of other options, but we won't be getting in to those here.

Hurting Your Opponent

> ### What You Already Know
>
> This article assumes a general knowledge of how combat works in *GURPS* (for example, what a to-hit roll is and what active defenses are), but not a complete command of the full range of combat rules in the Basic Set.

In *GURPS,* the best defense really is a good offense. Hurting your opponent isn't good for you just because it gets your opponent closer to zero hit points. Shock penalties and the special effects of hitting specific locations can also translate a successful attack into an opening you can use for your *next* attack. In order to hurt your opponent, you must make your attack roll, make sure your opponent doesn't make his defense roll, and do enough damage to overcome his DR. One of the best ways to take care of the first two is to *take your time*. Two valuable maneuvers don't have the slightest chance of hurting an opponent, but will help hurt him on a later turn: Evaluate and Feint. Evaluate can give you a bonus of up to +3 to hit your opponent, and Feint can reduce your opponent's active defense. If you're facing a relatively weak opponent, you can probably afford to simply attack every turn. However, if you're evenly matched, you can trade immediate effect for a better chance of success on later attacks.

Even without Evaluate, Feint is a very good option for anyone with higher skill than their opponent. Taking two turns to Feint and then Attack a low-skill mook will often net you a greater chance of landing a telling stroke against him than attacking for two consecutive turns. However, since Feints tend to amplify skill differences, it's not so effective against opponents who are more skilled than you are. But keep in mind that you can increase your Feint as a technique based on your weapon skill. If you've got a limited number of points to spend on combat skills, you might buy a moderate weapon skill and an improved Feint. You may not be as good an all-around fighter, but you'll get through your opponent's defenses more often than you might otherwise.

The drawback with Evaluate is that using it requires that you have time. Using it effectively requires that your own defenses are reasonably good and that you're not facing multiple dangerous opponents. However, if you're facing multiple opponents or an opponent with better skill, superior armor, or greater strength, you may get hurt faster than whoever is at the business end of your own weapon. You may need to use some less ideal options if you're pressed for time. The choices here are Deceptive Attack, Rapid Strike, and All-Out Attack. The problem with the first two is that they're relatively weak attacks, providing substantial penalties to your to-hit roll, while the problem with AoA is that it gives you a good attack at the price of leaving you with no defense.

Still, circumstances may lead you to use them. Use Deceptive Attack when you've got skill to burn but you can't get through your opponent's active defenses. Likewise, use Rapid Strike when you've got a very good chance to hit but need to do damage faster. Use AoA when you really want to hit your opponent *right now*. Though it leaves you open to attack, it can be very much worth the risk if you can end the fight in a single turn. It's also versatile. You've got a choice of a bonus to hit (good if your skill is low), extra damage (good if your opponent has heavy armor), reducing your opponent's defenses via the Feint and Attack option (good if your opponent has good active defenses), or an extra

attack (a good all-around option, particularly if your opponent is facing multiple enemies himself and can't exploit the weaknesses of all of them). As with regular attacks, they're all more effective when backed up by Evaluate and Feint. You might, for example, Evaluate your opponent for several turns, use the bonus on a more effective Feint, then use Deceptive Attack to further reduce his defenses or All-Out Attack to hit him with a pair of blows and put him down in a single turn.

One defensive option will help you hurt your opponent is to wear heavy armor. If you've got DR 3 or better, bare-handed attackers can hurt themselves when they hit you. You still don't want to get hit, of course, but it can be comforting to know that if the Bruce Lee wannabe manages to get through your dodge or parry, he might hurt himself on your mail shirt.

If you've got good skill but are facing an opponent with lots of DR and hit points, remember that you don't have to take him down to 0 hit points in order to win the fight. It requires more skill, but if you can do enough damage to specific hit locations to disable a limb, you make him a lot less effective. Disabling a weapon-side hand or arm reduces an opponent's ability to attack, while disabling a foot or leg essentially immobilizes most opponents and gives you as much room as you need to maneuver. Leg/foot attacks can be particularly effective because, in addition to slowing an opponent and therefore hurting his Dodge score, it gives you the option of running away if you still can't beat him. You might also target a lightly armored location (extremities typically have lower DR than the torso) in hopes of incurring some shock penalties, then follow that up the next turn with some flavor of All-Out Attack when your opponent is less likely to be able to take advantage of your lack of defenses.

Finally, if it appears that you can't get through your opponent's armor, consider non-lethal attacks, where high DR doesn't come into play: Disarming and Sweep. Both, if you can pull them off, put your opponent at a considerable disadvantage and are particularly useful if you need to keep your enemies alive. Like a Feint, both maneuvers requires a contest of skill, putting the more skilled fighter at a distinct advantage. Sweep has the additional issue of being available only with long weapons like spears and polearms. If you're armed with an axe or sword, you won't be able to attempt it.

Not Getting Hit

Now that you can hurt your opponent, you need to be sure you don't get hurt by him first. In **GURPS,** a warrior doesn't survive fights by being able to take a lot of damage; he survives by never having to take damage at all. Putting aside tactical considerations (like ambushing your enemies and getting in the first good hit) and superior equipment (if you do get hit, it's nice to have DR to soak up the damage), he does that by having good active defenses.

The basic defensive option is the Retreat, which grants a bonus to any active defense. Terrain permitting, you can do this pretty much automatically when fighting a single opponent. However, you can only Retreat once per turn, so use it carefully if you're facing multiple opponents. You may choose to stand your ground against a smaller, more lightly armed opponent who is likely to do minimal damage and back off from a bigger one who can do a lot of damage in a single hit. Retreat gives an improved bonus to fencing weapons, which makes them a good defensive weapons for many purposes, but don't forget that lighweight fencing weapons have a good chance of breaking if they're used to parry large, heavy weapons like battleaxes and two-handed swords.

If you've got Acrobatics skill, you can attempt an Acrobatic Dodge. This is a bit trickier. Unlike Retreat, which automatically gives you a bonus, Acrobatic Dodge involves a skill roll, so you can fail, and if you do, you get a *penalty.* Therefore, you probably shouldn't attempt it if your skill is very low. And like Retreat, you can only do it once per turn, so again, if you're facing multiple opponents, use it judiciously.

Just as there are attacks which limit you, there is a limiting defense: All-Out Defense. All-Out Defense is the way to go if you've just been badly wounded and are suffering from shock penalties. If you're already suffering skill penalties, your attack is unlikely to succeed, so you may as well bolster your defenses until next turn. If you're a less skilled fighter in a multi-person combat, you may also want to use it to stall for time while your companions deal with other opponents; in a few turns, they may be able to come help you out.

that shock penalties will negate his bonuses, or you may continue to Evaluate, counting on your own defenses to hold off his next attack and building up a greater bonus to use against him.

So what do you do if all else fails and you've got lower strength, less skill, and weaker armor than your opponent? Take the *Monty Python and the Holy Grail* option: run away. Turning around and running in the opposite direction is often a bad idea, since it takes more of your movement and presents your largely defenseless back to your opponent for an essentially free hit. Instead, try to keep your facing as much as possible. If you need to run away and the terrain permits, try to just turn a bit to one side and run that way. That forces your opponent to waste more of *his* movement in turning, giving you what is surely a badly needed head start. If you've got a very high DX or the terrain is very constricted, you may even consider Evading *through* the hex your opponent occupies. It's very risky, but if you can pull it off, your opponent will have to do a 180-degree turn to pursue you.

Buying Skills

Of course, if you're going to attack or defend successfully, you need the right skills. If you're building a character who is likely to be in a lot of fights, even if he's not primarily a warrior, make sure that his primary weapon skill is not less than 14. Although 12 is the nominal standard for professional competence in a skill, 14 takes a fighter up to an important statistical point. Not only is he likely to hit his target most of the time (about 90%), he can absorb modest penalties while keeping a reasonable chance to hit. Most importantly, though, his basic parry reaches 10, which means that he can successfully parry about half the time even without using up his limited additional defensive options. With a shield, he'll successfully defend well over half the time.

A number of useful maneuvers are available as techniques, most notably for our purposes Feint, Disarming, and Sweep. Feint is, in the final analysis, probably the most cost-effective maneuver, since you'll need to use it more often in most settings, particularly monster-rich fantasy settings. The others are useful in some circumstance, certainly, but Feint can be used against any opponent who might defend himself, whereas Disarming can't be used against unarmed martial artists and monsters who don't use weapons, and Sweep is limited to certain weapons and gives your opponent a choice between stats, giving him a better chance of finding one which is greater than your effective skill.

If you've got a low weapon skill, you may be tempted to buy up a number of techniques to take the edge off of your lack of offensive ability. However, if you find yourself looking at buying more than two or three techniques, strongly consider just buying up your underlying skill instead. The special abilities are nice, certainly, but since they're governed by the underlying skill, it's more cost-effective to buy "in bulk" rather than one at a time. Buying a level of the underlying skill will often cost fewer points than buying up each of four or more techniques, *and* it will give you better to-hit and defense rolls.

Another skill to strongly consider is Acrobatics. It may seem not very cost-effective if you're just buying it to use Acrobatic Dodge, particularly if you've got a low DX. However, given the skill's other uses, Acrobatics skill is a very good all-around investment for an adventurer (for example, to reduce falling damage and recovering from attempts to knock you over), so if at all possible, buy it up to at least skill-12, if not higher.

Extra Effort

You can generally assume that all of the options above are available unless your GM says otherwise, but the rules here are specifically noted as optional, so be sure to check with your GM before you attempt to use them. If the Extra Effort

rules are allowed in combat, warriors can burn fatigue for extra effect. There's Feverish Defense for a better defense, Flurry of Blows to buy extra attacks, and Mighty Blows for extra damage. One use of Extra Effort which *isn't* marked specifically as being optional is increasing your Move. If you're not a great warrior, remember that you can use Extra Effort to help you run away, or to close with distant enemies more quickly. You may also want to invest in the Breath Control skill or even the Fit or Very Fit advantages to help you get your fatigue back faster.

Designer's Notes: *GURPS Spaceships*

GURPS Spaceships is the first book in a planned eight-book PDF series. It focuses on spacecraft design, space operations, and space travel, with the intent of producing a player-and-GM friendly set of game mechanics to support *GURPS Space* that provides an alternative to the more complex *GURPS* Vehicles Design System and modular design systems.

The first book on spaceships was actually twice as long as it was originally planned . . . but even so, a few sections were omitted for reasons of space, and some of these are presented below. (Others were moved to later books in the series, which will include both additional rules and plenty of sample spacecraft and discussion of different spacecraft classes.)

Reaction Drives: Behind the Numbers

The reaction drives in *GURPS Spaceships* are rated for their acceleration in gravities (G) per engine and their delta-V in miles per second (mps) per tank of reaction mass installed. Here's how these numbers were derived from real or speculative spacecraft engines.

Acceleration (G): This is equal to 5% of the thrust-to-weight ratio of the engine. For example, if an advanced nuclear rocket engine is able to produce a thrust of two pounds for every pound that it weighs (a thrust to weight ratio of 2:1), its acceleration per engine system in *GURPS Spaceships* would be $0.05 \times 2 = 0.1$G. Sticklers for realism can include the weight of heat radiators and other important components, not just the engine itself. Delta-V per tank of reaction of mass (mps): This is derived from the specific impulse (traditionally abbreviated Isp) of the engine, a measure of space drive efficiency. To get delta-V in mps per tank of reaction mass divide specific impulse by 3,000 (or alternatively, divide the exhaust velocity in meters per second by 29,400). For example, if a speculative nuclear rocket engine is known to have Isp 900, it would be rated for 900/3,000 = 0.3 mps of delta-V per tank. (Alternatively, use exhaust velocity/29,400).

Ares-Class Battle Cruiser (TL10^)

"Manufactured in the Deimos navy yards, these sleek, wedge-shaped vessels were the pride of the Free Martian Navy. In the dark days after the Terran star fleet was lost at Second Jupiter, they carried the fight to the enemy systems, harassing convoys and outpost star bases. Their design harkened back to old wet navy battleships, with a powerful all-beam armament of varying sizes, including a large tertiary battery for defense against small craft. However, they suffered at long ranges against missile firing ships."
-- Red Star Fleet: History of the Third Space War

This warship was originally supposed to appear in the sample spacecraft, but was cut to save space. It's an example of a limited superscience design: a very heavy cruiser-sized vessel is intended to kill destroyers and cruisers, and to raid commerce. Built with a SM+12 streamlined hull, it masses 100,000 tons and is about 1,000 feet long.

Front Hull

[1-3]   Nanocomposite Armor (total dDR 210).
[4-5!]   Major Batteries (each with a fixed mount 30GJ UV laser).*
[6]   Tactical Array (comm/sensor 13).*
[core]   Control Room (Complexity 10 computer network, basic array with comm/sensor 11, 20 control stations).*

Central Hull

[1-2] Nanocomposite Armor (total dDR 140).

[3] Defensive ECM.*

[4!] Secondary Battery (10 turrets, with 300 MJ rapid fire particle beams).*

[5] Habitat (310 cabins, two briefing rooms, three labs, eight offices, four minifac fabricators, a 30-bed sickbay, and 1,200 tons cargo).*

[6!!] Super Stardrive Engine (FTL-2)*.

Rear Hull

[1] Nanocomposite Armor (dDR 70).

[2-3] Fusion Torch Engines (0.5G acceleration each).*

[4!] Major Battery (turret with rapid fire 3GJ UV laser).*

[5-6] Fuel Tanks (total of 10,000 tons hydrogen, total 30 mps delta-V reserve).

[core] Antimatter Reactor (four Power Points).*

* 10 workspaces per system.
! high-energy system.
!! high-energy system requiring 1-2 Power Points.

Ares is designed with artificial gravity. Her basic complement are 190 crew: 20 control crew, 10 turret gunners, 10 clerks, six scientists, 120 technicians, and three medics.

TL	Spacecraft	dST/HP	Hnd/SR	HT	Move	LWt.	Load	SM	Occ	dDR	Range	Cost
Piloting/TL10 (High Performance Spacecraft)												
10^	Ares-class Battle Cruiser	300	-2/5	13	1G/30 mps	100,000	1,262	+12	620ASV	210/140/70	2×	$18.864B

Top air speed is 2,500 mph.

Drive Hazards

Antimatter plasma rockets and torches, fusion rockets and torches, super fusion torches, and all fusion pulse drives produce plenty of heat and hard radiation behind the spacecraft! Although the drives can be operated safely, environmentally conscious authorities are very likely restrict their operation near populated orbits or habitable worlds. This could either result in a total ban from use in inhabited areas, or it might just limit them to operations in out-of-the-way deserts, oceans, or high orbit. These drives may be LC2.

Antimatter pion and antimatter pion torch engines, and (probably) total conversion and super conversion torches will produce directional and highly lethal energy beams. Their danger zone may extend for hundreds or even thousands of miles behind the vessel! Such engines are likely to banned from operation anywhere near a settled planet's space. Space ports may be placed on distant asteroids, or ships may require the equivalent of tug boats to boost them out far enough that they can safely use drives. LC1.

Nuclear saltwater rockets and external pulsed plasma engines produce continuous or pulsed nuclear explosions outside the ship. If you take off from the ground with one of these drives, you'll be leaving behind a big radioactive crater . . . As above, but even more stringent restrictions: LC0!

Ramscoops generate magnetic fields at lethal intensities in front of the vessel, likely covering hundreds or thousands of miles. They're also LC0.

Space drives not listed above aren't free of hazard, but if properly operated aren't likely to raise the hackles of local spaceport authorities. However, there may be specific regulations ("make sure a mass driver uses very fine dust!") but these are likely to apply to any spaceship operations. Superscience reactionless drives and stardrive engines may be

perfectly safe or have nasty side effects, at the GM's discretion.

The space combat maneuvers required to actually use high-energy reaction drives as weapon are covered in future volumes of the series.

Spacecraft Systems Optional Rules

A number of rules tweaks and options were developed late in the design process . . . some, like Cosmic Systems or water reaction mass, made it into the book; others came a bit too late to fit into the actual manuscript.

Ramscoops: Magsail Braking

If a ramscoop operating in interstellar space is activated at speeds above magsail velocitity (about 375 mps) but below minimum the ramscoop velocity (about 1,800 mps) it functions as a magsail (*GURPS Spaceships,* p. 25) to decelerate the spacecraft. Thus, a ramscoop-equipped ship can use its field to (slowly) decelerate from high sublight speeds without using reaction mass.

Handling of Multi-Stage Spacecraft

The rules allow a multi-stage spacecraft's lower stages may be controlled from a Control Room in a smaller upper stage. However, it should also suffer a Handling penalty since the attitude thrusters, etc., are also less massive. (This was ignored in the basic rules, since most multi-stage spacecraft don't maneuver much until they've ejected all their lower stages, instead usually just boosting in one particular direction!) To determine the penalty, find the SM of the stage containing the control room. Compare that to the SM of the lowest stage it's still attached to. This gives the Hnd penalty.

Example: A SM+8 spacecraft is a four-stage rocket. The last stage, with the Control Room, is a SM+5 spacecraft. While all four stages are attached, the spacecraft will suffer a -3 to Handling.

Phased Arrays

Advanced laser weapons may incorporate phased array optics, allowing a flat laser emitter composed of numerous cells that can project either a single powerful beam or multiple smaller beams, of variable intensity.

Any major battery equipped with a fixed mount laser or ultraviolet laser may be designated a phased array. Phased arrays batteries appear two TLs later than usual (TL11 for laser and TL12 for ultraviolet lasers) and cannot be combined with the improved, rapid fire, or very rapid fire options. A phased array laser or UV laser has the option of firing as a rapid fire weapon at one-tenth output or as a very rapid fire weapon at 1/100 output. In addition, a phased array can, if it does not fire, perform the active sensor (ladar) or laser communicator functions (only) of an equivalent SM tactical array.

Small Upper Stage [Front] (TL7)

This is similar to an Upper Stage, but it takes up two systems in the front hull, rather than an entire six-system front section. The upper stage spacecraft will be two SMs smaller; for example, a SM+10 spacecraft has a SM+8 spacecraft as its small upper stage.

(If a hit location roll indicates either of these two systems was struck, instead roll hit location and apply damage to the front hull of the upper stage spacecraft). Otherwise, use the normal rules for upper stages.

Notes for Deck Plans

GMs may wish to create deck plans for spaceships and space stations that follow the general design layout, with front, central, and rear sections divided into individual systems. Since spacecraft designs are based on their mass, the actual size of any system will vary somewhat due to differences in density. The table below shows the number of one-yard hexes per system:

Deck Plans Table

Hull	Armor	Other Systems
SM+5	neg.	2-3
SM+6	neg.	3-5
SM+7	0-2	6-15
SM+8	2-5	16-50
SM+9	6-15	51-150
SM+10	16-50	151-500
SM+11	51-50	501-1,500
SM+12	151-500	1,501-5,000
SM+13	501-1,500	5,001-15,000
SM+14	1,501-5,000	15,001-50,000
SM+15	5,001-15,000	50,001-150,000

Armor is "solid" spaceship hull. Cargo holds, fuel tanks, hangar bays, and open space systems will be 90% or more empty spaces, while habitats, and passenger seating will be 70-80% devoted to open space for the interiors of cabins, rooms, or corridors; the rest will be machinery. Factories will likely be about 50% machinery and 50% open space for assembly lines, etc. Most other systems will be 90% or more filled with machinery, with any remaining space devoted to rooms for workspaces, corridors, or ducts. One exception to the above are control room systems, in which (on larger vessels) most of the mass is distributed over the hull. A control room will generally take up at 3-5 hexes per control station; the rest of the mass is normally devoted to thruster and antenna systems outside the hull.

Drop Capsules

These tiny spacecraft are normally carried in hangar bays, though they may also replace 32cm or larger missiles and be carried in missile launchers. They are smaller than standard craft and have only attitude thrusters, but can reenter atmosphere as per Soft Landing System. See *GURPS Ultra- Tech* (p. 232) for detailed descriptions of their capabilities.

Life Pod (TL9): Four-person escape capsule with 90 man-days life support.

Drop Capsule (TL10): A basic landing capsule; not reusable; it breaks open a mile up to allow occupants (or packages) to descend via parachute, parawing, grav belt, etc.

Stealth Capsule (TL10): As above, but packed with countermeasures with a stealth hull. Either treat as if it had three Defensive ECM systems, or use the more detailed rules in Ultra-Tech. LC2.

Drop Capsules Table

TL	Vehicle	dST/HP	Hnd/SR	HT	Move	LWt	Load	SM	Occ.	dDR	Cost
9	Life Pod	5	-5/1	13	0.1G/0.3 mps	1	0.5	+2	4SV	2/10/2	$100K
10	Drop Capsule	5	--	13	--	1	0.5	+2	2SV	2/10/2	$10K
10	Stealth Capsule	5	--	13	--	1	0.3	+2	1SV	2/10/2	$50K

Grand Canyon Sweetness: The Kinkaid Enigma (Part Two)

"According to the story related to the Gazette *by Mr. Kinkaid, the archaeologists of the Smithsonian Institute, which is financing the expeditions, have made discoveries which almost conclusively prove that the race which inhabited this mysterious cavern, hewn in solid rock by human hands, was of oriental origin, possibly from Egypt, tracing back to Ramses. If their theories are borne out by the translation of the tablets engraved with hieroglyphics, the mystery of the prehistoric peoples of North America, their ancient arts, who they were and whence they came, will be solved. Egypt and the Nile, and Arizona and the Colorado will be linked by a historical chain running back to ages which staggers the wildest fancy of the fictionist."*
-- "Explorations in Grand Canyon," *Arizona Gazette* (April 5, 1909)

Welcome back to that Grandest of Canyons, and to our own descent of the rapids of weirdness that foam through it. Last time, we set up our base camp at a Temple discovered (if it was discovered) by one G.E. Kinkaid (if there was a G.E. Kinkaid) in 1909. Full of mummies and mystery, it won our hearts from the first. So what was the Temple, if there was a Temple and not just an April Fools' Day story that ran late? Well, it might have been an Anasazi ruin, seeing as they lived in the Canyon, and had temples and mummies. But that's kind of a cop-out, even if the Anasazi did, er, cop out. Like Coronado, we've looked for our Golden City of Cibola where we could. We've followed the twists of our mystery stream past Roman Jews in Tuscon and Chinese Buddhists in Fusang, and pored over the potpourri of myth and lore that the Smithsonian's hand-picked cartographer, Clarence Dutton, poured out on the Canyon's maps. But we're no closer to finding the head of this metaphorical stream than ever.

"He said there is a mountain inside the Grand Canyon called the Temple of Isis. . . . He told me that he and his friend went into this area. They were both expert mountain climbers trained in survival. He says that as he and his teammate approached the mountain, they found an actual stone pyramid made by human hands not far from the mountain. It was large enough to be impressive to these two researchers. To reach the Isis Temple, they had to climb a rock face that went straight up about 800 feet. . . . According to the article in the Arizona Gazette *there were 32 large doorways entering the temple high above ground level. My friend said that they were still there, but looked like someone had attempted to destroy them. They picked one of the "doorways" that looked in the best condition and climbed up to it. When they reached it, they found that the opening went into the mountain about 40 feet, where rubble blocked their way. However, above this doorway was a perfectly round cutout about six feet in diameter and several inches deep that had been created by human hands. Human beings had definitely been there. . . . "*
-- Drunvalo Melchizedek, *Ancient Secret of the Flower of Life, Vol II*

So where, or rather when, were we? Oh yes, the second millennium B.C., and the "time of Rameses" the *Arizona Gazette* plumped for. Which is to say, ancient Egypt, much like Arizona in being dry, hot, and strewn with enigmatic mummies and temples. (Nothing loth, Dutton not only spangled the map of the Canyon with Isis Temple, but with Osiris Temple, Tower of Set, Tower of Ra, Horus Temple, and Cheops Pyramid.) The Egyptologist Farouk el-Baz has proposed that the Pyramids of Giza (roughly contemporary with the Emperor Yu) might have been modeled on three hills in the Kharg Oasis west of Luxor. A similar triplicity occurs in the heart of the (Canyon-adjacent) Hopi Indian country, as the three mesas of Tuuwanasavi (the sacred heart of Hopi geography) eerily mirror Mts. Humphreys, Agassiz, and Fremont. And of course both the Pyramids and the Three Mesas match Orion's triple-starred belt in fine spooky fettle.

In *The Orion Zone,* Gary David also notes that the word *kachina,* the intercessor-gods of the Hopi, begins with *ka,* the Egyptian soul (which went, of course, into the western desert upon death), and that (to his satisfaction at least) *kachina* seems to be a borrowed word in Hopi, Zuni, and Keresan alike. Meanwhile, excitable epigrapher Barry Fell has discovered (again, to his satisfaction, at least) Libyan script on rocks in Big Bend National Park and in "Anubis Cave" (complete with jackal-god) in the Oklahoma Panhandle. (Another place Coronado went looking for Cibola, interestingly enough.) Best of all, Fell identifies the Zuni language as a dialect of ancient Libyan, and buttresses it with Herodotos' description of the language of a tribe in extreme western Libya as "unlike that of any other people."

Herodotos calls that tribe the Troglodytes, the "dwellers in holes." And where did the Zuni and Anasazi dwell in Herodotos' time? In holes in the ground, or properly "pit-houses." Herodotos' Troglodytes eat snakes (as do Pueblo Indians even now), and dwell at the Fountain of the Sun (which Pliny puts "far to the west"), an intriguing match for the "Birthplace of the Sun" in the *Shan Hai Ching,* no? No? What if I told you that a later chronicle of Fusang says that the women of "a nearby country" took serpents for husbands, and lived in holes? That last brings us back to our hole-dwelling Libyan Troglodytes, and the women of the Hopi certainly take Snake Clansmen for husbands. So from Libyan Troglodytes to Egyptian cavern-carvers is just a hop and a skip.

"A retired Ohio doctor has discovered relics of an ancient civilization, whose men were 8 or 9 feet tall, in the Colorado desert near the Arizona-Nevada-California line, an associate said today. Howard E. Hill of Los Angeles, speaking before the Transportation Club, disclosed that several well-preserved mummies were taken yesterday from caverns in an area roughly 180 miles square, extending through much of southern Nevada from Death Valley, Calif. across the Colorado River into Arizona."
-- "Trace of Giants Found in Desert," *San Diego Union* (August 5, 1947)

Much like the hop and a skip from the Grand Canyon to Death Valley, where another news squib informs us of another revolutionary archaeological discovery that somehow went nowhere, after going underground. The "retired Ohio doctor" was one F. Bruce Russell, who claimed in 1946 to have fallen (in 1931) through the floor of a mineshaft somewhere on the eastern side of Death Valley and discovered a complex of 32 caverns running from Death Valley into (you guessed it) the Grand Canyon. Inside were the standard hieroglyphics (including "devices and markings similar to those now used by the Masonic order"), mummies (like Kinkaid's mummies, all male), depictions of prehistoric animals (plus the bones of "elephants and tigers"), and two or three enigmas. Not only were the mummies giants (well, giant*ish*), but they wore gray clothing "taken from an animal unknown today." Not quite the alchemically-hardened copper of the Kinkaid find, but still, pretty neat.

Even more intriguing are the odd parallels between Russell's story and one published by Death Valley local historian Bourke Lee in his 1932 book *Death Valley Men.* Some time in the 1920s, it seems, one Fred White also fell through a mineshaft, this time on the western edge of Death Valley, in the Panamint Mountains. He also found a vast complex of temples, palaces, and suchlike, full of mummies, weapons, "jeweled aprons" (Masonic devices, anyone?), and a 90-foot idol, all surrounded by heaps of gold, to boot. (In a lovely touch, the complex was apparently lit by gaslights.) Enormous "windows" set into the high mountainside looked down onto Death Valley, and White believed the complex' builders "used to land their boats there." White recruited some partners, and like Kinkaid informed the "Smithsonian Institute" of his findings. But by the time Washington sent two scientists out to investigate, a great storm had shifted all the landmarks around, and White couldn't lead them to it. They went back East, and White and his two partners vanished in Death Valley, searching for their lost city.

Could Russell have read Lee's book and picked up the story to feed to his own prospective partners in "Amazing Explorations, Inc."? Well, he apparently had to fool not just the *San Diego Union* and the credulous Hill but an archaeologist of some local repute, Dr. Daniel Bovee. (Admittedly, since Bovee apparently dated the find to 78,000 B.C., he may not have been so hard to deceive.) But if it was all a scam to bilk money from his partners, Russell worked harder at it than most, right up until he, just like White, disappeared in Death Valley. His car was found weeks later with a burst radiator; Russell's suitcase was in the back seat, but the "artifacts" from the find had also disappeared with him. Where did they go? Or just as interestingly, where did they come from? Well, according to the unimpeachable *San Diego Union,* the hieroglyphs Russell found in Death Valley "bear a resemblance to what is known of those from the lost continent of Atlantis." Now, we're getting somewhere.

"Which Jared came forth with his brother and their families, with some others and their families, from the great tower, at the time the Lord confounded the language of the people, and swore in his wrath that they should be scattered upon all the face of the earth; and according to the word of the Lord the people were scattered. . . . And it came to pass that the brother of Jared did cry unto the Lord, and the Lord had compassion upon Jared; therefore he did not confound the language of Jared; and Jared and his brother were not confounded. . . . And it came to pass that the Lord did hear the brother of Jared, and had compassion upon him, and said unto him: . . . [T]hou shalt go at the head of them down into the valley which is northward."
-- *Book of Mormon,* Ether 1:33-42

It has doubtless occurred to us all that the multicultural relics in the 1909 Temple might be not from a blend like Tibetan Chinese or Roman Jews or Libyan Egyptians but from a civilization that predates all others. From [Atlantis](), perhaps? Sure, if you want to call the miraculous copper in the Temple orichalcum. From Sipapu, the legendary cave world of the Hopi ancestors? Sure, and maybe the Temple is Palatkwapi, the lost Red City of the Hopi. But in the mythic American West, the go-to culture that comes from a time before "multi" is the Jaredites, straight out of the *Book of Mormon.* The Canyon's first scientific explorer, John Wesley Powell, had a Mormon translator and factotum, Jacob Hamblin, who had already scouted the Canyon in 1858. Hamblin was also the guy who told Powell that the Indians, rather than the Sons of Dan, had killed Powell's three men. But wait, you remind me - didn't the Indians confess? Indeed they did, and the guy who translated their "confession" was none other than the singularly informative Jacob Hamblin. All this comes in mighty handy if his secret masters actually had the Howlands and Dunn whacked to hide the Lost Cavern of the Jaredites, hmmm?

So, the Jaredites. The Jaredites are the descendants and hangers-on of Jared, a patriarch who lived in Babel as Nimrod built his famous Tower. I'm quite fond of the speculation that the Mormon "Jared" is the same as the Biblical "Jerah," who is one of the begats in Genesis 10 whose line just winks out with no closure. Better still, in the time of Jerah's father Joktan, "the earth was divided." Sounds like discovering America, or even God creating a giant Canyon with the last of the Flood water, to me. (And for bonus points, "Joktan" is awful close to "Yucatan.") But anyhow, Jared wanted no part of the upcoming confusion of speech, and so he and his lit out for the territory, specifically, North America. The line of Jared, sad to say, did not rightly prosper. There was a plague of serpents, and lots of struggles over kingship and what-not, and then one Akish wrecked everything by forming "a secret combination" using "the oaths which were given by them of old who also sought power, which had been handed down even from Cain, who was a murderer from the beginning."

"It is only within the last few years that most people have stopped thinking of the West as a new land. I suppose the idea gained ground because our own especial civilisation happens to be new there; but nowadays explorers are digging beneath the surface and bringing up whole chapters of life that rose and fell among these plains and mountains before recorded history began. . . . We hear rumours of still older things, too . . ."
-- H.P. Lovecraft and Zealia Bishop, "The Mound"

And just how far back is "the beginning," anyhow? One very strange detail where the Kinkaid narrative echoes the Death Valley story is Kinkaid's discovery of "steps leading from [the] entrance some thirty yards to what was, at the time the cavern was inhabited, the level of the river." And said level of said river is now something like 1,900 feet below those steps, the same distance the floor of Death Valley lies below Fred White's putative Panamint mountainside "windows." In the immortal words of Bugs Bunny, "Watch that last step: it's a doozy!" The canyon itself is no more than 2 million years old, so applying a rule of thumb estimate to erosion time -- the canyon is only 45% eroded when the Temple Builders are working -- we get a date for the Temple of 1.1 million years ago. Now, of course, if we accept conventional, hidebound geology, it seems that most of the canyon's erosion took place in the first 800,000 years of its existence, which (after applying the same metric) gives us 1.64 million years ago as an outside limit for the Temple's construction.

There is an out, however, or sort of one, short of embracing creationism. (A book for sale in the Grand Canyon Park Center gift shop gives the Canyon's formation date as 2348 B.C. Or thereabouts.) The Canyon has flooded a number of times since its carving, as volcanoes dumped lava across the Colorado, damming the flow of the water. The largest of these volcanic dams, "Prospect Dam," is the one that would have raised the water level to roughly the 2,000-foot mark noted by Kinkaid; geological tests (40Ar/39Ar and 3He) place Prospect Dam at between half a million and 395,000 years old. This is still far back in [deep time](), where our prehistoric civilizations dwell. Intriguingly, around 5.5 million years ago, the Nile was also a deep, winding canyon very similar to the Grand Canyon now. When the Mediterranean Sea level temporarily fell during the Miocene closure of Gibraltar, the Nile carved out a canyon 8,200 feet deep from Aswan to the future Delta. Another strange and weirdly significant-seeming link between Egypt and the Grand Canyon.

"One thing I have not spoken of, may be of interest. There is one chamber of the passageway to which is not ventilated, and when we approached it a deadly, snaky smell struck us. Our light would not penetrate the gloom, and until stronger ones are available we will not know what the chamber contains. . . . The whole underground installation

gives one of shaky nerves the creeps. The gloom is like a weight on one's shoulders, and our flashlights and candles only make the darkness blacker. Imagination can revel in conjectures and ungodly daydreams back through the ages that have elapsed till the mind reels dizzily in space."
-- "Explorations in Grand Canyon," *Arizona Gazette* (April 5, 1909)

So do we really want to get to the bottom of the Kinkaid enigma? If the fate of Russell, and White, and Kinkaid, and Powell's three men, and the Anasazi don't deter us, maybe a couple of other tales might. Glen and Bessie Hyde vanished from a Grand Canyon boating excursion in November 1928, their boat turning up dry, fully loaded, and afloat 70 miles downstream from the last photograph in their camera. And Buzz Holmstrom, who in 1937 became the first man to descend the Colorado River solo ("talking to his friend, the moon" the while) died mysteriously on May 18, 1946, on the banks of the Grande Ronde River in Oregon. What connects the Pacific Northwest and the Grand Canyon? Well, Lemurians, sure. But also UFOs. Sure, we all know about Ken Arnold and his "flying saucer" encounter over Washington state on June 24, 1947. Sure, it might be a coincidence that Kinkaid said he was "looking for mineral" in the Canyon, and that Arnold encountered his UFOs over Mineral, Washington. But that same week on June 26 and June 30, 1947, two witnesses -- a doctor and a Navy pilot -- saw UFOs over the Grand Canyon. Dr. Leon Oetinger saw a "silver ball" fall directly toward the Canyon and swoosh to the horizon, and Lt. William McGinty saw two gray disks land just a few miles south of the Canyon. We also have the Kingman, Arizona UFO crash in 1953, on a line between the Canyon and Death Valley -- where there was an airship sighting in 1905, right about when Kinkaid would have been first uncovering his Temple.

Let's stir into this brew the odd similarities between Kinkaid, White, and Russell's stories. Kinkaid and White, intriguingly, are both reported to have dealt with the "Smithsonian Institute." Not, I point out, the Smithsonian Institu*tion,* which employed, among other people, John Wesley Powell. The same Powell who avidly studied myth and metaphysics, who left a triple sacrifice on the Canyon's rim, who insisted on naming "Bright Angel Creek" himself while starving (or sorcerously fasting?), who on August 14, 1869, heard the same aerial artillery that Lewis and Clark encountered at Great Falls, Montana, on another mysterious mission on another river. What did Powell hear, and what Bright Angel did he see, left over from settlements a million years old? Whatever it was, it was enough to activate the "Smithsonian Institute," a secret bureau within an unclassifiable collection, to bargain with the prehuman inhabitants of Sipapu, or K'n-yan, with the Reptoids who drove the Jaredites south into Mexico, who terrified the Anasazi into cannibalism and exodus, who married the queens of the Kingdom of Women, who built the house that Kinkaid found. What did "the Institute" get? Orichalcum for future UFO hulls? An army of giant, red-headed mummies? The secret of Lemurian gaslight? Maybe just the real map to the Canyon, to the twists and tunnels that take us from the Tower of Babel to the Tower of Ra, to the true dragon lines in America's bisociated backyard, to the Golden Cities of Cibola and the Valley of the Manifestation of the Dawn.

Icosahedron Adventures

Unusual Objects (Part Three: I-L)

by Owen K.C. Stephens

We continue our tour through items designed to guide, change, spur, or even create campaigns and adventures. Loosely designed for *d20 System* games, the core ideas can be adapted to other systems.

Icabod's Head

Like many myths, the *Legend of Sleepy Hallow* turns out to be more truth than fiction. A schoolteacher, Icabod Crane, did battle with a cranially challenged ghoul. The legend suggests Icabod panicked in his final confrontation, but the sad truth is he lost his head.

As it happens, the Hessian soldier who became the Headless Horseman is not a random undead, but instead the product of a specific ritual dating back to the time of the Templars. A head is severed and made into an idol (always named Baphomet), and the body becomes a servant of the creator's vengeance. Icabod was a coward but also a scholar, and discovered how to destroy the vile Horseman. In retribution, he was killed by the cult that controlled the Horseman, and made to replace it. In a ritual not found in any grimoire, Icabod's head was imbued with genies of knowledge, while his body became a gaunt killer with a burlap sack for a face. Once controlled by the cult that created them, these undead items have long since become independent.

In a game without the *Legend of Sleepy Hallow,* a similar legend can be created. The important aspects are a headless foe that terrorizes and seems to defeat a cowardly and scholarly everyman figure. In truth, the everyman wins but pays a terrible price for victory. An elven jester who taunted a headless ogre, an Arthurian squire haunted by a flying witch-head, or a long-gone race of alien roach-men who really can survive for centuries after being beheaded could all substitute for Mr. Crane.

As a result of the ritual, Icabod's head is a kind of oracle, a font of useful knowledge. In a high-magic game it can cast divination spells (*speak with dead* and *augury* being the most obvious, with perhaps *divination* on a less frequent basis). In lower-magic settings is is simply a sage of esoteric knowledge (either having ranks in many Knowledge skills itself, or granting a noteworthy +5 bonus to the Knowledge checks of whoever possesses it). In non-magic settings the head is either a psychic focus with knowledge stored in long-dead mental synapses, or a useless relic (hunted by those who -believe- it has magic powers).

There are two drawbacks to having Icabod's head (in campaigns where it has real power). First, Icabod remains a coward. He can do nothing more than talk (and perhaps bite), but is in mortal fear of any serious danger. Icabod is convinced he is damned for having been turned into a foul thing of magic, and his only chance of escaping eternal damnation is to never die. Thus, he strenuously argues against any course of action that might lead to his destruction, often so loudly as to make the danger worse.

Second, the Burlap Bandit seeks to reclaim its lost head. A tall, rawboned figure with a sack-head (featuring a jagged tear for a mouth and dark stains in the fabric for eyes), the Bandit wants its head back. However, Icabod is deathly afraid of his body, and wants nothing to do with it. Further, as long as one of the two exist, the other cannot be permanently destroyed. Owners of Icabod's head may defeat the Burlap bandit, but unless they kill Icabod as well, the sack-headed horror will regrow and come after them again -- each time stronger than in its last incarnation.

Jericho Trumpet

While the Ark is long gone, a few artifacts associated with it still exist. Most powerful of these is the last of the Seven Trumpets of Jericho. Played by priests that marched around the city for seven days, the trumpets are the heralds of divine retribution. Lost after the death of Joshua, often damaged and re-forged, the trumpets are spied throughout history though often not recognized. Items as diverse as the horn or Roland and the cornet of Sgt. Pepper are just forms of the Trumpets of Jericho. Though only one trumpet remains in usable form, legend claims the other six will be remade in time to be played by seven angels to mark the Rapture.

Rather than a magic item, the Trumpet could be an alien sonic weapon, a rift in space-time that warps structures around it, or a mundane musical instrument that happens to summon a supernatural force. It is sought by warriors, wizards, historians, Nazis and fringe religious groups hoping to sound the horn and end the world now.

The true power of the Trumpet is modest. Structures near it are weakened when it is played while being moved around them. A complete circuit of the structure is necessary; simply playing inside a building does nothing. If the conditions are met, the structure is weakened by 15% (reducing its defenses, but not its actual stability -- it removes hardness and damage reduction, but not hit points). The Trumpet also extends any sound-based morale effect out to the range it can be heard (normally a mile radius). It can be played only once a day, though for any duration.

If the Trumpet is damaged, it can be recreated from even the smallest scrap of its mass. This requires a master craftsman, but any such crafter recognizes the value of a remnant of the Trumpet instinctively. If two scraps remain, once one is reforged the other becomes useless dross.

Finally, the Trumpet knows its own. When played in the presence of any holy object, from a fragment of another Trumpet to a saint's bones or even Excalibur, the Trumpet's sound reverberates off the other holy objects, making them vibrate and (oddly) glow. Those who seek the Trumpet do so less for what it can accomplish itself, than for what it can be used to find.

Killer's Blade

Be it a mad slasher's machete, a cult leader's sacrificial obsidian knife or an assassin's stiletto, it is a blade that has been used to kill dozens -- or even hundreds -- or times. Death has soaked into the blade and marked it as a murderer's weapon. It may be the razor of Sweeney Todd, the axe of Lizzie Borden (or her family's real killer), or the laser-sword of the Dark Invader. It doesn't matter if it is imbued with the blood curse of its victims, psychically imprinted with the pain of those it has snuffed out, or magically enchanted through necromancy.

The blade kills with ease, but not without cost. Any attack made with it is a critical hit, but an attack roll, is made normally. If the d20 roll does not indicate a critical threat, the attack takes points of non-lethal damage equal to the roll needed for a threat minus the attack roll made. Any threat automatically confirms as a critical hit. At the end of any combat when the user of the knife has non-lethal damage on him, he must make a Will saving throw equal to 10 + non-lethal damage taken. On a failed save, the attacker permanently loses one point of Wisdom, and the blade's threat range increases by one when he uses it.

The blade qualifies as an artifact, showing none of its vile power to mundane investigation or standard spells and psychic divinations. Scholarly research turns up the details (DC 30 Knowledge check, with a retry allowed at +1 for each month of research or new library of occult lore accessed), but normally isn't undertaken until someone has killed with the blade. By then the curse has manifested; the new owner cannot make attacks with any other weapon, or any spell or martial art. They must either find a way to rid themselves of the blade (which changes ownership only with the current user's death), or live a life of non-violence, or risk becoming inhuman.

If the Wisdom of the blade's owner ever drops below 8, he becomes a psychopathic murderer. Each day a Will save must be made (DC 10 + number of days since an innocent victim has been murdered). On a failed save, the blade's owner must seek an innocent victim and murder them, making all effort not to be caught. If the Wisdom of the blade's owner drops below 5, he become a ghoul, vampire, or similar undead horror, dedicated to complex and horrific murders. Sadly, such creatures are resistant to damage from most everything but their own blades, which often starts the cycle over again.

Escaping the curse of the blade is difficult. If every murder that has ever been committed with it is solved, the blade disintegrates. Each time even a single murder is solved, it loses power for a week (though its power is restored if it is used in an attack). If its owner commits suicide, its power is broken (unless he is later restored to life). If an older killer's blade is found, it can break a younger version (though doing so counts as a murder).

Lembas Recipe

Elven waybread: The smallest portion can feed a man for a day, and it doesn't spoil even over the course of months. Sadly, the secret of its manufacture is long since lost, save for a single copy. Found in a faded tome (*The Joy of Alchemy*), the last copy of the recipe is a crucial element in an upcoming event. Nations may be going to war and need a way to feed their armies. Or the Great Depression may have made the possibility of food that never spoils too attractive to ignore. Of a mission to Mars may need a way to cram a lot of food into a small mass footprint. Indeed, the entire space race may hinge on saving fuel while feeding cosmonauts.

The book has been ignored for centuries. It is rife with rituals to turn gold into lead, keep a Jabberwock at bay, and remove the water from saltwater through distillation. Many copies have been burned, others used to keep tables level in damp climates. Only one copy remains, but no one knows where it is. There exists only a description, thus:

"Four hands tall, and two wide, though not big hands. Perhaps the hands of a large child, or small adult. Really, more like three hands tall, with a few extra thumbs tacked on. Thick enough to make a scrivener cry, but of sturdy paper unlike to tear easily. Also, the paper is not good for spitballs, as attested by one Master Jim Fortigew. The cover is red, except where it isn't. Mostly that's the gold lettering, in ancient Greek but badly spelled, and where someone stained it black with spilled coffee. There's a blue ribbon as a bookmark, which has a sigil of a pen, and embroidery of a kitten. Or maybe a puppy-it isn't good embroidery. The book does not burn or mildew, as it is the first and perfect form of its kind, the master book from which all others of this volume were copied. Also, if chocolate is placed upon the book, it fades away. The book likes chocolate.

"As a magic tome all these details are subject to chance. Except the part about chocolate."

The book is, indeed, fond of chocolate. It's fond of all good foods, in fact, and is imbued with the spirits of pixie cooks and their brownie brownies. It had recipes for anything edible, and ways to make many inedible things eatable. It has been owned by monks and chocolateers alike, and was once carried across the world in a glass elevator. Anyone owning it, treating it well, and generally being nice to others, gains many advantages. First, they never need for food or water. In any situation, the book provides a recipe for making a feast, even in a barren room. Second, it prevents the owner from dying, instead taking any lethal blow itself. It is a moody book, and subject to pouting or changing food tastes to brussel sprouts when annoyed, but basically a good sort of artifact.

But it lives, indestructible, only so long as it holds the secret of elven waybread. That is its last Great Secret, and if it gets out the book dies. The book is now on the run, looking for a plump child or desperate cook to hide it from the corporate spies who wish to make Larry's Unleavened Lembas the "it" food of the next century. The book can chance appearance, move a bit, and smell a rat a mile away, but to survive it needs help. Also, it can't resist chocolate, a sure-fire way to seek it out from lesser books.

IronPunk

for *GURPS*

by Eric Funk

"IronPunk" describes an alternate Rome in which the secret of Water has been unlocked. It permits near-instantaneous communications and incredible steam weapons. In this *GURPS Infinite Worlds* setting, the Roman Empire must contend with the Chinese, the Persians, and the South African Nok for international acclaim.

This setting is a somewhat corrupt Roman Empire that still has some local officials who care, and the higher nobles are generally concerned with keeping their holdings intact. Water on this world possesses slightly different electrical and acoustic properties. This applies equally to imported water, but not to any water removed from this world.

Name: Santorini-2, 89 AD

Current Affairs

The Roman Empire is becoming decadent, and is having trouble expanding further away from the Mediterranean. Seceding Atlantian forces from Santorini are helping the Britons repel the Roman occupants. A Persian Empire includes Arabic territory and India. China is colonizing Oceania. The Nok civilization is uniting Southern Africa. Together, these groups have formed tenuous relationships and have yet to discover the Americas.

Divergence Point: 1,500 BC -- The catastrophic eruption of the Mediterranean volcano of [Santorini](#) has not yet occurred. The magma chamber below the cone continues to fill to the point that the island is hundreds of feet above its Homeline level.

Major Civilizations? Western (Empire With Rivals), Tau (empire), Persian (multipolar), Zulu (empire).

Great Powers

Roman Empire (Representative dictatorship, CR4); Chinese Empire (CR5); Persian League (feudal, CR5), Nok (theocracy, CR3).

Worldline Data

TL 2+4

Infinity Rating: o10, except within 20 miles of the Mediterranean, and 500 miles of Santorini. There it is Z4.

Centrum Rating: Yellow.

Timeline

166   Roman ambassadors reach China

Roman Empire

Today

The age of [Bronze](#) is over. Rome has conquered the Mediterranean civilizations of Greece, Egypt, and Atlantis with an iron fist. Now decades later, its fist has already begun to rust. On Homeline, it would be centuries before it finally collapses. Here, everything is more fluid.

Poseidon's Gift

At the founding of Rome, the new Emperor made a peace treaty with Atlantis. During the temporary alliance, a golden age of prosperity swept the Mediterranean. A united task force kept pirates down, allowing trade to flourish. At this time, Roman agents acquired samples of advanced "technology" that allowed the Atlanteans to communicate over long distances and to be masters of the sea itself, which they called "Poseidon's Gift." The treaty ended soon after, beginning with the Siege of Santorini. The islanders' mastery has allowed them to hold out for decades against a half-hearted blockade. Any normal invasion force has been successfully repelled. The secrets of the technology used in the defense of Atlantis were called "Neptune's Gift" and shrouded in mystery. Each implementation was shrouded in respect and ritual. The Romans have taken a generally industrial view regarding the research and distribution of the technology.

To Be Roman

Roman citizens can vote, become politicians, and enjoy free protection in court. Those who embrace Roman citizenship are given the best education and the best opportunity for advancement, socially. Roman officers must be born Roman citizens. Within Rome are many provinces, which can be referred to by their old names (see ***GURPS Imperial Rome***, p. 8), although this is officially discouraged.

Greece

While officially part of the Roman Empire, Greece has only maintained any identity thanks to its compatibility with the Roman belief system. As a cultural center, it brings science, sports, theater, and philosophy, even if the best of each are shipped off to Rome. Many Greek citizens of the Roman Empire have made significant contributions such as

[Hero of Alexandria](#) (see Famous People, below). In Homeline, he *actually* invented a plethora of water-devices in the early first century, including steam generators (see *Hellenistic Influence, **GURPS Imperial Rome,*** pages 48 & 68).

Egypt

The newest large member (it says "ally") of the Roman Empire, Egypt brings many technological advances, particularly in the use of bound spirits. These *Animus Incolo* (Spirit Resident) are tireless warriors. They allowed Egypt to hold on longer than most, but the country fell in the end, as all the major cities are situated on the Nile, and the Roman forces merely sailed their warships along it. Egyptian spirit technology focused on acquiring servants to continue to serve. Nobles and kings were preserved for the "next" thing. This tradition continues with the noble houses, although the Royal house was obliterated during an uprising to help quell further rebellion. Roman officials installed a new system of government that was more responsible. Pharaohs were cloned to perpetuate the bloodline of the gods. A few pharaoh "cultists" survived the conquest, and plot to restore the rightful pharaohs to the throne (see ***GURPS Egypt*** and ***GURPS Imperial Rome,*** page 67).

Atlantis

For centuries, Atlantean culture was the most advanced civilization in the world. Its rulers became passive and resisted change. Thus, they met each challenge with supreme confidence in their abilities. Their greatest challenge was the occasional pirate fleet . . . until the Roman empire came. At first there was the occasional merchant ship, and then a Roman officer tried to annex the land in the name of his Emperor. After a fierce battle, a treaty was reached (see above). This lasted for a few years before it, too, fell through. While its naval force survives in legend, the kingdom of the sea itself is fading.

Labeled rebels by the Roman government, most Atlantean citizens have left the island of Santorini. Those who remain can tap into Roman hydrophones and intercept plans. Providing aid to the Britons to help them resist the Roman incursions has incited Roman generals, causing fleets to generally be divided between the siege of Santorini and reinforcing elements in the North Sea. This has helped divert Roman attention to the Scandinavian "barbarians" who raid the coasts of the North Sea. A war fleet is gathering at Rome to prepare to crush the Atlantean rebellion once and for all (see ***GURPS Atlantis***).

Persia

The Parthanian age of the [Persian Empire](#) is progressing well. Persia has expanded further East than in Homeline, having conquered India a century ago. Employing spirit "djinn" warriors permitted the sultans an advantage against the advanced metal of the Indians (see technology, below). India is known for its high-carbon steel, called *wootz*. Merchants and government officials jealously guard its origins. Persia is known for its generally conservative, yet diverse culture. Its elaborate tea houses and gardens are famous for their exquisite culinary delights. Rugs are considered part of architecture and are very profitable.

The Persians rebuilt the east-west Egyptian [Suez Canal](#) in 250BC, as in Homeline, and continued to maintain it on this world. The Persian government makes a tidy profit on the tolls from merchant and military ships passing through. The Persian government offers a subsidy for merchants buying or selling goods from its holdings, and for Persian merchants. These benefits are cumulative (see ***GURPS Arabian Nights***).

Asia

China's celestial bureaucracy communicates through water. The Chinese bureaucracy started in the [Qin Dynasty](#) in 500BC to maintain the irrigation and canals. The first Emperor also considered mercury to be the ultimate water, and became exceedingly eccentric as he experimented with it. The arrays of rice paddies can form part of a distributed telescope, even if it was originally designed to map the passage of celestial beings as they journey from cloud to cloud.

Today, the [Han Dynasty](#) is in full swing. The Chinese inventor [Zhang Heng](#) found new ways to harness water power (see Famous People, below). His contemporaries invented paper and basic steel earlier that century. On Homeline, Roman ambassadors did not officially arrive until 166 AD, but here are expected to undertake the journey "very soon." Likewise, the Chinese government can transmit basic intents to the Romans, but sees the need to send visitors (see *GURPS China*).

South Africa

The Nok and Bantu civilizations rise with steel in Southern Africa. The Nok people believe in animism, that all things have spirits. Thus, water is alive and listens to man as this is the "Age of Water." The prior two ages were the Age of Earth followed by the Age of Air. The Age of Fire is to come. The Nok build the fastest river boats, able to move with unbelievable speed.

These people possess a generally tribal organization, and a head man informally leads with councils for any day-to-day planning. A priest, or "shaman," makes executive decisions and provides strong suggestions for the councils. These proud people shun the elaborate, advanced weapons of the Romans and Chinese, favoring muscle wielded and fired tools. Their AIs are given animal forms, and are regularly allowed to roam free.

Fringes

Away from sources of water, many rebels can resist the roman legions who depend on water for their greatest strengths. In particular, the desert skirmishers ambush caravans with their "djinn" armies obtained from Persian contacts. The Celts and their druids form a great defense against the under-funded Romans deployed to Britain (see *GURPS Celtic Myth*).

Technology

Travel Civilian travel consists mainly of "aquamobiles" that travel the rivers and seas quickly. These boats use steam engines to drive impellers. The basic idea for the impeller was stolen from Egyptian toruses designed to pump water to large reservoirs for crops and drinking water. These huge rings can move boats!

Ferries carry loads of personal craft around the Atlantic shores. Today, most aqueducts near Mediterranean cities are clogged with aqua-cars. Most commercial aqua-cars are not rated for the ocean, and must stay in the Mediterranean Sea. The north-south [Suez Canal](#) is under construction to permit the Roman Navy access to the Persian Gulf and passage to the Far East without the inconvenience of the Nile and Persian Customs officers. Single-expansion steam trains ply rails laid between major centers. They can only run for short durations due to inefficient designs, but handle most inland freight and passenger service. Mining on Santorini-2 is much safer and efficient than during its equivalent time period on Homeline. Workers employ water drills and steam engines to pump air and water, as well as steam trains connect cities, and motors pull carts for mining operations.

Weapons

The Roman military acquired the new Emperor-approved "steam power" technology and immediately tried to apply it to all sectors of battle. "Steam cannons" are fast-loading siege engines such as catapults and trebuchets. Super-heated steam in the form of "liquid fire" can scorch targets at modest distances (flamers). These weapons are large and bulky, and can only be mounted on a large ship or fortification. The minimum size appears to be 10 tons. A few "gunboat" frigates exist, built around such weapons. Most are deployed to the North Sea to fight the Norse. There is also a new kind of self-propelled siege engine. These armored steam-powered devices bring devastating weapons, immune to hand-held weapons. They are called "tanks" as the original frames were designed to hold water. Specialists from Athens are renowned as the experts in Greek Fire.

Communication

The hydrophone is a water-based communication device present in most homes in the civilized world. The "hydro phonic communicator" or "hydrophone" (or phone) is revolutionizing business. In existence for almost 50 years now, it was developed accidentally as scientists Hero of Alexandria and Zhang Heng were experimenting with sending high-powered signals into the sea, and happened to pick up each other's messages. This works as long as the source and destination have a continuous water connection between them, be it a cloud, or water table. Businesses have linked together Chinese Babbage engines across hydrophones, permitting the near instantaneous transmission of records. Cutting-edge data storage consists of wax cylinders to recall missives (see Data Disks, *Steampunk,* page 62). This is encouraged by the bold marketing plan of Chinese entrepreneurs. Taking an initial loss, they marketed cheap, small Babbage engines for home use. Arriving with very simplified use interfaces, the machines come with wax cylinders containing accounting and Go. Today, the product of China's International Babbage Machines have become the standard, and the Roman and Persian corporations are struggling to keep up.

Uninvented Inventions

In a cinematic situation, a GM may permit devices that perform any or all of the following functions: Water Breathing (held backward, can also serve for a water-based creature to breathe air); Free Action (bands repelling water from limbs, but not the torso); Water Vision; and Sonar Vision.

The 'Net Today

A vast set of interconnected networks span the Empire. The "global net" is a water-based meta-connection; rivers and wells are sink points to connect the cities. Those using the 'net "weave" connections using a grid of copper wire dipped into the water. The user enters a trance-like state, and must practice to keep a meditative trance balancing somewhere between sleep and consciousness. This delicate balancing act is part of "surfing." Aqueducts not only provide drinking water and roadways, but lines of communication as well.

Roman generals see Atlanteans as enemies who now come from the ocean, and can eavesdrop in the "net." Professional dream weavers send coded data across to others, so cryptology is important. Standard operating procedure for Roman groups, be they civilian or military, is to dig a well as quickly as possible when arriving at a new location, permitting power and communications. To poison the well is to outright deny the opposition connections and potable water.

Medicine *Aqua vitae,* the waters of life, is the "science" of balancing the body's humors. Some advanced medical ideas are present, mainly regarding disease, infection, poisons, and blood types. GMs are recommended to permit basic herbalistic potions in the area of healing only (see **GURPS Magic** *Fourth Edition*, page 210). See also the Alexander Athanatos setting in **GURPS Bio-Tech**, pages 217-224, and Kenneth Hite's "Alternate Biotechs."

Zoomorph adaptations are popular among street fighters, warriors, and gladiators. As per the quoted article and the **Ultra-Tech** *First Edition* suggestion on p. 65age obvious modifications should come at normal character point cost, but 1/5 the **GURPS** $ cost, if they don't logically already do so. Thus buying a prehensile tail won't have a discount, but intending to buy Perfect Balance, but having to gain a tail, would. In addition, citizens who can withstand extreme temperatures can work with fewer supplies and rations. If they can ignore the hardships of blistering heat, freezing cold, or parching desert, all the better. Almost any template from Transhuman Space can be used, except those designed for zero gravity. In any case, "artificial" biological beings are not treated any different that any other kind of slave in that culture.

The Nok and common Roman citizens use zoomorphing modifications freely. The Chinese and noble Romans use "seamless" genetic improvements whenever possible. The Persians are moderate in their approach, but encourage genefixing and repairing any "negative" trait. Minotaur modifications are popular among Roman street fighters, gladiators, bouncers, and other guards. The strength, height, muscle mass, and stamina all tell tales of the upgrades. Runners may get cheetah legs, and so on. The Persians are generally practical, choosing abilities to survive. That said,

popular culture continually talks of legends of spider-legged, wall-walking Persian assassins. Chinese often pick a [zodiac](#) animal, either theirs or one that they idolize.

Non-Human Life

The Egyptians, Middle East, and Far East all had the secrets of binding spirit intelligences to statues to "create" this sort of life before the Romans acquired it. They are called *Animus Incolo* (Spirit Resident) and are generally divided into two categories.

The Dreamforged

The loyal, pragmatic servants are not very creative, and tend to follow orders to the letter, even if they are impossible. It is called a Non-seaforged *Animus Incolo* (NAI), and is restricted in its actions. The Nok do not make Dreamforged, and consider Seaforged to be full citizens if they prove themselves (see below). The Chinese do not make Seaforged, only Dreamforged.

The Seaforged

The wild spirits from the water make better creative thinkers, but are unpredictable. Some tend to philosophize while others revel in kills. There are few that take any sort of middle ground, but few mentalities are alike. In **GURPS** terms, each has around -20 points or more in mental disadvantages, and a Reputation (Unstable). A Seaforged *Animus Incolo* (SAI) is a slave by default, and most possess the disadvantage of Social Stigma (Property). The exception is the Nok people who only create SAIs. Those individuals that cooperate can gain membership in a tribe on their own merit.

There is a middle variant of complexity that is called Lesser seaforged *Animus Incolo* (LAI), they are considered to be merely very complexly instructed NAIs.

AIs can hop between prepared vessels in ST seconds. If it is already inhabited, the attacker must *win* a contest of ST. These animated statues can wear armor, if the forms are human. To respect Poseidon, the Seaforged are given full status as slaves. A few have earned their freedom. [Talos](#) was an Egyptian-made warrior given to the lord of Crete.

Home and Garden

Aquaculture is not as popular as merchants would like it to be, despite campaigning. The current fad is to eat normal crops given extra water and grown quickly. Today, aquaculture crops go mainly to feed cattle, freeing up more fields to grow crops for human consumption. Variety of aquaculture crops seems to be the leading problem.

Roman citizens in "civilized" areas can expect a variety of water-based conveniences. These range from water-cooled storage rooms to hot-and-cold running water, including [hypocausts](#). Lead has been proven to be anti-life, so commercial and military interest enjoy iron, normally forged in, or coated with, rust-resistant alloys. Civilians contend with copper and tin. Other conveniences include elevators, plumbing, and advanced sewage systems.

Weapons of War

The "water cannon" is a normal siege engine with a steam-powered reload mechanism. Purchase as 2× cost, taking an additional equal volume somewhere nearby for the power plant. Multiply the RoF by 100, to a maximum of RoF 1. Minimum Mass 10 tons.

The Flamer is a particle cannon. Buy as a Flamer, with RoF 1/10, minimum mass 10 tons. Flamethrowers are standard issue using Greek fire (see **GURPS Low-Tech,** pp. 92,113).

The Sonic Stunner is minimum 10 lbs; generally built into a metal staff, these devices can be wielded as such without

penalty or harm. A Ready maneuver is required to change between purposes.

Famous People

In science, Ptolemy works on water-powered rockets to the stars while the Greek cartographer Strabo works to expand his map of the known world. Hero of Alexandria explores atomic theory, and begins work on hot air balloons. Of Greek birth, and a Roman citizen, Hero advanced the Roman water power industry by leaps and bounds. He is the renowned expert on the captured Atlantean secrets.

Pliny the Elder is the leading Roman researcher. An officer in the army, he is always on the move, and is a voracious writer. He documents his journeys and writes extensive treatises on all aspects of natural science in the known world. Pliny the Elder is the foremost Roman authority on the workings of the formerly Greek biotechnology and captured Egyptian technologies. Together, Pliny and Hero have been compared to Leonardo da Vinci of their world. Pliny is the explorer, the naturalist.

Currently, the details behind certain aspects of Roman military technology, including high-powered weapons, are classified. Most other areas of science, nature, and history are published for all Roman citizens to read and aspire to. Pliny's textbooks on the fundamentals of modern science are required reading. The Chinese inventor and noble Zhang Heng made similar advances for his people. In addition, he pioneered a primitive water-powered Babbage engine to meet the demands of the bureaucracy.

Adventure Seeds

Rust to Rust: Rebels are rumored to possess a new water-based, super rust weapon that can corrode any metal but gold. Against iron, it is said to be devastating. The range is between ten and one hundred yards. The rumor is that the rebels are based around an oasis, but the PCs receive a tip that they are moving. There is a reward for hard information regarding the weapon, more for obtaining a sample, and even more for the entire group.

Island Retreat: Although some Atlanteans are escaping to the Canary Islands, most have escaped to South America. The Atlanteans are retreating from their island to an underwater base in an unknown location believed to be in the Atlantic Ocean. Many parties would pay well to know exactly where they went. If the Atlanteans did not reveal all their secrets, what else did they know? Flight? The secret of creating underwater domes?

Seekers: Pliny the Elder needs a few good men to gather technology samples outside of military channels, due to expedience. The heroes are to capture a large Seaforged djinni loose in the wastes and forests. What makes it special is its built-in ranged weapon . . .

Problem Clearing: The north-south Suez Canal project is being dug using Roman and local Egyptian slaves. The project is being dogged by raiders. The heroes are to help. Which side they help depends on who the heroes are . . .

Contact: Local philosophers believe that Poseidon's Gift involves spirits that inhabit the waters of this world. In particular, the South African shamans hold that all things possess spirits. The heroes are to find emperical evidence one way or the other.

Heaven & Earth, Third Edition

Published by Abstract Nova Entertainment LLC

Written by Lee Foster, Michelle Lyons, James Maliszewski, John. R. Phythyon, Jr., & Lucien Soulban with Rob Boyle, Danny Budge, & Jeff Mackintosh

Cover by Ed Northcott

Illustrated by Cliff Kurowski & Ed Northcott

128-page b&w softcover; $24.95

Welcome to Potters Lake, a quiet Midwest town. Home to the Catholic college of St. Anslem, the USAF training facility at Powell AFB, and Southey's Paper Mill, which made its millions from paper sanitary products, nothing ever really happens here. All right so some of the customs are quaint, like the exuberant Fourth of July celebrations that also mark the town's official founding; the Great Tomato Festival that takes place before Halloween every year, the celebrations of which last week; the rivalry to out-do the other of the Sheriff's Department and Fire Department balls; the utter seriousness with which Little League is held . . .

Scratch beneath the surface of life in the Kansas town and more than its fair share of oddities remain unanswered. Were they to admit it, every household has suffered from a haunting . . . Memorial Hospital's morgue is rumored to be haunted by a unicycling clown . . . Why does the current owner of Cain House boarding house keep it open when nobody stays? Could it be because the previous owner killed seven people and buried them in the basement? Is the old Hollyvale Cemetery really one of the seven portals to Hell, or is that just student rumor? Another rumor suggests that the infamous Men in Black have been known to visit households and take the inhabitants away, just as Powell AFB is rumored to be the headquarters for Project: Bluebook. The surrounding woods have a bad reputation backed up with regular disappearances and talk of strange monoliths, claw-like trees, and lost sand dunes.

Some, all, and more of these and other rumors are true, or at least have a basis in fact. For Potter's Lake really is a place with secrets, conspiracies, and cabals, which are ripe for uncovering whether the player characters are merely passing through, just moved there, or have lived there all of their lives. Of course, with so many secrets, conspiracies, and cabals, it seems an awful lot for one small town. But there is a reason for this. A damned good reason. Which could have come across as crass and poorly handled, but thankfully this is not the case. Pleasingly, where other RPGs might keep a GM in the dark as its revelations, *Heaven & Earth* does not shy away from revealing all of the setting's secrets.

[SPOILER ALERT!]

The simple truth is that the Apocalypse is almost upon us. In the war between God and Lucifer, humanity is merely a method of tallying the final score. After that, we have no future. Fortunately, we have a champion in Christ, who has rebelled and now walks the Earth in an attempt to save us. Potter's Lake is important because it happens to be a tainted slice of Eden and contains the means for humanity to stand up to both God and Lucifer. Eden's proximity has drawn angels, demons, and other supernatural entities to Potter's Lake, unhinging reality and attracting magicians, psychics, and ghosts to the town.

Character generation for *Heaven & Earth* is an easy process with an emphasis upon the ordinary person. Fourteen points are divided between six attributes each rated between one and five with two being average. Nine points are spent on an occupation and its rating. The occupations cost from one to five points and represent a package of skills that a character either has or has not. Thus the one-point Librarian occupation just offers the Research skill, whereas five-point Lawyer gives the research, etiquette, fast-talk, law, and oration skills. The ratings -- Rookie, Professional, or Veteran cost between one and three points, and apply to all of the skills within an occupation. Any leftover points can be spent on another occupation or on extracurricular skills, increasing attributes, and buying more Destiny Points, which are used to allow a skill check to be re-rolled or to even turn a failure into an automatic success. Each character normally begins the game with a single Destiny Point. A player is encouraged to select a few hobby skills that on occasion might provide a bonus.

Mechanically the game is equally as simple. Add the value of the attribute and skill rating to a die roll to beat a target of nine. The difficulty of a task is measured by the die type rolled. The smaller the die, the more difficult the task. Combat uses the same mechanics with a few minor tweaks, and is intentionally lethal. All characters can take same amount of lethal (10 points) and non-lethal or blunt damage (20 points). With even the smallest of pistols and rifles doing a ten-sided die's worth of damage, it is possible to kill a character with a single shot. This lethality is compounded with the slow healing rates -- weeks for blunt damage and months for lethal. Combat is not as clear as it should be, and a GM will have to read closely to work out how a character's Defence Value works.

Designed for quick play and character generation, *Heaven & Earth's* mechanics are over in 20 pages. They do have a player ask the typical questions about his character, but the focus is very much the character's occupation. This is because it indicates a lifestyle and connections, offers roleplaying opportunities, plus it speeds the character generation process. Given the revelatory nature of the game, one curious omission from the mechanics is a means of handling both mental shock and a character's mental status. Easy enough to import from another game though, but I suspect that players are meant to roleplay this.

Angels, demons, and other supernatural entities are handled in the same fashion, powerful, but kept off-screen working from behind the scenes. Magic and psychic abilities are also treated similarly, being difficult to work and learn. It is suggested that no player character begin the game as a psychic or magician.

The GM's advice is decent, pointing particularly towards a televisual format and structure, but better when discussing what could happen at game's end when all is revealed. A challenge in itself, how a GM handles this could make or break a game, possibly ruining what could be a long game. Certainly more advice on this would be welcome, and a whole supplement could be devoted to this denouement. The game is supported with a tightly plotted scenario designed with four players in mind.

Physically, *Heaven & Earth* opts for simplicity and clarity with a uniform feel to the art that hints at Potter's Lake's quiet weirdness. Although the book lacks an index, it neatly organizes everything into chapters, so for example, the NPCs are found in one, secret societies in another, and so on, that it is rarely a problem. The lack of stats for NPCs is another omission, but these can easily be created by the GM. The lack of stats for the supernatural creatures is more intentional, indicating at their inhuman, powerful, almost unfathomable nature which a GM should hint at, rather than expose.

Heaven & Earth is a game of discovery and revelation that provides the GM with everything that he needs, though Abstract Nova will publish further information. It rewards long-term play, with the many NPCs, locations, and mysteries all forming a ready source of scenario ideas. The game's mechanics are good, but since they are not integral and it is the setting that is important, a GM could substitute any game from *GURPS* or *In Nomine* to *[Buffy the Vampire Slayer Roleplaying Game](#)* or *[the World of Darkness Roleplaying Game.](#)* Likewise, Potter's Lake could easily be slotted into any horror game, but to relegate the town to mere sideshow would be to miss the point.

Small town weirdness is a well-trodden genre, especially in *Heaven & Earth's* suggested television format, and the game is perfectly set-up for that. Even given the gargantuan nature of Potter's Lake's secrets, everything is nicely kept

low key, letting the players focus on what are very ordinary characters and the GM on the oddness and the mood of the town. Handled with care and **Heaven & Earth** deserves renewal giving time for its secrets to be revealed, explored, and understood.

Pyramid Review

GameMastery Map Packs

Published by [Paizo Publishing](#)

Cartography by Corey Macourek

18 8"×5" map sections, sandwiched between ad sheets; $12.95 (Haunted Mansion, Fortress, Dungeon Chambers, Countryside, or City); $9.95 (Village or Graveyard)

Everyone wants in on the game-map market these days. Some are reusable, some redrawable, some flippable, and some interchangeable. It's Paizo Publishing's turn at bat, and *GameMastery Map Packs* boast geomorphic maps at affordable prices. Here are some generic notes, followed by a few specifics about particular sets, then some more generalization.

Each set contains 18 map pieces, 8"×5", for five square feet per package (though none are just one big map). A grid is superimposed over each panel to aid in moving miniatures. Glare from overhead lights can hamper visibility, so indirect lighting is a plus in the game room. The advertising insert briefly names each supplement's content.

At this point there's a handy selection of sites and scenes in the line. *Haunted Mansion* doesn't have Eddie Murphy, but it's still pretty scary. Too dark to appreciate the detail in many cases, actually, but mood is established with fine points like creepy nursery dolls and a grand entry hall worthy of the term "mansion." More location-specific items (like cribs) could better solidify each place's identity, but overall these well-appointed rooms represent one of the most tightly focused sets.

The *Village's* sites, as in the majority of these sets, are easy to assemble and understand through graphics alone (and not just by process of elimination, though some packets rely on that). Oddly the tavern lacks a fireplace, but minutiae like rats and papers mean attention to detail is not an issue. The roster is filled out by markets, magic shops, shrines, and even a gallows.

All things dead color the *Graveyard,* including graves; large, chambered structures; and some withered trees for atmosphere. The *Fortress* is a little from columns A and B, quality-wise: It takes a moment to realize the "drawbridge/moat/gatehouse" arrows aren't two color codes, they're hued to stand out against separate background colors. They're one set of connections. The drawbridge panel is printed or cut off-kilter and doesn't line up well with the other five sections (at least not in the set under review). One last oddity is an "extra" portrait: a table at the bottom of a stairwell. It's still an 18-panel package but this scene is unidentified. Still, "more" is better, yes?

Another dense entry is *Dungeon Chambers.* It's a uniformly dark look at a castle's underbelly, with little swords and skulls scattered about its dank corridors, and it maintains the motif admirably throughout. Strange that *Countryside* is also tightly woven, with toll- and rope-bridge segments that pair up (save for an off-center river bank). Then again, it has another tavern that takes up six segments (though it, too, lacks a fireplace -- those are only found in long-abandoned shrines and temples, apparently). Presumably the "ambush" uses the walled roadside, but one could argue that and the ruins are interchangeable, so it's hard to say which is which.

The *City* does nice work with its alley; it looks vicious and useful. The wizards' guild is a confusing mess, unfortunately, and possibly incomplete, with arrows and designs at odd angles. There's a magic shop, but the village has one of those too if that's the deciding factor in a purchase. Either the smithy isn't "finished" or else it's intended to be simple sections and not a complete structure.

With a map set, graphics are king, and sharp was the eye that produced these. Even in those rare moments where a site's identity isn't clear, the elements of the illustration are clear (though the fighter's guild wooden men look like ceiling fans). No credits are offered, but the website singles out cartographer Corey Macourek. (The cover illustrations are diverse, so while nice, the person -- people? -- responsible are anyone's guess.) Users can just about make out spare change on the desk's edge, it's often that specific. Still, none are so busy as to distract the viewer from appreciating the big picture. The pieces aren't thick, just stiff, so they may glide across a smooth table under a fan. The small faded arrows in the corners and edges help adjoin maps when arranged properly, but these aren't used in the cemetery, country, or city sets (and are applied haphazardly in the dungeon pack).

More description on the ad coversheets would be welcome (labeling the maps themselves might kill the mood). They recently jacked up some of the *GameMastery Map Pack* prices a nickel, so some are now at $12.99. These still aren't as cheap as the maps of Wizards of the Coast, which gives a better quality component, but for those wanting sharper focus within their tiles the subject matter remains suitably broad and widely applicable, and pieces can be easily cannibalized between inexpensive supplements.

--Andy Vetromile

Good Enough, Smart Enough, Liked by People

How much of an obligation does the GM have to make the players and/or the PCs feel special?

This was a question that sprang to mind this week as I wrote my review of *Pathfinder #1*. After all, in a high-fantasy world, there's a large number of people at most "levels" of power, except for the upper-most echelons, and it's something of a mood breaker to stop the Ravager of Worlds only to learn that there's a dozen other parties out there doing things that are at least as meaningful.

To a certain extent this is governed by the [power level](#) of the campaign. After all, if you're no more special than the rest of the world, then it doesn't stand to reason that you're going to *be* more special than anyone else. (Of course, such a premise is also perfect for the "everyman rises to the level of challenge" that's so popular.) Conversely, if you're only one of a thousand people on Earth with super-powers, then you're going to be pretty special by default.

But there are a few other factors that can affect this feeling of uniqueness among the heroes. Here are three that sprang to mind after some consideration.

Scope and Isolation: The smaller the scope, the easier it is to stand out. As an example, running a campaign set aboard a space station with only 1,000 people means that if you prove yourself better than 10 others, you've elevated your standing to at least the 2nd percentile.

Moderately realistic fantasy worlds tend to have limited communications, which -- even in epic settings -- allows for heroes to feel pretty special. For example, let's say that you stop the Ravager of Worlds, and there's a half-dozen other groups out there doing the same thing. Well, the existence of those other groups doesn't matter if you don't know about them, and if their exploits are months away from your ears because of the size of the world, then it's easy to continue feeling like you're a big deal. This is the tack taken by the old ***Earthdawn*** setting, which is a world shaking off the dust after burying itself in hiding for an extended period.

This is even true with relatively low power levels, if the scope is small enough. For example, saving an isolated village from a weak dungeon threat still makes you the greatest hero that berg has ever known, even if you would have a hard time standing toe to toe with a sickly orc.

Ease of Communication: This is another aspect of "scope" above, but probably warrants its own bullet point. Obviously, the easier it is to communicate *in a timely fashion,* the harder it is to feel truly special. This "timely fashion" clause is important, because it's still possible for easy communication to result in feeling special, since there can be that feeling of bobbing around in a larger sea: "Well, I just heard that Lothan the Mighty killed the Soul-Blighter, but that happened months ago; no one's heard from him since, so he might be dead. Of course, we've been adventuring for months now ourselves, so no one knows about us. Maybe we're dead. What's in these trail rations, anyway?"

Sci-fi settings with communication that's no faster than courier communiques *(**Traveller, Fading Suns**)* are especially easy to establish this; although it's possible to cover ridiculously large distances, the difficulty in doing so reliably makes it possible for someone to carve out a large reputation (and for the GM to make the players feel special), yet having evidence that either disproves that *or* spreads their influence to be fleeting. (As a good example of this, consider Han Solo from *Star Wars.* I always got the impression that among certain circles he had a tremendous reputation, but among even larger groups -- say, former Jedi generals and wamprat-shooters -- he was unheard of.)

On the other hand, settings with instant communication tend to make even the most skilled of PCs feel small compared to the backdrop of the larger world. ***Shadowrun,*** for example, strikes me as a setting where it's always possible to determine your current ranking in the grand scheme of things . . . and that rank will probably be low enough to feel invisible or high enough to be a target.

Publicity (or Lack Thereof): Of course, there's also a gulf between feeling special as a character and feeling special

as a *player*. It's one thing if the townspeople are hoisting you up on their shoulders, singing your praises in the streets for killing the Ravager of Worlds. It's another thing if the heroes defeat the Ravager of Worlds, then realize they must keep their deeds secret because the ritual that allows its summoning is fairly easy, and they don't want anyone else to get any ideas for trying to bring home their own Ravager.

Many settings -- such as **World of Darkness, Men in Black,** and **Black Ops** (hmm, is there a trend here?) -- tend to work well by having the heroes sense of importance be internal ones. This can be a great technique in game worlds with trivial fast communication; even if the secrets of the heroes' exploits could be spread far and wide, the need to keep it under wraps can counteract that ease. (In fact, the mere act of holding a secret tends to make one feel important; after all, if it's a secret then it must be something people would care about, right?)

Of course, not all players have the same need for their characters to feel important. But for many players, the need to feel that they're doing something interesting or special can be important; after all, if the heroes' deeds could be accomplished by dozens of other folks, what's the point of their involvement? But keeping in mind the various factors that can inhibit this sense of importance -- along with the elements that can mitigate those elements -- can go a long way toward making it easy to stay the center of the spotlight.

Unless, of course, the spotlight must remain dimmed . . . because the heroes are *that* important.

--Steven Marsh

Pathfinder #1: Rise of the Runelords Chapter 1: Burnt Offerings (for *d20 System*)

Published by [Paizo Publishing](#)

Written by James Jacobs, Wolfgang Baur, Erik Mona, Richard Pett, & F. Wesley Schneider

96-page b&w and color softcover; $19.99

Pathfinder: Rise of the Runelords Player's Guide

Written by F. Wesley Schneider

$10.00 for a pack of five copies, or [Free PDF](#)

Envision an amalgam of the continuing adventure serials from the last few years *Dragon* Magazine combined with articles from *Dungeon,* only envision that all those articles are in support of the adventure. Now, envision this amalgam coming out once a month, only it's not a magazine. For those of you familiar with Paizo's treatment of *Dungeon* and *Dragon,* what you have pictured in your mind's eye is probably pretty close to what *Pathfinder* is.

If you're not familiar with those periodicals (or even if you are), let's back up a bit. *Pathfinder* is the evolution of Paizo's former magazine efforts, coming about when Wizards of the Coast decided not to renew their relationship with Paizo (probably because, in hindsight, of developments with *Dungeons & Dragons Fourth Edition*). Each installment of *Pathfinder* contains a meaty adventure which is part of a series; each series is designed to take a player from 1st to 15th level (or more), after which Paizo assumes that you'll retire those characters and start out with new 1st-level heroes in a new series.

In addition to this adventure, each issue contains articles that support this adventure, either directly (such as write-ups of new monsters or parts of the game world) or indirectly (such as background organizations or ancient history). All this is packaged in a perfect-bound stiff-backed full-color softcover, which -- along with its lack of advertising -- makes it clear that this isn't intended to be a magazine, despite its monthly release schedule.

As planned, all *Pathfinder* campaigns will run for six months, and *Pathfinder #1* begins the first six-part series *Rise of the Runelords* with the adventure "Burnt Offerings." At over half the page count, this adventure is by far the largest part of the volume, and it's also the best (which is a good thing since it's presumably the main draw). Heroes begin as citizens or visitors in the sleepy coastal town of Sandpoint, and get drawn into adventure by a seemingly random act of violence that leads (naturally) to a larger web of adventure.

[SPOILER ALERT!]

The main adversaries of "Burnt Offerings" are goblins, a threat that ranks right below dust bunnies in the minds of many gamers. Nevertheless, the adventure -- as well as some of the supplemental material -- goes a long way toward elevating goblins into a larger, more dangerous threat, not by making them more *powerful,* but rather by emphasizing the aspects of their humanoid nature that make them effective and dangerous. They have an alien outlook, their insatiable appetites make them suicidally ruthless, and their seemingly comical nature can emphasize the horrors they

can evoke. For example, one encounter early on has the heroes investigating a mother's tearful recounting of her son and his fear of a "goblin in the closet"; the parents ignored him, with horrific results.

[END SPOILER ALERT]

The adventure elevates over several parts, ramping up in difficulty before the climactic ending . . . which, of course, reveals that there is more to the tale.

Without going too much into detail, the adventure avoids many of the pitfalls that other **d20 System** publishers have stumbled into. The adventure is designed to be undertaken in smaller chunks, and each section is easily digestible for players and GMs. In addition, these chunks all vary in their locale, objective, and mood; "Burnt Offerings" moves from urban encounters to a rescue effort in an interesting building to a classic dungeon crawl. The adventure also avoids much of the "led by a rope" feel of lesser tales; most objectives have several means of accomplishment, and some parts are entirely optional (and, indeed, are almost assumed that the heroes *won't* discover). In addition, there are many situations where actual roleplaying is more effective than swinging a sword, and in some cases it's the *only* solution, such as the thorny encounter with the shopkeep's daughter who wants to get one of the heroes alone . . .

The adventure makes good use of the Sandpoint locale; the city felt like a paddleball paddle, serving as the catalyst to send the heroes out and draw them back in, providing more motivation to venture out, and so on. The richness of this locale stems from both the adventure and the second major section of the book, which describes Sandpoint and its inhabitants in detail. This section is not designed to be memorized so much as provide instant spots for adventurers to seek subplots, supplies, or information. Although not provided stats, all the major inhabitants of the town are given names, brief histories, goals, motivations, and outlooks. One of the nice things about the background of Sandpoint is that it felt like a living city, with several major (and dozens of minor) events forming the town's history; most of these defining incidents have little or nothing do with the ongoing adventure, but rather provide context for Sandpoint's collective psyche -- how does a formerly sleepy town rebuild after a fire and a mass murderer? This development helps the town feel like a living, breathing locale rather than a pit stop for restocking heroes.

The next section details Thassilon, the former wondrous empire whose collapse ages ago forms the backdrop against which the adventure unfolds. (Short version: Mighty empire succumbs to sin, collapses on itself.) Although only eight pages, it nevertheless felt overly long, especially given that almost none of the information therein has any direct bearing on the adventure. Sure, there's a lot of background given about the "runelords" of the series title, but it remains to be seen how much of that info the players will ever know . . . especially since so much of that lore seems lost to the sands of time. As a litmus test, how much one gets out of this section will depend on how one feels about various bits of background information presented in *The Lord of the Rings;* if you're the sort of person who loved pouring over the pages and pages of history about how the ring came into being and how its evil eons ago almost brought about the end of time, then you may enjoy this section. If you're the sort who's satisfied with "there's an evil powerful ring that must be destroyed," then you can probably skip the Thassilon section. Nevertheless, it's at least satisfying to know that the world's creators have put considerable thought into the setting's back story, and the richness of this thought does lead to a consistent feeling in the campaign, even if the information itself isn't too interesting in its relevancy.

Most noteworthy about this section are sidebars that detail the remaining five parts of the adventure, giving the broad strokes of each subsequent installment. Although it feels a little wrong to read such "spoilers" ahead of time, it also goes a long way toward defusing criticism that the book doesn't give suitable information for how the series is going to end. It also enables GMs to foreshadow future events and make the whole feel more cohesive; for example, one future part involves the betrayal of someone who the heroes will possibly have befriended in the first adventure, and having this information ahead of time lets the GM plant the seeds much more effectively.

Next is "The Pathfinder's Journal," which details the Pathfinders organization. Yes, it turns out that "Pathfinders" isn't just the name of the book series, it's an actual group that heroes can join. This section tells about the Pathfinders' history, their (loose) organization, and their goals and accomplishments. The pathfinders exist to spread lore of their deeds, so those who would be members need to take notes and record their lore. As an out-of-game-world construct, it seems that the purpose of this group is to provide a means for heroes to enter their tales into the "public record," so that players participating in multiple *Pathfinder* series can chuckle at seeing their previous characters' exploits become

part of the world's history. It's not a bad idea, but it also makes the world feel very large; it's hard to maintain the illusion that the PCs might rise to be the greatest heroes of the land when there's an index of "previous greatest heroes." This section is also black and white, unlike the rest of the beautiful full-color supplement, which makes for a somewhat jarring disconnect.

The next section is the Bestiary, containing six critters who make their debut in the adventure. They're all solid entries, and each is given a full page or two. Without giving too much about them, almost all of them veer more toward the horrific than the goofy (perhaps the goblin snake -- a snake with the head of a you-guessed-it -- being the exception), and they, combined with the campaign advice about goblins earlier in the book, go a long way toward keeping jaded players on their toes.

The book wraps up with a few filler pages, consisting of four suitable-for-PC characters, a "coming next month" page (with the OGL), and an ad for future *Pathfinder* installments.

* * *

Taking a step aside for a moment, let us turn our attention to the ***Rise of the Runelords Player's Guide.*** This full-color supplement, intended (obviously) for players but also GMs, gives a would-be player everything they need to know about the setting. It gives insight into the world of Varisia, the part of the world that the *Rise of the Runelords* takes place.

The sections are typical of those seen in many setting books, with information on the races, classes, and gear of the world. The races and classes section aren't entirely inspiring . . . which is good, in a way, since it seems that Paizo is targeting those whose tastes in ***d20 System*** fare runes more traditional; options that deviated too sharply from what's expected probably would be more trouble than it's worth. More interesting is the gear, which lists 12 pieces of new and nontraditional equipment; this gear goes a long way toward making Varisian characters feel different from their standard-dungeon-crawl counterparts. However, most of the items almost exude *too* much flavor, and it seems unlikely that most players would choose more than a couple of them at most. (Again, this isn't necessarily a bad thing, since there are only 12 items to begin with.) All of the equipment is also illustrated, which goes a long way toward establishing that exotic flavor.

A brief history of Varisia is also presented, along with six feats unique to the land. At least a few of these are pretty interesting, and players looking to immerse themselves fully into the story-arc experience and make a character truly unique to the land would do well to consider using at least one of their slots on these new feats. A two-page description of Sandpoint is provided, giving the briefest of overviews that enables a player to get up to speed on the land. The guide is wrapped up with full-color maps of Varisia and Sandpoint on the inside covers. The Sandpoint map is the same one from *Pathfinder #1,* including the numbers; although it disrupts the aesthetics of the map a bit (especially since there's no corresponding key in this book), but again this isn't necessarily a bad thing since most gamers going through the *Rise of the Runelords* campaign

These ***Player's Guides*** (Paizo has released them previously for the Adventure Path series from *Dungeon*) are a great idea, and serve to bring players up to speed quickly and easily. Also, regardless of the form the gaming group chooses, Paizo offers two nice "services" with this product; one can either purchase a five-pack for $10.00 (and a 16-page full-color supplement for $2.00 apiece is a steal), or one can download the book [free](#). In fact, downloading that book is probably a good idea for anyone on the fence about jumping on the *Pathfinder* bandwagon, since that book does a good job of establishing the tone and feel of the series.

* * *

The first two *Pathfinder* products are not entirely without defect. For one thing, *Pathfinder #1* show signs of lackluster editing, especially in the first sections. This is most likely due to the rush to get the product ready for GenCon, and there isn't anything that is a "dealbreaker" as far as errors go, but it's still somewhat distracting if one is sensitive to that sort of thing. For another, the price might be a fairly large chunk for many gamers; to get the "full story" one is committing to six books in a cycle, which -- at $19.99 -- adds up fast, especially if a fair bit of the book is only intended for one use. Of course, that's probably over 300 pages of adventure, and almost as much again in

supplemental material for that adventure, over the course of the six months. Finally, the pace of release might prove challenging for many gaming groups; this first book looked to have at least four gaming sessions of adventure, which -- assuming a weekly meeting schedule -- means that folks interested in keeping up with the *Pathfinder* series will have some constant but intense gaming sessions. The *Pathfinder* series is a bold experiment, and it will be interesting to see how it pans out. They seem to be attempting to create their own "Forgotten Realms"-style campaign setting in a very different format, and developing that world through adventures and articles is certainly more interesting than trying to get a sense for the land by reading the dry almanac-style supplements And for those who love the old *Dungeon* and *Dragon* material, this line looks to promise similar material from much of the same creative team, with the added bonus that all the pieces are designed to fit together as a cohesive whole. For those who enjoy the idea of flavorful but accessible **d20 System** fantasy adventure, *Pathfinder #1* and the **Rise of the Runelords Player's Guide** form a promising beginning to what will hopefully be the stuff of legends.

Murphy's Rules

Alquimia de Barrio

for *GURPS Technomancer*

by Paul Stefko

In the world of **GURPS Technomancer,** while the business of alchemy is dominated by huge pharmachemical companies like Hermes Technology, small businesses still have a place locally. In ethnic communities, small towns, and especially among the criminal element, private alchemists maintain a healthy if diminishing trade.

In El Paso, Texas, one such small alchemist is Alejandro Espanoza, founder and proprietor of Alquimia de Barrio ("neighborhood alchemy"). Alquimia be Barrio opened 23 years ago, and business was good for quite a while. Eventually, though, many of Espanoza's staple elixirs began showing up on shelves at pharmacies and chain stores at vastly lower prices.

Mr. Espanoza has turned to other sources of income to supplement his dying business, leading him into the arms of the Juarez Cartel, who badly needed someone to brew combat elixirs for their enforcers. Now Alquimia de Barrio could easily become the location of adventure as PCs (be they law enforcement of criminals -- Cartel or otherwise) stumble across the shop in the course of other pursuits.

Setting

Exterior: Alquimia de Barrio is located in a three-story brick building with an adjacent alley. Walls are 6 inches of brick over 8 inches of reinforced concrete (DR 16*, 67 HP and DR 96*, 80 HP respectively).

Windows and Doors: The building has two exterior doors -- the public entrance in the front and a service door on the side of the building. The public entrance is plate glass (DR 1, 3 HP), as are the display windows. Both door and windows are mounted with 1/2-inch steel bars (DR 11, 22 HP). The service door opens from the business office into the alley; it is 2 inch-thick steel (DR 112, 75 HP). Both doors and all windows are fitted with high-quality locks (-4 to Lockpicking to open) and alarms (-2 to Electronics Operation (Security) to disable).

The Shop: The front room of the shop is taken up primarily with shelves displaying product. The shelves themselves are heavy wooden bookcases (DR 2*, 29 hp) standing about 4 feet high and lined with racks for potion or injection vials and aerosols or with stacks of boxes and tins for powders and ointments. A shop counter with register and small displays blocks off the rear of the shop, and a wooden door leads to the office.

Alquimia de Barrio commonly stocks the following elixirs (in most applicable forms, except pastilles, inhalers, and smokes):

Birth Control† $75*
Fire Resistance $435
Hair Growth† $175
Hair Removal† $95
Healing $65*
Health $865*
Hearing $260*
Keen Sight $440*
Magic Resistance‡ $1,610
Pain Resistance $465*
Self-Love $550*
Sleep $185*

Sunblock† $85
Tooth Care† $85
True Sight‡ $865
Water Breathing‡ $880
Universal Antidote $385*

* These elixirs are covered by most medical insurance programs (typically by prescription), subsidizing up to 80% of the cost to the consumer.
† *GURPS Technomancer*, p. 49-50.
‡ These elixirs are available but only in small numbers. Alejandro will have 1d-2 of each in stock at any given time.

The Office: A door at the rear of the shop leads to a small business office dominated by a large oak desk (DR 2*, 29 hp) and several filing cabinets (DR 7, 30 hp). An exterior door leads to the alley (see above). An interior door leads to stairs going down to the basement.

The desk is dominated by a rather outdated personal computer (-2 to Computer Operation rolls, but +2 to rolls to circumvent the limited security installed). Alejandro keeps his financial records and invoices on the system, but he also keeps a second set of ledgers in a false bottom in the large desk drawer (Lockpicking-1 to unlock the drawer, Search-1 to locate the compartment).

One of the filing cabinets is actually a disguised safe in which Alejandro locks the shop's earnings as well as his store of illegal elixirs. The safe is extremely high quality (-6 to Lockpicking) and was procured with the aid of the Cartel.

The Basement: The basement houses a well-stocked alchemy lab (+1 to Alchemy skill) with enough room for up to three alchemists to run concurrent projects. The walls here are 2 feet of reinforced concrete (DR 288*, 115 HP) to contain possible explosions.

One of the sections is curtained off with flowered bedsheets hung on a clothesline. This is where Ana-Maria works when she's home, and she's insisted on privacy when she's working on "hobby projects."

The Apartments: The floors above the shop are accessed via a stairwell above the alleyway exit. The second floor is a large, three- bedroom apartment inhabited by Alejandro Espenoza and his children. A boarded-up fireplace holds a mantletop shrine to the Virgin and a gilt-framed picture of Rosa, the late Mrs. Espanoza, who died 8 years ago of magic-resistant breast cancer.

The third floor is split into two single-bedroom apartments. Currently, one apartment is rented to a young married couple with a 5- month-old daughter. The other apartment is vacant; a sign in the stairwell window lists a phone number for prospective tenants.

Alejandro has not secured the top floors as well as he has the shop. The windows have simple locks (+2 to Lockpicking) and no alarms.

The Barrio: The surrounding neighborhood is run-down but generally friendly. Several restaurants and grocers cater to a nearly all- Hispanic population. Alejandro makes weekly money deliveries to a bank a block away; he wears his tactical vest under a long coat on such occasions.

Characters

Alejandro Espenoza   *150 points*

As a young boy, Alejandro Espenoza became fascinated with magic. Living in El Paso, only two obstacles really blocked Alejandro's entry into that world: his lack of magical ability and his family's superstitions against spellcasting.

Alejandro eventually discovered that the study of alchemy came quite easily to him. He loved deciphering new formularies and brewing up his little pieces of magic. His parents saw nothing wrong with alchemy; despite the odd smells, the practice felt more like their ancient folk remedies than "magic."

Alejandro was admitted to the University of Texas at El Paso's new Advanced Alchemy program in 1972. He published several papers on medical elixirs and earned his Ph.D. by the time he was 26. Then, rather than take one of his many offers of corporate employment, Alejandro moved back to his old neighborhood, working odd jobs and double shifts until he had enough money saved up to start his own alchemy shop, Alquimia de Barrio.

In the last decade, business has declined. Alejandro's desire to succeed has forced him into a poor position; five years ago, he started producing illegal combat elixirs for the Juarez Cartel. The combination of steady cash and access to secure formularies was too much incentive for Alejandro.

The Cartel's money has kept the Espenoza family comfortable despite their failing business. It has even paid for Alejandro's daughter, Ana-Maria, to attend UTEP. But the pressures of a criminal life are weighing on him. Alejandro is a proud man, and he doesn't like being beholden to anyone. It's only a matter of time before he makes the dangerous decision to part ways with the Cartel.

Alejandro Espanoza is 52 years old, balding, and has hearing loss from several nasty backfire accidents in college. He stands 5'8" tall and weighs 135 lbs. His typical attire includes a white business shirt and black pants, black socks and shoes, and a white apron stained with various chemicals and dyes. When he makes "deliveries" for the Cartel, he drives an unmarked white van with a pump shotgun behind the passenger seat. He also wears a tactical vest on such occasions for personal protection.

Ana-Maria Espenoza   *135 points*

Ana-Maria Espenoza is a junior at the University of Texas at El Paso, majoring in Meta-Informational Thaumatology. An avid runner and swimmer, she opted against joining the school's track or swimming teams in favor of her true passion -- dance.

Ana-Maria's magery was detected very early in her life when she used a kindermagic variant of Seek Earth to find a gold coin in a Mardi Gras cake. She taught her father a few of the spells he uses in his alchemy work, and she helped out around his lab after school and on weekends throughout high school.

In college, Ana-Maria is struggling economically. While her father handles her tuition bills, he cannot afford to provide her with spending money. To earn a little extra cash, Ana-Maria has prepared and sold Attractiveness elixirs to her fellow students since she was a freshman.

Despite having quite a few extracurricular activities and a very heavy course load, Ana-Maria stills tries to spend as much time at home as she can. She is not an uncommon sight around the shop in the evenings and on weekends.

Ana-Maria is 20 years old, stands 5'4" and weighs 120 lbs. She is a very pretty young woman with thick brown hair and brown eyes. She is most often dressed in denim shorts and t-shirts.

Miguel Espenoza   *75 points*

Miguel Espenoza is Alejandro's younger child. Two years ago, Miguel joined up with a street gang calling itself the Greyfaces. A minor part of the Juarez Cartel's local distribution network, the Greyfaces were responsible for the lowest street-level dealing. Miguel was a scout for the gang, but a natural talent for smooth talking lead to his quick rise in the organization.

Miguel's star was rising fast until the day he was arrested for vandalizing a local business. A first-time offender and a minor but with obvious ties to the Cartel, Miguel was tagged as an intelligence asset and released back onto the streets. Since his arrest, Miguel knows that he's being tracked by the DAEA and Vice, and he's been avoiding the Greyfaces for their own protection. Much of his time has been spent at his father's store, and he's becoming fairly proficient in the family business.

Miguel Espenoza is 15 years old, stands 5'5" tall, and weighs 125 lbs. His wardrobe typically consists of tight white tank-top shirts and very baggy blue jeans. His head is shaved, but he covers it with a bandanna when manning the shop.

"Toro" Ruez   *75 points*

"Toro" Ruez is an enforcer for the Juarez Cartel, a small-time hood assigned to protection rackets in the neighborhood. Big, none too pretty, and a little stupid, Ruez isn't good for much of anything requiring initiative, but he's more than frightening enough to keep most of the local businesses in line.

When he gets off work, Ruez likes to drink and gamble, and he can often be found at a local underground club called Lucifer Age.

Toro is 6'2" and weighs 215 lbs. He wears a Dallas Cowboys cap and windbreaker constantly, and he generally keeps one hand on the .38 revolver in his jacket pocket. He drives a rusted, 15-year-old Ford pickup.

Plot

There are several threads surrounding Alquimia de Barrio that could lead to the involvement of the PCs, depending on what kind of campaign you are running.

The War in the Streets: If the PCs are police or DAEA agents, the increasing frequency of combat elixirs in the hands of the Juarez Cartel will be an alarming development. Investigation could lead to one of Alejandro's monthly deliveries or to Toro Ruez and his intimidation racket in Alquimia's neighborhood.

The Helen Syndrome: A subtle critical failure in a batch of Ana- Maria's elixirs has produced a bizarre Attractiveness variant. The elixir makes the subject so attractive to members of the opposite sex that some develop an unhealthy and dangerous obsession. A rash of violent, competitive stalker activity draws the attention of police or campus-based PCs.

That Old Gang of Mine: Miguel is being pressured by his friends in the Greyfaces to help them move stolen property and drugs through the shop. With police attention firmly on him, Miguel is torn between loyalty and obedience to the gang and protecting the Greyfaces from their own poor planning. The PCs can become involved as officers assigned to Miguel's case, as agents of the Cartel attempting to work the kid, or as an independent force that Miguel might turn to to solve his dilemma.

Supply Run: The PCs are simply in the store shopping for elixirs when Toro and the Cartel make a visit looking for an emergency fix before a mission. Alejandro has been growing dissatisfied with his relationship with the Cartel and chooses today to stand up to their bullying. A conflict ensues with the PCs caught in the crossfire.

Interpretation

Using the Alquimia de Barrio in other settings involves making a few changes. The important elements are that the shop is run by a minority and maintains ties with both the ethnic community and some form or criminal organization.

Middle Ages/Renaissance: In a medieval or Renaissance campaign that includes open magical elements, Alquimia de Barrio can appear with little difference. Alejandro would fit perfectly as a Sephardi Jew in Moorish or (with an appropriate Secret) reconquered Spain. He chafes under his relationship with organized crime operated by Muslims or Gentiles.

Of course, in a secret-magic historical setting, the shop could become an apothecary that deals in elixirs under the

counter. Alejandro could then become involved with one or more secret magical societies, perhaps even being an uninitiated affiliate of the Cabal.

Modern/Cyberpunk: Assuming a fairly standard TL8 modern or cyberpunk setting without magic, Alejandro would become a pharmacist who deals in black-market drugs and combat stimulants. Remove all spells and alchemical techniques from Alejandro and his children. Ana-Maria and Miguel will decrease in point value, but Alejandro's skills should be modified as follows:

Skills: Chemistry/TL8 (Biochemistry)-16/14 (IQ+2) [8]; Computer Operation/TL8-16 (IQ+2) [4]; Driving/TL(7+1) (Automobile)-11† (DX+1) [3]; Guns/TL8 (Shotgun)-12 (DX+2) [4]; Merchant-15 (IQ+1) [4]; Pharmacy/TL8 (Synthetic)-17 (IQ+3) [16]; Research/TL8-17 (IQ+3) [12]; Writing-15 (IQ+1) [4].

Pyramid Review

Penguin

Published by [Fantasy Flight Games](#)

Designed by Reiner Knizia

Penguin artwork by David Clegg

Development & graphic design by Brian Schomburg & Christian T. Petersen

Full-color boxed game containing cloth bag, 36 penguin models in four colors, 39 penalty point chips, six player screens, & rule sheet; $14.95

For anyone who thinks global warming won't affect them, they haven't considered the plight of Fantasy Flight's *Penguin.* In spite of the singular form in the game's title, there are several of the little birds in peril here. They've all managed to get trapped on a small ice floe, and they're now jockeying for position, trying to get atop one another lest they fall over the side.

The object of the game is to end the game with the fewest penalty points.

Each player receives a small screen for privacy, and behind it places penguins he has blindly drawn from the selection in the bag. Every round a different player starts the action, placing one of his birds on the table. The penguins come in four colors. The next player may place one figure of any color on either side of the first. If someone tries to stack them, however, that penguin must sit atop two others in a pyramid formation, and it must match one of the two colors under it. Fumbling with the pieces carries a penalty; if the stack falls over, the player responsible is immediately fined for all his remaining figures and the round begins all over again.

The pyramid has a maximum base of eight penguins before it reaches the edges of the floe (about 12" on the tabletop), and ideally the 36 birds taper to a single animal at the top (seven or eight inches tall). It seldom works out so neatly. If on his turn a player finds he cannot meet the requirements for placing a penguin, he's done for that round. When everyone else has placed all their pieces or been eliminated, the round is over and any leftover penguins are revealed. Players receive a penalty point for every pawn they could not place, drawn from a pile of counters provided with the game. These points, like the penguins, are kept secret behind the screen after they're dispensed, so knowing how many a player has accumulated requires "counting cards" (so to speak). When everyone has had a turn to start a round, the game ends and penalty points are tallied. Whoever has the lowest total wins.

Most of the bad news regarding this game concerns the components. The cloth bag and the counters are both fine components. The little screens are nice, and it's surprising to find something that useful and involved (six of them, no less) in this box for the small sum Fantasy Flight is asking. Alas, they're awfully small, and fitting everything behind it isn't as easy as it looks (a round or square table works better in this regard; a long table causes privacy problems). The most disappointing feature is the penguins. These plastic figures are really nifty and the kids are going to love them. Trouble is, they might not stack as well as they should. They have slits along the shoulders, and the round bottoms should fit into these curved slots, but while that works fine at the kitchen table as an idle time-killer, multiple people contributing to the same activity during play won't have the same luck. The round bottoms allow them to rotate completely, so the bottoms almost always fit whereas the tops only do if one concentrates on aligning the shoulder

slots.

One solution is to line them up like bowling pins in decreasing rows on the table; players can still use the rules for knocking the penguins over, though not only is that a harsh penalty, it requires *everyone* to start from scratch . . . and passing that bag around gets old. The original plan was to make this a simple card game, and that would have cured many woes. Even now, though, if the rule sheet is folded up the whole thing fits into the cloth bag (which then makes the box, a surprisingly roomy one, obsolete).

It's easy to find good things about the game, too. Although foiling an opponent's plans is pretty much impossible (no one can possibly guess who has what behind their screen), stacking the penguins is a charming exercise . . . from a mechanics standpoint, anyway. One cannot help but think there's a strategy to be found lurking just at the corner of one's eye, and playing one more game might help unveil it, but even if this is an illusion it's an amusing and challenging one to pursue. The kids will love the colors and figurines, and parents will enjoy divining the patterns necessary for success.

--Andy Vetromile

The Omniscient Eye

How Much for Just the Senator?

So your character is a millionionaire playboy, a vampire cashing in some very long-term bonds, or an alchemist who finally has that lead-to- gold formula right. However you did it, you have a lot of money and want to buy yourself a Congressperson. How do you bribe an elected official, how illegal is that, and what can you do with your new friend?

First, know that this will be harder than you think. As frightening as it may seem, many politicians really believe most of the things they say. They have principles, believe they know better than you, or have fallen for their own PR. At least on core issues, bribery will not be the way to make large changes. Could you pay the President or Speaker of the House enough to reverse their positions on abortion? Even completely unprincipled politicians can be hard to sway because they are obstinate or too proud to be bought by someone from the 99.9999% of the population that is not a Senator. Or maybe someone else already bought that one.

And, frankly, can you trust him to stay bought? A quote attributed to a great many politicians holds, "If you can't take their money, drink their liquor, [enjoy] their women, and then come in here the next day and vote against them, you don't belong here." At best you are renting, not buying.

Even with a successful bribe, your range is limited. Your new friend (let's call him Bill) has a long list of old friends, alliances, and entanglements. A sudden change can undermine the power base you wanted to buy in the first place. Every hour Bill spends on damage control is an hour he is not advancing your interests.

Given these issues, one approach to buying an elected official is buying an election. Find a candidate who already agrees with you. This is how most special interest groups work: Support the home team instead of paying off your opponents. Besides, everyone wants to be your friend after you win, but you appreciate the people who helped you win in the first place. "Dance with the ones who brung ya."

There is, of course, a catch: Campaign finance laws are designed to protect incumbents. Your ability to fund an opposition candidate is limited, and meanwhile the existing representative can threaten your interests. You may need the challenger to win if you annoy the incumbent.

Consider the tools you have available for funding campaigns, whether you are helping someone's first or 31st election. The most obvious is "hard money," direct donations to campaigns. That will not get you far: a few thousand dollars in the primary and general elections. You can generate more hard money by organizing fundraisers, where many people donate a few thousand dollars, and if necessary make the fundraisers lavish enough to really be worth $1,000 a plate. You can also pour in as much "soft money" as you like, though it can be used only for "voter education" and other things that are not explicitly helping your candidate.

There are many backdoor methods of exceeding the campaign funding caps. Give generously to Bill's party, the state-level party, the state-level party in surrounding states, political action committees, or allied think tanks, non-profits, and university departments. Lend him a corporate jet for campaign appearances or some thugs for security.

You can also support causes Bill cares about. You held a fundraiser for him, so

The Americenteric View of the Universe

This column assumes current United States federal law. If you are playing in another country or century, you will have other exciting options. You might be able to bribe officials openly, or be required to do so in order to conduct normal business. You also might get hanged, so tread carefully.

hold one for his favorite charity. Let Bill headline an event and put out a press release taking credit; the public loves Bill, he loves you, and the charity loves you both. You are now on- record as a philanthropist who works on the same issues as Bill, so it is only natural that you meet with him frequently to discuss how you can help the public.

Maybe Bill is not the charitable type. He wants money, preferably legal and without your fingerprints on it. This is less efficient, but still doable. If Bill has written a book, buy a copy for everyone in your company, and he gets royalties; if not, have someone ghost-write one for him and get him a large advance. Buy some property from him at an inflated price or sell him a new car with a large discount. If your accountants cannot make that work, buy houses in his neighborhood and drive up his property value. Tell him just before you buy or sell a lot of stock. Try any of these ideas with his friends and family members. Basically, look up anyone involved in a federal ethics scandal. Whatever they (allegedly) did will probably work for you, if you can avoid getting caught.

Of course, why worry about getting caught? While most of the previous ideas are shady and/or unethical, they are only illegal under certain hard-to-prove circumstances. Someone will eventually make false ethics charges against Bill anyway, so he might as well get some money along the way (ask him, he'll take money and ethics charges over just ethics charges any day of the week). Investigations and hearings are far more common than prosecutions, and prison time is rare. Unless you are really obvious, your worst case scenario is the candidate forfeiting some of the money. At least Bill knows you tried.

You face two major risks. First, Bill must win. Supporting a loser means that you now have a legislator who knows you tried to take his job away. This makes investigation more likely and more rigorous, although there are also risks to having a high-profile winner.

Second, you the contributor bear more risk than the candidate. Bill can always claim he did not know it was dirty money and donate it to charity; you are the evil monster trying to subvert the democratic process (a completely fair charge in this case). The laws are written by politicians to protect politicians. You are a vulnerable outsider.

We're more than midway through the column, and we have not gotten to the simple option of giving Bill a suitcase full of money. If Bill is open to that, and no one cares that this is blatantly illegal and easy to tape, you win. However you did it, Bill is now on your side. What can Bill do for you?

Your rarest but most convenient case is for Bill to come with a price list. Evidence against Representative Duke Cunningham included a sheet showing how large of a bribe was needed to get various military contracts. He is now serving 100 months in federal prison, which suggests a reason why this is a rare and stupid brand of corruption.

Minus the explicit list, you are shopping for details. "Details," you say; "Thousands and million of dollars to support this buffoon and I get *details*?!"" Yes, details on a multi-trillion dollar budget and on regulations that can dictate winners and losers in an industry. Expect your bribe to be 5% of what you are getting.

Look at it from Representative Bill's position. Does he care whether school lunches are required to have an extra serving of dairy per week, especially when you are an old friend with such convincing graphs on why it is a good idea? Any bank could help with the loans on his new housing program, and conveniently you run a bank that employs many of his constituents. And does it really matter if, for purposes of this new legislation, companies of group C have regulations defined by subsection 3(e)iii rather than 3(e)ii (assuming Bill knows what that means)?

Earmarks have been in the news, as they are a convenient way of rewarding supporters. Earmarks are provisions in legislation directing funds to particular projects, organizations, or areas. Say Representative Bill is working on a $300 billion transportation bill; why not note that 0.1% of the money must be spent on building a bridge in his district? How about smaller potatoes, calling for the military to fund a specific $20 million research project? Really, $20 million is

less than a rounding error in a $3 trillion budget, but it means a lot to the construction or research company you happen to own.

Representative Bill could also give your company some relief from laws and regulations. Maybe Representative Bill can redefine size categories to put your company in a better bracket. If the new tax phases in over several years, you get to be the last group affected. He can call your federal oversight agency and ask them to back off a bit, or at least look more urgently elsewhere. Billion-dollar details are everywhere.

Of course, you will not want to be named explicitly in the legislation. That would look bad and be hard to get away with. Instead, we create a category with only one member: "This tax exemption is open to any company headquartered in Atlanta, Georgia, that distributes at least one million gallons of cola per year." If you need more cover (or do not care about collateral damage), make it less specific: "For purposes of this legislation, hamsters shall be considered to be spotted owls."

Your details may not be financial. What if they built that freeway on your enemies' ley lines, disrupting his magic? The military's new weapon could include a particular material that you can sense and control. If an endangered species were "found," you could prevent development in an area, either protecting your fairy friends or giving your world-devourer enough time to hatch.

You can do this backwards if you want the legislation to smite your foes. Re-categorize them or their suppliers. Have Representative Bill launch an investigation. Take whatever limitations you labor under and force them on everyone else. For example, if your company has high labor costs and is losing market share to cheaper competitors, ask Representative Bill to mandate a living wage for the entire industry. Your competitors face additional costs, and you get to stand up as the good corporate citizen who has always been paying that much. Don't just fight your current competitors: Lobby for high minimum requirements to compete at all, so that no one can challenge you. After all, Representative Bill argues, who can be against having the highest safety standards in our industries? Don't you care about the workers?

This leaks into a tactical side issue under the heading "Baptists and Bootleggers." Your bribery is likely to be noticed unless you have cover. Since you are making a mockery of representative government to use The State as a weapon against upright businessmen and consumers, you need someone else to argue that your policies are on the side of the angels. Enter coalition politics: temperance and religious groups supported alcohol Prohibition on moral grounds, while organized crime supported it because it made alcohol more profitable. If there is not already some group on your side "for the children," start funding one today so that it will have a track record when you need it.

This all comes back to our first point: Find someone who agrees with you. It is easier to bribe a man to do what we wants to do anyway. You just needed to shift Representative Bill's priorities a little to put your issue near the front. It does not matter if you have the same reasons for supporting the law, just that it gets passed. He brings jobs to the hard-working voters of his district, and you get a no-bid contract with nicely padded expenses. It is a win for everyone (except the taxpayers who are forced to pay for it)!

The higher up the food chain you shop, the more your elected official can do for you. A senator is more valuable than a representative. Take a committee chair over a freshman legislator. The appropriations committee is where the money is. The downside is that you will find more people bidding for Bill's attention as he advances, and some people forget old friends once they hit the big time.

Darn it, Bill has become corrupt over the years . . . he is selling out you instead of the voters. The cad! It is time to turn another batch of lead into gold and head back to the first paragraph. Luckily, you can tell your new friend Billtwo all about irregularities in Bill's campaign finance reports.

Pyramid Review

Mage: the Awakening (for the *World of Darkness*)

Published by [White Wolf Game Studio](#)

Written by Kraig Blackwelder, Bill Bridges, Brian Campbell, Stephen Michael DiPesa, Samuel Inabinet, Steve Kenson, & Malcolm Sheppard

Front & Back Cover by Richard Thomas & Katie McCaskill

Illustrated by Michael William Kaluta

400-page three-clor hardcover; $34.99

With ***Mage: the Awakening,*** White Wolf Game Studio completes the re-launch and the re-imagining of the original trilogy of the ***World of Darkness*** RPGs. Technically, as with ***[Vampire: the Requiem](#)*** and ***[Werewolf: the Forsaken,](#)*** it is supplementary setting to the ***[World of Darkness Roleplaying Game,](#)*** replacing ***[Mage: the Ascension](#)*** and designed to add a particular supernatural element to a Storyteller's campaign. Unlike the first two, which involve the undead and the theriomorph, this third game has the mortal at its heart . . . but not the mere mortal, because each Mage has Awoken to the truth of the Universe, and as a Willworker, can quite literally impose his Will upon reality.

Whether through exposure to the supernatural or via a dream, his consciousness has been drawn to an isolated Watchtower. If he can mark his name on the walls inside, he has imposed his Will for the first time, and returns a changed person. With an Awoken soul, he is set apart from the sleeping world of mere mortals, knowing its truth and its structure. The world of the mortals, our world, is known as the "Fallen World," and is denied both magic and access to the "Supernal Realms" by the Abyss. Once it was different; mankind basked in a golden age in the awakened city of Atlantis, but pride was her undoing. Learned in the ways of the Mysteries, the art and practice of magic, and in the patterns that make up the Tapestry of the Universe, this power went to the heads of many. A Wizards' War ensued over who could ascend a ladder built to reach the Supernal Realms, shattering both the ladder and sinking Atlantis. It is thought that the winners of this Celestial War managed to ascend and rule as the Exarchs, while the losers -- known as the Oracles -- were able to establish five watchtowers via which a mortal with a strong enough will could access magic.

Looked upon as different and distrusted by ordinary folk, including his family, a Mage invariably finds a home with one of the four Orders that traces its heritage back to Atlantis. Each Order believes itself to be the inheritors of Atlantis' knowledge and its duty to pass on its traditions. The Adamantine Arrows were Atlantis' warriors and soldiers, today employing combat magic to protect mage cabals and sanctums. Guardians of the Veil were the Awakened City's spies and security, and today try to prevent the misuse of the Mysteries or their revelation to sleepers. Scholars and explorers in Atlantis, today the Mysterium seek the lore lost in the city's destruction. Viziers and priests in Atlantis, the Silver Ladder are the Awakened's organizers who want to rule again. Finally, the Free Council is a new Order with no links to Atlantis, which seeks to modernize magic.

While these five Orders lie at the heart of both the game and character generation, equally as important is a player's choice of Path. This is literally the route dreamt by the Mage to the Watchtower and thus the Supernal Realm from which the Mage draws his magic. In turn the five paths, along with their nicknames are Acanthus (Enchanters), Mastigos (Warlocks), Moros (Necromancers), Obrimos (Theurgists), and Thyrsus (Shaman). Each Path determines two of a Mage's beginning Arcana, each being one of the 10 principles or elements that comprise the Tapestry of creation -

- Death, Fate, Forces, Life, Matter, Mind, Prime, Space, Spirit, and Time.

Of course, there are some basic changes to a character's Advantages or secondary traits. A Mage still possesses a virtue and a vice, and is offered a selection of new Merits, including Familiar (both spiritual and embodied), Enchanted Item, and Library. He also has Gnosis, representing his instinctual understanding of and connection to the Supernal World; essentially, the higher it is, the more capable the Mage, but the harder it is to hide his true nature. Instead of Morality, a Mage has Wisdom, his understanding of the need to maintain the balance between the magical and the mundane. The fundamental question is, can a Mage resist the temptation to employ what is essentially the power of a god? If he fails, this act of Hubris leads to a loss of Wisdom. With successful resistance, a Mage can better gain the trust of spirits, stave off the effects of Paradox, and be trusted enough to be granted an apprenticeship.

At the game's core is its magic system. Two approaches are presented, both traditional, one more than the other. The first is through Rotes, tried and tested spells that are relatively easy to learn and cast. A third of the book is devoted to listing these Rotes. A Mage begins the game with between three and six Rotes selected from his known Arcana. The second approach harks back to previous incarnations of the game, being more freeform. Improvised magic lets a Mage cast spells on the fly, creating them according to known Arcana. In addition a Mage can alter a spell's duration, effect, range, and so on depending upon known Arcana and by taking dice penalties.

If a spell is cast against the normal laws of Fallen World or witnessed by a Sleeper, then it is Vulgar (for) example, floating lotus fashion in the air or transforming into a cat). Vulgar magic invokes Paradox, which can result in Havoc (loss of spell control), Bedlam (personal derangement), an unreal Anomaly, or a Manifestation from the Abyss. Covert spells, for example, using Fortune's Protection to stop a bullet with a hip flask, does not invoke Paradox. Within a Mage's or cabal's sanctum, magic is not Vulgar.

Unfortunately the Storyteller's advice is lackluster, never really rising above the theme of "power corrupts . . ." Also the given antagonists are surprisingly few. The setting's major villains are the Seers of the Throne, mages in the service of the Exarchs; they are left undeveloped for future supplements, and other opposing mages are relegated to the status of short term villains. Likewise, the appendix devoted to "magical" Boston never comes alive as the previous games' settings did. Other appendices detail Legacies, tutored rites that shape an apprentice's soul, granting innate and Paradox free abilities in return for a stipend of power. There is one Legacy here per Path, plus two for NPCs. The Scelesti is a Legacy corrupted by the Abyss, while the Tremere are Mages afflicted by a curse that forces them to steal other Mages' souls. Their nickname indicates their role in the game -- liches.

Mage: the Awakening has some interesting little wrinkles. These include having the Guardians of the Veil sometimes being the "Men in Black" who build labyrinthine secret societies and conspiracies through which a Sleeper must work if he is to Awaken. Cabals of player characters can be built around different sets of symbolic themes from astrology to baseball. Each Path corresponds to certain occult symbols in the Fallen World, for example Egyptology for Moros and Druidism for Acanthus, lending both a method of casting for a Mage and an Awakened reading into the occult. Equally, a Path suggests the nimbus or aura visible when a Mage casts Vulgar magic or is otherwise visible to Mage Sight. For example, the Acanthus nimbus is Fey-like. These small aspects help to color and add flavor to a game.

Behind the dazzling cover *Mage: the Awakening* is the least striking of the *World of Darkness Roleplaying Game* quartet. Although with one artist it has a uniform look, that look is quite subtle. That said, not all of the art works as well as it should. Each of the books has employed a second tone and here it is gold, which works well except for the spell lists. When combined with a cursive font, it makes individual entries difficult to locate.

What stands out with *Mage: the Awakening* is the soundness of the design, the magic system pleasingly pitched at both the neophyte caster with the Rotes and the practiced magician with freeform casting, and the little details that serve to add color to both the magic and the setting. Yet as written, the setting is underwhelming which -- combined with the weak storytelling advice -- leaves the Storyteller to wonder both what he does with a game and the direction he takes it in, let alone sell it to his players. After all, *Vampire: the Requiem* and *Werewolf: the Forsaken* sell themselves with easier tags -- "gothic monsters surviving the night" and "rage-filled beasts policing the spiritual divide" respectively. *Mage: the Awakening* never quite achieves this, getting as far as "with great power . . . " and no further. The lack of an obvious enemy beyond the distant Exarchs and the incidental foe is a further hindrance as is the

uninteresting description of Boston.

Like its look, *Mage: the Awakening* is the least striking of the *World of Darkness Roleplaying* Game quartet. Bereft of both focus and direction, *Mage: the Awakening* fails to entice as a setting, but it is underpinned by decent mechanics and a magic system that works.

--Matthew Pook

How Long Is It? (And Other Personal Questions)

I was a big fan of the old *Talisman* game . . . the second edition if I recall, although as I understand it the basic gameplay changed very little between the first and second editions. This game had the right mix of board-game ease with lots of variety and exploration. The only problem our group had with the game was that an average session would take about as long as a geologic era to complete.

Other games had similar problems. An early afternoon "let's learn *Star Fleet Battles!*" session turned into a "Why has the day ball arisen to burn us?" grousing as the two-ship conflict had not quite resolved. A game of *Mega Supremacy* with all the expansions took days to complete. And a session of *BattleTech* practically ended with Dorito-throwing after several long hours.

But some games have the opposite problem. For example, the missus and I picked up *Vampire Hunter* from the local Goodwill a couple of weeks ago, and were astounded to learn that a game -- complete with hall-skulking, investigating, equipment gathering, and vampire hunting -- takes about 20 minutes from start to finish, including set-up time. (It's weird to consider that it's possible to thwart an ancient evil in less time that it takes to get through an episode of *The Office.*)

In this regard, roleplaying games have a definite edge; their open-ended nature means it's possible to play as long as the players are willing (or as briskly as they can stand) without affecting the core experience overly much. But board and card games are different, and people have different ideas about how long a game "should" last. I remember a review of the *Marvel Trading Card Game* (the PSP/DS/PC game that's based on the *Vs.* system CCG) that complained that a hand of the game could last 20 to 60 minutes. But as someone who used to play *Magic the Gathering* I felt the length of a hand was just right.

The problem is that it can be difficult to gauge what the core experience is that the players are trying to achieve in a game. In an old issue of (I believe) *Space Gamer* (reprinted in the *Murphy's Rules* collection) there's rules for the "Simplest Wargame": One hex, one counter, one die roll to see if the counter is removed. Obviously that is too basic a game for almost anyone, but it raises the question: How simple *could* a wargame get and still be interesting? Or, conversely, how much more needlessly complex are some games?

The Third Edition of *Talisman* ranks in my mind as one of the best game revisions ever. It took a game that was difficult to finish in 12 hours, and pared it down to something which could be completed in three. Even better, it laid the groundwork in my mind for how to speed up the game even further; for example, if each player started the game with a set amount of experience (seven, 14, or 21 points), then the beginning stage of the game can be skipped and the game's length by an hour or more. But there is a point where the game probably couldn't be condensed anymore without impacting the base experience . . . reducing it to the "simplest wargame" scenario of "whoever wins an early die roll will win the game."

Beyond these ruminations, I confess that I don't really have an idea as to *what* makes a game an appropriate length. I tend to feel that my tastes for most old wargames -- where you set up gargantuan maps and countless chits -- has waned over the years, since I don't feel like I have a desire to keep playing a game for a week. Of course, I probably wouldn't have any problem playing a game of *Civilization* for the same amount of time on the computer. I note that "Rock Paper Scissors" is considered by many to be one of the truest games out there, and I confess to having many of the same feelings of victory or defeat in that five-second expression as I have felt in a two-hour card game.

Trying to sort out why folks are playing a game -- and what effect a game's length has upon it -- can be important for tinkerers hoping to expand or contract a game. For example, my armchair analysis of *Talisman* tells me that there are three rough stages that the game has: the initial survival build-up, where players try to get enough experience and loot to stay alive; the mid-game, where the tipping point is reached and the character will survive most (but not all) encounters, and the final battle that will win the game (or push the failing player back to the mid-game). In this case, I tend to find the early stages of the game less interesting but the endgame a bit more so; as such, I can add some experience to starting characters to hasten the first part, and beef up the final encounter a bit more to prolong that

interesting middle game. In the same way, many people enjoy playing the *Vs.* system CCG, but want to shift the game so that the more interesting "expensive" super heroes and villains can make their way out. This is easily accomplished by starting people with one or two Resources (similar to "Land" in ***Magic the Gathering***) and beefing up the number of Endurance (akin to Hit Points) each player has . . . from 50 to, say, 100; that way the early game is sped up but the endgame is slowed down. As a final example, my mental ruminations about Chess tell me that I don't particularly like thinking that hard about each turn; in this case, a variant such as ***Knightmare Chess*** can both speed the game up and make the whole experience more enjoyable for me.

Short games have the advantage of being over with more quickly, which allows for a rematch sooner or permits more games squeezed into a game night. Longer games have a more "epic" feel; winning a close game at the end of the night where everyone is almost but not quite tired of playing is a good feeling. And games in between have their own charm and appeal. Regardless, asking yourself "How long should this game be?" can be the first step toward finding games that are the right length for you, as well as an important part of fixing games that aren't the right length already.

--Steven Marsh

Putting the "Me" in Teams

Whether called a team, a group, a unit, or something else, the assemblage of protagonists forms the basic unit of a gaming group. But what is the reason that a team forms in the first place?

Although a simple question, it's one that has broad implications for a campaign. For example, a group that is formed because of blood relations would have a hard time replacing members regularly (unless there's a slew of "long-lost brothers" floating around), while another group that gathers due to the revelation of a grand mystery might have little reason to remain together once that tale is solved.

Here is an attempt to catalog the most common reasons that a team might come together, including ideas for expanding, evolving, and changing those parameters.

There are two and a half broad reasons why teams form. The first two are because the group *wants* to form (or stay together) or because the group *needs* to form or stay together. The "half" reason is the blood relation; whether these groups are because the person wants to be there or feels obligated to depends on the family dynamics.

The Choices of Association

Most groups of PCs tend to form because its members want to. This is partly because of the desires of players; many gamers enjoy the freedom that roleplaying games provide, and that extends to the ability to associate with whomever they want . . . and leave when they want to. Usually, this rationale doesn't extend any further beyond the idea that they work together well, often because the members complement each other. Thus, a healer, a warrior, and a magician might find themselves agreeing to become a team because all three recognize that successful groups often have a healer, a warrior, and a magician. Likewise, many teams form for no reason other than mercenary self-interest; it's more profitable and easier to survive as part of a group. In this case, groups might come together because of guilds, gathering points, competitions, and so on.

In the Beginning . . .

To quote a tagline, "every saga has a beginning," and every group has a point when they get together for their first adventure. *After* this tale, it becomes a simple matter for heroes to stay together, but sometimes the reasoning to remain as a group is nothing more than a successful initial outing. This is especially true if the adventure was noteworthy; the fact that everyone came back alive from a "get the orb to save the world" tale can be auspicious enough to warrant a team's formation.

Getting the heroes together for that first adventure can be a challenge unto itself, but at this point any of the standard advice for motivating a group can kick in: "The four of you stop at an inn separately to rest for the night . . ." For a suitably epic setting, that "initial adventure" can actually provide the impitus to remain together throughout the entire campaign; for example, the Fellowship of *The Lord of the Rings* are only together for one purpose, but it just so happens that the mission requires a thousand pages of adventure (or twelve hours of screen time) to achieve that purpose.

Of course, one tried-and-true method of forming a group is to simply say that

Why Ask Why?

Many groups -- especially old-school "hack 'n' slash" ones -- tend to exist without concern or rationale for the larger "why"; they get together as a team because, if they didn't, the players would need to find something better to do with their time. While it's perfectly reasonable for groups to just be together, coming up with larger motivations can make it possible to enhance the experience of even the most "get to the point" gaming groups. For example, if the fantasy heroes have been given special status by the king as Officially Unofficial Imperial Investigators, then it becomes that much more logical for the "mysterious old man" to track down the heroes; he's simply a liaison of the king. Likewise, if these heroes have OUII status, then this can become motivation for larger goals and rewards: "Do the following, and the king will grant you a parcel of land for the purpose of building personal castles."

everyone knows each other; the hows and wherefores about who met whom when can be waved again for another day (although if the players have chosen this option themselves, it's probably best for them to hash out the broad basics of the association: how close of a friendship do they have, how long have they known each other, and so on).

Mystery Play

One of the best reasons for getting a group to gel -- either for an initial outing or longer -- is the mystery that all its members are interested in solving. Thus, if the four PCs gather in a tavern one evening and awaken to the shrieks of the innkeeper being killed in his (locked) study, then that alone might be reason to gather . . . at least initially. All four PCs -- the only ones in the inn suited for adventure, naturally -- might be well-disposed toward the innkeeper and interested in seeking justice (or the reward offered by the widow); discovering what happened is motivation enough to form a team.

When using a mystery to get the heroes together, the biggest questions the GM has are: How big is the mystery, and is it solvable? The former part should be obvious and determines how long the mystery motivation alone is designed to propel the heroes. A mystery that is intended to be resolved in an adventure or three ("Who killed the innkeeper, and why?") is different than one that will be the focus of an entire campaign ("What is the grand conspiracy behind the disappearance of the moon?"). Making sure the players understand what type of enigma is being presented keeps them from being either surprised at a mystery's abrupt conclusion or frustrated at the continued lack of resolution.

The second aspect of a mystery -- Is it solvable? -- may be somewhat surprising, since many people approach mysteries with the idea that they are always intended to be solved. However, in general, the three answers here are: "Yes," "No," and "Yes But Not Really." "Yes" is the most common type of mystery and doesn't really need an explanation. "No" is usually the type of mystery that is intended as a long-term campaign, such as, "Why are the stars rapidly growing dimmer?" (from *Fading Suns*) or "How do we permanently stop unstoppable evil _____?" (from many *Call of Cthulhu* campaigns). Of course, a "No" mystery can be turned into another form at any point with the revelation of additional clues. The "Yes But Not Really" type is reserved for mysteries that will have some resolution, but either the heroes can't reveal what they know, or there is more than one answer for what happened. The movie *Hollywoodland* is an example of this sort of mystery, as is *The DaVinci Code*. These mysteries can be a good compromise resolution to what would otherwise be "No" mysteries, giving some sense of resolution but not seriously impacting the campaign world as a full revelation of truth might.

It's *very* important to understand what is expected from a mystery before attempting to utilize it; failure to do so can lead to a player revolt or the collapse of the gaming group. Mysteries formed the foundation of both *The X-Files* and *Twin Peaks,* and the audience did not ultimately enjoy the pacing with which those issues were resolved. If a mystery isn't intended to be resolved (or at least not for a *looooong* time), it can be useful to let the *players* know this. One good way is via prophets, seers, wise folks, or the like: "There was a case like this back in '58 . . . it was never solved, and I doubt you all will come any closer to the truth."

Finally, as another possibility to the mysterious motivation, it's common for one mystery to lead to another. For example, if the answer to "Who killed the innkeeper, and why?" turns out to be, "Suicide, to lead the adventurers on the trail and to keep from being tortured by the Grand Conspiracy to discern what the innkeeper knew," then suddenly the mystery turns into other questions: "What is the Grand Conspiracy, and what did the innkeeper know (or not know)?"

Communal Origin

In the comics, a communal origin is a typical reason for a team to form voluntarily. Communal origins are most

Of course, it's possible for teams to avoid even the flimsiest of pretenses, but these pretenses can actually provide in game reasons for speeding along the players' desire to get to the action. For example, if the OUII liaison has a special handshake and sigil and the heroes have the Scroll of Liaison Confirmation, then a mission from him can sidestep any wasted time questioning whether the contact is a doppelganger, mind-controlled, etc. In this case, having a group rationale means line-jumping right to the dungeon!

common in campaigns with unusual abilities. If all the PCs are exposed to the same radiation and given powers because of it (such as *The Fantastic Four*) or were all formerly dead but resurrected by the elemental forces of the universe to serve them (as in *The Elementals*), then that can be justification enough to create a cohesive unit.

However, a communal origin doesn't need to relate to powers, per se, and can instead refer to the reasoning behind a group's gathering. For example, let's take our tavern mystery from above. Instead of discovering the innkeeper dead, what if our heroes awaken in the morning to discover everyone else in town dead but them? This is a combination mystery ("What the heck happened?!") and communal origin ("Why were we spared?"). This is the tack taken by the classic **Advanced Dungeons & Dragons** adventure/computer game **Curse of the Azure Bonds,** where the heroes all awaken with the same unusual tattoos that glow in certain circumstances. Another communal origin is the "escaped gladiators" premise that many **Dark Sun** campaigns were built around. Likewise, a group of heroes who all witness the same crime and are targeted by the mob might have a communal origin that gives a compelling reason to stick together.

With a Great Group Comes Great Powers

Related to the communal origin is the team that receives some kind of powers or abilities from being together. For example, a band of heroes exposed to radiation might be able to combine their powers into a powerful mega-blast, or a group of fantasy adventurers might be blessed by a deity such that none of them can die if all the members are within 100 yards of each other. The mere existence of such an ability could provide ample reason for characters to stick together.

Again, these "powers" need not be super-abilities in the traditional sense. For example, let's take our adventurers holed up in an inn once again. They're the only ones in the inn, and the innkeeper dies in the night. The mayor sorts out that the innkeeper's will stipulated that the tavern should be divided up among those who were staying there when he died . . . but they can't sell it for a period of less than five years. Such a contrivance would give the heroes a ready-made base of operations, ties to the local community (whose countryside is no doubt riddled with ancient dungeons), and a reason to stick together. (In this case, the GM might have an extra NPC or two in the inn at the same time as the heroes' fateful visit, to give a couple of "wild cards" a stake in the locale's operation.)

Generally, options that relate to additional abilities must usually be sorted out in character creation. However, this is not a requirement; for example, a group of heroes who were exposed to magical forces that enable them to focus as a party and determine the location of the next Great Evil in the world are really only doing the plot-device work that the Mysterious Old Men with Messages of the world would otherwise do. Such an ability could be granted by GM fiat after the campaign starts, and it probably shouldn't cost any points (unless the players figure out how to use this power in some creative way that gives them an edge).

The Trouble with Options

While reasons for a group's formation centering around their options have many advantages (most especially not feeling like they railroad the players), they also have their problems. First, it can be challenging to introduce new characters with some of these possibilities, such as the communal origin. Likewise, it can be difficult to bring in new *players* with some options, especially those that require player and character knowledge from the beginning. For example, a campaign that revolves around a long-running mystery with a lot of pieces might frustrate new arrivals who don't have full access to the back story, or may not appreciate future revelations ("Wow; the mastermind was the innkeeper's *widow?!*" "Err... sorry, Dave. Trust us; she was important.")

Assembly Required

The second broad class of a party's formation is where they are forced to together by some outside agency or element. The intensity of "requirements" can vary greatly; for example, someone instructed by their employer to join a team of PCs technically has a choice, but choosing to violate that option means unemployment. (Conversely, those who are compelled by their deity to join a group or die don't have a Plan B . . . unless you count "burial.") There are a few

classical ways that such a requirement might be devised, but many reasons can compel otherwise disparate people to join a team.

Agent X, You Know Agents Y and Z . . .

Perhaps the most common type of group organization comes from an outside agency (or agencies) that one or more of the heroes are a part of. If the PCs are all members of the same larger unit (such as *GURPS Black Ops*), then this justification is easy: "You are all assigned to the same team by the highers-up . . ." Likewise, if the heroes are parts of different organizations that have mostly friendly relations, then a group can be formed from inter-organizational loans; such arrangements often take place in spy games (where PCs are from different countries) as well as settings such as *In Nomine,* where the PCs all have angelic or demonic superiors (and, in a good number of games, all ostensibly work on "the same side").

In fact, the "different interconnected agencies" structure is ideal for many settings; it provides lots of different backgrounds and options and thus creates a varied group, yet the differences allow for some inter-party friction that keeps things interesting. ("Look, I know that the U.S. and Germany are on the same side now, but my dad was part of the Bulge, so you'll forgive me if I'm not all cozy about this arrangement, *mein freund.*")

If using this option, it's best to determine the extent of loyalty that the PCs have toward their organization(s), as well as the degree of freedom and latitude that they have in dealing with their teammates. Is there a designated "leader"? How often are they supposed to check in with superiors? How much freedom do members have to refuse an order, leave the team, or leave the organization? What kind of support can they expect from their superiors? A loose or weak group (such as a guild who recruits members to perform favors as a contingency of membership) will generate a different team dynamic than one assembled from a global-spanning intelligence agency . . . and both of those will be different from a band of PCs assembled within a military organization in a time of war.

One interesting use of agency-based characters is the possibility of multiple characters for players, with teams assembled *Mission Impossible*-like from the players' options. In fact, it should even be possible for players to concurrently run [multiple characters](#) in such an arrangement.

"I Must Ask a Favor of You All . . ."

Another reason for assembling a group is by having a powerful person request a favor from the PCs. (The strength of this favor -- and how much say they have about whether they accept -- determines if this is a "choice" for the heroes.) This is a common means of gather teams in settings where the individual PCs don't have specific allegiances. For example, a supers campaign might begin with the president (or governor or mayor) requesting the heroes undertake a mission. Since they aren't beholden *per se* to the person asking the favor, they are free to say no . . . but being "under investigation" by the police or military can be a pain. Likewise, this a typical way to get adventuring parties together in many *World of Darkness* settings, with various powerful entities requesting favors from a group of vampires, werewolves, or mages. Usually, this technique requires some sort of reward or promise, although the "reward" could simply be currying return favor with the requester.

Or Else *What?!?*

Of course, there's compulsory and then there's *compulsory.* Sometimes, saying "no" isn't an option. For example, if the heroes awaken in EvilCo's laboratory, with CEO Bob Evil explaining that they have all had bombs implanted in their skulls, and their options are "do a favor" or "chunky salsa style" . . . well, it's not really a choice then.

Many settings have options for making individuals or groups do something they wouldn't normally do, whether it's *geas* spells, drugs, nanites, or something else. GMs should use caution when relying on one of these options, as many players resent the "or else" form of team formation. After all, if their free will is going to be taken away from them in this circumstance, what's to keep it from getting taken away in the future? And if the GM's going to decide how the PCs will adventure, why play at all?

Besides, usually it's just not necessary for such measures to be employed; most players understand that they need to accept a "hook" tossed their way, and a note in a found bottle asking for a few adventurers to meet at the local tavern is just as compelling without resorting to taking away characters' free will. (Of course, if the player himself concocts such a compulsory origin for his belonging to a team, more power to him.)

The Dirty [Integer]

One type of required assembly -- and its resultant reward -- is common enough to form its own group-formation subgenre: The PCs are criminals (or at least serving prison sentences or on death row) and are offered a chance at freedom if they complete one simple mission . . . or work for the government for a period of time, or the like.

This is a great justification for a one-shot or convention game and serves as the foundation of the classic movie *The Dirty Dozen.* However, it can also be reason enough for an ongoing series; for example, DC Comics' *Suicide Squad* has its titular team composed of super-villains who are offered a chance at freedom if they survive a tour of duty performing missions with other costumed maniacs.

Although this option seems to imply that the protagonists primarily will be wrong-doers, this isn't necessarily the case. For example, if the PCs are trapped in the kingdom of a brutal dictator, then they might be captured by the ruler's agents with the sole purpose of using their arrest as leverage to accomplish some adventuring favor he needs done. (This could lead to interesting dilemmas: If a known wicked tyrant tells the heroes that time is of the essence to recover an orb of power and save the world, what do they do? It's not out of the question that he's actually telling the truth, since even the most sinister of dictators has a vested interest in keeping the world alive . . . but, of course, he's also one of the ones most likely to be lying for his own gain.)

As another possibility, what if a government has an investigatory committee whose job it is to research cases of those who proclaim their innocence and determine who is most likely to be, in fact, not guilty? The government could be callous enough not to drop charges or allow a retrial, instead using such low-risk "criminals" as a resource of adventurers who could be tapped for secret projects. (In this case, the PCs could all be designed around the question of, "Did they *really* do it?" which could lead to some interesting tension and subplots.)

He Ain't Deadly; He's My Brother

Whether or not familial ties are considered "optional" or "mandatory" depends on the nature of the family. Tight-knit families have a do-or-die loyalty that can bind them together more strongly than any government mandate. Conversely, families that are less interconnected can have the feel of a guild, and groups built around them can have a free-wheeling feel.

In some settings, the power of blood can provide reason alone for forming a team. For example, the noble houses of many fantasy and far-flung science-fiction settings rely on the interrelation of kinship to keep them moving toward the houses' goals (such as **Fading Suns** or **Menzoberranzan**). In other settings, this power can be much more literal, such as the families of *Amber* or the immortality of the *Highlander* MacLeods. (If so, this combines aspects of "common origin" with family ties.)

If family is important to a group of PCs (or a subset of a larger group), then the players should make sure that everyone is on the same page with regard to the family's facts: known history, genealogy, noteworthy victories or failures, family traditions, and so on. It's awkward for players portraying two brothers to disagree on salient points of their supposedly shared childhood. ("We need to bring this diamond home to Mom!" "Err . . . I thought Mom died during the Ice Wars when we were kids?")

The Sixth Sense: Duty

Another common element keeping many groups together -- or at least some of the members within it -- is a sense of duty. For example, a group member might have kept a vow to another character's mother to keep an eye on that character. Although not compulsory per se -- since people upholding such a duty usually have a "choice" -- these are typically at least as compelling a reason as any do-or-die requirements.

A Combo of Factors

Finally, it should be noted that many teams are not formed out of a single homogenous desire, goal, or rationale. Rather, each member can have their own reasons and justifications for participating. This is especially true for groups that have existed for a long time, replacing members as required or desired. Reasons for joining or leaving a team can also be deeply personal and not particularly interchangeable or expandable to multiple characters.

As an example, let's take a look at the group-dynamic justification of the comic-book version of the *Fantastic Four*. The four members of that team shared a common origin (irradiated spaceship) but were also united by familial ties. Sue Storm and Johnny Storm are siblings, Sue and Reed Richards are dating (later married), and Ben Grimm and Reed are long-time friends. As the team progressed, Sue and Reed got married (strengthening the family ties), and various other members joined and left (sometimes as a favor to others, sometimes as a sense of duty to keep the team strong in the public's eyes). Occasionally, a member would disappear or seem to die; additional members would get together with the others under the justification of attempting to keep the team together, as well as because of the mystery ("What happened to the missing/dead teammate?"). A similar amalgam of multiple motivations form the reason behind the *Stargate SG-1* teams, with varying levels of governmental duty, desire for adventure, sense of belonging, and overarching mysteries serving to give the group cohesion.

Having multiple motivations for a group's formation can make it much easier to keep the group extant in an entirely justifiable fashion, with new reasons serving to keep the group together even as old ones are resolved or fade into history. For example, let's look at the evolution of a (fictional) group of gaming heroes: Two of the PCs were the lone survivors of a great attack on their village; they have the desire to solve the mystery, along with the shared origin of their own survival. One of the other PCs is a prisoner offered a chance by the king at reformation by joining the first two heroes in their quest to determine what happened to that village (part of the king's holdings); another of the PCs is the officer assigned to keeping an eye on the prisoner. (These two combine obligatory duties with the chance at freedom.) Another PC believes that one of the others in the group might be his long-lost sibling, but isn't sure which one may (or may not) be, so is keeping the suspicions secret for now and instead offering his services as another adventurer. This character combines family ties, mystery, and "just because" motivations.

With such a Byzantine series of interconnections, it's trivial to introduce new players and/or characters, as necessary. For example, let's say that the series has been going for a while, and the heroes have unraveled who is behind the initial attack but not necessarily what their reasoning was. A new player could join and play an escaped warrior for that attacking army, providing (via the GM) new clues to advance the older mysteries. Such a character would also offer an interesting group dynamic: Can the new character be trusted? Later on, one of the do-gooder PCs dies, and the player -- seeing what a blast the reformed-criminal's player was having -- requests to play his own version of that idea. His new character is another released criminal given a second chance and assigned the same watchful officer. Finally, shortly thereafter, this group is exposed to strange magic that gives them telepathy and bizarre flashes of future insight, provided they all stay within earshot of each other. These new group powers help unify the existing structure, validating the current roster despite the fact that several members weren't there from the beginning.

All Together Now

It's easy to come up with reasons for having PCs come together for a single adventure. But a bit of extra thought on the part of the players and/or the GM can make such groups even more cohesive, providing both ample justification for undertaking missions and ample reason for sticking together. In so doing, it's possible to stretch one successful team outing into the foundation of a long and fruitful series.

The Three Dollar Society

A "Funny" Cult for Modern-Day *Call of Cthulhu*

by J. Edward Tremlett

Not every Mythos cult knows it's a cult. Some of them think they're scientists, philosophers or historians, which has to be as non-cultish as you get -- right? Some of them even think they're some kind of anti-cult, or a sophisticated joke.

One such "non-cult" is the Three Dollar Society. Formed as a joke (albeit one with economic incentives) the Society has become an underground phenomenon of sorts. You'll see their marks almost anywhere you go: t-shirts, buttons, graffiti, and bumper stickers . . . everywhere the face of their spokesperson, "Bubba" -- endlessly grinning.

But there's nothing to smile about. Somehow, somewhere along the way, the Three Dollar Society attracted the wrong kind of attention, and their mascot has come to hideous life. Terrible things are happening wherever their anti-ideas take hold.

Stranger still, the Society's founders are all missing in action, and yet someone -- or some**thing** -- is still running the show . . .

The Three Dollar Society can be background noise, cause for investigation, or an ongoing threat in your ***Modern-Day Call of Cthulhu/Delta Green*** game. Ideas on what to do with them, along with ideas of what its meme-made-flesh "Bubba" could be, follow the main section of the article.

It's Not Funny If We Gotta Explain It

Who's "Bubba"? Come on, now. You know "Bubba."

See, some time ago, down South, back in the 1990s, there was a bunch of disaffected losers with a high amount of disdain for American society and culture. They lazed around one another's houses, living off beer, food stamps, and whatever money they could bum from out-of-state visitors. And they sat around late at night, drinking beer and eating potato chips and telling one another how screwed up and stupid other people were.

After a while, they got sick and tired of just complaining and decided to do something. Since they were a bit on the impish side of things, they decided to play a joke. And since they really needed money, and didn't feel like working for it, they decided to make it a really good joke -- the sort of joke that got them money for almost nothing.

So they created a quasi-secret society for fellow disaffected losers, in which they declared that by being disaffected losers, they were actually better than most other people. They exhorted their followers to believe that only by lazing around the house, playing jokes on stupid people, and living off their money could they truly achieve enlightenment. And for the cost of three dollars -- just three measly dollars!!! -- they could join the group, get a packet of badly-photocopied introductory materials and be entitled to . . . well, sit around the house and do nothing.

But they needed some kind of figurehead. And since none of them really wanted their *own* faces or names in the public domain, one of them came up with Bubba. He would be just a fat guy in a rocking chair with overalls and a ball cap: the sort of person Yankees would expect to see on any porch once they got below the Mason-Dixon Line. He would be dumb and lazy, just sitting and drinking beer and doing and thinking nothing at all.

And yet he would *know* his indolence and stupidity for what it was, and would therefore be a king amongst men.

Of course, the founders weren't stupid, themselves. They knew "Bubba" was horribly stereotypical and offensive, and

the sort of idea they shouldn't be feeding. But by the time they voiced those concerns they'd already brainstormed about 50 ideas apiece on what to do with him, and they just couldn't drop him and let it go. So, like a bad germ they just couldn't shake, they learned to live with it. And "Bubba" was born into the world, hooting and hollering.

Oddly enough, the joke worked. There were enough disaffected losers out there who bought into it to turn the Three Dollar Society into some kind of underground phenomenon. So the founders didn't have to get real jobs, and were able to spend more time on their "hobby," and send out new materials on a regular basis. Soon they could make T-shirts and buttons, have a web page, and even publish a book, the *Three Dollar Bible*.

And that's why people know Bubba.

The Three Dollar Tao of Bubba

Bubba, as explained in Three Dollar Society literature, is basically the king of contradiction. He is all-knowing, all-wise, and all-understanding by virtue of being ignorant, foolish, and dumb. He has all the money in the world by being dirt poor, and everything of value someone could want because he doesn't have hardly anything. He speaks only lies, but tells nothing but the truth.

He also has all the power in the world by being horribly disenfranchised, and that's very important, right there, because somehow his being less than everyone makes him simultaneously *greater* than anyone. This gets him into the halls of power, where he can reportedly make his secret deals with the President, the Trilateral Commission, weird space aliens, and God (who is also, incidentally, a weird space alien). But by the end of the day he's back to sitting on a front porch and drinking his beer, so no one but the enlightened would ever know.

A perfect explanation of this principle is Bubba's car, which features in several drawings and parables in the Three Dollar Bible. It's a crappy, broken down Ford, rusting on cinderblocks in Bubba's front yard. It hasn't worked since Jimmy Carter was President, but it is somehow connected to every point in time and space. And, therefore, it's able to take its driver literally anywhere, and anywhen, all by virtue of being broken down and immobile. (And this is why Bubba's followers often punctuate self-contradictory statements with "Ford!")

Three Dollar Society and Its Discontents

So what does the Society do, exactly? "Take your money and laugh" is the short answer, but that goes for everyone in the Society. For example, it's considered a perfect day when the average member gets at least three dollars more than he lost, *without* having to really work for it. (Selling your old junk on eBay isn't considered working.)

Most Society members are aging hippies, wacky neo-pagans, or trendy non-conformist college kids. They wear "Bubba" T-shirts, ball caps, and pins, and put up the silly fliers the Society makes available for photocopy from their newsletters, book and website. They also graffiti his grinning face on public walls and buildings using the stencils the Society provides for that purpose.

They can be seen on campus greens, public parks and street corners, dressed like evangelists and shouting the word of "Bubba" at passersby. They have "sighting parties," where they try and find "Bubba" -- or someone who *looks* like him -- and snap his picture without his knowledge. Then they send it in to the Society for inclusion on the website.

They also post fictitious "events" in college newspaper calendars ("Bowling for Bubba," College Green, Noon), and lurk nearby with cameras to see who shows up, later posting the photos on fliers. "Looking for 'Bubba'?" the fliers ask: "If you call him, he will come." Oddly enough, some do.

The Three Dollar Bible is their testament, available from their website for $19.99 + shipping and handling. (It isn't available in stores, even through special order.) It's a bunch of disconnected, rambling essays, alternate histories, prophecies, and testimonies about the power of "Bubba," with kooky illustrations and collages. Members of the Society use it to preach to the heathen, but tend to keep it in their bathrooms as toilet reading.

Courtesy of these soft, almost subliminal pitches, "Bubba" has infested the fringes of popular culture, to the point where people who aren't in the Society have come to know who he is. His face has been spotted in high-priced Hollywood movies, television ads aimed at college-age kids and older teens, and the latest music video by Mr. T's Toenails. A small RPG manufacturer even made a boardgame about Bubba; the object is to win by losing.

If only they knew how true that was . . .

If You Call Him, He Will Come

There's something funny going on here, all right, but the joke is on us.

"Bubba" is a meme: a cancer of the mind that poisons the soul, creating a spiritual connection between the individual and the idea that "Bubba" can exploit. How likely it is that the connection happens depends on how much the afflicted individual fixates on the Three Dollar Society, and its many trappings. But even a passing fancy is just enough to let "Bubba" in, if He chooses to. And that is never a good thing.

It begins with Society members, in their dreams. "Bubba" appears at their periphery -- lurking and watching. Over time he becomes their center: suggesting new ways to spread His ideas. And together they walk hand in hand through a transformed city, where "Bubba" smiles from every wall and window.

In their sleep, the faithful desire nothing more than to see this world take shape. In their waking hours, they half-remember those dreams, but still seek to put the face of "Bubba" wherever they can. And while they don't always succeed as brilliantly as they'd like, it's often enough to gain a foothold on the innocent and uninitiated, so that they, too, will dream of "Bubba."

However, the dreams for non-members are much different. They suffer through increasingly surreal tableaus of madness, chaos and death, where "Bubba" reigns supreme. The dreams get worse, night after night, slowly working to a breaking point in the mind, when "Bubba" finally reveals himself for what he truly is.

After that, some people wake up changed. Some awaken long enough to kill themselves, just to end the visions. And some just vanish from their beds, never to be seen again . . . at least by human eyes.

They wouldn't be the only ones to disappear. The original, founding members of the Three Dollar Society have vanished, one and all. They don't answer their phone or their email, and the web site hasn't been updated since Windows 98.

But their book still ships if you fill out the form. And the newsletter still comes out on time, with photos of "Bubba" sightings duly reported upon. And if you send them $3 in the mail, you will still get a packet of badly photocopied introductory materials, complete with instructions.

And you *will* know Bubba, whether you want to or not.

Priceless Possibilities

"Bubba" is . . .

- Nyarlathotep, in yet another guise. He's decided to retool one of His lesser forms to get followers amongst the ultra-hip, "anything for a laugh" crowd, and claim the victims their jokes provide. So far it's working pretty well.
- The King in Yellow, seen imperfectly. "Bubba" has a ball cap that has a weird squiggle on the front -- one that no one can quite make out, or describe. That squiggle is the Yellow Sign, and those who spend too much time trying to discern what it is attract the King's attention.
- Hypnos, reaching a tendril from the Dreamlands into the waking world. It took him great effort to break through, but once He got here it was a simple thing to twist the dreams of the founders, and create a living meme. The

fear and love "Bubba" generates feeds Him greater than He's known for aeons, and He's bloating like a tick.

- "Bubba" -- most likely a Great Old One who's just escaped confinement, or a Larvae of the Other Gods (*Malleus Monstrorum,* pg. 211). Either way, the creature has latched onto the founders' ideas and taken advantage of them, assuming the shape of "Bubba." Unless stopped, "Bubba" will grow in power until He's powerful enough to drop the world into a maddened slumber. And then he will either rule over the ruins, or blast it apart on His way back to Azathoth's court.

The Founders are . . .

- Dead by their own hands, having succumbed to the dreams of "Bubba" long ago. Their bodies are rotting in a pit, somewhere. Meanwhile, "Bubba" runs the operation by mystical remote control, seeing to it that new material comes from seemingly nowhere.
- Sleepwalking zombies doing the will of "Bubba" in a shotgun shack, somewhere in Alabama. The letters arrive from nowhere, they sort out the photos and cash from the checks (which they burn), and make sure the newsletter comes out on time and the website gets updated . . . and that's about it. When one of them woke up a year back, the others killed and ate her.
- Willing and insane cultists overseeing the will of "Bubba." They faked their disappearance and live elsewhere, now. Once a week they pick up the Society's mail, spend the cash, burn the checks, and keep the photos. And once a month, when the Moon is appropriate, they harvest the souls their dream work has provided and send it to "Bubba" by way of His car.
- Victims, pressed into service with the souls of the taken. Their occasionally-corporeal shades walk the halls of Three Dollar central, working for "Bubba" until they're too tired and run down to continue. Then "Bubba" eats them and excretes them anew, so they can get back to work. Who's laughing now?

The Three Dollar Bible is . . .

- Utter and complete crap, however funny. Whatever occult significance it may have is cobbled together from numerous, unrelated sources and of no real use in understanding the problem. The illustrations are kind of cute, though.
- A key that unlocks the door to "Bubba." It doesn't look, or read, like much, but if an investigator keeps it in his house while he sleeps, there's a percentile chance equal to "Bubba's" POW minus his that "Bubba" may take notice, and come to visit in dreams. These will be the "friendly" type of dreams, until it's made clear the Investigator isn't a Society stooge. Then things could get ugly.
- A cipher-based text. The first and last paragraph on every page has only four sentences. If you put them together, and read them 8,4,1,5,7,3,2,6 it becomes a minor, if somewhat straightforward, Mythos text describing "Bubba," His true nature and how to Call and Dismiss Him. (English; 1d4/1d8; +3%; 2 weeks; Call/Dismiss "Bubba")
- Not the poison, but the cure. Hidden within the book are clues as to "Bubba's" true nature, and how to defeat Him. The founders put the book out once they realized what they'd done, and tried to make it sneaky enough that "Bubba" wouldn't know what they were doing. Unfortunately, it's so sneaky that only intense study of what seems to be its complete nonsense will reveal the truth.(English; 1d4/1d8; +3%; 8 weeks; Call/Dismiss "Bubba")

Care and Feeding of "Bubba"

Keepers have full reign to determine how powerful "Bubba" actually is. If He's an avatar, He might share the POW of the parent God, or might have something a little lower. If He's a Larvae or Great Old One, his POW is probably somewhere in the 30's, but growing as His web of dreams gets larger.

"Bubba's" two unique characteristics are the ability to transform the dreams of the infected (100%) and a dream attack. The transformation is "Bubba" entering a dream and changing it around to fit His needs. These changes can be maddening, but aren't cause for a SAN loss greater than 1d4.

The attack is a nightmare in which "Bubba" begins to show a little of His true nature, or warps the dream to the point where it does actual damage to the dreamer's psyche. Pit His POW against the POW of the dreamer on the Resistance Table. If the dreamer wins, there's a chance equal to the dreamer's POW that he's shrugged off the infection. But if

"Bubba" wins, the dreamer loses 1d10 SAN and wakes up screaming.

"Bubba" can attack once per day, when the dreamer is asleep. When the dreamer's SAN reaches zero the dreamer falls under His thrall. Some kill themselves, some join the Society fulltime as insane "helpers," and some vanish to slake His thirst.

"Bubba" is a magical infection of the mind. He usually transmits Himself via the facsimiles made of Him, but not every likeness is powerful enough to carry "Bubba." The difference is in seeing a symbol handmade by someone who's being guided in dreams by "Bubba," Himself.

So seeing someone's T-shirt or photocopied flier won't do it, but seeing the original collage or drawing the flier was photocopied *from* will. And seeing the graffiti definitely will, which is why "Bubba" pushes Society members to tag buildings with His likeness. Likewise, all copies of the Three Dollar Bible count, since "Bubba" is directly overseeing their mystical manufacture.

Anytime someone sees a worthy likeness of "Bubba," pit the POW of "Bubba" against the POW of the onlooker on the Resistance Table. If "Bubba" wins, infection has occurred. If the onlooker wins, then he's shaken "Bubba" off, and cannot be threatened by that particular form of infection ever again.

While second-hand likenesses aren't powerful enough to be carriers, there is a percentile chance equal to the POW of the observer that every new likeness of "Bubba" he sees will pique his interest enough to gain the attention of "Bubba." Subtract the onlooker's POW from the POW of "Bubba" to get the percentile chance that "Bubba" can infect him indirectly. This is how "Bubba" gains new followers, and the dreams He sends in these cases may be the more benign variety.

There are two ways to purposely get "Bubba" to take notice of you. One is to simply call Him into your life, either jokingly or earnestly. In this case, proceed as though someone saw a worthy likeness of "Bubba," but if the caller wins then "Bubba" isn't permanently shaken off. He's just not interested at that moment in time -- maybe the caller will have to do something to prove himself worthy?

There's also the Call "Bubba" spell, which functions as a normal Call Deity spell, with the addendum that each unique representation of "Bubba" the casters have with them increases the chance of "Bubba" appearing by 5%. Dismiss works as normal, but if the casters can get a number of unique representations equaling "Bubba's" POW (10 representations would be 50 POW, and so on) and destroy them during the casting, then "Bubba" will no longer have any hold over the city or town the Dismissal is performed in. This total Dismissal will last only so long as no one casts Call "Bubba" ever again.

Ways to Get the Investigation Going

- **Indirect:** "Okay, you like weird stuff, right? So you tell me how this is possible. Last night, we get a call of a drunk and disorderly at Mike's downtown, on Campus. We pick the guy up, and he's off his head and raving that the scary guy's gonna get him when he falls asleep. Of course, he's 10 sheets and resisting arrest, so we toss him down here. It's a light night, just him in the cell . . . and then, this morning, he's not here. Vanished! Camera down the hall doesn't have him leaving. No way in *or* out. Guard on duty heard him screaming sometime this morning, maybe four, but we get that all the time so he didn't check. Something about 'Go away' or 'I'm going.' No way to be sure, now."
- **Direct:** One of the Investigators discovers that someone close to them has disappeared. He'd been complaining of headaches and nightmares recently, and his significant other says he'd been like that for a month. What's changed in the last month? Plenty, but what really did it was a detour through a part of town where "Bubba" graffiti has been cropping up. It turns out he's not the only one in his office who's had nightmares, or vanished. And those suffering talk about the same weird guy with a ball cap, turning their dreams into freak shows.
- **Foreground:** An Investigator starts dreaming of "Bubba," either from seeing graffiti or too many fliers. If the GM has been running the sort of campaign where Investigators' brushes with the Mythos, or other horrors, are cause for the occasional in-game nightmare, along with SAN loss, then the Investigator might have no reason to

suspect anything's out of the ordinary. But as it continues, and gets worse, an Idea roll might be in order.

- **Background:** One or more of the Investigators live in a college town, and the Three Dollar Society has just become active on campus. Slowly make the Investigators aware that they're seeing "Bubba" everywhere. Maybe the fliers are put up around them while they're not looking, and then, when they turn back around, "Bubba" is everywhere. Maybe one of them winds up getting pictured on a "Looking for Bubba?" flier, entirely by accident. It all looks like harmless fun until the city is melting.

W1: Conquest of Bloodsworn Vale

Designed by Jason Bulmahn

Developed & edited by Jason Bulmahn, Mike McArtor, & Jeremy Walker

Art, cartography, & graphic design by Warren Mahy, Vincent Dutrait, Drew Pocza, Christophe Swal, Christopher West, & James Davis

32-page full-color softcover; $12.99

Shortly before launching their new *Pathfinder* line of products, Paizo Publishing warmed the engine with a couple of small adventure modules. *D1: Crown of the Kobold King* (for four 2nd-level characters) and *W1: Conquest of Bloodsworn Vale* (for four 6th-level PCs) are small but potentially formidable stories to get players back into the swing of things:

In *Crown of the Kobold King,* the party is asked by villagers to retrieve their missing children. Some are convinced the former mistress of the town orphanage extends her reach even beyond the deadly fire that killed her and destroyed her facility, but all anyone wants is to find and stop the force that takes their offspring.

[SPOILER ALERT!]

There are, in fact, outcast kobolds working in the darkness beneath the dwarven monastery, and the children have been scattered throughout. They were taken to appease a prophecy that could lift the curse from the kobold king's rule. Some are hostages or slaves, others hide out, and others still are more than they appear. The kidnappers aren't alone down here -- the darkness creeping up from below is why they moved up to begin with -- and everything from forgotten dwarven "inventions" (read: traps) to the restless dead walk the halls.

As a note to GMs in case they need to weigh future product purchases, there's a collapsed tunnel at the bottom of the dungeon, and it's meant to lead to further adventures in another volume.

Conquest of the Bloodsworn Vale brings the players to a build site where, after many years of disuse, the trade routes are to be reestablished by the king. The vale has become rough country after all this time, and only stout adventurers can tame it, answering the call given by the king's best soldier at Fort Thorn.

The story pulls in the influences of several different factions, some smarter than others. The valley is littered with thorny roses, supposedly the magical remains of the many souls who died here in battle. Roseblood sprites eat the workers, lizardmen and owlbears mark their territory, and firedrakes under the command of a powerful sorcerer threaten to level the entire area.

Crown of the Kobold King, covers ground that's been done before, though it's always good to see it done competently. The paintings of the targeted children in this module are some of the best in either book. A close comparison of the text accompanying the illustrations suggests there may have been some confusion when trying to match the two up, leaving the visuals and the writing somewhat at odds with each other. The map of Falcon's Hollow is a simple one, but that makes sense since it's only a logging town.

Of the two, ***Conquest of the Bloodsworn Vale*** is arguably the better product, though this one reads, runs, and feels more like a campaign setting, so if it's just a few quick evenings of play one wants it becomes less attractive. The plotting is tight, the encounters and puzzles interesting if not overly creative, and the roseblood sprites an excellent, creepy addition to any GM's stock of enemies. A timeline of events helps keep all the action manageable, and the well-developed fort is a good place to base a campaign (certainly given that success means lands and wealth for the party). Sporting a fabulous cover, about the only real complaint is the escalating danger.

It becomes less believable as the story progresses that there are so many layers of villainy to be uncovered (especially in a relatively small area), or that the sorcerer seems so intent on removing humanoid influences from the area when it seems that same pecking order depends on having at least some people around.

Both books use great maps and make full use of the insides of the covers. Four ready-made player characters are offered for those who want to hit the ground running. It's the same crew in both books, but their stats are tailored to reflect the different levels of the adventures. (As a strange aside, two PCs have portraits while the other two have pictures of their equipment.)

Crown of the Kobold King and ***Conquest of Bloodsworn Vale*** are brief but effective introductions to what Paizo Publishing is capable of, and can easily be used as well-reasoned springboards to larger stories. The writing isn't jaded and the quality worked into the books -- from the full-color artistry to the glossy pages -- means someone is serious about their work. If they put this much effort and care into two quickie items, their full product line is likely worth the further investment.

--Andy Vetromile

The Orgone Tomorrow

A Campaign Setting for *GURPS*

Jürgen Hubert

Aliens -- or rather, Extra-Dimensional Entities (EDEs) as they are called now -- have visited our Earth for a long time. However, proof of their existence remained elusive. The American government came closest when a flying saucer crashed near Roswell in 1947, but when the remains were teleported out of our dimension a short time later, the Army convinced most people that only a weather balloon had crashed. An organization named Majestic was created to keep a watch on UFO activity in secret, but for the next six decades they only caught frustrating glimpses of alien activity, in addition to interviewing the occasional former abductee and an enormous number of hoaxes and false leads. In the end, they concluded that otherworldly entities did operate on Earth from time to time, but that they only appeared once every few years at best. Similar efforts by other governments were even more inconclusive, and most scientists and politicians alike dismissed the idea of alien visitations as preposterous.

All this changed on February 10th 2010, when a Gray saucer appeared near the city of Samawah in Iraq. As it turned out later, its dimensional engines had problems, but the American fighter patrol that scrambled to intercept it interpreted the mysterious rays emanating from it as an attack, especially once they had destroyed one jet.

The Uruk Event

The missiles that were shot at the UFO resulted in a chain reaction that spread around the world and bathed Earth in a strange energy. Every human being alive experienced hallucinations of strange, alien vistas for several minutes. As the American military converged on Samawah and gathered UFO pieces from the area surrounding the ancient ruins of Uruk, reports from all over the world poured in about people displaying strange powers, from summoning columns of flame to causing dead things to come alive. Chaos reigned. Stock markets crashed. Many believed the End Times had come.

But eventually, things calmed down again. Many of the "Gifted," as those who attained these strange powers were called, had enhanced senses beyond those of any existing eyes -- or sensors. This allowed them to perceive a new form of energy dubbed "orgone," which co-exists with all matter and provides an infinite energy source for the powers of the Gifted. As the source of these powers became understood, it eventually became possible to train normal humans in their use. Though the Gifted had a large head start, with enough training and practice it would become possible for non-Gifted orgone users to reach or even surpass their abilities.

Though these "rational" explanations didn't satisfy everyone, eventually the world settled down uneasily and waited to see how these new powers would transform human society. Many people took up the study of orgone use enthusiastically, and strange cults formed in many places, in which orgone users claimed that they had been given their abilities by supernatural beings of vast powers and wisdom. Another noteworthy development was the discovery of alternate dimensions, which members of the Gifted with powers over dimensional travel explored.

And in 2012, they brought someone back with them.

First Contact

The species humanity dubbed the Anu (after the Sumerian sky god) arrived in a massive floating mothership and announced their "willingness to engage in trade" to humanity by broadcasting their statement over the airwaves in garbled English. Many nations were willing to take that offer, and in exchange for advanced orgone-using technology they traded raw resources, cultural artifacts, and -- especially -- land. While they would trade for minor trinkets with

anyone willing to deal with them, they only bought land from national governments. They also insisted that any land they bought would be their own, sovereign territory not subject to human law. Most countries were willing to sell them small estates for the establishment of local embassies and trade centers, but many poorer nations traded away vast tracts of land -- sometimes entire provinces of their countries -- in exchange for massive technological boosts, resulting in vast changes in the geopolitical power balance. While the First World nations protested, this did not faze the Anu in the least, and they simply kept buying lands in exchange for aid -- and never sold any of the land back. Instead, they changed the flora and fauna of these areas into one resembling their home dimension, and many ecologists worry that these alien life forms might eventually supplant the native ecosystem of Earth as they spread out from these zones. But so far, greed for Anu technology has outweighed such concerns.

Further Developments

The next species of EDEs humanity made contact with were more familiar: the entities known as Grays. In 2015, they established a colony consisting of almost fungal structures burrowing into the ice of Marie Byrd Land and have since used their superior technology to chase off most humans who entered their territory. Their flying saucers have appeared more frequently around the world. They will defend themselves from human aircraft when attacked, but on the three occasions when one was destroyed by human attackers (difficult but possible thanks to new, orgone-based technology), no retaliation or even reaction from other Grays was forthcoming. Diplomatic contact with human nations is extremely infrequent; while they have consented to send an observer to the United Nations in 2017, the ambassador generally only watches the discussions and makes enigmatic pronouncements from time to time.

However, apparently they make telepathic contact with a number of people around the world. Most people so contacted describe such contact as "visions of peace and bliss," although a small minority only dimly remembers scenes out of a nightmare. Many such contactees become obsessed with traveling to the Gray colony. Few return from there, and those who do help maintain an underground railroad bringing more people there. Most nations now undertake active measures trying to "deprogram" the contactees with a modicum of success, but a large number of people to slip through. And so far, no nation has dared to mount an attack on the main colony, though public pressure to do so is rising.

In 2019, Gray saucers attacked several Anu colonies in Africa and South America, causing large-scale damage. Anu ambassadors have refused to comment on the attacks, describing it as an "internal matter". Their human neighbors are growing nervous about the potential for an all-out war between those two species.

The third major group of EDEs to reveal themselves were the Nommo, a species of aquatic humanoids. Their existence became known in 2016 when three gigantic, living cities floated to the surface in the middle of the Atlantic, Indian, and Pacific Oceans. Thanks to their locations and the insistence of the Nommo in referring to these cities as "Sources," they were soon dubbed "Source Atlantis," "Source Lemuria," and "Source Mu" by humanity. The Nommo permitted humans to travel to their cities and engage in limited commerce. They primarily offer cheap fish and other ocean food, as well as jewelry and pieces of art which tend to have an alien beauty that has become fashionable in many circles. A black market in Nommo technological artifacts has also developed, though this seems to happen on the initiative of individual Nommo instead of their ruling classes, which periodically crack down on such trades.

Most disturbingly, it has recently become known that Nommo and humans are interfertile. Examination of Nommo DNA revealed a surprising number of similarities to human DNA. The few human-Nommo children that have been examined in a lab *seem* human, but their genes have significant differences which led some scientists to speculate that they might change their form later in life.

But while these are the best known types of EDEs, they are far from the only ones. Strange beings have begun to lurk in the corners of the Earth. Most of them seem unintelligent (which raises the question of how they got here), but others have displayed strong cunning or even tool use -- sometimes unique alien artifacts. The nations of Earth are struggling with cataloging the entities that are out there, and every week there seems to be a new discovery.

The Cults of the Unseen

When some orgone users started to claim that they had received their powers from supernatural entities, most researchers chalked it up to the general madness of the times. And when some of these people lost their powers for "violating the strictures of their deity," it was assumed that this was a purely psychological block.

However, a large-scale statistical analysis revealed in 2015 that large groups of such orgone users often acted with a unified agenda -- without even having been in contact with each other! While some sort of subconscious telepathic "group mind" cannot be ruled out entirely, most observers have come to the conclusion that yet another group of EDEs -- dubbed "the Unseen" -- was manipulating a large number of humans behind the scenes.

These beings always appear to their chosen humans in dreams. They usually take the form of figures out of religion or mythology, though stranger appearances have been known, from Elvis Presley to entities out of fantasy and science fiction novels. They offer instructions in the use of mystical powers (orgone powers, though the chosen human might refuse to recognize them as such) in exchange for following certain strictures of behavior (not necessarily outright worship, though this is far from uncommon). These apparitions almost always seem to relate to pre-existing knowledge and personal beliefs of the target -- someone who has studied Norse Mythology might be contacted by an entity resembling Odin, for example, and the imposed strictures are usually in a form with which the target will have few qualms about. A warm-hearted and caring cultist might be required to donate a portion of her income to charity, while a true sociopath will have to sacrifice a living human being four times a year.

However, the strictures stay the same even if the orgone user changes his own beliefs, and if he does not adhere to them he will loose his powers. Furthermore, he can teach those orgone powers to others -- but then those new cultists share the exact same strictures.

Acceptance of these cults has varied widely, though even the most liberal areas view them with suspicion. While many cults are basically benevolent -- and indeed, may have strictures to aid other humans even if they are not cult members -- a number of cults with truly disgusting strictures have given the others a bad name. And, of course, many are worried about the Unseen themselves, who often command their followers to engage in mysterious activities that might have long-term repercussions not readily apparent to observers -- including the cultists themselves.

Today

The year is 2020. Despite the upheavals of the last decade, the world economy is booming. New, orgone-based inventions and adaptations of EDE technology provide humans with cheap energy, food, water, and a staggering array of new entertainments. New innovations appear every day, and it seems that there is no limit to human achievements. Those humans who are not employed often train themselves in the use of orgone powers which will give them new job opportunities, or else figure out new applications for such powers -- for in such a young field, there are myriad money-making opportunities of which no one has thought of yet.

Despite this, the minds of many people are troubled. With the appearance of orgone powers, whole social structures and economies broke down overnight, and the repercussions are far from over. The appearance of the EDEs has caused large-scale upheavals and a shift in the global balance of power which isn't over yet, and many people and nations who have been humiliated in the past itch for a rematch. And no human knows the ultimate agenda of the Anu, the Gray, and the Nommo . . . or when humanity might have to defend itself against them or other threats lurking in nearby dimensions.

The future is uncertain. The only certainty is that this is an age full of adventures and opportunities for all who are willing to grasp them.

The World

Earth has gone through many changes in the last few years. This short gazetteer covers some of them.

The United States

The reputation of the USA was hit hard when it was revealed that their leaders had known of the Grays for a long time, and conspiracy theories abound concerning what else the American government knows and is not telling about the changes apparent in the world. In reality, the American government does not know much more about the EDEs than the other major nations . . . and that lack of knowledge has them deeply worried. Much of the government and the Joint Chiefs of Staff consider the EDEs the greatest threat not only to the USA, but Earth in general, and war games that deal with attacks by or against EDEs are becoming increasingly common. Though they are reluctant to deal with Anu merchants directly, American government agencies are willing to pay high prices for samples of EDE technology, and they regularly deal with the international black market trading in such artifacts. Someone who manages to steal or otherwise acquire new tech -- especially if it is weapons technology -- can become very rich and make quite a few useful contacts in the American intelligence community. Government-sponsored labs then try to figure these artifacts out and reverse-engineer them.

The USA has also reinstated the Draft. While the mandatory term of service is only nine months and conscripts are not sent to any actual combat missions, the government is worried about possible EDE invasions and wants to be able to organize a large portion of the population into fighting units on short notice should such a situation occur. A slim majority of the population currently supports this policy, though protests remain numerous and loud. A secondary goal is to increase the number of the Gifted, which typically appear under times of great stress . . . such as during boot camp. This policy seems to be working, and the Gifted are given strong economic incentives to enlist. This has contributed to allowing the USA to maintain its military edge, shrinking though it may be. Another measure the American government has taken is the mandatory registration of all orgone users -- they need to submit the precise nature of all their orgone powers and update those descriptions on a regular basis. The goal here is to integrate orgone users into appropriate military units in the case of an emergency, but the registration remains deeply unpopular among most orgone users -- if not the general population.

The European Union

While the EU is not quite as paranoid about the EDEs as the USA and has accepted the Anu and the Nommo as valid trading partners, there is still a general unease about just how far these beings can be trusted. As a result, the armies of the EU have gradually shifted towards a centralized command over the past few years. Furthermore, the expansion of the EU has accelerated, since it is felt that the more of humanity stands united against possible threats from EDEs, the better. Several nations in North Africa have joined after democratic reforms and receive generous economic subsidies, and at the moment there are negotiations about possible Canadian EU membership.

Economically, the EU is doing well; while they didn't sell large tracts of land to the Anu, educational standards were high enough that a large number of scientists and engineers were available for analyzing orgone-based powers and machines and engineering new devices. Additionally, the large training programs for unemployed people in place in much of Europe were quickly adjusted to training orgone use, resulting in a large percentage of the population being able to use low-level orgone powers. As a result, the EU is now the leader in human-manufactured civilian orgone technology (as opposed to the military orgone tech of the USA, or the Anu-manufactured devices available in large quantities elsewhere).

The Middle East

The Middle East was hit hard when portable orgone-based energy sources caused the oil market to collapse practically overnight. While oil is still required for many manufacturing processes, the previous high prices are no longer sustainable, and poverty and small wars are rampant. Iraq -- which gained a greater number of the Gifted than any other region thanks to the proximity of the Uruk Event -- is now effectively divided into three separate ethnic nations that coexist in an uneasy peace shattered occasionally by terrorist attacks, and the only thing that keeps the country from another civil war is the small American garrison which props up the (almost powerless) central government. An unexpected boon has been the ideological fracture of al-Quaeda and similar groups over the issue of orgone use; the majority of the terrorists reject it, but thus deprived themselves of a powerful weapon. They spend much of their time

fighting with pro-orgone use cells and are an easier target for the US forces in the region which have fully integrated orgone users into their units. Indeed, some claim that the American garrison is maintained mostly to test their theories on orgone-assisted combat tactics.

Russia

While Russia lost much of its economic influence with the collapse of the oil and gas markets, it found that it had another resource suddenly in strong demand: land. Large stretches of land were sold off to the Anu in exchange for advanced technology, and now the Russian government feels it can take the respect it thinks it deserves. It has bullied many of its neighboring nations to the south and west and even attacked them, all with the approval of much of the population. As the political system of Russia grows ever more authoritarian and nationalist, many worry that an eventual military conflict with either the EU or China will become inevitable.

China

China has steadfastly refused to sell any land to the Anu; even the territories for their embassies are only temporary leases. This does not mean they have any shortages of Anu technologies, however. Instead, they have convinced many allied African governments into selling land to the Anu, and then bought the technology from them. Domestically, China has introduced the Draft for the same reasons as the USA, and with similar results. They have also abolished the "One Child" policy, as orgone-based tech has made many provinces in the formerly inhospitable Western lands of China fertile.

Africa

The "mother continent" has now become the primary home of the Anu on Earth, as many poor nations have sold large territories to the Anu in exchange for technological aid and (especially) weaponry. Unfortunately, this has destabilized many nations in Central Africa even further, as each tries to seize more land from its neighbors. The European Union and South Africa try their best to stabilize the northern and southern ends of the continent, but so far this has not been enough to stop the wars.

Other Dimensions

A number of the Gifted have developed the ability to travel to other dimensions, and a few primitive orgone tech "gates" have been developed in recent years as well. A portion of these other worlds have recognizably been variants of Earth... but with vastly divergent evolutionary paths. No humans have developed in any of them, and while the fauna and flora was sometimes recognizable, the time when they diverged from our geological record was tens, and sometimes hundreds of millions of years ago. And a small number of worlds are *strange*, with normal physical laws being warped by orgone to create utterly alien habitats -- yet which are teeming with strange, alien life forms.

A few dozens of worlds have been cataloged, and none *seem* to have native intelligent life, though three have Anu outposts. Exploration of those worlds by major governments has mostly been fairly cautious, as no one knows what kinds of hostile entities might lurk out there. The exceptions have been India and a few other nations with severe population problems, who see off-world colonization as a solution to their population pressures. Additionally, various corporations have been more concerned with possible profits than any theoretical dangers posed by going off too far into the unknown too soon.

Technology

Humanity has reached a tech level of TL8+1. Mature TL8 technology is easily available, but anything more advanced than this incorporates orgone tech and often has a fairly alien "feel" to it, thanks to reverse-engineering from EDE technology. Feel free to add odd lights and noises, as well as strange protrusions and other minor annoyances to such equipment.

The Anu have TL6+4. Some of the more primitive mechanical functions of their devices are obvious to human engineers, but the most intricate details still elude terrestrial scientists. It is unknown whether this is the "true" technology level of the Anu, or just the one they choose to put on display on Earth. They will readily sell TL6+3 devices to interested parties in exchange for Earth products and raw materials or even cash in major currencies, but they will only sell TL6+4 devices or autofactories that produce some limited variants of their technologies in exchange for land from national governments.

The Gray have TL2+8. Most of their technology is utterly alien and hard to understand by human standards. Much of it is biotechnology based on strange, fungal matter with an amazing range of properties. While scientists continue to be fascinated by the small number of samples of Gray technology they have attained, reverse-engineering them has proven much more difficult than the relatively understandable Anu technology.

The Nommo generally have TL4+5, though their energy and materials technology actually reaches TL4+7 in certain limited ways. Many items they produce are made of alloys which are unexplainable by human science, and they frequently use both force fields as well as strange energy devices which they use as both melee and ranged weapons.

Characters

Characters of all power levels are possible, from relatively normal people with 100-150 character points to the most powerful Gifted and elite xenohunters based on 400 or more points. While in theory almost any combination of powers is possible, in practice it has been shown that those who learn to use orgone powers do so most effectively if they concentrate on learning powers centered around a common "theme," which helps with visualizing and practicing the power. This is represented by the sample powers in *GURPS Powers,* with the exception of Anti-Magic, Anti- Super, Astral Projection, Cosmic, Magic, and Time Mastery, as well as the psionic powers from the *Basic Set.* Antipsi is renamed Anti-Orgone, but otherwise works identically. Their Power Modifier is -10% (-5% for working anti-orgone powers, and -5% for rare and experimental technological countermeasures).

Furthermore, orgone users learning a new orgone-based advantage often take additional limitations on it to make it easier to learn. These "memory aids" are often shed as the user grows more proficient with the advantage, but some never bother to stop using them. At other times, the inexperience of the user causes problems when using that ability which persist until the user has trained long enough. Thus, most of the limitations from the *Basic Set* or *GURPS Powers* are appropriate.

Two groups of orgone users deserve special mention.

The Gifted

Sometimes when under stress, ordinary people suddenly display the ability to use orgone powers far beyond what they were capable of before, and even when the stress goes away they retain those abilities. This was the case with the first recorded orgone users during the Uruk Event, and even today many people suddenly gain a boost in their orgone powers. As far as scientists know, this happens when a local conflux of potent orgone energies interacts with a human currently under great stress. These confluxes remain hard to predict even with precognitive abilities -- though there have been a limited number of successes in deliberately triggering such an event, the vast majority of such incidents remain accidental (though that doesn't stop wannabe-Gifted from deliberately exposing themselves to great stress in the hope of gaining such powers -- a practice that has resulted in more deaths than new Gifted).

In game terms, there isn't any difference between the Gifted and other orgone users. The new Gifted gains anywhere from fifty to several hundreds of points (in the most extreme cases) of orgone-based powers, but those powers don't

Using the Orgone Tomorrow with *GURPS Infinite Worlds*

Given the technology available in this setting, along with various extra-dimensional complications, it can be tricky to incorporate this world into the *Infinite Worlds* setting, and GMs should pay special attention to how its technology, orgone powers, and extradimensional travel function elsewhere. Nevertheless, here are a few

differ mechanically from the abilities of those who gained orgone powers through training. It merely provides an in-game rationale for "ordinary people" to get vast powers without training them for many years.

Cultists of the Unseen

The abilities of cultists are also basically orgone powers, but they have additional strictures which they must adhere to in order to keep them. In game terms, this increases the value of their Power Modifier depending on the severity of their strictures; see page 21 of *GURPS Powers* for details.

EDEs

It is strongly recommended that EDEs are not allowed as player characters, since their motivations and activities are some of the central mysteries of the setting. Nevertheless, here are some basic templates the GM can use for EDE NPCs.

Anu

The Anu resemble gigantic slugs with a length of six feet and a diameter of two feet. Their front end has nine faceted eyes of various sizes and terminates in a long proscobis with which they digest their food -- the fluids of small, terrestrial animals apparently being one of their favorites. Around this "face" six lengthy tentacles ending in small feelers serve as their manipulative organs.

Attributes: **ST** 9, **DX** 10, **IQ** 12, **HT** 9
Advantages: Extra Arms ×4, Extra Hit Points +3, Hyperspectral Vision
Disadvantages: Basic Move -2, Greed, Honesty
Commonly Observed Powers: Electrokinesis, Gravity, Machine Telepathy, Psychokinesis, Sound/Vibration

Note: Their Honesty manifests itself as the refusal to knowingly break any local laws. However, they tend to regard as "law" whatever the local government says it is, and they have no qualms with bribing local dictators to do what they want. Additionally, they assert sovereignty over the land they purchase, and the laws of this territory are rarely well-known by humans.

Gray

The Gray look like their traditional portrayals -- 4' tall, gray-skinned humanoid beings with dark, faceted eyes, elongated fingers, and no visible sexual organs.

Attributes: **ST** 7, **DX** 12, **IQ** 12, **HT** 10
Advantages: Dark Vision, Racial Memory (Active) Disadvantages: Curious, Low Empathy
Commonly Observed Powers: Anti-Orgone, Body Alteration, Dimension Travel, ESP, Illusion, Probability Alteration, Telepathy, Vampirism

Nommo

The Nommo fit the traditional "fish man" archetype -- humanoids with green skin, fins, scales, and large, alien eyes.

ideas for incorporating this timeline.

Orgone-1 was discovered one year ago and has been a fascinating find -- not the least because of the natives' ability for crossworld travel. Not only that, but they also seem to be able to jump over a *much* larger "quantum distance" than Infinity technology; the measurements of Infinity ops who accompanied the native dimensional jumpers nearly went off the quantum scale! Infinity is now worried about the possibility of the natives learning to "tune in" into more local quantum bands, thus stumbling across worlds with Infinity influence.

Even more worrying is that the Grays probably know about Infinity activities on this world -- one of the statements of the Gray UN ambassador was: "The Infinity is not welcome here!" Subsequently, three Infinity teams were attacked by Grays, inflicting heavy losses. Still, the opportunity this world offers -- from new insights into parachronics to the mysteries of the orgone powers evident on this world -- remain too tempting to ignore.

Attributes: **ST** 15, **DX** 10, **IQ** 11, **HT** 13
Advantages: Dark Vision, Parabolic Hearing ×3, Pressure Support 2, Racial Memory (Passive), Regrowth, Scanning Sense (Sonar), Sharp Claws, Sharp Teeth, Unaging
Disadvantages: Bad Sight (Farsighted), Berserk, Odious Personal Habit (Lusts after humans -- not a universal trait, but far from uncommon)
Commonly Observed Powers: Bioenergy, Body Control, Electricity, Magnetism, Matter Control, Water, Weather Control

Possible Campaigns

The setting supports a large variety of campaign styles and adventures, from EBE "bug-hunting" to espionage, orgone-powered crime-fighting (masked or otherwise), political activism for the rights of orgone-users, exploration of other dimensions, and more. However, one of the most fascinating campaign types might be the investigation of the secret history of Earth, especially its involvement with other dimensions. It now is a known fact that the Grays have visited Earth before the Uruk event, and there are strong hints that the Anu and Nommo have also been here before . . . and perhaps other species as well. Just how far does the influence of EBEs reach back throughout the history of Earth, including in pre-human times? What do all these species know that they aren't telling humanity?

Such a campaign can mix conventional archeology (complicated by the interest of multiple intelligence agencies of major nations) with unraveling human conspiracies (such as Majestic and its counterparts elsewhere), tense negotiations with EBEs or daring raids into their territories, and exploration to nearby dimensions (just why do these pyramidical structures in a nearby dimension show inscriptions in ancient Sumerian?).

Pyramid Review

Generation Gap (for *[CyberGeneration](#)*)

Published by [Firestorm Ink](#)

Written by Ed Bolme, Wade Racine, David Ackerman-Gray, & Craig Sheeley

Cover by Paolo Parenté

Illustrated by Nick Bliss, Réne Barr, Jennie Breedon, Lance Card, Malcolm Hee, Avy Price, Alex Racine, Jenny Romanchuck, Jason Seabaugh, & Matthew Westberg

96-page b&w softcover; $18

Just as everyone is surprised at the final arrival of *Cyberpunk V3* after quite some time, support continues for its stepchild, *[CyberGeneration: The Final Battle for the Cyberpunk Future.](#)* Last year Firestorm Ink released the scenario *[Researching Medicine,](#)* and now they follow that up with *Generation Gap.* This is a companion volume to the core rules, designed to do several things. First, look at the life of the average *CyberGeneration* character -- or "juve" -- in the late 2020s; second, examine the relationship between the gene-teens, their parents and other adults, including those Edgerunners from the pre-Carbon Plague era that are still around; and third, provide advice for player and GenGM alike to make the game run and play better. In this, *Generation Gap* is more than reminiscent of the supplement, *Listen Up, You Primitive Screwheads!!!!* for *Cyberpunk 2.0.2.0.*

Physically, *Generation Gap* is proof that Firestorm Ink has learned much from publishing *Researching Medicine.* This is a much better looking and laid out book. Yet it is not without problems. There is no index, awkward given the number of subjects covered in the book; there are references to page "XX"; and the page numbers and chapter headings are placed on the inside of each page in the book's center. On the plus side, the layout is tidy, and artwork a huge improvement. It only jars when pieces from *Cyberpunk 2.0.2.0.* are re-used to depict that game's signature Edgerunners -- Morgan Blackhand, Rache Bartmoss, Alt Cunningham, and John Silverhand. All four pieces feel out of sync with *Generation Gap's* otherwise Manga influenced look, but this actually works to highlight the actual generation gap between the juves and these "ancient" Edgerunners.

The book starts out small, concentrating on the role of the player and his juve in 2027. Fundamentally, the juve is not a miniature adult, and the pointers given here to playing a hormonally charged, angst-ridden teenager are more than useful for us adults who prefer not to remember their own adolescence. These pointers expand upon those found in the core rulebook: confidence, impulsiveness, passions, and hobbies, plus attitudes to sex, drugs, and the world in general. Of course, there is an addition to this so far traditional list: the change. Not just that of puberty, but that brought on by contracting the Carbon Plague, which has more radical effects, turning a juve into a nanotech fueled mutant with abilities that might let control electricity or morph his body. This is combined with an eclectic mix that includes the archetypes representing standard high school culture; advice on how the players can co-operate in helping their juves along with both yogangs and cyberevolved types; possible juve goals, reputation, status, and fashion; plus a major section on the subject of sex and the geneteen. Besides the obvious dangers and difficulties, the Carbon Plague might also reject a cyberevolved's contraceptive implant. This subject is further developed in a later section for the GM's eyes only.

After characters, campaigns receive similar treatment. It asks what sort of game within the CyberRevolution the GenGM wants to run and the players want to play: resistance, espionage, teen life, building a brave new world, or even young superheroes with really "neat" powers. It looks at possible goals and enemies, how the juves come and stay together, before bringing the adult into the game and the role he plays. This is not just as a member of BuReloc (Bureau of Relocation) or CorpSec, but also as someone who will interact with the juves on a daily and more personal basis. Most obviously a parent (who gets a whole section to himself), but it can also be a guerilla fighter, a teacher, or even Morgan Blackhand, who has established summer camps to further teach the skills needed to fight the revolution! The rules for teaching and learning complement this and school life. The real thrust of this chapter is that in an age when the family unit is rarely traditional, often dysfunctional, even not present at all, the juve's one aim is to build one of their own.

And once they have built that, the juves can build their desired future. This of course, is bringing about the revolution. Achieving this is described as a series of easy steps and is coupled with a solid method of tracking a campaign's progress via morale and resources. It takes into account player actions, the list of adjustments to both morale and resources for such actions also works backwards to serve as a list of simple scenario ideas. Parallel to this is *CyberGeneration's* Plot Path system, used to track the themes and events applied to individual characters rather than to the campaign. The advice here is tied into the various *Documents of the Revolution* sourcebooks, and culminates in the roles played by the leaders of the Revolution, also the signature characters from *Cyberpunk 2.0.2.0.*

Having already suggested that a juve build his own family, his actual family is discussed. Diverse in nature and functionality, it should be more than a ready source of funds, equipment, and support, most obviously as a trigger for roleplaying and in-game events. The most radical thing a family has to deal with in 2027 is learning that a member is "suffering" from the Carbon Plague. Parental reaction to this bad news is going to color a juve's own reaction and heavily influence a game. Will automatically inform the authorities? Or respond with revulsion? Disown him, or support him as best they can? The book draws strong parallels throughout between the ISA of 2027 and Germany of the 1930s, though of course, the CyberEvolved have these neat abilities with which to strike back . . . This leads into the chapter on combat, which in *CyberGeneration* is particularly deadly as the juves lack the skills and the guns despite the neat abilities. The advice is to keep the game non-lethal, and to make the juve who wants to make it lethal pay for it with armed response upon the part of the authorities.

There is a lot of material to be found within the pages of *Generation Gap.* Much of it excellent and thoroughly useful advice for running a *CyberGeneration* game, that can be used by both player and GM alike, though unlike the earlier *Listen Up, You Primitive Screwheads!!!!* for *Cyberpunk 2.0.2.0.,* this book will not be particularly useful outside of *CyberGeneration.* This book is at its best when exploring the life and role of the juve, both normal and CyberEvolved, less so when dealing with the relationship between a juve and the adult world. Unfortunately, the book feels disorganized and although there is a reasonable table of contents, finding anything is hampered by the absence of an index. It is not a book though to be consulted mid-game; rather, *Generation Gap* is something for the GenGM to sit down, read, absorb, and apply the contents to his campaign.

--Matthew Pook

Longing for a Century Ago

In the 1958-59 season, what did seven of the top 10 shows in the U.S. have in common? (I know; you landed on "Science and Nature," and this is an "Arts and Entertainment" question. Bear with me.)

The answer is, "Westerns." Or, for those who've watched *Jeopardy!*
too often, "What are 'Westerns?'" For the curious, the shows in question are:

1) *Gunsmoke*
2) *Wagon Train*
3) *Have Gun, Will Travel*
4) *The Rifleman*
6) *Maverick*
7) *Tales of Wells Fargo*
10) *The Life and Legend of Wyatt Earp*

Now, what's interesting (to me) is to map this interest in the Wild West with the *actual* Wild West. A cursory glance shows that the television series and its historical inspiration were almost 100 years apart, if one pegs the beginning of the Wild-West era with the end of the American Civil War in 1865.

This realization has gotten me pondering a bit about nostalgia. This is "nostalgia" as it relates to history, the collective conscious ideal of nostalgia . . . not the digging up of old stuff in the closet.

Now, there's already a perfectly good discussion of nostalgia at one of my favorite sites, The Straight Dope, so I'll try not to duplicate that article too much. But it's interesting to note that we -- at least, "we" referring to the Western world -- seem to be truly nostalgic for events that are almost but not quite beyond the peripheries of our memories. Thus the 90-year bridge between the historical Wild West and the "modern" romanticism toward it relied on the passage of a few generations. Some romanticism comes quicker than others; for example, World War II spawned hundreds of movies in the decades following that event, tapering off quickly as Vietnam escalated. But there has to be *some* distance; I suspect the failure of shows such as *That 80s Show* is because not enough time has passed. Of course, the old becomes new, and the success of Ken Burns' WWII documentary *The War* shows that there is a new audience for appreciating that global conflict.

This passage of time -- but not *too* much time -- I think is noteworthy. For example, the gulf between the real Wild West and the Hollywood Western allowed for many second-hand anecdotes of those experiencing it: "Grandpa, what was the West like?" "Well, I was only a little boy there during the tail end of it, but my father told me once that . . ." That 100-year (give or take) gulf between the event and the reflection makes it recent enough to remain relevant to modern events, but distant enough to allow for artistic and creative license. For example, modern audiences wouldn't accept a show set in the 1970s that had its main characters using cell phones (no matter how bulky), but they'd probably be okay with similar anachronisms in telegraph or railroad technology from Westerns.

To me, then, there are two interesting avenues of contemplation for gaming. First, I find myself wondering what "tomorrow's nostalgia" will be. We can already extrapolate the 100-year window and apply that to a renewed interest in Victorian and "steampunk" in recent years, and I can't help but wonder if the coming decades will see a resurgence in hard-boiled and Prohibition-Era stories.

Second, it would stand to reason that the wistfulness humans feel toward its past culture would extend to any society advancing at a reasonable clip. Thus I would imagine that a series set in 2207 would be nostalgic about events that took place at the turn of the 22nd century; GMs looking to add a bit of culture and color to such a world can merely look backwards a hundred years on the timeline and see what was going on then, make up a holovid series or two, and call it a "trend." Or, for near-future events, try to figure out what in our recent history might spark similar thoughts; for example, I could easily see a space-race based series taking off sometime between 2050 and 2070. (As a final food for thought, "100 years" equals approximately "three generations"; what would "nostalgia" look like for generations that

last longer or shorter? When the average human lifespan reaches 150 years, will that longing for the past shoot even farther back?)

Of course, the constant need for entertainment means that all eras will eventually be plundered. But, at the very least, it's interesting to note that 100 years ago is a nice compromise: Close to us, yet -- when it comes to adventure -- far, far away.

The Omniscient Eye

What's a Fellow Have to Do to Maintain Civilization?

The Banestorm from *GURPS Fantasy* and literary devices in assorted sci-fi or "alternate history" novels transplant small groups of people into a primitive, hostile or just uncaring world and let them struggle to maintain their civilization and technology.

At a first glance, groups from a lower tech level should have an easier time retain their technology. There are fewer specialized professions and tools, so they have better chances that all required skills will be present in the group and that the specialists can make all of their own tools.

Is that true? And what is the highest tech level where a transplanted rural village or an infantry battalion would contain all the skills and tools to retain its TL, assuming an average village or battalion? No "gee, what a luck that we have a special forces medic, a couple of SCA fanatics and a former engineering professor in *each* squad" . . .

Note that I'm deliberately ignoring genetic diversity. There will be a barbarian princess for our Steel-Jawed Hero, or vice versa, if the story follows literary precedents.

It has been said that it's not a long fall that kills you, it's the sudden stop at the end. Something similar is likely here: it's not a lack of long-term skills that's going to be a problem (although it will, certainly, be a problem) so much as the sudden transition to another world.

It would indeed seem likely that people from lower levels of technology would have a better time of it than people with better toys. Maintaining hunter-gatherer technology requires some sophisticated but readily learnable skills, practiced by outdoorsmen through the ages, such as professional hunters and gamekeepers as well as modern survivalists and other interested amateurs, and taught by some military organizations. Of course, even hunter-gatherers rely on specialized skills, or at least specialized knowledge, which allow them to survive in their native environments. It's not just knowing "how to survive"; it's knowing "these particular things, which grow everywhere I've ever been but not necessarily elsewhere, are good to eat . . . and here's where all the watering holes are." Switching a band of Inuit from near the Artic Circle and !Kung San from the Kalahari desert would be a formula for cranking the life expectancies of both down to near zero.

Still, that's an extreme case. A group of hunter-gatherers transplanted to an unfamiliar environment would have a period of adjustment as they learned the specifics of which plants were edible, how local animals behaved, seasonal patterns, and so on, but they'd likely survive and thrive again once they'd adapted. After all, that's what our own ancestors did as they spread across the globe.

Farming

Moving from hunting and gathering to agriculture and higher levels of technology, however, requires not just a different skill set but also an infrastructure. Generally speaking, higher-tech skills require higher-tech equipment to be of much use, and producing that high-tech gear gets farther and farther out of the hands of the typical user. While any hunter-gatherer can make his own bow, clothing, or carrying basket, it's a rare doctor who can formulate his own medicines or a rare garage mechanic, let alone a typical driver, who can fabricate the mechanical parts necessary to

build a car.

So what does that mean for the size of self-sustaining groups? Sufficiently clever hunter-gatherers can find something to eat anywhere on the planet, but farmers need at the very least domesticated food crops and possibly domesticated animals. Domesticating wild plants is a process which can take less than a lifetime, but does take decades. If dropped into an alternative location without taking their land and homes with them, a group of individuals would need to be supported by hunting and gathering skills for a long time before they could restore farming technology, and few groups of people are likely to have sufficient skills in both.

Even with some tools and supplies, a moderate difference in environment can be a major obstacle. Despite merely going from one temperate climate to another and carrying significant quantities of relatively high-tech goods with them, early European settlers in the New World sustained serious casualties before they refined their farming techniques. However, if an entire village with a not-terribly-advanced level of technology were picked up lock, stock, and barrel along with their already-cleared fields, and placed in a new -- if not terribly different -- landscape, it could carry on with its previous lifestyle largely uninterrupted.

The Renaissance pushes the limits of the level of technology at which a typical small settlement could survive largely without regular support from the outside world. Once various kinds of water-powered manufacturing start to ramp up on the way to the coal-fired industrial revolution, an increasing number of small villages become more oriented towards trade with the outside world and more dependent on imported goods from cloth to agricultural tools. Even apparently independent backwoods Appalachian towns, some of which didn't have electricity until the TVA came along in the 1930s, nevertheless needed iron stoves, saw-blades, rifle and shotgun cartridges, cloth, and other goods produced in urban factories.

Partial Transfer

But then there's the question of just what technology will come along for the ride. A Medieval village transported to a new world with a compatible environment or left behind when everyone else in the world vanishes can probably survive indefinitely, losing little or none of they technology they've got. Just about everything they have is made locally anyway: food, cloth, pottery, lumber for houses, and so on, though they might have to do without some luxuries and less vital imported goods. For example, Medieval England saw a surprisingly brisk trade in preserved fish which penetrated well inland; if an inland village ended up somewhere else, it'd lose access to the trade network. With a large enough set of villagers, they might also have sufficient carpentry and masonry skills to build waterwheels. Metal formed a relatively small proportion of tools used by peasants (for example, shovels and other tools we'd make out of metal were often wooden, and little or no metal was used in home construction) and smithing at a village level was typically a part-time trade anyway, so if the local smith wasn't fully checked out on how to find iron ore and smelt new metal out of it, he might have time to experiment and figure it out.

However, the villagers wouldn't bring with them a number of contemporary technologies we might regard as characteristic of the era. For example, armory was a specialized trade practiced by urban smiths. A village smith could probably turn a bar of iron into something with a cutting edge, but it'd be a pretty poor sword. Likewise, they almost certainly wouldn't have literacy (let alone the skills necessary to produce illuminated manuscripts) or the masonry

Domestication

Hunter-gatherers, who are free to wander around the landscape, can opportunistically exploit whatever species come to hand. They adapt their behavior to the environment. Farmers, on the other hand, need their food species to adapt to them, growing in ways which lend themselves to efficient human cultivation. Just what that constitutes varies from species to species, but one of the fundamental adaptations in Western history was the development of the flexible rachis. The rachis is a structure which connects grain to the plant on which it grows. In wild species, the rachis is brittle. Wind, rain, and casual contact with passing animals can break it, scattering the seeds. That's fine for the plants, but bad for humans. With a brittle rachis, a large portion of a harvest can be lost to the elements before the farmer can try to collect the grain he's growing. Humans are much happier when the plant has a mutation which occasionally happens in the wild: a flexible

skills necessary to build flying buttresses, the conventional apex of Medieval architecture. They'd practice agriculture at a level commensurate with their original technology and be able to sustain that indefinitely, but large swaths of their contemporary technology, most of which they'd never come into contact with anyway, would be left behind. To maintain *all* of that level of technology, one would need a fair-sized city (say, at least 30,000 people), where one would be likely to find a population of scholars, master masons, and tradesmen catering to various elites. Of course, that city would need to be supported by an agricultural hinterland with a population several times that of the city itself. For example, if Florence were to be transported to another world, it would have to take the whole of Tuscany with it at the very least if it were to survive.

Industry

The Victorian age is probably the highest level of technology at which a moderately sized region would be self-supporting, and even that might be dependent on local geography. For example, around the end of the 19th century, Pittsburgh had active factories, access to massive coal resources and a bit of oil to boot (including, importantly, already active mines and wells), a large agricultural hinterland already under cultivation, and a sufficiently educated core of scholars and other specialists to maintain a level of medical, engineering, and scientific knowledge which -- while not cutting edge -- would be reasonably close to the state of the art. If western Pennsylvania (perhaps with an extension to iron ore deposits around the Great Lakes) were dropped onto another world, the chief city would probably have the physical resources to maintain its level of technology.

Even so, Victorian Pittsburgh would suffer tremendous economic and social disruptions which could endanger its survival. For example, although the farmland of western Pennsylvania might be enough to feed the city's teeming thousands, they'd be eating mostly local corn and wheat. Meat, increasingly shipped in from the Midwest, would be in shorter local supply the later in the period we're discussing, and cotton, largely imported from southern states, would also vanish, causing a collapse in the local textile industry until fibers could be grown or otherwise produced locally. (Synthetic fibers were invented in the 1850s but were unsuitable for commercial production until the turn of the 20th century.) Factories would have to retool their production for local needs, miners and food suppliers would have to quickly sort out new patterns of distribution, and the people would have to establish how they were going to govern themselves in their strange new world.

Other cities, of course, may not be so happily situated. Victorian Chicago would be in a position similar to Pittsburgh, trading oil and some coal (coal was discovered in northern Illinois in the 1860s) for better access to livestock and minerals. Victorian New York, Atlanta, or Boston, on the other hand, would probably lack energy resources, and most of the Midwest would probably be light on manufacturing or top-notch scientists. Given sufficient food production resources, such regions might be able to preserve enough technological knowledge to eventually rebuild their former sophistication, but it would likely take years or decades to get back to where they started.

In the modern era, the necessary region to support our technology is even larger and even more dependent on geography. A large chunk of the state of Texas, for example, might have enough agricultural land, energy resources, manufacturing capacity, and intellectual capital to maintain everything from a reasonable level of subsistence to nuclear and space capabilities, particularly if that chunk extends out of Texas and into the Great Plains and the Gulf of Mexico, retaining prime farmland and petroleum resources. A similarly sized chunk of the Northeastern US or western Europe, though, might have enough manufacturing capacity and all the knowledge, but too little farmland and not enough oil.

rachis. A less brittle rachis keeps more of the grain in place until a farmer reaps the plants and beats them hard enough to detach the valuable seeds.

It's not clear just why humans came to start cultivating grain, but it *is* clear that humans trying to cultivate grain would end up selecting for the flexible rachis, and when the flexible rachis became predominant in the plants the farmers were keeping for seed grain, the plant would become a far more reliable food source. However, even assuming a very optimistic scenario for the rate at which the mutation for the flexible rachis would occur and be selected for by farmers, it would take at least 20 years for the flexible rachis to become predominant enough to allow full-time farming, and 200 years seems a more likely span. Until that happens, even the most skillful and best equipped farmers are unlikely to be able to make a go of grain farming.

Armies

So a settlement or group of settlements of appropriate size can support itself and its technology up to a certain level. Can a battalion or other military organization? We'll assume a unit comprised of several hundred to a thousand men. For a low level of technology, quite probably. Most ancient armies contained a significant number of people who were already farmers and often included a small corps of carpenters, masons, and smiths, and the upper echelons might bring advanced literacy and other skills with less immediate application with them. Access to enough seed grain to go back to farming would be a significant issue if, say, a Roman legion or group of Crusaders were dropped into another world, but if they had a short-term subsistence fix, they would at least have a decent chance of survival while bringing along a significantly more technology (or, at least, technology-related skills) than a typical village. If the lost soldiers can find some local women to impress, they'll have the core of a nice little town.

But for higher levels of technology (say, anything since the invention of cartridge-firing guns), almost certainly not. A reasonably well-trained unit could survive indefinitely as hunter-gatherers, though even in a friendly environment, they'd have to spread themselves out over an area twelve to sixteen miles across. Beyond that, the infrastructure issue strikes again. It seems unlikely that they'd have botanists capable of recognizing undomesticated forms of food crops, geologists capable of finding metal ores, farmers used to working without industrially manufactured equipment, skilled herbalists, and so on. And even if there were a few friendly natives willing to point them to the basics, they would be extremely unlikely to have the kind of gear with them they'd need to bootstrap an industrial revolution.

However, though they don't have the skills and tools necessary to maintain their own high-tech society, a body of higher-tech soldiers would be in an excellent position to borrow somebody else's society and accelerate its own technological advances. As long as their ammunition, batteries, and discipline hold out, just about any military unit which has learned the lessons of the First World War would be essentially unstoppable against one which hasn't. And since pre-gunpowder societies are also likely to recognize conquest as a legitimate means of taking power, a sufficiently canny commander could turn his temporary technological advantage into a longer-lasting political one, putting him in a good position to infuse scraps of high-tech knowledge into a low-tech society.

The average soldier might not have many applicable skills, but given a critical mass of educated specialists and officers, they might be able piece together enough knowledge about modern technologies to push the societies they had taken over into a higher level of technology. Here, the composition of the unit becomes significant, but it need not have a preponderance of SCA members and hobbyist blacksmiths to make a dent in local technology. For example, a handful of people who had taken physics and chemistry classes at university might be able to piece together enough remembered information about electromagnetism to start producing magnets, which could be combined with waterwheels (available since Classical antiquity) to create small electrical generators. They might also work with local smiths, glassblowers, and potters to develop hotter furnaces; just knowing that high-temperature furnaces would lead to superior iron and steel could provide a considerable spur to local metalworkers more familiar with contemporary furnace designs. A doctor or even a few medics could provide invaluable assistance with instituting public health measures in cooperation with local architects, such as building sewers and draining swamps.

What the moderns would add in this case is not the engineering knowledge necessary to build such public works, but rather sufficient public health expertise to know that sewage-filled gutters and mosquito-filled swamps should be done away with . . . oh, and killing all the cats is not a good way of preventing rat-borne plagues. Just as important as positive new knowledge they can contribute is the knowledge of dead ends they can help the locals avoid. None of this is likely to lead to an overnight technological revolution. However, it can raise the tone considerably.

A peculiar side effect is that time-traveled soldiers might find themselves in the unusual position of being primarily administrators rather than warriors. Since modern soldiers are more likely to be literate than most historical people they'd subjugate and more used to the workings of a bureaucracy, they'd be better than average candidates to coordinate the actions of the ruling class.

Doing It Right

Mostly, we've been talking about what won't work. It might be useful to look at an example of something which *has* worked properly. For several centuries, from the end of the Greek Dark Ages to around the time Rome completed its dominance of the Mediterranean, all of the major Greek city-states established colonies around the Mediterranean and the Black Sea, from modern Russia to modern Spain. Excess population was sent off to establish new settlements, starting with initial expeditions of as few as a hundred men, potentially growing quickly to the low thousands. These settlements, though political allies and trade partners of their parent cities, were as independent as any settlement could be. After all, their parent cities could be months away by even a fast ship, and more than token support would be impossible. However, by putting little cities all over the landscape, the Greeks managed to establish long-lasting, autonomous settlements with a vast cultural influence.

So why did this work? The specific skills of the colonists probably weren't much different from the skills one might find in a large random sampling of their home city's population: farming and animal husbandry, carpentry, masonry, ship-building, forestry and woodcutting, smithing, cloth-making, pottery, and a handful of additional trades and skills (for example, literacy and law), and their equipment would have been little more than they could have brought with them on their ships. One significant factor may be the environment. Everywhere the Greeks went had fairly similar climate and reasonably similar soil to their home. Very little of the farming knowledge they had wouldn't have been applicable anywhere else they tried to live.

More importantly, though, they didn't just drop people off into a blank landscape. Although colonies were established in places where there weren't already cities, it would have been impossible to find a completely unpopulated region around the Mediterranean or Black Sea which would have been capable of supporting a city. This gave the first colonists the bare minimum of infrastructure they would need to get through that initial period of adjustment. They might trade for locally produced goods or militarily subjugate the surrounding territory in order to impose taxes, but either way, they'd have all-important material support which would let them set up their own settlement.

So what, finally, does this mean for groups of people jumping timelines or worlds? Mostly, it's that they need to bring their high-tech tools and materials with them if they're to make any use of their high-tech skills. Higher-tech societies are increasingly integrated, with a small handful of producers creating the bulk of the country, region, or even world's supply of goods used elsewhere. For example, for many years after World War II, the majority of the world's producers of certain classes of machine parts (those made from fused powdered metal) were based in north-central Pennsylvania. Transporting any region or group of people into a new world and not including that area probably means that not only would they not have the skill to produce a wide range of vital machine parts, they wouldn't have factories with the specialized gear necessary to replace them, rendering the skills moot. Any number of high-tech devices from computers to medical imaging devices depend on rare earths mined and processed half a world away from where the devices are built. Modern technology is immensely powerful, but that comes at the price of requiring tremendous specialization and a vast web of dependencies. World-travelers may be able to work at recreating those webs if they find themselves far from home, but without support, there may be too many strands to construct on their own.

Ca$h'n Gun$

Published by [Asmodée Editions](#)

Designed by Ludovic Maublanc

Illustrated by Gérard Mathieu

Development & advanced rules by Les Belges à Sombreros

Translated by Benoît Löscher

Full-color boxed set with six foam pistols, 48 bullet cards (eight each for six characters), 14 Wound markers, 14 Shame markers, 40 banknotes, six characters with plastic stands, 10 super power cards, three switchboard cards, one telephone card, six secret role cards (one cop and five gangsters), quick reference card, & rules; $39.99

Have you ever seen one of those flicks where a heist goes off perfectly and the thieves, in the spirit of camaraderie and good fortune, compliment one another on their seamless teamwork, then split the take equitably before going their separate ways? Neither has anyone else, and that's why there's no game based on the concept. On the other hand, *Ca$h'n Gun$* from Asmodée Editions scratches the itch for anyone who ever wanted to play out the climax of a Quentin Tarantino movie.

The object is to be the richest thug left alive at the end of the game.

As four to six gangsters gather at their rendezvous to split the loot, everyone gets a character standup, a matching set of eight bullet cards, and -- sweetest of all -- a foam-rubber gun. Each round, five of the stolen bank notes are flipped face up so the crooks know what's at stake. Everyone places a bullet card facedown in front of them. Five of them say *Click Click Click,* two read *Bang!,* and one says *Bang! Bang! Bang!*

When the godfather counts to three, everyone levels his gun at another player so the game table looks like a John Woo confrontation. Another three-count, and anyone who doesn't like his odds with X number of guns pointed at him can lower his weapon and hit the deck. He takes no wounds but gets a shame tile and loses out on this round's loot. Of the remaining criminals, anyone who played a *Bang! Bang! Bang!* card has a hair trigger and starts firing. He wounds his target, who gets no share in the spoils and only fires back if he also played a *Bang! Bang! Bang!* card. The *Bang!* cards are last; these wound just as before, only now combatants have a better chance of returning fire. *Click Click Click* means a bluff (try explaining that to Mr. Black . . .). Three wounds kill a gangster, removing him from the game. Bullet cards can only be used once, but are not revealed if the gunman didn't get a shot off.

The survivors then share in the cash. An even amount goes to each crook but you can't make change, so you divide what you can and the rest carries over to the next round. For example, if you have five $5,000 notes and four people still standing, each gets one of the bills and the fifth stays in. It's easier than it sounds for the entire take to be stalled in this fashion. Whoever is still alive and has the most money at the end of round eight wins.

Unless . . . unless someone's giving everyone funny looks. Like he was hiding something. Say, Tino's not a *cop,* is he? He might be, if players use that option. In this case, there's an extra step in which a phone call card circulates. It gets

passed under the table to everyone who survived the round. Only the cop can flip it to show he snuck away to raise the alarm. The first couple of calls suffer bureaucratic snafus, but the third alerts the feds. The officer has only six rounds in which to contact his superiors, and he may be lying down wounded on some of those. That also narrows down who *could* have made the calls. If he's alive after round eight, the SWAT teams descend and he wins; otherwise, there's no one to testify against these respectable businessmen. Throw in the "super power" cards that allow players to break the rules somehow and the fun spirals out of control.

The bank notes aren't typical Monopoly money; they're good, stiff cardboard bits. You only get one reference card (almost not worth including it), the cards are so-so material, and the standup figures (to identify who's who) have bases too small to stay upright properly (they promise two for each standup on the box, yet you only get six), but that doesn't really matter because *players get foam-rubber guns.* These are too cool, and feel great when clutched in one's larcenous hands. As for why they changed the color to orange from the original black when reprinting the game, well, use your imagination.

Some games really capture the essence of their topic; this one sits on the motif's chest and slaps it backhanded in the face. It's hard to explain just how exciting it feels, how right, and then the mantra repeats: *foam-rubber guns.* It sets up a tense situation, and the box lies about taking up half an hour for playing time. That's true the first time, and maybe when the cop or super power rules are introduced, but then it's back to 20 minutes for each of the several games that *will* be played, many of them long after the impatient spouse has called wondering if there was a traffic jam.

Playing with the cop option won't be for everyone. It's a tough role to play, and it's hard to win with it, but it really ratchets up the stress for the whole group, and this from a game that already has everyone sweating bullets and staring nervously at their "partners." This time it isn't enough trying to figure out someone's strategy, players must get inside their opponents' heads. The "super power" cards are perhaps badly named. They're handy little quirks for twisting the rules, not Matrix-style wildcards that break participants out of the moment. *Ca$h'n Gun$* is a hard-rocking and tough-playing pastime, and rare is the board game that pumps the blood while just sitting at the table.

Affiliates RPG

Published by [Anglo-Canadian Games](#)

Written by Janet Neilson with Zavada McElwain, Brian Menczynski, & Ben Yee

Illustrated by Toos Holman with Janet Neilson

Player's Guide, 124-Page Perfect Bound Book; $22
Game Master's Guide, 108-Page Perfect Bound Book; $22

Affiliates, published by Anglo-Canadian Games, is a new entry in the crime genre of RPGs. Split into two books, the *Player's Guide* and the *Game Master's Guide,* this casts the characters as almost, but not quite, members of the Mafia. Rather they belong to "Smythe Affiliated," also known as the "Affiliation" or the Mafia's Mafia. Created by an expatriate Englishman in the days of Prohibition, it consists of a single family or bloodline with a very loyal cadre of specialists in criminal activity. Its role is provide other criminal organizations -- the Mafia, the Yakuza, the Triads, and others (though for historical reasons, not the Organizatsiya) -- with specialist services such as safe houses, weaponry, information, even assassination, but all without involving itself in the politics or wars of their customer base. As members of Smythe Affiliated, player characters will undertake such tasks while also protecting the Smythe family from its rivals, the Merritts. But when it comes to the job, an Affiliate's motto is, "Simple. Nasty. Effective."

The whole concept feels like a television series pitch -- "They're mafia, but not mafia, only associated with them, but they still get to do all those bad things that Mafioso do. Plus they do it while looking cool and every character has both an easy-to-remember nickname, and an easy-to-remember signature skill that defines his role." These last two are represented by a call sign given within a month of the character being hired by Smythe Affiliated from the criminal gene pool and elsewhere, and by every player character having a Signature Trait, an ability that was also their reason for being hired.

Mechanically, Affiliates uses the "Caltrops System," which -- as the name suggests -- uses the humble four-sided die. The base action check involves rolling and adding a number of dice equal to attribute, rated from one to six, though rarely more than three following character generation. The target number is 10, impossible or difficult with two or three dice. This is where skills come in. Rated from one to six, a skill makes an action check easier by directly lowering the target number value. Skill specialties, Signature Traits, and Merits (advantages) likewise lower a target number, while a Flaw will raise it. The system is fairly easy, as are the combat mechanics, which emphasis how deadly weapons can be, and how long it takes to heal.

Character generation involves spending a set amount of points on attributes, backgrounds, skills, and Signature Traits, all bolstered by a handful of freebie points. Ten points are distributed between the six attributes all have a free starting value of one, but cannot have a starting value of more than three. The skill list includes plenty of specialties, an affiliate beginning the game with three free. Of the skill list, the only interesting inclusion is the Menial Tasks skill, which enables a character to get away with a boring job without him looking like it is beneath him. Backgrounds represent a character's resources, both material and immaterial. Available in five levels for each type, they include Connections, actual Equipment, Patron, Reputation, and monetary Resources. Merits and Flaws can be purchased with any of the points spent during character generation, just as long as the points balance at the end.

Signature Traits represent an affiliate's specialty, something that he is good enough to come to the notice of Smythe

Affiliated's hiring agents. All require an associated skill, have four levels, and are expensive to buy. The choice available includes Geek (Computers), Craftsman (Crafts), Socialite (Socialize), Assassin (Stealth), Legit (Business), Ride (Drive), plus one each for guns, blades, and blunt weaponry. Most characters buy a few levels of one Trait, but with freebie points can afford to buy the basic levels in two. The levels do seem arbitrary, so that for Craftsman you have in ascending order: Saboteur, Blueprint Cipher, Petrolhead, and Duct Tape Magician. The question is, what happens if he wants to a play an expert car mechanic but not take the Trait's earlier levels?

Finally, a player is asked to detail his character by answering various questions about his Affiliate's personality, background, and ambitions. He also needs to come up with a call sign and select personal equipment, including weaponry from a somewhat eclectic list. The creation process is not a difficult one, but an example would have helped. The feel of both system and character generation process is reminiscent of a slimmed down version of White Wolf Studio's *Storyteller System.*

The *Player's Guide* gives a decent amount of background upon Smythe Affiliated, including its history, branches throughout the USA, major Affiliates, and enemies, in particular, the Merritt family. There are also six ready-to-play characters that do enforce the role defining nature of Signature Traits, and also feel stereotyped, something that the players will have to work hard at to overcome with their own characters.

Although there is no GM advice in the *Player's Guide,* the types of work undertaken by a Regime (a local branch of Smythe Affiliated) is discussed, serving as pointers to the type of adventures a GM could run. The book is rounded out with a short bibliography. In comparison, the shorter *Game Master's Guide* goes into much more depth about the game's background and setting, exploring in particular the enmity between the Smythe Family and their rivals, the Merritts. Actually a mafia family, the Merritts are definitely portrayed as the game's bad guys. The intention is also to have a campaign played out involving the recent history of this rivalry. All of the NPCs in the *Player's Guide* are given more detail and also a character sheet. In addition, there are rules for handling poisons, car chases, damaging objects, plus a collection of generic NPCs.

Advice on getting a campaign started is basic, but workable. It suggests having the player Affiliates establish an outpost in uncontested territory with the aid of an exiting branch. Also covered is how a member is brought into the Affiliation, allowing the recruitment of new characters to be played out. While good advice, it does not really cover campaign play. This is not to say that the background lacks inspirational potential, but a GM is nevertheless left to his own devices. A trio of myths and rumors do at least suggest how the game should be played and lend themselves to adventure ideas, but again the work is up to the GM.

Physically, both books are unremarkable, with neat layout, adequate artwork, and fitting photography. It needs both an index (for which there is room) and an edit. There is even one paragraph that ends with a note to the writer saying how it needs to be finished and what cool stuff will be in it. Fortunately, the lack of editing has been fixed since my pre-launch edition, and the lack of index, the blank pages due to a printer's error, will be fixed in a second edition. The layout feels unnecessarily spacious, and a better choice of fount and tighter layout might have improved the game's look.

Better layout and organization might have eliminated the sense of repetition between the two books, the splitting of rules that could have gone into the *Player's Guide,* and the presentation of the NPC character sheets. Why not give their game stats as text (as they do for the generic NPCs) rather than as fuzzy character sheets? It might also make space for more GM advice and help with running a game. This is the *Affiliates'* Achilles Heel. It does not help the GM enough, especially in the long term, and more effort should have gone into helping the GM expand the written history into something that can be run as a game.

Not a game for the inexperienced GM -- both because of its subject matter and dearth of advice -- *Affiliates* is a solid design despite its omissions. Although there is no specific background upon other criminal organizations or the law, a GM can find ready information in Living Room Games' *Complete Mafia* and Hogshead Publishing's *Crime Scene* series. Of course, Affiliates is not the first crime-themed RPG, but in comparison with *Haven: City of Violence* it plays its subject straight, and its mechanics are relatively contemporary. All of which is not to say that you could not get a good game out of playing the Affiliates. It certainly lends itself to the gritty (and probably amoral) "honor

amongst thieves" genre, and the concept sells itself easily enough.

--Matthew Pook

Brian Colver, Recovering Psychic Addict

for *GURPS*

by Paul Stefko

Brian Colver is a young resident at a major urban hospital. He is currently assigned to the ER, dealing with domestic abuse patients, gunshot victims, and worse. While he often seems cold and aloof, he does his job very well.

But Brian Colver has a secret. As a teenager, he discovered he had a gift, a talent for medicine that transcended the abilities of any normal doctor. Brian could sense and manipulate the very essence of life itself.

Brian possesses a rare combination of Psychic Vampirism and Psychic Healing. He is capable of draining a so-far unidentified "life energy" from large groups (anyone within 300 feet) and channel this energy into others to heal their wounds, repair crippled limbs, and cure diseases. He cannot hold onto this energy very long; either he uses it to heal, or it dissipates harmlessly.

Brian is reluctant to use his healing powers, however, for two reasons. First, he knows that he can only heal by draining life from others. As a doctor, he finds it hard to reconcile this drawback with the benefits of his gift. More importantly, though, whenever he uses his healing power, he feels an unstoppable rush of ecstasy, leaving him incapacitated for minutes at a time. The feeling is, for Brian, highly addictive.

Brian has a long family history with addiction. Brian's father, grandfather, and great-grandfather were all police officers and all alcoholics. His grandfather died of liver failure, while his great- grandfather was actually shot dead while drunk on the job. Brian's father is currently living in a psychiatric care facility after driving his car into a bridge embankment, killing his wife of 35 years. Brian visits him at least once a week. He knows nothing of his son's "gift."

Brian was treated for alcohol abuse in his early 20s. He had started drinking in high school, soon after his first major use of his ability.

Brian had witnessed a bus accident, and without thinking, he rushed in and tried to help the first person he saw. The man was bleeding heavily, and while Brian used some of the first aid training he'd received in Boy Scouts, he could feel the man dying beneath his hands. Instinctively, Brian reached out with his mind and drew on the life around him; all around, other victims took their last, rattling breaths, as their life flowed out of them and into Brian's body. With a push, and a surge of bliss, Brian gave that life to the man he was helping.

Brian has only used his power a few times since then. He quickly found the feeling of healing another person to be overwhelming. He turned to alcohol to dull his mind to the pain of others. Through college, he drank heavily, even tried drugs on occasion, usually marijuana but also cocaine and heroin. He slipped into the dark spiral of the addict, and he knew he would never climb out on his own. The summer before he was to have started medical school, he checked himself into a detox program.

Today, Brian is a grim, serious young man. He presents a front of cold detachment as a defense mechanism against his power. If he doesn't care about a patient's pain, he won't be tempted to give in and heal them.

Brian doesn't know much about the origin of his powers or the extent of others like him. He was approached once, several years ago, by a woman who called herself Eva. She claimed to represent a group of people "of like mind and potential" and that she was authorized to extend an invitation of membership. Brian refused, and since then, "Eva" or the people she works for have been shadowing Brian, watching from a distance but never approaching. The message was clear: they were waiting for his inevitable change of mind.

Mysteriously, Brian occasionally receives anonymous packages containing research data: MRIs, genetic analyses,

digital recordings of parapsychological testing. All are seemingly reproduced and verified by multiple groups, but none have ever been published in any medical journal Brian has ever been able to locate. He is slowly piecing together a comprehensive knowledge of psionic ability, despite never actually having met anyone else with demonstrable powers. Brian can't help but wonder if "Eva" and his mysterious benefactor are somehow connected.

Adventure Hooks

Brian Colver is designed for Psychic Wars or psionic Secret Powers campaigns (page 218 and pages 214-217 of *GURPS Powers,* respectively). The easiest way to introduce Brian into a game is to have one of the PCs taken to Brian's ER following a serious injury (gunfights and car crashes are rarely in short supply in many PCs' lives). The worse off the character is, the more likely it is that Brian will slip and use his ability to save him. If the heroes include anyone with ESP or the ability to detect psionic powers, they could easily sniff Brian out in the process.

Alternately, Brian could finally decide to seek out other psis on his own. With his growing collection of psionic research, he should be able to piece together reports of strange occurrences and trace it all back to the PCs and their activities. Does Brian want help, answers, maybe even a cure?

Finally, Brian could take up "Eva's" offer and join a shadowy cabal of psis (or even the Cabal itself, which has all manner of uses for a young psychic vampire). He could then become a rival or ally of the PCs, depending on their relationship with this group.

The Last Days of New York

by Paul Drye

It was late 1977 when the first cases started showing up. Everyone had seen *The Boy In The Plastic Bubble* the year before, so they had some idea about immune deficiency. A few New Yorkers, often poor, died of something mysterious, then a few more. Philadelphia and Los Angeles started seeing cases too, and then the bomb dropped. Just after Christmas the Center for Disease Control announced that the new disease was infectious by air, and that it had a very long incubation period -- sometimes as short as a few weeks, but others over six months and with the horizon climbing. Worse, the discovery had been made by statistical analysis of cases; at first there was no test for finding out who was still asymptomatic yet passing the disease on. Worse, there was no cure, and this acquired immune deficiency looked as if it would always be fatal in the long run.

Later work would show that the percentage of the American population already infected with Communicable Immune Deficiency was about ten percent, particularly concentrated in the large cities of the East and West Coast, and Chicago. Despite widespread efforts to set up "public barrier prevention" by distributing paper face masks and the like, that figure was over 20% when the first CID blood test was developed in September 1978 and it became clear just how widespread the problem was.

By then, about a half a million people had died, two million were obviously ill and in decline, and another 40 million were "dead men walking": asymptomatic, but with every reason to believe that their own number would come up eventually. For six months, many people had been refusing to go to work, shopping malls and grocery stores were near-empty, and most public entertainment had been outlawed on health grounds. The economy dropped in size by 50% and the only thing preventing riots in the streets was fear of catching something from the other rioters.

As the United States seethed, Europe started its own decline when a cluster of cases appeared in Paris and began to spread. Armed with knowledge gleaned from the American outbreak the French authorities managed to blunt the infection, but complete eradication was elusive. With CID's long incubation period, it was impossible to track down everyone who'd made contact with each new case, and problematic to isolate the many who could be found. Cases rose to 8% of the population, and started to spread outside France's borders. West Germany and the United Kingdom were soon fighting the same battle.

The U.S.S.R. and the Warsaw Pact countries had only a few cases, thanks to their immediately closing off contacts with the West and working to distribute face masks and latex gloves before the pandemic hit them. The infected (and their social circles) were ruthlessly isolated, and in some cases euthanized out of hand. Still, the Kremlin worried about the problem incessantly as their long-term rival across the Atlantic collapsed. Perhaps the disease would get into their empire through Yugoslavia, or from Greece into Romania, and then who knew what would happen?

The particular thorn in their side was West Berlin. Protected by treaty that connected it to the rest of the world by air, it was an obvious flaw in the U.S.S.R.'s plan to isolate itself and its satellites. After months of dithering, and after cases

of CID started appearing in Hamburg, the Kremlin made the decision to shut down the world's connections to the city.

It was certainly a defensible moral position, but unfortunately the entire situation was poisoned by old Cold War animosities and the new feeling of crisis. The recent Helsinki Accords, in particular, made the whole maneuver legally questionable. In the chaos of mid-1978, NATO decided to make an issue of the new blockade, only to have the US portion of the military response fall apart. In France the threat of their own wounded country declaring war and tempting a nuclear strike caused huge populist riots and the downfall of the Giscard d'Estaing government. A Communist/Radical-Left coalition took over and essentially switched sides in the conflict. In the UK, the minority Labour government of James Callaghan was tied up by its own radical wing, and after an emboldened U.S.S.R. crossed over into West Germany and occupied it virtually unopposed, Britain capitulated and moved out of the United States' orbit.

With the Russians moving in, refugees from Western Europe left in the tens of thousands. Unfortunately for them, no country was willing to accept them for fear of the spreading infection. The United States seemed like the best bet, but the Coast Guard swept up most of the small boats (arguing, plausibly, that North Atlantic conditions made all small-boat crossings a case for humanitarian rescue). Anyone caught was brought to one of three processing centers: Wilmington in North Carolina, Key Largo, or Governors Island in New York. From there they were moved into the local quarantine zone. Manhattan rapidly developed a European, primarily British, subculture composed of immigrants who were destitute even by New York's rapidly lowering standards.

It's now October of 1980, and it's not at all clear that the Big Apple has hit bottom yet.

New York City

The population of New York is about a quarter of a million now. Most fled when it became apparent that the city was breaking down entirely, and that water, food, and law were becoming scarce. As many as a million and a half die-hards stayed, but between CID, other diseases, and violence most of them have perished.

On the mainland, mandatory testing of the entire U.S. population, quarantine camps in isolated places like Kansas and Nevada, and generally paranoid social behavior by the public have reduced the number of new CID cases to an appalling-but-manageable few thousand per month. New York (as well as a few other major cities) are considered too far gone for this to work. Unless a cure is developed, the American government's strategy for New York is to isolate it and let the plague burn itself out until the population is small enough to be taken to camps. After that, it will be reopened for settlement. They are expecting to be able to do this by 1985.

The National Guard has been mobilized in every state, and has been used (among other things) to quarantine New York since December of 1978. New York has been cut at the Cross Westchester Expressway to the north of the city. In the south, Staten Island is still "free," with the blockade being on the Verrazano Narrows Bridge; however, all of Long Island has been thrown to the wolves so that Long Island Sound can be used as a firebreak. The western border of the quarantine zone is the Hudson River, with the tunnels and bridges leading across it closely watched. At first people were still let out if they passed a CID test and stayed in a quarantine camp for another month, but by January of 1980 no one was passing the test anymore and that program lapsed.

Until the population is small enough for the Guard to move in safely, they're restricting their actions in the city to using the 105th and 109th Airlift Wings to drop food and supplies, concentrating on the poorest neighborhoods south of Houston Street as well as Harlem in the north. Most of the city between is empty and wrecked, with windows shattered by old riots, looters, and three years of weather. Cars are abandoned and rusting, their gasoline long since siphoned. The feral cat population has boomed, as abandoned pets figured out how to live off the city's pigeons and rats.

South of Houston

The rigors of illness and malnutrition have severely reduced the number of old and young in New York. People in their teens and 20s dominate the remaining population, and in the chaotic and nihilistic atmosphere punk culture has

spread widely. By day they live on the handouts that fall from the sky over SoHo, squatting in the buildings that haven't got collapsed floors or roofs. By night, they use scrounged car batteries to plug in their amps and either play or dance to exhaustion, and getting blindingly drunk or stoned if they can. If they don't wake up the next morning, what's the difference?

Without hope or even much to do, the punks have split into two factions based around love for American or British punk and engage in pitched street battles over it. Individuals are accosted with the challenge "Hell or Rotten?" and are beaten if they answer wrongly; most long-timers know which areas are safe for them and which are not.

Harlem

Fresh water is an issue in Manhattan. The Hudson is brackish, and the island's natural streams and springs have been paved over for a hundred years or more. The solution many New Yorkers have hit upon is to move into the subways, which are rapidly becoming the city's new "natural" waterways. Most of the underground tunnels are flooded after rains, and keep that water for a while now that the subway system's drains and pumps are failing due to lack of maintenance. To the north and east of Central Park, in Harlem, the A-Line is flooded even between rains, and has picked up quite a number of people from elsewhere to replace the population lost to disease and flight. The rest of the city may be verging on a ghost town, but Harlem is still recognizably a functioning neighborhood.

Naturally, most people still live above ground, but as Harlem's buildings decay and collapse, more and more are moving into the tunnels themselves (particularly in winter where the thermal inertia of the rock and concrete around the tunnels keeps temperatures 10 degrees or more above freezing).

Sanitation is also a problem, but again the flooded subways are helping. In Harlem the subway channels are used as sewers too. This has attendant smell and health issues, of course, but it's still about the best option in the city. The situation has improved since last winter when there was a noticeable increase in the flow of the water. Some worry that the Central Park Reservoir has started to leak into the subways, but few care very much.

The Central Park Farmers

New York's other stable settlement is in southern Central Park in the area known as the Sheep Meadow. The core of the community is the local Girl Scout organization, which had enough members left to organize after the city was cut off from the mainland. Led by a resourceful troop leader named Carolyn Ellenbecker, they managed to get a couple of dozen Girl Scouts and what was left of their families established in the city's Scout offices; from there they scavenged canned goods and clean water. It soon became apparent that they might be on their own for some time and so they moved north to Central Park. Between their own naïve woodcraft and research expeditions to the New York Public Library about a half-mile from the park, they quickly learned how to set up a permanent camp that's expanded into a passable village of about 350 people.

Corn was scoured from nearby grocery stores and planted, pigs liberated from the Central Park Zoo and set loose to feed on the local acorns, and nuts and fruits are retrieved from the Shakespeare Garden and the paths' occasional walnut tree. The first winter was harsh, but the city's preserved foods were not entirely gone and the village eked through. Now they're entirely reliant on their own resources, but those are growing stronger monthly.

The Central Park farms are low-tech by design, trying to stick with only what they can make or repair themselves when possible. There's no running water or electricity, but at times life there borders on rustically pleasant as long as one stays away from the hostel for the sick in the former Tavern On The Green. Unfortunately, all the people in the settlement are CID-positive, and will likely die in the next few years.

Riker's Island

Ironically, an extreme concentration of undesirable elements have made Riker's Island and the surrounding shore of Long Island one of the most comfortable places to live in this timeline's New York -- so long as some gangster is

looking out for you.

The prison island itself dominates the situation, as it was already designed to be a semi-independent town with its own housing, medical clinics, power plant, and water supply. Nearby Randalls and Wards Islands have a water treatment plant and plenty of parkland for growing food. Across the river by the Rikers Island Bridge are the main Con Edison power plant for the city and LaGuardia Airport. The former is running at a fraction of its capacity, but still keeps Astoria lit up more often than not. The latter has plentiful amounts of airline fuel and baggage cars (which can be converted into primitive motorized farm equipment) left behind after flights into and out of New York were suspended.

Of course, the major problem with this entire set-up is the power structure: Riker's Island was, after all, one of the largest prisons in the Western world. As New York emptied, fewer and fewer guards showed up for duty. The power kept failing, and during one of these blackouts the prisoners (who'd become progressively angrier and more desperate about issues ranging from fear of the plague to a lack of cigarettes) rioted and managed to take over the island. From there, they rapidly organized along gang and ethnic lines, and spread rapidly into Astoria and Jackson Heights to the south.

The gangs fought for six months using weapons looted from gun stores and even a few makeshift mortars fashioned by Vietnam vets. Eventually, through extinction and consolidation, the area was brought under the control of one man. Constantine Mitsopoulos was a grifter before he went in; now he's King of Rikers. He's a hero to the Greek immigrants in Astoria, whose support he relies on, for enforcing his favorite saying (to paraphrase): don't perform bodily functions in your own nest. Even so, people who get on Mitsopolous' bad side -- and there are a lot of them -- are little better than slaves. Some end up as fodder for the blood sports at Shea Stadium.

Most of his men's aggression is directed outwards across the Triborough Bridge to Harlem and the various access routes to southern Manhattan. The Central Park Farms remain undiscovered because of their relatively small population and the mysterious 1979 dynamiting of the 59th Street Bridge and Queens Midtown Tunnels that lead to them. Raids north and south bring back air-dropped packages intended for the people there, as well as more slaves and currently useless prestige items like jewelry. There's also a well-developed system of scrounging for tobacco, alcohol, and drugs throughout the city.

Mitsopolous is one of the very few people left in New York who is not CID-positive. He is obsessive-compulsive about germs and phobic about bodily fluids, oddities that have turned into a useful survival mechanism under the circumstances. He does not leave his home, formerly the gatehouse on Riker's Island for anything but the most urgent reasons, and the air around him is redolent of soap and perfumes.

Characters

Ronnie Faustino: A resident of East Harlem, Ronnie was a carpenter and family man prior to CID. After losing his wife and twin sons, his sanity became precarious and he moved into the Harlem Fire Watchtower in Mount Morris Park (on the south edge of the heavily populated part of Harlem); it had previously been unwanted because of its open cast iron construction and elevated, rain-exposed position, but Faustino put his trade skills to work and turned the top platform into a passable hut.

He pays his way by watching for fires in Harlem, or attacks from Rikers. The fate of his family has made him obsessively protective of the people in the blocks around him, so he's actually pretty good at his job despite a slight tendency to cry wolf. Visitors will find him a useful source of maddeningly vague tips about movements in Manhattan Island.

Kelly Brewington: A 16-year-old Scout with the Central Park Farmers, Brewington is a lowercase-s scout for the village, often spending several days prowling Manhattan looking for whatever the settlement needs this week. In the two years since being cut off in New York, she's become a decent archer, learned a lot of "urban woodcraft," and memorized much of Manhattan down to the last detail. She lived with her mother, who has since died, and may have a father; he was in Ohio on business when the quarantine came down. She talked to him on the phone a few times after the quarantine began, but the network broke down 18 months ago and she hasn't had any contact since. Belief in his

shadowy existence somewhere "out there" is what keeps her otherwise ruined life running, not any connection to the other Central Park survivors. While in the settlement, she's often screaming at people, or worse.

Visitors to this timeline would do well to talk to her, or even hire her as a guide. She can get them into Harlem and in touch with the people who help run it. SoHo and Rikers territory are more difficult -- no one goes to either in small groups -- but she'd be helpful when organizing an expedition.

Milan Barnett: Milan is a New Yorker, but of the Homeline variety. He acts as an agent for the various corporations and trusts buying up this world's New York (see below). He knows him home city well, and has spent years poring over the city's land title records for the 1970s, figuring out who owns what and how to get it from them for nothing. He doesn't actually leave Homeline very often -- that's what contractors are for -- but if something goes very wrong and there's a lot of his very important money circling the drain, he might end up having to go. No, he doesn't know how to fire a gun; "What kind of person do you think I am?" He needs bodyguards, and he passably pays well even if he treats them badly.

He's a good source of contract work that will send adventurers to this New York, as someone has to check out properties and get that information back home. If played right, players might enjoy shooting him for karmic reasons, though doing so will cause problems later.

Infinity and the Last Days

Until the outbreak of CID, this timeline was unexceptional. Dubbed Johnson-2 (for the man who beat out John F. Kennedy and Richard Nixon to be the American president in 1960), it was contacted 14 years ago during its 1966. As it was on Quantum-5, there was no pressure to examine it for Centrum influence and nothing interesting about it from the standpoint of trading. Infinity set up a small office in the local Boston then ignored it.

When CID hit, however, Infinity's quarantine procedures kicked in. The virus had actually infected several staff and spread to other timelines, but Infinity's medical technology was quick to solve the problem. CID was just a variant on HIV-1 that developed the nasty twist of being transmissible through sneezes and coughs; Homeline's technology was easily up to detecting it and curing it. Travel restrictions to Johnson-2 were lifted six months later, and Infinity agents may travel there so long as they follow the usual medical and decontamination routines on entry and exit.

Paradoxically, the downward turn in Johnson-2's fortunes made it more interesting to Homeliners. Miracle Workers began humanitarian efforts, trying to spike the world's knowledge of the disease with the right hints about what was going on and how to fight it; the discovery of a test for it by local medical authorities in less than ten months is largely due to their efforts. Unfortunately, the kind of medicines needed to slow or halt the pandemic are clearly beyond Johnson-2's abilities (requiring moderately sophisticated genetic technologies), and so Miracle Workers have been unable to come up with a plan to offer more than charity and other relief.

The other, more ethically questionable interest that Homeline has is economic. Now that the city is at rock-bottom, various Homeline corporations are taking a long-term (and disease-immune) view to the ultimate value of Manhattan Island and are buying assets from people desperate to sell. Eventually the plague will recede, and Johnson-2 will recover. The Americans seem to be getting a hold on the disease, and if nothing else about 15% of the population has CCR5-D32 genes and are nearly immune to HIV infection. It may be only a few years or it may take a few decades, but things will eventually settle down and life will go on in some way. New York City will likely become a focus of the world economy again, and when it does, Homeline interests will own a lot of the real estate.

There are rumors of one other new project too. A long-term nightmare of Infinity's is that a world jumper will be born on a Gotha virus timeline and spread the contagion elsewhere; this is one of the major theories for how it's managed to appear on several quite separate worlds. CID is the same issue writ somewhat differently. There are signs that a shadowy group within Infinity is scouring the timeline looking for jumpers, and doing what it takes to neutralize the ones it finds. If they're willing to join up, they're accepted. If not, it's Coventry or worse.

Adventures in the Last Days

One Size Cures All: Infinity receives a tip, though their Homeline Russian liaisons, that Johnson-2's Russia has developed a novel approach to control CID. The remedy is a phage virus, capable of infecting only T cells that have themselves been infected with CID but doing it better and faster. By killing the T cell before it can develop a full load of CID retrovirus, it dramatically reduces the speed of CID's onset and can even prevent immune deficiency from developing entirely so long as the patient is periodically re-infected with the phage.

This is quite unlike any other known retroviral cure, and Infinity decides they want to acquire some for research purposes. Since it also provides plausible deniability if it's provided to the rest of Johnson-2, Miracle Workers is profoundly interested in it too.

The difficulty lies in spiriting it out of Johnson-2's U.S.S.R. The borders of the Warsaw Pact are sealed off to travelers from the West, and the KGB pays close attention to leakier routes like via Iran or China. The best solution might be by transiting in through Homeline's Russia, but there's the usual problems with lack of cooperation there. There is even the question of why the Russians bothered to tell Infinity about the phage in the first place. *Cui bono?*

Isolation: Voyeur Records is a small record label on Homeline which specializes in retrieving dark rock music from disaster-ridden timelines and marketing them to angsty teenagers. One of their execs and his heavily armed entourage has come to Johnson-2's Manhattan to record Falling Curtains, a punk band fronted by a deep-voiced British refugee who goes by the pseudonym of Transmission. The exec is now 48 hours overdue to return.

The Last Days In Other Settings

This version of New York fits into apocalyptic or cyberpunk sci-fi settings best, the only difference between the two being how bad things are in the rest of the world. It can also be used in another city, but be careful about where you move it. A lot of its frisson comes from the Hestonian "You maniacs! You blew it up!" fun of playing with well-known locations. London or Paris would probably work as well, with other candidates depending on what part of the world one hails from.

Space opera settings are more problematic, as the same stricture probably requires the sacrifice of a major city, and there likely aren't many that will have much emotional impact on players unless Earth is involved. If it's not, your other option is to use the inevitable "capital world" of your setting. Killing that off, however, does have larger implications for an on-going campaign.

Modern-day campaigns have a similar problem. Infinite Worlds has as many New Yorks as you need, so sacrificing one isn't that big a deal . . . not so with a supposed "real world." Horror campaigns do have some intriguing angles to use, especially if you're willing to run with the theme of "Cthulhu (or reasonable analog) may have already won." Under those circumstances, why not sacrifice New York as a consequence of player actions? It will certainly shake them up and get them wondering what other big and terrible changes you're willing to implement if they fail again. Merely getting them thinking this way is probably enough if a radically changed New York is about as much as you're willing to put into your campaign.

Johnson-2's New York can also be transposed to a fantasy setting if you have a city even vaguely resembling Byzantium or, failing that, Rome. Plagues are a common event in some fantasy settings, and even the ones without will withstand something that resembles the Black Death in many ways. One issue to consider is why it's so widespread and resistant to cure, as that implies the defeat of magical efforts to end it. A god's curse would work, and also explain why the kingdom's authorities have abandoned a major city entirely: It would be impious to do otherwise. Similarly, the divide between punk clans is based on the Blue/Green dichotomy in Byzantine culture; some readers may also recognize the ghost of religious strife in Scotland and Northern Ireland, the latter stretching down to the current generation.

Murphy's Rules

Six 'Clix Morris

by Nikola Vrtis

This game for two players is a variant of Nine Men's Morris. Nine Men's Morris is a European strategy board game that first appeared during the Roman Empire; historians believe that it was popular among soldiers. It gained special prominence during the Middle Ages, particularly in England. The game also goes by such names as Mills, Merrills, and other variations on that theme.

The object of the game is to remove ("pound") or block all of the opponent's pieces.

Setting Up the Game

In this version of Nine Men's Morris, players need six *HeroClix* figures, with a maximum of total of 200 points. Also needed are the *HeroClix* rules, which can be found on the WizKids web site (on the rules page) and a *HeroClix* map with a large open space of at least nine squares on each side (such as a warehouse or park) or an assembled printout of the game board. (Players could also use maps of other locations, but the game might last longer.)

Participants can purchase *HeroClix* through most local and Internet retailers. Alternatively, players can use the basic generic characters created for this article and any sort of counter or figure with a base of no more than 1.5 inches at its widest point, such as Steve Jackson Games' *Cardboard Heroes Modern Characters.*

Almost any character goes, with a few exceptions: No double-base, giant, or colossal characters are allowed. Players may not use battlefield conditions or feats. Players may include flying characters.

To decide who goes first, each player rolls two dice and adds the results. The highest roll goes first; reroll any ties. The players then takes turns putting their figures anywhere on the map or board. (Players using the board provided with this article may not place characters in the solid black area.) After the participants have set out all of their figures, the game begins.

Playing the Game

Participants take turns in the same order as they placed their figures. For attacking, movement, and power use, use the *HeroClix* rules, with the following modifications.

Movement and Blocking Movement

Blocking Examples

Standard move rules apply, including the fact that characters may not move off of the edge of the board. Additionally, players using this article's board may not move (including hovering) through the solid black area on it, though flying characters may soar over it. Maps from other sources may have their own restricted areas.

A character is blocked and prevented from moving (including breaking away) if opposing figures surround it in a square (one figure in each square diagonal to the target or one figure in each square horizontally or vertically adjacent to the target; see the example picture).

If two or three figures are in the correct spots and one or two are not, the figure is not blocked. For example, if two figures are in squares diagonal to the target and two figures are in squares vertically adjacent to the target, the defending character may break away on the next turn.

Example Attacking but Not Blocking

Attacking and Pounding Characters

To attack an opposing character, the player must have at least three of his figures adjacent to the target figure (see the example picture). To remove (or "pound," to use the Nine Men's Morris term) a character, the target must receive enough clicks of damage to cause three KOs to appear in the stat slots.

Those who may move and attack as a single action (such as transporters and those with Hypersonic Speed) may only attack an opposing character if at least two friendly characters are already adjacent to the target.

Blocked characters may attack and be attacked, assuming the conditions are right.

Characters who are blocking opposing figures may themselves be blocked or attacked.

A player who is down to two characters may only attack if he can maneuver an opposing figure into a corner and surround it on two of the three adjacent squares with his figures.

Attacking Examples

Variations

Object Lesson: After all players have placed their figures, they take turns putting out any three objects. These objects are used as per the rulebook and other guidelines relating to them.

A Pounding from Anywhere: This variation relates to the special markings on the board that accompanies this article. If one player gets three of his characters on any three spots marked with an O in the same ring, one of those characters may attack any one opposing character anywhere on the board, regardless of the range. There is a price for this bonus: The player must lower the attacking character's attack value by 2 for the duration of the attack.

Generic Character Cards

To use these cards, you'll need a eight-sided die for each character. Turn the die so that the maximum clicks of damage shown on the card is face up. Each time a character takes a click of damage, turn the die to the next lower side. Stat values do not go down as a character takes damage. Additionally, characters with super powers retain the use of those abilities until they are KO'd.

Contributor's Notes: Here Today, *Paragons* Tomorrow

A few weeks ago saw the official street-date release of the ***Mutants & Masterminds*** setting book ***Paragons.*** ("Street-date release," of course, is industry code for, "They had a crate of them at GenCon.") Now, this fine volume was primarily Steve Kenson's baby, but he let a few freelancers toss their hats into the ring and offer up their own contributions to this world. And since I was as eager to work on this book as Kenson was eager to have me stop harassing him via cell phone several dozen times a day, some of my works are contained therein. While my discussion of my work in this volume may be seen as little more than self-hucksterism, I assure you that my motives are entirely devoted to you, the gamer, and are completely noncommercial [INSERT AMAZON LINK HERE]. So hopefully you'll glean a bit of insight into my creative process, and maybe tap an idea or two of your own for your game. Oh, and I'm including a few scraps that aren't in the actual book.

First off, actually, "setting book" is a bit of a misnomer. ***Paragons*** is more of a make-your-own-setting book, with a broad overarching idea ("super-powered individuals pop up not-too-recently, and are likely going to change the world") and a bunch of pieces-parts that can be plugged in and used . . . or not. I don't think there's any idea, character, or organization that is absolutely "essential" to the setting. This let me approach the project like an assemblage of *Pyramid* articles; whenever I write a piece for here, I usually do so with little expectation that the audience has access to little more than the basics. I ended up contributing two characters and three organizations, and I treated them all similarly to how I would approach articles.

The organizations were the more challenging of the two types, since I only had a few thousand words apiece to present an entire group and make it as logical, interesting, and playable as possible. (To put it in perspective, each organization got about half as many words as either the [American Civil Liberties Union](#) or the [National Rifle Association](#) Wikipedia entries.) Although not a mandate, one of the ways I accomplished the "toolkit" feel of this setting -- and saved a few words to boot -- was by avoiding *all* character names or assignments in the organizations; there's no one mentioned in the history sections, nor "current members" roll call.

Why? I didn't want these to feel like all the "good" parts were already assigned or even conceived, like often happens in some settings <koff>whitewolf<koff>. For example, one of the groups was the Paragon Professionals Society, a combination trade organization and advocacy group for paranormals. I could've made the head of the PPS be "Unum, the world's smartest lawyer," but what if a player wanted to play a smart lawyer? Do I force the GM to sand off the references to Unum and plug the PC into that role? What if the player doesn't want his super-smart lawyer to be part of the PPS? I find it very difficult to strip the roles of established characters in a setting; for example, in an ***Aberrant*** campaign, it would be near-impossible to recast the roles of Caestus Pax or Divas Mal and still have it resemble an ***Abberant*** campaign. Likewise in a remotely canonical ***Forgotten Realms*** campaign, someone taking the role of wizard or fighter just needs to contend himself with the fact that he'll never be as "cool" as Elminster or Drizzt.

While I realize I don't speak for all gamers, in my experience, it's near-trivial to come up with throwaway concepts that can fill out required NPC roles in organizations. ("Need to figure out the Inner Circle for Club X? Umm . . . The Fool, Skipper, Mr. & Mrs. Millionaire, Starlet, Prof, and Merry Ann. My sitcom education finally pays off!") Comic books often have throwaway heroes and villains who aren't particularly interesting, and only serve to advance the plot, make a point, or provide a momentary obstacle for heroes. In an RPG, though, this serves almost as a no-win situation; either characters are fully-fleshed and threaten to overshadow the PCs and their possible roles, or they're so disposable that one wonders why they're taking up space at all.

[Aside: For those looking for article ideas, there might be a possibility for quicker-than-quick character concepts: say, 100 throwaway supers characters, with a name and briefest of personality snippets . . . no more than 20-30 words apiece, I'm guessing.]

Anyway, I designed all my organizations with the goal that any of the PCs could easily take up any roles in the organizations. It's my fondest wish that a player working with the GM in a ***Paragons*** campaign might say, "I want to be one of the founders of this organization," or "I notice that it doesn't say this organization has an expert on *<something>*; can I fill that niche?"

And now, brief notes on the three organizations I did:

The Paragon Professionals Society: I've talked about them briefly already. As I envision them, they're the group who'll *always* weigh in with an opinion on paranormal-related issues . . . especially those that relate to the law or or how the rest of the world views them. The most challenging part of envisioning this group was coming up with examples and opinions that were at least somewhat universal; a ***Paragons*** campaign where paranormals are so accepted that one is running for President will see a very different role for the PPS than one where the courts are considering changing conviction rules for paranormal-related crimes from "beyond a shadow of doubt" to "preponderance of the evidence." Nevertheless, I tried to make a group that PCs could join and be part-time members, helping out for a mission or two a year (or more, if desired).

I never made a mock-up of their logo, but I envisioned it as a stylized version of the Greek God Atlas in a suit and tie, with the "globe" he holds displaying the letters "PPS" in the center ringed by the words "Paragon Professionals Society."

Zero Latitude: My eco-terrorist group; the rationale here was that, if Zero Latitude Logo
folks suddenly had world-changing powers today, many of them would
be tempted to . . . oh, change the world. This one was *very* hard to
design around the "no names" concept. It's tough to come up with an
environmental-themed group that doesn't espouse a world-view one
way or the other, but hopefully I succeeded. (If so, I was no doubt
helped by my own uncertainty about whether or not a group of super-
powered folks hell-bent on solving environmental issues -- humans be
damned -- would do more harm than good for everyone, let alone
humanity.) I created them with the idea that they would always serve
as a wild card in any interactions with other paranormals; ideally, I see
this group trying to (say) blow up a plane over the ocean one week
because they know that there's a deadly unnatural virus aboard, and
then saving another plane the next week from crashing into a group of
California redwoods.

This is the logo that I came up with for them. I wanted something that would be similar to the "anarchy" symbol or the "Zorro" slash, where it could be done quickly by its members. (In case the symbolism isn't obvious, it's supposed to represent a lightning bolt running through the Earth, representing their speed and object of their devotion.)

The Paramount Club: This was intended as the "fraternal" organization for Paramount Club Logo
paranormals: Show up at one of the clubhouses, drink, socialize, plot. It either
serves as a backdrop for other adventures, or a central ground in its own right.
I tried to create something that could either be like the Catholic Church or the
[Loyal Order of Water Buffalos](#) -- either globe-spanning major players with
lots of fingers in various pies; or a kind of goofy, trivial place that exists as an
excuse to hang out. In hindsight, I might have been a bit too ambitious with
some of the "behind-the-scenes" machinations (especially given that
paranormals are supposed to be fairly recent), but I figure that even if all that
stuff is ignored it still serves as a good set piece for a bar fight or three.

Here is the logo, evocative of a glowing mountaintop ("paramount" . . . get it?
). When designing it, I only had one goal in mind: "Would it look cool as a
wax seal or signet ring?" I didn't think of it at the time I came up with it, but
hopefully Steve Jackson Games doesn't have a trademark on the equilateral
triangle.

* * *

I also did two characters in **Paragons.** Again, I threw myself entirely into the "modular" ideal, and tried to come up with characters that could be used in a variety of settings: antagonist, protagonist, window dressing.

[SPOILER ALERT!]

For example, one "character" -- Logar -- is a force of energy that possesses random people, imbuing them with super-speed for 24 hours but also possibly draining a bit of their intelligence as the force becomes more and more sentient itself. It can serve as a Good Thing (a hero or ally gets a perk of speed), a Neutral Thing (something to investigate and figure out), a Bad Thing (an evil-doer goes on a super-fast crime spree), or a Really Bad Thing (a super-fast force of energy might eventually become one of the smartest entities in the world.)

[END SPOILER ALERT]

Hopefully I came up with interesting enough concepts that they can be used in a few different ways, even with the same group of heroes.

In all, I loved working on **Paragons;** I love the idea behind the toolkit setting, and hope that more campaigns take up the torch. And I'm also grateful to Steve Kenson for letting me contribute, and I'm equally grateful that he didn't renew the restraining order against me. And I'm grateful for you, my long-patient audience, for allowing me this moment of authorial self-indulgence.

--Steven Marsh

Pyramid Review

Last Night on Earth, The Zombie Game

Published by Flying Frog Productions

Designed by Jason C. Hill

Layout, photographs, & graphics by Jack Scott Hill

Illustrated by Matthew Morgaine

Miniatures by James Ma & Gael Goumon

Music composed by Mary Beth Magallanes

Full-color boxed set with town center game board, six L-shaped outer boards, eight Hero figures, eight character boards, five scenario boards, 14 Zombie figures (seven each in two colors), 60 Hero cards & 60 Zombie cards (40 each for the basic game & 20 each for the advanced game), two sheets of counters, 16 six-sided dice, six reference cards, rulebook, and music CD; $49.95

Are they going to stop making zombie flicks? No. Are they going to stop making zombie games? Equally unlikely, especially if they're as entertaining as *Last Night on Earth, The Zombie Game.*

The object of the game, subject to alteration by the various scenario cards, is to survive the mission (if playing a Hero) or destroy all the living people left in town (if a Zombie).

Heroes and Zombies have separate decks, but only the Zombie player gets a hand of cards; the good guys have to scavenge theirs, trading their movement for a card draw when inside a building. The initial Zombies are spewed from pits on the board (the morgue, the graveyard, etc.), while humans are placed according to their character sheet; the nurse begins at the hospital, for example, and the high school quarterback at the gym.

The board is a customizable affair, with a center square surrounded by "L" shaped sections that cup each corner (it takes only four to frame the middle, but six are provided for variety). The center section has two sides; one is a wide-open park and the other, a mansion. A grid overlays the boards, and figurines move square to square (Heroes roll a die while Zombies shuffle one space at a time). Where the mansion has a normal grid (for the "Defend the Manor House" scenario), the park side uses oversized spaces to streamline movement. Heroes make better progress from end to end.

The Zombies are a pretty homogenous bunch of undead (though advanced rules turn conquered Heroes into "Zombie Heroes"). The good guys are more detailed: They have different wound totals and possess special abilities to give them the edge fighting the hordes. Game play is straightforward: Move and fight. Cards alter the flow of events. Some are weapons, some empower the user with heroic powers, and some affect the play of the game overall. The best way to kill the undead is with a gun from a pleasant remove, but if the two sides mix it up in melee they compare six-sided dice rolls. Zombies only get one to the typical Hero's two, but they win ties and, when a flesh-eater is killed, more are probably ready to respawn or take its place.

A game takes from an hour to 90 minutes, depending on the scenario; the basic setup is "Die, Zombie, Die," which is brief and requires the death of 15 Zombies in as many turns (and gets faster as players play it again . . . and again . . .). Five other adventures require rescues or gassing up the getaway vehicle, which in turn demands that certain items or people be collected or protected. A track is provided for counting up most anything: dead bodies, hours until dawn, etc.

The designers reportedly worked on the game for the last eight years, which is probably why nothing has been left to chance. The components are fully realized, with full-color pieces, heavy character cards, excellent sculpting on the figurines, and a gallery of illustration that consists almost entirely of live-action photos (Jenny the farmer's daughter is already an early fan favorite). The cards are good and thick, though they've been packed tightly and covered with some surfacing that makes them stick together something awful. The dice are standard six-siders, yet for some reason the "one" pip is a single oversized dot and the "two" is stamped edge-to-edge, not corner-to-corner. A couple of buildings have tiled floors to add character to certain locations, but some almost look as though players are meant to use them for movement. Most impressive is the inclusion of a mood-setting music CD, though the points here are for effort; it's professional but lacks tension, recalling 1980s science-fiction more than horror stories. An Enya-wannabe vocalist does not a thriller make. Oh, and once freed, the pieces don't properly fit back into the box (in spite of some clever packaging arrangements by the creators).

Flying Frog Productions is the new kid on the block and can easily be forgiven a few hiccups in an otherwise well-built product (the supplement is promised for early 2008). It plays fast, contains plenty of strategy, and has benefits to balance it at either end of the player scale (two to six can play). Reversals of fortune are common, and a hopeless situation (for either side) can turn into an endgame knuckle-biter. Pieces are even included simply because they may be used or useful in later releases or for home-brewed scenarios. Little touches like a counter for most every eventuality and those big squares spanning the middle of the board make *Last Night on Earth* like a well-designed car that anticipates all the owner's needs. As it promises, it's a deftly constructed recreation of zombie movies that cleverly mirrors those exploits.

--Andy Vetromile

Stay Awake, Stay Alive

A Lovecraftian Deadworld for All Flesh Must Be Eaten

by J. Edward Tremlett

*"It's coming . . . don't you see? The dreams I've had, the dreams others have had . . . the pictures Wilcox made before they locked him up. They all point to the same thing, and it's coming here -- for **us.***

*"It's all in the books! Von Liebekraft warned us, didn't he? He told us this would happen, and no one listened. They said he was a charlatan. They make horror movies of his books and discoveries and say he was a fraud. But how does that explain any of this? **How?***

*"What I've seen . . . my **God** what I've seen . . .*

"I'm not going to wait. I'm not strong enough. I know I'll break when I see it, so I'm not going to take the chance.

*"But you . . . if you see this video, if you hear my warning, remember -- **Stay awake, stay alive . . ."***

<click> <BANG>

* * *

Concerned astronomers often look up to the sky in fear, worried about a doomsday event. At any moment an asteroid or comet could crash into the Earth with the force of a thousand H-bombs, bringing about a global extinction.

They're right to be worried, but not everything that can kill us needs to actually *hit* us. Some things just have to get close.

And this Halloween, a massive, long-slumbering beast from before our universe was born will be coming very, very close. Close enough to infect us with visions that eat mortal souls, turning their emptied shells into twisted reflections of itself.

Ancient wisdom speaks of this threat, and tells us, "To stay awake is to stay alive." But how long can mere mortals do either while they're fighting the monstrous, dead servants of the sleeper?

This Deadworld for *All Flesh Must Be Eaten* features a Lovecraftian theme, and introduces a new and nasty method of making zombies through dreams. It's a one-shot recommended for Norms, but it can be run with Survivors or turned into a Campaign if the Zombie Master chooses to worsen the presented situation.

Ancient History

Untold billions of years ago, while our universe was still forming, the truly ancient survivors of the previous universe eked out a sad and lonely existence amongst the new stars.

These refugees of the long, slow collapse, and subsequent big bang, had cheated death, but it was only a postponement of the inevitable. For the cosmic laws that supported their cyclopean bodies, and equally cyclopean appetites, no longer applied; once cannibalism was no longer an option, many of the great presences chose suicide to slow starvation. But some chose slumber: closing their massive eyes on the strange aeons, and putting themselves into stasis -- waiting for the right time to reawaken, and *feed.*

One such entity is Ul'Thuch -- a creature best described as a semi-translucent nautilus with a body the size of Earth's

moon. It has hundreds of long, ropy tentacles, stretching up to three times the length of its beetling, mottled blood-red and bruise-purple shell. Three great, burning white eyes lie on each side of its body, but these have been dim and sightless for billions of years, as Ul'Thuch has slept and dreamed of the age to come.

But though it merely slumbers, Ul'Thuch is still very dangerous. Its dreams are contagious, and any sentient creatures close enough to share in those powerful and all-encompassing dreams are likely to be taken over by them, and have their souls devoured from afar. The bodies of its dream-victims are then transformed into monsters -- near mindless echoes of Ul'Thuch who seek to bring yet more into the dreams of their dreaming god.

As the universe reformed around its strange bulk, Ul'Thuch fell into a long, weird orbit in our Solar System -- one that takes it well outside the Oort Cloud. It only comes back in every 1,074.45 years, shaking a few new comets loose and usually staying well clear of Earth. But every 5,372.25 years, it comes just close enough to be seen in the night sky for three days, seeming a third as large as the Moon from our perspective.

And for those three days the world finds itself lost in the maddening dreams of Ul'Thuch.

The last time Ul'Thuch came by Earth, more than 5,000 years ago, humanity barely survived the aftermath. What records were left by the survivors have been scattered by time and successive generations, until all that is left is fragmentary at best, leaving just enough evidence for certain scholars to piece together what may have happened. And their theories sound so insane that no one with any authority to do something has taken them seriously.

And so Earth remains unaware of the threat -- now swiftly approaching . . .

Recent History

It's October in Campell, Massachusetts, a sleepy, one-college town 25 miles from the Atlantic. The leaves are turning, the wind picks up and turns cold. School is back in session, the restaurants change to Fall menus, and football and Halloween are all anyone cares about, now.

On October 17th, radio telescopes begin to track a swift, strange object of indeterminate mass leaving the orbit of Mars, and heading for Earth. Operators have a hard time confirming its presence -- it seems as though it's only there half the time. Over the next few days, a couple of scientists come forward with news of the possible Near Earth Object. But it's the tenth NEO "warning" this year, and after the last nine false alarms no one cares.

On October 22nd, the T. E. Derleth Science Museum at Campbell U. begins a controversial exhibition of the work of Heinrich von Liebekraft, the late, local author, anthropologist and archaeologist considered by many to have been a deluded crank.

Von Liebekraft's theories that Earth was visited by a giant space monster made him the laughing stock of the early 20th century scientific community, and his one scientific treatise was panned. Having failed to convince the learned of his day, he turned to literature, penning several "fictional possibilities" in which he warned of the disaster to come. "The Scream of the Star-Squid" was the best-known of about twenty tales, all written from 1901 to his suicide at the start of World War I.

The author proved more accepted in death than in life, finding posthumous fame from his stories. Scientists still think he was a crank, but are at least willing to humor his theories, rather than dismiss them outright. The faithful, the curious, and the easily amused are visiting the Museum to view his puzzling evidence, some of which is on display for the first time ever. And afterwards, they descend upon the gift shop, buying copies of his books, plush toys of the "Star-Squid" and bumper stickers reading "Stay Awake -- Stay Alive!"

The Nightmare Now

On October 29th, psychics worldwide dream of something coming . . . something malevolent and hungry. Three

burning white eyes stare at them in their dreams, calling them forth. Some try to warn the world as best as they can, making manic, scribbled pictures, blogging of what they've witnessed, or leaving long, rambling warnings on YouTube. Some go mad and take their lives, and some take the lives of others to spare them the horror.

October 30th, something new shines in the early morning sky -- something that should not be there. It remains visible after morning, and appears to be getting larger. Astronomical bodies say it's the NEO they warned us about, but that there is no imminent danger of impact; it's just brighter, larger and more visible than usual. Those who warned of something terrible coming fall horribly silent, vanishing from the public eye. Amateur astronomers cannot make out many details during the day, but anyone who witnesses it after dark with a strong enough telescope shrieks in terror at what they see (Fear Test at -4 Modifier).

October 31st: Halloween. There can be no mistake. There is something wrong in the sky. It is a third as large as the Moon, and looks like some kind of monstrous fossil come to life. Worse still, it looks like it's moving, twitching its tentacles as it comes closer, and closer still (Fear Test at -5 Modifier).

Panic erupts as fear runs wild. Governments try to assure the people that everything is under control, and that the object is just passing us by. But religious figures tell the faithful that the End Times are here at last. Looting and mob violence break out everywhere, with police and emergency workers joining in the fray, convinced that none may survive. FEMA collapses under the strain of being everywhere at once, and the National Guard locks its bases down, one by one.

And then, with the rustling of twisted, reanimated flesh, the end truly begins.

They burst from seemingly nowhere: nightmare hordes of dead, nautilus- headed things. They rise as one, steadily stalking after the living, no matter where they hide. Those they corner or overtake are crushed in deadly embraces, and choked with a mouthful of slimy tentacles. And soon these victims, too, twist and change into dead monsters.

Horror looms in the sky. Terror swiftly blankets the Earth. Society collapses in a whirlwind of fear, panic and death.

The Course of Action

"Stay Awake, Stay Alive" starts out like any other one-shot Deadworld, albeit with unusual enemies. It's recommended that the Zombie Master starts the game a few days before Ul'Thuch appears in the skies, Oct 30th, so as to add a sense of foreboding, creeping apocalypse. This will also give characters a chance to meet one another, expand on pre-written relationships through actual roleplaying, and possibly look into some of the background information (NEO notices, von Liebekraft's exhibit, the psychics' warnings, etc.).

Once Ul'Thuch shows up in orbit, and the zombies attack, it's *All Flesh Must Be Eaten* as usual . . . until such time as the party hunkers down for some sleep. Once that happens, the true terror becomes apparent. Any Survivors who sleep, or lose consciousness, should be taken through the Dream of Ul'Thuch (see below). Those who lose their characters to the dreams either have the option of assuming new characters (have some pre-generated ones handy!) or watching in amusement as their former characters try to kill their former allies.

It will soon be obvious that the Survivors must stay awake to survive. A scrabble for caffeinated products may follow, unless the characters can think of other ways to stay up. But the more they run and fight, the more exhausted they get. And since they don't know there's a time limit to the madness, they may soon believe there's no hope.

The Zombie Master may choose this point to have events steer them to the Museum, where von Liebekraft's exhibit is running. There, they can discover that, according to ancient legend, the "star squid" was only near Earth for three days and three nights. Knowing that may make it easier, but can they hold out against masses of zombies, and their own need for sleep?

Environs

Lovecraftian Option:

Campbell, MA is a normal, medium-sized American town. That is to say there are about 50,000 people residing there, with one major hospital, two police stations and three fire stations. Several old, stone buildings downtown, and on campus, are strong enough to withstand a prolonged zombie attack. The Museum showcasing von Liebekraft's collection is one of these.

Firearms can be bought and sold at both Wally-World locations, as well as a handful of gun and ammo stores, most of which are in the outlying areas of town. These will have handguns, hunting rifles and shotguns, and there's a 1 in 1d10 chance that some of the nastier- looking stores will have "something special" in the back for "preferred customers" (most likely submachine guns or assault rifles).

Campaign Considerations

This Deadworld could be turned into a Campaign if the situation is worsened.

The first option has the zombies continuing to exist even after Ul'Thuch passes the Earth by. Any victims they take are still turned into zombies, as they can share a little of their master's dream with their victims. Mortals can sleep once more as they cleanse and rebuild the world, but can never rest easy again for wondering if the monster will re-appear in the sky . . .

A second variation has Ul'Thuch becoming a second Moon, caught in a long, elliptical orbit that takes one month to complete. For six days every month (three the first week and three the third) Humanity is in danger of zombie outbreaks. And one day, it may just wake up . . .

A third, even nastier option is invasion, as Ul'Thuch determines that the time is right to awaken and feed. It comes in for a surprisingly soft landing in the Pacific Ocean, and then calls to its "children" to remake the world in its image. The previously-unintelligent zombies gain an Intelligence of 2, and begin rebuilding Earth into something resembling an H.R.Giger landscape -- black, ropy towers with nautilus ceilings that pulse and ebb with dark, alien life.

Now that it is awake, Ul'Thuch does not dream; what remains of humanity is safe from falling victim to it in their sleep. The zombies it generated before can still turn humans into copies of themselves, but prefer to capture them alive for use as slave labor, or sacrifices to their great, dark God. Can the dwindling human population mount some kind of resistance, or are they doomed to watch their world be devoured by a thing from beyond time . . . ?

The Dream Warriors

If the Zombie Master wants to give the characters a chance to be proactive, there's a way to take the fight *to* Ul'Thuch -- provided they don't mind running a terrible risk.

Inside the pages of Von Liebekraft's "Doomsday Mysteries of the Ancient Fragments" – one annotated copy being kept under lock and key in the Museum's library -- it is said that Ul'Thuch's dreams can be disrupted. Details are given for an ancient Sumerian spell that will link souls together in a lucid dream.

Should they succeed in enacting the spell (Very Difficult Intelligence + Occult Knowledge Test to figure the spell out, and a Difficult Willpower Test to be made by each participant) they willingly enter the Dream of Ul'Thuch. Once there, they cannot be attacked by the Dream, itself, but must battle a variable number of Dream-zombies all the way back to their monstrous creator.

Consider each segment of the dream to be a separate battle, with 1d10 Zombies in the first, 2d10 in the second, and 3d10 in the third. If they survive the third, a last, symbolic blow can be struck against Ul'Thuch, itself. This will disrupt its dream, and dispel its effect on the Earth.

While dreaming through this spell, Survivors have whatever weapons and ammunition they are conscious of having on their person when they fall asleep. They cannot wake themselves back up until they

Spd: 4
Essence: 6

Intelligence: Dumb as Dead Wood 0
Spreading the Love: Dreams +5
Special: None
Power: 32

The Zombies are truly grotesque things, all remade in the image of their monstrous creator. As they die in its dreams, their heads are twisted to look like Ul'Thuch: eyes going blank and sightless as three burning, white eyes push their way out of each temple; jawbone breaking and mouth ripping open as hundreds of long, slithering tentacles slide from between the lips; skull distending, stretching and bursting the skin as it turns into a great, mottled-red and purple nautilus shell.

The creatures are unintelligent, but move with the speed and agility of the living. They are also relentless in their pursuit of those who have not joined with their god, able to sense the presence of the living nearby, and run towards them.

They attack by grappling with a victim, getting in close enough to use the Hug of Death. Once they have succeeded in immobilizing their victim, they give them the Kiss of Ul'Thuch: sliding their tentacles into his mouth, doing D4(2)×10 combined crush and choke damage per Turn until the victim blacks out from the pain and lack of oxygen. The victim then suffers the Dream of Ul'Thuch, and may become another Zombie. If he resists, he will either die from his injuries or recover, depending on whether the Zombie who attacked him stays beside him or moves on.

The Zombies do not have long to ravage the world. When Ul'Thuch devours the soul, a small portion of its own, deadly dream slips into the body to replace it, and it is this fragment which twists and reanimates the body. When the source of those dreams slips out of range, 72 hours from the start of the contagion, the bodies will lose the power. And then they will fall down dead, disintegrating into powder as they strike the cold earth.

The Dream of Ul'Thuch

The Dream is presented in three segments, and each segment requires a Willpower Test. The first is Difficult, the second Very Difficult, and the third is Heroic. Success at any point means the Survivor has overcome the Dream of Ul'Thuch, and may stop reading through the dream at that point. The character can sleep as normal, and regain Endurance Points accordingly.

Failing all three tests in succession means the Survivor's soul has been consumed by the monster, and his body will soon be changed. His next breath is his last, his body shudders and spasms in its death throes, and he will twist and change into a zombie within 2d4 Turns. After that, the character is handed to the Zombie Master, who uses it to attack the rest of the Survivors.

It's recommended the following text be copied once for each player, and cut into separate segments, so the players can't "read ahead" if their characters survive a segment. If the Zombie Master has some creepy music to play in the

have succeeded in their mission. However, should a Survivor fail a Fear Test, the spell is broken for him and he wakes up.

Those in the spell do not suffer Endurance loss from exertion, but if they're wounded in the dream they lose Essence rather than Life Points, with all the losses that entails. If a Survivor so wounded fails his Survival Test at -30 Essence, he not only dies, but turns into a zombie, wakes up and rampages against the other Survivors, who can't wake up to fight back . . .

background as the players read, use it. (Especially "Metastatic Resonance'" from *The Place Where The Black Stars Hang* by Lustmord, if you can find a copy.)

One

There is blackness. There is cold. There is nothing but the dark, total and complete. You are dust within that darkness, floating forever in the void between worlds. No planet behind or ahead. No stars in the distance to guide your way. There is only the vague suggestion of shapes, out there in the distance.

And one of those shapes is calling.

It comes closer. You can feel it. You cannot see it, not just yet, but you know it's coming. The blackness rustles and pulses, like fog pushed by wind.

It calls again -- louder this time.

Two

The suggestion in the darkness hardens into shape. There's something large, there. Something terribly large and misshapen, with things scuttling ahead of it. Things that twirl and twitch and test the area ahead . . .

Another, louder call, shattering the darkness.

Tentacles. You're certain, now. A hundred . . . a *thousand* long, ropy things so large that it hurts your mind to try and put size to them. They stretch and wave like plants under the sea, pulling some yet- unseen bulk smoothly forward, through the shifting, pulsing darkness . . .

It is calling you forth, from the darkness, voice as old as eternity . . . *come.*

Three

The tentacles surround you. There is nowhere to run -- no escape from what comes towards you, from the timeless black between worlds.

It calls again -- *come* -- and between the swaying, pulsing arms, thick as worlds, you can see . . .

A head-body, large as the moon. Beetling, mottled red and purple nautilus shell. Massive, white eyes, three to a side, sightless in ancient slumber. Endless and timeless *thing* from beyond nightmares . . .

Without warning the eyes blaze. Your body is transfixed in pale, endless white. Your mind becomes hard stone underfoot.

It owns you, body and soul. It's calling you by *name.* There is no escape.

Come.

(If you fail, start coughing the word "Ul'Thuch" and hand your character sheet to the Zombie Master.)

dream is infecting people with the curse of undeath. It may be limited to a certain area, or worldwide in scope, and it may be caused by one individual, an artifact, a meme, or something much worse.

Any who fall fully unconscious or asleep while in the affected area must make at least one Willpower test to avoid dying and turning into a zombie. It's the Zombie Master's prerogative to state how many tests are needed, and if succeeding once completely inoculates the character, or just saves them for one night's worth of sleep.

The Hunter's Craft

A Martial Art for Monster Fighters

by Phil Masters

The fictitious martial art described below for *GURPS* use is derived from three assumptions: first, that more-or-less supernatural monsters exist in the game world, second, that some people set out to kill them, and third, that some of those people develop a set of fighting techniques, using low-tech weapons, which can be and are formalized as a style and taught to others. How enough monster-fighters survive long enough to manage all this, and how they tear themselves away from what's usually an obsessive career to take up teaching, may be an interesting question -- but the answers will depend on the game world. The form taken by the style is partly derived from the logic of the business of monster fighting, and partly based on the techniques used by various fictional monster fighters. In fact, the style has a range of options available, enabling it to be customized to fit with various different historical periods and cultures.

The Hunter's Craft *6 points*

The basic, "realistic" form of this style is straightforward and practical, being based on two principles: (a) Know your enemy, and (b) Kill it as quickly and efficiently as possible. Occultism is taught as one of the style's core skills because too many monsters can't be killed in a conventional way; a stylist has to know their specific weaknesses to stand a chance. (A version of the style intended for use against one single monster type -- say, European vampires who all have the same weakness -- could drop this component, saving a point from the style cost.) Research is a strongly recommended optional addition for the same reason. A stylist should always fight carefully until he's decided what needs to be done, then do it, often very aggressively, although monster-fighters who want to survive will temper this approach with rational caution. Some like large weapons; others think that it's far too dangerous to rely on raw power, because monsters are always *more* powerful.

The exact form taken by the fighting style can vary considerably, mostly depending on the cultural background of the fighter and the game setting, which is why the style has such a range of options among its basic skills. Which ones to choose should usually be determined by the campaign, *not* by individual preference! The broadsword is a classic weapon for these purposes, being effective in attack and defense, versatile, and widely available, but some cultures may have a strong preference for the shortsword, while fighters from a swashbuckling background might favor fencing blades, "Eastern monk" types might prefer the staff, fighters who favor dishing out as much damage as possible per blow might opt for the two- handed axe, and some purists might emphasize the you're-never-unarmed ethos of open-hand training. However, stylists always master knife-fighting techniques, which can be used for sacred or magical daggers or small wooden stakes, depending on the monster; and also spear-like weapon fighting skills, used as often as not with larger stakes, but also good for holding monsters at a relatively safe distance. Many fighters survive desperate battles by using whatever comes to hand as a weapon, or learn to wield strange objects (such as crude stakes, domestic silverware, or church/temple decorations) in combat in order to exploit peculiar monster vulnerabilities; some learn to construct or adapt their own weapons, in case of emergencies or in response to specific problems.

Grappling is rather less heavily emphasized -- getting in close is too often grossly unwise with too many types of monster -- although some stylists learn how to break and escape monstrous death-grips. Likewise, trainees are carefully taught *not* to think much about choke holds or pressure points; too few monsters respond satisfyingly to such assaults. On the other hand, many of them are vulnerable to strikes to the heart, or to beheading, so training may focus on those sorts of attacks. (If a campaign features a monster type with some other specially vulnerable location, the style can add a Hit Location technique to target that.) Many schools teach practical *hunting* skills, appropriate ranged weapons, arcane treatments for supernatural infections, strange secrets about monsters, or additional defensive options. Thrown weapon skills are fairly rare, though; they can too easily leave a fighter without a weapon in hand at relatively close ranges, and too many monsters are quick to close that sort of gap.

The cinematic version of this style can be *very* flamboyant; such stylists tend to have Acrobatics at high levels and to be very mobile combatants, dodging multiple monster attacks or warding them off with open-hand defenses while using any weapons largely for offense. Many fighters are noted for devastating killing blows, unleashing near-superhuman power against monsters which won't die of anything less; hewing the thing's head off with a single stroke always looks good. Resistance to psychic assaults can be useful, too. Some stylists also learn to fight without even looking at their opponents, as can be necessary when dealing with the sorts of monsters which kill or paralyze by eye contact or by their mere appearance, or which use literally dark magics to make things difficult. Really flashy stylists may be self-confident enough to learn throwing skills after all, probably adding Fast-Draw to enable them to bring another weapon into play if the throw doesn't end the fight.

Lastly, the disadvantages associated with the style mostly reflect the motivations appropriate to a career monster-fighter, which vary considerably; some treat this as a high-risk, high-return profession, others as a sacred crusade, others again as something very personal. And while many of these warriors are fiercely defensive of humanity, some develop a cold detachment or a crazy edge after seeing too many mangled bodies. In fact, some may be downright crazy in a *bad* way; *Battle not with monsters, lest you become a monster . . .*

Skills: Knife; Occultism; Spear; and any *two* of Broadsword, Karate, Rapier, Saber, Staff, or Two-Handed Axe/Mace.

Techniques: Back Strike (Knife); Hammer Fist (Karate); Kicking (Karate); Retain Weapon (any); Spinning Strike (Broadsword, Saber, or Knife); Sweep (Staff or Two-Handed Axe/Mace); Targeted Attack (Broadsword Swing/Neck); Targeted Attack (Knife Thrust/Vitals); Targeted Attack (Saber Swing/Neck); Targeted Attack (Spear Thrust/Vitals); Targeted Attack (Two-Handed Axe Swing/Neck).

Cinematic Skills: Blind Fighting; Flying Leap; Mental Strength; Power Blow.

Cinematic Techniques: Dual-Weapon Attack (Knife); Roll with Blow (Karate); Springing Attack (Spear).

Perks: Armor Familiarity (any style skill); Improvised Weapons (any style skill); Off-Hand Weapon Training (Knife); Rapid Retraction (Kicks or Punches); Technique Adaptation (Back Strike).

Optional Traits

Secondary Characteristics: Improved Per and Will.

Advantages: Combat Reflexes; Danger Sense; Enhanced Defenses; Fearlessness; Higher Purpose; Indomitable; Night Vision; True Faith; Unfazeable.

Disadvantages: Bloodlust; Callous; Charitable; Enemies (monster groups); Fanaticism; Greed; Intolerance; Nightmares; On the Edge; Sense of Duty.

Skills: Acrobatics; Armoury; Crossbow; Esoteric Medicine; Hidden Lore; Liquid Projector/TL; Observation; Research; Scrounging; Shield; Stealth; Tactics; Tracking; Weird Science; Wrestling.

Techniques: Acrobatic Stand; Breakfall (Acrobatics); Evade (Acrobatics); Targeted Attack (Crossbow/Vitals).

Cinematic Techniques: Roll with Blow (Acrobatics).

Pyramid Review

Zombie Fluxx: The Ever-Changing Zombie Card Game

Published by [Looney Labs](#)

Designed by Andrew Looney

Illustrated by Derek Ring

100 full-color cards & rules leaflet; $16

[*Fluxx*](#) is unlike any other game. Its mechanics fits its theme of constant change, of a chaos that cannot be beaten but rather adapted to if a player is to win. A game starts simply with two rules: draw one card, play one card, and winning achieved by playing Keeper cards that match those on varying Goal card. All this changes as new Rule cards alter the number of cards that can be drawn, played, held, and so forth, not only from turn to turn, but also within a turn itself. The result is that *Fluxx* cannot be played to win, but is best played to make the best of the current situation. Or not, as the game's fluid nature means that it can even be won when it is not your turn. This nature also divides players, with some (like my sisters) loathing it for its chaotic rules, while others (like my teenage daughter) loving it for the same reason.

Since its original publication in 1997, *Fluxx* has been modified and adapted to several flavors, including ecological, family-orientated, and religious themes. At its heart, though, *Fluxx* has always remained true to the designer's hippie beliefs and is a friendly, peaceful game. This makes *Zombie Fluxx* unlike any *Fluxx* game that has gone before, because it gives you weapons and lets you kill things, which is as deeply, incredibly un-hippie as you can get. Except that what you kill are Zombies, and Zombies are seriously, seriously uncool. Of course, this being a *Fluxx* game, the aim in *Zombie Fluxx* is not just to adapt to the changing circumstances of the cards being played, but also to adapt to the growing numbers of the corpse cortege that shuffle into play.

Designed for two to six players and to be played in about 10 to 40 minutes (although we found 20 minutes to be the norm), the first thing that strikes you about *Zombie Fluxx* is that many of the cards are illustrated in full color and that you actually get two sets of rules. One side of the rules sheet is devoted to the basic game and enables the purchaser to learn *Fluxx,* although the more complex *Zombie Fluxx* cards must be put aside for this. Once the basic rules have been mastered, the rules leaflet can be flipped over and the undead can walk the Earth.

Zombie Fluxx introduces two new card types. The first is the Creeper. Marked with an unhappy face, the Creeper is the equivalent of the anti-Keeper and depicts between one and four Zombies. Although a player does not want one in his hand, he must play any Creeper as soon as it is drawn. He gets to draw and play another card, but again this could be another Creeper. Once there are Creepers on the table, various Goals can no longer be met such as "Barricade the Windows" (which requires a player to have the "Lumber" and a "Friend" Keeper in place, but no Creepers in play by anyone at all); while new Goal cards, like "Zombie Baseball Team" (which requires the "Baseball Bat" Keeper and nine Zombies to be in front of you), can be.

The second new card type is the "Ungoal" card, marked with an octagon. In the standard game, *Fluxx* can be won if anyone matches his Keepers with the Goal currently in play, but in *Zombie Fluxx* meeting the conditions of "Zombie Victory" means that the cadaver cavalcade have won. This means that the players have all lost. Fortunately, "Zombie Victory" is the only "Ungoal" card in *Zombie Fluxx.*

Zombies are undoubtedly a bad thing, not just because they can stop everyone from winning, but because they can also win themselves. Fortunately, they can be gotten rid off. This merely takes the use of a weapon Keeper like "The

Shotgun," or under the "Weapon Bonus" New Rule, the use of potential weapon Keepers like "The Chainsaw" or "The Car." Any potential weapon Keeper is marked with a "POW!" symbol. If a player has any of these in play before him, he can use them once each round to kill or affect one of the Creepers also in front of him. Kill a Creeper that depicts a single Zombie and it goes into the discard pile. A Creeper depicting a Pair of Zombies can also be killed and discarded, but if another Creeper is killed instead, that Pair of Zombies will run and hide with another player of the killer's choice! A Trio of Zombies Creeper cannot be killed, but is instead moved to a neighboring player. Finally, a Zombie Quartet Creeper can be killed, but always comes back to life, being placed on top of the draw deck where it will affect whoever has to draw next.

What all of this means is that the appearance of the Zombies adds another level of chaos to the core *Fluxx* game play that can be spread among the other players. Further, it adds just the hint of a narrative structure. After all, at the start of the movie only a few zombies appear, but soon enough the cast are threatened, if not overwhelmed by a horde doing the undead shamble. Or in the case of *Zombie Fluxx,* the players are threatened by a horde of Creepers that are unrelentingly difficult to get off the table despite the inclusion of the new weapon/potential weapon Keepers (although the ". . . and Stay Dead" and "No Zombies" Action cards will get rid of every Creeper card on the table). Their growing (and spreading) numbers also makes it difficult to meet the majority of the new game's Goals and entirely possible for everyone to lose the game entirely. This is only in keeping with the feel of the genre. As are cards like "Let's Shamble" (which allows every player with a Creeper to move it to a neighbor), "Adrenaline Bonus" (lets a player draw another card if he has a Zombie in front of him), "Dead Friends" (which turns the Friends Keepers into Creepers), "Return of the Dead" (all of the Creepers in the discard pile are dealt back out to everyone), and our personal favorite, "Groaning Required" (a player must groan like a zombie when he draws a Creeper card or be given another Creeper).

Compared with other Zombie games, *Zombie Fluxx* is probably a little too light and -- bar its advertisement card for certain other zombie themed games -- all too gore free. And despite it being slightly more complex, it is still a *Fluxx* game, so treats its theme with a little more humor, making it a light, fun, and family-friendly card game (even if the Zombies are anything but). Like all *Fluxx* games, more players means more chaos and more fun, and with *Zombie Fluxx* fewer players means having less victims around which to spread the love . . . and if *Zombie Fluxx* is anything, it is an entertainingly chaotic means to spread both the Zombie and the *Fluxx* love.

--Matthew Pook

The Patriot Potion

by Steven Marsh

He had been known as Captain Stripes in the Big One. But that was a long time ago. The costume still fit, but it smelled of mothballs and smoke . . . the latter a reminder of a habit given up 20 years ago. His pacemaker shifted uneasily beneath his skin as he pivoted his hovering form over the city, focusing his Stripe Vision to maximum magnification. Somewhere, in the city of five million, was Tyler, lurking, the blood of a hundred subway commuters on his claws; part of the Captain still thought of him as Tyke-Tyke, the towheaded boy he fished with over a decade ago. But a lot can change in a decade, and the Captain tried to steel the part of his mind that knew the horrible truth: He would probably need to kill Tyler. And then, if he succeeded, hundreds . . . thousands more.

* * *

Whether it's global conflict, interstellar invasion, or environmental cataclysm, every world faces a crisis from time to time. As the base of human knowledge has progressed, the world's leaders have often turned to science in these cataclysmic times . . . often without fulling understanding the long-term consequences. Even more interestingly, many technological items -- wonderful and horrific -- have often found widespread usage in times of war, whether it's the machine gun, Agent Orange, or the nuclear bomb. One such marvel is the Patriot Potion. This chemical marvel alters the body on a genetic and biochemical level, imparting wondrous super abilities on some who imbibe it, creating a "supreme soldier" capable of performing feats that an entire squadron couldn't accomplish . . . while still looking perfectly human.

Unfortunately, there are some downsides. First, the Potion doesn't work on everyone, nor is there any way to tell if one who imbibes it will have powers bestowed upon them. (The percentage can depend on the level of super powers the GM wishes to have in the campaign world, but anywhere from 1% to one in a million are a good range, depending on the usefulness of powers). Second, the abilities the Potion gives seem to be entirely random; there's no way of knowing if a successful recipient will become super-strong, amazingly fast, able to control the weather, or anything else the mind can fathom. But these faults are relatively obvious, and able to work around.

And the last problem? Well, that was less obvious.

Those who received powers from the Patriot Potion program seemed otherwise normal, and -- after the crisis was over -- these Patriots resumed their normal lives, which included families. The children of those who received the Patriot Potion seemed absolutely normal. So did the grandchildren . . . at least, until sometime after puberty. But after a couple decades of life, somewhere between 10% and 20% of the grandchildren of the Patriot Potion recipients became horrible deformed monsters, possessing random powers similar to the successful Patriot Potion cases but unencumbered by sanity or conscience.

Worse, *everyone* who received the Patriot Potion was subject to these side effects . . . not just those who were granted powers. And, since there was no way of knowing whether or not someone was a good candidate to receive the treatment originally, the agency responsible for giving the Potion tended to give it wide swaths of people (which, in the case of a World-War-style global conflict, would have meant every able-bodied man in the Army).

If there is a "positive side," it's that the great-grandchildren of those Potion recipients seem to be normal, meaning that humanity has a reasonable shot at survival if it can eliminate the danger that the mutants pose. Of course, so too did the grandchildren seem to be normal, until they no longer were . . . and what hidden danger do the great-great-grandchildren pose to the world?

Campaign Uses

Designed as a Supers/Horror crossover item, the Patriot Potion is designed to be a versatile global conundrum in a

wide variety of campaigns. Out of the box, it provides an interesting take on many super settings involving legacy heroes, especially those from World War II. What do these aging heroes do if they are the only ones with super powers, in a world where large numbers of their descendants -- and those of their friends and neighbors -- are monsters? The passage of time will claim more and more of these supreme soldiers, while the numbers available to the deadly generation are seemingly endless. In this usage, PCs can either be these legacy heroes; the children of these heroes (unpowered but perhaps taking the role of mundane "masked vigilantes" to handle the monstrous hordes that their elders cannot); or the grandchildren, without currently manifesting mutant powers, desperately seeking a cure or a resolution to the impossible situation, all the while wondering, "Will I be next?"

The Patriot Potion can also form a background element as a previous horror endured by the world, especially if it was utilized in smaller quantities. For example, a Dr. Jekyll- or Invisible-Man-esque brew only consumed by a few people in Victorian times would see the monster generation manifest during the World War II era. In this case, the Potion can provide a tantalizing possibility for world leaders (or those with access to the technology) striving to overcome some new cataclysm: "Yes, using the Potion will create monsters in 40 years . . . but if we don't do something about this alien invasion, there won't be a tomorrow to worry about!"

The elixir can also be the source of powers for a PC or group of PCs in a larger Supers campaign, in a setting where the Potion wasn't used on large segments of the population. If the truth of the eventual fate of the PCs' descendants becomes known (say, by visiting the future or via other four-color supers plot), this could form a true angsty conundrum for those characters.

Finally, a particularly cruel GM could run two campaigns (either in series or parallel), with the first as a straight Supers setting focusing on the exploits of the colorful World-War-II heroes, and the other -- set in the same world -- a modern-day setting dealing with the monstrous aftermath.

Regardless of which option is used, the fact that the Patriot Potion is to blame for the rise of the mutants may not be immediately obvious, especially if the Potion was inflicted on large segments of the population.

Themes and Designer's Notes

The broad idea of the Potion is a metaphor for any number of global ways we affect our lives without necessarily understanding the long-term consequences: vaccinations, fluoridation, means of preserving food and beverage. (If cell phones *did* cause cancer, how would we ever discern this if everyone is using a cell phone? How does the equation change if cell phones did cause problems, but not for a generation or two? Would the world be able to go back to a cell-phone-free life?)

For the idea to work well, it does require some key concepts (or some contemplation to get around the reasons suggested). First, the Potion shouldn't work on everyone, nor should it be obvious who will be a successful candidate. This sows the seeds of the future generational conflict, and keeps it from being used in generations after that. Otherwise, the Potion's limitations are easy to remove; if one is able to ensure a 100% success rate in recipients, then one need simply sterilize those metahumans to prevent the problems. Likewise, if only the grandchildren of those who received super-powers became mutants, it would be straightforward to work out a vector about from where the monsters would come.

The percentage of the generation post-Potion affected can be adjusted. The 10% to 20% figure utilized was chosen to ensure a global end-times threat, yet one that can still be contained.

The Potion doesn't *have* to instill superpowers; for example, the Potion could be the cure to particularly virulent disease or other health problem. In this case, it's up to the GM how powerful the future mutants are.

Finally, the gestation period for the future menace could vary, but grandchildren ensures that a large number of the threat exists while keeping it within living memory of the primary beneficiaries.

Tomb of Clio's Nightmares

"Men of broader intellect know that there is no sharp distinction betwixt the real and the unreal; that all things appear as they do only by virtue of the delicate individual physical and mental media through which we are made conscious of them; but the prosaic materialism of the majority condemns as madness the flashes of super-sight which penetrate the common veil of obvious empiricism."
-- H.P. Lovecraft, "The Tomb"

Clio, being of broader intellect herself, knows full well the indistinction between the real and unreal. She knows better than to condemn as madness the flashes of alternate history, of times better past than present, which penetrate the skin of the world on Halloween. She sees them in her nightmares every year, and even in the cold light of day can take no refuge in the "obvious empiricism" that walls her in. This year, taking a key from our title, we present three campaign frames submerged for the most part in boundary zones. Two lie between secret history and alternate history, two between horror and fantasy, two between the general and the specific. But all lie heavy on Clio's brow, as she tosses and turns in her open tomb . . .

"It will have blood; they say, blood will have blood.
Stones have been known to move and trees to speak;
Augurs and understood relations have
By maggot-pies and choughs and rooks brought forth
The secret'st man of blood. What is the night?"
-- William Shakespeare, *Macbeth,* III:iv:121-125

This much is truth: The ancient Norse and British had a custom called *alfablot,* in which women smeared blood on old megalithic barrows at the dying of the year, as a propitiation of the "alfar," the pale inhuman spirits who dwelt therein. The Neolithic megalith complex at Tarxien in Malta features "libation holes" in a lightless chamber, suitable for such liquid offerings. In the megalithic tomb at Altendorf, three quarters of the skeletons found by archaeologists had been decapitated. There have been no skeletons whatsoever found in the megalithic tombs in the Low Countries. Missing bodies are common at other megalithic gravesites. Later intruders in megalithic tombs from Malta to Ireland removed the heads and crossed the limbs of those interred bodies that could be found. The rest is terror: Of the thin, pale, almost spider-like things that laid themselves down in the long passage graves, open for escape but only to sunlight once per year; painting the walls red with ochre and carving their patterns of rings and spirals on the flat stones. Of how they slunk in with the sea fog when the cold returned, scuttling from their caves in the high Pyrenees or lying in wait in the rivers to drag down the unwary. Of how they knew the secret names of earth, water, and sky, and built their works to whisper them. Of how they raised herds of serfs to do their bidding, dragging great stones into position - stones they hinted were their own dead gods and makers - before slaughtering their kine to water the new granges. Of how they clung to the land and its hollows with fang and talon until sun's cross and bright bronze drove them deep, and bold heroes entered the blackness of their ancient stone tombs to do what had to be done at the last.

This campaign frame might be alternate history along the lines of Brian Stableford's *Empire of Fear,* or it might be a secret history of the vampiric Neolithic. That will be up to the GM - and to the heroes of this **GURPS Low-Tech** horror campaign. If they win, it's a secret history - if they lose, and the vampires hold on to Europe west of the Elbe, well, time to start hoping the Persians do better. But this campaign might happen during the onset of the vampires around 3800 B.C., during their great age of power from Newgrange to Malta at the turn of the millennium, or during the long war of humanity to retake the sacred power sites over the next thousand years. It probably works best either in the primitive beginnings, with swarthy warriors wielding the sacred flint (fire's favorite stone) to hold back the pale, crawling hordes from sea and river, or in the "last gasp years" around 2100 B.C. as the Bell-Beaker folk who broke the vampires' grasp have grown complacent, and certain of their wise have turned to the megalithic arts themselves. Why, there's even talk of re-setting the bluestones at the Henge! Only the bravest sons of the Sun-Cross will dare act on what the common folk whisper - that the Secret Men of Blood skulk forth once more, and hiss their poison into the ears of chiefs and priests alike.

"[T]his man's indiscretion had brought a great scandal upon the House of Commons . . . when we had prepared a statute to pass to this end and purpose for the removing of all offensive pictures yet we had specially provided that no tombs should be meddled withall . . . therefore I would wish we might have the tombs again repaired and the matters so compounded as he might come into no further danger for this, his indiscreet act."
-- Sir Simonds D'Ewes, M.P., *Journal* (Oct. 16, 1641)

It seemed like a good idea - even a godly one - at the time. In 1641, Parliament ordered "idolatrous images" be removed or defaced all across Britain. While some parsons were measured in their compliance, others smashed images indiscriminately - and one of those smashed images, somewhere, must have been very important indeed. Now, along with the marching of Roundheads and the raiding of Cavaliers in civil war, the depredations of the Irish and the invasions of mercenary Scots, poor England suffers from a plague of monsters thought bottled up in Hell, or at least vanished since the Deluge. Dragons and wyrms - some venomous, many more simply impiously vast and appallingly quick - have crawled from the fens and bogs. Lions and tigers, some with immense sabre-like fangs, once more prowl from Sherwood to the New Forest, and the trees themselves show shoots of growth more tropic than temperate. Giants - brutish to be sure, but ten feet tall and strong withal - climb down from the Pennines and even the Gogmagog Hills, and feast on the unwary, even as beetle-browed goblins with thick, yellowed teeth swarm up from the barrows and caves of the Downs to crack the marrow-bones of shepherds and goose-girls. Matthew Hopkins' so-called "Witch-Finders" do battle with the covens and esbats who have thrown off their disguise in these Satanic times, while savants at Oxford and Cambridge claim to have spoken with angels or with Atlanteans, and carry out strange projects as a consequence. Folk have seen Merlin walking with the trees, and a savage Arthur riding beneath the banner of Our Lady, wearing antlers and Roman war mail. Everywhere, the past of Britain is come alive, and the time itself is out of joint; everywhere, things have learned to walk that should crawl.

Herefordshire is no different. While Hereford Cathedral still stands, protected by the body of the sainted King Ethelbert of East Anglia, murdered by foul and serpentine treachery at the court of King Offa in 794 A.D., the county around it swarms with monsters, witches, fanatics, and Parliamentary dragoons. Some vast evil boiled up from the magic well and megalithic barrow at Turnastone, placed under interdict by the Bishop of Hereford in 1409; it crouches athwart the county's approaches to the southwest. After a brief and unwelcome Parliamentary occupation in 1641, Hereford remains loyal to King Charles I, but has only its own artisans and squires to defend it. Sir Herbert Croft, Dean of Hereford Cathedral, has taken command of the defenses, drilling troops and teaching what lore he can find in the Cathedral archives. His buxom, aggressive daughter Laura is not satisfied with such passivity. She seeks King Ethelbert's severed head, last reported looted from Westminster Abbey; if it can be returned to Hereford before the city falls, perhaps the land can symbolically be healed. The PCs in this *GURPS Swashbucklers-Dinosaurs-Horror* campaign frame (with as much *Fantasy* and *Celtic Myth* as you wish) are her noble band of tomb raiders: swordsmen, priests, sages, clever delving engineers - even thieves seeking pardon for their crimes -- dispatched to seek the Head of St. Ethelbert in a land gone mad though all Hell has let out for breakfast.

"The most startling scheme was one with which two young doctors, who took rooms at the then notorious Shakspere Hotel, were identified. The Police discovered that one of the employees in the Tombs had been, or was to have been, bribed to cut down the body while it was yet warm, that life was to have been restored by the use of a galvanic battery, and another body substituted for that of the resuscitated murderer. . . . [A] fire added to the excitement of the hour. This circumstance gave rise to a story that while the tumult was at its height . . . the attempted scheme of resuscitation had been really accomplished."
-- "A Crime of Forty Years Ago," *New York Times* (Dec. 18, 1880)

In New York City's Tombs prison, in the heart of the Five Points district, John C. Colt, brother of gunsmith Samuel Colt, awaited his execution for the hatchet murder of one Samuel Adams in 1841. Colt's brother was in the city testing a new battery and torpedo system for submarines. Colt had been allowed to marry his mistress (his brother's abandoned wife, the gossips whispered) that morning, a rite hastily carried out by a strange priest. But on the day Colt's hanging was scheduled to occur, a fire broke out in the tower of the Tombs. The firemen - all gangsters from the Points - appeared, and in the confusion, John Colt appeared to have knifed himself in the heart. But something happened that day in the Tombs; in a prison built to the plan of an Egyptian mausoleum by the architect John Haviland, resting on a foundation raft of hemlock logs floating on an underground river. On that day a pillar of fire appeared above the Egyptian Revival pillars and cornices of the Tombs. On that day, two doctors smuggled a

revolutionary galvanic battery - one that had gone beneath the waters of the secret Nile and risen again - into the Five Points. In the basement of the notorious Shakspere Hotel, they resurrected the murderer John Colt, bringing him out of Egypt and into Bablyon on the Hudson, the wickedest city in the world.

Like our first campaign frame, this **GURPS Screampunk** setting probably begins as a secret history, in this case, of New York City: *Gangs of New York* meets *The House of Frankenstein* with a big splash of *The Mummy.* John Colt, the Resurrected Man, is the secret lord of the city, running gangs like the Blind Apes, the Crocks, the Jackals, and the Hawk-Heads and displacing the old Shirt Tails, Chichesters, and Roach Guards. Only the old-Irish Bowery Boys, led by the Mighty Mose, and the up-and-coming new-Irish Dead Rabbits under Priest Vallon dare to stand against him. The GM can play it for full-on Egyptomania, with "Mose" and the Resurrected Man hurling plagues at each other while dueling over the Secret Nile beneath Manhattan in fine *Anubis Gates* fettle. Or go for hard-scrabble urban horror in an **Unknown Armies: 1848** mode, with Coltish mechanisms, sewer crocodiles, and albino hoodoo cults aplenty. PCs in either game might be Irish gangsters, Anglo cops, Black conjure-men, "Dutch" hexerei, Scots gearsmiths, Jewish sages, Welsh tunnel-jacks, or Italian revolutionaries, just trying to make ends meet and keep alive in the American melting pot - or is it the Black Cauldron of Annwn?

Irregular Webcomic

Irregular Webcomic

Irregular Webcomic

So long as you know that I know that I won't ever know what you know, I know that's okay . . .y'know?

Reality, and Other Constructs We'll Never Know the Full Truth About

One of my earliest "memories" -- one which I seldom think about, have only discussed with the missus, and never have I written about -- is of a "monster" under my bed. "Memories" is in quotes because it's hard to sort out which of one's early childhood recollections are real and which aren't, and "monster" is in quotes because it probably wasn't.

As far as monsters under the bed go, this one was relatively tame; I only encountered it once, and it seemed to me more something on the periphery of my perceptions. I think my primary memory of it is of it running under my hand, which was likely hanging off the side of my bed. (I primarily remember the tactile aspects of it, thinking that it had fur; I think of it as a black cat, although it was probably "black" only because it was dark, and it was probably a "cat" because I only had an idea of a few creatures, so any smaller-than-pony animal probably registered in my mind as "cat.") I also remember a sensation like my hand was licked, as well as some kind of glowing eyes, although that could be my mind creating details from the aether as the years have passed.

I remember being somewhat spooked at the time, but I think my greater sense of disease came from my inability to get my mom to take the situation seriously. Why wasn't she investigating? Why was she only offering hollow reassurances that everything was fine, when she did nothing to ensure my safety? And so on. I remember sleeping uneasily for a while, but it became easier with time until the incident became part of the static of childhood.

In hindsight, though, I think the thing that continues to disturb me to this day is that I'll never know the truth of the "incident." Did my arm fall asleep and flop off the bed (the tingling sensation kinda feeling like it's being licked)? Did I touch some piece of clothing or fabric on the side of the bed? Was it a particularly vivid nightmare? Did a rat find its way into my room . . . or Something Worse?

When I was six or seven, I remember watching *In Search Of . . .,* my first encounter with the World of Weirdness. (It also resulted in one of my first "What the heck?!" moments of quasi-continuity disbelief, when episodes about Big Foot, the Loch Ness Monster, and UFOs were followed by one about . . . tornados.) As an impressionable child of the television era, I think the thing that freaked me out the most about that series was how almost every topic was presented with an air of, "We will probably never know the truth . . ." As a fan of books, comics, and other forms of media (i.e. "more TV"), my sense of closure wanted to know what was *really* behind these strange phenomena.

But, of course, that's the secret of real-world and quasi-real-world horror phenomena: not knowing what's going on with absolute certainty. Where did AIDS come from? Do we know the full truth behind the Kennedy assassination? Even in those circumstances where we do come to understand something horrific, it can take an incredibly long time. For example, the Black Death struck without being comprehended for almost half a millennium. The knowable nature of horror flies in the face of what we expect from most forms of entertainment. In horror stories, there usually needs to be some manner of explanation or logical cohesion to the tale, even if those answers open up more questions.

There are three broad answers I can devise to this conundrum, with the additional toggle of whether or not the players know which option their GM is going with. First, the GM can allow for the "realistic" option that the truth is, ultimately, unknowable; the PCs (and players) merely need to deal with events as they happen, and they may never know what's really going on. This is the tack taken in some zombie flicks ("They just showed up!") as well as classics such as Alfred Hitchcock's *The Birds.*

Alternatively, the GM can make sure that the truth *can* be known, although it may be difficult and might not be accomplished successfully. This is the strategy of many RPGs (including classics such as **Delta Green**), as well as the metaplot of the *X-Files* television show. Of course, for this to work, you need to know the big secrets in the first place. Trust me on this . . . the whole process goes a lot smoother. Finally, it's possible for the truth not to be known by the

PCs, but for the *players* to know the truth (or, at least, the GM's theories about what was going on). This is the tack taken by some classic games and adventures, including the superlative "In Media Res" from ***The Unspeakable Oath.*** In this technique, the GM can reveal the larger picture, although the players may not know it. This is especially satisfying for the conclusion of long-running campaigns; having a question-and-answer session where the GM answers all the players' questions can help provide closure to the players, even if their characters are still in the dark. This is also the default position of almost any commercial RPG and adventure; the players always have the option of reading the "Players Don't Read This!" sections once the adventure is over.

The gulf between the desire to know and the fact that many things will never be known can cause friction in an RPG, but as long as the players and GM are on the same page as far as expectations, there's nothing to fear.

Except creatures under the bed.

--Steven Marsh

The Seven Sinister Statuettes of Jose Von Lee

by Fade Manley

When the villagers looted the late Jose Von Lee's tower for anything that could be sold to unsuspecting passersby, the easily pocketed trinkets went first. (See "[The Six Cursed Rings of Jose Von Lee](#)" and "[The Seven Blessed Event Items of Jose Von Lee](#)" for more on the trinkets.) After they'd turned a profit on those, and no one had died in too horrible a fashion, the villagers went in for the trickier loot. They found seven statuettes arranged in a circle on a large brass disc, and yanked each one off its stand to sell individually. The brass disc itself seemed sufficiently magic-free that they made it a tabletop in the local tavern.

Meanwhile, the seven statuettes are circulating as minor magical items. Each one affects anyone who spends a few hours a day -- four or five will usually do it -- in the presence of the statuette. Putting the figure somewhere that it can "see" the person trying to take advantage of the magical effects works, as does keeping it in one's carried possessions. The effects last for a single day, and have to be renewed each day to keep the benefits.

Standard methods of discerning enchantments show off only the obvious, benign features of each statuette. It's a pity for their owners that those aren't the only magical effects. Or, more precisely, it's a pity for everyone their owners associate with . . .

Dryad

This silver statuette of a tree also appears to be a maiden with leafy hair, when viewed from certain angles. It gives the owner a green thumb; he can figure out how best to grow any plant, or treat any plant ailment, regardless of past experience or lack thereof.

The downside: The plants do just fine so long as they're still growing. Stored grain and vegetables, however, will begin to rot at an alarming rate. If there's any sort of nasty fungus or blight that can affect stored food, it appears within a week or two of the owner first using the Dryad's blessings. Meat and cheese are still safe, but beer made from grains goes sour. Unlike many the other statuettes' effects, this one will affect the owner's stored food just like anyone else's.

Sally

More of a doll than a statue, Sally has a porcelain face and a soft cloth body with wires to let her be posed. (Anyone who's seen someone wear the Ring of Pretty Lass will recognize the face and figure.) Sally keeps nightmares away from her owner. She's the perfect gift for any child suffering from nightmares, and will thoroughly eradicate them if left in the child's bedroom.

The downside: Eradicated? More like relocated. And amplified, in the process. The owner's best friends will begin suffering from nightmares instead. If the owner has no friends, the effects move on to relatives instead. If the owner has neither relatives nor friends, the nightmares wait for the first night he's no longer being influenced by the statuette, and then rebound on the owner. All at once.

The Rat Jester

A young man dressed in Harlequin garb smiles while a dozen rats climb up his legs. The statuette has been carved out of a single bone, with odd contortions in the figure's posture to accommodate the dimensions of a human leg bone. This figure gives its owner insight to wit, granting a bonus to any attempt to be entertaining or charming in a humorous manner. (In *GURPS,* +2 to social skills when any sort of humor is involved.) It also keeps the premises of

any building where it's left for a few days free from rats and mice for as long as it stays there.

The downside: When you're the funniest person around, no one else is very funny at all. Anyone in the owner's presence gets a penalty to all social skills while he's around. (-2 to any social skill, in *GURPS.*) Furthermore, any rats driven out by the statuette will take up residence in buildings nearby, while demonstrating a startling level of intelligence and health in avoiding any traps, cats, poison, or other attempts to remove them.

The Drowning Man

This is the only statuette that's obviously magical at first glance. Made of green glass, it shows a man struggling upward as if drowning, and hovers a few inches off whatever surface it's been set on. The glass always feels wet to the touch. Despite the appearance, this statue doesn't prevent drowning; instead, it protects the owner from inconvenient water. He can walk through a thunderstorm and arrive at his destination dry, stomp through mud puddles without dirtying his boots, or spill wine down his shirt and simply shake it off.

The downside: The statue doesn't look like that for no reason. Every time the statue keeps the owner from another inconvenience, it sends the accumulated liquid to someone else. In their lungs. When it's only water, this can be mistaken for a sudden onset of pneumonia; when an otherwise healthy person begins hacking up mud or wine, it draws more attention. Unlike some of the other curses, this one has a wide range, and has no preference for people associated with the owner. Anyone within a few miles of the statue's owner may be affected.

Medusa

This brass statuette shows a lovely woman with snakes for hair. Its primary effect is to make people better at romance and seduction. (In *GURPS,* a +2 bonus to Sex Appeal.) As a minor quirk, it also lets the person understand the speech of snakes; since snakes are dumb animals that seldom say much of interest, this is less useful than one might think.

The downside: Everyone the owner makes skin contact with while under Medusa's effects suffers from weakness to malign effects. (In *GURPS,* -5 to HT.) For the next month, any affected person suffers a sharp penalty to resisting disease, poison, being turned to stone . . . Touching the owner again will restore the penalty, though it won't increase it.

Lucky Dog

This clay statuette is of a cartoonish plump dog, displaying a winning hand of cards. Most of its owners believe it gave them better luck in games of chance. It actually gives a bonus to gambling skills.

The downside: Lucky in cards, unlucky in love. Any romantic relationship the owner participates in while under the influence of the Lucky Dog will end in tragedy for the loved one. Sudden revelations of arranged marriages that can't be escaped, jealous stalkers, bizarre misunderstandings . . . It's not always death, but it can't end with the owner still having a relationship with his loved one, or said loved one in any sort of happy condition. And the tragedy will always somehow be the owner's fault. Any sweetheart of someone with the Lucky Dog and Medusa can look forward to a strange death involving poisoned playing cards.

The Reader

A painted wooden carving shows a child in peasant's clothing, sitting with a book in her lap. The owner of the Reader becomes a paragon of a teacher, able to flawlessly impart knowledge to others with a few simple examples and a clear explanation. He can pass on any of his own learned skills to others in a quarter of the usual time, with no miscommunications or setbacks.

The downside: It's possible to teach people more than you meant to. The owner also passes on any flaws he has to his students, at the rate of about one major personal failing to every skill increase the student gains. "Flaws" include bad

habits, bad luck, and even bad skills; a profligate teacher who never could get the hang of sums may end up with a whole pack of spendthrift, math-illiterate students. Even physical disadvantages can be passed on over time, with appropriate tragic accidents as necessary to imitate missing limbs, poor eyesight, or a bad back. (In GURPS terms, move three points of Disadvantages from the teacher for every point of skill a student acquires under his instruction. If there are no more Disadvantages to move over, start reducing skills the student has and the teacher does not.)

Putting it All Together

The brass disc, on its own, is a minor cursed item. Anyone who spends a week of cumulative time within a few yards of it begins to lose his strength of purpose. (In *GURPS,* subtract one point of Will for each week.) From where it's placed in a village tavern, it'll be months -- or years -- before anyone notices the staff is becoming weak-willed and apathetic. And it'll be even longer before its effect on the whole village becomes clear . . .

Placing all seven statuettes back on the disc turns off the curse. Anyone who sits on the disc between those statuettes from one dawn to the next acquires all of the beneficial aspects of the statuettes permanently. This is an all or nothing proposition: a person cannot set down five of seven and get only five magical blessings.

Of course, all of the statuettes' less-beneficial side effects will also permanently follow this person around. The truly callous might not care, but anyone near them who figures out what's going on certainly will. This is not quite the stuff of which serious Evil Overlords are made, but PCs may have good reason to start investigating if anyone begins collecting the scattered statuettes.

Pyramid Review

Army of Darkness Roleplaying Game

Published by [Eden Studios, Inc.](#)

Written by Shane Lacy Hensley

Illustrated by C. Brent Ferguson & Jon Hodgson

242-page full-color hardcover; $40

"So listen up you primitive knuckleheads, here's how it is. Being god's gift to tool users, you're be able to take that big ol' file and apply it to one of them games like *__Buffy the Vampire Slayer Roleplaying Game__* or *__Angel Roleplaying Game__* until ya got all the purple and other goffic stuff off. Then take what's left and use a nail gun to get all the campy action horror I know you goofballs like from *Army of Darkness* stapled down good 'n' hard, and make it something all new. When you're done give a fresh lick of paint so it kinda reminds you of that corner of Medieval Merry Olde England right here in dusty California. Now you almost got yourself a whole new game. Just get some other bigger knucklehead to tell you lesser knuckleheads how the game goes . . . And hey presto, ya got yourself a copy of the *Army of Darkness Roleplaying Game.* Groovy . . ."

Of course, I could carry on like this in-voice for the remainder of this review, but since this is neither April 1st nor bearable for either reader or reviewer, I shall desist. Instead, I shall settle down and get on with telling you things that really need to know. Like the fact that this is not the author's first [book](#) for Eden Studios (he even gets to peddle his own games), and that this new game employs the publisher's same Cinematic UniSystem mechanics found in the games mentioned above. So if you have played either of those games, you can leap straight in here. It also means that there is a "cookie cutter" feel to this game, something that might impact upon the review.

[SPOILER ALERT!]

Anyway, the *Army of Darkness Roleplaying Game* is based upon Sam Raimi's film of the same name, the third part of his *Evil Dead* trilogy. In that, Ash, our low-browed, big-chinned hero is thrown back in time after a disastrous encounter deep on the woods with the *Necronomicon Ex Mortis* and a host of deadites. Finding himself in the surprisingly dusty Medieval England, the chainsaw-for-an-arm, wise-cracking lunk not only has to contend with the naturally suspicious locals, but also another deadite outbreak. Having grasped the situation and been hailed as the "Promised One" by the local Wise Man, Ash must forge an alliance between the distrusting Lord Arthur and Duke Henry the Red, all before defending a castle besieged by a skeletal horde and demonic forces.

Naturally the game allows you take on the roles of Ash and other cast members, and it even provides guidelines for the Director to run the film as an adventure. All of the major cast members receive a full character sheet to that end. Changes have been made of course, so that anyone having seen the film will have to deal with a twist or two. While this is groovy enough, it only gets you so far. What do you do with the book next? Well, here the author takes his cue from Raimi's Director's Cut of *Army of Darkness,* in which Ash does not return to being an S-Mart store clerk, ready to raid the sporting goods section in the event of another Deadite outbreak. Instead, he oversleeps entombed in his cave and awakes to find a future London blasted all to heck. Knowing that the *Necronomicon Ex Mortis* and the Watcher in the Woods -- the big bad behind it all -- can appear here, there, and everywhere throughout time, and Ash of course being asleep for a lot of this time, then there have to be other Promised Ones ready to take up the good fight and lay down a mighty smiting on the deadites. Calling the player characters . . .

[END SPOILER ALERT]

If *Buffy the Vampire Slayer Roleplaying Game* has its Experienced Heroes, Heroes, and White Hats, then the *Army of Darkness Roleplaying Game* has its Experienced Heroes, Heroes, and Primitive Screwheads, all character types that determine the points to be spent on attributes, Qualities, Drawbacks, and Skills, plus Drama Points. In a radical move compared to the previous Cinematic UniSystem games, the Director is not bound by default to include a single, tougher, more capable character such as the Slayer in a party. Everyone can play a character with the Promised One Quality, which like the Slayer Quality makes a character tougher and harder to kill, and be destined to battle Deadites throughout history. Indeed, the majority of the sample archetypes have the Promised Quality, being in the main ordinary folks raised to heroic status, just like Ash. They include a Zorro-like Folk Hero, the Mary Sue-ish Game Designer, a Roman Gladiator, a Wild West Gunslinger, a Hollywood Dick, a monster hunting Night Stalker, a near future Rollerball player, and a Viking. The selection also reflects the cross-time, "Circa" historical nature of the game.

Mechanically, the Cinematic UniSystem remains unchanged bar some additions to make it more like the film. One of course is the Promised One Quality, but other Qualities and Drawbacks include Big Chin/Really Big Chin, Schmuck, and Tool Man. Schmuck is for the goofball who always screws up, while Tool Man lets you replace a lost limb with something better suited to doing the DIY. Big Chin/Really Big Chin is the true measure of a hero, representing his ability to save others and urge them on in the fight against evil. The effect is either to grant a temporary skill bonus, which must be explained, or even restore another character half of his Life Points, though this costs a Drama Point. These all sum up Ash nicely, although (as pointed out by a colleague) they could work just as well with *Buffy the Vampire Slayer's* Xander.

In terms of combat, Ash -- or anyone so equipped -- gets to use the Chainsaw Ballet maneuver, but the real addition is the Battle System. Quick and dirty, this handles big battles such as the castle siege at the end of the movie, but it is designed cope with all levels of technology, and features in the sample scenarios and settings. It has built-in room for player planning and tactical decisions, and also expects them to participate in the battle.

The *Army of Darkness Roleplaying Game* retains the Cinematic UniSystem's major feature, the Drama Point system. Designed to encourage a player to act heroically, they are expended to gain a skill bonus, regain Life Points, gain a small break in the story with a "Plot Twist," work up a Righteous Fury upon a foe in combat, and finally, to bring a character back from the dead, though still badly wounded. Although they can be bought with Experience Points, they are better gained for delivering good one-liners, for committing heroic acts, and whenever bad things happen to a cast member, more so when they involve his Drawbacks.

The Director's advice starts with the movie and a description of its "Circa England" -- "Circa" here meaning that it gives more than a nod to the history, but without sweating the actual details. Thus you can have deserts and palm trees in an England of 1300AD. The description includes very-full write-ups of the Watcher-in-the-Woods, the Deadites, simulacra like the Tiny Ashes and Evil Ash (and how to do that to the cast members), plus relics, including the *Necronomicon,* Back Stabber, a dagger deadly to the Promised One, and the Spear of Destiny. The latter did not appear in the movie, but does in the book's sample settings. Yet the advice looks more to its sister games in suggesting that the *Army of Darkness Roleplaying Game* be played in a televisual format, with seasons and episodes, perhaps not even facing the Watcher in the Woods each season, but dealing with another foe. None are given here, but the other Cinematic UniSystem RPGs are a more than ready source. The suggested length for a season is four episodes, making it more of a mini-series than a full season, and closer to the source's movie format.

The included scenario, "Once More Unto The Breach," which has the cast members playing a sequel to the film still in Circa England, and the three "Worlds of Darkness" support this format. Two are set in times when the Necronomicon is known to have appeared: ancient Sumeria with "Gilga-Ash," and post-apocalyptic England of 2093AD with "The Future Dead." In-between is "War is Hell," a late World War II setting in which Hitler has harnessed the nasty book and the Deadites to throw the Allies back out of Europe. All provide hours of playing time, and showcase how the author takes the game beyond the film's confines.

Over all, this game feels very complete, something that other licensed RPGs fail to do. Actually lighter and dumber in tone than the other Cinematic UniSystem RPGs, it possesses a very beer 'n' pretzels feel in keeping with the source. Nicely presented and ably (if informally) penned, the *Army of Darkness Roleplaying Game* is pleasingly more than everything you need to run the movie and beyond.

--Matthew Pook

Adventurous Occupations: Man-at-Arms

for *GURPS*

by Sean Manning

For many centuries aristocratic heavy cavalry had an important role in society and on the battlefield. While good heavy infantry could always give them a tough fight, and priests and merchants often challenged their power in peacetime, cavalry had a special glamor. With their combat skills, gear, and political connections, men-at-arms can make excellent adventurers. This template is designed for a starting PC or major NPC in a fairly realistic campaign set at TL2-4, but can also serve as a quick set of stats for nameless opponents. Bronze Age societies used chariots, not cavalry, while quick-firing rifles and cannon relegate cavalry to the fringes of the battlefield at TL5. In history, the template could represent a knight, samurai, Macedonian Companion, Turkish or Persian spahi, or a professional cavalryman or noble from many societies. The classic "knight in shining armor" was a lancer and swordsman first and foremost, but heavy cavalry in other cultures were skilled with bow, javelin, or pistol to soften up tough opponents before a charge. This man-at-arms is respectable and owns his own mounts and arms.

One reason heavy cavalry tended to be drawn from an aristocracy was the sheer expense of good weapons, metal armor, and several horses. Most governments could not afford to arm, pay, and feed a large force of professional cavalry, and few amateurs could afford the needed equipment and training. Instead, rulers often loaned land or other sources of income to men who agreed to train as soldiers and provide a certain amount of military service. Sometimes land grants were hereditary, other times the son of a soldier would be issued a different parcel of land. Feudal landholding got started this way in much of Europe, but similar practices were used in the Muslim world and Far East. One danger was that if the government weakened the soldiers might come to think of themselves as owning the land outright, or even rebel. Another was that the men might come to think of themselves as landowners first, soldiers second, and neglect their military skills. Medieval governments sometimes encouraged this, accepting cash in lieu of service and using it to hire men. The governments of the Muslim world were often more successful in keeping control over the lands they loaned to their soldiers than their European counterparts, but the difference was not absolute. Muslim princes also bought mamluks or ghulams -- Central Asian slaves who were armed as heavy cavalry -- to provide troops without dangerous religious or family loyalties. Many were eventually freed, but retained responsibilities to their old owners. Another category of men-at-arms were household troops, men supported by a lord in exchange for military service. Their terms of service were often relatively informal, but they were generally expected to be very loyal to their current employer.

> ### Why "Man-At-Arms"?
>
> In late medieval Europe, a man-at-arms was any heavy cavalryman with full metal armor, whereas a knight was a gentleman who had been given the honor of knighthood by a lord. In earlier periods there was less distinction among those who could fight as heavy cavalry, as long as they had their own arms and mounts. The term is used here to refer to any aristocratic heavy cavalryman, whatever his arms or culture.

Because maintaining gear and mounts is so difficult, one of the first decisions that must be made about a man-at-arms character is how he makes a living. Full-time professionals generally make poor adventurers, unless the campaign is focused on a war, but a retired cavalryman could provide muscle for a party in a stable empire like Rome or China. Household troops tend to have a bit more flexibility, and are likely to be assigned interesting tasks by their master between wars. On the other hand, some players dislike being tied to an employer. Landholding men-at-arms have advantages and disadvantages as a character. They can do as they like in peacetime, but have responsibilities on their lands. These can provide many adventure seeds, but are restrictive. They would make good characters in a campaign centered on a limited area. Lastly, a man-at-arms could be a free lance, or mercenary. This fits the "wandering knight" of medieval romances and modern *d20 System* campaigns, and the need to feed several expensive horses gives an automatic motive for adventure! Almost any adventurous man-at-arms will spend some time traveling between employers, unless he owns enough land to support himself.

A man-at-arms is a fearsome opponent in combat, for several reasons. He is a frightening figure atop his steed and clad in gleaming armor, both faster than most enemies and better able to resist blows. His horse and armor make him faster and tougher than most commoners. Also, he has the time to learn a wide variety of military skills, making him a versatile and well-rounded soldier. Throughout most of the middle ages, knights fought on foot whenever necessary. Aristocratic men-at-arms also tend to have a formidable pride and camaraderie with their peers. Sometimes class pride, a demanding code of honor, or the sheer joy of a cavalry charge can lead men-at-arms into rash actions, although this has often been exaggerated. Most medieval knights were highly disciplined, for example.

As warrior aristocrats, men-at-arms tend to have their own distinctive way of life. Training and administrative duties keep them fairly busy. Training can be dangerous and exciting -- such as fencing with unbated weapons or galloping through rough terrain -- and is often done as part of a group. However, there is plenty of time for amusements, ranging from the common (singing, dancing, feasting) to the aristocratic (literature, hunting, more expensive feasting). These can provide background to an adventure- or trigger one, if a drunken contest goes wrong! They also provide opportunities for ambitious characters to make contacts or impress potential patrons. Men-at-arms often develop complex codes of behavior. Greeks and Romans dabbled in philosophy, medieval knights accepted chivalry, and the samurai developed bushido. These codes are often part of what men-at-arms believe separates them from lesser warriors, but they can often complicate life- another possible source of adventure. As prosperous horsemen, men-at-arms also often find an excuse to travel, whether on business for their lord or for themselves. Players of traveling men-at-arms should seriously consider bringing along luxuries, such as folding furniture, good food, or a servant, like their historical counterparts did.

Man-at-Arms   *100 points*

This template represents a professional heavy cavalryman, born to a prosperous family and the owner of his arms and mounts. Very rarely, professional armies draw their cavalry from ordinary citizens- use a different template in that case.

Attributes: ST 11 [10], *DX* 11 [20], *IQ* 10 [0], *HT* 11 [10].

Secondary Characteristics: Dmg 1d+1/1d-1; BL 24 lbs; HP 11 [0]; Will 10 [0]; Per 10 [0]; FP 11 [0]; Basic Speed 5.50 [0]; Move 5 [0].

Advantages: Fit [5], Status 2 [5*], Wealth (Very Wealthy) [30]. 15 points chosen from among increased ST [10/level], HT [10/level], FP [3/level] or HP [2/level]; Allies (servants, squires, soldiers, etc.) [Varies], Charisma [5/level], Combat Reflexes [15], Fearlessness [2/level], High Pain Threshold [10], Legal Enforcement Powers [5 or 10], Patron (Knightly order, lord, etc.) [Varies], Reputation (e.g. honorable) [Varies], or Very Fit [+10].

Disadvantages: -35 points chosen from among Bad Temper [-10*], Bloodlust [-10*], Callous [-5], Code of Honor (any) [Varies], Compulsive Behavior (Carousing, Fighting, etc.) [Varies*], Debt [-1/level], Duty (Lord) [Varies], Intolerance (Religious, racial, or national) [Varies], Overconfidence [-5*], Reputation (e.g. Dishonourable) [varies], Selfish [-5*], Sense of Duty (e.g. lord, vassals, the weak) [varies], Stubbornness [-5].

Primary Skills: 16 points chosen from among combat skills. Riding (Equines) (DX/A) DX+1 [4]-12, Soldier/TL (IQ/A) IQ+2 [8]-12.

Secondary Skills: Savoir-Faire (IQ/E) IQ+1 [2]-11. 7 points chosen from among Administration (IQ/A), Area Knowledge (Local) (IQ/E), Climbing (DX/A), Jumping (DX/E), Leadership (IQ/A), Tactics (IQ/H), or various unarmed combat skills.

Background Skills: 3 points chosen from among Dancing (DX/A) DX-1 [1]-10; Armory/TL (Body Armor), Armory/TL (Melee Weapons), Connoisseur (any), Falconry, Farming/TL, Heraldry, or Poetry (all IQ/A) IQ-1 [1]-9; Law (Local customary) or Theology (Own religion) (both IQ/H) IQ-2 [1]-8; Carousing or Singing (both HT/E) HT [1]-11; or Tracking (Per/A) Per-1 [1]-9 35 points.

* One level free from Very Wealthy.

Landed Lens: Status 3 [+5], Wealth (Filthy Rich) [+20], Independent Income 5 [5]. Choose Administration (IQ/A) IQ+1 [4]-11, Area Knowledge (Own estates) (IQ/E) IQ [1], and Leadership (IQ/A) IQ [2]-10 as Secondary Skills. 30 points.

You have extensive land holdings, which bring in enough rents, taxes, and fees to support you and a retinue. As a result, you are a political leader as well as a soldier, and do not depend on a lord to support yourself. Legal Enforcement Powers will be appropriate in many settings!

A landed knight would work 20 hours a week as a feudal lord, using the best of Administration and Law (Local Customary). This is a Very Wealthy job with income adjusted by margin of success or failure, worth $7,000/month at TL3. Independent Income brings in $5,000/month at TL3, so with typical rolls he can support himself. On a critical failure, either there is some sort of disaster (half income for 1d months) or the lord gets himself in some sort of legal or political trouble. See for a more detailed discussion of landholding.

Cataphract Lens: Combat skills are Spear (DX/A) DX+2 [8]-13; one of Bow (DX/A), Buckler, Shield, or Thrown Weapon (Spear) (all DX/E) DX+1 [2]-12; one of Axe/Mace, Broadsword, or Shortsword (all DX/A) DX+1 [4]-12; and one of Brawling (DX/E) DX+1 [2]-12 or Wrestling (DX/A) DX [2]-11.

You are one of your Iron Age (TL2) society's most fearsome warriors. You wear a full suit of metal armor, ride a horse with an armored trapper, and wield a long spear two-handed. You may not be nimble, but can push through most opposition confident that armor will protect you and your mount. A few cataphracts also carry bows, or use a pair of spears (one to throw, one to thrust) instead of the lance.

High Medieval Knight Lens: Combat skills are Lance (DX/A) DX+1 [4]-12, Broadsword (DX/A) DX+1 [4]-12, Axe/Mace (DX/A) DX [2]-11, Shield (DX/E) DX+1 [2]-12; one of improved Axe/Mace, Bow (DX/A) DX [2]-11, Crossbow (DX/E) DX+1 [2]-12, Spear (DX/A) DX [2]-11, Polearm (DX/A) DX [2]-11, Staff (DX/A) DX [2]-10, Two-Handed Axe/Mace (DX/A) DX [2]-11, and Two-Handed Sword (DX/A) DX [2]-11; and either Brawling (DX/E) DX+1 [2]-12 or Wrestling (DX/A) DX [2]-11.

You are a classic mailed knight, wielding broadsword, lance, and heater shield. You can fight well on foot or on horseback, but dislike using ranged weapons except to hunt.

Horse-Archer Lens: Combat skills are Axe/Mace (DX/A) DX [2]-11, Bow (DX/A) DX+1 [4]-12, Broadsword (DX/A) DX [2]-11, Fast-Draw (Arrow) DX [2]-11, Lance (DX/A) DX-1 [1]-10, Shield (DX/E) DX [1]-11, Spear (DX/A) DX [2]-11, Wrestling (DX/A) DX [2]-11.

You are an armored horse-archer, able to harass your enemy with arrows before closing with lance and sword. This is a flexible style of fighting, but you are neither as nimble as a light cavalrymen nor as fearsome hand-to-hand as a knight. Samurai could use a similar template, dropping out Axe/Mace, Lance, and Shield, and adding Two-Handed Sword, Polearm, and Shortsword.

Sample Characters

Mazaeos   *100 points*

Attributes: ST 11 [10], *DX* 11 [20], *IQ* 10 [0], *HT* 11 [10].

Secondary Characteristics: Dmg 1d+1/1d-1; BL 24 lbs; HP 11 [0]; Will 10 [0]; Per 10 [0]; FP 11 [0]; Basic Speed 5.50 [0]; Move 5 [0].

Social Background: TL2; Cultural Familiarities West Iranian [0], Languages Old Persian (Native/None) [-3], Lydian (Accented/None) [2], Thracian (Broken/None) [1].

Advantages: Charisma [5], Fit [5], Legal Enforcement Powers [10], Status 2 [5*], Wealth (Very Wealthy) [30].

Disadvantages: Code of Honor (Persian) [-10], Compulsive Carousing (9) [-7], Duty (Satrap of Lydia, 12 or less) [-10], Hidebound [-5].

Primary Skills: Bow (DX/A) DX [2]-11; Riding (Equines) (DX/A) DX+1 [4]-12; Shortsword (DX/A) DX+1 [4]-13; Soldier/TL (IQ/A) IQ+2 [8]-12; Spear (DX/A) DX+1 [4]-12; Thrown Weapon (Spear) (DX/E) DX+1 [2]-12; Wrestling (DX/A) DX+1 [4]-12.

Secondary Skills: Area Knowledge (Western Anatolia) (IQ/E) IQ [1]-10; Climbing (DX/A) DX [2]-11; Jumping (DX/E) DX [1]-11; Savoir-Faire (IQ/E) IQ [2]-10.

Background Skills: Carousing (HT/E) HT [1]-11; Connoisseur (Gardens and parks) (IQ/A) IQ-1 [1]-9; Dancing (DX/A) DX-1 [1]-10.

Quirks: Ambitious; believes Persians are a superior race; thinks he's a good judge of character; careless of his finery; mild stubbornness.

* One level free from Very Wealthy.

Equipment: Two spears, fine akinakes (straight-bladed shortsword with a small guard), composite bow and bowcase, hip quiver and 20 arrows, bronze pot-helm, linen cuirass (DR 2, protects torso and groin, 9 lbs). Brown cavalry horse, and several riding horses. All horses have bit and bridle and a thick saddlecloth (-1 equipment penalty to Riding skill). Normally, he leaves the bow and quiver behind when he is fighting on horseback. He has nowhere to put his spears when his hands are full with the bow!

Appearance: A clean-shaven, brown haired man with a swarthy complexion, wearing a brightly patterned shirt and trousers, several pieces of gold and silver jewelry, and a felt hood with flaps which can be wrapped around the chin.

Mazaeos is part of the Persian garrison of Lydia, in western Anatolia, in the fifth century BC. His grandfather was settled here when the Persians conquered the region, and he lives on the family estate near Sardis. He protects against raiders and invaders, and enforces the law as part of a squadron of 100 riders. He is popular with his comrades, and with the other local soldiers and officials. He is well known as a wrestler and as a good man to drink with. He doesn't mind learning languages, although many aristocratic Persians leave translation to scribes. The satrap Pissuthenes has used him several times to investigate various problems, but the results were not entirely satisfactory. Mazaeos tends to make snap judgments of people, and he isn't particularly clever (although it is easy to underestimate him). He dreams of being awarded an estate with green gardens, cool streams, and a happy population of herders and farmers.

In battle, Mazaeos uses standard tactics for medium cavalry. He tries to keep moving and throw one spear at dangerous opponents before closing with the other, provoking opponents too tough to fight with taunts and missiles in hope they will break position and pursue him. Dismounted, he often grapples with his left hand while stabbing with the right. He would make a good 'friendly Persian' for Greek characters to meet, or a distraction for out-timers in a historical parallel.

Sir Guy FitzWilliam   *150 points*

Attributes: ST 12 [20], *DX* 11 [20], *IQ* 10 [0], *HT* 11 [10].

Secondary Characteristics: Dmg 1d+2/1d-1; BL 29 lbs; HP 12 [0]; Will 10 [0]; Per 10 [0]; FP 11 [0]; Basic Speed 5.50 [0]; Move 5 [0].

Social Background: TL3, CF Latin Christendom [0]; Languages Norman French (Native/None) [-3], Old English (Accented/None) [2], Greek (Broken/Broken) [2].

Advantages: Fit [5], High Pain Threshold [10], Independent Income 5 [5], Legal Enforcement Powers [10], Status 3 [10*], Wealth (Filthy Rich) [50].

Disadvantages: Duty (Lord, 12 or less) [-10]; Laziness [-10], Lecherousness (12) [-15], Reputation -1 (Weak lord, subjects and stronger-willed Normans, all the time) [-2], Reputation -2 (Conqueror, the English, all the time) [-5].

Primary Skills: Axe/Mace (DX/A) DX [2]-11, Bow (DX/A) DX-1 [1]-10, Brawling (DX/E) DX+1 [2]-12, Broadsword (DX/A) DX+1 [4]-12, Lance (DX/A) DX [2]-11, Shield (DX/E) DX+1 [2]-12, Spear (DX/E) DX+1 [4]-12, Thrown Weapon (Spear) (DX/E) DX+1 [2]-12, Wrestling (DX/A) DX-1 [1]-10; Riding (Equines) (DX/A) DX+2 [8]-13, Soldier/TL (IQ/A) IQ+2 [8]-12.

Secondary Skills: Administration (IQ/A) [2], Area Knowledge (England) [1], Area Knowledge (Normandy) [1], Savoir-Faire (IQ/E) IQ+1 [2]-11, Tactics (IQ/H) [1], Jumping (DX/E) [2].

Background Skills: Dancing (DX/A) DX-1 [1]-10, Falconry (IQ/A) [1], Law (Local customary) (IQ/H) IQ-2 [1]-8.

* One level free from Filthy Rich.

Quirks: Ruthless when he sets his mind on something; likes telling stories of his adventures, but does it badly; vocally pious; keeps his gear brightly polished at all times (makes him easy to spot); hates Norsemen.

Equipment: Steel pot-helm with nasal, mail hauberk (protects torso, groin, skull, arms and half the legs), fine lance, broadsword, small axe. Dappled grey-and-white warhorse, riding horse, and packhorse; all horses have appropriate tack and saddles.

Appearance: A scarred, redheaded man with big lips and an athletic figure, dressed in good clothes and wearing a sword.

Sir Guy is that rarity, a successful adventurer. He left his father's estate in Normandy as a young man, and drifted south to Italy to fight for the Greek Emperor. The women were good, but the pay was poor, and the fighting was too desperate for his liking. He saved just enough money to buy passage on a boat heading back to Normandy in time to join Duke William's expedition against England. He managed to escape both disease and angry Englishmen, and was rewarded with an estate in western England. The local peasants don't like him, but have heard of plenty of worse overlords. If he bothers their wives and daughters, he is not otherwise oppressive. Despite his piety and laziness he is protective of his rights, and he has clashed with the local church over legal authority. He is mostly satisfied with what he has, but wants a proper Norman wife. His current mistress, Cuthild, is pregnant and has her own feelings about this . . .

Sir Guy is equally comfortable fighting on foot or on horseback, although he avoids marching whenever possible. Sometimes he charges with his lance couched under his armpit, but he is more comfortable fighting in the traditional manner, thrusting or throwing his lance underhand (use the Spear or Thrown Weapon (Spear) skill). He could make a good opponent for a group of low-powered English characters, an interesting contact for some Norman ones, or a foil for a reform-minded cleric. He is one of the few people in eleventh-century England who can read any Greek, which could also make him useful to desperate adventurers. He could be set in another medieval setting, such as Yrth, with slight changes of back-story and gear.

Akechi Sengoku   *150 points*

Attributes: ST 11 [10], *DX* 12 [40], *IQ* 11 [20], *HT* 11 [10].

Secondary Characteristics: Dmg 1d+1/1d-1; BL 24 lbs; HP 11 [0]; Will 11 [0]; Per 11 [0]; FP 11 [0]; Basic Speed 5.50 [0]; Move 5 [0].

Social Background: TL4; CF Japanese [0]; Languages Japanese (Native/Native) [0], Korean (Accented/None) [2].

Advantages: Combat Reflexes [15], Fearlessness 2 [4], Fit [5], Status 2 [5*], Wealth (Very Wealthy) [30].

Disadvantages: Bad Temper (12) [-10*], Callous [-5], Enemy (Bounty hunters and the authorities in several districts, 9 or less; Hunter) [-20], Intolerance (Uppity poor people) [-5], Reputation -3 (Coward, to honorable samurai who know he survived his master: 10 or less) [-2].

Quirks: Fatalistic and lives for the present; mean drunk; hates gunpowder weapons and those who use them against gentlemen; tries to behave honorably; showy fighter.

Primary Skills: Bow (DX/A) DX+2 [8]-14, Broadsword (DX/A) DX+1 [4]-13, Guns/TL 4 (Pistol) DX [1]-12, Judo (DX/H) DX [4]-12, Polearm (DX/A) [2], Riding (Equines) (DX/A) DX+2 [8]-14, Shortsword (DX/A) DX [2]-12, Soldier/TL (IQ/A) IQ+1 [4]-12, Two-Handed Sword (DX/A) DX+2 [8]-14. 41

Secondary Skills: Area Knowledge (local region) (IQ/E) IQ+1 [2]-12, Climbing (DX/A) DX [2]-12, Jumping (DX/E) DX+1 [2]-13, Savoir-Faire (IQ/E) IQ+1 [2]-12, Tactics (IQ/H) IQ-1 [2]-10. 10

Background Skills: Armory/TL (Body armor) (IQ/A) IQ [2]-11, Poetry (IQ/A) IQ-1 [1]-10, Theology (Buddhist) (IQ/H) IQ-2 [1]-9, Singing (HT/E) HT [1]-11.

* One level free from Very Wealthy.

Equipment: Fine katana, fine composite bow, naginata, hip quiver and 20 arrows, wheelock pistol (concealed on his person), set of lacquered hide lamellar armor (protects torso, groin, neck, and legs to the knees; treat as DR 2 leather), steel pot-helm with face-mask. Good warhorse and ordinary packhorse; both horses have appropriate tack and saddle. He often leaves the naginata behind when fighting on horseback so he has both hands free to draw a bow.

Appearance: A wiry, clean-shaven Japanese man with rounded features, dressed in good but somewhat soiled and mismatched robes and armor.

Akechi is a master-less samurai in the wars of sixteenth-century Japan. Akechi's previous master was killed in battle against a neighboring lord and his musket-armed militia. Akechi escaped from that battle with a musket ball through his chest and an abiding hatred for lowly peasants who dare to stand against their betters. His prejudices don't stop him from working with commoners, or carrying a small pistol as a backup, though! On the day that his master died he decided that he would do what he needed to do to survive until the day of his fated death.

He wanders Japan, falling in and out with other groups of renegades and working for local lords. Eventually his temper slips, or someone learns of his past "cowardice." He is known as a useful ally, but unreliable, and a hard man. He fights ferociously, and rarely shows mercy. Sometimes he has stooped to banditry, with the result that there is a small price on his head. He makes an unpleasant ally or villain for a party of Japanese characters, and could be found almost anywhere in East Asia with a slightly different back-story. He could inspire a mercenary in almost any disorderly setting with a strong warrior class.

A Mélange of Magical Creatures XI

for *GURPS*

by Eric Funk

The tenth time's the charm when it comes to this collection of unusual entities. This time, we turn our attention to a smaller world . . . one that's sure to get under your skin in more ways than one.

Mageburn

"Mageburn is a blight on our guilds. It claims the lives of more mages than any other disease. Magic is a necessary industry, so we are trying to find non-magical solutions for the resistant curse. The presence of this plague is known throughout the world."
-- Ymitri Azilo, *Magical Disasters*

Mageburn is a magical, magic-resistant disease that steals life from a victim. Fortunately for civilization in general, it only affects people with Magical Aptitude, using that connection with magic to power itself. Each day it sucks more life from its victim. Non-constant Magery prolongs the cycles and pain; for example, night-only Magery mages lose life at about half normal rate.

The disease makes a patch of its victim's skin glow a florescent color. In some victims it turns pink, some blue, and others green. The pathogen normally takes only one color per person, although the same strain can express itself differently with different victims. The affected area itches and burns as the colors visibly throb. In the worst cases with victims with high Magery, the affliction actually appears to be flames that cause the victim agony (1d/2 shock penalty), although these flames cause no heat and do not affect others. Exposure to a no-mana zone will only make the virus dormant, although damage inflicted can heal normally. The cycle continues where it left off should the patient re-renter an area with mana.

Encountered

Mageburn is likely be seen first, before contracted. Magic-using characters should be worried when they hear about health and fatigue-draining *magical, magic-resistant, mage-only* diseases. Mild strains can be deliberately introduced as fashion, and to try to build up resistance. Settings with unstable magic and many young casters could expect different magical and magic-resistant diseases. However, entering a standard Low-Mana zone will afford the victim +5 to rolls to recover from this disease. It would seem likely that proliferators of this disease could be a large organization bent on removing mages from seats of power.

Industrial Uses

"What other plagues will be unleashed by common magic use? Everyone is afraid even to get near this plague. How will we be readied?"
-- Sage Antonius, *Practice safe hex*

The pigments from mageburn are useful for magical tattoos, and a carrier for tailored follow-up diseases and curses. Organizations might make use of similar organisms, perhaps even a weakened strain of this plague, to test individuals for Magery. This might take the form of blood testing in a laboratory, or simply infecting a group of students at a school. Some guilds have been using mageburn to help create wizard marks. In either case, the visibility of a victim's Aura is increased by Magery.

Game Mechanics

Mageburn is dangerous within 20 yards of an infected individual (or area): Roll vs. HT - Victim's Magery - Target's Magery, +1 per yard distance. The most effective way to resist the effects is using a HT-augmenting spell effect, such as Vigor, and then journeying into a Low-Mana zone. This sickness is defined as follows: HT-Magery; 1 day Onset; 1d+Magery FP; 1 day cycle; HT-Magery to recover. However, entering a standard Low-Mana zone will afford the victim +5 to rolls to recover from this disease. The disease cannot defend itself properly against the body's defenses in a low-mana zone. Ironically, a no-mana zone is more dangerous (in the long term) than a Low-Mana zone, since mageburn hides itself in such areas.

Adventure Possibility

The heroes have been hired to find a way to deliver a case of mageburn, supposedly to embarrass a very pompous mage. Little do they realize what else it carries: a mind-control spell. Victims of this strain will have to fight it off every night until the plague is cured or the brainwashing takes effect. If the intended victim is successfully infcted, this fact will become obvious when he goes to make a scheduled speech; when he begins, his opinions on certain political matters have turned completely, surprising anyone familiar with his work and ideals.

Mageburn

Appearance: Glowing patches of a victim's skin that are warm to the touch.
Category: Virus, magical.
Diet: Manavore.
HT 12.
Traits: Magic Resistance (Improved) 5; Metabolism Control 1 (Hibernation; automatic in No-mana zone)

Whispers

"Only recently identified as a life form, this species of energy beings is slowly migrating to our world. Those on the other side can see across space, and send messages to those traveling to our plane. This can make for an unwilling prophet if the being becomes stuck in a host."
--Divination For Village Idiots

First identified during a flu epidemic, early descriptions of these beings simply noted "a whisper in the dark." The real breakthrough was made when technicians were able to detect a dimensional distortion opening during the height of a patient's fever, followed by a change in the victim's brainwaves or aura, as if they were not alone. Could it be that at the height of the sickness, a pathway opens for pilgrims from another dimension?

Very few individuals stay infected for long. As individuals enter the fever trance, they can communicate with the other side, becoming an "oracle," of sorts. To maintain the oracle power, they must touch at least one person per day. The Whisper that resides with them has Will 15, IQ 12. Treat as per Epilepsy (see the ***Basic Set***).

Encountered

Prophecy and far-sight requires these "oracles" to enter a state of fitful sleep, send a message into the "old world," and receive a reply in the same session. The entire process takes 1d+2 hours.

Being touched by someone newly infected or an oracle can set in motion a "curse" that causes the new victim to subconsciously perform a ritual to bring in a spirit to this world. A few medics have discovered that they can ask some sick people questions, and *other* sick people in the vicinity can carry the answer back.

Industrial Uses

"An empathic friend of mine was recently ill, and she claims to have made contact with the Whispers while in the fever dream. She sent images of the pain to the spirit and asked it 'why?' She said the response translated to 'regretfully necessary." Of course, this was in the middle of a fever dream, but it is the most reputable tale of contact to date."
-- Tychnius the Elder, *Planar Visions*

The idea of far-seeing and instantaneous communications without a range appeals to many individuals and organizations. Alchemists theorize that leftover essence after arriving may be containable, perhaps leading into a doorway to the home dimension. Further experimentation is difficult, as their apparent need for information implies that they are intelligent.

The Truth?

These beings can scry from their home plane, and send word through the connection formed while a host is in a fever. Although Whisperers are certain that it is a peaceful immigration, all individuals are very tight-lipped about where they go once they arrive. Some sages suspect that it may be to leave for another plane of existence through a different fever dream. The beings that chase them may not be so friendly, and have no compassion for the sick . . .

Adventure Possibility

A doomsayer comes to the heroes, screaming about unseen invaders that have made his brother sick. If the adventurers can cure his brother, they might be able to quiet the preacher, averting mass panic. Either way, the sickness will run its course in 3d days. Until then, they will have to contend with disappearances and murders of sick individuals in the city, as a crazed killer is using the sown confusion as an excuse to cleanse the planet . . .

Game Mechanics

Victims resist infection with HT, plus modifiers such as Magic Resistance, Fit, and Resistance to Disease. Those victims who are already under a form of mental coercion are immune to the final summoning ritual, but still suffer the physical side effects (page 12 of *Magic*). Each infection gives a victim +1 to fight off a future infection. On a roll of 18, or a successful Will roll to invite the creature to stay, it *can* remain. Some psionic powers may also offer protection.

Whispers

Appearance: No known appearance.
Category: Energy Beings.
Diet: Unknown.
ST 8; DX 8; IQ 10; HT 12.
Will 12; Per 12; Speed 5; Dodge 8; Move 5.
Traits: Astral Entity (page 263 of the ***Basic Set***), Compulsive Behavior (Answering Questions); Telecommunication (Shortwave; Accessibility: Only while in unconscious fever: Requires preparation)

Variant: Rival

Traits: As above, plus Callous; Obsession (Revenge)

Living Tattoos

"It was my first time in the big city. I was eating lunch at an indoor café on the ridge. While I was looking out the window, a man with a vibrant tattoo on his arm sat down with someone at the window side table. I tried not to stare as the cameo in the tattoo moved on its own. I was taken aback when a tattoo of a boat sailed past it and up his arm!"

-- Mordok the Unseen

The first sightings of these creatures date back to tribal shamans imbuing warriors with "the strength of the living spirits" to give them endurance. These symbionts wander the body, eating parasites and cleaning wounds. An advantage of their use as a tattoo medium is that the drawing can be made in an area with duller, flatter skin, and later coaxed to a sensitive area, such as the eyelid. They can be corralled to stay in one area, but then they can only service that area. Most can be trained to come to a certain point on command, to show others. "Free-roaming" living tattoos are not very good as a brand, except as a backup means of identification. There are rumors of variants that can "live" on chitin and scales.

Encountered

Adventurers will likely encountered these strange creatures as tattoos on people, or perhaps animals. On giant beasts, such as whales, these creatures could be real hazards.

Industrial Uses

"I was finally able to convince the shaman to let me observe the process of making the tattoo, if I promised not to give the details away, so I cannot. The dyes were mixed with an 'élan vital,' which, supposedly would bring the drawing to life. The process of drawing the tattoo seemed to take hours, and it was difficult to see without getting in her way. Finally, it was done, and the image rippled to life, as a rock dropped into a still pond, but in reverse. It soon slid out of the way. The shaman bandaged the operating site as it bled slightly. We led the horse outside, and I was surprised to see it wander over the animal's nose. I guess they need to see the sun, too."
-- Franz Zeiteil, *Warhorses of Taz*

Industrial and the military use these animals in the upkeep of cattle and war mounts. The tattoos are not visible under fur, and thus are less elaborate in colder climes. In hotter climates, the nose art on a war elephant can be terrifying, indeed! These life forms can easily hold enchantments such as knack tattoos (see the vignette on page 56 of *Magic*) if drawn in a sympathetic shape.

Adventure Possibility

The heroes are to intercept a message, and deliver it to the next town. Their contact lets them know at the last moment that it is on a cow. What no one but the sending agent knows is that it is a "living" tattoo. Not even he knows that it is a shy two-dimensional creature. Complications arise when enemy agents get on their trail, and the cow is recalcitrant to move. Can the adventurers keep from leaving behind telltale signs of a cow's passage?

Game Mechanics

To add such a creature with a tattoo, roll against the lower of Professional Skill (Living Tattoo) and either Artist (Tattoo) for static images that still slide around, or Artist (Illusion) for animated images.

The time it takes for the tattoo to react depends on its average proximity to the wound. A tiny tattoo (1 sq. in.) will arrive in about 20 seconds, a large one (1 sq. ft.), in 10 seconds, and a huge one in 2 seconds. Divide the time in the category by the number of tattoos in that category (minimum 1 second delay), and take the lowest of the three delay categories.

Note that the larger the tattoo, the more likely it will be struck in combat (see page 19 of the *Basic Set*). Solid, framed tattoos might qualify as a "box" for +2 to hit, while scattered grids might be at -1.

Living Tattoos (1 square inch)

Appearance: Any drawn image.

Category: Unknown.
Diet: Carnivore and photovore.
ST 1; DX 4; IQ 1; HT 12.
Will 8; Per 8; Speed 4; Dodge 8; Move 4.
SM -11; DR 1.
Traits: Affliction (Cosmic; Advantage: Sanitized Metabolism; Accessibility: Host only; only areas the tattoo is limited to); Body of Shadow; Combat Reflexes; Dependency (Host; Very Common; Constantly; Hibernate only); Domestic Animal.
Skills: First Aid-12.
Notes: Steals 1 HP per month.

Giant Living Tattoos (1 sf)

ST 3; DX 3; IQ 1; HT 13.
Will 9; Per 9; Speed 4; Dodge 8; Move 4.
SM -4; DR 2.
Notes: Steals 1 HP per week.

Humungous Living Tattoos (1 sq. yd.)

ST 9; DX 2; IQ 1; HT 14.
Will 10; Per 10; Speed 4; Dodge 8; Move 4.
SM -2; DR 4.
Notes: Steals 1 HP per Day.
Notes: Average surface area of an average weight ST 10 man is 2,880 square inches or 20 sq. ft or 2.22 sq. yd.

Hypermorphosis Virus

"Aye was jus' gonna' nip into the O'Larry henhouse to borree a few eggs. I snuck into the pen, fine, but them dry twigs on the ground snapped somethin' fierce. A few o' the chick'ns woke, and started cooin'. There ain't been much light, but I swear one of them hens burst outta her feathers and leapt at my throat! Wrastlin', I managed to throw it off, and get outta' there. When I stopped runnin', I realized I had red fur in ma' clenched fists."
-- Overheard at the tavern *The Otter's Tale*

This strain of therianthropy was developed as a research tool to study the effects of such viruses on lab animals. Affecting only "lower" animals, this disease turns a timid creature into a single form of a natural predator for its species. In general, the hypermorphosis virus does not affect carnivores or creatures larger than a small sheep or small pig. Rumors persist of strains that can turn chickens into foxes, hares into ferrets, parakeets into falcons, and mice into cats.

Encountered

If controlled carefully, it can be used to protect a herd by affecting a single member to let it confront attackers.

Industrial Uses

"So, you heard about those chickens that can turn into foxes? That's sure something you don't expect. It's a good thing it doesn't work on cows! What's next, a toaster that turns into a microwave?"
-- Andi Tellain, Jester

This virus can be used to turn low-energy animals such as chickens and mice into higher-energy animals for fur, such as foxes and mink. Shapechanging spells can be aided, if one wants to turn into one of the two creatures.

Adventure Possibility

Something has been breaking into hen houses and removing only the roosters. Some prints point to a fox, but attempts to track or locate it come to nothing. Authorities would certainly like the culprit brought in alive for examination, if convenient. The culprit is a rooster were-fox that has been taking out the competition. After a merry romp through the forest or city, perhaps encountering rogues and monsters on the way, the heroes can triumphantly bring in the offender. Unless the players think to look into it, next month, when the eggs hatch, there will be a number of chicken were-foxes around. This strain of the virus affects only males; a GM should consider it infecting other small males in the vicinity of the heroes as well as an additional clue.

Shadow Moss

"Shadow moss is a severely misunderstood life form. Almost every book I have encountered it in lists it as something of pure evil. It is simply a malleable tool for individuals of that mindset. Here, let me show you."
-- His Grace, the Bishop of Cleeberry

Technically a lichen, this life form feeds on emotions, reacting to hate and loathing the strongest. People often get angry when a strange moss grows on their house, and this breeds hate in the creature. It can be frightening to watch a matte mass slowly spreading, taking over the roof of a building within days. The spores of shadow moss are relatively few for a fungus, making the mass fairly safe to work around. The colony shares resources to some extent. Cells in well-lit areas photosynthesize and store energy for use where light levels are low. The colony shares resources as if a single organism, allowing portions in low-light to receive energy gained in photosynthesis.

Encountered

It is said that jails and hospitals often attract this life form due to the emotional power these facilities foster. It is uncertain whether the emotions of undead can feed shadow moss, although some note (and worry) that cemeteries tend to accumulate the lichen. In some regions, it has a reputation of *being* evil, due to perceived association with negative emotion, although there has been no solid proof of this association. Conversely, there are places of healing that deliberately place careful "potted" mats of shadow moss to encourage loving thought. Undue shadow moss growth will be associated with negative emotions, and this may effect visitors' reactions to those in the area. Continued fungal growth may mean mandatory counseling, magical healing, or other setting-appropriate action.

Industrial Uses

"A strange use found for shadow moss is as a basic enemy detector. Unfortunately, it is vague as a reader cannot be sure that the emotions detected are against the organization or a specific person present."
--*Magic Security Monthly*

Oddly enough, the first multipurpose use of this life form is as paint. The moss is grown, and then scraped off, permanently staining the wood underneath. The easiest way to bottle food for it is using the essence of a previous batch of shadow moss. Dark villains or altruistic leaders always want to do more with this creature. Some individuals keep shadow moss to vent their anger, and claim to be refreshed afterward.

Adventure Possibility

The heroes are hired as bodyguards for a young rich man who turns out to be near-consumed with dreams of vengeance. He is set to take down a misanthropic local crime lord who has despicable personal habits. The adventurers must pass checkpoints without letting their hate fester . . .

Shadow Moss

Appearance: A matte black lichen - a fungal-photobiont symbiosis.
Category: Unknown.
Diet: Emotivore, Photovore.
HT 11.
Traits: Detect (Strong Negative Emotion); Leech (Maledication; Ranged 1; Requires Strong Negative Emotion).

Bone Plague

"I am writing this because my brother was changed by the plague that ravages our city. He is no longer himself. He does not remember our mother, nor the dog we had as a child. I fear for us all, as I, too feel the first of these symptoms. I sincerely hope that this is not the end, but farewell, mother."
-- The last written words of Enrico, before becoming known as Enrico the ripper, notorious mass murderer

From a distance, the symptoms if the bone plague appear to be those of a virulent cold. The patient gets allergenic symptoms, such as coughing and a runny nose, followed by a debilitating fever. A patient is bedridden for a few days, and then the fever breaks, and the body recovers quickly. Although a few weaker individuals die from fevers every year, most make a full recovery within a week or two. However, the bone plague has an odd property: A select few have reported some partial or even total amnesia, which sometimes recovers with time. Those interviewed during recovery seem to be looking for something; in fact, there is another, near-unknown property of the bone plague: Those thoroughly infected are actually possessed by an entity intent on xenophobic rage.

Encountered

If the bone plague already exists in a setting, then chances are that the adventurers have likely been close to someone infected. If one is familiar with the Whispers' plague, the two are superficially similar. At close examination, the afflictions may be distinguished by their divergent neurological effects, which may allow a clue as to how to develop a cure.

Industrial Uses

*"It is a waking nightmare to see so many friends and colleagues simply **replaced** with strangers. These individuals that have the same scars, blood, and eyes, but different auras and facial expressions."*
-- Alix Trutuk, *War of Beans*

Although it is an unusual technique, perhaps the illness can cause messages to be delivered circumspectly: If a group of individuals are given an important secret message and then exposed to the pathogen to induce amnesia, then the group can travel without fear of mental discovery or physical coercion. (A group should be so infected in case the amnesia is permanent.) If fully harnessed and controlled, the memory-erasing effects can be useful in a pacifistic society instead of a death penalty. The "clean slate" nature of the permanent form of the amnesia could spark a nature-versus-nurture debate, as subjects could be re-raised in a new environment. It can be used to guarantee spies' loyalty, safeguard industrial secrets, and to undermine an opposing army's willpower.

Adventure Possibility

A wizard claims to have captured an invading being from another plane, but fears that other agents of the entity might be after the captive. He hires the heroes to set up traps and later protect the shop from intruders while tests are conducted. Meanwhile, the adventurers will have to deal with jabbering politicians, arson, rioters, and more ordinary folk that seem to be causing trouble; a virulent form of the bone plague is intent on protecting its brethren. Just as some useful findings are almost complete, there could be a mass escape from the local jail, and the curiously organized mob rushes the lab . . .

Game Mechanics

When a person is sick with the "Bone Plague," he must make a HT roll, modified by Magic Resistance or Susceptibility. A critical failure on the health roll (usually 17 or 18) means "death," but after 1d minutes life resumes, but with the "patient" suffering from amnesia. If DX, Magery or psionics are mental traits (as opposed to physical), they are now gone with the original mind (see Mind Transfer, page 296 of the *Basic Set*).

Bone Plague

Appearance: True form unknown.
Category: Being of Pure Thought.
Diet: Unknown.
ST 10; DX 10; IQ 11; HT 12.
Will 14; Per 11; Speed 5.5; Dodge 8; Move 5.
Traits: Being of Pure Thought; Sadism (Not own species).

Host of the Bone Plague

ST +2 (Max*: 14); DX +2 (Max*: 12); IQ 12 to 14; HT +2 (Max*: 14).
Traits: Amnesia (Total).

* No increase beyond 14 as the parasite cannot control beyond this level, even if the host's physical ability is higher.

Keyworms

"These bugs can allow less-talented individuals a quick way into the criminal agency, but they have a price. They seem to keep traces of blood from everyone who feds it in the last week or month. One lesson is 'don't use second-hand tools.'"
-- Detective Igram Madson, *Tredroy Allied Guard*

This tiny brown-gray invertebrate fits to shapes, possibly an adaptation to stay inside crevasses in rocks or trees in swamps; the obvious usage for picklocks (legitimate or otherwise) led to the name "keyworms." Unfortunately, the creature has an instinct to become rigid when it becomes stressed, making it hard to pull it out of a hole.

A keyworm drinks blood like a leech, making small, diamond-shaped wounds. In feeding, it becomes very pliable, and placid for hours, until it becomes hungry again, or is scared. When it is squeezed, the whole creature becomes rigid, and surprisingly effective as a key. Thus, the keyworm is fast becoming the tool of choice for thieves and infiltrators, until forensic and law enforcement technology catches up. According to the word on the street, a person can tell a leech's individual moods by the kind of marks it makes.

Encountered

Keyworms are a dramatic tool to encounter, likely as a thief shows a PC the "real" way to pick a lock. These living tools don't rust and are not detectable as metal.

Preventative measures must be drastic to keep keyworms from being effective -- contact poisons don't work well, and can be dangerous for normal users. A messy solution is to embed razors into locks. Thus adventurers may encounter bleeding locks (which may cause them to interpret the locks as an omen or an evil sort of foreshadowing). Some agencies have reported some success in marking keyholes with pheromones that prevent keyworms from tensing up. Problems include time delays and the fact that not all worms respond equally to the scents.

Keyworms are presented as a socially dangerous creature, and can pass on germs through themselves and on keyholes. As a vector for disease, it is recommended that a person never feed a worm, and one should always wear gloves when holding one. Paradoxically, gloves inhibit fine motor control, and thus are eschewed by picklocks . . .

Industrial Uses

"It is considered a mark of bravado for master thief to eat his keys after he thinks he's done with them, disposing of the evidence in a dramatic way. This works very well, as long as no one empties his stomach."
-- Detective Marcius Askelon, *Megalos PD*

Some companies have begun to make locks without keys, specifically requiring a person to use such a lock pick. This has led to the creation of locks almost impossible to open even with a standard key lock picks. This arms race will only hold until the underground get enough keyworms of their own, at which point it becomes a novelty. Options for utilizing keyworms in enchantments include those effects that alter a subject's fortitude or flexibility. The widespread proliferation of the keyworm may result in the emergence of keyless entry, whether by ways magical or mundane (such as combination locks).

Game Mechanics

On locks not designed to resist keyworms, this creature provides +1 to +5 to skill. A GM may wish to limit the bonus to 1/4 the character's Animal Handling (Keyworm) skill.

Adventure Possibility

The owner of a an inner-city medical clinic comes to the PCs. It seems that a virus or plague is sweeping the streets. It is not debilitating at first, but sets in after a month. It is passed by blood, and official responses are nominal and slow to arrive. A careful reading of the expressions of the prominent politicians suggests that they endorse the disease. Perhaps they released it to wipe out crime and homeless people. Although, if so, the vector for how it was spread initially may surprise (and horrify) the heroes . . .

Keyworms

Appearance: A grey-brown worm.
Category: "Insect" (worm).
Diet: Carnivore.
HT 12.
Will 6; Per 6; Move 1/4.
SM -8 (5" long).
Traits: Combat Paralysis; Flexibility (Double-jointed); No Manipulators; Regrowth; Vermiform; Wild Animal.

Beyond Fantasy

This installment's creatures could be altered to exist in hard-science worlds, even if the more wondrous aspects can't translate directly. Mageburn can be merely an unusually vivid phage. Whispers are energy beings or hallucinations. Living Tattoos might be made of nanomachines. The Hypermorphosis Virus could be a virus that changes the scent of a creature to emit hallucinogens. Shadow Moss could merely react to the stimulus of loud noises (which would mean roadways and airports could have large accumulations of it). The Bone Plague might just be a vicious mental disease that affects the memory and personality of its victim. Keyworms can translate fairly directly, although the need for such a lockpicking device is questionable in the future; regardless, they are still good vectors of disease.

Sidekicks: A New Look at Child's Play

by Brian Rogers

Comic tropes are like fashion: they change over time without discernible cause, and you can look back on decades old photos and say "Why the heck was I wearing that?!?" What you're wearing in this case is a costume disturbingly similar to your mentor's and an innocent grin that makes your older self take two insulin shots and go to bed. Once all the rage, of late sidekicks have fallen out of vogue, replaced by, um, adventurous teenage heroes who bear a striking similarity to a major figure with whom they occasionally work. OK, so there are still sidekicks, but they're more angst prone and independent. Still, it's easy to say that the glory days of the sidekick are past.

But what glory days they were! Even into the silver age DC had sidekicks a'plenty (in the early Pre-crisis Justice League of America there were seven heroes and seven sidekicks, plus one for the team as a whole) and even the less sidekick friendly Marvel universe had Wyatt Wingfoot and Rick Jones (who would sidekick to anyone for panel space). So if you're going to run a supers game, you have to give sidekicks some thought, if only to figure out why you shouldn't have them. The following is a deconstruction of the various types, how to model them with game mechanics, with examples tying back to the [Omniman Family](#).

Sidekick Breeds

*The Protégé

The classic super-hero sidekick is the apprentice who happens to share the hero's powers: Robin, Kid Flash, Aqualad, Speedy, etc. Mechanically this is the easiest to do, as a version of the hero "on the cheap" and doesn't require a lot of new power designs. However, since there's nothing the sidekick can do that the hero can't do better, why bother? The narrative answer is emotional resonance; the Protégé provides a second emotional viewpoint, and shows how different minds will approach problems in different ways with the same tools. The tactical reason is the character can't be in two places at once and can't watch his own back, so the sidekick provides an extra set of eyes and hands.

Best Pals

Almost as common is the normal (if highly capable) human who hangs out with the hero as his best friend. This can pose some mechanical problems, as the Best Pal is usually much less capable than the hero he hangs out with: Jimmy Olsen and Superman, Rick Jones and the Hulk. This means either making use of some mechanical tricks to even the odds (giving the Best Pal a lot of Luck, levels in Hard to Kill, etc.) or just accepting the genre convention that the sidekick will not be a direct target. The Best Pal serves some of the same functions as the Protégé, but often serves as a humanity translator: explaining the world to their alien / monster / time traveler friend and their friend to the world.

Active Contact

One of the sidekicks least often seen as such is the hero's contact who has their own adventurous capacity: the crusading DA, the field testing scientist, the mystic voyager. More potent than the Best Pals, they have specialized skills and limited powers rather than an everyman's versatility and charm. Active Contacts straddle the line between being sidekicks or being contacts, allies and dependents. The determining factors are how often is the character working directly with the hero? And how do the characters view their relationship? Jim Gordon often works directly with the Dark Knight, provides advice and contacts and even occasionally gets held hostage by the villains, but neither he nor Batman see Gordon as a sidekick.

Sidekick Mechanics

Here are a few alternate approaches to the construction of your closest companion.

Allies and Pets

This is how most systems handle Sidekicks: a simple mechanic where the player invests a certain amount of their character's ability into a reliable partner. This gives the player a sizable degree of control over the sidekick's actions, and is usually well balanced.

Omniman has one such sidekick in Omnidog. Most Protégé sidekicks are most easily done via this mechanic.

Duplication

The hero is able to generate an independent, likely less potent version of him or her self. Because this is an independent personality this makes the duplicate more a sidekick than it is an extension of the heroes own being (which is how a duplicate is normally handled). It's up to the GM and player as to which of them has control of the Duplicate's actions; the player might enjoy arguing with himself in the form of two different versions. While the mechanics are via duplication, the breed is very similar to Protégé since the 'sidekicks' powers are usually duplicated.

Omniman has this sort of sidekick by calling on his younger self. Other examples could include Tom Strong's occasionally recruiting of help from his other-dimensional counterparts (such as his funny animal version Warren Strong), or possibly Superman's cadre of Superman-robots, though those seldom provide him with advice as much as they do extra hands. Oftentimes such duplicate sidekicks require being in specific locations or the use of strange devices or rituals to bring the sidekicks into play.

Transfer, Usable By Others or Affliction

The hero is able to give other people some portion of his powers and abilities, turning them into their "Sidekick of the Moment." This is sometimes done magically or bio-chemically ("Here, take a Miraclo pill!"), but it's a great way to increase the punch of a Best Pal or Active Contact, or to make sure that someone on the ground will always have the ability to back you up. Another option is occasionally outfitting people with the hero's lesser used devices, scavenged enemy tech or untried inventions - not technically a Transfer (unless the hero keeps several earlier prototypes of his gear or outdated power suits around for just that purpose) but the concept is the same.

Since Omniman's powers all stem from his ability to make things more powerful, several of his sidekicks have some form of transfer involved - most specifically Omnilass. Dr. Strange has upgraded others with magical powers to help him out, and Tony Stark has given others access to his back up armors when he needed a boost. Jimmy Olsen has had so many short term power sets (I'm fond of the one where his touch brings images to life) that Superman might well have a seldom-used variable power pool transfer for his pal. Few heroes use this on a regular basis - in most cases it's seldom enough to be a story idea rather than something they pay points for - but well worth considering, if only to determine why they _don't_.

Contacts/Dependents

Just as it's possible for allies and contacts to become romantic partners it's possible for any NPC tied to the character by points to take a role as a sidekick . . . of a sort. If the NPC has sufficient power or skill to be able to act effectively on their own, their repeated presence could elevate them to sidekick status, If the hero's kid partner is half as powerful as the hero but it perpetually getting into trouble from which the hero feels obliged to rescue him, is he an accident prone sidekick or a competent DNPC? If the hero's scientific friend appears in every episode to help circumvent the monster's powers or opens wondrous new worlds for the hero to explores, is he a brainy sidekick, or a highly reliable contact?

Omniman has both Professor Blast and Detective Quincy as sidekick/contacts/dependents: both appear regularly, have very useful skills, and are independent players. Given how blurry this dividing line can be, the argument can be made

that almost any sidekick character is actually a dependent, or contact. The real test is who ultimately controls the NPCs actions; if it was purchased as an ally or sidekick then the player has significant, perhaps final, say on what he does. If the NPC was worth points, the GM is in the driver's seat. If the player has flagged the dependent as being highly competent and frequently appearing, some deference might be paid to the sidekick title - the NPC might even think of himself in those terms, even if the character sheet doesn't back him up.

Another Player

Not usually seen as an option, but another player could take the role of the sidekick. The success of the ***Buffy the Vampire Slayer*** RPG proves that this can be done (on a classic level, Buffy is a solo hero with a broad cast of sidekicks, dependents and contacts), but sidekicks also make great way-stations for part time players, new players learning about RPGs or the system (especially since protégé sidekicks can see what their mentor hero does with the powers and mimic them to get an idea how powers work), or people just in town for one session (as it mitigates the need to play 'introduce the new character'). Plus, players more interested in the narrative or the genre conventions just enjoy playing the second string hero with the new viewpoint.

As was discussed in the article on [League](#) play, all of the Omniman family except his younger self had been designed as secondary PCs by the other League players, but in practice it's Captain Quincy that's usually under another player's control. As a detective and representative of the law she has access to skills and contacts that complement the big guy, as well as the ability to requisition tactical support teams that give the player something to do in major fights. As with the line between sidekicks and dependent/contacts, this one is impossible to clearly define in the source material: there are times when Robin or Rick Jones are independent and potent enough to be under the control of other players, and times when they're not.

Sidekicks in Play

Fortunately, My Trusted Companion Will . . .

Sidekicks make for a great excuse to suddenly change the conditions on the ground: Just as things look really bad for the heroes, the one with the curiously-absent-sidekick narrates out what his faithful companion has been doing (usually setting explosives, shutting down the base's power supply or successfully impersonating one of the mooks) to turn the tables. For narrative gamers, it may be enough that the Sidekick-owning player makes the statement, while more rules-focused GMs can ask for a quick series of rolls (say a stealth, lock-picking and demolitions checks) for the sidekick to get the same effect.

Can We Go Get the Bad-Guys Now? Huh? Can We?

Youthful exuberance is forte of the kid sidekick, and the character can either come to personify the need to protect innocence or give the grim defender a mouthpiece for any emotion the player might want brought to the fore. Sidekicks make great goads to keep the game moving: if the players are making wildly incorrect assumptions the GM can use the sidekick as a "voice on the spot" to point this out; if they're getting bogged down in endless argument they can try to solve the problem themselves and hence provide a new, genre-appropriate looming deadline.

No, Don't Shoot! He's My Friend! And I'm a Federal Marshall!

Sidekicks can provide their own contacts, resources, and status for the heroes to draw on one step removed. A team of high powered heroes might spend an extended story arc on the run with the one government agent who believes them, or trying to learn more about 'the human condition' by driving their super-vehicle-disguised -as-a-tour-bus around the country with a down-and-out rock musician. Either would give them access to skills and societies that they might not otherwise see, and can give monsters or vigilantes an image of respectability in an otherwise hostile environment.

"If this is Singapore, I must be Vijay!"

Finally, there's the idea of a variable or rotating sidekick, where one or more world traveling heroes have allies everywhere who will immediately drop what they're doing and move to help. This gives the players an automatic insight into the local culture and the GM a free pass to dump information on the players from a trustworthy source. If you have a Player-As-Sidekick who is also one who likes making up new characters he could just swap PCs every time the players move to a new locale - this is great way to incorporate such a player into a Wonder/Exploration based campaign. For an example of this, the film *Sky Captain and the World of Tomorrow* can be cast with three players: Polly, Joe, and Joe's rotating sidekick, Dex/Kaji/Franky.

In conclusion, there are a lot of lenses to apply to the classic companion, with varying potency, utility and independence. It's worth taking a look at which might best fit your game before you kick the idea to the side.

Murphy's Rules

What's an RPG Got in Its Pocketses?

I've been spending my last batch of random personal CPU cycles trying to figure out the answer to one question. Namely, why are there so many songs about rainbows? No, wait; there's only two.

No, the question is a seemingly obvious one, and an answer I find satisfactory has proven as elusive as the question is obvious. Namely, what advantage(s) do RPGs have over other forms of entertainment?

Now, I'm not going to discuss what answers I discarded (although I might return to that list in a future column). However, I was surprised to realize that I only had two answers. However, they're pretty meaty answers, so I'll tackle each answer in its own column.

The first answer is the more obvious one, but it's also the one that's most likely to be rendered obsolete as computer games grow more complex and sophisticated.

RPGs permit the attempt of any type of action the player might want to attempt, with the expectation of an answer more satisfying than, "You can't do that."

Okay; I'm sure this answer *seems* obvious. But let's look at our two-entry truth table.

RPGs let you do unexpected things with the expectation of a rational (if not successful) result. Assuming this is true, then we see the appeal of the "classical" RPG: Any actions for which there are not rules can be attempted, with the GM adjudicating an appropriate response on the fly. Whether throwing sand at an opponent's eyes, kissing the king by surprise, or attempting to make a deal with a monster that it was presumed you would only fight, it's entirely possible for an RPG to exist such that the GM needs to make up a fair bit of actions, reactions, and effects on the fly. But is this a mandate from the heavens?

RPGs *don't* let you do unexpected things. One of the emotions I felt when I first read the final version of the ***Dungeons & Dragons Third Edition Player's Handbook*** was how unbelievably complete it was. It seemed that, literally, *every* possible action possessed an accompanying action and roll, a success at which would bestow some kind of bonus, penalty, or damage. This is especially true if you look at actions along the lines of desired outcomes, rather than discrete actions themselves. For example, an action for which there does not seem to be rules -- such as "I kiss the king" -- has as its core an attempt at a desired outcome. Is the goal to rattle the King? There's rules for confusing an opponent (and an accompanying skill). Is the goal to enrage him? That's a taunt. Is the goal to seduce him? That's a seduction roll. And so on.

Looking at it in this fashion, it's possible to envision an RPG in which it is *not* possible to do unexpected things, simply because all actions have been expected. One early example of this distinction comes from the ***Torg*** RPG, where practically all combat actions could be sorted into a category of (possibly) "approved" actions: attack, trick, taunt, maneuver, and so on.

Non-RPGs don't let you do unexpected things. Again, this is the default position from which I'm working. But, as should be obvious from the point immediately above this one, if the list of "unexpected things" is reduced to zero, then non-RPGs should be able to compete entirely on that ground. Again, interacting with NPCs (Interrogation or Streetwise checks), taunting (Taunting powers or skills), throwing sand in eyes (Improvised weapons and/or Blinding), and so on could all -- theoretically -- be coded out in the not-too-distant future. Even going "off the map" has no meaning if the map is rigidly defined and/or new content can be generated dynamically or randomly as necessary; in the same way that players can't go off the map on an RPG set aboard a space station, players should have no expectation for being able to do so in a computer RPG's solid stone dungeon coded^D^D^D^D^Dcarved centuries ago. Of course, this avoids the "roleplaying" aspect; for example, in a game like ***World of Warcraft,*** there's no contingency for something like taunting monsters or another player.

Or is there?

Non-RPGs *do* let you do unexpected things. All games encourage and often reward thinking "outside the box," which can let players accomplish things even if they weren't the original intent. I have two ***World of Warcraft*** stories to share, both of them expressed by me, someone who hasn't played the game. (Which is prelude to say that if I got a fact wrong or am not explaining it right, I wouldn't be surprised.) First, when the game was released, the various factions couldn't talk to each other; attempts at typing messages to others resulted in those players seeing gibberish. However, people figured out how to use one of the commands -- I believe "emote" or "yell" -- to broadcast messages one character at a time. Some enterprising characters figured out how to make a macro that would take a line of text and craft it into lines readable by the other factions. *Voila!* Instant ability to taunt!

Another great story I've heard about was how one of the guilds managed to get its members to lure one necessary NPC to a remote corner of the game world and cordon him off, making it so that none of the other players (who weren't in the guild) could access him and get the necessary info/item/whatever to continue their own quests.

Both these actions were eventually undone -- a developer patch in the case of the former and an in-game GM resetting the NPC in the case of the latter -- but that doesn't change the fact that players were "rewarded" (up to a point) for their efforts at doing the unexpected . . . just like they would be in a tabletop RPG.

Next week: The second, more complex, less obvious (and more difficult to execute) advantage that RPGs possess.

Pyramid Review

The Shackled City Adventure Path (for *Dungeons & Dragons*)

Published by Paizo Publishing

Written by Jesse Decker, James Jacobs, Tito Leati, David Noonan, Christopher Perkins, & Chris Tomasson

Cover by Matt Cavotta

Illustrated by Attlia Adorjany, Tom Baxa, Peter Bergting, Matt Cavotta, Jeff Carlisle, Christine Choi, Stephen Daniele, Omar Dogon, Tom Fowler, Andrew Hou, Ben Huen, Eric Kim, Chuck Lukacs, Val Mayerick, Mark nelson, Ramón Pérez, Chris Stevens, & Jim Zubkavich

Cartography by Christopher West

418-page full-color hardcover; $59.95

Traditionally, the roleplaying scenario comes in just a few parts, typically a trilogy or quartet. Rarely do they come longer, although *The Shackled City Adventure Path* is a rare exception, consisting of 12 parts. Originally appearing separately in issues 97 through 116 of *Dungeon Magazine* as eleven parts, the campaign has now been collated, organized, and updated for presentation as one whole campaign designed to take a party of first level characters right up to 20th level. And that includes the addition of a whole new scenario to those seen in the magazine, designed to smooth play at low levels.

As a campaign, *The Shackled City Adventure Path* is designed for generic *Dungeons & Dragons,* primarily using only the three core books. That said, having copies of the *Monster Manual II, Monster Manual III, Fiend Folio, Draconomicon,* and *Libris Mortis* on hand could prove useful. This generic nature applies equally to the setting; apart from references to the basic pantheon detailed in the *Player's Handbook* and some names drawn from the Greyhawk campaign, the campaign can be placed into almost any *Dungeons & Dragons* world. Not that it needs to be, as the campaign is pretty much self-contained.

The setting for *The Shackled City Adventure Path* is Cauldron, an important trading town built within the caldera of an extinct volcano. The town is only a few centuries old, but the region has a longer, more turbulent history, involving Yuan-Ti, a necromantic cult, demonic infestation, one of history's greatest spell casters, plus several dragons. All of which -- and more -- might become relevant as the characters are thrown up against a plot that just happens to make use of Cauldron's unique location.

[SPOILER ALERT!]

What the villains of the piece have in mind is the destruction of Cauldron by activating the volcano underneath it. Once the lava flows, its power can be harnessed to fuel a ritual that will open a permanent portal between the Material Plane and one deep in the Abyss. Also necessary is the sacrifice of the 13 Shackleborn, individuals born of demonic blood and marked with an invisible sigil, the ritual requiring that they be placed in a tree of Soul Cages. There is the

possibility that one of the player characters is one of the Shackleborn, but in what is really the book's only major downside, this aspect is left relatively unexplored. Of course, this cabal, known as the Cage Wrights, is not the only villain that the player characters will have to face.

[END SPOILER ALERT]

The campaign opens with "Life's Bazaar" and a cliché. In the old days, an adventure began in a tavern, with an old man staggering in and delivering a cry for help, before invariably dropping dead at the characters' feet. These days, the cliché to get a campaign going is to have the characters come to the aid of someone in the street. In this instance, three thugs are beating up a priest of the church of St. Cuthbert. The trio has been hired by Cauldron's notorious thieves' guild, The Last Laugh, to dissuade the priest from investigating a recent rash of disappearances including several from the town's orphanage. Besides giving her thanks for their aid, the priest's superior and acting head of the church in Cauldron, Jenya Urikas asks the party to conduct the investigation on her behalf. This leads the characters into an abandoned gnome workshop below Cauldron and below that, the local headquarters of a slave ring. The question is, are the slavers just after more merchandise, or are they working to order?

This first part sets the pattern for much of the campaign. As it progresses, the dungeons grow smaller and smaller, but also deadlier. Yet the campaign is not just a series of dungeon bashes. The party will face several other interesting challenges that include saving a neighborhood from a rampaging Umberhulk; trekking across a level of the Abyss part infused with celestial elements to take the tests that will make them its master; and, when the bad guys' plans come to fruition, working hard to evacuate a panic-stricken city. The dungeons though, are well designed, but take on increasingly tactical and resource management elements as they increase in complexity and lethality.

The campaign is structured in the classic onionskin mode, with a lot of information from the DM to keep on top of, and impart. The players will need to make as many friends as they do enemies, but their efforts should be monetarily and magically rewarding. The structure for the campaign also leaves plenty of room for character research and magical item construction, and whilst there is some railroading, the DM is given several areas to detail himself. That said, there is relatively little advice in terms of running the campaign, which might prove handy if the players wander too far from the plot. Advice on getting the campaign started is good though, suggesting which classes are best suited to the campaign and rewarding characters if they are local to Cauldron. This is in the form of "traits," first seen in ***Unearthed Arcana,*** which give benefits and drawbacks that fit easily into the campaign.

Physically, ***The Shackled City Adventure Path*** is a nice presentation in full color, with a chain motif used in the page margins throughout. A pleasing touch is the coming apart of the chains as you progress through the book. The artwork is also good, although it would have been nice to see some of this presented in a manner that could be shown to the players. Everything from the campaign's NPCs and monsters (standard and new), to the new Prestige classes, feats and magic, are handily organized into several appendices. This is awkward for including the protagonists though, meaning that no little preparation is required. The cartography -- presented in a poster map of Cauldron and its surroundings and as a booklet of the dungeons -- is never less than superb.

The Shackled City Adventure Path is nothing less than a challenge, both to run and to play. In part it feels a little old fashioned, harking back to ***Advanced Dungeons and Dragons*** campaigns like ***A1-4, Scourge of the Slavelords*** and ***GDQ1-7, Queen of the Spiders,*** but this is a more modern affair, not dissimilar to ***The Enemy Within*** campaign of ***Warhammer Fantasy Role Play*** fame. It certainly possesses the same grand, epic scale, yet more particular to this campaign is the serialized structure that means the time and effort needed to invest in this campaign can be more easily halted and come back to at a later date. This is the best way to really play what is an epic affair, much more than a mega-dungeon. ***The Shackled City Adventure Path*** is a big investment, not just in time, but also money, but it more than delivers with the fate of Cauldron relying completely in the hands of the players.

Pyramid Review

Dilbert: The Board Game

Published by [Hyperion](#)

Designed by Eric Lang

Graphics by Simon Stone, Brian Wood

Copy editing by Pat Harrigan

Full-color boxed set with game board, six-sided die, six employee stand-ups, six employee cards, Pointy-Haired Boss stand-up, plastic stands, 15 glass signature tokens, 70 memo cards, 26 project cards, 18 consultant cards, 18 trait tokens, 17 work tokens, six happiness tokens, six cubicle tokens, two donut tokens, one out of order token, one Todd token, one Ted token, one family portrait token, one plastic plant token, rulebook; $29.95

Scott Adams, creator of the mega-popular Dilbert comic strip, has been accused of having spies in everyone's office. How else could his observations be so piercing? Well, the folks at Hyperion must have agents in everyone's game group, because they've developed a fine adaptation that brings the strip to the tabletop while maintaining its cursed humor. Everyone must now report to work at *Dilbert: The Board Game.*

The object of the game -- designed for two to six players with an hour playing time -- is to have the highest Happiness level when the boss finally gets traded to upper management.

Players take an employee playing piece and the card and work tokens that accompany it. Three to six drudges can take part. Everyone gets lined up in cubicles; the closer one is to the boss, the unhappier one becomes, knowing at any moment the call could come to perform the most pointless task first (cube position breaks many ties). Every character is rated for Motivation (how far he can move), Apathy, Incompetence, and Offensiveness. What no one has a lot of is Happiness, and they'll spend the game trying to get it.

Each turn, characters find themselves assigned to horrible, thankless projects, and they wander the halls and offices of the board in hope of finding all the signatures they need for the job. They may be helped by Memo cards; these offer ways of skirting danger or foisting things off on someone else. Carpal Tunnel Syndrome may place the burden of making die rolls on another player; Casual Day could work against any player wearing blue jeans; and Sexual Harassment hurts those who touch someone else's tokens. If someone gets a signature from all the departments involved in a task, the project is killed (no one wants to take responsibility for that particular turkey).

Those signatures may not be easily secured if the employee runs afoul of one of many pitfalls. Meeting the boss knocks a character over and darns him to Heck. Some tasks are assigned to, say, "the most Offensive employee," and if someone chooses to switch their level of that stat with someone else they may dodge that bullet. Worse still, a set of Dogbert's consultant cards sit in the middle of the board, and anyone who stumbles into the meeting there may trigger one. These make life even more miserable for everyone (except Dilbert, who can ignore them; and anyone currently enjoying the anonymity of the restroom). For example, budget cutbacks drain Happiness every time the sufferer touches the die. Other cards may require everyone to guess the next die result or to compliment the active player, and Proprietary Non-Disclosure Policy makes the game worth buying all on its own.

But once the signatures are in hand, they can be placed on a matching project. Enough of them kill an assignment. That's good for anyone working on it, because every turn players lose Happiness for their tasks. The person who ends an assignment gains Happiness. When a character and the Pointy-Haired Boss cross each other on the Happiness track, the poor taskmaster gets traded to upper management. The player with the highest final score, as adjusted by things like how good their current cubicle assignment is, claims what little victory his dead-end position allows him.

The best part about the pieces is how big and bright they are. There's not a lot of time wasted on overly fancy graphics. The game shares the cartoon strip's Spartan sense of style and décor, favoring the simple over the detailed. Cartoon blurbs are scattered throughout the game's equipment and the rulebook is clear and concise. Everyone's skills (Apathy and so on) are tracked on the board using markers, and these are unfortunately quite small. Also, the board seems to warp without too much effort.

A lot of games like this turn out to be gimmicky cash-in opportunities, and while that would be quite Dilbertesque, this game makes players laugh just reading the rules. It becomes funnier still when all the separate ways to hose players come together to make life miserable for all concerned. Touches like drawing a real and practical distinction between the employees and the players playing them (some cards target one over the other) set off round after round of the giggles, and some of the potential card combinations can be positively gut-busting.

Dilbert: The Board Game is funny, unpredictable, and playable. The humor and the game both have staying power and make good use of their subject matter. More than a straightforward Dogbert marketing ploy, Hyperion makes their license count.

--Andy Vetromile

Rockets High!

for *GURPS* and the *d20 System*

by R. West

Lieutenant Jaeger swept over the front, leading his flight of Aeolus attack craft. Improvised anti-aircraft guns reached up, but there was no real threat; the Alliance's monopoly on powered aircraft -- even on the technology needed to produce them -- meant that he and is squadron merely had to drop their bombs, shoot up the artillery positions, and return home. Indeed, in the six months the Aeolus had been in action, only five had gone down -- and all of them had exploded, so only fragments would be available to be examined.

As the first of the 25-pound bombs struck the enemy position, over two hundred streaks of flame streaked through the formation. Lieutenant Jaeger snapped his head around as two of those streaks struck his number two's plane, which simply vanished as two three and a half pound warheads detonated, along with the bombs still aboard. Another plane staggered from the blast, lost control, and plunged to the ground. "This can't be . . ." was the lieutenant's reaction as he saw what was coming -- airplanes that simply could not be. He had no time to think further, as the supposedly impossible planes were stitching the sky -- and his Aeolus -- with machine-gun fire.

What seemed like a lifetime later, the strange planes roared away at impossible speeds, flame jetting from their tails. Nine of his flight of 12 were gone, at the cost of only one enemy. The war had stopped being fun . . . and he had a report to file.

* * *

With the Habsburg's enemies controlling the skies -- for the simple reason that they had the only heavier-than-air aircraft -- something had to be done. Pieces of a destroyed enemy plane, downed by pure luck, gave the basic shape, while the Habsburg Monarchy had the resources of some of the world's best engineers and chemists.

It cost many lives, but eventually, artillery rockets were scaled up for propulsion, and a complex amalgam of wood, fabric, and metal was contrived to act as an airframe. The first efforts crashed and burned, but eventually, sheer brute force combined with more experiments, coupled with the conceptual breakthrough of putting the horizontal stabilizer in front and away from the rocket's exhaust, produced an airframe that could carry machine guns and rockets.

The resulting machine looks quite strange by almost any standards. At first glance, an interworld agent would think of a World War One biplane fighter, but there is no propeller in the front -- instead, a long boom holds the horizontal stabilizer well in front of the nose of the plane. Doped cloth gives the latticework boom some semblance of streamlining. The vertical stabilizer sits in its traditional place, at the rear of the fuselage. From the lower wings hang a miscellany of rockets and bombs.

The "Vengeance" series aircraft is a nightmare to handle; once the engine is ignited, it must burn at full power until it burns out. Changing speed is impossible. Although quite responsive, it is also unforgiving of mistakes. In addition, when it's overly stressed, it has a bad habit of breaking up. It must land and take off from a hard surface, either paved or well cared for packed dirt, or be air launched from a dirigible. Glide ratio is adequate, but there are no mistakes on landing; all landings are dead stick. Any accident on takeoff, with a burning rocket and missiles or bombs attached, is usually fatal. An added complication is quality control on the propulsion rockets: Burn time and thrust are somewhat variable, with a higher thrust rocket burning for a shorter time. On the plus side, internal combustion technology is not needed to build it. Even the latest version is still deadly dangerous to the pilot, but is never the less in full production. A fortunate lull in the pace of the war allowed for a substantial number to be built, and the next Habsburg offensive will have air power.

It is a weapon of desperation -- the rockets or bombs are dangerous, but inaccurate, and the twin machine guns are of

relatively minor use against ground targets, but quite effective for air to air combat. The air to ground rockets are risky to use. For the first six months of deployment, any malfunction on a rocket attack has a one in six chance of setting the launching aircraft on fire. Additionally, on the earlier versions, all ordnance on a single hardpoint must be launched at once.

The smallest missiles are designed for salvoing at Aeolus aircraft or infantry, while the other weaponry is intended to deal with Republican ground forces. A squadron of twelve can put 240 light missiles into the air, or drop 2400 pounds of explosives on Republican positions.

In the Ming-3 timeline, all the elements are there for a similar craft, with the exception of the chemistry. Rockets and gliders are both known technology, and a sufficiently brilliant chemist or team of chemists could perhaps work out an adequate rocket. This could be the result of a warlord working to develop a counter to the immense weight of numbers of the Imperial Army, or someone within the Imperial hierarchy preparing for a civil war. The resources required would likely be extreme, but the expenses could be hidden in the labyrinth of bureaucracy, or gleaned from a warlord's treasury.

In Cornwallis, the Aeolus version could be used almost unchanged, as a vehicle built by the Sons of Liberty in secret. Cornwallis's tech level is such that it would not represent cutting edge technology, and could perhaps be built in a barn in the woods. Even Rome Aeternus is close to having the needed technology . . . with a little help from outside.

TL5/6 Rocket Plane (*GURPS* Stats)

The TL 5/6 rocket plane is developed as its society is approaching tech level 6; a good understanding of airfoils and a TL 6 chemistry knowledge are assumed on an otherwise TL 5 craft.

The following items are the only ones that do not conform to TL 5:

- The engine and the missiles use TL6 explosives and fuel.
- The machine gun is TL6.
- The wings use TL6 knowlege of airfoil construction.
- The wings and machine gun could be developed near the end of TL5; GM may wish to change the Malf. number of the machine gun, and introduce uncertainty as to exactly how long the rocket will burn.

Note: Although the vehicle's HT computes as 10, insufficient knowledge of the stresses of aerobatics could, at the GM's option, reduce the HT by as much as 4.

Crew: 1 total. 1 crew station covering vehicle maneuvering system.
Subassemblies: Vehicle +4, Wheels +1, Fuselage +3, 2xWings +2.
P&P: 1,000 lbs. thrust solid fuel rocket (45 minute burn time) [Fusalage].
Fuel: Built in to engine
Occ: cramped crew station (exposed) [Fusalage]

Armor	F	RL	B	T	U
Wheels	2/2	2/2	2/2	2/2	2/2
Fuselage	2/2	2/2	2/2	2/2	2/2
Wings	2/2	2/2	2/2	2/2	2/2

Weaponry	Malf	Type	Damage	SS	Acc	1/2D yds	Max yds	RoF	TL
12.5mm .50 cal machine gun	Crit.	Cr	11d+1	20	13	890	4,500	13	6
12.5mm AP ammo	-	Cr	11d+1(2)	-	13	890	4,500	-	5

Equipment

All: two 100 lbs. untapped hard points. Fuselage: two 12.5mm .50 cal machine guns (long barrel); 1,600 rounds 12.5mm AP ammo.

Statistics

Size: [L×W×H] 23.6'×5.9'×2.95' *Payload:* 784 lbs. Lwt.: 15,871 lbs.
Volume: 410 cf Maint.: 36.5 hours (2.63 mh/day) *Price:* $75,125

HT: 10 HP: 16 each [3×Wheels], 177 [Fusalage], 240 each [2×Wings].

Wheeled Ground Performance: Speed Factor 12, Top Speed 70 mph, gAccel 5 mph/s, gDecel 10 mph/s, gMR 0.5, gSR 3, Ground Pressure 1,558 lbs./sf, Off Road Speed 25 mph.

Aerial Performance: Stall Speed 50 mph, Drag 456, Top Speed 130 mph, aAccel 1 mph/s, aMR 4.5, aSR 1, aDecel 18 mph/s.

Design Notes

TL5 light frame very expensive materials [Vehicle].
TL5 DR 2 TL6- non-rigid [Vehicle].
Payload Cost: $576
Vehicle Features: mechanical controls, fair streamlining, cheaply made.
Wings: biplane.
Wheels: quantity 3, small.
Volume: 12.4 cf [Wheels], 248 cf [Fuselage], 75 cf [2×Wings].
Area: 32.1 sf [Wheels], 237 sf [Fuselage], 320 sf [22×Wings].
Empty Space: 100 cf [Fuselage], 75 cf [22×Wings].
Aerial Performance: external item drag 1, payload 0, sweep none

These are typical weapons that the Habsburg Empire might mount in the two 100 pound hardpoints:

Weaponry	Malf	Type	Damage	SS	Acc	1/2D yds	Max yds	RoF	TL
50 pound bomb	Crit	Exp	4dx145[10d]	-	6	0	0	-	6
100 pound bomb	Crit	Exp	6dx200[12d]	-	6	0	0	-	6
10 pound bomb	Crit	Exp	6dx20[6d]	-	6	0	0	-	6
2 pound bomb	Crit	Exp	23d[4d]	-	6	0	0	-	6
Heavy ground attack missile (100 pounds)	Crit	Exp	4dx175[10d]	-	13	660	1,200	-	6
light ground attack missile (25 pounds)	Crit	Exp	5dx7[6d]	-	13	660	1,500	-	6
Light Missile (10 pounds)	Crit	Exp	21d[4d]	-	12	520	520	-	6

The stats presented here represent an ideal version, with all the bugs worked out. Since a solid fuel vehicle is more difficult to test than most (replace the engine after every flight) testing is expensive, and time consuming, a perfected version is unlikely to be developed before it becomes obsolete. (Two vehicle files are included; the first one is for Aeolus, while the second one is a lower technology version, suitable for Ming 3.)

Likely Bugs

Airframe design is at a very primitive level for Aeolus and Ming-3, and similar craft in Cornwallis will be amateur efforts, and prone to failure in high stress situations. Subtract 1D from the health of the aircraft.

Likewise, poor control and/or stability are also very likely.

The four 100-pound hardpoints can carry a variety of ordnance, with the most common being bombs and two different varieties of rockets. The munitions listed are the best Habsburg technology could produce -- if the vehicle is used in the Ming-3 timeline, substituting lower technology munitions is recommended. All ordnance on a single hardpoint must be released simultaneously.

There is 100 cubic feet of empty space in the fuselage. This is to allow for the maze of wires and struts that hold the craft together -- it is not useable for anything large, although a timeline with radio could perhaps shoehorn one in.

An engine costs $7,020, and must be replaced after each flight. Installing a new engine takes approximately two hours.

Adventure Ideas

- In any timeline, PCs could be elite test pilots, flying the first mission with the new aircraft against the enemy, or desperate spies, trying to obtain the plans -- or a sample -- of the latest weapon they have faced. Intrepid rebels could even be the inventors of one of these craft.
- Similar craft have appeared in several timelines, changing delicate balances of power. Is this a coincidence, or out time meddling? And by whom? Centrum would be a logical suspect, but the rocket craft have been seen flying for the Sons of Liberty, and Centrum would most likely have nothing to do with them.
- A primitive world is seeking entrance into the local interstellar polity as a developed world rather than a primitive (i.e. "exploitable by the big corporations") world. Functional heavier-than-air craft, built with purely local resources and knowledge, are an artificial benchmark for this coveted status. The player characters have to build such by the time of the hearing. Be they native or visitor, they need to gather (and perhaps steal) enough chemical information to compound the fuel: a fuel that at least looks like it could have been developed locally. Then, they have to craft the aircraft, test-fly it, and demonstrate it. A suitable climax for an adventure could be a desperate race to first get the plane close enough to the conference site, then roar overhead, rockets thundering as the craft circles, and finishing with a dramatic dead-stick landing on the space field, or on the grounds of the facility where the conference is taking place. Opposition could range from the natural risks of experimental aircraft, to (far more likely) agents of vested interests that will loose money of the planet gains entry as a full member state.

d20 Modern/Past/Future Stats

PL: 4
Crew: 1
Passengers: 0
Cargo: Personal gear only, plus 4 100 pound external hardpoints
Initiative: -4
Max speed: 210 squares
Defense: 8
Hardness: 3
Hit Points: 42
Size: H
Purchase DC: 31
Restrictions: Mil (+3)
New engine (required for each flight): Purchase DC 25

It can be armed with two of almost any Progress Level 4 machine guns.

d20 System Stats

Huge Vehicle

Profession: Pilot (-2)
Speed: 1000 (special)
AC: 0
HP: 42
Ram: 15D6, but destroyed in the collision
Face: 5 feet wide, 25 feet long, 25 foot wingspan

Height: 10 feet
Crew: 1
Cargo: 400 pounds on external hardpoints
Cost: 1000 (or more) gp without engine
Engine costs 4000gp (or possibly *much* more) and can be used once, assuming alchemical engines.

Notes

- Unlike most objects, the vehicle takes full damage from fire, and will explode in a fireball if destroyed by fire with a fueled engine still in place (10d6)
- The price assumes a moderate to high magic campaign; in a low magic campaign, the value of a flying machine could be much higher.
- Note that, due to the fragile nature of the craft, it does not have sectional HP or AC -- as wires break and frame members crack, damage cascades through the entire vehicle.
- No *d20 System* stats are provided for weapons, as that will vary from campaign to campaign -- from falling rocks to wands mounted on the wings, and anything else that can be imagined.

Memory Corrupt

More Moving Performances for *GURPS*

by Paul Stefko

In "[Moving Performances](),": we discussed ideas for using sensie technology or sensory transmission abilities in your *GURPS* game. In this article, we expand on those themes, branching out into the deeper realm of memory.

Making New Memories

With the addition of the Conditioning enhancement, the Mind Control advantage can be used to alter a subject's personality (through any number of mental disadvantages) and memories (specifically through the Delusion disadvantage). The following enhancement and limitation allow for the ability to alter memory without changing personality traits.

Memory Implant: A limited form of Conditioning, this enhancement allows you to give your subject Delusions representing false or altered memories. These memories can come from any source available to a sensie transmission, including your own experiences, stolen memories, and artificial memories created with the Artist (Sensie) skill. +20%.

Memory Implant Only: Your Mind Control ability is only capable of giving the subject Delusions representing false memories, as above. -80%.

New Powers

Here are two sample powers that can be useful for creating characters that manipulate memories and senses respectively.

Memory Control Power

Sources: Biological, Magical, Psionic, or Super.

Focus: Extracting, manipulating, and transmitting memories.

Considered by some to be a limited form of Telepathy (page 134 of *Powers*), Memory Control can have subtle yet profound effects on its subject. If you are seeking to create a dupe to assassinate a rival, you don't need to dominate him. Just implant a memory of your rival assaulting the victim's sister and let good old fashioned vengeance work its magic.

Memory Control Talent   *5 points/level*

Memory Control Abilities

Cultural Adaptability; Eidetic Memory; Language Talent; Mind Control, with Memory Implant Only; Mind Probe; Mind Shield, limited to protecting memories (see Protected Memory below); Modular Abilities, limited to skills and "learnable" advantages (see Borrowed Training below); Photographic Memory; Protected Power; Racial Memory; Social Chameleon; Telecommunication (Telesend); Xeno-Adaptability.

Attacks should all be Afflictions that cause disadvantages such as Amnesia (erasing all the subject's memories) or Incompetence (erasing the memories of training in a particular skill). Optionally, the GM may allow Afflictions that stun or daze, representing a massive burst of conflicting memories.

Sensory Control Power

Sources: Biological, Magical, Psionic, or Super.

Focus: Sensory manipulation.

Like the Illusion power (p. 129 of Powers), Sensory Control deals with manipulating a target's senses, but Sensory Control is generally much more focused than Illusion. Sensory Control also includes abilities that can tap into a target's senses, allowing you to experience everything your subject does, as well as abilities that protect your own senses from manipulation.

Sensory Control Talent   *5 points/level*

Sensory Control Abilities

Illusion, with Mental; Invisibility, with Glamour; Mind Reading, with Sensory Only; Mind Shield, limited to abilities that manipulate the senses; Morph, with Cosmetic and Glamour; Obscure (any); Protected Power; Protected Sense; Silence; Telesend, with Sensie Only.

Attacks are Afflictions that grant or negate any sense-enhancing advantage or sense-impairing disadvantage, that stun (with sensory overload), or that cause Agony, Dazed, Ecstasy, Euphoria, Hallucinating, Moderate Pain, Nauseated, Severe Pain, or Terrible Pain conditions.

New Sensie Packages

The following perks, advantages, and meta-traits provide packaged abilities for stealing, manipulating, and transmitting sensies and other memories. The GM is free to add power modifiers appropriate to his campaign.

Borrowed Training: You have the ability to absorb memories of skills training from those around you. Mind Shields and other forms of mental protection automatically block this ability. Modular Abilities (Cosmic Power; Limited, Skills possessed by unprotected minds around you, -30%; Physical and Mental, +100%) [17/level]. 17/point of skills.

Full Sensie Experience: You are able to extract a memory from a subject's mind and project it as a full-sensory illusion in a two-yard radius around you. Illusion (Extended, taste/smell and touch, +40%; Link, +10%) [38] + Mind Probe (Invasive, +75%; Link, +10%; Sensory Only, -40%) [29]. 67 points.

Gift of Scheherezade: Your supreme gift of storytelling allows your audience to actually experience the tale themselves. Telecommunication (Telesend; Broadcast, +50%; Sense-Based, Hearing, -20%; Sensie Only, -10%) [36]. 36 points.

Memory Connection: You can extract a memory from the mind of one individual and transmit it directly into the mind of another in real-time. Mind Probe (Invasive, +75%; Link, +10%; Sensory Only, -40%) [29] + Telesend (Link, +10%; Sensie Only, -10%) [30]. 59 points.

Protected Memory: You can selectively protect a single memory from theft or alteration. Mind Shield (Limited, abilities that alter or steal memory) [1/level]. 1 point/level.

Sensie Bug: A nanotech device injected into the target by dart discretely transmits all sensory data the subject

experiences to a predetermined receiver. Target must roll against HT or be afflicted with Telecommunication (Radio; Sensie Only, -10%) for 30 minutes per point by which he fails, beginning one hour after exposure. Affliction 1 (Advantage, Telecommunication, +90%; Extended Duration, 30 minutes, +60%; Follow-Up, -15%; Onset, 1 hour, -20%) [22] + Small Piercing Attack 1 damage (Accurate, Acc 4, +5%; Increased Range, 1/2D only, ×10, +15%; Reduced Range, 1/10, -30%) [1]. 23 points.

Pyramid Review

Legends of Excalibur (for the *d20 System*)

Published by [RPG Objects](#)

Written by Charles Rice with Paul King & Chris Davis

Cover by Jeremy Simmons

Illustrated by Eleanor Brickdale, William Russell Flint, Louis, Arthur Rackham, & George Wooliscroft Rhead

160-page hardcover; $29.95

If you have a yearning for roleplaying in the Arthurian Age, then no doubt you will have rejoiced in the news that White Wolf republished the **King Arthur Pendragon RPG.** And while it can be successfully argued that it is the definitive game of the genre, what are the options for the **d20 System?** One might be **Legends of Excalibur,** published by RPG Objects. This has the feel not dissimilar to Green Ronin's ***Medieval Player's Manual*** and Atlas Games' **Love & War,** in the main part it draws several particular sources for its inspiration. The first is that of Le Morte D'Arthur by Sir Thomas Mallory, which gives Legends of Excalibur its high romance and medievalism. The second is Alfred, Lord Tennyson's *Idylls of the King,* which infects this gaming interpretation with a stark brutality. Both of these sources, (which the author quotes from), and others, have been referenced in their Project Gutenberg editions. Other sources of also referenced, but perhaps the most notable of these is the film Excalibur, which imparts a sense of epic grandeur and sweep to the game.

Another source of the game's Victorianism comes in its appearance. While the book is clean, tidy, and utilitarian in its look, it benefits from the works of the Pre-Raphaelites. Unfortunately they are reproduced in black and white, but they still add much to the flavor of the game. Another fine point about Legends of Excalibur is the use of its maps. Not only nicely drawn, they are both reproduced in grey scale within the pages of the book and in full glorious color inside the front and back covers, an intelligent and pleasingly effective use of space.

The starting point for characters is their Bloodline or Lineage, which replaces the race of other settings. It represents a character's destiny, opportunity, and determination as they can rise from a lowly blacksmith's son to become a Knight of the Round Table, and indeed vice versa. Ranging from Base/Criminal and Common/Serf through Middle Class to Lesser Nobility/Peerage and Nobility/Royalty, a lineage also represents a character's social origins and each lists several traits. These are his feats, skill points and bonuses, resources, attribute changes, and his initial Nobility score.

The latter takes the place of alignment, being a measure of a character's actions and deeds. High values qualify some characters to enter prestige classes such as the Quest Knight class. Knights of Renown, such as Sir Gawain or Sir Lancelot, have nobility ratings in the 90's. Each 20 points of Nobility gives additional bonuses to Charisma-based skills, plus various class abilities. The book includes the transgressions against and virtues inherent to Nobility in a clear manner.

Characters in **Legends of Excalibur** are by default British, but an option suggests class skills for other nationalities. Others give favored classes such as the Barbarian for the Saxon, and the Yeoman for the British, the Barbarian being one of the allowed classes from the Players Handbook, as are the Bard, Druid, Fighter, and Rogue. These are joined by several new classes. The Fool is an all-round entertainer, wanting to make everyone laugh, but also surviving by luck,

wit, and agility. The prophecy-gifted Hedge Mage replaces wizards and sorcerors, and draws upon Ley Lines to power his spells. Both the Hermit and the Priest are divine spellcasters and capable healers, the latter also the representative of the One God and the Church of Rome. In particular, they are opposed to Druids, and they have power to declare a crusade and groups of people as being infidels. Priests face penalties when they are violent or greedy and must learn to "turn the other cheek." The Bard is supplemented by the Minstrel, who works with the Druid, and by the Skald, who marches with the military to keep the men's morale up. The Yeoman is woodsman, hunter and archer, inspired by Robin Hood as much as Arthurian Legend.

Perhaps the two central classes are the Noble and the Knight. The former are powerful in terms temporal and divine, being bound to his lands and subjects. Not only can he send knights on quests, he can grant knighthood, but will lose Nobility should anyone he dubs transgress against the knightly virtues. One such transgressor is the Robber Baron, who does not adhere to the codes of chivalry. The Knight itself is both a warrior and a horseman, the class leading to the most prestige classes. The Crusader class serves the holy cause, while the Quest Knight is the purest of the pure, represented by the likes of Tristan and Percival. Perhaps the most interesting is the colored or Spectral Knight and includes the Black (against Arthur and the Round Table), Blue (servants of the Lady of the Lake), Green (knights of the wild), Purple (servants of royalty), Red (secretly uses sorcery), and White (serves the One God). Other prestige classes are logical progressions of earlier core classes such as the Berserker for the Saxon Barbarian, and the Court Mage for the Hedge Mage. Given the epic sweep of the setting, a guide is given for all of the classes at Epic Level -- for use with the *[Epic Level Handbook,](#)* including Epic Feats.

Only one new skill, Prophecy, is given while there are several new feats. Many of these are adaptations of *Legends of Excalibur's* spell point system, which works for all of its spell casting classes and enables a character to cast as many small spells as his points allow or one big one! Point recovery varies by class, a Hedge Mage tapping into Ley Lines while the Hermit from time spent alone.

The chapter on the Arthurian Legend includes a history, from the age of antiquity when Giants ruled Britain, to the passing of Arthur. Its gazetteers cover Britain (which gets right up to date with the inclusion of Seahenge) and abroad. The latter stretches as far away as Baghdad and the Ethiopia of Prester John as well as touching upon the mythic places of Amazonia, Atlantis, and Fairyland. Stats and write-ups are given for all the Legend's major figures.

Legends of Excalibur divides the legend into three adventuring eras: the "Rise of Arthur;" the initial reign of King Arthur and his marriage until he is crowned High Emperor in Rome; and "Dream's End," its onset marked by the affair of Lancelot and Guinivere. The first of the three eras is supported by three campaign outlines: the "Childhood of Arthur" has the player characters guarding a young Arthur; "War of Ascension" follows on almost immediately after Arthur's coronation when King Lot rebels; while in "Cameliard," King Arthur sends young knights to aid an ally of his father. Several adventures are suggested for each, as are their recurring themes and notable cast members. The discussions of the themes are an invaluable aid to writing further adventures. The basic adventure model is that of the quest, two samples being given, and suitable for quick start play.

Both quests and campaigns are suggested by example of a town, a city, a Henge (Seahenge) and a ruined castle (Tintagel). These tie back into the sample adventures as well as being a source for them. Write ups are given for magic items and weaponry suited to, and from the legend, along with monsters from the Monster Manual suited to the setting.

There is sparseness to the campaign advice, but what is given is nevertheless useful. If Legends of Excalibur lacks anything, it is sample campaigns for the latter two eras. Despite this lack, the supplement is very well written and a well-done adaptation of the legend. But above all, it feels right, conveying both the romanticism of the source (especially in the choice of illustrations) and the epic sweep of the legend. With that in mind, it might be the perfect choice to run a game inspired by the excellent Excalibur. While the first choice for roleplaying in the time of Arthur still remains the *King Arthur Pendragon RPG,* there is no better choice under the *d20 System* than *Legends of Excalibur.*

--Matthew Pook

Loch, Loch, Who's There?

"There's a shadow on the door
Of a cottage on the shore
Of a dark Scottish loch
Many miles away."
-- Sting, "Synchronicity II"

We haven't really set our nets for big game in a while, so bear with me while we return to the Department of Blurry Photography and angle for explanations. With the Loch Ness Monster, there's no shortage of those, though answers are in somewhat lower supply. So trail your hands in the black, cold water of that dark Scottish loch -- and let's see what bites.

"On Friday last, a well known business man, who lives near Inverness, & his wife, a university graduate, when motoring along the north shore not far from Abriachan Pier, were startled to see a tremendous upheaval on the loch, which previously had been calm as a mill pond. The lady was first to notice the disturbance which occurred fully three quarters of a mile from the shore & it was her sudden cries which directed her husband's attention to the water. There the creature disported itself, rolling & plunging for fully a minute, its body resembling that of a whale & the water cascading & surging like a simmering cauldron. Soon, however, it disappeared in a boiling mass of foam."
-- Alex Campbell, "Strange Spectacle in Loch Ness," *Inverness Courier* (May 2, 1933)

The Loch Ness Monster may be the most famous cryptid that ever creeped, but its history goes back a bare 70-plus years. Aside from a single letter to the editor of the *Northern Chronicle* in 1930 and a mistaken "sea-serpent" sighting in 1852 (it was an escaped pony), the article above is the first contemporary record of a monster in Loch Ness. The "well known business man" was John Mackay, the proprietor of the Drumnadrochit Hotel, which saw booming business as the story broke across Britain. A score of reports flooded in during 1933 and 1934, and the Monster drew Britain's leading expert on sea-serpents, Commander Rupert T. Gould, and the first of many expeditions to investigate the Monster, organized by the *Daily Mail.* It was photographed at least twice in that period, most famously by Lt. Col. Robert Kenneth Wilson in April 1934. (This "surgeon's photograph" is the photo you're thinking of right now.) From those photos and reports, the creature assembled itself. The 'consensus' Monster had a long neck held vertically, with a smallish, snake-like (or horse-like) head. It is dark-colored, usually gray or black, and has a long, club-like tail and one to three humps. Repeated expeditions have reported odd clicks, "ascending sonar contacts," blurry photos, and the occasional anomalous echo. And that's the way the Monster has stayed in the popular imagination ever since.

"We went from shoreline to shoreline, top to bottom on this one, we have covered everything in this loch and we saw no signs of any large living animal in the loch."
-- Hydroacoustic engineer and surveyor Ian Florence, quoted by the BBC (Jul. 27, 2003)

And as so often happens, the popular imagination is full of baloney. All the "seed" reports in mid-1933 came from the industrious pen of Alex Campbell, who had been riding a pet hobby-horse of a haunted loch for years. Mrs. Mackay later denounced Campbell's article on her sighting, saying she had merely seen two ducks fighting. The "surgeon's photograph" was exposed as a hoax in 1994, and close examination of the height of the waves in the image makes clear that the intrepid surgeon had shot a small plastic or wooden model of some sort. (It is theorized that the *Daily Mail* cryptid-hunter, the euphonious Marmaduke Weatherall, faked the "surgeon's photograph" in revenge for having been hoaxed himself with a stuffed hippo footprint.) At least some of the expeditions have returned hoaxed footage or faked photos along with their "anomalous recordings," which calls the whole program into question. The most complete Loch Ness sonar survey, the BBC 2003 investigation, turned up absolutely nothing. And perhaps the best evidence for the Monster's absence is the absence of evidence. Nobody has ever found a dead monster (although pranksters have left skinned dolphins by the lake) or monster spoor of any kind. Worst of all, the sighting record far more closely replicates psychological patterns than it does biological ones. Monster sightings *increase,* statistically, between "flaps." In other words, when more and more people -- and more scientifically trained people -- look for the Monster, they see it less and less. When a scattering of untrained people just happen to be looking at the loch, that's

when the Monster deigns to show up.

"To my mind, the evidence available at present goes all the way to demonstrate the real existence of a creature much resembling in outline and structure the plesiosaurus of Mesozoic times."
-- Cmdr. Rupert T. Gould, *The Case for the Sea-Serpent*

But that's just what one would expect if the Monster has been hiding out for 70 million years, no? The traditional explanation for the Monster is a surviving plesiosaur, a long-necked aquatic dinosaur that has become the template for the Monster in popular illustration. The recent shift to "warm-blooded" theories of dino-biology removes one big objection -- that Loch Ness is too cold for a big reptile to flourish in. Other objections, such as the fact that Loch Ness is fresh water not salt, that plesiosaurs were likely sight-hunters and therefore would be stymied by the Loch's thick, peaty water, and that the Loch doesn't hold enough fish to support a breeding population of plesiosaurs anyway can be waved away by positing 70 million years of evolution. If it can turn cave fish white, surely it can turn plesiosaurs into Nessies. It wouldn't even have to take 70 million years if the Monster was actually a zeuglodon (or basilosaurus, when it's in polite company), a sort of Eocene-era snake-like whale that actually fits the eyewitness descriptions a trifle better than the plesiosaur, as long as you ignore the Monster's neck. Plenty of neckless Monsters have turned up anyhow.

"Occasionally something will happen which makes an eel sterile. Instead of swimming to the open sea, they stay in fresh water and keep on growing and eating. And as long as something doesn't get them first, there's no real size limit -- a few years ago an 18ft long eel was found in a ship canal in the West Midlands. If you ask me, Nessie is a bloody great 30ft long eel."
-- Jonathan Downes, of the Centre for Fortean Zoology, quoted in the Edinburgh *Evening News* (Jul. 18, 2003)

Which is why the compromise solution is some sort of giant, overgrown, mutant eel. Eels (which have either no, or all, neck) have the advantage of being animals capable of living in both fresh and saltwater, and they also have humps, as the Monster does. They don't poke their heads up out of the water too much, but how much of those sightings, reports, and post-facto recollections are contaminated by the "surgeon's photograph," anyhow? Even Rupert T. Gould, he of the plesiosaurian sea-serpent, eventually decided that the Monster was actually a giant prehistoric newt, which is the next-best thing to an eel, surely. Other clever fellows have proposed seals (which like the Monster but unlike eels can go up on land), Steller's sea cows (which ties mermaids and the Monster together), otters (clowning around as they do posing as dinosaurs), pike or sturgeon (although if you're going to propose fish, just propose eels), and even an escaped circus elephant! Honest to Barnum, menagerie impresario Bertram Mills toured Inverness in the Thirties and at least some reports claim that he let his elephant swim in Loch Ness to cool off. Eerily, that fits the Monster even better -- an elephant is large and gray, the head and body give you the humps, and the raised trunk makes an excellently erect "neck." And that would also explain why the sightings suddenly started in 1933, which none of the "natural" ones -- including eels *or* plesiosaurs -- would.

"I observed the most extraordinary form of an animal crossing the road. It was horrible -- an abomination. First we saw an undulating sort of neck, a little thicker than an elephant's trunk. It did not move in the usual reptilian fashion but, with three arches in its neck, it shot across the road until a ponderous body about four feet high came into view. When we reached the part of the road it had crossed, we stopped, but there was no sign of it. It had been a loathsome sight. It seems futile to describe it because it was like nothing I have read about or seen. It was terrible. Its color, so far as the body was concerned, could be called a dark elephant gray. It looked like a huge snail with a long neck. I reported the affair to various scientific bodies all of whom seem to be incredulous. I am willing to take an oath, and so is my wife, that we saw this Loch Ness beast."
-- Eyewitness report of George Spicer

But chasing our elephant has let us swim dangerously close to the lee shore of fact. Let's tack back with the most elephantine sighting of all, the famous "land sighting" of George Spicer on July 22, 1933. The above quote is the one given in F.W. Holiday's magnificent *The Great Orm of Loch Ness,* and Holiday notes the sheer horror inspired by the Monster in this report. "Horrible . . . abomination . . . loathsome . . . like nothing I have read about or seen . . . terrible." Other reports (including one that I heard first-hand from a close friend) emphasize a similar dread. It seems almost to be something out of Lovecraft, not something out of Loch Ness. (Ugly-minded skeptics prefer to quote Spicer's initial

letter to the *Inverness Courier* of August 4, in which he describes the horror as only eight feet long.) Holiday builds on Spicer's report, and on the generally eel-like nature of the Monster as recorded by others, and comes to the conclusion that the Monster is, to quote Sherlock Holmes, "a remarkable worm unknown to science." Specifically, it is a surviving descendant of *Tullimonstrum,* a prehistoric slug-like thing (paleontologists seem just as creeped out by it as Spicer, and they haven't classified it yet) known only by 200-million-year-old fossils from Mazon Creek near Chicago. Sure, the *Tullimonstrum* is only six inches long and has no known relatives, much less surviving descendants, but to Holiday that's just more evidence that the "Great Orm" is special. He even identifies it with the snake symbol carved by the Picts across Scotland, including at Balmacaan, about a mile from Loch Ness.

"On another occasion also, when the blessed man was living for some days in the province of the Picts, he was obliged to cross the river Nesa; and when he reached the bank of the river, he saw some of the inhabitants burying an unfortunate man, who, according to the account of those who were burying him, was a short time before seized, as he was swimming, and bitten most severely by a monster that lived in the water. . . . But the monster, which, so far from being satiated, was only roused for more prey, was lying at the bottom of the stream, and when it felt the water disturbed above . . . suddenly rushed out, and, giving an awful roar, darted after him, with its mouth wide open, as the man swam in the middle of the stream. Then the blessed man observing this, raised his holy hand, while all the rest, brethren as well as strangers, were stupefied with terror, and, invoking the name of God, formed the saving sign of the cross in the air, and commanded the ferocious monster, saying, 'Thou shalt go no further, nor touch the man; go back with all speed.' Then at the voice of the saint, the monster was terrified, and fled more quickly than if it had been pulled back with ropes."
-- St. Adomnan of Iona, *Life of St. Columba*

Oh, and Holiday also identifies the Loch Ness Monster as the medieval "worm" or dragon. He says that similar Monsters were the source of the British water-dragons from the Lambton Worm (killed in the River Wear in Durham in 1420) to the Henham Dragon (killed in an Essex fen in 1668). Sadly there are no dragon reports from Loch Ness itself, unless you count the hagiographical incident recounted above in the *Life of St. Columba.* St. Columba's encounter (which you will note happens in the River Ness, not Loch Ness) occurred in 565 A.D. or thereabouts, and intrigues us primarily because the method of Monster-thwarting is a good old-fashioned Sign of the Cross. In other words, an exorcism. And while Loch Ness has no dragons, it does have the occasional kelpie, or water-horse (*each uisge* in Scots Gaelic) legend. And intriguingly, kelpies are shape-shifters, which could explain our multifarious Monster -- and his playful sense of timing -- right there. Holiday's further explorations of the Loch, and his sighting of a yellow Monster, began to convince him of this supernatural explanation. His film (and that of others) would mysteriously malfunction right when the Monster hove into view. He noted a ley line running through Loch Ness (and indeed, there is also a geological fault line running beneath it), saw Men in Black on the scene, and drew connections with UFOs and other mysterious phenomena. Eventually, in June 1973, Holiday and the Reverend Donald Omand rowed out into the Loch to exorcise the Monster once more. But it didn't take -- Holiday suffered a heart attack in Foyers, near the Loch, in 1974. In 1979, he died of a second attack.

"First the Abyss of the Water: on which I, even I, brooded amid other dusky flames as Shin upon Maim, held by my Genius. And I beheld the victory of Ra upon Apophis and the First of the Golden Dawns! Yea: and monsters, faces half-formed, arose: but they subsisted not."
-- Aleister Crowley, *Confessions*

I now direct your attention to the passage above, which refers to a dream that Crowley had while engaging in elemental invocations at Boleskine Manor in 1900. And where is Boleskine Manor, you may ask? Why, it is nearest the village of Foyers, where Holiday suffered his heart attack and saw his Man in Black. And, as it happens, 'tis right on the shore of Loch Ness. Crowley bought Boleskine Manor (for "twice its value") in order to have a suitable retreat for performing the Abramelin Working, which allows the magus "conversation with his Holy Guardian Angel." Crowley moved up to Boleskine in 1899, intending to perform the Abramelin Working on the next Easter. But in typical Crowleian fashion, he got distracted, first by the opportunity to snake the O.T.O out from under Macgregor Mathers, and second by an attractive woman. Although by his own account he had successfully attracted "the Abramelin demons," he never did finish the Working at Boleskine. He instead went on a world tour, during which he received the *Book of the Law* -- which he left in his attic at Boleskine for several years thereafter. In other words, he left a whole lot of magical doors open on the shore of Loch Ness, at the birth of a new century. And what happens 33

years afterward, the same length of time it took a different Revelation to go from inception to totality? (From 4 B.C. to 29 A.D., if you need a hint.) A "loathsome, terrible" rough beast, a Great Orm, a Monster, if you will, slouches toward Boleskine, waiting to be born. The Loch Ness monster is a tulpa, worshipped by the Picts, driven out by St. Columba, conjured up again by sloppy black magic and unleashed on the modern imagination, barely contained in plesiosaurs and eels, and casting its shadow on the door. Better not let it in.

Irregular Webcomic

The Computer Doesn't Know If You're Bored

[Last week](#) I promised to talk about the second advantage that RPGs have over most other forms of entertainment (the first one being freedom of action, or the illusion thereof).

This week I keep that promise, without going off on any tangents, or padding the front of my column to make my meager revelation seem more revolutionary than it is.

But first, I would like to mention that the greatest hits album name of 80s group Roxette is entitled *Don't Bore Us -- Get to the Chorus!* (Roxette, of course, is known for their smash hit "The Look," which contains the lyric "She's got the look" repeated five times in a row.) It's quite possibly one of the greatest seven-word commentaries ever on the pop music scene, eclipsing Elvis' 1976 proclamation, "I'm bigger than Jesus . . . and still hungry!" (Okay; I made that one up.)

Many popular songs -- perhaps most -- are popular primarily because of their chorus, where the "good parts" of the song are. Indeed, many hit songs consist of little more than the chorus coupled with a few inconsequential verses designed to get to bridge those reiterations. (c.f. "Roxette") The creators of such songs realize -- consciously or otherwise -- the desires of their audience, and tailor their songs accordingly.

Speaking of 80s music, as another aside, last week I realized that, if I my son maintains a pattern of musical interest similar to mine, his musical tastes will be most greatly influenced by the 2010s, and he will grow nostalgic for this era in the '20s and '30s. This realization makes me feel one bandage away from being a dust-covered shambling mummy.

Speaking of mummies, I've just learned that our local Children's Museum is planning on returning the mummy Wenu-hotep to the Art Institute of Chicago after a one-year loan turned into a 48-year stay. (I always wonder how those one-year arrangements turn into something that lasts decades: "Dear Art Institute of Chicago: We're keeping the mummy, and there's not a lick you can do about it. Ha-ha...")

Where was I? Oh, right . . . not stalling.

Anyway, the second advantage that RPGs have is the ability to control the pacing of the experience depending on the wants and needs of the audience . . and it can do so on the fly. Does the gaming group seem to be nodding off during the political intrigues of the court? The phrase "Suddenly, ninjas burst through the wall!" can work wonders. Do the players have a fondness for developing magical items and spells? Well, then, hints can be dropped about new components and reagents, ready to be found the Next Town Over. Do the players like urban exploration? A city can become *much* more interesting than originally planned.

Games can be zoomed in as narrowly or grandly as desired. I still remember the mental tripwire that was triggered when our GM of our long-running *Vampire: The Dark Ages* campaign asked, "Is there anything you all were hoping to accomplish in the next few years of game time? Because, if not, time's going to fast-forward here in a bit." Likewise a group that enjoys tactical wargaming can convert from a narrative system for combat to a tactical miniatures one, and might even try its hand at a strategic system for those really epic battles. Conversely if the heroes face a group of mooks that everyone knows they can beat, and the GM sees the players roll their eyes and look a little restless, he can wave his arms and say, "Okay; you mop the floor with them and continue . . ."

Compare this with nearly any other kind of game. If folks decide the middle game of (say) **Rail Baron** or **Are You A Werewolf?** is dragging a bit, there's no real option to "fast-forward" to the good bits. Computer RPGs often make you re-fight battles you find boring or pointless ("84 Level Ranger Hits Giant Rat For 87,244 Points! Giant Rat Dies!"). And if in that computer RPG you need (say) 723 gold to buy another level of a skill and you can boringly farm 20 gold an hour, then the next 36.15 of your leisure time is going to be devoted to doing something you don't find fun.

Oh, sure, for some games the gaming group can try to make up rules or other initial conditions beforehand that mold the game something more to the player's liking (something I've talked about [before](#)). . . but it's much harder to make

those changes on the fly[1]. And computer games (online or offline) can't adapt to the desires of individual players in the way that RPGs can (although it is possible for players to find their own fun, as I discussed last week).

In a lot of ways, this pacing feature of RPGs is the flip side of last week's idea. Last week focused on how players in an RPG have the freedom to choose their own levels of focus (primarily by doing unexpected things), and this week deals with the idea that the GM can also do unexpected things in an effort to keep the game rolling smoothly and for maximum fun for all.

It's possible to envision a computer game in the future being able to discern the actions of the players and adapt accordingly; for example, if you spend more time in the shops than you do fighting monsters, it might generate more and different items to buy, sell, and trade. But it can be difficult to discern *why* a player likes something -- does the player like trying to min-max his character? Does he enjoy trying to immerse himself in the culture of the world? -- and a GM in a tabletop RPG can just ask. Plus, the desires of players are often mercurial; what starts out as a desire for shopping one week can turn into a longing to investigate a mysterious castle, a plot thread left dangling in a sourcebook. The GM has the power to wrap up what was previously intensive shopping and wipe-fade to . . . the outside of a mysterious castle! It's hard to get that kind of responsiveness in other games.

I have a few more thoughts on these two columns, but I'll save 'em for next week. In the meantime, I've got to pay a visit to my mummy one more time.

--Steven Marsh

* * *

[1] I might make the argument that a fast-paced meta-game such as Poker also allows this kind of adaptability; if a group doesn't like five rounds of betting entailed by Seven-Card Stud, they can opt for a different game on subsequent hands. But I won't, this time.

Designers' Notes

GURPS High-Tech

by Shawn Fisher & Hans-Christian Vortisch

We have been fans of Michael Hurst's original *GURPS High-Tech* for almost as long as its existence; we both wrote other *GURPS* books that were inspired by it in one way or another. As equipment aficionados, firearm enthusiasts, and vehicle fans, we have tinkered with how to describe technology of all kinds in terms of the game for many years. How much damage does a flechette rifle do? How does a thermograph work? How fast can you distill ethanol for your armored car? What are the game stats for a flying boat?

When *GURPS Basic Set* *Fourth Edition* came along, it was clear from the outset that *GURPS High-Tech* was one of the other core books that would need to be updated. Rules- and stat-heavy, there was much that would have to be changed to align it with the new improved system. A few years earlier, still in the *Third Edition* era, we had conceived a joint-project called *GURPS Gadgets,* which was to be a gear catalog to update and expand *High-Tech,* and to address one of its few weaknesses, that being its focus on weaponry, especially military weapons. *Gadgets* was to address this, but never came to be.

Finally, in early 2004, we were extended an offer to write the new edition . . . something which we had dreamed of for a long time. However, we were not only contracted to update the old material, but to write a hugely expanded version for the *Fourth Edition,* a full-color, hardback book containing a whopping 240 pages of guns, gear, and vehicles (this was later even further increased to 256 pages!).

The main requirement was to change the outline of the book. The original book, as published in 1988 and revised (in details only) for two newer editions, was in many parts organized like a historical textbook, outlining technological developments as they occurred in history. The fourth edition was to become, first and foremost, an adventurer's catalog, not unlike *GURPS Ultra-Tech.* Thus, where the chapters in the old editions each addressed a different tech level, the chapters of the new edition had to cover a specific type of equipment instead -- survival and exploration equipment, weaponry, armor and defenses, medical technology, etc. An entirely new chapter on a few adventuring vehicles was to be thrown in, as well. Also, instead of TL4-7, as the old editions, it would now cover TL5-8.

Working closely together with David Pulver, who at the same time was working on the new edition of *Ultra-Tech,* we decided what gear to put in which chapter. We split the workload in half; Hans writing the chapters about weaponry and vehicles, and Shawn everything else.

The new organization makes it more easily accessible since individual items can be found more quickly, and the entire book is more generic and thus better suited to campaigns and settings that do *not* use historical Earth as background. That said, we included many historical examples and tidbits to explain the context of the equipment in a way that gamers would appreciate. Theodore Roosevelt kept extra pairs of eyeglasses while commanding the "Rough Riders"? Doc Holliday carried a Belgian Meteor "whippit" shotgun at the O.K. Corral?

Chapter One covers the basics: equipment statistics, design options, and explanations on the introduction of the Dirty Tech design textboxes. These boxes explain ways to make high-tech devices from scratch: armor, explosives, guns and ammunition, batteries, and so on. The goal here was to use as many of the background skills on the character sheet as possible.

Chapter Two was probably the most difficult chapter for Shawn to write. It describes the core technologies of a civilization -- power and information. Steam engines, generators, batteries, computers, slide rules, and office equipment. How do you copy a letter at TL5? What *GURPS* computer program does the ENIAC run? Books and libraries, database queries, and the Internet all get covered in Chapter 2. For purposes of brevity, much was left out -- microfilm and microfiche, nuclear power plants, and so on. Still, we feel the chapter is a good basic introduction to the

type of technology for which an adventuring party might have a most pressing need.

In Chapter Three, Shawn went nuts. It's the tools and equipment chapter. Swiss army knives, survival kits, flashlights, hand-held sonar devices, night vision goggles. The list goes on and on and on. Climbing equipment, skis, snowshoes, scuba. We tried to be as generic as possible here, and still add historical flavor.

Chapter Four, required the most design work for Shawn. He had to find obscure body armor weights and costs, figure out their historical performance, and then massage the whole thing into a unified whole. This required a lot of communication back and forth between the authors and Sean Punch and David Pulver.

Chapter Five, Weaponry, turned out the longest, for several reasons. First, it covers the bulk of the material from the original editions, which was mainly weapons. Second, weapons are of special interest to many players. As *GURPS Basic Set, Fourth Edition* "only" lists a selection of generic weapons, this was the book to fill in the gaps. Also, guns are an especially notable part of popular culture, and many players want to get more specific when their characters' guns are concerned. Finally, this chapter includes many new rules to make gunplay more detailed, more interesting, and more fun. Covered are not only practically all the entries from the old editions, but also most of the stuff from *GURPS Modern Firepower* and *GURPS Special Ops,* and a lot from the various *GURPS WWII* books. The emphasis is on man-portable stuff useful to adventurers, but there *are* artillery pieces, missiles, and bombs.

Chapter Six is the espionage chapter: spytech and police equipment. Much of it was cribbed from *GURPS Covert Ops,* updated to *Fourth Edition* standards. Some of it is brand new, some based on David Pulver's *Vehicle Design.*

Chapter Seven is the medical chapter. It was written in parallel with the new edition of *GURPS Bio-Tech.* This is mostly brand new text, with extensive details on historical medical equipment.

Chapter Eight, Vehicles, covers an eclectic selection of vehicles for use by adventurers, from skateboards and motorbikes to jeeps, tanks, and flying boats. The vehicles described were primarily chosen for their potential use in adventures, but some also showcase special rules or features. While further books should considerably expand on this, *High-Tech* gives you a decent start.

How We Did It

We're often asked how one goes about writing a book. We won't lie to you: it's a massive undertaking. Be prepared for endless hours in front of a computer, chasing leads in the Internet, asking questions in various online forums full of experts, and ordering books from online retailers.

Some especially useful websites include:

- Google's Book Search feature. Many of the best primary sourcebooks for this project were "full view," that is, free!
- NewspaperArchives.com. A wonderful site that for a small fee which allows you to download .pdfs of newspapers dating back to the American Civil War. Excellent stuff.
- Military historical agencies, such as the U.S. Army Center of Military History, or the Naval Historical Center have extensive websites packed with primary source material and articles from their publications.
- How Much Is That Worth Today? converts prices from back then to 2004 dollars, the basis for all *GURPS* costs.

Frankly, if you expect to do a decent job, we feel you'll spend all your advance royalties on books, books, and more books. Buy backorders of out-of-print historical journals, and any old catalogs you can find. Frequent garage sales, estate sales, and thumb through the bookshelves of used bookstores any chance you get.

We also contacted manufacturers, historians, historical re-enactors, military accoutrement aficionados, and called a few museums to set up a good time to visit. Tip: when you go to a museum, bring your own white cotton gloves in a little baggy. Ask polite, specific questions. Bring a notebook. You'll be surprised what you can get your hands on.

Outtakes

We eventually ran out of space; even 256 pages were not enough for all the gear that we researched and provided with *GURPS* stats. Here is a grab bag of outtakes that didn't make it.

Price

In the interests of keeping **High-Tech** as generic as possible we used an item's full retail price, MSRP if you will. It would not be unreasonable to vary the price by 10-30% for market conditions, buying in bulk, etc. We assumed Merchant skill would drop the price for those with the requisite expertise. Used equipment would be even cheaper; half-price is a basic approximation. For "military surplus" equipment, meaning the stuff left over from a previous tech level, the price may be as little one-tenth of its original retail price, though equipment in good condition might actually increase in value -- as antiques!

Nuclear Power (TL7)

Nuclear power plants are essentially steam engines -- using a nuclear reaction rather than coal shoveled into a firebox, to create the steam which spins a turbine and creates electricity.

Self-Contained Nuclear Power Plant (TL8): This is nuclear-power-to-go: a sealed, computer-controlled nuclear power plant the size of city bus. It will operate, more or less without human intervention, for 30-50 years. It is specifically designed to be maintenance-free throughout its lifetime and can meet all the energy needs of a city of 50,000. $25 million, 250 tons., LC 1.

Nuclear Fuel (TL7)

Uranium is used as fuel in most nuclear reactors. Civilian power-plant grade U-235 (4% enrichment) is $500 per pound (about the size of a golf ball), and provides 150,000 kWh. Weapons-grade uranium is enriched to 90% or more; it is available on the open market for research and power production for $25,000 a pound (a "simple" nuclear bomb needs 70-90 pounds). LC0.

Historical Computers

Computers advance so rapidly throughout TL5-8 that a few sample computers can help show the rapid growth. Of course, these are intended to be general approximations, rather than exact simulations.

Difference Engine (TL5+1). Babbage's design was never completed. If it had been, it might look like this: macroframe computer with the hardened, electro-mechanical, and slow options. Complexity 0. $100,000, 4 tons, external power. LC4.

ENIAC (early TL7). One of the first all-electric computers, the ENIAC was a monstrous device with 19,000 vacuum tubes. Megacomputer with vacuum-tube option. Complexity 3. $10,000,000, 20 tons, external power. LC4.

UNIVAC (early TL7). The UNIVAC I was one of the first commercial computers. It had 5,400 vacuum tubes. Macroframe with vacuum-tube option. Complexity 2. $1,000,000, 2 tons, external power. LC4.

Bendex G-15A (TL7): The Bendex was one of the first successful business and research computers, with 800 vacuum tubes. Mainframe with vacuum-tube option. Complexity 1. $100,000, 1 ton, external power. LC4.

IBM 1401 (TL7). A major IBM product during the 1960s, it could be found in many large corporations and universities. Macroframe with transistor option. Complexity 3. $1,000,000, 2 tons, external power. LC4.

PDP-8 (TL7). A very common computer in middle-level business and science applications. Mainframe with transistor

and compact options. Complexity 2. $200,000, 200 lbs., external power. LC4.

The machines require a primitive terminal and primitive storage, though magnetic tape is common for the later models.

Note that most of these computers cannot run a full suite of Software Tools, and so are restricted to running certain *applications* within the suite. The GM may, for instance, give a small bonus (+1 or +2) if the user is performing one of these limited functions against an adversary who does not have access to a computer.

Generally, however, primitive computers are simply basic tools for technological skills -- though the GM may declare that a bank of multiple computers can act as one or more Complexity levels higher, which may boost this high enough to act as Good-quality Software tools.

Alternately, the GM may declare that for certain applications the a computer's Complexity acts as a divisor on how long a project takes. For instance, a Complexity 3 computer may be treated as the equivalent of three skilled helpers (see *Time Required*, under *New Inventions*, p. B00). Note also that even primitive computers fulfill the requirements for Cryptography skill (p. B00), making the task much easier.

Infinite Weapons

The following firearms were intended to illustrate alternate technology paths or designs that could have been done historically, but just weren't.

Jarré-Armstrong Machine Carbine P/1860, .405 Pinfire (U.K., 1860-1869)

In 1859, Jean Jarré of Paris patented a selective-fire machine carbine that used his harmonica-type feed: the "magazine" is a steel block drilled with 20 holes that serve as chambers and are individually loaded with copper pinfire cartridges. The magazine is then inserted horizontally from the left into the gun, and slides to the right like a harmonica as the chambers are fired in series. The overall weapon is compact and well-finished with gleaming brass fittings. The Pattern 1860 was adopted by the British Army and Royal Marines.

This submachine gun is found on Etheria, a Quantum 6 world (see *GURPS Infinite Worlds* and *GURPS Steampunk*). Historically, Sir Robert Moray of the Royal Society of Science wrote of a British inventor who, in 1664, claimed to be able to construct a selective-fire black powder machine pistol! Unfortunately, the name of that genius is not known, nor whether he actually built such a device and how -- but the *idea* certainly is very old. "Machine carbine" is the old-fashioned British nomenclature for a submachine gun, which was still used during WWII. The pinfire was an early type of metallic cartridge that predated the more commonly known rimfire and centerfire variants still used today. Jarré patented and sold harmonica-type repeating weapons in the 1850s and 1860s. And Sir William Armstrong & Co. was an important English arms manufacturer in 1847-1897.

Barrett M97 Dragonfang, .50 Browning (USA, 1997-)

The M97 Dragonfang is a short-barreled, stockless personal defense weapon (PDW) designed for dragons and combat golems -- it would also be suited as a sidearm for large supers or mecha. Chambered for the .50 Browning round, it can deliver a considerable punch against other magical creatures as well as light vehicles. It lacks a stock and is intended to be fired one-handed.

Many dragons have their guns custom-enchanted. For example, giving it +1 Acc would add $6,250 (see pp. B481-483).

It fires solid projectiles (in the table) and APHEX (Dmg 6d×2(2) pi with 1d-2 [1d-2] cr ex follow-up) or SPDN (Dmg 6d×2(2) pi).

The Dragonfang is found on Merlin-1, a Quantum 3 world (see p. B529, *GURPS Infinite Worlds,* and *GURPS Technomancer,* where it first appeared). In real life, Ronnie Barrett patented his first .50-caliber semiautomatic sniper rifle in 1982. Shortening the M82 and providing a selective fire option is certainly possible, although it poses certain

strength requirements on the user . . .

Gustloff MG88, 7.92×42mm Krieghoff (Germany, 1988-)

The *Maschinengewehr 88* is the latest variant of the long line of German general-purpose machine guns (GPMG) tracing their origins back to the Gustloff MG44 developed by Professor Barnitzke. It employs a flywheel action that keeps weight low and allows a high rate of fire. Like the Mauser StG03 assault rifle (see *GURPS Infinite Worlds*), the MG88 fires a caseless telescoped round perfected in the 1970s. The weapon is still standard issue for the stormtroopers of the *SS-Raben-Division* in 2010.

The gun feeds from 150-round disintegrating belts (6 lbs., 6.5 lbs. in pouch) and the standard round is APHC-T (Dmg 7d+2(2) pi- inc). A spare barrel weighs 4 lbs.

The MG88 is used on Reich-5, a Quantum 3 world (see p. B543, *GURPS Infinite Worlds,* and *GURPS Alternate Earths*). Back in the real world, Professor Barnitzke existed, and patented a flywheel machine gun in the 1940s, but the gun never entered production. German small arms designers and the military had worked on caseless ammunition development since the 1940s, but historically only managed to make it work in the late 1980s, for use in the H&K G11 rifle. Gustloff-Werke produced many automatic weapons during WWII, and was one of the companies occupied with caseless ammunition research -- another being the Heinrich Krieghoff Waffenfabrik.

Weapons Table

See pp. B268-271 for an explanation of the statistics.

GUNS (SUBMACHINE GUN) (DX-4 or most other Guns at -2)

TL	Weapon	Damage	Acc	Range	Weight	RoF	Shots	ST	Bulk	Rcl	Cost	LC	Notes
5+1	Jarré-Armstrong P/1860, .405 Jarré	2d pi+	3	140/1,500	12/1.5	6	20(3)	10†	-4	3	$1,500/$30	2	[1]
8	Barrett M97 Dragonfang, .50 Browning	6d×2 pi+	3	1,600/6,700	30.7/9	10	30+1(3)	20	-4	4	$3,000/$68	1	[2]

GUNS (LIGHT MACHINE GUN) (DX-4 or most other Guns at -2)

TL	Weapon	Damage	Acc	Range	Empty Weight	RoF	Shots	ST	Bulk	Rcl	Cost	LC	Notes
8	Gustloff MG88, 7.92×42mm	7d+2 pi	5	1,100/4,500	26/6.5	25!	150(5)	11B†	-6	2	$10,400	1	[2, 3]

[1] Very unreliable. Malfunctions on 15+ (see page 407 of the *Basic Set*).

[2] Accessory rails (see *GURPS High-Tech*).

[3] Very reliable. Will not malfunction unless lack of maintenance lowers Malf. (see page 407).

Pyramid Review

Carcassonne: The Discovery

Published by Rio Grande Games

Written by Leo Colovini

Illustrated by Oliver Freudenreich

Translated by Jay Tummelson

75 Town Tiles, 70 Wood Walls, 12 Wood Towers, 32 Followers in four colors, two Canvass Bags, Scoring Track, & a four page full-color Rule Booklet; $18.99

There are plenty of variants available for the *__Carcassonne__* devotee, including several that take the franchise away from the original game set in Medieval France, both in terms of time and distance. The latest addition maintains the Medieval theme, but takes it over the sea and far away. In *Carcassonne: The Discovery,* the peoples of *Carcassonne* have decided to expand into distant lands, sending expeditions off to explore the new territories, facing the perils of the mountains and the seas before venturing out into the vast grasslands.

This new variant is designed by Leo Colovini, the creator of titles such as *Doge* and *Carolus Magnus,* and it brings a radical style of play to the series. Yet it is still a *Carcassonne* title and comes nicely appointed with solid full color tiles, brightly colored wooden followers (or meeples), a scoring track (vertical rather than horizontal and drawn as a river), a full color rulebook, and five reference cards, one per player. The artwork on the tiles is not as vibrant as in other *Carcassonne* titles, but the muted, slightly old-fashioned style is appropriate and captures the feel of unexplored virgin territories. The tiles themselves depict the mountains and grasslands of the new lands, the seas surrounding them, and the cities located along the coast and at the edge of the mountains.

Designed for two to five players, *Carcassonne: The Discovery* is played like any other *Carcassonne* game. Each turn a player still draws and places a tile to create and enlarge the map-like board, and he can still put a meeple of his color on the newly placed tile. Brigands are placed in the Mountains, Explorers on the Grasslands, and Navigators in the Seas. He can also pick up a meeple and score for the feature it is on. What he cannot do, is both in a single turn. He can place a meeple, or score from a meeple. Further, a player does not have to complete a feature in order to score from it. If he decides to score from an incomplete feature, fewer points are scored than if the feature was complete. It is also possible to score more than once from the same feature. This can be by joining two features together such that it has two or more meeples on it, or by scoring from a feature a first time, then in subsequent turns adding another tile and placing a meeple on that to score from later on in the game. This of course, can only be done with incomplete features.

Another fundamental change is the lack of competition over individual features. In other *Carcassonne* games, players can win and score for an area by having the most meeples on it, often stealing it from an opponent. Not so in *Carcassonne: The Discovery,* where more than one player can have meeples on a feature, (possible by joining separate areas together), and instead of the points going to the player with the most or being divided, players score the full points possible for the area.

The method of scoring is also different, just like other *Carcassonne* titles. Brigands score for the cities located within the Mountains and all adjacent grasslands; Explorers score for each segment of Grassland as normal; and Navigators score for each city along the nearby coastline and also for each Sea segment if the Sea area is complete. Roughly half

the number of points are scored if a feature is incomplete. Any meeples in play at a game's end are scored as if the feature was incomplete, even if it is actually complete.

The effect of the new playing method -- coupled with the fact that each player only has four meeples -- is to make *Carcassonne: The Discovery* a more thoughtful and much tighter game. Choosing when to score becomes vitally important. Do you wait to complete a feature and score high, or score earlier with fewer points to ensure that you have a spare meeple to add to a new feature? Another effect is that a player no longer has a meeple sit fallow throughout the game, like the Farmer, waiting until the end of the game to score.

Two variant rules are offered. The first suggests that each player initially draw two tiles to be kept face up and visible. On his turn, player places one of the tiles and then draws another. The second variant suggests removing a number of tiles so that all players take the same number of turns.

The low tile count and mix further adds to the game's tight nature, with players competing for the higher scoring more attractive Mountain and Sea areas. In general, my partner and I found it better to build big as it increases your scoring potential, but with just three tiles comprised of a single feature (Grassland, Mountain, or Sea), it was not always possible. This left gaps in the tiles that we really wanted to fill as we like the jigsaw-puzzle quality of *Carcassonne* games.

Yet aside from this low number of tiles, there is no downside to this *Carcassonne* variant. Its place a follower or score from a follower mechanic is certainly radical, perhaps too much so for some. There is no denying that it is a limiting factor in play, but a player has instead a greater flexibility in how and when he scores points than before. Overall this is a less fussy variant than ***Hunters & Gatherers*** or ***Carcassonne: The City,*** harking back towards the original game in its simplicity. The combined factors of the either/or play and the different scoring method though, both interesting enough to try out on other *Carcassonne* games, make *Carcassonne: The Discovery* less of a family game and more of a gamer's game.

Cutthroat Caverns

Published by [Smirk & Dagger Games](#)

Designed by Curt Covert

Developed by Justin Brunetto & Curt Covert

Art & graphics by Justin Brunetto, Tim Wollweber, Chad Savage, Mats Holmgren, Adam Vehige, Eric R. Martin, William Teo, Steve Messenger, Bruno Krippahl, Uraga, Morgan Rashand, Henri Härkönen, Ian Field-Richards, Noel Hill, Mark Jernstrom, & Paul Adam

Full-color boxed set with die-cut sheet of game tokens, six character cards, eight glass tokens, one monster life tracker, 100 cards (Action, Attack, Initiative, & Item), 25 Encounter cards, & rules; $29.95

It has long been said there are no winners or losers in a roleplaying game, but anyone whose character has ever seized the hilt of a mighty relic and felt that surge of power knows that's the bunk. The adventurer who walks away with the best stuff and the most kills is definitely "da man." For those without the time for a full-blown RPG session, *Cutthroat Caverns* is the quick and dirty way to show others who's top dog.

The object of the game is to finish with the most Prestige points.

Three to six players get a hand of cards and a character to play. The latter includes an archetypical dwarven warrior, an elven archer, a mysterious thief, and so on. A random set of nine Encounter cards are taken from the deck, to be used as that game's dungeon. The first is flipped over, and players take turns interacting with it. Most are monsters of some sort, and the goal then is clear: Wale on the thing until it breathes its last. Well, all right, not all critters are as straightforward as that . . . take for example the beast that's a delicate bag of poisonous gas. Any damage destroys it and fills the air with toxins, hurting the person responsible. No one wants to do this, but unless someone does the party can advance no further. That's part and parcel of the "cutthroat" element.

Most monsters have their own way of doing things, or create special effects when attacking. They might hurt multiple characters, absorb hit points, steal cards, or require ever-increasing damage levels to defeat. Wolf Packs may multiply, getting harder to reduce as they add to their numbers. The Encounter describes who gets hurt; it may attack the adventurer who did the most damage, or it may simply go for the second person in this turn's Initiative order. Still other cards may be locations, like the Trap Room. Here the team has to draw cards -- from their own hands -- to see who springs the traps before anyone can get past it. The bottom of a monster's card indicates how many hit points it has depending on the number of players -- more participants means a tougher kill, and Encounters use that number as a constant for the game even if one or more members are eliminated early on.

The cards heroes play come in a few varieties. Item cards can be magic potions that heal or increase one's damage capacity, or the amulet that adds to one's hand limit. Actions let the player play dirty pool; while it can improve the damage done or allow a good counterattack, many of them pull the rug out from under allies. Their strike could miss, or they might find themselves staring at a toothy maw when someone else was the intended target. In short, the trick

is: Everyone must help to overcome obstacles, but only the adventurer who delivers the killing blow gets the Prestige.

The equipment supplied is nice, and thorough to boot. The cards don't just have attack values, they have that same number halved and multiplied on each edge. If someone improves or cripples the effectiveness of an assault, the card is turned to determine its current value. Aside from the cards there's a panel that tracks monster hit points (and the current Encounter number), fancy glass beads to track numbers, and several cardboard tokens and markers for managing wolf attacks and Prestige awards (or for use with the promised supplements). The artwork is flawless and intriguing, and the Encounter sheets are large enough for all the information.

The rules themselves are a bit iffier. While all the material looks to be there, some of it is presented just off-kilter enough that the reader does a double-take. It could use another pass with an eye toward the presentation, and duplicating some important rules or having this section refer back to that one wouldn't hurt either. Some of a player's plans end up at the mercy of random elements, but arranging things so he comes out on top is a labor of love. The characters don't feel like distinct entities; if an Attack cards depicts a specific persona, that character gets a bonus to play it (it's a generic way of representing that character's special attack).

If the buyer can get past that, this is a fun way to spend time with one's most vicious friends, at 90 minutes a game. Tripping others up, jockeying for position, and pulling out last-minute upsets is the name of the game. It's real competition -- one does not play this with those who are easily upset -- and while its promise of roleplaying action in a card-game format probably depends more on the style of RPG one plays, there's clearly a lot of space here for additional material, house rules, and extended scenarios. *Cutthroat Caverns* doesn't hit quite as high a mark as it aims for, but the opposition isn't going to last long.

Designers' Notes: Creatures of the Night, Volumes 1 and 2

by Scott Maykrantz & Jason Levine

In September 2007, Jason Levine and Scott Maykrantz were interviewed on CBC for "The Farley Bloom Conversation." The theme for the week was "Fantasy Design: Artist and writers working in the field of computer games, board games, and roleplaying games."

Bloom: You wrote the *Creatures of the Night* books -- two volumes so far -- for the *GURPS* game. Have either of you collaborated before?

Levine: No, I've bounced ideas off of other people, but this is my first time working directly with another author.

Maykranz: I have before, but this is a step forward--

Bloom: An evolution.

Maykranz: You could say that, yeah.

Bloom: And how does it work? I'm interested to know [thoughtful pause] I'm fascinated by the "division of labor," as I call it. Who does which part?

Levine: The concept stuff is all Scott. He comes up with the basic idea behind each critter, and then I come home from work to find a demonic midwife in my email. [laughs] Usually it's a solid treatment -- what the creature is, what it does, and how you'd use it -- along with artwork. In fact, if I can reveal your trade secret, Scott? [Maykrantz nods] He often just draws a creature with no preconceptions, then looks at the drawing later on and figures out what it will be.

Maykranz: Yeah, that's true. I draw a lot of monsters--

Bloom: Every day?

Maykranz: Yes. I have a backlog of pictures to choose from. I brainstorm names, I link names with pictures, and then I start writing ideas for traits, habitat, and adventures. The other day I drew a picture of a humanoid made of rocks. I looked at my list of names and chose "Clatternorn." Then I wrote what the creature does, what it wants, weaknesses, and that sort of thing.

Levine: And once I get the first draft of a critter, it's usually obvious where it's going. If I'm not sure, I interrogate Scott until we're both on the same page -- which occasionally involves changing the concept, or at least part of it. After that, I start "*GURPS*-ifying" it by statting the beast up and turning references into rules.

Maykranz: When Jason sends the creature back to me, it has a different feel. My version has minor references to game mechanics and a few numbers that don't mean much.

Bloom: So Jason nails it down. He makes it more specific.

Maykranz: Yeah. With his input, I can see flaws that aren't apparent when I'm sitting at home, typing at the computer. I see the stats, the advantages, the disadvantages -- and I get right back into the creature, adding --

Bloom: Now be honest, Scott. Have you ever sent a creature to Jason that needed a serious overhaul?

Maykranz: Yeah, I've sent a few that I needed help with completing the concept. I think the *slake hounds* fit that

description. [Turing to Levine.] They weren't finished when I sent them to you, were they?

Levine: Well, the rough concept was there. Originally, they were these undead things that drank body fluids. You wanted them to have a "black heart" --

Maykranz: Right, but I wasn't sure what that meant. I just wrote "black heart" and said, "Jason, what does that mean?" [Laughs]

Levine: Yeah, so we brainstormed on it. We already had a few undead things in the book, so it seemed more fun to make them living creatures -- part of the ecology, so adventurers might wander into a pack of them in a forest. And then we hit on the "bile organ," which is what I feel makes them interesting. It gives them an Achilles' heel, a potent defense, and a reason to be hunted by the PCs, all in one package. So they turned out quite different from the initial concept . . . and definitely for the better.

Maykranz: And then we spent a lot of time on the *miser troll*. That one was hard to write. I struggled with the idea of a creature that instigates a series of political adventures. It sits at the center of a geopolitical conflict. It was hard to get a grasp on.

Levine: He's a slippery little guy, pun intended, especially because we wanted to make him more of a plot hook than an opponent you'd go toe-to-toe with. The conflict that springs up around him is the real adventure, with the troll existing more to surprise the players with a supernatural twist. In fact, we originally had more rules for running a war of influence than we did for the troll itself. But we ended up cutting it, for various reasons.

Bloom: I understand you're going to share that "lost footage" with us tonight. I think we have the clip. [Looks past the cameraman to the producer.] Hal, can we see that clip now?

The Groups and Their Assets

Rival groups come in many forms. The GM should define each with three characteristics called assets, each with a strength from one to six. The GM can set appropriate values or just roll 1d for each asset.

Strength	Explanation
1	Just starting out; loose organization; pathetic, rag-tag charm
2	Real potential; resourceful; weak, early stages
3	Significant; hard core but weak along the edges; bright future
4	Almost a major player, but with a fatal weakness or two; former world power a generation later
5	Major player; rival for the top; deep roots; flexible and strong
6	World-class; setting new standards; awe-inspiring

Firepower: This is hardware, people, and money. It is a combination of weapons, soldiers, reserve troops, supply lines, vehicles, money, allies, fortifications, and intelligence-gathering systems. When thinking of a major political or military power, Firepower is the "raw strength" that first comes to mind.

Strategic Skill: The ability to use firepower effectively, the wisdom of retreat, when to make and break alliances, controlling the group's public image, and taking advantage of opponents' weaknesses. A group that lacks Firepower can make up for it with Strategic Skill.

Tenacity: The resolve of the group, its dedication, the ability to recover from setbacks, and to change with new conditions. To have a high Tenacity, it helps to have a unifying ideology, a deep need for revenge, and homogeneity within the group. Tenacious groups have a strong internal culture, memorization of history, and see themselves as righteous soldiers.

Example: The Mondragon Army (MA) is fighting for control of the poppy fields of Central Asia. They're a

medium-sized guerrilla force, well-equipped, with no allies, lots of cash, and enough vehicles to move troops and supplies. They rely on locals for food, water, and medicine. They're a versatile group, with excellent diplomatic skills. However, their leader is too megalomaniacal to pay attention to the realities of the world. Their commitment to control the poppies is impressive, but they do not have a coherent ideology. Their Firepower is 3. Their Strategic Skill could be 4, but the leader's eccentricity lowers it to 3. Their Tenacity is 2.

Using Asset Numbers

The group with the highest sum of assets controls the resource. If two groups are tied for the highest total, the group that currently controls the resource maintains control. Events in the adventure alter these numbers, reflecting a gain or loss of strength for each group in the conflict.

If a new group takes over, they will announce their victory. The transfer takes time and should be worked into the plot by the GM. The new group will employ key figures of the old regime, purge traitors, and rebuild their organization for permanent rule.

Example: The People's Revolutionary Vanguard (PRV) controls the poppy fields. They have Firepower 4, Strategic Skill 2, and Tenacity 2 (asset total: 8). The MA assassinates the PRV's leader. The GM decides that this will reduce their Strategic Skill to 1 and an asset total of 7. This gives the MA (asset total: 8) control of the fields. The takeover by the MA is not instant, but once the assassination takes place, everyone can see that the PRV is defeated.

Asset numbers bring player characters into the heart of the conflict. The players should be encouraged to make decisions using the asset numbers as targets. For example, they could carry out a mission to destroy the key weapons depot of an enemy group. The GM informs them that this will lower the group's Firepower by two levels. If they complete the mission, they can easily see how they affect the conflict for the resource.

For the players to know the asset numbers, their characters will need access to reliable intelligence. This requires data gathering and use of the Intelligence Analysis skill -- see page 201 of the ***Basic Set*** for details on both. (If no one in the party has Intelligence Analysis, they can rely on an expert NPC to keep them informed.) Success on the analysis roll reveals the relative ranking of the major groups, from strongest to weakest, without knowing any real numbers. Success by 3 or more reveals the asset total for all major groups, while success by 6 or more will reveal the individual asset strengths for each group.

Bloom: Interesting. Mmmm. Tell me, how was Volume 2 different from Volume 1?

Maykranz: As I worked on the new volume, I asked for opinions on the Steve Jackson Games forums. I wrote "Tell me how you've used Creatures of the Night." Kevin Munoz mentioned that the creatures had traits without explanations.

It was a useful criticism. I thought, "I should explain *why* this creature has these particular abilities." I didn't want the creatures to be arbitrary collections of strengths and weaknesses. When I was coming up with ideas for Volume 2, I tried to tie all of the traits for a particular creature into a coherent concept. I thought about real-world animals, and used their natural traits as a template for my ideas.

Bloom: Right. Now, Volume 2 has a theme: Territories. Did Volume 1 have a theme?

Maykranz: No. It was scattered. I wanted variety -- smart humanoids, big dumb combat monsters, something that looks normal but is really a creature --

Bloom: Like the *guardian owls?*

Maykranz: Yeah. The guardian owls are passive, in a way. They are doing their own thing, and don't need to interact

with the player characters.

Levine: Most creatures aren't out to bother the PCs. It's more realistic for them to be left alone. We did that with the *tellanodes.* The psychic eavesdroppers they create would be perfectly happy to sit in their house all day, stealing secrets. Of course, this creates a weird, Twilight-Zone atmosphere that will inspire the players to figure out what's really going on. But they're not obvious monsters or bad guys in any way -- just opportunists.

Bloom: Where do you see this series going? Are you going to continue using themes?

Maykranz: The theme for Volume 2 was really just a way of saying "I know that you can find similarities among these creatures." It's like listening to your favorite album and you notice that every song has something in common. I looked at the Volume 2 creatures, re-read them a few times, and then realized that they had a theme, a unifying idea.

Levine: My only concern with consciously pursuing a theme is that you tend to force your ideas into that one mold, whether or not that's the best thing for them. I'd prefer keeping all possibilities open.

Maykranz: Yeah. The theme was an afterthought. It's best to keep it scattered, with a lot of variety, during the first draft.

For the next volume, we'll use feedback from the gamers. They can tell us what they like most. We'll do more of the good stuff. They'll let us know what's missing, too.

Bloom: Well, I look forward to continued installments of the series. I'd love to have you back to talk again.

Maykranz: It's been great, Farley. Thanks for having us here.

Levine: Yes, thanks for the opportunity. I'm a big fan.

The Omniscient Eye

If Magic Items Are Common, Should They Be Called Mundane Items?

How much are magic items invented by modern fantasy writers, or just by modern fantasy games? I'm not an expert on mythology or Medieval history, but where characters in games are dripping with magic swords and wands and potions, they look pretty rare in historical stories. Is that true?

Determining how powerful and prevalent to make magic and magic items in a given world is quite possibly one of the most difficult and important decisions a fantasy author or GM has to make. It they are too common or powerful, they can easily upset the balance of the game or plot. Too weak or nonexistent and the audience questions just how fantastic the setting really is. What we have here, though, are really two different questions. The answer to the first is simply that very few magic items that appear in modern fantasy novels or gaming are entirely invented by the author/GM. Most are based, at least loosely, on historic or literary models. Others -- such as Terry Pratchett's -- are based on technological devices. The second question is a bit more difficult and involved, so a few categories seem appropriate. We will then broadly group the response into four divisions: mythic, historic, literary/legendary, and modern.

Mythic Magic

Western mythology is surprisingly filled with magic devices of various sorts. Taking just three of the most well known mythologies -- Graeco-Roman, Celtic, and Norse -- we see a wide range of items appearing in the hands of heroes and gods alike. While there are great differences in the types of items possessed in each mythology, they all generally serve to develop the plot or point of the particular myth they belong to. None of the mythic magical items are simply there as loot for the hero. In fact, many are merely loaned to the hero by a divine being who expects to get his possession back in a reasonable amount of time. They always get their items back, but the Repo Men of Olympus conjures interesting images and could serve as an adventure or campaign hook for a game.

Looking at specifics, though, a few items come instantly to mind. In Graeco-Roman mythology, we see Hermes' winged sandals which are briefly loaned to Perseus in some tales; and Aphrodite's girdle, said to mystically enhance her already unearthly beauty. Among the Celts, we see a plethora of magic cauldrons and weapons. Most of these appear in the hands of the gods, such as the Dagda's club (which both kills and resurrects) and cauldron (which always feeds anyone who wishes to eat from it); or Manannan mac Lir's ship (which moves without sails), invisibility cloak, flaming helmet, and sword (which always hits its mark). Nordic possibilities include Thor's hammer, Mjolnir (which always returns to his hand after it is thrown); Idun's apples (without which the gods grow old and die); and most of Odin's armament. In the Christian tradition, the most obvious (if rather rare) magic item is the Archangel Michael's flaming sword. Across the world, Sun Wukong, the Monkey King's staff which changes sizes, certainly fits within this category as well.

The overall trend is that mythological magic items are fairly common in most traditions. That said, virtually all mythological magic items are unique. They are almost always associated with a particular individual, either as identification or as a necessity for doing his or her job, such as Hermes' winged sandals which increase the messenger god's speed, Thor's hammer which is the tool and weapon of the smith god. Most seem to be associated with a divinity rather than a particular mortal, even if mortals sometimes borrow the items (mostly in the Graeco-Roman and Celtic traditions, rarely if ever in the Nordic). When the magic item is not used to identify its owner, and even in times where it is, it typically appears as an integral part of the plot. For example, Idun's apples first appear when Loki convinces her to leave and bring her apples along. Were it not for the apples and their power, the plot would not exist. The same can be said when Perseus borrows Hermes' sandals; the loan makes for a sign of divine favor and provides a means of moving the myth's plot along.

Magic Items in History

If we move away from the semi-literary world of mythology into the physical, historical realm, we find that items imbued with magical powers multiply but change. As a broad survey, I classify these items into six areas: amulets/talisman, gems, potions/unguents, animal pelts/belts, runic inscriptions, and saints' relics. The first three classes appear from at least as far back as Sumeria and continue, arguably, into the modern day. The latter three really come into their own during the post-Roman era and continue into modern usage, especially saints' relics.

Amulets and talismans typically appear as protective devices. While charms, spells, and animal-based remedies were often used to cure illnesses after the fact, amulets and talismans are meant to prevent the illness from occurring in the first place. The purpose behind both types of item are identical, but the source and form vary. Amulets are made from plant or animal parts while a talisman has "written words or at least letters written on" it (Kieckhefer 77). Some examples include wearing a hare's foot on the left arm to prevent all dangers, hanging springs of rosemary to repel venomous snakes, or "a series of names for God which, if borne on one's person, will protect against fire, water, arms, and poison" (Kieckhefer 77). These items appear to be permanent in nature, efficacious so long as the item continues to exist in one piece. They are typically small, simple to make, and usually (in the Christian era at least) have prayers said over them. Because of the ease with which they can be produced and how often they are discussed in treatises, amulets and talismans were probably very common at least through the end of the Renaissance.

While not enchanted, as such, various gemstones were also considered to have a range of pseudo-magical effects. Nearly any medieval lapidary contains such details, though Bishop Marbode of Rennes' *Book of Stones* from the 11th century is probably the most commonly cited. Some of the abilities associated with stones include: the sapphire's ability to dispel terror and cure headaches; and the power of crushed magnet sprinkled over hot coals to cause "the occupants of the house [to] mysteriously depart, leaving the place easy prey for burglary" (Kieckhefer 103). General belief held that while herbs had various mystical properties, stones and especially jewels had even greater strength. This belief was probably held because most of the stones included in lapidaries were quite rare at the time. Thus, since any peasant could hunt around the woods and find various common herbs yet only the wealthy could afford sapphires, clearly sapphires were more mystically potent.

Another common class of magic items from the ancient world that reaches into the modern era is the ingested or applied items, potions, and unguents. Many of these items were created by doctors and herbalists and were meant to be single use, or limited use, items. The majority were used for medical purposes or as love potions. That said, there were those learned in such lore who used their skills to harm others. As Europe moved into the medieval and Renaissance periods, more unguents which were said to allow people to transform themselves or others into beasts -- cats, wolves, and horses being the most common -- appeared in popular stories and broadsides. Many of these were said to be recipes learned from the Devil (most common from the 15th century onwards). Any late medieval or Renaissance witchcraft or witch-hunting source covers a variety of such unguents, especially the French sources like Henri Boguet.

A related item that was very common in France and Italy during the Renaissance and Scandinavia during earlier periods were animal pelts/belts. These were said to transform the wearer into the animal the pelt or belt was made from, typically a wolf. If sources such as Boguet are to be believed, every village in France had at least one such pelt floating around (as well as numerous unguents). Of course, Boguet made his living as a witch and werewolf hunter, so it is very likely that he was simply attempting to drum up business.

One of the most highly debated medieval magic items is the runic inscription. From what archaeologists and runic scholars can tell, there were quite a few inscriptions meant to protect the wielder of a sword or amulet. Others have a less well defined purpose. Being conservative, we can only count as magic those inscriptions which we can translate into meaningful text and which clearly call upon aid (usually divine) for the owner. Some less conservative individuals have taken to calling any runic inscription that we cannot meaningfully translate "magic." This approach calls to mind the archaeologists' reference to an object having "religious significance." In the latter case, "religious significance" can either mean that the object has verifiable religious use or that the archaeological community has no idea what the object was used for. Most untranslatable runic inscriptions, the Omniscient Eye would argue, probably fall into the non-magical category. For all we know, they could simply be the first owner's initials or a version of a smith's mark,

depending on the region, time period, and culture.

Perhaps the most recent type of magic object to enter the general public was the saints' relic. These objects, whether formerly owned by a saint or a bone/body part of the saint, were incredibly common during the middle ages. Nearly every church, cathedral, or shrine of note had some sort of relic on hand to draw pilgrims and donations. If we are to believe the sources, some saints apparently had 20 or 30 fingers, sometimes as many as seven heads, or uncountable ribs. But, various abbots, pastors, and pardoners had a reason for this multiplication. By turning to the Bible, they claimed that as Christ multiplied the loaves and fishes, the relics left behind by saints multiplied for the greater good of Christendom. This replicate effect clearly did not create enough relics, though as we have several reported cases of monks, priests, and others stealing relics from various sanctuaries, or hiring people to steal them. Most of these relics were believed to be imbued with power from the saint to whom they formerly belonged. Because of this, most were believed to have curative properties or to extend the saint's "sanctity field" around the owner to protect him from demons and devils. Whatever properties the relic was supposed to have were almost always related to the saint's life and area of influence. Obviously, such relics as the Shroud of Turin and the True Cross were believed to be incredibly potent.

Enchanting Words

The medieval literary world is no less productive than history or mythology when it comes to magical devices. A brief survey of Arthurian romances, or instance, presents a plethora of mystical herbs, unguents, love potions, gems, and other artifacts. Many of these became the source of modern Eurocentric fantasy items. One classic example is Tolkien's One Ring which derives its primary power (invisibility), in part, from Chretien de Troyes' *Yvain*, who acquires a magic ring which hides him from his enemies in the same fashion. As with the historical sources, most herbs and unguents were used for healing purposes in the various romances, *lais*, and other tales. Perhaps the most famous love potion is that which drives the plot of *Tristen and Isolde* in any of the story's incarnations. Most gems, as with their historical cousins, are put to protective use, typically in rings. Artifacts are where we see the greatest variation. These devices range from magically imbued dishes (plates and other flatware) and drinking vessels to swords and boats. As Kieckhefer states, "The world of the romances seems at times a vast toy shop stocked with magical delights" (107).

Other important artifacts include both of King Arthur's swords (the one in the stone and Excalibur) as well as his scabbard -- which prevented blood loss -- and Sir Gawain's green sash. The latter, present in *Sir Gawain and the Green Knight*, is a debatable object in that Bertilak's wife claims it will protect him from being beheaded, but she is also his opponent's wife, so she is not an entirely reputable source. A perfect example of myriad magical objects is Chaucer's "The Squire's Tale" from *The Canterbury Tales*. This particular story is a veritable treasure trove of medieval magical items. Among the latter's collection are a brass steed that never tires, a mirror that shows friend and foe (Rowling's "foeglass" seen in *Harry Potter and the Goblet of Fire*), a ring that allows the wearer to understand bird speech, and a sword that cuts through anything and can heal the wounds it causes. In the Breton *lais* recorded by Marie de France, such as "Guigemar" and "Les Deus Amanz," we can find another boat/ship which moves on its own with no crew and a potion which instantly restores the drinker's strength respectively.

While we find innumerable magical items in medieval literature, there are a few common characteristics that all of them share. Most artifacts discovered in the romances, *lais*, and other works are unique. That is, they are not mass produced, most have names, and finding two with the same powers is difficult at best. One of the few exceptions to the latter is magic ships, which all seem to be able to propel themselves without sails, crews, or oarsmen. In nearly every case of artifacts, there are limits to who can use the item. This does not apply to potions, unguents, gems, and other "common" objects. For example, a magic boat may only work for passengers who are humble, loyal, and innocent of treachery. A knight who boasts of some conquest may find himself magically tossed overboard. Likewise, a castle may be visible only to those who are brave, remaining invisible to cowards. And a magic sword may fail its owner if the cause is not righteous (Excalibur is a good example). In almost every case, these items are integral to the plot of the story or are necessary to keep the story moving. Without the love potion, *Tristen and Isolde* loses a considerable amount of the dramatic tension which arises from the Tristen-Isolde-King Mark triangle. King Arthur, without Excalibur and the sword in the stone, is simply another trumped up warlord and mediocre knight. Lacking the magic invisibility ring, Yvain finds himself trapped in a room with no exits and his enemy's men-at-arms with no place to

hide and no chance of winning a fight.

To a modern audience, these may seem like crutches to avoid having to find creative solutions to problems. However, to the period and many later audiences, various magic devices served to create problems that needed creative or divinely mandated solutions. They also served to show that the hero was truly heroic, possessed certain knightly virtues, and/or had divine blessing. The latter is clearly the case with Arthur and the sword in the stone as well as with Galahad's sword in a stone (which proved that he was the perfect knight). From a certain perspective we can also argue that the various knights of the romances and *lais* were the James Bonds of the period and that the magic devices they acquired or encountered were the equivalent of high-tech gadgets or defenses.

Modern Applications

What the modern author or GM does with these sources and the prevalence of magic items really depends on what his purpose is. We can identify three basic, broad, and certainly not all-inclusive, classes in the work of modern authors: practically nonexistent, rare, or mass produced.

The first class includes those authors who limit magic devices to the point that they effectively do not exist. George R. R. Martin's Song of Fire and Ice series, at least the first two books, are a good example of this sort of setting. Over the course of the first two books, the audience is presented with only three arguably magical items: Dani's dragon eggs. ("Arguably" here because the eggs are not necessarily magical in and of themselves, but the creatures they hatch reintroduce magic to the world.) William Goldman's *The Princess Bride* presents a similar fantasy setting in which magical devices are virtually nonexistent; the only ones that come to mind are Miracle Max's chocolate coated pill and possibly the death device in the Pit of Despair. The rare class includes those authors who definitely employ magical items, but do so sparingly or make them difficult enough to acquire that they have no effect on daily life. Fritz Leiber's Lankhmar is a good example of this category with almost all of the magical items being provided by Ningauble and Sheelba when, and only when, the heroes need them. In both classes, the magical items are used to inject a sense of mystery and the epic into the world. They can also be used, as with the medieval examples, to move the plot along or to outclass the heroes, whose enemies often have more and better magic than they do.

The mass-produced class is probably the one most familiar to many gamers. In these settings large quantities of magical items exist and usually have generic names, such as the classic **Dungeons & Dragons** potions of healing, +1 swords, or bags of holding. Good examples in fiction include J. K. Rowling's Harry Potter series and Terry Pratchett's Discworld in which mass-produced magic items are used to replace technology. Another is Steven Brust's Dragaera setting which has some mass-produced magical devices, almost exclusively weapons. The most notable of these are the Morganti blades that were potentially inspired by Elric's Stormbringer, without necessarily having the latter's sentience. In most of these cases the prevalence of magic items is purposely chosen in order to create a world similar to our own without resorting to technology. Thus Rowling's wizards replace sports cars with broomsticks and Pratchett uses imps with painting equipment to replace cameras. Some of these mass produced items are unique to modern fantasy, others have classical, historic, or legendary ancestors (such as flying broomsticks), while most of the rest are based on primary world items (Unseen University's Hex). This class is definitely a modern creation that does not appear to have any historical -- mythic or literary -- predecessors.

Gaming Application

The potential application of this question and answer to gaming should be pretty straightforward. Both the GM and players should decide what role magical devices are going to play in the setting or game. Any of the historical, mythic, or literary trends lead to a variety of gaming or writing opportunities. Characters could be sent on a quest to retrieve a rare, unique magic item. As we can see in the tale of the Argonauts, this could lead to several side quests involving single-shot magic. In a related style, they could perform a quest for their divinities in order to borrow a special item that they need for their greater quest. On the other hand, they could be contacted by a divinity to retrieve an item he loaned to a mortal who never returned it. Magic items could remain in the hands of powerful NPCs for use against the characters, making the PCs underdogs. Or they could be so common that the world is little different from our own, just archaic in appearance -- possibly the medieval/Renaissance version of steampunk or cyberpunk: manapunk, a world in

which enchanter guilds/companies control the government and everyone seeks the latest and greatest magical upgrades.

Village of the Star

by Paul Drye

There's not much original research on Homeline, but that doesn't mean there's none at all. Observational astronomy took a huge hit after it became apparent that there were timelines as advanced as Homeline (or more) that had made their own telescope runs to steal. Rather than building an observatory and paying to man it, one could just mine the papers produced elsewhere. Still, there's grant money to be had if a scientist can tie his work to parachronics, no matter how obliquely. Other timelines just don't know what to look for in that case.

The Schuler Project was founded more than a decade ago by several major American and European observatories. Its purpose was follow up on hints that some of the processes occurring during neutron star formation might give insight into projector physics. Waiting around for a neutron star to form (and even expecting to catch it early enough to see the whole process) is a fool's errand under normal circumstances, as you need a particular type of supernova to make one. With hundreds of timelines at hand, though, each with a different date in the past, it was possible to know when and where one could be seen by examining Homeline's own history.

That was the theory, anyway, but even with this advantage the Project has struggled. The 1572 and 1604 supernovas were of the wrong type, and the Cassiopeia A is too dim and shrouded by interstellar dust to give good readings. The 1181 and 185 explosions were hunted down and observed too, but they turned out to be the useless Type Ia as well. Only the Crab Nebula supernova produced a clean neutron star and, while it's been studied on several different timelines now, only one data point is a disappointing harvest for what counts as a major scientific endeavor by Homeline's standards.

Accordingly, the Project has moved on to the one remaining candidate despite its inherent difficulties. The Vela Supernova took place more than 11,000 years ago, and before the Project started looking into it the error bar on the exact date was more than 1,300 years. Close study of records from the most advanced timelines at that date took more than two years, but have finally narrowed the explosion down to somewhere in the years 11,291 and 11,290 BC. For the last 18 months, two astronomers have been living in the central Chilean mountains of Clovis-3, the sole timeline presently known to be moving through those two years. Their mission is to keep a battery of telescopes pointed at the progenitor star and catch it when it finally goes off. When they do, the Project's board will finally be able to justify the expenses of their project, and hopefully can extend the program further into the past.

Of course, there are complications.

The Project

Schuler's people selected Santiago, Chile as the point from which they'd transition to Clovis-3. The Vela Supernova is to occur in a southern constellation, and Chile has a history of high-level astronomical work. Many unemployed

workers from Cerro Tololo and Las Campanas moved back south to Santiago in the post-parachronics pure-science funding bust, and were hired as support crew for the current effort. One of them, Juan Navarro Hernandez, is on the two-member team out-time.

On Homeline, the Project has a small but advanced facility in San José de Maipo, a small town 30 miles outside of Santiago. Though quite accessible, it is on a river embedded in the Andes (the Rio Maipo) and so is also close to the mountain tops the researchers need on Clovis-3; there is a climbable ridge to the east, a couple of miles long, which takes travelers to a small plateau more than a mile high. Just 100 yards long and 50 wide (running southwest to northeast in its long axis), it's more than big enough for the task at hand.

On Clovis-3, the plateau has been turned into a small observatory. Porters having translated in from San José carrying an aluminum sheet observation dome, several small telescopes (visual light and other frequencies), and the necessities of life for the two on-site personnel. There are a series of tree-protected rock shelters on the north of the plateau where the researchers have set up their tents, slit trenches, and cooking area. Once installed, the plan was that the researchers would walk down to a contact point nearer the Maipo where they would drop off their latest observations for translation back to Homeline, then return to the plateau.

As there's a chance the supernova will explode at a time when the constellation is not visible from Santiago -- Vela is quite high in the sky most of the year, but it does disappear at various points -- there is also a backup station near the similarly dry and high Warburton, Western Australia. However, it is unmanned for budgetary reasons. The plan is that if the neutrino detector at the Maipo station says the star is going off when it's below the horizon, the two researchers will crash a message back to Homeline where two more researchers in Australia can back them up.

The Refugees

The Khormokatho are a tribe of some 20 Paleo-Indians who lived in the Santiago Basin until last year. They're members of the sparse and rather unsuccessful people that inhabited South America prior to the real conquest of the New World by Asian hunters crossing Beringia. It's taken these Clovis culture people and their descendants this long to reach southern South America, but now they're pushing out the Khormokatho and their like. If history runs anything like it does on Homeline, they're going to be very successful.

After a raid killed several of their fighting-age men, the remnants of the Khormokatho escaped up into the mountains surrounding their former home. It was a strategy of desperation, as life in the mountains is harsh and none of the tribes-people had any skills geared to living there. By a stroke of luck -- whether good or bad depends on one's perspective -- they stumbled across the Schuler Project's encampment where the two astronomers took pity on them.

They allowed the Khormokatho to set up a permanent encampment on the plateau, and have used their technologically advanced resources to help defend them. The two out-timers use their local knowledge, the firearms they've been given, and even their food and medicine (to the extent that they can be extended to ten times the number they're supposed to support) to keep the Clovis-culture interlopers off the backs of their charges. Unfortunately, while the invaders are somewhat afraid of chasing down the Khormokatho now, they're not entirely dissuaded. The refugees have had to be enlisted to protect the plateau, forming a bicultural, bi-technological society that breaks every kind of rule Infinity has.

The researchers have justified their decision on the basis that the Clovis people would have found the encampment otherwise and brought the attempt to observe the supernova to an early end. However, the Project's protocol was that, if attack threatened, they were to wrap up and come home. This has been ignored. Quite rightly, the researchers believe that failing at this observation will break the Project, and there will be no second attempt. Accordingly, they've been falsifying their reports. They include mentions of friendly natives in the area (true, as far as it goes) while omitting the reason why the natives are this high up in the mountains.

The Khormokatho's origins are somewhat mysterious, and certainly they don't look much like any group of humans living in the modern world. Their arms and legs are relatively short, leaving them about a head below most out-timers. Their skins are quite dark and their hair brown and curly, which suggests some association with Australian Aborigines,

but their facial features have a "European" cast. If any of them survive the next few years, some geneticist is going to find it interesting to study them.

Changes

The researchers have used the isolation of their plateau base to their advantage. They walk nearly a mile to their drop-off point, and often the contact is automated, with no other humans involved. Accordingly, they've been careful not to give any indication that things are not going according to plan. They don't think they're doing wrong, but they know what they're up to would not meet with approval back home. As long as their reports are either bland or upbeat, they're hoping to be left alone.

Anyone on a journey from the drop-off point to the camp will realize right away that all is not as reported. The occasional switchbacks along the ridge route are crudely fortified with piled rocks retrieved from around the area. Observant visitors will notice that a few spots between the drop-off and the Rio Maipo plain below -- in other words, in the opposite direction from the camp -- are fortified too. The obvious implication is that the astronomers are trying to keep something from getting between down there and the plateau. Neither the Homeliners or the Khormokatho know much about defensive structures, but their hearts are in the right place. While very basic, the gates are admittedly somewhat effective in keeping the Yultang from an all-out assault. However, their size and number will be the first clue that not just the researchers are involved. Unless the two have been doing nothing but toting boulders around, there's more manpower involved.

The camp itself is a dead giveaway. The edges of the plateau are piled up with rocks and logs to throw at (or roll down on) anyone approaching from those angles. Posts have been driven into the ground at the flatter spots and wicker fences woven between them; some are still in the process of construction. The line of approach along the ridge is guarded by one of the two researchers carrying a rifle or, more worryingly, a Khormokatho woman named Pangka armed with the researchers' spare. She's the only one who can hit the broad side of a barn with it. Within the compound itself, fire pits line all the available rock ledges and outcroppings. Children run around playing, while adults watch newcomers warily.

The Researchers

Juan Navarro Hernandez: A graduate of the University of Chile in the mid-1990s, Hernandez was on track for a career as an astronomer when most institutions pulled out of Chile's observatories. For the last three decades he's been stuck as a high-school mathematics teacher in Valparaiso, pining for the life he nearly had. When the Schuler Project contacted him, he jumped at the chance to do "real work" even if he had to go out-time to do it.

As well as being a trained astronomer he is into hiking and outdoor activities, a combination that brought him to the attention of Schuler. Though over 50 now, he is still very fit, with tanned skin and distinguished-looking gray hair. To some extent he has never lost his youthful idealism, which people who know him attribute to the influence of his missing father. The elder Hernandez was an educated union organizer who was murdered in the aftermath of the Chilean Coup of 1973. Juan has always thought of himself as a passionate, socially responsible person in the mold of his long-lost parent.

He is the driving force behind giving the Khormokatho protection. It was obvious to him that the ragged band that appeared on his doorstep was in trouble, and he was the one who used his orienteering skills to establish that a new group had appeared in the region and were ousting the previous natives. In the months since, he has developed some rough language skills that let him communicate with his new charges, and direct them in their resistance. He does harbor some guilt that this is interfering with his duties as an astronomer, but as mentioned previously he claims that the two are complementary to one another. What would happen if he were forced to choose between the supernova and the people is unclear.

Jenna Harpe: A 28-year old native of Seattle, Washington, the young Jenna somehow got interested in astronomy despite her hometown's terrible skies. Her mother is Mexican-American, so she grew up bilingual in Spanish and

English, then took a degree in astronomy at UC Davis. After graduation she was hired by Infinity as a "time-checker": one of the people who went in early to an empty timeline and used astronomical observations to establish the local year in the absence of any cultures with recognizable calendars. She was seconded to the Schuler Project two years ago after they asked for some help on the Vela observations. Though working in civilian life since then, it's entirely possible that any visiting Infinity personnel will have met her at some point, perhaps during training.

As well as being a good liaison to the locals in Homeline Chile, and a skilled astronomer, she is also Infinity's eyes on Clovis-3. Unfortunately for that idea, she and Hernandez have fallen in love and, despite her misgivings, she is going along with his plans to protect the Khormokatho. With her insight into Infinity's procedures, she's even been helpful at constructing the ruses with which they deceive the folks back home.

She is a young "American-looking" woman with tanned brown skin and long black hair that she wears in a practical pony-tail. While in the field she wears a mixture of the leather-and-denim clothes she picked up during her post-graduate work in the American Southwest and the more colorful (but equally field-practical) Chilean huasa garb she discovered recently. Somewhat chubby, she could be quickly described as Indiana Jones turned female and squashed down into a 5' 4" frame.

The Enemy

The Yultang are the newcomers to the area, the vanguard of the Beringian colonists known to archeologically minded Homeliners as the Clovis culture. They're not the stereotypical picture of the slavering invader, being in dire need of a new homeland themselves. Native to the Atacama region to the north, the recent end of the last ice age has been drying out the plains they called home; in a few thousand more years it will be transformed into the driest desert on Earth. Faced with severe population pressure, some of them have moved south.

They aren't even very good fighters, as they've spent the last couple of thousand years on two continents so wide and empty that it's simply easier to move to another location rather than conflict with another group. Still, they have spear-throwers and basic ideas about tactics. The Khormokatho, on the other hand, are more technologically primitive, and they and related peoples were so widely spread out that they rarely encountered each other let alone fought. Their native language is unrelated to anything found on Homeline (or a lot of other timelines, for that matter), but Juan Navarro Hernandez has a smattering of it as mentioned above, and some of them have started picking up Spanish.

The Yultang (and their relatives) are in the process of becoming the typical pre-Columbian people of the Americas; only an expert would be able to distinguish them from an American Indian, as per Homeline's idea of the term. They are relatively tall, with reddish-brown skin and black hair. While their language is ancestral to modern-day Mapudungu, even on the off-chance an out-timer knows this obscure tongue it will be of little use. Their speech is as different from the modern version as English is from Armenian.

The Star

Sooner or later, the Vela Supernova is going to blow. Before it does so, anyone who wishes to look at it at night will just be able to make it out with the naked eye in the dry, thin air of the plateau; if viewed through binoculars or anything stronger it is obviously "fuzzy" from the gas it has been expelling over the last few millennia. When it explodes it will increase in brightness over a day about magnitude-11 then gain another magnitude over the next week before slowly sliding back down the scale of brightness. At its peak, it will give off as much light as the full moon, but compressed into a point source rather than spread out across a disk. Unless the GM has been indulging in some unusual timelines, it's likely to be the most remarkable thing the adventurers have ever seen in the sky. It will certainly be the most unusual seen by the natives of Clovis-3.

The uncertainty in the actual day it will go off lets the GM use the star at the high point of any visit. If the situation is deteriorating, an attack by the Yultang can occur just as the critical observations are getting underway and it will be up to the adventurers to keep the astronomers safe for extraction . . . either after the recordings are made, or before if that's absolutely necessary. Alternatively, if the visitors are trying to broker a peace between the Khormokatho and the

Yultang, a latter-day Thales of Miletos might want to use the supernova as an omen. "Behold! The sky gods smile upon peace!" Hopefully they'll think to do this before some bright spark among the Yultang decides it's a signal to finish their enemies instead, and convinces the others of the same. Some tension can be milked out of having both interpretations occur at the same time.

Other Adventures in the Village of the Star

Simon Says: The Khormokatho aren't inclined to listen to the players' characters; after all, it's Juan and Jenna who've helped turn their lives around. If they want to cajole the natives into doing something against their better judgments, the strangers will have to help too. The only question is, what can they do that doesn't break four kinds of laws?

In talking with the Khormokatho, they'll find that they had to leave behind an object of religious import, the native equivalent of an altar or totem pole. It's now deep inside Yultang territory on one of the city of Santiago's hills. Retrieving it without alerting the invaders might be just the ticket.

For an additional wrinkle, perhaps the object in question is irretrievable on Clovis-3 but still can be found in the matching spot on Homeline. Or the object the natives revere could be something entirely out of place for their timeline, such as a knight's helmet; is there a natural weak point in the multiverse here?

One Down, Several to Go: If the researchers are given sufficiently long warning of visitors, they might be able to set a trap. One of the group (either an NPC or a handily unavailable player's character) will be taken hostage and used to pressure the remainder to keep their mouths shut and help the conspirators arrive at a permanent solution to their problems. They won't kill the hostage if their bluff is called, but they won't free him either and won't allow the remaining group to stay on the plateau. The visitors will have to stage a rescue with two groups against them instead of having allies in one against the other.

What's All This Then?: The Homeline visitors are projecting into the drop-off point (either on their first visit or, if co-opted by the researchers earlier, perhaps returning with some aid) only to find themselves in the middle of a group of Yultang assaulting the stoutly defended gate next up the line. A very confused combat ensues.

Attack From Within: There is one basic question that might be worth answering: Why are the Yultang here, now? If the GM wants to throw a completely different light on things, it may be that this is not a natural migration. The Yultang may be attacking the Khormokatho at the instigation of someone else from out-time. After all, the Schuler Project was initiated to study a poorly known aspect of parachronics physics. There's money and power in play here. This possibility is particularly worthwhile if the playing group is having a hard time bringing the situation in the Village of the Star to a satisfactory conclusion, as discovering outside interference would justify the group throwing themselves behind the plateau dwellers. Possibilities for the Yultang's mentor include Centrum looking to prevent Infinity from getting info the Centrum already has, an alarmingly well-informed Reich-5 group that somehow knows what's going on, or even Infinity themselves trying to prevent the study. Perhaps the terrifying secret Paul Van Zandt revealed to the UN has something to do with it.

If the GM uses "Simon Says," above, the unusual out-time object being retrieved could foreshadow the identity of the opposing faction.

Using the Village of the Star in Other Settings

The key element of this setting is to nail down the adventurers in a situation where they'll be tempted to help a desperate group of primitives against their enemies using what amounts to godlike powers. A fantasy setting likely has the advantage of several different races, so the main difficulty is picking ones that make a moral conflict. If saddled with an alignment system, take care not to make the Yultang a band of orcs or whatnot. There are more subtle antagonisms -- elves against dwarves, for example, or Lawful Neutral against Chaotic Good -- that would work better. Transposed into a primitive tribal region, they would fit the events described above to a T.

Sci-fi settings also have opposed races, but here the danger lies in getting the players to identify with the Khormokatho. If mapped onto an alien species, the GM runs the risk of the players not caring very much. *GURPS Traveller* has the advantage of primitive minor human races, so placing one of those in peril of extinction at the hands of an equally primitive alien race would work. Come up with a reasonable justification for the aliens to be aggrieved that is no fault of the humans (perhaps the aliens are violently allergic to human body chemistry, or "galactic culture" humans once took them as slaves) and you'll be good to go.

Pulp settings have it easiest of all, since one can hardly turn around in those without discovering a new tribe in Africa or South America. About the only part of the Village of the Star that has to change is the astronomical justification for the civilized folks to interfere, but naïve scientists can be found in any field of knowledge and co-opted for similar purposes.

Murphy's Rules

by Greg Hyland

Murphy's Rules

The Gulf Between "Cool" and "Customer"

The past couple of weeks I've been talking about the two advantages I see RPGs having over other forms of game-like entertainment. This week contains a few random thoughts to wrap up this epic series.

Speaking of epic series, my beloved (former) hometown Miami Dolphins continues their epic losing streak. Supposed players of American-rules football, this team last won a game during the Roosevelt administration (which Roosevelt, I'm not sure). Now, one interesting thing about sports teams is that (for the most part) the local interest in the team is directly proportional to whether or not the team wins. From an economic point of view, this "interest" translates into "principle" (i.e. "piles of cash"). In other words, there are dozens of other factors behind the scenes of a sports team that have little to no bearing on the success of the team: how picturesque the stadium is, how affordable the tickets are, how tasty the hot dogs are, how nice the head coach is . . . none of that matters anywhere near as much as whether the team wins.

One analogy I can make to the tabletop gaming world -- and the epilogue-y point I'll be driving into the ground here -- is that the success or failure of an RPG on the micro sense is the ability of the GM (and, to a lesser extent, the players) to make it fun. It's been said before -- by me and others -- that a good GM can make the worst RPG a blast, while a bad one can turn the best RPG into a one-session wonder. But, unlike the winningness of RPG teams, "good" and "bad" can have different definitions, depending on the group. For example, I consider myself to be a better-than-the-average-bear GM, but if I were saddled with a group that only wanted a rich tactical-combat experience, all parties would probably be profoundly disappointed.

In general, RPGs have been portrayed as having a wide scope of *possible* audience: combat folks, storytellers, character actors, and so on. But the *actual* manifestation of how specific games translate to specific audiences' desires can vary widely from game to game. For example, the most recent **Dungeons & Dragons** game is much more clearly designed with the tactician in mind compared to (say) classic **Paranoia.** But other publishers, utilizing the **d20 System** (or even OGL material) have transmuted this game into something closer to other audiences' desires. The most obvious example I can consider is Green Ronin's **Blue Rose** RPG, which looks to me like what the bog-standard **d20 System** game would become if it went away to art school for a summer of change involving poetry readings and clove cigarettes.

And the actual way audiences use their chosen games is (mostly) out of the hands of the publisher. In other words, RPGs' two greatest advantages -- as I described them the last two weeks -- aren't up to the publisher, for the most part. If recognized, this must be frustrating for those who make a living from the RPG biz; like the hot dog vendor whose profits nosedive when the team whose stadium he's in has a cold streak, so too can RPGs fail to shine at their full potential because of outside agents.

In my mind, then, two possible courses of action are -- paradoxically -- to make the GM either less or more involved. I've talked before about the possibility of [making GMs obsolete](), but it might be possible to go in the other direction, giving GMs the tools and training they need to fully utilize the advantages that RPGs have. Envision, say, regional GM trainers, who hold seminars at local cons about tips and techniques to be better. Those who participate would be rewarded with certain perks (access to special websites, ability to playtest certain games), and possibly more "tangible" rewards (limited-edition adventures, shirts, or other goodies). Perhaps ways to get GMs more involved could be devised as well, such as filing after-game reports (what books/rules/situations worked, what didn't) that could give the GMs additional rewards.

In a way, this has been attempted before: **Torg** with its Infiniverse newsletter encouraged gaming groups to send in reports. I don't know how well the concept worked then, but if there were weaknesses in this method then I can't help but wonder if they could be overcome with technology; the original reports needed to be mailed in, and I understand they've come up with a few faster means of information transmission technology in the past couple of decades. But regardless the idea previously was to make a better *game* rather than better *gamers;* focussing on one side of this equation without looking at the other would be like a golfing magazine focussing all its attention on how to buy better clubs and balls rather than how to play the game "right."

RPGs have a lot of potential advantages over other forms of entertainment, but turning that "potential" into a consistent force is a challenge for the entire hobby. As the de-motivational poster of the [one mangled fork](#) says, "Just because you are unique does not mean you are useful."

--Steven Marsh

Adventurous Occupations: Journalist

for *GURPS*

by Paul Stefko

The journalist is often a standard feature of adventure fiction. Curious, resourceful, and dedicated, the reporter will often break the case, poking into holes and discovering clues that other investigators miss. They are also good at spotting lies as well as telling them, manipulating witnesses and sources into giving them the information they need.

The intrepid reporter fits into just about every genre and in any setting that includes organized media. Superheroes maintain secret identities as journalists because it gives them an excuse to disappear at a moment's notice, off to catch the latest scoop. Paranoia thrillers see conspiracies split open by the lucky reporter in the wrong place at the right time. Horror reporters are often the first to discover the mysterious and terrifying (and just as often the first to die).

Journalist PCs

As a player character, the journalist can often serve as a walking adventure hook. Three things make the journalist ideal for spring-boarding the party into an adventure: professional interest in solving mysteries and uncovering obfuscated truths, reliable sources of information, and strong investigative skills.

A reporter is nothing without the scoop. His job hinges on being able to recognize an important story, being in the position to investigate, and actually being able to unravel the case. Success in his career can lead the journalist to major awards (granting Reputation or even Wealth and Status), while failure can leave him discredited (a negative Reputation) or -- depending on the society -- facing harsh punishment (with the law as an Enemy, assuming the player won't retire the character to his justice).

Of course, the reporter's next big story will typically be the tale of the party's current adventure. This keeps the journalist character motivated, and his interest may be enough to draw the entire group deeper into the goings-on. And with his skills and resources, the reporter will also be a valuable part of the investigation.

Any good reporter cultivates a stable of informants, snitches, and friends that can feed him information from various corners. A low-level crook attached to a larger gang, a minor official at City Hall, or a RN at the hospital can serve as helpful Contacts. When the journalist finds himself in need of information, he might give any one of these sources a call.

But it's when the sources dry up that an adventuring reporter can really shine. A talented journalist will have sharp investigative skills such as Fast-Talk, Detect Lies, Body Language, and Observation, but he could also be expected to have skills like Administration (for dealing with officials), Intimidation (to bully information out of a reluctant witness), Stealth and Shadowing, various Savoir-Faire skills, and Streetwise. In many genres, some combat ability wouldn't be out of line, either. (For players and GMs with access to *GURPS Martial Arts,* the discussion of self-defense styles on p. 145 would be a good place to start.)

Journalist NPCs

As an NPC, a reporter serves as a font of aid or information, an annoyance too nosy for his own good, or a legitimate threat to the PCs in the form of secrets revealed and dangers exposed.

A journalist as an NPC will rarely warrant the level of Ally. Reporters capable enough to be of use on an adventure should probably be reserved for PCs. However, an Ally reporter is possible in many genres, useful for establishing

covers ("With your press pass, you could easily get one of us into the gala as your date") or providing "soft skill" backup for more physical (read: combat-oriented) PCs.

However, a journalist is perfectly suited to the roll of Contact. In fact, with his own wide-ranging network, the journalist Contact could serve as a filter of many different areas of expertise. With a high enough effective skill and reliability, the journalist could be the only information source the party needs.

Journalists make interesting Enemies. Typically, they will fall into the Watcher or Rival categories, dogging the PC and hoping to catch him in a compromising position. This will, of course, wind up on the front page, potentially exposing Secrets or alerting more dangerous Enemies to the character's whereabouts.

Journalist PCs will often have journalist Enemies through professional rivalries. Perhaps one reporter scooped the other on a major story, leading one to promotion and the other to disgrace. (This very relationship has even lead to the creation of supervillains in the form of Spider-Man rogue Eddie Brock, a.k.a. Venom.)

New Perk

Many settings grant members of the press certain special privileges, such as access to secured areas and important individuals. The following perk reflects this.

Press Pass: You possess credentials that allow you access (albeit potentially restricted) to areas a normal citizen may not be able to visit.

Disadvantages

The following professional Code of Honor is adhered to by most scrupulous journalists in the modern world.

Code of Honor (Professional Journalist): Remain objective; avoid conflicts of interest at all costs. Protect your sources; never reveal an anonymous source unless extreme circumstances require it. Report accurately and without bias; seek reliable sources and quote them faithfully and in proper context. -5 points.

New Skill

The frontier of the news in the early 21st century is online, and the following new skill allows Internet journalists to present themselves and their stories in a more appealing way.

Artist (Web Design)   *IQ/Hard*
                                                                                    Default: IQ-6.

This is the skill of making visually appealing web sites. While related, there is no default to Computer Programming; that skill can be used to add functionality to a web site, but it has no bearing on the site's aesthetics.

Modifiers: Equipment modifiers (p. B345); -2 if the medium is unfamiliar; -5 if the medium is difficult (mobile devices like cell phones).

New Templates

Blogger   *25 points*

You are a blogger, the modern vanguard of independent media. Bloggers are increasingly often the first to break the most important stories in many fields. Some are competent, clever, and ethical . . . and some are complete whack jobs. Most bloggers fall somewhere in the middle.

Contacts and Patrons: The best bloggers know people just about everywhere who can pass them information. The worst will pretend to have sources to legitimize their own pet theories. Some bloggers work for companies who are trying to capitalize on a "big name" in Internet circles.

Equipment: Blogs can be accessed from just about any location with an Internet-connected computer - public libraries, cybercafes, or an old PC at home. Bloggers don't need much in the way of equipment.

Attributes: **ST** 10 [0]; **DX** 10 [0]; **IQ** 10 [0]; **HT** 10 [0].

Secondary Characteristics: Dmg 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 10 [0]; Per 10 [0]; FP 10 [0].

Advantages: 15 points chosen from Contacts [varies], Intuition [15], Patron (Minimal Intervention, -50%) [varies], Reputation +1 or +2 (small class of people, "the blogosphere"; 10 or less) [0 or 1].

Disadvantages: 15 points chosen from Chauvinistic [-1], Delusions [varies], Enemy (rival) [varies], Imaginative [-1], Nosy [-1] or Curious [-5*], Odious Personal Habits (vocally opinionated) [-5], Proud [-1], Reputation -1 or -2 (small class of people, "the blogosphere"; 10 or less) [-1 or -2], Trademark [-1 or -5], Wealth (Struggling or Poor) [-10 or -15].

Primary Skills: Artist (Web Design) (H) IQ+1 [8]-11, Writing (A) IQ+2 [8]-12.

Secondary Skills: Pick three of Computer Operation/TL (E) IQ+1 [2]-11, Computer Programming/TL (H) IQ-1 [2]-9, Current Affairs/TL (any) (E) IQ+1 [2]-11, Savoir-Faire (Internet) (E) IQ+1 [2]-11.

Background Skills: 3 points chosen from Fast-Talk, Propaganda/TL and Research/TL, all IQ/A; or Market Analysis, IQ/H.

* Multiplied for self-control number; see p. 120 of the ***Basic Set.***

Journalist   *55 points*

You are a trained journalist working for a newspaper or broadcast outlet. You have resources, contacts, and credentials, and you always get your story.

Contacts: Sources are a journalist's lifeblood. Most reporters will protect their sources tenaciously. Reporters have even gone to jail protecting a source's identity.

Equipment: A journalist, regardless of medium, will typically carry a cell phone and some way to record notes (either a notebook or a tape recorder). Video or radio journalists will have more sophisticated recording and editing equipment.

Attributes: **ST** 10 [0]; **DX** 10 [0]; **IQ** 11 [20]; **HT** 10 [0].

Secondary Characteristics: Dmg 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 11 [0]; Per 12 [5]; FP 10 [0].

Advantages: 25 points chosen from Alternate Identity (Illegal) [15], Charisma [5/level], Contact Group [varies], Contacts [varies], Eidetic Memory [5] or Photographic Memory [10], Favor [varies], Fearlessness [2/level], Honest Face [1], Intuition [15], Patron [varies], Press Pass [1], Sensitive [5] or Empathy [15], Smooth Operator [15/level].

Disadvantages: -30 points chosen from Addiction (tobacco) [-5], Alcoholism [-15 or -20], Attentive [-1], Broad-

Minded [-1], Code of Honor (Professional Journalist) [-5], Curious [-5*], Enemy (rival) [varies], Imaginative [-1], Obsession [-5* or -10*], Stubbornness [-5], Truthfulness [-5*], Wealth (Struggling) [-10], Workaholic [-5].

Primary Skills (24): Detect Lies (H) IQ [4]-11, Fast-Talk (A) IQ+1 [4]-12, Research/TL (A) IQ+1 [4]-12. Pick one of Acting (A) IQ+2 [4]-12 and Public Speaking (A) IQ+1 [4]-12, or Writing (A) IQ+2 [8]-13. Pick one of Area Knowledge (E) IQ+2 [4]-13 or Current Affairs/TL (any) (E) IQ+2 [4]-13.

Secondary Skills: Pick three of Body Language (A) Per [2]-12, Diplomacy (H) IQ-1 [2]-10, Electronics Operation/TL (Media) (A) IQ [2]-11, Intimidation (A) IQ [2]-11, or Observation (A) Per [2]-12.

Background Skills: 5 points chosen from Computer Operation/TL, IQ/E; Stealth, DX/A; Propaganda/TL and Streetwise, both IQ/A; or Law (Print or Broadcast), Market Analysis, and Sociology, all IQ/H.

* Multiplied for self-control number; see p. B120.

Lens

Combat Experience (+20 points): You have served extensively as an embedded journalist with a military unit in a live combat zone. You have picked up critical skills for surviving in a battlefield. Add Combat Reflexes [15], Soldier/TL (A) IQ-1 [1]-10, and Tactics (H) IQ [4]-11.

Pulp Reporter   *100 points*

This template represents the image of the reporter in adventure fiction: brave, tenacious, and ingenious. These journalists are adventurers in the truest sense. They are typically able to handle themselves as well in a fight as they do at a press conference.

Pulp reporters are typically newspapermen (and -women), reflecting the age in which the pulps were written. However, with the miniaturization (or even implantation) of recording devices, broadcast journalists could easily become adventurers.

Allies and Contacts: The pulp reporter's contacts are wide-ranging and world-spanning. More often, also, a pulp reporter will have true allies willing to get involved in a tough story. These could be old war buddies, or maybe cops cleared of charges by the reporter's dogged investigations.

Equipment: Just as often as a microphone or notepad, a pulp reporter might have a gun tucked into his trousers or hidden in her handbag.

Attributes: **ST** 10 [0]; **DX** 10 [0]; **IQ** 12 [40]; **HT** 11 [10].

Secondary Characteristics: Dmg 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 12 [0]; Per 12 [0]; FP 11 [0].

Advantages: Fit [5] plus 35 points chosen from Ally [varies], Charisma [5/level], Contact Group [varies], Contacts [varies], Danger Sense [15], Daredevil [15], Eidetic Memory [5] or Photographic Memory [10], Favor [varies], Fearlessness [2/level], Intuition [15], Luck [varies], Patron [varies], Press Pass [1], Reputation [varies], Sensitive [5] or Empathy [15], Smooth Operator [15/level].

Disadvantages: -30 points chosen from Addiction (tobacco) [-5], Alcoholism [-15 or -20], Attentive [-1], Broad-Minded [-1], Chummy [-5], Code of Honor (Professional Journalist) [-5], Curious [-5*], Enemy [varies], Imaginative [-1], Honesty [-10*], Obsession [-5* or -10*], Stubbornness [-5], Truthfulness [-5*], Wealth (Struggling) [-10].

Primary Skills (24): Detect Lies (H) IQ [4]-12, Fast-Talk (A) IQ+1 [4]-13, Research/TL (A) IQ+1 [4]-13. Pick one of Acting (A) IQ+1 [4]-13 and Public Speaking (A) IQ+1 [4]-13, or Writing (A) IQ+2 [8]-14. Pick one of Area

Knowledge (E) IQ+2 [4]-14 or Current Affairs/TL (any) (E) IQ+2 [4]-14.

Secondary Skills: Pick one of Brawling (E) DX+2 [4]-12 or Guns/TL (any) (E) DX+2 [4]-12. Pick three of Body Language (A) Per [2]-12, Diplomacy (H) IQ-1 [2]-11, Electronics Operation/TL (Media) (A) IQ [2]-12, Intimidation (A) IQ [2]-12, or Observation (A) Per [2]-12.

Background Skills: 6 points chosen from Computer Operation/TL, IQ/E; Driving, Piloting/TL, and Stealth, DX/A; Propaganda/TL and Streetwise, both IQ/A; or Law (Print or Broadcast), Market Analysis, and Sociology, all IQ/H.

Lens

Psychic Scoop (+50 points): You possess mental powers beyond mere reporter's intuition. Maybe your ears itch when someone is lying to you, you can hear through walls, or you get glimpses of breaking stories before they happen. Add ESP Talent 1 [5] and 45 points chosen from additional levels of ESP Talent and abilities from the ESP power (page 256 of the *Basic Set*).

Sample Reporters

The following are sample characters built using the Pulp Reporter and Journalist templates above. Carson Walburn is suitable as a PC and intended as an alternative to the traditional gumshoe in a 1950s investigation campaign; Molly O'Shea is his Ally/Dependent.

Carson Walburn   *150 points*

ST 10 [0]; *DX* 11 [20]; *IQ* 12 [40]; *HT* 11 [10].

Damage 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 12 [0]; Per 12 [0]; FP 11 [0].

Basic Speed 5.5 [0]; Basic Move 5 [0]; Block 0; Dodge 8; Parry 10 (Brawling).

Social Background

TL: 7 [0].
CF: Western (Native) [0].
Languages: English (Native) [0]; French (Broken/Literate) [3]; German (Broken/None) [1].

Advantages: Ally (Molly O'Shea; 75% of starting points; 12 or less) [6]; Appearance (Attractive) [4]; Charisma 2 [10]; Contact (Johnson at City Hall; Effective Skill 15; Usually Reliable; 12 or less) [8]; Contact Group (Criminal; Effective Skill 15; Somewhat Reliable; 6 or less) [5]; Fit [5]; Intuition [15]; Photographic Memory [10]; Sensitive [5]; Wealth (Comfortable) [10].

Perks: Press Pass [1].

Disadvantages: Addiction (Tobacco; Cheap; Highly addictive; Legal) [-5]; Code of Honor (Professional Journalist) [-5]; Dependent (Molly O'Shea; no more than 75%; Loved one; 6 or less) [-2]; Enemy (Dirk Logan; equal in power to the PC; 9 or less; Rival) [-5]; Enemy (the Mob; 6 or less) [-15]; Honesty (9) [-15]; Obsession (Bring down McCarthy; Long-Term Goal; 15 or less) [-5]; Stubbornness [-5].

Quirks: Affects Intolerance of Communists; Alcohol Intolerance; Ashamed of his family; Only smokes Turkish cigarettes; Proud [-5].

Skills: Boating/TL6 (Unpowered)-12 (DX+1) [4]; Body Language (Human)-12 (Per+0) [2]; Brawling-14 (DX+3) [8];

Current Affairs/TL7 (People)-14 (IQ+2) [4]; Detect Lies-13* (Per+1) [4]; Driving/TL6 (Automobile)-11 (DX+0) [2]; Fast-Talk-12 (IQ+0) [2]; Guns/TL7 (Pistol)-13 (DX+2) [3]; Guns/TL6 (Rifle)-13 (DX+2) [4]; Intimidation-12 (Will+0) [2]; Law (Print)-12 (IQ+0) [4]; Observation-12 (Per+0) [2]; Research/TL7-13 (IQ+1) [3]; Savoir-Faire (High Society)-13 (IQ+1) [2]; Savoir-Faire (Military)-12 (IQ+0) [1]; Soldier/TL6-12 (IQ+0) [2]; Streetwise-12 (IQ+0) [2]; Writing-14 (IQ+2) [8].

* +1 from Sensitive

Carson Walburn was born to a well-placed Connecticut family in 1923, and he was afforded all the comforts of wealth. He attended Deerfield Academy, where he was captain of the crew team. When he was young, Carson's parents toyed with emerging European fascism, but Carson didn't pay the idea much thought until December, 1940, and the Japanese attack on Pearl Harbor.

By the time he was 18 and free of his father's control, Carson had set his mind on enlisting, and he soon sailed off to North Africa and Italy, where he served ably but without distinction. He was well-liked by his fellow soldiers and officers.

After he returned from the war, Carson turned his back on his parents and the family business and enrolled in Columbia University to pursue a degree in journalism. After graduating with honors, he took a job with the New York Globe, much to his dismay, working at the Society desk.

At the Globe, Carson met two fellow reporters, Dirk Logan and Molly O'Shea, and the trio quickly became friends. Unfortunately, the two men found each other vying for Molly's attention, and when Carson eventually won her hand, Dirk vowed to prove once and for all that he was the better man, both in love and reporting. The two have been bitter rivals ever since.

A few lucky (or perhaps not-so-lucky) breaks led Carson to a run-in with Mob boss Angelo "the Captain" Cantone. Carson's articles sent the Captain to prison, but the gangster's soldiers still harass Carson from time to time. More than once, the Cantone mob has targeted Molly, hoping to use her as leverage against her fiancée.

Today, Carson has his sights set on Senator Joseph McCarthy. He views the Senator's anti-communist witch hunts to be just as reprehensible as the persecution of Jews, Gypsies, and other "undesirables" conducted by Hitler and his ilk. While he publicly toes the line, Carson is slowly digging into McCarthy's activities, looking for anything that he can use to bring down one of the most powerful men in the nation.

Physically, Carson is a rugged young man in his late 20s. He stands 5'8" and weighs 145 lbs., with sandy blond hair and hazel eyes. He typically wears a well-tailored but relatively simple suit and hat. If he's expecting trouble, he'll carry a .38 snub revolver in a shoulder holster beneath his coat.

Molly O'Shea *100 points*

ST 10 [0]; **DX** 11 [20]; **IQ** 11 [20]; **HT** 10 [0].

Damage 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 11 [0]; Per 12 [5]; FP 10 [0].

Basic Speed 5.25 [0]; Basic Move 5 [0]; Block 0; Dodge 8; Parry 0.

Social Background

TL: 7 [0].
CF: Western (Native) [0].
Languages: English (Native) [0].

Advantages: Ally (100% of starting points) (Favor; 9 or less) [1]; Appearance (Beautiful) [12]; Contact (Effective Skill 18) (6 or less; Usually Reliable) [3]; Contact Group (Effective Skill 12) (9 or less; Somewhat Reliable) [5]; Empathy [15]; Fearlessness 2 [4].

Perks: Honest Face; Press Pass [2].

Disadvantages: Code of Honor (Professional Journalist) [-5]; Curious (9 or less) [-7]; Stubbornness [-5]; Wealth (Struggling) [-10].

Quirks: Attentive; Broad-Minded; Imaginative [-3].

Skills: Acting-10 (IQ-1) [1]; Area Knowledge (New York City)-13 (IQ+2) [4]; Body Language (Human)-12 (Per+0) [2]; Carousing-11 (HT+1) [2]; Dancing-11 (DX+0) [2]; Detect Lies-15* (Per+3) [4]; Diplomacy-10 (IQ-1) [2]; Fast-Talk-12 (IQ+1) [4]; Guns/TL7 (Pistol)-11 (DX+0) [1]; Observation-12 (Per+0) [2]; Research/TL7-12 (IQ+1) [3]; Sex Appeal-13† (HT+3) [1]; Singing-10 (HT+0) [1]; Sociology-10 (IQ-1) [2]; Stealth-11 (DX+0) [2]; Streetwise-11 (IQ+0) [2]; Writing-13 (IQ+2) [8].

* +3 from Empathy

† +4 from Appearance

Molly O'Shea was born in Queens in 1927 and spent her childhood running all over New York City. Several of her older brothers are police officers, and Molly got to know a lot of New York's finest quite well. Many of them pass her information from time to time. One, Officer Sean Loughlin, owes her big after she introduced him to her sister, Mary. Their daughter, Liza, just turned three.

Molly talked her way onto the staff of the New York Globe at the age of 17, and the shortage of experienced journalists led to the "girl reporter" getting quite a few decent assignments. After the war, however, she was put back on more "feminine" topics, where she chafes vocally.

Still, the Globe introduced her to Carson Walburn, so the job wasn't all that bad. When Carson joined the paper, Molly had already been on staff 6 years, and she took it upon herself to show the college boy a thing or two about being a newspaperman. The two quickly fell in love, and Carson relies on her more and more professionally as well as he rises through the paper's ranks. As for her own career, Molly thinks that television is the future. She's beginning to look into broadcast journalism, a practically unexplored field.

Molly is a strikingly good-looking young woman in her mid-20s. She has fire red hair and green eyes and is slim and leggy at 5'7", a trait she accentuates with long, slender skirts.

Menagerie-1

for *GURPS Infinite Worlds*

by Eric Funk

Name: **Menagerie-1**

Worldline Data

Mana Level: Normal
Infinity Class: O10
Centrum Zone: Red (Indigo before Secundus intervention)

History

When Menagerie-1 was first discovered at the beginning of the age of exploration, the explorers were taken aback by the sheer variety of the creatures that lived there. Almost every ecosystem had evolved differently than on their Earth. The closest they come are creatures that *look* like known creatures, but have unusual abilities. Both Greenpeace and the [Genetic Diversity and Re-establishment Program](#) had a field day, and at the same time mourned the exploitation of a pristine environment.

Once the explorers were reasonably sure that there were no native intelligent species, people began to flood in. Certainly, upon arriving, the colonists made many attempts to locate traces of an industrial civilization, but none were successful. Attention soon turned to cataloguing the most useful species in this wondrous world. Shortly thereafter many species "hot spots" were marked on the maps, and visitors could pick which they visit. Such locations were typified by the kinds of creatures, be they desert, jungle, or arctic. Hunting in these tourist traps is prohibited, but there are a variety of shops providing pets to tourists.

Today, a census reports well over a million permanent residents, with more immigrating every day. There are major settlements near the coasts connected by rough roads, ferries, and electric planes and helicopters. Most of the trade in the Northwestern hemisphere is coordinated from the settlement Safari One. Acting as a Customs gate around the landing platform, the largest publicly accessible labs are here as well as veterinary quarantine facilities for new and sick creatures. All around this settlement, botanists, biologists, and explorers scramble to be the first to discover something noteworthy. Paleontologists are continually finding new kinds of bones on each layer of soil. Many have yet to be classified. The call for taxonomical classification can slow official excavations, encouraging "accidental" digs.

Peter's Panoptic Pet Panorama

Peter's is a typical pet exporter operating on Menagerie-1. He operates a large variety of cages and pens with all sorts of animals, from small telekinetic mice to elephant-sized worms that are as gentle as lambs. His corporation operates a store and web presence at the home world, as well as on several colonies. There are some regular "items" that are shipped out at a steady rate, while others are on request only. A few are restricted, either to be sold to Earth-dwelling citizens only, or even locally, not permitted to be exported. Many pets have special diet and maintenance requirements, and Peter's can offer a discount to frequent customers as an encouragement to come to the shop frequently. Such requirements can also make an animal popular for suppliers. "Honest" John Peters guarantees that the pets sold from his store have no illnesses when brought in and when they are sold. He apparently has *some* creature that cures such illnesses. See below for the template of "Honest" John Peters.

Visiting Menagerie-1

Although city dwellers are generally friendly toward tourists willing to spend money, colonists living outside of towns generally prefer their solitude. Many are involved in private research, breeding, or training indigenous species.

Smuggling is a big problem across the planet. It ranges from parents trying to bring back a mini-dragon for their nephew Johnny to terrorists trying to smuggle out a fire elemental. The text and illustration on p. 11 of ***Infinite Worlds*** is particularly relevant. Legitimate shipping companies suffer as employees are severely tempted to "drop" items into cargo containers. As of today, there are hundreds of tons of legitimate trade export in biomass leaving the planet every day. There are many people who suggest that the mass exploitation of the ecosystem must be balanced. Thus they recommend shipping back natural biowastes in otherwise empty containers, to be buried or dropped in the ocean, and slowly restore the balance.

"The fabulously beautiful planet Bethselamin is now so worried about the cumulative erosion by ten billion visiting tourists a year . . ."
-- Douglas Adams

Adventure

Tour

Sightseeing goes wrong in so many ways. The heroes could be posing as bodyguards for a celebrity, waiting for some smugglers to act, and get embroiled in a plot to install some authoritarian policies in the government.

Recapture

A millionaire's pet *[something]* has escaped! It has been rendered harmless, but its sudden appearance could frighten citizens. The heroes are to recapture it, unharmed.
Complications: A wild *[something]* has wandered into the area. In addition to being dangerous, the two creatures are now a mated pair, never far apart.

Exploration

There are still vast tracts of land upon which no man has set foot. Who will be the next to find an upside-down duck, a yeti, or a rainbow-shooting tiger?

Elusive Pets

Because of the unusual biodiversity of DNA, many researchers suspect a higher number of parachronozoids on Menagerie-1 (see page 544 of the ***Basic Set*** and page 73 of ***GURPS Infinite Worlds***). Likewise, the black market would be a concern, if a species were confirmed, as it could become a prime target for anyone seeking a means of illegal (and silent!) parachronic travel. Thus, when a rich man pays good money for capturing and taming any animal that has certain qualities, such as white fur, violet eyes, and so on. When such a specimen is found, hapless hunters that chase it could wind up far, far away from the safe O10 world they started on.

In Search of Sentients?

A "crackpot" researcher tries to put forth the idea that he has found a species that can exhibit intelligent operation. Although he has several arrests for fraud and a smuggling sentence behind him, he has willingly submitted to a lie detector test and passed. He will not reveal the location or describe the species in any but the vaguest terms. He plans to take three parties: one interested, one doubtful, and one neutral. The PCs should fit into at least one of these groups.

Is it real, or just parroting? Whether or not he is telling the truth or is correct in his conclusions, he is in trouble. Former smuggling contacts have surfaced, and are looking to get their share of money from his hide. The researcher hopes that all this publicity can buy him time to prepare an escape. Unbeknownst to him, they have infiltrated the mission . . .

Intrigue in Safari Town

A smuggling ring has been leaning on some local operators. They are trying to live as honestly as they can, but cannot give evidence, or they will suffer backlash from the powerful cartel. The heroes must unearth their own, and get justice served.

Unhealthy Competition

The heroes are paid or otherwise encouraged to take part in fauna herding. There is a competitor making a similar ride just on the other side of the river. Both are equally outfitted. Tension mounts as sabotage is found. As accusations fly, will cooler heads discover that *both* camps have been sabotaged? Is there a mole in the party? (As a likely complication, perhaps both parties have moles; the culprit is not the opponent rancher corporation, but a competitor at the destination that does not want either to succeed!)

On the Move

While animals are being moved, they are skittish and afraid, ripe for someone to drug or help escape. An animal breaking loose of a cargo container will create problems, no matter what vehicle or loading dock it is on.

The Truth?

On this world is a powerful, regularly waxing and waning banestorm that draws animals to this world (see *GURPS Infinite Worlds,* p. 75). Scientists are slowly realizing their detectors are registering a buildup of oz particles. What is happening is that every hundred years or so, there is a banestorm that drops dozens of animal and plant species from parallel worlds all across the planet over the course of a year. However, it only pulls non-sapients. Some of these species die out, while others mutate and adapt to their new surroundings. The first human children born on Menagerie-1 are now coming into adolescence. Perhaps the heroes could be on the other side of the banestorm where a favorite pet disappears, and following it leads them here.

Variants

Instead of Infinity Unlimited, this setting could just as easily be run by Centrum or a private corporation. Policy may not even change, but darker truths could lurk anywhere. (Of course, this could occur even under an Infinity Unlimited operation!) For a "gray" option, most exports are still pets, but some animal resources are being exploited unfairly. For a truly dark variant, the entire world could be a haven of ghoulish biomass exploitation and utilization.

Menagerie-1 works fine in a science-fiction setting; simply ignore the Infinite Worlds information. Likewise in a Fantasy or Cliffhangers campaign, ignore the world description as well; it is simply a "lost world."

GURPS Fourth Edition Character

"Honest John Peters"   *150 points*

Human male, 5'10", short black hair.
Primary Attributes: **ST** 10; **DX** 12 [40]; **IQ** 12 [40]; **HT** 12 [20].

Secondary Characteristics: Dmg 1d-2/1d-1; BL 20 lbs; HP 10; Will 12; Per 12; FP 12; Basic Speed 7 [20]; Basic Move 7; Dodge 11. (Total: 120)

Advantages: Animal Empathy [5]; Charisma +3 [15]; Combat Reflexes [15]; Contact ([GDREP](#) Agent; Effective skill 18, 12-, completely reliable) [9]; Plant Empathy [5]; Talent (Animal Friend +4) [20]. (Total: 60 points)

Disadvantages: Duty (Job, very hazardous, 15-) [-20]; Easy to Read [-10]; Gregarious [-10]; Sense of Duty (Family) [-5]; Truthfulness (6) [-10]; Workaholic [-5]; Xenophilia (6) [-20]. (Total: -75 points)

Skills: Administration-12 (IQ A) [2]; Animal Handling!-15 (IQ‡+3 !) [12]; Electronics Operation (Security Systems)-11 (IQ-1 A) [1]; Diplomacy-15/19‡§ (IQ+3† H) [4]; Fast-talk-15/19‡§ (IQ+3† A) [2]; Intimidation-15/19‡§ (Will+3† A) [1]; Law (Pets)-12/10 (IQ-1 H) [2]; Merchant (Pets)-14/12 (IQ+1 A) [4]; Veterinary-15 (IQ+3‡ H) [2]; Wrestling (Animals)-14/12 (DX+1 A) [4]. (Total: 36)

† Includes +3 for Charisma.
‡ Includes +4 for Talent (Animal Friend).
§ Higher number for animals, see Animal Empathy and Plant Empathy.

Note that all animals are at -1 against this character due to Animal Handling.

* * *

Special thanks to Max Belankov and Deanya Lattimore for their expertise in wrangling parachronozoids.

Pyramid Review

R-Eco

Published by [Z-Man Games](#)

Designed by Susumu Kawasaki

Translated by Ro Sato

Full-color boxed set with 104 cards (100 garbage, four recycling facilities), 32 tokens, & rules; $15

Gaming can be glamorous, putting one in the role of superhero, time traveler, or even commander of the Allied forces. Even so, everything has its dark side. Someone's gotta take out the garbage, and Z-Man Games has a card game for that, too: *R-Eco.*

The object of the game is to earn the most money by having the cleanest environmental record at the end.

Two to five players are garbage collectors, and they are vying to be the best person in the city for the job (and to have all the glory that accords). They get a three-card hand to start their ventures. The department isn't just amassing the trash, it's recycling it . . . or rather, it ought to be. There are four color-coded dump sites for the types of materials: plastic, steel, paper, and glass. A player may discard from his hand as many of the same color cards as he likes onto the matching site. For example, the worker could choose to dump yellow steel cans, but any and all cards discarded at the same time must be cans.

If that site now has four or more steel can icons showing on the cards built up there, the stack is swept to the discard pile and the player takes a token from atop that location. Running from -2 to 5 points, these represent the money the company has gained, but a player must have at least two of the same color to score points for them (no doing things by halves). Every site also has a dump site out back where they throw the overflow from their trucks. If someone plays cards onto a location, they must take any cards stacked up there (whether they got a token or not) and add them to their hand. If this totals more than five cards, the excess must be placed in front of the player; each such shameful bit of business is worth -1 point at the end of the game. If the hand is only five or fewer cards, the collector still has some breathing room to get this junk into the right disposal units next turn. When the dump site is cleared, more cards are placed there to keep the cycle going.

When one of the four units has lost all its tokens, scores are tallied. Tokens and excess dumping are added together, and if someone manages to stay a step ahead and not have any excess cards to be embarrassed over, they get a bonus for their environmentally enlightened ways (specifically, they get points for everyone else who blew it).

For a small box like this, the description ends up being pretty workmanlike. The cards are colorful and serviceable, and the tokens are about what fits in the little container. It's simple but utile. The rules are only a couple of small pages, and it manages to squeeze some inoffensive two-player tweaks in as well.

What sounds like a complex, interlocking series of card plays is actually a simple process, familiar after a few experimental rounds of play. What the never-ending cycle does convey pretty effectively is the snowballing sense of how tough it must be in the sanitation industry to keep ahead of mankind's waste output.

Which is not to say the game is preachy. It's only functional, and players can come to their own conclusions about what the game's politics might be (Z-Man Games imported this one from Japan). No, this one is all about the game

play, and it's a good-natured sort of evil. Sticking it to the next guy over isn't a walk in the polluted park, but it's possible; tracking the interactions of dump sites, recycling units, and one's own hand keeps things lively and interesting, and just trying for that coveted Honorary Garbage Collector bonus is a gameable bit of entertainment. Add to this that there's a -2 token in each stack no collector wants to be stuck with (yes, it counts against someone), and manipulating the order of plays to one's advantage becomes an art (everyone knows the order in which the tokens are placed).

R-Eco takes a solid half hour to play when all the seats are taken, but it's an enjoyable 30-minute excursion (incidentally, R stands for Recycling and Eco is short for "ecology"). It manages to capture a tiny bit of what it must be like to maintain landfills but never lets the real-world headaches get in the way of having fun at the gaming table.

Pyramid Review

Time of Vengeance (for [*Mutants & Masterminds*](#))

Published by [Green Ronin Publishing](#)

Written by Chris McGlothlin

Cover by Attila Adorjany

Illustrated by Talon Dunning, Greg Kirkpatrick, Tony Parker, Kevin Stokes, & Darren Taylor

64-page b&w softcover; $16.95

Back in 2003 Christopher McGlothlin penned [*Time of Crisis,*](#) the first and only scenario published by Green Ronin for the publisher's award winning [*Mutants & Masterminds.*](#) So it is only fitting that he is the author of *Time of Vengeance,* the first scenario for [*Mutants & Masterminds 2nd Edition,*](#) still the best superhero RPG to be derived from the **d20 System.** Where *Time of Crisis* presented a parallel-Earth-hopping romp in search of a solution to the threat posed to [*Freedom City*](#) (the default campaign setting for *Mutants & Masterminds*), the new scenario keeps everyone at home to face another threat to Freedom City, a threat that is particularly old style . . . *really* old style, and not just from the Golden Age of comicdom.

Time of Vengeance is designed for a group of six or so superheroes, each of Power Level 10, the default for all starting heroes in *Mutants & Masterminds.* No particular superhero types are required, but a good mix including a flyer and a brick or two as well as an investigative type will see the heroes through. There are also plenty of opportunities for roleplaying, and -- ultimately -- it is roleplaying that will enable the threat faced in *Time of Vengeance* to be overcome, and not fisticuffs, energy blasts, or the like.

Set entirely within the confines of Freedom City, *Time of Vengeance* opens on one of those blissfully calm days before the proverbial storm. Over the course of three days a series of villains appear to bring devastation to the city and fear to its citizens. With the city's top-flight heroes -- The Atom Family and The Freedom League -- otherwise engaged, it is up to the player characters to save the day. In an escalating series of encounters, the heroes are going to be challenged and put through the wringer. First they face a carpet of fleas, then an army of frogs, then a sanguinary encounter . . .

[SPOILER ALERT!]

. . . which raises the question, what exactly is going on in Time of Vengeance? Having asked, this review isn't going to answer the question. Having already said too much, we can say that there is a little more involved than the list of plagues hinted at . . . It involves a forgotten heroine from the Golden Age, and encounter with an old-time hero and an old-time villain, and a run in with some real comic book aficionados.

[END SPOILER ALERT]

Where *Time of Crisis* was in color, *Time of Vengeance* is in black and white. Nevertheless, *Time of Vengeance* is a good-looking book with some excellent artwork. The front cover is perhaps a little scrappy, but the adventure itself is engagingly written with plenty of staging advice on how to run every scene.

Although a challenge to the heroes, *Time of Vengeance* is not as much of a challenge for the GM to run. The staging advice certainly helps, but so does the fact that the heroes never have to face more than three of the villains at the same time. Besides the write ups of the 10 villains -- who of course can easily make return appearances -- the GM gets details of a new super-heroine, and of a Golden-Age heroine. There is advice on how to use her beyond the pages of *Time of Vengeance,* written in a prequel or sequel.

By adventure's end, the heroes should have saved Freedom City and (in game terms) been awarded more than a few Hero Points and even a Power Point or two. More importantly, they will have made a name for themselves, established a reputation, and made plenty of friends and connections . . . all of whom are ready to appear in future scenarios.

If the GM does not own a copy of *Freedom City,* details are included in *Time of Vengeance.* Then again, *Time of Vengeance* -- like the earlier *Time of Crisis* -- can easily be set in almost any supers RPG. All the GM has to do is recreate the various villains in the system of his choice.

Time of Vengeance is another fine entry for *Mutants & Masterminds* and an excellent entry in the superhero adventure field, which is somewhat small to start with. It would be great to have more of its ilk and its quality, but *Time of Vengeance* is worth having for any super-powered RPG.

Things To Be Thankful For: #217,744 (In a Series)

A few months ago, I read a quote in *Blender* magazine that's stuck in my cranium ever since; at the time, it even managed to momentarily dislodge other thoughts, such as, "Why the heck am I reading *Blender?!*" (For those of you unfamiliar, *Blender* is a mainstream music magazine, although it is to music journalism what *The Sun* is to . . . well, music journalism.)

Anyway, some music celebrity whose name utterly escapes me said something along the lines of, "I would think being a baby is a lot like being kidnapped by aliens." Being a somewhat new father myself, this struck me as a perfect analogy. I imagine the life of my child, and how arbitrary and unfathomable it is to him; strange beings snatch him up seemingly at random, chittering incomprehensible noises, exhibit unknown powers like the ability to walk, and subject him to unspeakable torments like diapers.

The ability to place myself in my son's shoes is truly amazing, when you think about it. (For one thing, his shoes don't fit me very well . . . hah!) It's an ability my son doesn't have yet, and it will take him a number of years to develop this gift. Likewise animals generally don't have such abilities; while some smart critters can show complex problem-solving capabilities, it's usually only of the sort "how do you handle the problem immediately at hand?" (as in, "How do I get at those yummy bananas dangling from the rope over these unstacked boxes?") But anything more complex either needs to come from instinct, genetics, and heredity ("must . . . build . . . dam . . .") or it just doesn't happen; humans are pretty much alone when it's able to put itself in different shoes and ponder, "If I build a basin to collect rainwater, I can have fresh water after it finishes raining. Then I can devote more time to sharpening these sticks, rather than looking for water." Animals usually don't even understand the concept of "pointing"; if you point at something with your index finger, almost all animals will -- at best -- concentrate at the tip of your finger, unable to conceive the imaginary line that connects your fingertip with the object in question.

Here in the states, it's that time of year when we're thankful for various things. I try to spend lots of my time being thankful in general, but this year -- for this column, at least -- I'm thankful for the gift of imagination. It's what makes all but the most immediate and basic of games *possible.* Whether I'm competing in the home-game version of *Who Wants to Be a Millionaire?* and feeling a sinking in my stomach as I wonder if I'm willing to "risk" "my" "$500,000"; or whether we're playing the **Lord of the Rings** cooperative boardgame and truly wanting to win because it's "right"; or whether I'm a PC on trial for a crime I didn't commit, and I feel a true desire to vindicate "myself" . . . in all these cases, it is the gift of imagination that turns these from being pure mathematical endeavors to something more. Something magical, and worthy of appreciation.

Why do we play games where we are pushing around spaceships or horses or sword-wielding heroes or Batman, instead of utilizing featureless cubes on plain white grids? (Of course, if you're playing German-style boardgames, then you're back to the featureless cubes . . . but never mind that right now.) Why do we dress in paintball garb or laser-tag equipment and attempt to "kill" our friends? Because we can imagine. We can imagine infinite worlds, infinite vistas, infinite leopards, infinite . . . ubuntus? Whatever.

So the next time you look at a colander or soup pot and wonder what kind of protection it would offer as a helmet; or the next time you're walking on the sidewalk and you decide that the grass is the inky abyss and the street is lava; or the next time you feel despair because the 16x16 pixelated plumber that represents you falls off the screen . . . think of the fact that it's imagination that makes it all possible. And that's truly something to be thankful for.

GURPS Martial Arts Case Study

Strong Guys: Part I

by Peter V. Dell'Orto

In *GURPS* combat, generally skill trumps strength. No matter how strong you are, a superior skilled fighter can eventually take you apart. Perhaps if you lack vulnerable locations like the eyes or vitals you can stand up to him longer. But it takes luck to penetrate his superior defenses, your Feints are wasted, and he'll use Deceptive Attack and Feint to pick you apart. Only superior DR and a lucky hit or two, maybe a broken weapon on a parry, will shift the fight in your favor. Oh sure, you can try to smash his weapon but he'll parry, or you can try to grapple but his superior skill will result in sliced up arms as he dances free.

Until the publication of *GURPS Martial Arts.* It presents a lot more options for fighters. Strong fighters especially benefit -- with rules for using your strength and classic big-guy weapons to full effect. This article will discuss the options and the tactics that *GURPS Martial Arts* opens for strong fighters, and the tactics allowable in the *Basic Set* that make the most sense for high-ST characters.

Fighting Tactics for Strong Guys

In order, let's look at Maneuvers, Combat Options, and Optional Rules. Many rules affect everyone equally; we won't examine those. Those rules which are most useful -- or most problematic -- for high-ST fighters are the ones we'll look at.

Maneuvers

Most Maneuvers are just as useful for a strong fighter as for any other fighter. But a few are worth special consideration.

All-Out Attack. The (Strong), (Double), and (Determined) options are quite valuable here. Strong gives +2 damage, or +1 per die. For ST 13+ fighters swinging, +1 per die means at least +2 damage, and +3 for ST 17+ fighters. This extra damage costs you your defenses, so use it with caution. If you've designed your fighter well enough, his strength and weapon selection will mean most of the time he won't need this extra damage. Determined is useful for overcoming skill penalties for vulnerable locations such as the Vitals (for impaling attacks) and Skull or Neck (for swinging attacks). Because your damage is already high, you can often skip using (Strong) and instead aim at a location that will provide much more damage potential if you can hit it. (Double) is attractive because your damage should be high enough that your unaugmented attack can maim or kill. (Feint) and (Long) are not without their uses. (Feint) is useful if you have more skill than your opponent, or when combined with a Beat (see below) against weaker foes. (Long) provides even more reach for long weapons or multi-hex reach for shorter weapons, but for swinging it attacks it costs damage. A strong fighter can absorb that loss of damage, so don't overlook trading damage for range. At ST 15 with an axe swing, AOA (Long) is (2+3)-2=2+1 cut; at ST 18 and a staff swing (reach 3!) it's (3+1-3)=3-2 crush. It's best used for lunging thrusts or reaching targets who won't be able to strike back.

All-Out Attack (Determined) is also useful for ranged attacks; you can throw a heavy thrown weapon like an axe, hungamunga, or spear. Don't forget that strength will also let you throw things for damage at range. If you don't have a weapon handy, grab a rock and toss it! For high-tech fighters, Determined will give you a +1 to your gun skill, letting you trade off your defenses for a better shot.

Note Slams as All-Out Attacks. You can use your full move on an All-Out Attack using a Slam. Combine this with Determined to ensure you hit, or Strong to get some extra power to put your opponent down. Also note that with Double, you can only move *half* your move but you can attack either your slam target (great for soaking up a potentially damaging parry or doing extra harm), or attack *someone else on the way*. Strong Guys using their size and power to clear a crowd can use AOA (Double), run past one target and attack him, then slam a second target on the same turn. This is doubly effective if your opponents can't defend, either because you're attacking by Total Surprise, from behind, or because they've taken All-Out Attack themselves.

Attack. Your bread-and-butter. Wade in and hit them. Don't overlook the basic tactics of keeping out of your opponent's reach if you can, stepping in and out of close combat, or other uses of your Step. But if you're sufficiently strong and well equipped, you should be able to fight with a long series of Attack maneuvers. If your weapon(s) are heavy enough to force opponents to check for breakage when they parry, repeated Attacks may pave the way for later finishing moves against your disarmed opponent. This is also a good way to work as a team with other fighters -- target those opponents armed with light weapons, forcing them to check for breakage if they parry (and likely force them to try and disengage). This will allow your companions to take advantage if the weapon breaks, or just to pile on after the opponent has used a Block or being forced to Cross Parry or Supported Parry against your weapon.

Fighters will Gigantism can benefit from their C reach attacks being reach 1 instead. Unarmed, you can punch, or Knee Strike, or Elbow Strike at the same reach as your smaller opponents can only Kick (making DX rolls to avoid falling when they do!). You can also use short-ranged attack (like thrust/impaling for your Large Knife) at reach 1, avoiding the need for close combat if you want to avoid it.

Ranged fighters will generally be using this maneuver. Just open up with your machine gun/plasma rifle/shotgun. Remember your high ST might let you fire some of these weapons without a bipod, tripod, or with one hand instead of two.

Committed Attack. Against, like All-Out Attack, your great strength means (Strong) is less valuable than it might be for a weaker fighter. But if you're armored like a tank thanks to your high ST, and if you're carrying an off-hand parrying weapon or, better yet, a shield, this can be a good way to get a +2 skill (Determined) or a little extra damage (Strong). Some powerful techniques, including Jump Kick and Axe Kick, are based on Committed Attack, so you may have no option but to choose this or All-Out Attack. For a U-stat Parry weapon like an axe or morningstar, this is often better than Attack; you can't parry with it anyway, so you may as well get some bonus damage or an extra step. But be sure your other defenses are up to the task of keeping your intact until your turn comes up again!

Defensive Attack. Ironically, your great strength is going to allow you to pull your blows while still dealing a lot of damage. This makes Defensive Attack very attractive, especially for unbalanced weapons. A ST 13 fighter with a Dueling Halberd does 2+3 cut or 2+3 imp, or (2+3-2)=2+1 with a Defensive Attack . . . still plenty of damage, and the weapon can be used to parry, allowing it to take advantage of the multiple-parry rules. This is also handy for axe-and-shield or morningstar-and-shield fighters -- you can use Deceptive Attack as your normal attack, saving Attack or Committed Attack for vulnerable foes or one-on-one fights. For fighters with balanced weapons, this is less of a concern -- but it's still handy if you *need* that +1 to defend either for the attacking weapon or a backup weapon/shield.

Evaluate is a good way to trade time for skill. Each turn you spend Evaluating is a +1 to attack that target. If you use the optional rules from *GURPS Martial Arts,* it also provides its bonus to counteract Deceptive Attacks and Feints. Against a superior opponent, if you can find the time to Evaluate you can frustrate attempts to Feint or Deceptive

carries connotations and limitations not common to other strong guys in other genres. As such, this article deliberately chose a different term. For *lots* of tips, rules, and build advice for Bricks, check out Bill Stoddard's excellent ***GURPS Supers.***

Attack you, all the while accumulating bonuses to help *you* when you launch your own attack. The maximum +3 can be traded for a +1 to hit and a -2/-1 Deceptive Attack, or give a much-needed bonus to partly or fully offset the penalties for an important hit locations -- such as a leg, weapon arm, or the Neck or Skull. It's less useful against lower-skill opponents, because you can generally bull them around with your strength. Use it when you need extra skill, but unless that +1 to +3 is worth 1-3 turns, do something else instead.

Feint. Feints are potentially useful for any fighter. For a strong fighter, the best option is usually a Beat (***Martial Arts,*** p. 100).

Beat. Beat is perhaps the single most useful combat option for a strong guy. Beat lets you leverage your strength to crush the defenses of weaker fighters. It is a more limited version of feint; first, you must already have contact with your opponent's weapon to lower Parry, shield to reduce Block, or body to defeat his Dodge. That means they must parry or you must have parried them. If your opponent refuses to engage you with a parry, and instead relies on Dodge, you've lost the ability to Beat . . . but then they can't risk attacking you, either, without lots of Feints and Deceptive Attacks or you'll Beat after *your* successful Parry. Dodge is generally less of a problem than Parry when fighting skilled opponents. While a skilled and fast fighter may have a high dodge, in melee combat their parry is your first obstacle. Beat that down and *then* you can worry about Dodge.

Second, Beat is limited to lowering *one* defense, but *anyone* can take advantage. This means big guys can use historically accurate tactics, like bashing down opposing pikes, polearms, or other weapons with their two-handed sword so friends can take advantage of the opponent. Use your strength and your weapon as a can-opener for your buddies -- Beat down the guard of a defensively-able opponent and your friends can attack into the gap, forcing him to rely on a secondary defense. This is especially useful if you grapple one or both arms of your opponent -- use a Beat to reduce Dodge, hold onto his parrying arm(s) with yours, and he's defenseless against your friends. Risky if they miss and stab you, of course, but you're a big guy, you can take it.

Beat is also a useful way to deal with foes who Wait with a braced weapon -- step in, parry the attack, and then use Beat to lower the parry -- and let your friends close to attack the enemy.

Move and Attack. Note that you can substitute your slam damage calculation for your normal damage if you're big and fast enough to take advantage and have a thrusting attack. To do this, you need a lot of HP and velocity.

Combat Options

Now let's look at some combat options.

Rapid Strike and *Dual-Weapon Attack* are useful, but if you've emphasized your ST over DX and skill, you may not have sufficient skill to pull these off very effectively (unless you're also Trained By A Master or Weapon Master, of course). Keep them in mind, but don't depend on them. A -6 penalty is very steep unless your skill is 16+. Keep your mind on business; for a strong fighter, your goal is to get damage on the target as often as possible. Two attempted attacks resulting in possibly zero hits is less useful than one attack almost certainly resulting in one hit. Dual-Weapon Attack is useful if you can buy it up, same with Combinations. These are worth considering if your skill is high enough. For a very strong fighter with sufficient skill, these can dramatically increase your killing power in combat. But they all come at a cost in skill penalties and character points.

Deceptive Attack. If your skill is sufficient, take advantage of this like any other fighter would! Against skilled defenders, you may need it to get through their defenses. Against lesser foes, it might be a cheap and easy way to reduce their moderate defenses to low defenses, allowing for easy victory. This can also be used as a "team tactic." If you're working with a weaker but more skilled companion, have them use Deceptive Attacks and/or techniques come with

Trading Strength for Skill

GURPS effectively allows skilled fighters to trade skill for effect. They can choose to attack vital Hit Locations such as Eyes, Skull, or Vitals to increase damage, or limbs and extremities for fight-ending cripples or low-damage Major Wounds. They can trade skill for more attacks (Rapid Strike and Dual-Weapon Attack) and to make attacks harder to stop (Deceptive Attack). They can soak up the -2 skill from a Defensive Grip and get a +1 damage. Anyone can trade some or all of their defenses for

defense penalties for the target to force your opponent to use Retreat to bring his defenses back up to par. This will use up his Retreat, preventing its use against your strong but less skilled (and therefore less Deceptive) attacks. If Retreating foes are giving you a problem, try to maneuver them into a corner or against impassable terrain, eliminating his retreat!

Telegraphic Attack. A tempting option if your skill is relatively low, but the +4 to hit comes at a steep cost of a +2 to defend. It can't follow up a Feint, either . . . but it *can* follow up a Beat. It's also ideal for use against foes who All-Out Attack (Strong) to crack your armor -- who cares if they have a +2 to defend if they have no defenses? A Telegraphic Attack is also handy for luring an opponent into a Beat. Use a Telegraphic Attack to draw a Parry, then use that Parry as the setup for a Beat! The same goes for heavy weapons -- an opponent may be forced to parry with a weapon that may break, or need to use a Cross Parry or Supported Parry (page 121 of **Martial Arts**) instead. This can backfire, of course. With a +2 to defend, your victim might just Dodge instead. This type of attack can be useful with flail-type weapons, too -- they give opponents a -4 to parry or -2 to block. Telegraphic Attack will lower these to -2 to parry, no penalty to block, and +2 to Dodge, but give you a +4 you can use to target the Skull much more easily.

Defensive Grip. Most useful for one-on-one situations. One a one-handed weapon you get -2 skill but +1 damage. For a really strong guy, this generally isn't worth the skill drop, but don't overlook it for a real "power" attack using Defensive Grip and any one of All-Out Attack (Strong), Committed Attack (Strong), or Mighty Blows. With a two-handed weapon, it reduces your swinging damage in return for better defensive benefits: you suffer -2 damage or -1 per die, but get a +1 to defend from attacks from the front. Here again, you can trade some of your high damage for a better parry. Combined with Defensive Attack, your strike may be quite weak but your parry will be excellent -- very useful for duels. For a ST 15 man with a Dueling Halberd using Defensive Grip and Defensive Attack, Parry will be +2 against an attacker from the front and damage drops to (2+5-2-2)=2+1, still plenty of damage. This grip and attack combination is extremely useful with a staff, too, giving a +4 parry when counting the +2 Parry stat of the staff, in exchange for -4 damage or -2 per die. That's great for situations where you have a single opponent you can damage easily, but you can't afford to let hit you -- such as an even bigger and stronger opponent!

If you choke up sufficiently on a sword, you can knock off -2 from the penalty to target Chinks in Armor, but damage drops to flat thrust/impale or thrust/crushing. It's a useful finishing move or for when you *need* to stab someone at reach C with a longer weapon.

Shoves and *Shoves with Long Weapons* are most effective for strong guys. Use it like an attack, but for when you need to clear opponents out of an area. Or you need to knock them back into even more danger. Useful for putting foes into pits, down stairs, off suspiciously railing-less walkways, and so on. Don't forget to try slamming down two opponents with your long weapon, either. It takes skill (it's a Dual-Weapon Attack) but if you're ST and Move are sufficient you should be able to knock smaller foes down.

Disarms and *Striking At Shields* are both worth considering. Your ST and

---

extra skill or damage.

What about ST? What can you trade it for? Trading ST for effect is rarely as direct as trading skill. But you've got some options:

Defenses. Defensive Attack reduces your damage, but increases your Active Defenses. It can also allow you to parry despite using a unbalanced weapons. You'll also do enough damage that All-Out-Attack and Committed Attack aren't as vital for victory.

Reach. All-Out Attack (Long) costs damage to swinging attacks but adds +1 reach.

Side benefits. Strong fighters don't need to use risky Exotic Hand Strikes or normal punches; a Hammer Fist can be sufficiently effective and reduce the damage from striking DR.

Move. High ST means high BL, which further means heavy weapons and armor won't encumber you as much. "Big and slow" is only the case if you carry too much. Keep your load reasonable and you can be "big and fast."

DR. If Move isn't a concern, you can load up with gear, extra weapons, wear heavy armor or layered armor (see p. B286) or both, and so on.

Skill. This is more indirect than most. A high ST means you can wield high-damage weapons with a high ST statistic without any penalties. A ST 13 sniper rifle is -3 skill for a ST 10 sniper, but for a ST 15 guy hip-shooting the rifle is possible without any penalties!

damage might be enough to shatter a weapon or break a shield into flinders. If your problem with a foe is penetrating his Active Defenses, these tactics don't make so much sense -- they're just as likely to be Parried or Blocked as an attack on the foe's body. But if you need to capture an opponent, or otherwise can't reach him but can reach his weapon or shield, go for it. Remember that using a Beat first can lower defenses against this, and open a foe's weapon or shield for destruction.

Tip Slash isn't useful for the kind of large, cutting weapons generally carried by strong fighters. But if you've got a non-swinging weapon like a rapier or spear, your high strength can make this tactic work well enough to try.

Grappling

Grappling is an especially useful tactic for Strong Guys. Several important actions after a grapple are based on strength, including the all-important Takedown, Pin, and Choke or Strangle.

The entire Grab and Smash! box on page 118 is like it was written for strong guys. Twofers especially require lots of strength to pull off, but can be effective. They're also a signature Strong Guy move, so you owe it yourself to try it at least once. Just like in the movies, it works best from behind and by surprise.

Also take a look at The Sound of One Hand Grappling. A high-ST fighter can use these rules to engage a single weaker target with one hand, freeing the other for strikes, drawing a weapon, or grabbing another for a twofer.

Parrying with Two-Handed Weapons. This rule is vital if you're running a two-handed balanced weapon wielding fighter. Without it, you're stuck at a cascading -4 penalty for multiple parries. With it, the penalty is halved, and you can swipe away Dual-Weapon Attacks with a single parry.

Low-tech strong fighters can wield heavy Dueling Polearms or use two-handed weapons in one hand. High-tech fighters can carry lots of ammo, enabling them to use full ROF (or very high ROF weapons) to get bonuses to hit. Weaker fighters can do the same, but can't carry the ammo load to sustain it as long.

Any fighter can use these options, but for a high-ST fighter the cost is less onerous. A ST 11 fighter with a Broadsword does 1d+1 thrust/impale and 1d+2 swing/cut. With a Defensive Attack this becomes 1d-1 thrust/impale and 1d swing/cut, a big drop in damage! For a ST 15 fighter, the same sword gives 1d+3 impale and 2d+2 cut . . . reduced to 1d+1 and 2d for a Defensive Attack. Still enough damage to potentially penetrate Light Plate with a thrust and cleave unarmored foes into pieces.

All of these attack options work well with unarmed attacks. Grappling is very useful for high-ST combatants. Takedowns allow you to use the best of your ST, DX, and grappling skill. Pins are a regular Contest of ST. Slams damage is based on your HP. You can also use your high strength to Choke or Strangle, execute a Neck Snap, or Wrench Limb. Wrench Spine (for realistic fighters) and Snap Weapon (after grabs) and Backbreaker or Piledriver are also terrifyingly effective for cinematic strongmen.

Opponents who grapple you but who have half or less of your ST score don't stop you from moving, they merely act as encumbrance. But if enough of them pile on, you're in trouble. This mob-grapple tactic is called dogpiling. Per the **Basic Set,** the highest ST and DX of the attackers count, and each additional attacker adds 1/5 of that. Six ST 10 DX 10 thugs have an effective ST and DX of 20, meaning a ST 20 fighter has only even odds of breaking free! The best way to counter a dogpile is not to let it happen. Don't let yourself get surrounded, and deal immediately and ruthlessly with anyone who grapples you. Maybe you *can* take all of 'em, but no reason you have to take all of 'em at once. If you're potentially going to get mobbed, avoid using Sprawls to counter grapples (you'll be on the ground and easier to attack). Retreat if possible. Don't grapple, strike -- you can't parry while you hold on for a Takedown, Choke, or Wrench Limb. If the worst happens and they get you, your best move is to Break Free. Use Mighty Blows or All-Out Attack (Strong) if you have to. The first is better; avoid being defenseless on the following turn and you'll avoid being re-grappled immediately.

Miscellaneous Tactics

Finally, always remember to take advantage of your companion's skills and abilities. In a game with supernatural powers, keep an eye on how they can help you. Magical additions to your strength (elixirs, Might spells) are useful. But additions to DX or skill might be more useful, as your high ST might not need enhancement. Try to leverage synergies as well; bonuses to Move might not seem so useful, but if its sufficient to push you over the edge to take advantage of Move and Attack's slam damage rule, it's more valuable than it seems. Psi powers like TK may allow your friends to grab a foe and hold him in place for your Slam or prevent a Retreat away from your attack. The possibilities are endless; just remember what you're good at, and try to find ways to maximize that!

Conclusion

The new rules and styles in *GURPS Martial Arts* open up a world of pain and misery for your opponents everywhere, perhaps no more so than for very strong or very skilled fighters. So get out there and try out your strength!

But what if you don't *have* a strong character? Next month, in Part II, we'll look at how to build a big guy.

GURPS Accelerator

Class Act: Emulating Fantasy Character Classes

by Matt Riggsby

As the chapter of the *GURPS Basic Set* on templates makes clear, *GURPS* does not have character classes. Nevertheless, some players may want guidance through the mass of character generation rules to help them build characters with well-defined sets of abilities and improve them appropriately through the course of play. This article presents templates which represent a number of common fantasy character types (warriors, wizards, and so on), priced for campaigns with starting characters in the 100-200 point range. Not only can they be used as-is, but they can be combined to produce a variety of other character types. For maximum compatibility, all templates use only traits in the *Basic Set,* except for the Magician templates, which require *GURPS Magic.*

Warriors

These templates are for characters whose primary occupation is fighting.

What You Need To Do

This article presents templates with abilities fitting particular job descriptions common in fantasy games. They do not, however, include traits representing social and legal relationships or personality traits. The Fencer template, for example, sets out abilities useful to a skilled fencer, but doesn't include other traits necessary to make him a highwayman leading a double life in high society (for example, Secret, Disguise, and Streetwise), a guardsman of the Cardinal (Rank, Patron, Duty), a dastardly nobleman (Wealth, Status, Bully, Alcoholism), or an dangerous dandy (Compulsive Carousing, Fashion Sense, Rapier Wit). You, the individual player, must still fine-tune the template to turn it into an actual character.

Brick   *111 points*

The brick is a simple, straightforward warrior. There's nothing subtle about a brick. He stands on the front line, dishes out a lot of damage, and soaks up the same. The brick has a good ST for damage dealing, hit points, and wearing heavy armor.

Attributes: **ST** +3 [30]; **DX** +2 [40]; **HT** +2 [20]
Advantages: High Pain Threshold [10]
Skills: Broadsword (A) DX+2 [8], Brawling (E) DX+0 [1], Fast-Draw (Broadsword) (E) DX+0 [1], Shield (E) DX+0 [1]

Fencer   *110 points*

The fencer, on the other hand, doesn't have a lot of armor or hit points standing between him and an untimely demise. He depends on high skill, quick moves, and occasional surprise techniques.

Attributes: **DX** +3 [60]; **HT** +1 [10]
Advantages: Combat Reflexes [15]
Skills: Acrobatics (H) DX [4], Fast-Draw (Rapier) (E) DX+0 [1], Main-Gauche (A) DX+1 [3], Rapier (A) DX+3 [12]
Techniques: Disarming (Rapier) +1 [2], Feint (Rapier) +2 [3]

Martial Artist   113 points

Like the fencer, the martial artist has to rely on speed and skill rather than brute force and ability to absorb damage. This template presents a "balanced" bare-hand martial artist, equally capable of hard techniques like strikes and kicks and soft techniques like holds and throws.

Attributes: **ST** +1 [10]; **DX** +3 [60]; **HT** +1 [10]
Advantages: Combat Reflexes [15]
Skills: Acrobatics (H) DX-1 [2], Judo (H) DX+1 [8], Karate (H) DX+1 [8]

Archer   75 points

An archer must combine ST (for range and damage) and **DX** (for accuracy). A relatively high skill is important to counteract range and speed penalties, and having a backup weapon is a good idea in case enemies can get into hand-to-hand combat range.

Attributes: **ST** +2 [20]; **DX** +2 [40]
Skills: Bow (A) DX+3 [2], Broadsword (A) DX+2 [8], Fast-Draw (Arrow) (E) DX+0 [1]

Rogues

These templates are for characters who rely on stealth and deception.

Basic Rogue   92 points

This is template represents someone who is generally good at being sneaky and running away. However, it doesn't represent a complete rogue. You'll want to apply a Burglar, Cutpurse, or Assassin lens, immediately following.

Attributes: **DX** +3 [60]; IQ +1 [20]
Skills: Brawling (E) DX+0 [1], Knife (E) DX+0 [1] or Shortsword (A) DX-1 [1], Streetwise (A) IQ+0 [2], Observation (A) Per+0 [2], Running (A) HT+0 [2], Stealth (A) DX+1 [4]

Burglar   22 points

This rogue specializes in breaking and entering.

Advantages: Perfect Balance [15], Acute Hearing 1 [2]
Skills: Climbing (A) DX+0 [2] (receives bonus from Perfect Balance), Forced Entry (E) DX+0 [1], Lockpicking/TL (A) IQ+0 [2]

Cutpurse   25 points

This rogue specializes in crimes of opportunity, such as shoplifting and pickpocketing.

Advantages: Danger Sense [15], Acute Vision 1 [2]
Skills: Filch (A) DX+0 [2], Pickpocket (H) DX+0 [4], Shadowing (A) IQ+0 [2]

Assassin   20 points

This rogue kills quietly and from hiding, getting close and striking when the victim is defenseless. This is a murderer, not a warrior. This lens is, strictly speaking, 20 points, but since the Basic Rogue template already has a point in Knife or Shortsword, you can reduce the cost by a point if you increase skill in the weapon already learned.

Advantages: Night Vision 2 [2]
Skills: Climbing (A) DX+0 [2], Disguise (A) IQ+0 [2], Knife (E) DX+2 [4] or Shortsword (A) DX+1 [4], Lockpicking/TL (A) IQ+0 [2], Poisons (H) IQ+0 [4], Shadowing (A) IQ+0 [2], Throwing (A) DX+0 [2]

Con Man   84 points

Unlike other rogues, who rely on being inconspicuous, the con man is all about being seen. This template is a flexible social operator who doesn't necessarily have to be dishonest, but he's very good at it if he is.

Attributes: IQ +1 [20]
Advantages: Smooth Operator 2 [30]
Skills: Acting (A) IQ+0 [2], Carousing (E) HT+0 [1], Detect Lies (H) Per-1 [2], Diplomacy (H) IQ+0 [4], Fast-Talk (A) IQ+2 [8], Gambling (A) IQ+0 [2], Merchant (A) IQ+0 [2], Observation (A) Per+0 [2], Running (A) HT+0 [2], Savoir-Faire (E) IQ+0 [1], Sex Appeal (A) HT+0 [2], Shadowing (A) IQ+0 [2], Streetwise (A) IQ+1 [4]

Acting, Carousing, Detect Lies, Diplomacy, Fast-Talk, Savoir-Faire, Sex Appeal, and Streetwise receive a bonus from Smooth Operator.

Magicians

"The Modular Magician" presented a number of lenses for magic-using characters, but don't constitute complete templates themselves. All those spells rely on IQ and Magery, and spellcasting characters might have a few supporting mundane skills. These basic templates combined with some spell modules will produce more-or-less complete magicians.

Magician, Functional Build   53 points

This template, built on a relatively low number of points, doesn't represent a particularly powerful spellcaster, but it is, at least, reasonably capable, with enough IQ and Magery to buy a handful of spells at a fairly functional skill level for a moderate point cost. Moreover, in a game with starting characters at around 150 points, it leaves room to combine it with other templates.

Attributes: IQ +1 [20]
Advantages: Magery 2 [25]
Skills: Any two of Alchemy (VH) IQ-1 [4], Hidden Lore (A) IQ+1 [4], Innate Attack (A) DX+1 [4], Occultism (A) IQ+1 [4], Thaumatology (VH) IQ-1 [4]

Hidden Lore and Innate Attack both require specialization.

Magician, Optimized Build   123 points

It's general knowledge among experienced players that there's a statistical "sweet spot" for building magicians. With

IQ 14 and Magery 3, a magic-using character can spend a single point in most spells (two points for VH spells) and get them at skill-15, the level at which fatigue reductions for high skill start to kick in. It's a significant investment of points and some GMs get quite thoroughly tired of seeing IQ14/M3 mages all the time, but it's both a very efficient build and one which fits the stereotypical picture of a magician; without points to spend on much else once he gets done buying spells, optimized magicians tend to be intelligent but not terribly physically or socially capable.

Attributes: IQ +4 [80]
Advantages: Magery 3 [35]
Skills: Any two of Alchemy (VH) IQ-1 [4], Hidden Lore (A) IQ+1 [4], Innate Attack (A) DX+1 [4], Occultism (A) IQ+1 [4], Thaumatology (VH) IQ-1 [4]

Magician Variants

Some kinds of magicians are distinguished by small differences in how they can use their magical abilities and where they come from. The "standard" *GURPS* magician is relatively scholarly, studying hard to learn his spells. However, some games and fictional worlds have what might be called intuitive magician, who develop their powers more by force of will than by study. There are a number of ways to model this, but one of the easiest is to take the advantage Wild Talent (Retention +25%, Focused: Magic -20%) [21/level]. With this advantage, you can attempt to cast any spell you don't know and, if you succeed, may be able to buy that spell immediately.

Another common variant is the priestly magician, who has supernatural powers which are similar in effect to magical spells but are powered by faith, divine power, or something similar. If a spellcaster's abilities are a gift from his deity, he should take an appropriate disadvantage such as Code of Honor or Disciplines of Faith and apply the Pact limitation to his Magery (see also the Holy Man template below).

Other Character Types

This last batch of templates is for specialists in social and technical fields.

Bard   *41 points*

This template represents a professional storyteller and musician. Bards may recite classic stories, comment on current events, or know well-hidden secrets.

Attributes: IQ +1 [20]
Advantages: Charisma 1 [5], Musical Ability 1 [5]
Skills: Musical Instrument (H) IQ+0 [2] (gets bonus from Musical Ability), Poetry (A) IQ+0 [2], Public Speaking (Storytelling) (E) IQ+0 [1] (gets bonus from Charisma), Singing (E) HT+1 [2] (gets bonus from Musical Ability), and two of Current Affairs/TL (E) IQ+1 [2], Hidden Lore (A) IQ+0 [2], or Literature (H) IQ-1 [2]

Current Affairs, Hidden Lore, and Musical Instrument take specialties

Mystic Bard   *20 points*

The basic Bard template is a mundane performer. With this lens, the bard takes on nigh-supernatural abilities to influence people's minds.

Skills: Enthrallment (Persuade) (H) Will+1 [8], Enthrallment (Sway Emotions) (H) Will+1 [8], Musical Influence (VH) IQ+0 [4] (gets bonus from Musical Ability)

Craftsman   *97 points*

This is more than just an ordinary craftsman. It's an all-purpose, highly skilled low-tech mechanic and inventor, who might be on hand to build siege engines, armored wagons, and Da Vinci-esque gliders.

Attributes: IQ +1 [20]
Advantages: Artificier [20], Gadgeteer [25]
Skills: Alchemy/TL (VH) IQ+0 [8], Armoury/TL (A) IQ+1 [4], Carpentry (E) IQ+0 [1], Engineer/TL (Specialty 1) (H) IQ+1 [8], Engineer/TL (Specialty 2) (H) IQ+0 [4], Jeweler/TL (H) IQ+0 [4], Masonry (E) IQ+0 [1], Smith/TL (A) IQ+0 [2]

All skills but Alchemy get a bonus from Artificier. Armoury, Engineer, and Smith take specialties.

Holy Man   *13 points*

This is someone who has deep religious faith, works hard for it, and gets a certain aura of holiness because of it.

Advantages: True Faith [15]
Disadvantages: Code of Honor or Disciplines of Faith [-10]
Skills: Religious Ritual (H) IQ+0 [4], Theology (H) IQ+0 [4],

Religious Ritual and Theology are specialized by religion.

Leader   *48 points*

This is, more specifically, a war leader, someone capable of leading troops into battle.

Attributes: IQ +1 [20]
Skills: Administration (A) IQ [2], Diplomacy (H) IQ [4], Leadership (A) IQ+1 [4], Soldier (A) IQ+0 [2], Strategy (H) IQ+1 [8], Tactics (H) IQ+1 [8]

Outdoorsman   *41 points*

This template is appropriate for barbarians, gamekeepers on large feudal estates, and others who spend most of their time outdoors.

Advantages: Acute (Sense) 2 [4], Outdoorsman 1 [10]
Skills: Bow (A) DX-1 [1], Climbing (A) DX+0 [2], Fishing (E) Per+0 [1], Hiking (A) HT+1 [4], Mimicry (Animal Sounds) (H) IQ-2 8 [1], Naturalist (H) IQ-2 8 [1], Spear (A) DX-1 [1], Stealth (A) DX-1 [1], Survival (terrain 1) (A) Per+1 [4], Survival (terrain 2) (A) Per+1 [4], Swimming (E) HT+0 [1], Tracking (A) Per+1 [4], Weather Sense (A) IQ+0 [2]

Naturalist and Survival take specialties; this template provides survival skills in two different kinds of terrain.

The "Adventurer" Lens And Professional Connections

Although some of these might be regarded as skills more relevant to particular templates, all are ultimately skills which "professional" adventurers, who travel extensively, go places they're not supposed to, and otherwise get themselves

into trouble, should have regardless of what their main tasks are. Consider buying this 11-point lens:

Skills: Climbing (A) DX+0 [2], Hiking (A) HT+0 [2], Stealth (A) DX+0 [2], Swimming (E) HT+0 [1], Riding (Animal) (A) DX+0 [2], Running (A) HT+0 [2]

Sooner or later, every adventurer is going to have to scale a cliff or wall, walk a long way, sneak around, get into the water, get on a horse, or run away, and buying the skills in advance will save you some very nasty surprises. In addition, several characters in any group should have First Aid and/or Survival skills. A few characters with those skills can effectively look after a larger group, so not everyone needs them, but any functional group absolutely requires them.

Do note that this lens, while good for the footloose PC adventurer, isn't necessarily sufficient to reflect subsidiary traits which characters with "day jobs" might need. For example, the warrior templates are good for lone fighters, but professional soldiers will have Soldier skill. Likewise, rogues may have a Savoir-Faire skill reflecting the etiquette of a criminal organization they work with, magicians may have similar skills to fit into a formal guild, martial artists for their dojo or temple, and so on.

Combining Templates

In addition to the basic character types presented here, other common types can be created by combining them. For example, let's say you want to play an officer. He's a fighter with leadership abilities. That sounds a lot like one of the warrior templates combined with a leader. Here are some other character types which could be produced by combining these templates:

- *Barbarian:* outdoorsman + brick (a stereotypical barbarian has the Berserk disadvantage as well and uses an axe instead of a broadsword)
- *Druid:* outdoorsman + magician with plant or animal spells
- *Holy warrior:* holy man + any warrior
- *Ninja:* Basic rogue + assassin + martial artist
- *Priestly healer:* holy man + magician with healing spells and the Pact limitation on his Magery
- *Ranger:* outdoorsman + any warrior

Of course, less common character types can be created by experimenting with other combinations. A war-leader doesn't necessarily have to swing a sword. He could be a magician instead; indeed, because leadership skills are largely mental and magicians tend to be smarter than warriors, a wizard-general would be a relatively easy-to-build character. The bard and con man templates could be combined to produce a medicine show charlatan, who uses his performing abilities to help sell bogus cures.

When combining templates with overlapping traits, you could combine overlapping traits, but in general it's probably a better idea (or, at least, more affordable) not to. Simply take the higher attribute, advantage, or skill level. For example, to create a roguish swordsman, you might combine the basic rogue and fencer templates. Both templates include **DX** +3. While you could create a character with DX +6, but it's highly unlikely that the character will be able to afford the 120 points for a single attribute, so just take DX+3. The combined template, then, would look something like this:

Attributes: **DX** +3 [60]; IQ+1 [20]; **HT** +1 [10]
Advantages: Combat Reflexes [15]
Skills: Acrobatics (H) DX+0 [4], Fast-Draw (Rapier) (E) DX+0 [1], Main-Gauche (A) DX+1 [3], Rapier (A) DX+3 [12], Brawling (E) DX+0 [1], Knife (E) DX+0 [1] or Shortsword (A) DX-1 [1], Streetwise (A) IQ+0 [2], Observation (A) Per+0 [2], Running (A) HT+0 [2], Stealth (A) DX+1 [4]
Techniques: Disarming (Rapier) +1 [2], Feint (Rapier) +2 [3]

The cost of 142 points is considerable, but well within the realm of reason for a 150 point game, even leaving (with a few disadvantages) room for the cutpurse, burglar, or assassin lenses. You might also remove the Knife or Shortsword

skill, since the high Rapier skill provides much better fighting ability than a smattering of the other combat skills.

Advanced Classes

Just as there are no character classes in *GURPS,* there are no specific avenues for advancement which resemble "leveling up." Characters can improve their abilities, of course, but advancement tends to be much more gradual than in class-and-level games. Players can spend points on incremental advancement of skills as they come in rather than waiting for a few big jumps in ability (though, of course, they can choose to do so).

It also happens in a less structured fashion. There's no set schedule for improving abilities. Given a fistful of points, a player can chose to improve attributes, buy advantages, buy off disadvantages, buy new skills, or increase existing ones freely (within the bounds of whatever limitations the GM imposes on the campaign, of course). But while there's no fixed path for advancement, there's a huge menu of options.

The most obvious avenue for advancement is simply to increase the skills (and, if there are enough points, the attributes and advantages) a character already has. However, there are a number of skills and advantages appropriate for many character types which aren't already in the templates. Here are some examples:

Warriors: Fighting characters probably have the broadest range of options. Combat Reflexes and High Pain Threshold are all but mandatory for fighting characters, with Weapon Master (for armed fighters) or Trained By a Master (for unarmed fighters) coming in a very close third. If your GM is amenable, you might consider buying Weapon Master in stages, starting with a single weapon, then moving up through classes of weapons until you've got the full advantage, but since it's most effective coupled with high weapon skills, make sure you've got at least one or two relevant weapon skills at DX+2 first. Once you've got WM/TBaM, you've also got access to cinematic skills like Blind Fighting and Power Blow. Enhanced defenses, extra attacks, extra hit points, increased Arm ST, and Fit/Very Fit are also very useful. Archers with a high enough skill also have access to Zen Archery.

Rogues: Some esoteric skills may become available to stealthy characters, such as Light Walk and Invisibility Art. However, these are cinematic skills, and your GM may require that you buy an Unusual Background to be allowed to learn them. Night Vision is another very useful ability, though the GM may, again, limit its purchase. Con men may pick up Contacts, Cultural Adaptability, and Social Chameleon.

Magicians: Magicians can spend countless points buying spells not in the given templates, picking up a vast range of new abilities just in new spells. However, they may also be able to justify developing just about any supernatural advantage the GM will allow in the campaign. Particularly relevant abilities include Mana Enhancer and Oracle. Magicians can also make good use of Extra Fatigue, and check out the Ally advantage if you want a familiar.

Bard: There are two more Enthrallment specialties not in the Mystic Bard template, and the GM may allow skilled bards to buy Magery, with the limitation that spells must be sung, which opens up the entirely of the magic system.

Craftsman: A craftsman might pick up High Manual Dexterity or any number of Gizmos. He might also upgrade Gadgeteer to Quick Gadgeteer.

Holy man: Blessed, Healer, and Oracle are very appropriate advantages for holy characters. Among the more mundane abilities, Clerical Investment and Social Regard are natural advantages to have.

Leader: The template here provides the ability to lead, but not necessarily the authority. A more able leader might have Status or Rank, indicating a position of some official power, or an Ally group, indicating a body of personal followers.

Outdoorsman: Animal Empathy and Plant Empathy are appropriate to outdoorsmen, and in a more mystical campaign, even Speak With Animals and Speak With Plants. Likewise, they may pick up Herb Lore.

Since there are few if any restrictions imposed on a character's development by their race or previously obtained

abilities, characters built on one template may also start to acquire traits from related templates (for example, a cutpurse may start acquiring burglars skills) or "multi-class" by dipping into others without fear of penalties (the cutpurse may start learning fencing skills and, indeed, turn out to be quite good at it, given his already high DX).

Finally, don't disregard the social and legal advantages which *any* successful character might pick up. In some games, high-level characters gain followers, strongholds, and other trappings of notoriety. Those would be reflected by advantages such as Status, Allies, Social Regard, and Reputation.

Pyramid Review

Star Wars Roleplaying Game, Saga Edition Revised Core Rulebook

Published by [Wizards of the Coast](#)

Designed by Bill Slavicsek, Andy Collins, JD Wiker, Christopher Perkins, Owen KC Stephens, & Rodney Thompson

Edited by Christopher Perkins & Gary M. Sarli Art, imaging, & graphics by Travis Adams, Bob Jordan, Paul Hebron, Scott Okumura, Keven Smith, Leon Cortez, Michael Martin, Angelika Lokotz, Jay Sakamoto, Daniel Falconer, Langdon Foss, 4G Squared, Daniel Gelon, D. Alexander Gregory, Matt Hatton, Raven Mimura, Vinod Rams, Ramon Perez, Andrew Robinson, Marc Sasso, Greg Staples, Mark Tedin, Chris Trevas, & Lucasfilm Ltd.

288-page full-color hardcover with a double-sided battle map; $39.95

An epic movie series, an epic topic, and an epic name: ***Star Wars Roleplaying Game, Saga Edition Revised Core Rulebook.*** Think of it as Wizards of the Coast's own trilogy. Is the third time the charm for the exciting d20-version of the popular setting? Tune in next paragraph to find out.

For anyone who's been living in a spice mine for the last three decades, it's all about the rise, fall, and rise of the star-faring Skywalker family. There are some sword fights.

This is the first publication for the franchise to come out after the movie saga was completed (hence the title), so readers may rest assured it's a fairly exhaustive treatment of the setting. Planet gazetteers, lists of races and their features, and a history of the galaxy all add to the body of knowledge. Even the "extended" world is included, so favored video games, novels, comic books, and so on get enough mention to make them useful.

Most of what Wizards of the Coast is pushing to sell the book, though, is the streamlined nature of it all. Characters start as one of only five classes -- soldier, Jedi, noble, scoundrel, and scout -- and personalizing these requires either a prestige class (most of which are just better versions of these, like ace pilots and officers) or a talent tree. Borrowing heavily from ***d20 Modern,*** the in-game persona is constructed more from the things he chooses off these lists than the things he's locked into within his species or "job." That greatly improves the choices, especially if someone is here for the Force goodies. Those can be gained from feats or talents, and one need not be a) a doddering, white-haired relic or b) locked into the Jedi milieu to get them. A boost to personal competence isn't dependent on going up a level for the next cool ability, and even the hit points are beefed up to make first-levelers someone to be reckoned with.

Skills have been cut by about half, as have the rules for vehicle combat. In the former case, it's a strange mix. Iffy skills like Disguise and Forgery have been rolled into Deception, yet the new Acrobatics is still separate from many physical abilities like climbing or jumping. On the other hand, there are no ranks. All "skills" are sets of many smaller skills -- they must be purchased at creation, and new skills or the improvement of old ones requires a feat at some future level (though these, too, are generous enhancements). In the latter instance, vehicle combat is still abstracted, but the same rules cover all vehicles; ranges don't depend on a weird graphic; and a quick list of options for pilots and

other combatants cover a lot of ground (or space, or . . .). Combat in general is less detailed and more forgiving: Heroes get those extra hit points so they can enjoy some of the more cinematic maneuvers seen in the films, and not being shoehorned into specific roles broadens one's menu.

The look of the book is great. The artwork is just quirky enough to represent the tapestry of Star Wars, while the photos, -- mostly things any fan has seen before -- are big, bright, and beautiful, as though they've been digitally remastered along with everything else in the modern world. A lot of that artwork was taken from previous editions, but the graphic design is far clearer. Readers (and some shops) may have mixed feelings about the size . . . it comes in an odd little square format, 9.5 inches on a side. It has a double-sided map suited to using figurines, though these, too, may look familiar (they're basically revamped maps from some of the miniature sets), and it has to be pulled out along a perforated dotted line.

Wizards of the Coast can do all the streamlining they like, but one of the best additions to this book is something many of their products could use: a chapter on being G. They often promise that advice but seldom deliver, yet here they offer a solid section on how to create games and what goes into a campaign. It may not be of much use to the experts, but for a game that always ought to be accessible to lots of people -- it is a good entry point for new roleplayers, after all -- this goes through the motions and puts folks at ease with tabletop gaming.

With a fresh and far less complicated look at Lucas' world, ***Star Wars Saga Edition*** is a fine buy to get players up to speed on roleplaying their favorite Jedi. That life of adventure should be characterized by saber-wielding and blaster-twirling, not page-flipping, and the condensed guidelines found here make that galaxy not nearly so far away.

--Andy Vetromile

Pyramid Review

Mansions of Madness: Six Classic Explorations of the Unknown, the Deserted, and the Insane (for **Call of Cthulhu**)

Published by **Chaosium, Inc.**

Written by Fred Behrendt, Michael DeWolfe, Keith Herber, Penny Love, Wesley Martin, Mark Morrison, & Liam Routt with David Conyers, William Dunn, & Charlie Krank

Cover by Lee Gibbons

Illustrated by Janet Aulisio, Sam Inabinet, & David Lee Ingersoll

Cartography by David Conyers, Lydia Ortiz, Carol Triplett-Smith, & Pegasus Spiele

160-page b&w softcover; $21.95

Like 2006's *__The Stars Are Right,__* this Chaosium anthology for *__Call of Cthulhu__* is a reprint given a makeover and some additional new material. Originally published in 1990 as a quintet, *Mansions of Madness: Six Classic Explorations of the Unknown, the Deserted, and the Insane* returns as a sextet, presenting domestic tales despoiled by dark dreams, murderous malignancy, and insidious insanity. It differs from *The Stars Are Right* in that this anthology is for the game's classic period of the 1920s rather than the modern era, but any of the scenarios here could easily be transposed to the 1890s of *Cthulhu by Gaslight* or the here-and-now of *Cthulhu Now.* That said, the Keeper will have to work hard to make them suitable for *Delta Green.* In addition, the collection contains a good mix, suited to both the experienced and the inexperienced player and investigator alike. Further, many are suited to play by small groups, even by a single player and Keeper.

Physically, *Mansions of Madness* is a surprise. Of late, Chaosium's releases for *Call of Cthulhu* have suffered from poor design and irritatingly poor handling of both art and cartography, the end result invariably looking grubby and fuzzy. For the most part, *Mansions of Madness* suffers from none of this; the illustrations are crisp and the maps legible. Exactly as they should be. The only real oddity is the inclusion of the maps in the players' handouts, which despite having had most of the important information removed, are superfluous.

[SPOILER ALERT!]

The collection opens with Michael DeWolfe's "Mister Corbitt," suitable for the inexperienced and for smaller groups, even a single investigator. It even begins in an investigator's home, so can be set anywhere. When the investigator spies his neighbor out of the window, he sees him drop an item: a child's arm. What does Walter Corbitt want with such an object? Obviously, there is something going on here, but surprisingly Corbitt is neither the villain of the piece, nor even really evil. Despite its small scale, "Mister Corbitt" nicely showcases the uncaring nature and effect of the Mythos, making it a solid introduction to the game that can still be enjoyed by the experienced player in a single session.

"The Plantation" by Wesley Martin is a much longer adventure held in high regard by the game's devotees. It begins in Arkham, but is set mainly in the Deep South. A young African-American boy comes looking for help from Miskatonic University's Professor Albert Gist. His brother, Caleb Gist, owns the plantation where Joe lives, and (as the boy explains) is holding his sister prisoner and is messing with a new Mojo man. If the investigators agree to help Joe and the Professor, they journey to South Carolina and a rich, fetid mix of clichés that includes decay and degeneracy, snakes and snake cults, and voodoo (although the faith is properly described as Obeah) and zombies. Fittingly, the scenario's Mythos revolves around Yig, Father of Serpents, used to a surprisingly benign, possibly beneficial effect, and although it leans towards the game's Pulp style, this is an enjoyably grand affair that easily slots into any tropical or sub-tropical setting.

Mark Morrison's "The Crack'd and Crook'd Manse" is again a shorter scenario, another classic mix of the haunted house and rats in the walls. Again suited to inexperienced investigators, here they must locate an archaeologist who has not been seen at home for some weeks. The solution to the problem here is a familiar one, but much like the core rulebook's "The Haunting," the Keeper can happily play up the haunted house's special effects. And as with "The Haunting," there is something nasty in the basement.

Like "The Plantation" earlier in the book, Keith Herber's "The Sanatorium" relies upon clichés, but unfortunately they are used to less pleasing effect. It takes place on an offshore island, home to a sanatorium where a doctor is conducting treatment on the mentally ill. Naturally, the patients have run amok, all hell has broken loose, and a murderer stalks the island upon which the investigators will find themselves trapped. The monster at the heart of the scenario feels too similar to that of "The Crack'd and Crook'd Manse," just in a larger, though still self-contained area. "The Sanatorium" will be of interest to medically trained investigators, and discovering one solution might prove entertaining involving as it does the regression of a patient into past lives. The Keeper may well also enjoy the opportunity to roleplay the scenario's cast of the asylum's patients, but otherwise, "The Sanatorium" has little to recommend it.

The last of the original scenarios is "Mansion of Madness" by Fred Behrendt, another missing persons case, but one that takes the investigators to several different homes, and is thus much longer. They find themselves mired in the murderous wake of a female cultist, her trail leading them through the Boston's art world and underworld, back to her own home, and finally to that of a local underworld figure. If the scenario's finale literally turns into a bug hunt, the investigation is worth playing through to see the devastation wrought by the cultist.

Mansions of Madness' sixth and new scenario is "That Old Damned House" by Liam Rout and Penny Love. Inspired by the H.P. Lovecraft story "The Mound" and the film *The Old Dark House,* this scenario's simple opening has the investigators hired to verify an insurance claim. The Hazard family claims that an heirloom, the famous Hazard Pearls have been stolen, the police suggesting that a renowned cat burglar was responsible. The job requires the investigators visit the Hazard family home in Mystic, Connecticut, prove that the pearls were stolen and identify the thief. This will expose them to the Hazard family, a collection of seemingly eccentrics hiding both a number of grotesques and a dark secret. This is a detailed adventure, but with surprisingly little going on, and really it requires the Keeper to be reactive rather than proactive as both the threat and the aging Hazard family being slow to move. Although its background links to Indian legends of an underground city make this scenario the most difficult to relocate elsewhere, this is still suitable for play by the inexperienced.

[END SPOILER ALERT]

With only the one weak adventure, and the rest a good mix of short scenarios and scenarios suitable for play by inexperienced players and investigators, this second edition of Mansions of Madness is an improvement upon the original. Physically, *Mansions of Madness* is also an improvement, hopefully marking the end of Chaosium's presentation problems. Of the scenarios, "The Plantation" certainly stands out as a Pulp classic, but others like "Mister Corbitt," "The Crack'd and Crook'd Manse," and "That Old Damned House" nicely counter this trend. It is this low key nature of so many of the scenarios herein that is the main feature of this anthology. This not only makes *Mansions of Madness* a welcome reprint, but also a wise purchase for the beginning Keeper.

--Matthew Pook

Is Training to Be "Good Enough" Good Enough?

Over in the *Pyramid* message boards, there was an interesting discussion that stemmed from my column two weeks ago. As you'll recall, that was when I proposed that it might be possible to have sessions or seminars for training about how to be a "good GM." One facet of this discussion asked (paraphrasing), "Is such a thing possible if there's no agreement on what being a 'good GM' means?"

At its core, this is an excellent question. Because, obviously, what makes a "good GM" in one instance might make for a lousy one in others. (I've expressed my own inability to be the tactical-combat adversarial mastermind that some player groups love to square off against, but such a deficiency was seldom missed among the folks I gamed with.) In mulling it over, I eventually rephrased the question in my mind: Is GMing more like sex, or parenting?

See, when it comes to affairs of the bedroom (or wherever), what makes any two (or more) people appropriate for each other can vary wildly from couple to couple. What Pablo Plain finds appealing might differ greatly from what Molly McWhipcrack enjoys. *But* there is enough common ground between practically all variations for countless tomes, TV shows, and podcasts to fill all available media outlets. And it is in this common ground that lies the most fruitful ground for improvement: the need for communication, the importance of honesty tempered with diplomacy, and so on.

In contrast, it is possible for two people to disagree *entirely* when it comes to parenting. For example, one set of parents might believe in a strict "obey or else" model of behavior from their children, while another household might be more permissive and lenient in their upbringing. In such a case, the two sets of our hypothetical parents would be unable to find *any* common ground outside of the most basic "well, duh" concepts: Feed your kid, give him a place to sleep, don't let your child bring the blue ironing board crashing atop his body while you're trying to finish a book deadline even though you thought you'd secured it (the ironing board) sufficiently the *last* time he tried to commit unwitting suicide. The classic cinematic masterpiece *Meet the Fockers* hinges on this dichotomy in parenting styles . . . although I think the two sets of parents learn in the end that maybe they're not so different after all, undermining my thesis statement. (I'm not certain, because by that point in the film I had long since succumbed to the neuron-deadening comforts of palm-oil-soaked popcorn.)

Now, I obviously believe that there's enough of a common ground to not worry about alienating too much of my audience each week. And many of the high points of "crucial" things for a good GM to know and do I've harped on before (c.f. "communication," "honesty," "diplomacy"). But I'm less certain if that common ground is enough to produce a foundation that can be utilized by all GMs to produce better-than-adequate results. In other words, if all the good GMs of the world shared the good advice that they could generally agree on and infused that knowledge with a blank clay vessel of a GM, what level would that GoleM be at? Would he be any good at what he does?

The answer to this question obviously is directly related to a hypothetical training program (or any other means of improving GMs); if a GM resulting from generic appeal-to-all training still isn't any good, then why bother?

Alternatively, it might fall to the game to define what it means for a GM to play the game "right." This seems antithetical to some folks, and is indeed contrary to much of my past advice; I've long believed and espoused that -- so long as everyone has fun -- what does it matter *how* the game is played?

But that isn't a universal notion, at least compared to other games and hobbies. For example, consider golf. It's entirely possible for someone to "play golf" with the sole idea of having fun out in the fresh air, chatting with friends, trying to get the ball going (mostly) in the right direction, and so on; in such a game, it's possible to envision everyone taking a lax attitude toward, say, mulligans ("Try again, Dave!") or out-of-bound shots ("Aw, just toss the ball somewhere interesting and go from there . . ."). Really, in this case, one doesn't even need to keep score, if one's group doesn't desire. (I've played some rounds of miniature golf like this, where total strokes weren't counted so much as who won each hole . . . and often we forgot even that by the end of the game.) Yet this isn't how the hobby of golf envisions their game to be played; if you read a golfing magazine, it's going to tell you how to improve your swing, how to get out of difficult ball positions, and so on. It's going to devote precious few resources to in-game conversation topics, or "Hole 19" mixed drink suggestions, or wacky alternate games you can play when duffing around.

To a certain extent, some games already take a fairly hard line against certain styles of play or mindsets. For example, the various **Vampire** lines from the past few years have strongly emphasized that, no, being a vampire is *not* cool or fun, and you're not a blood-drinking super-hero. Yet this is a case where many fans often override the written word and creators' intentions, and I've heard of plenty of games that were basically blood-powered supers settings. (Heck, I've played a few myself . . . it's pretty fun, really.)

In this circumstance, I believe it might be possible for the developers of such a game to emphasize and train others in how they feel their game *should* be played. Of course, this introduces a somewhat adversarial relationship between the consumers and the publishers, which could prove problematic . . . especially given how, in some aspects, the hobby's been having a hard time maintaining strong numbers.

But that still leaves open the general case: Is there enough useful information that's applicable to enough people that it can benefit most games? And, if so, is there a good way to train would-be-brilliant GMs on that information?

I don't have any answers . . . just lots and lots of questions. But an inquisitive nature is a good way to lead to enlightenment.

Of course, it can also lead to an ironing board crashing down on your head . . .

Changeling: The Lost

Published by [White Wolf Gaming Studios](#)

Developed by Ethan Skemp

Written by Justin Achilli, Joseph Carriker, Jess Hartley, Wood Ingram, Mathew McFarland, Peter Schaefer, John Snead, Travis Stout, Chuck Wendig, & Peter Woodworth

Art by John Bridges, Mathew Dixon, Andrew Hepworth, Jeff Holt, Veronica Jones, Brian LeBlanc, Pat Loboyko, Eric Lofgren, Thomas Manning, Britt Martin, Peter Mohrbacher, Justin Norman, R.K Post, Steve Prescott, Mathew Stawicki, & William Teo

350-page black-white-and-green hardcover; $34.99

White Wolf's *[Changeling: The Dreaming](#)* was one of those games that you either "got" or you didn't. It had its fans, but many would-be players were put off by its setting and mechanics, as well as its' seemingly "cheery" atmosphere in a game world ruled by cynicism, dread and treacle-thick angst. And that was unfortunate, as *Changeling: The Dreaming* was a glorious treasure trove of story for those wanting to rage against the darkness, or aid it in its course.

But, in the spirit of re-doing old *World of Darkness* games, *Changeling*'s time for a makeover has come. And it's undergone a drastic change in becoming *[Changeling: The Lost.](#)* It's not the same game with a different setting and vibe; it's a whole new beast, born of beauty and madness, and very much at home within the re-imagined, re-tooled *World of Darkness.*

I came to this new game hoping to recapture the days when a Corebook could open up an entire new world, offer a coherent way to work within it, and beg to be played. *Changeling: The Lost* doesn't just succeed in these goals; it excels. Whether you're an old fan of *Changeling: the Dreaming* or never quite got into that game because of its flaws or off-putting atmosphere, you should definitely check out *Changeling: The Lost.*

(One small note for the uninitiated: As with the other New *World of Darnkess* corebooks, *Changeling: The Lost* does not have all the rules you would need to play a the game . . . only those bits that pertain directly to Changelings. You have to possess the *World of Darkness Rulebook* to fully understand and play the system, and create characters in it.)

Changeling: The Lost is set up in what's become standard format for most new corebooks. There's a piece of opening fiction, followed by a short but decent Introduction. We then get four chapters that describe the setting, character creation, special rules for Changelings, and Storytelling, respectively. These are followed by a pair of appendixes which give characters another level of social interaction, and a sample setting to play in: Entitlements and the Freehold of Miami, in this case.

So what do we have here? White Wolf has taken the idea of being a Changeling back to its original meaning: the characters are those mortals who have been abducted by the True Fae, or tricked into entering Faerie, and been replaced in the real world by a doppelganger, known as a Fetch. Forced into bargains with their new masters in order to survive in the beautiful but maddening realm of Faerie, these victims are slowly changed to be more like their truly inhuman captors. One day they escape through the dangerous Hedge between worlds, only to find that years have gone

by, and something else has been living their lives *for* them. They have become Lost.

The book grabbed me right from the start with the mysterious and violent "What Alec Bourbon Said." Instead of the drawn-out initiation tales we used to get in most corebooks, we get a compelling sideways glimpse at Lost culture at work as it hides among the mortals. And it's one of those stories where, as you read the book, you begin to understand what you saw, and why it's important, which is always good reading for me.

The setting described thereafter is both intriguing and evocative. Changeling society is rife with contradictions, precariously balanced between hospitality and paranoia, change and stability, insane beauty and bone-ugly madness. That's hardly surprising, given what we learn about the True Fae; they are harsh monsters with alien minds and hearts, utterly unlike anything we read about in fairy tales as children. We are introduced to the Freeholds the Lost gather in, the four seasonal Courts which rule over them in turn (or *should*), and the threats they face, from within and outside their society.

So far so good, but then there's always the tricky part of any game: matching the mechanics up with the themes and concepts described in a fun, playable manner. This is something I think ***Changeling: The Dreaming*** failed at in a few respects in both editions. The good news is that ***Changeling: The Lost*** does not repeat that mistake, and does an excellent job of capturing the theme of the game in how the characters are set up, and how their special features and powers work.

For example, I like the fact that the Lost *don't* have to pick a Court, given how paranoid and distrustful they may be after their experiences in Faerie. Likewise, while every Changeling has a Seeming which governs its general appearance and origins, and gives benefits and drawbacks, they don't have to pick a Kith (a further subdivision of that Seeming, each with its own general appearance and benefit). And if they don't see a Kith they like amongst the 39 ones listed, players are outright encouraged to make their own.

And yes, you read that right: 39 Kiths, all with a spelled-out benefit. I think that's the most "splats" I've ever seen in a new corebook, ever. If you're looking for something to match a character concept, you'll probably find at least one possibility there . . . maybe even two.

And while we're giving out plaudits, the idea that the Wyrd -- which measures how powerful a Changeling is -- not only causes increasingly serious problems for them once they get over 5, but can also be *voluntarily* decreased to avoid these problems, is sheer genius. I'm not so sure about bundling the Lost's morality and grip on reality into one scale -- Clarity -- but I can see how having two scales might make things overly complicated. And while Changelings still use Glamour, the means of getting it have been vastly simplified and improved.

A further improvement is in the powers the Lost use, known as Contracts: ancient agreements that Changelings, and their individual Seemings, Courts, and Kiths have made with the world to wield temporary power over parts of it. These powers aren't old, re-flavored and renamed Arts from ***Changeling: the Dreaming;*** they're new and truly remarkable ideas. They've also done away with the old, clunky magic system of Arts and Realms that ***Changeling: The Dreaming*** used, and made it more straightforward. I also like that most of the Contracts have Catches, whereby a scheming Changeling can forgo having to pay to activate a power if a certain condition is met. Some have Bans, prohibiting your character from using the Contacts too often, and some have a harmful price to pay for their use.

The other systems in the book are intriguing as well -- I particularly like the idea of the Pledges that bind Changeling society together with magically-enforced promises -- but time and again I keep looking past the rules and coming back to how full the setting is. Like I said earlier, this isn't just an old game with new names; this is something entirely new and amazing, with something for almost any style and flavor of play, giving you enough information to tell any kind of story. The Freehold of Miami alone illustrates how the game can be put to work almost anywhere, and can work well with the local environment.

I kept reading ***Changeling: The Lost*** looking for some flaw, but I didn't find anything major enough to grouse about. As with most new corebooks it has a case of being overwritten in spots, and one gets the feeling one has read something a few times before. But the book is still meat from cover to cover, with little waste and not much want . . . except to see what comes in the next book in the series.

--J. Edward Tremlett

Go With the Phlogiston: Reality Hekla

" Most of the items it describes are based on specific, historical devices . . . but the treatment is intentionally generic, making the equipment useful even in non-historical campaigns."
-- Shawn Fisher and Hans-Christian Vortisch, **GURPS High-Tech,** *Fourth Edition*

And indeed, whole stretches of the new **GURPS High-Tech** might still come in handy in this Reality. Or it might not. That's the fun of a truly alternate high-tech, one that diverges with the last great whipping boy of the physical sciences, phlogiston. Like our previous ventures of this sort, this setting is designed "feel first." Reality Hekla is a sharp contrast of glacial cold (with a tip of the cursor to the setting of the vignettes in Shawn and Hans-Christian's **GURPS High-Tech**) and philosophical fire, for a powder-wigged Mordor flair. It combines Robert Louis Stevenson and Neal Stephenson, or Tchaikovsky and the Clash, with images by J.M.W. Turner and Andrei Tarkovsky. Bundle up and feel the burn.

"During several of the summer months of the year 1783 . . . there existed a constant fog over all Europe, and great part of North America. This fog was of a permanent nature; it was dry, and the rays of the sun seemed to have little effect towards dissipating it . . . They were indeed rendered so faint in passing through it, that when collected in the focus of a burning glass they would scarce kindle brown paper. Of course, their summer effect in heating the earth was exceedingly diminished. . . . Hence the first snows remained on it unmelted, and received continual additions. . . . Hence perhaps the winter of 1783-4, was more severe, than any that had happened for many years."
-- Benjamin Franklin, "Meteorological Imaginations and Conjectures" (1784)

Iceland's Mount Hekla may not have been the gateway to Hell, as the medieval chroniclers wrote following its 1104 eruption, but in 1766 its explosion gave birth not to demons but to a new world. The caloric currents within the earth roiled and foamed: Vesuvius erupted in 1779 and 1794, Mount St. Helens in 1800, La Soufriere in the Caribbean in 1812, Mayon in the Philippines in 1814, just to name a few of the greatest plumes of calcinated ash flung into the skies. But the greatest blasts were those hurled out by the volcanic rifts Laki and Grímsvötn in Iceland in 1783. The fog they expelled began to darken the very sun itself, and the glaciers crawled forth once again, in Norway and Switzerland and Canada and Tibet. By the time Mount Tambora exploded, blasting the East Indian island of Sumbava to pieces in 1815, there had been many years gone without summers. And there would be many more in the next 200 years.

Savants have determined that the glaciers may not yet have reached their fullest extent even now; though Scandinavia and Scotland lie covered in ice, and only the most powerful ice-breaking ships can keep the St. Lawrence open. North Sea has become arctic swamp, and the Baltic a lake, as the frigoric fluid bound up beneath Iceland and Greenland flows south in subterranean flood. The great forests of Northern Europe have thinned to pine and alder or died entirely, leaving a howling, bitter wasteland from Ireland to Anjou. This "New Siberia" extends to the Ural glaciers, and the rain once favoring Britain and Germany now falls in Spain and across the Sahara grasslands, born of moisture and caloric carried straight east across the Atlantic by the new Gulf Stream.

"Heat, therefore, and phlogiston, appear to be two opposite principles in nature. By the action of heat upon bodies, the force of their attraction to phlogiston is diminished; and by the action of phlogiston, a part of the absolute heat, which exists in all bodies as an elementary principle, is expelled."
-- M. Adair Crawford, *Experiments and Observations on Animal Heat and the Inflammation of Combustible Bodies* (1779)

Indeed, were it not for the philosophers' tireless pursuit of the phlogiston, London and Paris might be completely uninhabitable, rather than the cozy towngas-lit frontier outposts of the Bonaparte-Murats that they have become. But even as the skies darkened and the sun dimmed, the light of philosophick inquiry waxed and overspilled. In 1718, Georg Stahl had taken the "oily earth" (*terra pinguis*) of Johann Joachim Becher from the fringes of alchemy to the frontiers of natural philosophy, explaining that phlogiston (from the Greek *phlogiston,* meaning "burnt up") was not an earth, but an immaterial elemental substance like any of the magnetisms. Present in all flammable matter, it is released into the air by burning; once air is fully phlogisticated, it damps fires and can no longer support life. (Respiration

removes phlogiston from the body.) Furthermore, explained Stahl, rust was merely the dephlogistication of metal down to its own elemental state, the calx.

Over the next century, experiments by Lomonosov, Cavendish, Priestley, Rumford, and Lavoisier repeatedly demonstrated the validity of Stahl's principle, and began to establish the relationships between phlogiston, the caloric, frigoric, and galvanic fluids, the four magnetisms (animal, cosmic, mineral, and planetary), corpuscular light, and the virtue of metals. In 1864, when Maxwell (working in President Seward's brand-new Philosophick Academy in Baltimore) demonstrated the cyclical equations at the basis of phlogiston-physics, the modern High Technologick age can truly be said to have begun.

"To return to the experiment of the deflagration of dephlogisticated and inflammable air, it appears from the two airs becoming red-hot on their union, that the quantity of heat contained in one or both of them, is much greater than that contained in steam; because, for the first moments after the explosion, the water deposited by the air remains in the form of steam, and consequently retains the latent heat due to that modification of water."
-- James Watt, "Thoughts on the Constituent Parts of Water and of Dephlogisticated Air," *Philosophical Transactions* 74:329 (1784)

Of course, savants, enginers, and philosophers had been applying basic phlogiston theory for some time before that. James Watt had produced the combined-airs boiler, which vastly increased the efficiency of his steam engines, before his 1810 emigration to America (along with, eventually, several million of his countrymen) ahead of the Ben Nevis glacier. Trevithick in Bengal, and Carnot in the French Empire, both built caloric interchange engines in the 1830s and 1840s, which became the primary drivers for the rail networks the Bonaparte-Murats flung across North Africa, the Brunel ships that carried the "Empire Loyalists" to India after the fall of Ireland in 1851, and the steam-wagons that Lee and Sheridan used to conquer Mexico in the Third Mexican War of 1861-1863. With only a few modifications (such as conversion to pinguine-fired ignition-chambers) and exceptions (primarily galvanic-fluidic carriages in urbanized corridors such as the Gulf Coast, Casablanca-Nouvelle Paris-Cairo, and India's Imperial Grand Trunk) it is such engines that power today's vehicles from smart phaetons and cabriolets in Algiers or Sao Paulo, to sky-schooners carrying medicine to the Sioux and Chippewa protectorates on the interglacial plains, to load-hauling boxcarts crossing the Deccan or Sonora, to the silent nautiluses of the Royal Australian Navy that keep the Tian-Kuo Republic bottled up behind the Flores Strait.

"For though with the same external appearance, the same metal may contain different proportions of any particular principle, as phlogiston, they must be denominated different substances, if some specimens contain this element, and others be wholly destitute of it."
-- Joseph Priestley, "Considerations on the Doctrine of Phlogiston" (1796)

Lee's men in 1861, and King Harry's sailors today, would recognize each other's guns, and even Napoleon's grognards made the switch to modern weapons for the final Franco-Austrian war against the increasingly desperate Russian hordes in 1821-1828. Only the Bavarian forces, and the militias of four American states, switched to Count Rumford's new "excited transfer" guns within a decade of their invention in 1794, but the increasingly high cost of sulfur (ever more desirable as a source of phlogiston for industry) and the discovery and expansion of pitchblende mines in the Upper Louisiana regions of America (which eventually caused the War of 1837), Bohemia, and Australia did much to encourage the shift. Also, the new weapons had a much higher rate of fire, could be loaded from the breech, and though less powerful than gunpowder muskets, were much less noisy and smoky. Indeed, the excited transfer of phlogiston from the pitchblende cylinder to the lead bullet generates only a thin "crack" and the hissing vent of steam from the barrel as the water in the chamber rapidly dephlogisticates.

Clever geometers even in Napoleon's day had determined how to shape helixes of platinum or pitchblende into the barrel of a howitzer to impel maximum velocity to a shell or petard with the minimum transfer possible of phlogiston, although coil-artillery didn't really come into its own until the War of 1837, when it was adopted wholesale by the American, French, and Prussian-Hanoverian forces. (The English had made the change by 1848, but it came too late to save the home islands - by then the British Peninsula -- from France.) Improved hyper-phlogisticated pitchblende cylinders have made hundred-bullet guns possible in the last century, as the world learned during the first Turkish War, but their principles remain those elucidated by Count Rumford over 200 years ago.

"Phlogiston doth not gravitate, and . . . hath a power whereby it counteracts the gravitation of other matter; unless the bodies whose gravitation is encreased whilst they are deprived of phlogiston, attract and combine with the air which cannot be extricated or discovered by any known art."
-- Bryan Higgins, *Philosophical Essay Concerning Light* (1776)

Gabriel Venel in 1755 and Louis-Bernard Guyton de Morveau in 1772 demonstrated experimentally and theoretically that phlogiston had a "negative mass," since metals gained weight when they lost phlogiston. Rumford's excited transfer method was the first application of this discovery, although it remained primarily a theoretical concern for many decades. Rumford also developed an insulating compound for inflammable-air balloons that enabled their wide-scale use beginning with Napoleon and Jackson in the 1800s and 1810s. With balloon travel becoming increasingly common, savants turned to the question of phlogistonick lift: Could a sufficiently phlogisticated air be developed that the mass of the balloon or carriage would be completely negated by phlogiston's counter-gravitic properties?

Although there were a number of false alarms and unrepeatable breakthroughs, the problem was not truly solved until 1900, when William Thomson, Lord Chenab, developed modern corpuscular theory at the Imperial Observatory in Buganda. By stripping out the corpuscles of light from phlogiston, a negative mass could be annealed onto a lifting body. Counter-gravitic craft were initially far too expensive and unwieldy for mass production, until the Empire's wars with Turkey, France, and Tian-Kuo in the first half of the century left all the combatants (as well as America and Australia) awash in surplus sky-schooners and aerostats. America's great distances, and its wars with Brazil and Shina-Nihon, provided its own enginers with incentives to improve on counter-gravitic design, and to finally abandon its fleet of steam aircraft, which had been flying since the 1890s. But once they took it up, Americans created some of the most impressive examples of counter-gravitic craft, not least the *Seward* and *Burr,* which landed American explorers on Mars and Venus.

"Our quadrupeds have been mostly described by Linnaeus and Mons. de Buffon. Of these the Mammoth, or big buffalo, as called by the Indians, must certainly have been the largest. Their tradition is, that he was carnivorous, and still exists in the northern parts of America."
-- Thomas Jefferson, *Notes on the State of Virginia* (1784)

Mars, of course, proved far too cold and dry even for Americans used to the tundras of Nebraska to settle, but Venus is another matter. Its caloric fluid is almost permanently in tumult, and its atmosphere and soil is rich in phlogisticated sulfur. A Rush similar to the California Gold Rush of 1848 or the Dakota Pitchblende Rush of 1834 is underway, and international law has essentially broken down on that warm, moist world. America, the French and British-Indian Empires, and Prussia-Hanover all claim overlapping swathes of the planet, while Brazil, Shina-Nihon, and Australia maintain the right to explore and prospect throughout the "terra nullius" of Venus without let or hindrance. The saving grace is that such competition provides an outlet for the rebellious youth of the old world, hemmed in by aristocratic monopoly in the monarchies, immiserated by encroaching permafrost in the north, or excluded by racial barriers everywhere.

Those who cannot afford the passage to Venus, however, have taken to sojourning amongst the Indians of America's far north, or among the cannibal savages of what once was Russia and is now ignored by the Sultan of Turkey, or in the African interior. They hunt the mammoth in Russia, or the man-eating megalonyx in Wyoming, or the fearsome grey tiger in Turkestan, or the brontosaur in the wild unclaimed Congo. Their camps combine prospector's boomtown (a pitchblende strike in Congo has attracted the attention of the French Empire), phalansterist's colony (many of them are Fourieristes), enthusiast's camp (with sermons from Methodism to Vril-ya), and pirate haven (with old war-surplus aerostats or sky-schooners hanging in the gray skies). They draw power from wildcat phlogiston-fixing engines, live by their wits, and trade furs and gems with agents of radical parties and second-son Imperial nobility. Every crackpot dream finds voice there, and they seek to excite a new caloric spirit in the dawning 21st century.

"You do not surely expect that chemistry should be able to present you with a handful of phlogiston, separated from an inflammable body; you may just as reasonably demand a handful of magnetism, gravity, or electricity, to be extracted from a magnetic, weighty, or electric body. There are powers in nature which cannot otherwise become the objects of sense, than by the effects they produce; and of this kind is phlogiston."
-- Richard Watson, "Of Fire, Sulphur, and Phlogiston" (1789)

In similar fashion, so do the emperors, kings, and presidents of the great powers, as they pour ever more resources into the race for the Phlogiston Bomb. With tensions rising on Venus, millenarian expansionists ruling both Turkey and Tian-Kuo, global cooling (caused, say some savants, by increasing industrial liberation of phlogiston) killing crops worldwide, and no real alliances among any of the powers, global war could return at any time. The nation that builds the first Phlogiston Bomb can save itself from that oncoming avalanche.

Although in 1931, building on Thomson's work, the Austrian savant Einstein theoretically demonstrated it to be possible, no philosopher has yet isolated fixed phlogiston. Calcined phlogiston has been used as an explosive for centuries, of course -- phlogistickal petards blow holes in glaciers along the St. Lawrence and Brahmaputra, and phlogistickal mines dug the canals through Nicaragua and Tunisia -- but calcined phlogiston remains intermixed with light, and therefore fluid. Fixed phlogiston, contrarily, would have no corpuscular properties whatsoever, and would theoretically expand at perhaps infinite speed. It would be a total explosive, although savants still dispute its effects. It might forcibly phlogistonate everything in its radius, killing off all animal life. It might simply create a city-wide sphere of fire, as light corpuscles rush back into it and create calcined phlogiston. It might redirect the caloric fluid, freezing and boiling its targets seemingly indiscriminately. Or, of course, it might set off a runaway chain reaction, exciting air and metal, dephlogisticating everything in its path in a vast storm of plasmatic gas and burning the entire globe to a cinder. Thus, testing occurs on Mars, or in evacuated chambers deep underground, carried out by savants hoping not to destroy the world in fire before it dies under the ice.

by Greg Hyland

Murphy's Rules

Robot Fighting

A *GURPS* Martial Art for the Future

by Phil Masters

In futuristic worlds where robots are used in combat, it's surely inevitable that some human fighters will study methods for dealing with them at close quarters . . . and these studies could evolve into a full-blown martial art. This article describes such a style, named with elegant simplicity "Robot Fighting" (though people are welcome to rename it to something more allusive or graceful, such as "Organic Self-Protection Procedures" or "Anticyber-Fu"), with consideration given to its origins, uses, and variations, all presented within the framework defined by ***GURPS Martial Arts.***

This style is closest in spirit to various modern-day "Military Hand-to-Hand" styles (see ***Martial Arts,*** pages 182-5); it's a functional collection of skills, intended to give a serious fighter some chance in what's likely to be a desperate situation. Indeed, in most worlds, such a style is most likely to be developed and taught by the military, and may be an offshoot or an element of some force's preferred Military Hand-to-Hand style. GMs are welcome to combine this style with elements of some other practical style (MCMAP would be a good candidate) to represent a more rounded training for combat against both men *and* machines. Something like this might also be taught to civilians, if there's a perceived need for self-defense against rebellious or misused robots, or perhaps more likely, to police forces when robots start to be used for criminal purposes or start misbehaving in public and the cops have to stop them, or to paramilitary forces faced with a desperate need for ways to deal with warbots or battlesuits.

Although Robot Fighting is explicitly designed for use against, well, robots, it's a functional fighting style incorporating general-purpose skills; even without added "human fighter" features, stylists should be quite effective in combat against organic opponents. It can also be used against "mechanized human" foes such as battlesuit troops. The fact is, though, that a lightly-unarmed human faced with serious mechanical enemy is almost certainly going to lose, probably badly; combat robots are built for the battlefield of the future, and the human body isn't. This style merely gives the user a slightly better chance, especially against non-military robots (such as civilian models run amok or maliciously reprogrammed), and may teach the use of any weapons that might equalize things a little.

There is no "sport" form of the style; future societies may develop some kind of sport of robot fighting, which may even pit humans against machines, but if so, it's likely to be carefully restricted, or at least highly formalized, and any martial arts used will surely take very specialized and specific forms. On the other hand, there are already sci-fi stories about ultra-competent humans with amazing fighting skills taking on powerful robots and winning, and any world in which humans really do have to fight robots will surely develop its own myths, so the style has a set of cinematic options.

Development Considerations

Any fighting style designed to deal with robots will have to allow for specific facts about the opposition. Above all, the point is that *Robots Aren't Human.* While Robot Fighting can draw on the rich practical traditions of the martial arts, any ideas or techniques predicated on the assumption that the opponent has specifically human features will have to be ruthless eliminated. This central fact has a number of aspects.

First, *Robots Don't Have Human Bodies.* Even models built with a humanoid body plan are merely impersonating humanity, and are unlikely to have specifically human vulnerabilities. Any fancy ideas about "pressure points" have to go right out of the window, along with more basic but serviceable tricks such as strangleholds or most targeted attacks. A humanoid robot may even be able to fight on with its head cut off, if the brain and enough of the sensors are in the torso; it may also be built double-jointed or otherwise less like a normal human than it looks. Individual robot models may have their own weak points, but those won't necessarily be replicated even on similar-looking designs, so it's safer

not to waste much time studying them. Even if this style is used primarily or entirely against battlesuit-clad human troops, the point still holds; battle armor is likely to be designed specifically to protect human weak points and vulnerabilities.

A partial exception to this is the fact that many (though not necessarily all) robot models may have relatively vulnerable visual sensors -- usually camera lenses -- which can be blinded, at least temporarily, if not smashed; stylists may be taught to go after these, probably with firearms or perhaps with blinding weapons, which can be as simple and improvised as spray paints. Still, some combat robot designs may incorporate countermeasures to this, so stylists shouldn't depend on such tricks. The only other hit location which a stylist might learn to focus on is the center of mass; whether the robot has its brain, power plant, or anything else there, a good solid hit which penetrates usually has a fair chance of getting *something* essential to its function. This can be represented in **GURPS** terms as a Vitals hit. Unfortunately, though, that part of most machines is also usually one of the best armored areas, so few attackers try to exploit such weaknesses unless they have powerful weaponry of some kind. Targeted Attacks against chinks in armor *may* be possible, but as a distinctly cinematic option in this context; properly designed combat robots may well not have such flaws, and in any case, the penalty to hit is likely to be overwhelming for a most fighters, who should be looking for some more reliable way to survive.

Non-humanoid robot chassis designs make many other common fighting tricks ineffective; for example, sweeping two legs out from under a human (or a humanoid) drops the victim to the floor, while doing so to a six-legged robot probably barely inconveniences it much, and never mind wheeled or flying machines. Whether robots have a flow of *chi* which can be manipulated by advanced cinematic martial artists and esoteric medicine is up to the GM, if and when the question arises, but the suggested answer is "probably not."

Another related principle sometimes dinned into students of the style is that *Robots Don't Feel Pain.* Actually, this may not be entirely true; whether or not they feel "pain" in the organic sense may be a philosophical question, but some models can be temporarily discommoded by damage, in a way very analogous to "shock" felt by a human. However, military designs usually have overrides and feedback dampers (giving them High Pain Threshold, in **GURPS** terms), and most robots will be immune to fighting tricks such as arm or finger locks which work specifically by inducing pain rather than permanent damage in a human victim.

Also, *Robots are Armored.* This arises most notably with serious military robot designs, which are likely to be so rugged that no human can hope to cause them physical damage with bare hands, even using advanced cinematic skills, but even cheap civilian models will generally have metal, plastic, or ceramic casings which can hold off normal human punches. In grittily realistic games which allow for the problems of bruised knuckles, punching *any* robot may turn out to be a bad idea.

And as has already been mentioned in passing, *Robots are Diverse.* That is, robots are likely to be built in a wide variety of models and configurations, with form following intended function -- and even where two units have the same shell, they may have radically different processors and software. Hence, fighters are advised to study these variations, with enough understanding of the basic engineering principles that they can analyze a model which they've never seen before and guess what it might do -- but even with such knowledge, stylists are advised to rely on straightforward, general-purpose fighting methods, rather than getting fancily specific.

And lastly, *Robots Don't Think Like People.* Well, not necessarily. (In worlds with advanced sapient robots which *do* think a lot like people, instructors who quote that line a lot will not only be branded as carbon supremacists; they'll potentially be doing their pupils a grave disservice.) Aside from the fact that robots may not worry about being threatened, and may have reprogrammable loyalties, they'll usually be immune to martial arts tricks that depend on essentially human psychology. In even the most flamboyant of cinematic games, skills such as Kiai and Hypnotic Hands will probably be assumed to be useless against robots -- although *extremely* cinematic fighters *may* be able to exploit specific flaws in programmed robotic psychology.

High-Tech (and Other) Melee Weapons

Expert Skill (Robotics)

One way for a human to have a chance in close combat with a robot may be to

use some kind of weaponry -- which may even be something simple or improvised, if the robot isn't very tough. A good heavy two-handed axe or mace can inflict a fair amount of damage, enough to damage many civilian-model robots, and some stylists learn to wield whatever heavy implements they find to hand. Likewise, spraying a robot's camera lenses with paint *may* be a useful trick (see above), and such a spray can might be available in a lot of places.

But high-tech weaponry, whether designed specifically for use against robots or more for general-purpose applications, really is a better bet in most cases. The simplest option, possibly not actually manufactured for combat, is the *Fist Load Weapon.* This consists of a cylindrical device, about the size and shape of a chunky pen or a hypodermic syringe (indeed, this may *be* a hypodermic syringe). There's usually some kind of safety cover or catch, but when that is released and the "business end" is jabbed firmly against a target, or perhaps when a button at the other end is pressed, the device delivers its payload. That may consist of a dose of some chemical, a quantity of nanotech devices, an electromagnetic pulse, or anything else that may do what's needed and which can be delivered by something this large. The best method for wielding this sort of thing in a fight is usually, as the name suggests, gripped in a clenched fist and swung with a "hammer hand" action.

Because "fist load weapon" describes a format rather than a specific device, it's impossible to assign it a single price or set of details. A one-shot disposable syringe or nanotech dispenser is a TL6 device with a nominal cost of a dollar or two, but the contents may be cheap, may cost thousands, or may be one-off experimental concoctions; see *GURPS Bio-Tech* or *GURPS Ultra- Tech* for some ideas. For example, a concentrated application of "high intensity" disassembler nano might have the cost and damage effects listed on page 169 of *Ultra-Tech,* but applied to a single hit location, or a squirt of viscous MEA (pp. 160-1 of *Ultra-Tech*) could be an effective if slow anti-robot weapon. Alternatively, technology might permit a weapon consisting of a small power cell, a capacitor, and an electromagnetic pulse generator which produces a signal which can scramble electronic circuitry, temporarily or permanently. Costs and effects for this will depend heavily on the setting and technological assumptions, but might run to thousands -- or start as low as $50 or so for a one-shot device using established technology.

Fist load weapons are frankly fiddly and tricky to use, although they're also light and easily concealed. Alternatively, something very similar can be mounted on a short staff or baton, and jabbed against a target from a slightly greater distance; add around $30 to the cost for this. Indeed, this makes it relatively safe to load the weapon up with a more *vigorous* payload, such as a small explosive charge, producing a classic "bang stick." (For some examples of the bang stick principle in a futuristic martial arts context, see [Transhuman Martial Arts](#).) This category also encompasses all sorts of hand-held tasers and "stun wands," which may be effective against poorly insulated robots; see pages. 164-5 of *Ultra-Tech.* Such devices are usually wielded with Shortsword skill; if they're made rugged enough (+$10 to cost), they can also be used as ordinary batons or clubs, for crushing damage.

Robot fighters may do a lot with physical skills, but some of the problems discussed under *Development Considerations* make the timeless principle of "Know Thine Enemy" even more pressing than usual. Hence, this style incorporates an Expert Skill which may also be known to peaceful technology buffs, salesmen, and journalists in any robot-rich setting.

Expert (Robotics) grants knowledge of different models of robots and the basics of how they work, mentally and physically, including some idea of their flaws and how they can go wrong. It isn't much use in fixing problems, especially as it doesn't cover use of the requisite tools and doesn't include any hands-on experience, but it may help with diagnosis, at the GM's option. It even covers the aesthetics of robot design, if any, and probably something about the market for robots, though not in great depth. It can substitute for Computer Programming, Electrician, Electronics Repair, Engineer (Robotics), or Mechanic (Robotics) in matters relating to general robot design and standard robot models and behaviors; it might also substitute for Current Affairs (Science & Technology) or even Connoisseur ("Robotic Arts") if these are important to anyone who wants to keep up with the field of robotics, and perhaps likewise for specialties of Psychology relevant to robots.

To inflict serious damage on an armored robot, though, heavier explosives may be indicated. Fighters may opt for limpet mines, which can be attached to a target and then detonated moments later when the fighter is (hopefully) well clear. These will usually do damage equal to that of a shaped charge warhead of similar size; *Ultra-Tech* again has

rules, and offers a limpet mine dispenser which might become a favorite of among fighters who are often forced to close quarters with robotic opponents. The same book offers a number of other melee weapons with damage and armor divisor ratings sufficient to hurt even quite tough warbots, although many of these are flagged as superscience developments, and hence won't be available in all campaigns. Still, if they are, robot fighting at close quarters can be made into a viable and impressive weapon- oriented martial art, just by adding the skills to use them.

But lastly, of course, firearms (or similar devices, such as liquid projectors to dispense nanotech concoctions) may well be the best bet of all. Fighters may be taught to hang onto such weapons and to bring them to bear quickly in any situation, with the relevant skills and techniques being incorporated into Robot Fighting training.

Robot Fighting Style   *4 points*

As described above, this style is based on a set of classic practical fighting skills, adapted to its special purpose largely by a process of *subtraction,* eliminating things that don't work well against robots and adding just a few new ideas that do. This process of elimination sometimes makes it harder to teach to people who've already learned useful "human vs. human" styles; they have to break some carefully engrained habits! Where the style is combined with another, more traditional martial art, part of the training is designed to adjust the fighter's reflexes according to the type of opponent.

"Ordinary" robot fighters *usually* work on the principle that they should get out of any combat situation as soon as possible. If they've got a ranged weapon that can damage the robot, they should hang onto it and try and buy enough space to use it properly; if they know that they haven't got a chance of actually destroying the thing, the best hope is just to *get away.* Certainly, going to very close quarters with a robot may well be a bad idea; many robots have multiple limbs, superhuman strength, or built-in blades, and *will* win in a grappling match. Fighters learn elbow and knee strikes to use if they are forced to close quarters, hopefully discommoding the robot for a moment while the human moves away.

Hence, this is taught very much as a striking art, using both disciplined punches and kicks intended to maximize hitting power, and less elegant brawler's tricks; "fighting dirty" is rarely deprecated when fighting machines. But most stylists fight very defensively, using Defensive Strike (especially with weapons) or All-Out Defense and an array of techniques which are designed to avoid close engagement and open the gap; Push Kick is heavily emphasized by some instructors, and a karate parry with retreat is the foundation of the style. This leads to the seeming paradox of a defensive style which concentrates on striking skills; many arts which emphasize defense over attack focus on Judo, but they're designed to defend against *humans,* with ideas which aren't reliable against robots. Still, some versions of this style may add Judo to their skill list, especially if users often have to fight humanoid robots or human battlesuit troops; these will probably also add Breakfall (Judo) and Evade (Judo) to the list of techniques.

Other skills and techniques are included in the style's options list to work with common anti-robot weapons (see above); if any of these weapons are considered standard among robot fighters, move the relevant items from the optional section to the main part of the style, and increase the point cost accordingly. Robotic opponents with no more than human strength and mass may be slammed or battered aside or bowled over, giving the human a chance to get away or deliver a weapon attack; variant styles which focus on this idea may add Sumo Wrestling to their core skills, again increasing the cost accordingly.

Cinematic stylists are usually assumed to have a real chance of actually damaging their opponents, and so fight rather more aggressively -- though even they may focus on defense for the first couple of rounds of a fight, until they have the measure of a new mechanical opponent. They also tend to show off their defensive skills against bigger machines, making any robot look like a lumbering joke, then use exotic weapons or devastatingly powerful strikes with pin-point accuracy to shatter or bypass armor, leaving heaps of dismantled scrap in their wake. (GMs can add Targeted Attack against chinks in armor to such a fighter's technique list if they like.) They may also be highly acrobatic fighters, especially if robots aren't; add Acrobatics to the main part of the style if desired. Against hordes of small, weak robots, they'll probably use Whirlwind Attack to take down multiple targets in the shortest possible time. While hand or weapon parries can work against robots, cinematic stylists may prefer to focus on dramatic but effective dodges; too many of the robots they fight have built-in claws, plasma blades, or other deadly melee attacks, or just overwhelming

strength.

Most of the types of anti-robot close-quarters weapon described above are used with specific Melee Weapon skills, which are therefore included in the style's options list. If any of these weapons are considered standard elements of the robot fighter's arsenal in a setting, the associated skill should be moved to the style's mandatory list, increasing the style cost by one. Really fancy cinematic fighters may even use baton-format weapons with elegant fencing techniques, giving them better parries; for these people, use Smallsword skill instead of or as well as Shortsword throughout, and add the Weapon Adaptation (Shortsword to Smallsword) perk (see *GURPS Martial Arts,* page 52). Alternatively, such weapons may be constructed in the shape of side-handled batons, in which case, Tonfa skill can be used instead of or in addition to Shortsword. (For a really fancy weapon, try a tonfa with a different high-tech weapons payload mounted at each end of the baton.) Fist load weapons are used with the Hammer Fist technique instead; that too may be moved from the list of options to the main style list, if desired. In fact, it's only really included here because of these weapons.

Cinematic robot fighters are sometimes depicted using devastating karate chops against robots. This would theoretically be represented by an Exotic Hand Strike or maybe Lethal Strike, but in reality and with the rules as written, using such techniques with an empty hand against an armored robot is likely to be dangerous and painful. Rather, treat this as an ordinary strike, probably enhanced by Breaking Blow or possibly Power Blow, with the appearance of the thing being a special effect. Alternatively, such fighters may have the Iron Hands perk (probably twice) and so be able to learn and apply those techniques relatively safely.

Skills: Brawling; Expert Skill (Robotics); Karate.

Techniques: Back Kick; Elbow Strike (Brawling); Kicking (Brawling or Karate); Knee Strike (Brawling); Push Kick (Brawling or Karate).

Cinematic Skills: Breaking Blow; Power Blow; Push.

Cinematic Techniques: Flying Jump Kick; Roll with Blow; Springing Attack (Karate); Whirlwind Attack.

Perks: Armor Familiarity; Rapid Retraction (Kicks or Punches); Style Adaptation (usually for a military style, but possibly for some types of Karate or other "hard" styles).

Optional Traits

Advantages: Combat Reflexes; Cybernetics; Enhanced Dodge; Enhanced Parry; Gunslinger.

Disadvantages: Code of Honor (Professional Robot Hunter); Intolerance (Robots).

Skills: Acrobatics; Armoury (Body Armor, or anything relating to standard anti-robot weapons); Beam Weapons (any); Fast Draw (anything useful for robot fighting); Force Sword; Guns (various); Liquid Projector (Sprayer); Monowire Whip; Shortsword; Soldier; Sumo Wrestling; Two-Handed Axe/Mace.

Techniques: Breakfall (Acrobatics); Close Combat (various); Evade; Hammer Fist (Brawling or Karate); Retain Weapon (various); Targeted Attack (Liquid Projector (Sprayer)/Eyes); Targeted Attack (Shortsword Thrust/Eyes); Targeted Attack (Flying Jump Kick/Vitals); Targeted Attack (Karate Punch/Vitals); Targeted Attack (Shortsword Thrust/Vitals).

Perks: Improvised Weapons (Two-Handed Axe/Mace); Suit Familiarity.

Campaign Uses

Robot Fighting may be an essential skill for a desperate resistance movement in a "rise of the robots" campaign, a functional set of techniques for professional future soldiers, or the peculiar invention of a group of paranoid

technophobes or "organic chauvinists" determined to keep the tin men in their place. It can also be handy for professional bounty hunters or law enforcers in a setting where robots are mostly accepted and friendly, but where enough go rogue from time to create a need for specialists in dealing with the problem. The cinematic version fits super-soldiers, futuristic "kung fu monks" who come down from their mountain retreats to show the modern world what old-style martial arts can achieve, and super-agents who can not only infiltrate a master villain's lair single-handed, but take down a dozen of his guardbots with their bare hands when eventually detected.

Amongst other things, the exact nature of the typical robot fighter's background and motives will determine which *GURPS* disadvantages are most often associated with the style. Professional soldiers and cops will usually have no particular dislike for robots in general, regarding these skills as a necessary tool for occasional circumstances. However, as with any military style, intensive training in ruthlessly pragmatic fighting skills may leave the trainee with a tendency to Bloodlust -- making sure that a downed foe stays down. Likewise, professional bounty hunters may be cool-headed and efficient, with no strong disadvantages related to their work other than a Professional Code of Honor, or maybe Greed. On the other hand, resistance fighters battling against the tyranny of the machines will probably develop Intolerance (Robots), especially if they're motivated by seeing friends or loved one die, and may approach outright Technophobia -- although the cool-headed, cautious, analytical methods of the disciplined stylist aren't really compatible with a phobic response.

Several published *GURPS* campaign settings feature combat robots, and hence may have a place for this style. These can provide examples of different ways to use it in a setting:

GURPS Ogre

This style could easily emerge as a specialized aspect of military or militia training at some point in the *Ogre* future, although it would be intended for use against battlesuit troops rather than self- willed robots; the only sapient war machines in the setting are **not** going to be worried by karate punches. On the other hand, it's likely to be fairly rare; professional soldiers won't bother with it much, having battlesuits or armored vehicles of their own, and the less formal militias who might appreciate it as a last-ditch self-protection skill generally won't have time for lengthy training in a martial arts style. Still, the infantry training schools of the major power blocs will surely have a few instructors with the mind- sets and just enough time to develop such things.

GURPS Reign of Steel

Robot Fighting would be a useful martial art in the *Reign of Steel* future, but there's a serious problem; who would get the time and opportunity to invent and teach anything approaching a new martial art?

Well, Zone London's SAS would be primary candidates -- this is exactly the sort of thing they're doing in their hidden bases. Zone Washington's WASPs, Moscow's info-commandos, and Tel Aviv's slave- soldiers may also be permitted to learn such skills; while their masters may be nervous about humans learning how best to kill machines, these troops do have to tackle enemy robots sometimes. Likewise, the bio-engineered troops created by zoneminds such as Caracas would be trusted with such training, although most zoneminds would probably consider that fast reflexes and big guns did the job best. In other zones with reasonably substantial free human populations, there may be aging survivalist-martial arts masters, or small communities of eccentric low-tech warriors, hiding in remote and well-concealed communities, and any of these people might have decided to create and then teach something like this style.

Transhuman Space

In the world of 2100, human warriors still share some battlefields with human-scale cybershell troops. Hence, the Robot Fighting style could well represent part of some forces' training -- including the training of AIs running on humanoid military cybershells! Likewise, the pervasiveness of cybershells, and the existence of rogue AIs and criminal bot-jackers, will make this an appealing art for cops and hyper-cautious civilians. Most users will combine it with training in the use of electrolasers or missile pods -- both of them hand-held weapons which can disable or destroy many cybershells. Nanotech weapons are another option, though the lack of "dry" nano limits their lethality against

well-protected cybershell targets.

See ["Transhuman Martial Arts,"](#) by Peter V. Dell'Orto & Werner H. Hartmann, for more on martial arts in this setting. (That article was written for *GURPS Third Edition*, but it would be very easy to update the styles it defines.)

Traveller

Robots aren't a major feature of the *Traveller* background at any date, but they are usually present; however, *combat* robots are prohibited in the Third Imperium and largely avoided by other interstellar powers, with the crucial exception of the Zhodani. On the other hand, the Imperium is huge; there are likely to be some high-tech planets where, thanks to local incidents or sheer paranoia, some people worry enough about misbehaving or misused robots to think about ways to fight them. Also, elite Imperial troops doubtless train to deal with all sorts of potential threats from beyond the frontier, including Zhodani warbots.

Hence. the Robot Fighting style could show up in *GURPS Traveller* games, although it's only likely to see heavy use in specialized sorts of campaign. Still, "Trained in the robot- fighting arts of Planet X" (or ". . . of the Imperial Marines") makes an interesting background for a brawler character.

The Omniscient Eye

How Big a Suitcase Does My Colony Need?

A [recent Omniscient Eye](#) talked about the minimum technology to continue a level of technology for transplanted settlements. Is there a specific, minimum amount of technology that needs to be sent along with *new* colonies for optimum self-growth, or is it the skills that are more important? (That is, until ultratech minifacs come along which can produce anything, given time and licenses . . .)
--Eric Funk

In order to survive and thrive, a colony needs three things: fear, surprise, ruthless efficiency, and an almost fanatical devotion . . . no, wait, we'll try that again.

In order to survive and thrive, a colony needs three things: natural resources appropriate to the colony's technology, skills appropriate to use and maintain that technology, and equipment sufficient to exploit the resources when operated with the skills. Like a table with three legs, take away any one and the whole thing collapses. There's no "minimum level of technology," as such, required to make a colony thrive. Early Iron Age Greeks were downright promiscuous in hurling colonies around the Mediterranean, and before them prehistoric and early historical humans spread out across the globe even if we're unsure about their methods for setting up new settlements, so clearly one can set up successful new settlements with a very low level of technology. The real requirement is a matching of appropriate skills, equipment, and environment. Any settlement which has the appropriate tools to survive should be able to grow, and as it grows it can increase the range and quantity of resources it controls and develop new ways of dealing with them.

If you're intentionally placing a colony rather than spiriting a random group of people away across space and time, you can typically buy the equipment and train or select colonists for their skills, which makes natural resources at their destination the most pressing issue. It's not that they're more important, just harder to control from a distance. Moreover, much of the territory the colony needs must undergo some preparation before it can be useful. It's almost a Catch-22: in order to have a successful colony, you need a prepared settlement, but before you can prepare the settlement, you have to have a colony. For example, the bare minimum requirement for most colonies is fields for growing cereal crops (short-term shelters are relatively easy to build in a reasonably hospitable environment). Before the advent of powered earth-moving equipment, it could take an entire working season for farmers to clear a patch of land large enough for them to support themselves. This means, naturally, that they'd need someone else to feed them for the time they're clearing the land *and* for the time from when they get the land cleared to when it produces its first harvest. If the colony is to depend on labor-intensive resources like orchard crops or irrigation canals, that period of initial investment gets even longer.

A higher-tech colony with bulldozers avoids this particular problem for the most part; clearing arable land takes days, not months. But it'll have problems with its own infrastructure. Even with contemporary tools, it takes months if not years and truckloads of specialized materials and equipment to set up power plants, multiple mines for industrial metals, chemical refineries, hospitals, factories, machine shops, and roads, sewage pipes, and power lines connecting everything.

Therefore, for just about any colony, colonization is a process, not a single event. The first step is to establish a core settlement which can manage day-to-day survival over a short to medium term. This is far simpler than reproducing the whole of the home environment in microcosm. This bare-bones settlement has to produce basic foodstuffs, perform basic medical care and equipment production and maintenance, and perhaps (at appropriate levels of technology) provide basic utilities. All of these services are likely to be far inferior to whatever conditions obtain back home.

Once that foothold is established, the colony can grow. If it has a good enough subsistence base and isn't afflicted with serious diseases, it can grow with remarkable speed. Historical records indicate that healthy populations expanding into

fairly open territory (frequently the case for European expansion in the New World, not so much so for Greek Mediterranean colonies) can grow as fast as three or four percent per year. A very modest settlement of 5,000 -- about as small as a settlement can get and still be called a city -- could grow into a respectable colony of 30,000 to 40,000 without any further input, large enough to support most Medieval technology, in the space of a few generations. After a century, the colony could have nearly a hundred thousand people, probably good enough for Victorian technology and possibly a bit more than that.

Knowledge transfer is an issue in this scenario. Even into the modern period, most practical skills have been transmitted by practical instruction and one-on-one teaching, not by textbooks. For example, a colony with Medieval technology might include a few masons capable of building broken arches, flying buttresses, and the like. However, until the colony is large enough to support labor-intensive building with precisely shaped stone, those masons won't have much opportunity to pass those skills on to the next generation of apprentices. Consequently, revived technology is likely to lag at least a generation or two behind the economic ability to support it as craftsmen decades removed from use of more esoteric skills work to convert largely theoretical knowledge into real-world applications, repeat old mistakes as a consequence of having little guidance, and reinvent what has been lost in the intervening years. Increased literacy and better information technologies could offset that problem to some extent in prospective higher-tech colonies, but since a higher-tech colony also has to build up a much broader range of infrastructure and related skills, there's still going to be a considerable lag between building up population and filling in semi-lost technology.

Moreover, a colony can outgrow a formerly appropriate environment. For example, a colony with Renaissance technology can thrive on fertile fields, a good supply of limestone, and relatively modest metal deposits as long as they're near the surface. However, when that colony approaches Victorian-level technology, they can find themselves in trouble when those surface deposits run out and there's no coal or oil in the offing. Without appropriate resources, the colony's own technological development will be stunted.

Of course, most of this can be offset where skills, equipment, and/or resources can be bought or coerced from someone already established. This can be done at a variety of levels. The first Puritan settlers in Massachusetts, who were very badly prepared for their new home, depended on food provided by Indian neighbors for the first few years until they could establish their own agriculture. European settlers in the Caribbean put themselves in charge and pressed the natives into work, handing off subsistence tasks and a great deal of other productive labor to them (replacing them with African slaves only after they died off from disease). Trading post-type colonies would usually lean heavily on the ability to trade for everyday necessities locally rather than develop their own productive capacities.

Having said all that, though, the idea of a *completely* isolated colony which must be in all ways self-supporting is thoroughly artificial. One-time colonization events, involving devices like slow interstellar spacecraft, time travel, or global disasters which are about to annihilate the parent world, appear frequently in the literature, but historically, as a rule, colonies weren't spun off from their mother countries never to be heard from again. At the very least, they were preferred trading partners and occasional allies. In many cases, they were founded quite deliberately as bases for military conquest or rapacious economic expansion.

Trading Posts

We've been discussing one kind of colony here: a settlement in relative wilderness whose primary purpose is to support itself with some kind of autonomy and the ability to expand. But there are other kinds of colonies. Most notably, many powers established small colonies whose purpose was not to grow or take over territory, but simply to have a presence, usually in support of commerce. Genoa, Venice, and other important Italian trading cities of the later Middle Ages and Renaissance established small but permanent settlements around the eastern Mediterranean. The Genoese controlled their own neighborhood in Constantinople, a district named Galata across the Golden Horn from the city proper, from the late 13th century to the city's fall in 1453. Colonization becomes much easier when you can simply rent a house in your new home. In later times, the Portuguese, Spanish, and other Europeans established small trading colonies around Africa, Asia, and some richer islands in the western Pacific. These ranged from small fortresses on relatively unsettled west African coast to small neighborhoods and suburbs in southern Asia. At the extreme end of the scale, one might

Successful colonies were, therefore, in slow and distant but nevertheless regular contact with home, importing manufactured goods, skilled labor, and simply more colonists to fuel their survival and expansion. Day-to-day survival was still a local matter; basic foods and building materials had to be obtained locally, and clothing from home would be in limited supply. But more esoteric bits of technology and complex skills were still supplied from elsewhere. Instead of needing to make their own cannon, for example, European colonies in the New World could ship them in from the established foundries of their homelands. Instead of having to breed their own populations of horses and cattle, more could be imported from the fields and pastures of home to supplement local animal husbandry. Instead of training their own doctors, engineers, and other technical specialists, they could bring in graduates of well-established universities. For example, the Universidad de Santo Domingo, the oldest institution of higher learning in the Western hemisphere (founded in 1538), post-dates European colonization of the Caribbean by nearly a half-century.

point to European colonies in Hong Kong and Shanghai. Although some of them in time became large enough to turn into towns and cities which ruled over a large area of colonized territory, many remained distant outposts of empire.

In short, colonies maintain and develop their technology, particularly the most cutting edge technology their society has to offer, in large part by continuing to get it from where they always got it: home. That has been the case in the past and will likely continue to be the case in the future. Even our own tentative plans for "colonizing" (or, at least, making semipermanent outposts on) the Moon and Mars involve a steady stream of imports and even the tireless efforts of worker robots to prepare a more habitable environment for us. Only when a colony is very well established, a process of generations, can it even pretend to be able to stand on its own, and even then it won't care to, preferring continued trade and cultural relations to isolation.

--Matt Riggsby

Sages theorize that the Omniscient Eye might actually be composed of a panel of Experts chosen through mysterious and arcane means. Regardless, the Omniscient Eye is benevolent, and every other week it is willing to share its lore to all. Or, at least, to all with valid *Pyramid* subscriptions.

The Omniscient Eye seeks to answer questions that are tied to knowledge of the real world, providing information with a perspective that is of use to gamers. The Omniscient Eye does not concern itself with specific game systems or statistics.

Do you have a question for the Omniscient Eye? Feel free to send it to pyramidquestions@yahoogroups.com, and the Omniscient Eye might answer it!

Pyramid Review

War on Terror

Published by [TerrorBull Games Ltd.](#)

Designed by Andrew Sheerin & Andrew Tompkins

Illustrated by Tom Morgan-Jones

Full-color boxed set with map, rulebook, card appendix, three six-sided dice (two standard, one customized), "secret message" pad, pencil, Axis of Evil spinner, six reference cards, 47 Terrorist cards, 65 Empire cards, 60 oil counters, 15 radiation counters, 180 bank notes, 150 ownership counters (50 Empire, 100 Terrorist), & "Evil" balaclava; $58

America was awfully generous when it got everyone involved in the conflicts over in the Middle East. Sadly, Great Britain was a bit slower reciprocating, only recently allowing the United States to join in their *War on Terror.* Admittedly, theirs is a bit smaller, comes in a box, and fits on a tabletop. Oh, and it's produced by TerrorBull Games.

A game lasts two to three hours, and the is to achieve a certain number of Liberation Points, as either an empire or a terrorist.

Using a map of the beleaguered real world, two to six players go looking for oil and trouble. A cross between *Risk* and *Settlers of Catan,* world powers (called Empires) start villages in the various countries and improve them into towns and cities. An oil counter lies facedown on each province, to be uncovered by its "liberators." If its number (two to 12, though some markers are worth zero) comes up when the two six-sided oil dice are rolled, the settlement makes money for its owner (a bigger development returns more cash). These may fund more conquests, towns, or cards, but a player can also buy Terrorist vanguards, columns, and cells (the counterparts to Empire developments). These "training camps" may be part of a player's plan to make life difficult in some area of the world, or they may be kept off the board in an intimidating pile as a way to dissuade similar attacks by one's enemies.

Cards (again, one deck for the good guys, one for the bad) determine when attacks can be made, and each has a chart that shows the type and effectiveness of an attack against a Terrorist base or opposing Empire. Some raids offer better odds on the dice than others, depending on whether it's, say, an air strike or a nuclear event. Some cards have special effects like switching one base for another color or allowing a better return on one's investment. Still others may demand a use of the Axis of Evil spinner. If it points to a player's color, that person plays the Terrorists until another spin is made. Then again, anyone who doesn't like his chances as an upstanding member of the world community can simply declare himself a Terrorist. All players who choose this course (or are forced into it by bankruptcy) constitute a single "player" for both turns taken and victory conditions.

An Empire gets Liberation Points for having a whole continent to itself, plus points for any cities it owns. Terrorists get points for removing any and all traces of Empires from a continent. In both cases, the fewer nations, the fewer points needed to win. This may make victory for the Terrorist player(s) easier, but at the same time, every nation that falls to terrorism reduces the number of points the remaining Empires need for a win.

For a freshman effort, TerrorBull puts out a pretty decent product. The production values are high, from the cartoon art that's so bad it's good to the fully mounted map board. The quality pieces fall into the shadow of the most notable component, however: the [balaclava](#) of evil. When a player plays the Terrorists, he puts this item on to identify himself. (It has the word "EVIL" stitched across the forehead, just so there's no confusion.) To avoid communicating colds and

other respiratory diseases, it fits rather handily over an arm as well.

And for a game that has but a small rulebook (and a card appendix to help forestall arguments), the depth is surprising. Not only is it a well-thought-out work of strategy, it's a deft and insightful observation on the nature of the actual wars being played out on the world stage. Anyone can fund and place Terrorist units somewhere to slow an opponent's advance, but that player may himself have to face those units later. The bases are built in the same countries as the Empires' towns, and the greater the influence of evil becomes, the more detrimental are the effects suffered by that location's economy.

In *War on Terror,* not only is it possible to play both sides of the conflict; not only is it subjective who counts as being the real Terrorist; but one may find oneself simultaneously playing both sides in ways big and small. A wry sense of the absurd contributes immensely to one of the easiest large-scale war games in recent memory. There may be little to like or laugh about in the day's headlines, but playing out on the living room coffee table is a likable mix of social commentary and satire that, similarly, is hard to ignore.

Pyramid Review

Grim Tales (for the *d20 System*)

Published by [Badeaxe Games](#)

Written by Benjamin Durbin

Cover by Ken Kelly

Illustrated by Scott Drouin, Andrew Hale, Jeremy Mohler, John O'Connor, Scott Purdy & Jim Zubkavich

212-page hardcover; $34.95

It is an unfortunate fact that the pulp genre has been ill served by the *d20 System.* Until the publication of *d20 Adventure!,* the [adaptation](#) of White Wolf's Origins Award winning RPG that is a prequel to the [*Aberrant*](#) and [*Trinity*](#) RPGs, the best choice still remained the two mini games published in issues of *Dungeon/Polyhedron.* Badaxe Games' Grim Tales sets out to counter this omission. With its tagline of "High Adventure, Low Magic," it is a "Rules Resource And Campaign Toolkit" that describes itself as a sourcebook for fantastic roleplaying in the pulp genre. It sets out to cover material "from the dawn of Atlantis to the apocalyptic future of a dying planet." These are not high claims, but on past form, pulp RPGs often fail to live up to their claims.

In simple terms what *Grim Tales* does, is being together a wide selection of rules and mechanics from other sources. This game files off the knobs and whistles of the *d20 System,* best represented by the [*d20 Modern Roleplaying Game*](#) (but any *d20 System*-based RPG will do) and distills the remainder down into its essences. From that base, the author retools the game based on one simple fact: Magic is both scarce and potentially dangerous to its user. With magic scarce and magic weaponry scarcer still, players will find that even the lowliest of creatures is now a far greater threat than in other games. In *Grim Tales* magic is as much a prize as it is a danger.

At various turns, *Grim Tales* offers options that allow the GM to tinker with and set various factors within his campaign. Many are rated by their threat level, measured in Skull & Crossbones symbols. One indicates a forgiving nature favoring the players; two the danger found in most games; and three a lethality that will gain a GM an unpleasant sobriquet. Threat levels are in addition to the variant rules also given.

Grim Tales boils characters down to just six classes, each tied to a single attribute; for example, the Strong Hero might represent the typical fighter, while a rapier or pistol-wielding fighter might multiclass as a Fast Hero. Characters can multiclass freely, the classes awarding a feat or talent at alternate levels. Talents represent abilities integral to, and available only from a class. For example, a Smart Hero could take the "Linguist" Talent from the Research Talent tree, while a Tough Hero can select the "Stay In The Game" Talent from the Unbreakable Talent tree. Besides a class, a character has a background that defines up to five core class skills, to which a player adds one Craft, one Knowledge and one Professional skill to represent the character's current career. Another three skills are freely selected. Character generation is very flexible for the *d20 System,* and is aided by full listings of skills, feats and talents.

To mark a character as special, he also possesses Action Points. These can be spent to improve a d20 roll, activate a heroic ability (some feats, talents, or class features require the expenditure of action points); improve personal Armor Class temporarily; or even heal after combat. Each is modified by the roll of a die, variants suggesting the die type rising by level or having the die explode when maximums are rolled. The first of *Grim Tales'* threat level choices are

given for the action point replenishment, which can be by session, by level, or even never!

Combat is as per *d20 System* standard, although options suggest changing or altering the massive damage threshold. The combat system is supported by a simple set of rules for creating firearms and handling vehicles. Others cover hazards, natural and unnatural, right up to the effects of fallout, suitable to some post-apocalyptic settings. The threat levels for this are grim indeed, though a separate variant allows for mutations.

Where *Grim Tales* starts to get interesting beyond the character beginning is with magic. Here anyone can cast an arcane spell and at any time, if they know it, although the Spellcraft skill is needed. Adepts -- arcane, divine, and wild -- have a bonus to their Spellcraft checks. But all spellcasters suffer from "Spell Burn," damage applied to the caster's Strength or Constitution attribute, depending upon whether he is trained or untrained. Spell Burn damage is inflicted by die type (which becomes higher the stronger the threat level) and although adepts have an innate resistance, a natural roll of one per die cannot be resisted.

While some sections are useful, others are too short. Of the former, the one devoted to the Economy and Equipment covers both the use of currency and the purchase difficulty check models, while the one on Horror and Insanity nicely handles its subject. Of the latter the chapter on Fantastical Technology focuses too much on the creation and installation of cyberware in too short a space. The rules are decent enough, but the genre encompasses far more than that technologically speaking. (A further nitpick would be to point out that John Logie Baird is also recognized as the inventor of the television.)

The GM that likes not just to tinker with the campaign, but with the nuts and bolts of his creatures, will enjoy the chapter on creature creation. These rules get under the skin of the monster's skin by listing all of the factors that go into its Creature Rating. Expansive and detailed, these rules are coupled with those for designing Encounter Levels that take up the bulk of the chapter on Gamemastering. Only in the final two pages does it address adventure design, which seems wholly inadequate. The section though does include a checklist for the various threat level rules given throughout the book.

That said, the appendix gives three different Campaign Models, each reworked across the game's three eras: the archaic, the modern, and the post-apocalyptic. The undead campaign has the characters facing a mummy lord in the archaic era, an Austrian vampire archduke in the modern, and a cyborg Lich in the post-apocalyptic. The same is done again with a trio of dragons in the Dragon Lords campaign, and then in the Lethid campaign against brain controlling puppets.

While there are adventure hooks for each, the three campaign threats do feel like a last-minute addition to rectify something that *Grim Tales* does not address. While it does deal with what lies under the hood, and effectively so in most cases, *Grim Tales* seems reluctant to discuss the nature of the hood itself: that is, the pulp genre. Yet the rules themselves are effectively reworked so that in their simplicity they feel right for the genre. The work done on the character generation gifts the player the ultimate in flexibility in creating a character and the rules on magic use stand out in capturing the flavor of the genre. The GM will have to develop the rest himself, but *Grim Tales* is very much the rules resource needed to power a pulp action game. In the meantime, we are still waiting though for the definitive pulp game *d20 System* RPG.

--Matthew Pook

The Function and the Form

When I was in college pursuing my Creative Writing degree (a degree that is "pursued" at my college in the same way that sheriff's deputy might pursue an escaped convict who's wearing a dayglow-orange jumpsuit and leg irons so tight they cause a trickle blood to mark his crippled passage like a crimson calling card -- take your time, don't get bored, try not to get shanked at the end, and you'll succeed), one of my areas of interest was how the medium affected the message of a piece of writing. As a few examples: What is the difference in how a piece is perceived if it is in a hardcover versus softcover format? If it's in a two-column format versus one? If it's onscreen versus paper? (As an aside, I purchased many book compilations once upon a time -- from the Complete Shakespeare to the Complete Hitchhiker's Guide -- and discovered that, for the most part, I wasn't able to read and enjoy them for what they were; the mere presence of, say, 500 pages left in my lap keeps me from immersing myself in the page I'm reading.)

And, of course, the notion of presentation has affected other forms of media besides the written word. The rise of the long-playing record over the two-song single utterly changed the musical landscape, and the existence of the random-access digital music world has altered that world again. The home-video revolution of the 1980s forever changed Hollywood, and television on DVD has completely changed how some shows are marketed and financed. And, of course, each of these changes has altered how the medium is *experienced;* watching the *Rocky Horror Picture Show* on a video tape is a very different experience from viewing it in a theater with an exuberant crowd. And (at least for me) some television shows have become completely different when experienced on DVD.

I was reminded of my collegiate studies earlier this week when I learned about the closing of *Comics & Games Retailer,* a fondly remembered yet fluffy magazine I recall from my days working the comics-and-game store, over a decade ago. (A nice overview and reminiscing is available online from former editor John Jackson Miller.) In the news about the magazine's departure from the print world, one of the tidbits mentioned was the fact that some aspects of the publication would transition to the Web. This fact got me to thinking, "Is it really the same?" and -- having quickly arrived at my answer (c.f. "Nope") -- "Is it close enough?"

When I was working on my grand ideas, the Internet was one of those vague, abstract-y kind of things that the folks in the comp-sci department got to play with . . . not that anyone would have wanted to with the 2400 baud modems that were commonly associated with the steam-powered PCs of the era. ("How long ago was this?" you ask? Well, I remember asking my computer-savvy friend what this ominous blue screen I got when running Windows, and he said, *"I don't know . . . I've never seen that before."*) So I never got to incorporate more grandiose digital ideas of the medium-affecting-message thesis in my collegiate studies.

A few years after I graduated, for example, letter pages in comic books shrank from two pages an issue to one, then disappeared altogether, with the justification that computer message boards had completely supplanted letters pages. (Actually, technically "extra page of advertising" nudged out the letter column, but I digress.) Now, for anyone who's ever participated in a message board, the notion of an edited, finite letter page with multiple months between a printed letter and possible response being replaced with an unmoderated message board will find this ludicrous on the face . . . really, it's the difference between a museum that exhibits artist-submitted statues, and a pile of fist-sized rocks next to a sign that says, "Make your own statue here!" Oh, and the rocks are next to a building made up of hundreds of windows, and all submitters have to wear smocks with red and white concentric circles on the front and back.

Of course, for many people, the thrill of seeing an interesting response or insightful comment within minutes of a previous post more than makes up for the flame wars and pointless digressions; in this case, immediacy trumps idiocy. And, indeed, more instantaneous forms of communication gave largely usurped their more traditional ancestors; the number of emails I receive in a day is an order of magnitude larger than the number of paper-based letters I receive in a *year.*

The gaming world has been sorting out the two aspects of the "medium affecting message" conundrum for a number of years now; the publication you're reading right this instant is a very different beast from its bimonthly paper-based form of a decade ago. *Dragon* and *Dungeon* magazines seem to be returning to Wizards of the Coast, their brands returning as some kind of on-line initiative. I've mentioned before how tabletop wargames have largely been

supplanted by computer iterations. Over on the West End Games forum, Publisher Eric Gibson [revealed](#) that last month was the first month where PDF revenue exceeded paper product revenue.

Of course, different presentations aren't limited to various electronic initiatives. Hardcovers, once limited to one or two books in a product line (if then), are now the norm instead of the exception; and with these durable covers have come increased page counts; many fat supplements being released nowadays would have been published as two or more books a half-decade ago. And full color has become much more common, with both jaw-dropping visual potential and jaw-dropping price-increasing potential. The rise of alternative distribution and printing methods have opened up many other opportunities, all of which might affect how a product is perceived. (As a thought exercise: Imagine two otherwise identical books, where you are told that one of the books had nationwide distribution, is available from Amazon, and has sold over 10,000 copies; while the other book is only available by ordering it from the publisher's website, which informs you that copies are printed as needed. Does that knowledge make you perceive the work differently? Why or why not?)

As the Information Age chugs along like a barely fathomed freight train, the ideas of what works and what doesn't seem to be changing on a daily basis. The petrie dish of the marketplace has enabled various ideas to compete in new and fascinating ways. And one of the hallmarks of evolution is that some ideas are destined to die, or at least morph into forms that might not be immediately recognizable. Whether this is good or bad remains to be seen, but there's no doubt that it'll be fascinating.

Elasund: The First City of Catan

Published by [Mayfair Games](#)

Designed by Klaus Tauber

Boxed set with game board, 40 wooden Victory Point Cubes, 4 round wooden cylinders, 1 wooden boat, 2 wooden dice, 2 city gate tiles, 37 building tiles, 9 church tiles, 36 city wall tiles, 20 building permits, 4 turn overview sheets, 51 gold cards, 39 influence cards, & 1 rulebook; $49

Elasund: The First City of Catan is the second Catan spin-off in a series called "Adventure Catan," with the first being [*Candamir.*](#) The goal of this game is to deploy all ten of your Victory Point Cubes (VP) to the game board by building structures on the map that have spaces for them. Designed for two to four players, the play area is enlarged in proportion to the number of players. *Settlers of Catan* players will notice the familiar grid of two to 12 along the coastline, with the 2 and 12 along the north and south border walls, respectively. The 7 is still lacking, as it represents the familiar robber mechanic.

Setup involves distributing "exclusive" buildings to each player (colored with no VP cube spots), separating the buildings of each type, and shuffling the temple tiles and Influence cards. The gold cards are stored face-up as they are identical. Each player is given three gold cards and one Influence card, and his two, free, starting buildings are placed on their colored official starting locations. Each player has a Wall stack in front of him with his wall tokens in increasing order. The board is large and elegant, with spaces ready for the Temple stack, the Commerce track, and wall pieces. The pieces themselves are robust. The "tiles," "permits," and "sheets" are made of stiff cardstock, and seem to be quite resilient.

There are four actions that occur in order, the numbered sequence given by the rules and turn overview sheets.

First roll the dice. The ship is moved to that row, and any building on that row produces gold or Influence, as indicated on the tile, e.g., if the blue player has two gold-producing buildings and an influence building on a row that is rolled, he receives two gold cards and an influence card. If a 7 is rolled, there is no production, and the roller chooses the row to place the ship. This is generally a boon for the roller, helping him in later steps. In addition, a player must discard a card (gold or Influence) for each cube in the pirate's row. (Fans of [*Settlers of Catan*](#) may recognize the ship as an unpainted pirate ship from the [*Cities and Knights of Catan*](#) or [*Seafarers of Catan*](#) Expansions.)

Next is the Build action. A player may build one or two structures, a structure being defined as a building, wall, or a piece of temple. Buildings normally bring income in the form of gold or Influence cards, should they be in a row that was rolled before. Dimensions vary from 1×1, 1×2, 2×1, 1×1, 2×2, or 2×3. They require from one to three permits on the ground to build them, and up to 7 gold, in addition to the cost of the permits. Each building has a small compass, and it must point North. Thus, "tall" buildings are more attractive as they produce more often, and they cover more Trade Windmills if placed on the coast, the latter leading to a secondary track to deploy Victory Point Cubes. At least one of the permits for the building must be yours, but the others can belong to anyone. The player placing the structure need only pay the player the value of the Permit(s). Building choices are critical at the beginning of the game. Later, when a player has more resources, he can more easily build over or displace buildings.

Early in the game, players normally start by building their own "exclusive" buildings as they are cheaper, then moving up to the "common" buildings. The latter are more numerous, have spots for VP cubes, and are usually larger and more expensive. The largest buildings offer two Victory Point Cubes, but produce nothing! As this is a competitive game,

there is no cost to build over a smaller building, and to build over an identical-size building merely costs three Influence cards of the same color. This assumes that a player can place the required permits properly adjacent and pay the normal gold building costs. Normally, the building is returned to the pool from whence it came, except if it was one of the victim's two starting buildings (marked with totem poles). The victim immediately gets to place the starting building somewhere else on the map, before builder can take any more actions.

The exception to this is the Temple with its special mechanic. The nine tiles that comprise it are shuffled at the beginning, and the first player to buy a Temple tile gets to look at the first two tiles, and put one back at the *bottom* of the stack, allowing for strategic placement. That said, the first tile always goes on the specially marked square in the center of the board near the shore. As shown in the diagram by the Temple tile stack, it builds a puzzle as the tiles are purchased. Each allows for a single VP cube. This temple has priority, destroying or displacing any structure in its way. Until revealed, any of the 24 tiles around its starting square could be in danger. Of course, this is right in the middle of the seashore 5-9 range, the highest probability and thus most valuable real estate. Players *will* want to build there until the Temple chases people out.

The last form of building that players can build is not in the town itself, but pieces of wall around the town. The number of squares available is determined by the number of players. For example, the North and South faces vary from three tiles long at two players to seven long with four players. The North and South pieces of wall cost only two gold each, while the East wall costs 4 gold per piece (the West of the city is the sea). Building the Wall either grants players one or two Influence cards (as indicated on the tile) or a space to put a VP cube.

The third action allows the player to either place a permit in the ship's row *or* take two gold. At this stage, a player may place a permit in the ship's row at no additional cost, or pay two Influence cards of the same color and place the permit anywhere. Each player has five permit tokens, numbered 0 through 4; this is the gold value of the permit. It costs this value for the player to place it, and an opponent to displace it. The gold a player spends to place the token is not recovered unless an opponent "steals" his token to use it to place a building. Early in the game, it is usually better to place a token if the player has few on the board, as they can be moved in step 4. If placed carefully, they can obstruct opponents' plans.

The last phase is the "Special" one. By paying three differently colored Influence cards, a player can place a permit wherever he wants, *or* take two gold, *or* pay two Influence cards of the same color, and a player can upgrade or move one of their building Permits.

The Influence card mechanic is clever: the colors themselves don't matter . . . it is the number of cards of the same color that does. Each player receives a handy turn overview card that neatly states the turn steps and option costs.

Beyond putting cubes on production buildings, there are other ways to deploy cubes to the board: The temple guarantees 1 VP cube for seven gold for each of the nine temple tiles. Another path to victory can involve claiming the Trade Windmills dispersed along the shore and at the sparse two and 12 walls. These can afford a player up to 4 VP cubes, if that player has structures over all the Trade Windmill squares. Finally, a player's Wall tile has three cube tiles interspersed, offering yet more ways to deploy cubes. A perk here is that each Wall VP slot allows the player to randomly recover one of the cards "stolen" by pirates if *that player* should roll a 7 on the resource dice.

The many choices in this game can paralyze some players. The myriad pieces can overlap and easily get mixed up. Players may spend some time looking for a specific tile if it is not meticulously stored at the end of the previous session. A single mistake early in the game can cripple a player later. For example, in one game during the review process, a player strategically placed permits, and then built the largest structure available, a 2×3 two-VP building. Its purchase displaced several opponents' buildings, and gave that player a temporary lead, but as it produced nothing and was in the middle of the production area, it hampered that player's game for a long time. Thus, strategy is an important thing to consider at all times.

Elasund: The First City of Catan's' game play will be slightly different each time as the exact location of the temple will change; it can occupy any of nine different positions, which makes a huge difference in two-player games when space is at a premium. In all, the game is a good, if somewhat complex, addition to any Euro-game collection. It has a

modest learning curve on par with the original *Settlers of Catan,* but like its originator, still has you coming back for more.

--Eric Funk

Sentinels of the Styx, Part I

An Adventure for *GURPS Martial Arts*

by Stephen Dedman

Part One: En Garde

For this adventure, the GM will need the **GURPS Basic Set** and **GURPS Martial Arts.** It is designed for Heroic-level *Martial Arts* characters (100-200 points), but it can be tweaked for higher level characters and is also suitable for "realistic" *Supers* or a cinematic *Espionage* campaign where magic-using NPCs are a possibility. It is set in the present in a generic medium-sized city and can be easily adapted for any period from *Cliffhangers* to *Cyberpunk,* or for other systems such as *Shadowrun.*

Incoming!

The action begins in a dojo, where some or all of the PCs are present. They may be teaching, competing in a tournament, or simply watching. After a little (mostly harmless) sparring, there is a sudden screeching of tires and a motorbike comes flying through the dojo window, dumping its leather-clad rider on the mat. None of the heroes should be injured, though everyone present should make a Fright Check at -2.

The rider wears a helmet with the visor down: -2 to identify as female, -6 to recognize the person without opening or removing the helmet. Alternatively, PCs can roll with Drive (Motorcycle) or Mechanic (Motorcycle) to recognize the bike, a Kawasaki Ninja, as belonging to Kim Song, a freelance journalist and fellow martial artist (Hapkido black belt). Kim is lying face up, immobile and barely conscious, and the wooden quarrel sticking out of her back just below the shoulder blade will not be apparent until someone moves her body.

When Kim's face is revealed, and she sees a friendly face, she will whisper ". . . styx . . ." immediately before dying. If the PCs unzip her jacket, they find a small digital camera tucked into an inside pocket. There are no stills on the disc, only a 135-second movie clip of a martial arts battle in a space between stacks of cargo containers.

If any PCs venture outside immediately, they will see a black SUV speeding away from the scene: roll Vision (-5 for poor light) to read the license plate. Should anyone give chase, the adversaries escape in a suitably inventive way: crossing railroad tracks an instant before the train barrels through; throwing down caltrops (spikes) to puncture the tires (or soles) of any pursuer; or as a last resort, opening the back window and blasting away with a 12G shotgun and a 9mm machine pistol, aiming low. Inside the van are Sabra Stein and three Merrimac heavies; Sabra has a pistol crossbow, with six wooden bolts tipped with fresh cobra venom, but this will only be used if the pursuers prove resistant to everything else.

Martial Law

Two uniformed cops arrive 6 minutes after the motorbike, followed 11 minutes later by a crime-scene investigator and two homicide detectives, Sidney Torres and Vincent Kane. After questioning all the witnesses, officers let the heroes go, giving them business cards in case they remember anything else.

How much information the PCs decide to give the detectives has no immediate effect except to change the detectives' reaction to them: +1 for every potentially useful piece of information voluntarily handed over (the camera, the license number of the SUV, etc.), -1 for every lie detected. Cop PCs get a +2 reaction and will be kept up to date with the police investigation into Kim's death.

Follow that Car!

Heroes deciding to investigate Kim's death themselves have a few possible leads they can follow. By checking Kim's apartment, they discover the police have been there before them and removed her computer. If they talk to Kim's editor, and he has a good or better reaction to any of them, they learn that Kim was investigating a major smuggling ring, but he doesn't have any other details. With a police contact, they can find out the cause of Kim's death, though the source of the cobra venom is unknown. If they have a police contact and know the license plate of the SUV, they can track it back to Rio Lobo K-9 Services, a business that breeds and trains guard dogs, and a subsidiary of Merrimac Security Consultancy.

Research -4 or Street, Business, Police, or Military contacts can all give the same information about Merrimac: their main business is in survival and combat training, high security couriers, and private security services for small businesses and entertainment venues. While most of their executives, instructors, and pilots have impeccable military or law enforcement backgrounds, they also hire ex-cons as nightclub bouncers, security guards, and "consultants." They are rumored to have links with the Serbian and Bulgarian mafias, and to be involved in the illegal arms trade and other forms of smuggling, but none of these charges have ever been proven.

Caught on Camera

If the group watches the movie in Kim's camera, they see a slender Asian woman (Lin Chu) fighting off six men in a space between two cargo containers. The movie is badly lit and obviously shot with a handheld camera, but the sequence of events is easy to make out. The woman faces four men: two armed with heavy flashlights, one with a knife, one apparently unarmed. One man with a flashlight rushes her and is knocked down with a sweeping kick, followed by an elbow to the temple as he falls. Flashlight 2 and Knife attack from opposite sides; she spins, disarming both, knocks the knife-wielder out with the flashlight, and back-kicks the man who's just lost his flashlight. He tries to tackle her from behind; she grabs his arm and throws him at the last man standing. Another two men come running into the picture, one with a machete, the other with a baseball bat: she turns her back on the machete in order to dodge a blow from the bat, then is hit between neck and shoulder with the machete. Apparently unfazed by this, she knocks the batter out with a jump-kick to the head before turning her attention to the machete. When the man with the machete strikes again, hitting her arm, she grabs his wrist and kicks him in the jaw. At the sound of shots, the camera pans to show two men with shotguns running toward the scene and firing; the clip ends on that image.

Those who make a Vision roll at this point see a logo on a container behind the gunmen. A roll on Research identifies the logo as belonging to Kaimuk, a Thai seafood exporter. Another success at Research reveals that a Kaimuk container of frozen fish arrived at the local harbor two days ago.

None of the men are immediately recognizable: All seem to be wearing the same uniform (dark jacket, cargo pants, cap, and boots), with cloth badges on their caps and jackets, but the image resolution is too poor for the badges to be readable.

Something Fishy

When the investigators search for the location of Chu's fight, a roll on Research (or successful use of a Business contact) leads them to the dock where the Kaimuk container was unloaded. Signs on the dock (roll Per) tell them that it is patrolled by Merrimac security. Getting close to the container requires either a Contest of Stealth vs. the watchman's Per, or a Good or better reaction from the watchman (a Merrimac mook, but not one of those who fought Chu).

The location has been thoroughly cleaned up -- no trace of the fight -- but after a few minutes, the heroes see another guard in the doorway of a nearby warehouse, with a bruise partly hidden by his mirrorshades: those who make a Vision roll recognize him as the knife-wielder from the video.

Upon successfully interrogating the guard (Paul Brogsdale), he tells them that he works for Merrimac and that extra guards had been put on the docks because a package was coming in and a reporter, an Asian woman, had been

snooping around. They were told that if they caught her, to bring her to the boss -- or failing that, to scare her away. He doesn't know what happened after he was knocked out, except that the woman somehow got away. If the heroes ask who the boss is, Brogsdale says it's Glanton, one of Merrimac's managers.

PCs who make a roll on Current Affairs (Sports) at +2 recognize Glanton as a contender in the international Mixed Martial Arts full-contact scene. Research or a Business contact reveals that Donald Glanton is Merrimac's VP in charge of recruitment and training; he also teaches their advanced martial arts classes. A critical success uncovers the less secret parts of Glanton's bio (see Part II).

Dogs of War

An attempt to physically break into Rio Lobo's facility first requires getting by the front gate, which is constantly watched by security cameras (infra-red and visible light), and electronically locked (-4 to pick). The complex is 100 yards by 60 yards; the surrounding wall is 12 feet high and topped with an electric fence (Per to detect, Acrobatics to avoid; failure triggers an alarm and delivers an electric shock. If shocked, roll vs HT; failure results in the character being stunned for 20-HT seconds.) Inside are several kennels, a car park, and a two-story house. All buildings are electronically locked. The SUV seen outside the dojo is parked near the front door of the house.

Once inside, the investigators need to make stealth rolls for every 5 hexes moved or every 10 seconds spent not moving. As well as hidden infra-red cameras, there are kennels full of guard dogs along the south and east walls, and a guard (a Merrimac mook) patrolling with a dog at all times.

The guard is armed with a heavy flashlight, a .40 Auto Pistol, and a small folding knife. He wears a quilted jacket (treat as cloth armor with sleeves), boots, gloves, heavy trousers, a cloth cap, and a headset radio. If attacked, he releases the dog and (unless silenced immediately) call for backup; he defends himself by using the flashlight as a baton. If outnumbered, he moves the flashlight to his left hand and draw his pistol. Should the guard watching the monitors inside hears a shot, he remotely unlock the cages and releases eleven dogs, as well as sounding a general alarm. At the blare of an alarm, Volker, Sabra, and another two mooks (armed with shotguns) come running out of the house.

If the PCs manage to get inside the house without incident, a search turns up two cobras in glass cases in the veterinary clinic. The weapons safe in the security station contains two dart rifles, two self-loading rifles, four pump shotguns, eight .40 auto pistols, and 100 rounds of ammunition for each weapon (not including those guns carried by the guards). A computer in Volker's office houses details of Merrimac's smuggling operations, but recovering useful data demands rolls on Computer Hacking -3 (a critical failure causes a security program to erase the hard drive), Cryptanalysis -5, and 10 man-hours of Research. The data is not admissible as evidence, but it will count as probable cause for a search warrant or wire-tap on Merrimac's offices. The e-mail inbox holds a series of fuzzy photos of Lin Chu, taken on a cell phone camera at the local airport; roll on Per to recognize as the woman from the video on Kim's camera. The only caption is the date, four days ago.

Those captured by Volker, the guards, and the dogs are interrogated by Volker. When he is satisfied that he has learned all he can, he shuts the heroes naked in a large meat locker. The refrigerator is bolted from the outside; Escape and Lockpicking are useless. A correctly placed Breaking Blow might shatter the weakest point of the latch (metal, DR 7, 30 HP), but it is completely dark inside the locker, adding to the difficulty unless the martial artist also has the Blind Fighting skill.

PCs without the Temperature Tolerance advantage must make their HT roll against cold (p. B430) at -5 every half hour. As the locker is airtight as well as cold (34 F), the investigators may be in greater danger of suffocation than of freezing. The refrigerator holds enough air for 18 man-hours of mild exertion (e.g. six PCs can survive for three hours). Heroes who make a roll on the Body Control skill consume a negligible amount of air and do not suffer any of the physical ill effects (described below) from their confinement.

To determine how much air the PCs consume, divide an individual's breathing rate by 1.5 if he makes a Breath Control skill roll or goes to sleep (e.g., three sleepers consume as much air as two active people); multiply by up to 5 for frantic

activity (e.g., constantly attempting to break out).

When a third of the total time (adjusted for activity) has elapsed, the heroes are in danger from carbon dioxide build-up and oxygen depletion. Those who have not made a successful roll on Body Control should roll vs HT; failure results in them suffering nausea (see p. B428; normal bonuses for Fit and Very Fit advantages apply). Characters who are not already nauseous should roll vs HT again when half of the total time has elapsed; characters who are nauseous also roll again, with failure resulting in moderate pain and 1 point of toxic damage, and critical failure in unconsciousness. This pain and nausea lasts 15-HT days.

Fortunately, before any of the heroes die or suffer brain damage, the door is opened by a man in a Merrimac uniform. The man, John Turvey, is an undercover cop who is willing to risk blowing his cover rather than see the PCs fed to Volker's dogs. Unfortunately, he couldn't retrieve the investigators' clothing, but he did procure a waterproof camo poncho for each of them. It's raining outside, and his shift has just ended, so he should be able to sneak them out to his SUV and through the gate if they hurry and don't draw attention to themselves.

If the heroes decide to trust Turvey, he leads them safely outside the building -- but when they are approximately 12 yards from his car, Sabra walks outside to her car. If every PC wins a Contest of Stealth vs her Per, they can get to Turvey's SUV safely. If anyone fails, the investigators either have to outrun her (they have a 5-yard start, but she tries to tackle the slowest) or fight her and prevent her from raising the alarm. Neither she nor Turvey are armed.

Once in the car and outside the compound, Turvey tells the PCs that he has enough evidence against Volker to charge him with cruelty to animals (he's been running dog fights), smuggling wildlife, and supplying animal steroids and veterinary drugs to humans. That, he hopes, will be enough to get him to testify against the police's real target, Don Glanton, who Turvey suspects of killing Kim Song as well as running a major arms-smuggling operation. Turvey has also heard that Glanton is trying to make a deal with some group called the Sticks, and that the cobras Volker smuggled into the country have something to do with that, though he doesn't know any more details.

Inside Job

The logical way to confront Glanton, or to infiltrate Merrimac to find evidence of criminal activity is to apply for a job with the company; to sign up for one of Glanton's intensive training courses (see p.B293) in kajukenbo, firearms, or survival; or to enroll in his dojo. Applicants to enroll in the dojo must win a full-contact unarmed fight with a Merrimac heavy. Any investigators who have already encountered Glanton or Sabra also need to disguise themselves.

Minimum qualifications for any job at Merrimac are Literacy, DX 10+, IQ 9+, HT 10+, Per 10+, Basic Move and Speed 5+, First Aid/TL8-10+, Driving/TL8 (Car)-9+, and a Neutral or better reaction from Glanton's secretary. They also are asked whether they speak any other languages. To be put on the books, PCs need to succeed at any five of the following tests.

Test 1: Surveillance. This test involves watching a bank of monitors for half an hour. Applicants need to roll on Electronics Operation/TL8 (Security Systems) at -2 and a Contest of Observation vs. Sabra's Filch skill. Characters with the Absent-Mindedness or Short Attention Span disadvantages need to make 1d Will-5 rolls; those with the Distractible quirk are at -1 to their Observation roll.

Test 2: Gatekeeper. The candidate must roleplay minding the door at an entertainment venue, not allowing in any weapons, cell phones, or alcohol. Six people walk past -- two mooks, three clerks (Fast Talk-10, Holdout-6), and Sabra. One has a cell phone (-1 to Holdout); Sabra or one of the mooks has a small folding training knife (-1 to Holdout; -2 crushing damage). This is firstly a Contest of Search vs. Holdout and/or Detect Lies vs. Fast-Talk, but if the applicant spots the items, he then needs to ask the "smuggler" to hand it over, which requires a neutral or better reaction. A very bad or worse reaction means that the "smuggler" attacks and has to be restrained with minimal injury.

Test 3: Courier. The hero has to pick up an order of take-out food for the staff at Merrimac's office (using their own car). Roll on Driving and Area Knowledge (City) or Navigation to find the diner in time. When the PC arrives at the diner, he finds that the cashier -- an underage but pretty girl - speaks no English, only a language the character has told

Glanton he knows (e.g. if he claims to speak Korean, he is sent to a Korean restaurant in Koreatown; Spanish, a Mexican cantina in the barrio; etc.). If the applicant successfully communicates with the girl, he can return on time; if not, he fails the test.

Test 4: Firearms. This "shoot-no shoot" exercise involves firing an automatic pistol (9mm or .40) at stationary man-sized pop-up targets at 20 yards (-6) in poor light (-3). Targets pop up for two seconds; 2/3 are of unarmed people and 1/3 of armed (GM should roll separately for each target). The PC must make a Vision roll (at -6, with penalties for poor light) before shooting. With 10 shots and 20 pop-ups in this test, the hero must hit more than half of the legitimate targets, and shooting the wrong target is an automatic failure.

Test 5: Fitness. The character runs a 1,500-yard course on poor ground in 12 minutes. For anyone with Ground Move 5+, this can be done in 10 minutes and requires 10 HT or Running rolls (see p. B354).

Test 6: Animal Handling (Dog). This test requires two rolls at -3. On a critical failure, the guard dog bites.

Test 7: Unarmed Combat. The applicant walks down a dark alley (-5 to vision), making a Contest of Per vs. Stealth to avoid ambush by two mooks armed with training knives. Failing either contest means that the PC can be attacked from behind as well as from the front.

Test 8: Clerical. The hero has to proofread and correct a number of standard computerized forms (inventories, rosters, incident reports, etc.). This requires rolls on Administration, Computer Operation/TL8, and Writing at -2.

Characters who succeed in getting put on the books at Merrimac probably have a day or night doing a boring courier or watchman job, transporting or guarding something with little resale value, before the big doom-metal Cyanotix concert, which will require a lot of security personnel and would be an opportune time to talk with other Merrimac employees.

Charm Offensive

If the investigators aren't working for Merrimac and they haven't already been recognized by Merrimac's people in the week after Kim's death (i.e., by Day 8; see *Timeline for Part I*), Glanton sends someone to question them about Kim's death -- whether she said anything or gave them any other sort of clues before she died. Sabra makes the first approach; she comes to the dojo on to see which PC will be easiest to seduce. If she can get this character alone, she handcuffs him to a chair or (preferably) the bed and brings in Volker and Turvey -- Turvey to help her search the hero's home, and Volker to interrogate the PC to find out what he knows about Glanton, Lin Chu, the death of Kim Song, and any illegal activities that Merrimac is involved in. Once the interrogation is over, Volker tries to intimidate the investigator into keeping quiet; if he's not convinced that his victim will, he draws his knife with the intention of cutting the character's throat. This causes Turvey to draw his pistol and point it at the back of Volker's head, leading to a standoff and the end of this part of the adventure.

Also turning up at the dojo on Day 8 is Sidney Torres, who has become attracted to one of the PCs and offers to act as a Police Contact (at least as a one-off "Favor"), providing useful information about Kim's death.

Timeline for Part I

Day -2. Lin Chu arrives in town, photographed at airport.

Day 1. Kim Song and Lin Chu, independently, investigate smuggling operations at the docks. Song films Chu defeating eight Merrimac guards, flees from gunmen. Chu defeats gunmen. Sabra Stein and heavies arrive at dock, mistake Song for Chu, and shoot her with crossbow. Song heads for PCs' dojo, dies. Torres and Kane investigate murder, question PCs.

Day 8. Sabra and Torres return to PCs' dojo. Sabra attempts to seduce a PC, then interrogate him. Torres, attracted to a PC, offers to help their investigation.

Cast

Merrimac Mook   *70 points*

Attributes: ST 12 [20]; DX 10 [0]; IQ 10 [0]; HT 11 [10].

Secondary Characteristics: Dmg 1d-1/1d+2; BL 29; HP 12 [0]; Will 10 [0]; Per 11 [5]; FP 11 [0]; Basic Speed 5.25 [0]; Basic Move 5 [0].

Advantages and Perks: Acute Hearing 1 OR Night Vision 2 [2]; High Pain Threshold [10]; Style Familiarity [1].

Disadvantages and Quirks: Bully (12) [-10]; Chauvinistic [-1]; Dull [-1].

Skills: Administration (A) IQ-1 [1]-9; Animal Handling (Dog) (A) IQ-1 [2]-10; Brawling (E) DX [1]-10; Detect Lies (H) Per-2 [1]-9; Driving (Car) (A) DX [2]-10; Electronics Operation/TL8 (Security Systems) (A) IQ [2]-10; First Aid (E) IQ [1]-10; Guns/TL8 (Pistol) (E) DX+2 [4]-12; Intimidation (A) Will+1 [4]-11; Melee Weapon (Shortsword) (A) DX [2]-10; Observation (A) Per [2]-11; Streetwise (A) IQ [2]-10.

Mook Martial Arts styles (roll 1d):

1. *Jujutsu:* Judo (H) DX [4]-10; Karate (H) DX [4]-10; Arm Lock (A) Judo+2 [2]-12 or Disarming (H) Judo+1 [2]-11.
2. *Kajukenbo:* Judo (H) DX [4]-10; Karate (H) DX [4]-10; Exotic Hand Strike (A) Karate [1]-10; Hammer Fist (A) Karate [1]-10.
3. *Karate:* Judo (DX-2) [1]-8; Karate (DX) [8]-11; Exotic Hand Strike (A) Karate [1]-11.
4. *Krav Maga:* Karate (H) DX [4]-10; Wrestling (A) DX [2]-10; Choke Hold (H) (Wrestling)-2 [2]-9; Disarming (H) Wrestling+1 [2]-11.
5. *MCMAP:* Brawling (DX+2) [3]-12; Judo (DX) [4]-10; Elbow Strike (A) Brawling-1 [1]-12; Stamp Kick (H) Brawling-2 [2]-10.
6. *Savate:* Karate (DX) [4]-10; Wrestling (DX) [2]-10; Head Butt (H) Karate [2]-10; Kicking (H) Karate-1 [2]-9.

Merrimac Heavy   *170 points*

Attributes: ST 13 [30]; DX 11 [20]; IQ 10 [0]; HT 12 [20].

Secondary Characteristics: Dmg 1d/2d-1; BL 34; HP 13 [0]; Will 11 [5]; Per 11 [5]; FP 12 [0]; Basic Speed 6 [5]; Basic Move 6 [0].

Advantages and Perks: Acute Hearing 1 [2]; Combat Reflexes [15]; Fit [5]; High Pain Threshold [10]; Night Vision 2 [2]; Style Familiarity (Kajukenbo) [1].

Disadvantages: Bad Temper OR Berserk OR Bully (15) [-5]; Overconfidence (12) [-5]; Sense of Duty (Merrimac, small group) [-5].

Skills: Administration (A) IQ [2]-10; Animal Handling (Dog) (A) IQ [4]-11; Brawling (E) DX [1]-10; Carousing (E) HT [1]-12; Detect Lies (H) Per-1 [2]-10; Driving (Car) (A) DX [2]-11; Electronics Operation/TL8 (Security Systems) (A) IQ [2]-10; First Aid (E) IQ [1]-10; Guns/TL8 (Pistol) (E) DX+2 [4]-13; Judo (H) DX+2 [12]-13; Karate (H) DX+3 [16]-14; Intimidation (A) Will+1 [4]-12; Leadership (A) IQ [2]-10; Melee Weapon (Shortsword) (A) DX [2]-11; Observation (A) Per [2]-11; Streetwise (A) IQ [2]-10.

Techniques: Exotic Hand Strike (A) Karate [1]-14; Hammer Fist (A) Karate [1]-14; Stamp Kick (H) Karate-2 [2]-12;

Sweeping Kick (Karate) (H) Karate-2 [2]-12.

Gear: TL8 ballistic vest, leather jacket, cup, and boots. Weapons and other gear as described in adventure.

Sabra Stein   *250 points*

Sabra Stein's father, an Israeli soldier selected for pilot training, was killed by Palestinians before Sabra's second birthday. Her mother returned to her native Chicago a year later, and remarried when Sabra was five. Her stepfather, a lawyer, sexually abused her for several years before she started junior high, where she finally found a teacher who would listen to her accusations and act on them. Sabra's stepfather was acquitted, and Sabra ran away from home.

By the time she was old enough to enlist in the Air Force (under her biological father's name), Sabra was a seasoned streetfighter with an erratic employment history. Dismissed for kicking her drill sergeant, she applied for work with Merrimac. Glanton recognized her talent, gave her as a job, lent her the money for flying lessons, and became one of her favorite lovers. Though promiscuous, she is fiercely loyal to him in all other ways.

Violent, vicious, and not inclined to fight fair, Sabra is not evil: She prefers to vent her sadistic impulses on willing or deserving victims, such as drug dealers or child molesters.

Height 5'8", Wt 110 lbs, Size Modifier 0, Age 28.

Appearance: Tanned complexion, short but unruly black hair, hazel eyes, snakes tattooed around biceps and ankles: a large-breasted, sexy, strong, and confident-looking woman.

Languages: English (Native); Hebrew (Broken) [2]. *TL:* 8. *Cultural Familiarity:* Western.

Attributes: ST 11 [10]; DX 13 [60]; IQ 11 [20]; HT 13 [30].

Secondary Characteristics: Dmg 1d-1/1d+1; BL 24; HP 12 [5]; Will 12 [5]; Per 11 [0]; FP 13 [0]; Basic Speed 6.5 [0]; Basic Move 6 [0]. 130

Advantages and Perks: Ambidexterity [5]; Attractive [5]; Combat Reflexes [15]; Fit [5]; High Pain Threshold [10]; Improvised Weapons (Karate) [1]; Night Vision 4 [4]; Rapid Healing [5]; Style Familiarity (Escrima, Kajukenbo, Krav Maga) [3]; Unusual Training (Dual-weapon attack) [1].

Disadvantages and Quirks: Atheist, but eats kosher food out of habit [-1]; Attracted to men in uniform (reacts at +1) [-1]; Callous [-5]; Chauvinistic [-1]; Debt [-3]; Enjoys cigars after sex and/or violence [-1]; Greed (15) [-7]; Insomnia [-5]; Lecherousness (12) [-15]; Likes snakes, especially venomous ones [-1]; Sadism (15) [-7]; Sense of Duty (Glanton) [-2].

Skills: Acrobatics (H) DX [4]-13; Acting (A) IQ+1 [4]-12; Administration (A) IQ-1 [1]-10; Animal Handling (Dog) (A) IQ+1 [4]-12; Carousing (E) HT [1]-13; Computer Operation/TL8 (E) IQ [1]-11; Crossbow (E) DX [1]-13; Detect Lies (H) Per [4]-11; Disguise/TL8 (A) IQ-1 [1]-10; Driving/TL8 (Car) (A) DX+1 [4]-14; Electronics Operation/TL8 (Security Systems) (A) IQ [2]-11; Erotic Art (A) DX-1 [1]-12; Fast-Draw (Knife) (E) DX+1 [1]-14*, (Balisong) (E) DX+1 [1]-14*; Filch (A) DX [2]-13; First Aid (E) IQ [1]-11; Guns/TL8 (SMG) (E) DX+2 [4]-15; Holdout (A) IQ [2]-11; Interrogation (A) IQ [2]-11; Intimidation (A) Will [2]-12; Karate (H) DX+4 [16]-16; Melee Weapon (Main Gauche) (A) DX+1 [4]-14, (Smallsword) (A) DX+1 [4]-14; Observation (A) Per [2]-11; Piloting/TL8 (Helicopter) (A) DX [8]-15; Running (A) HT [2]-13; Sex Appeal (A) HT+1 [4]-14; Smuggling (A) IQ+1 [4]-12; Soldier (A) IQ-1 [1]-10; Stealth (A) DX [2]-13; Streetwise (A) IQ+1 [4]-12; Swimming (A) HT [1]-12; Throwing DX+1 [4]-14; Urban Survival (A) Per+1 [2]-11; Wrestling (A) DX+3 [12]-16.

* +1 for Combat Reflexes

Techniques: Aggressive Parry (Karate) (H) Karate Parry [2]-11; Eye Rake (H) Karate-4 [2]-14; Head Lock (H)

(Wrestling)-2 [2]-14; Knee Strike (A) Karate [1]-16.

Gear: Fine Balisong knife; cheap plastic knife. Usually wears leathers (including leggings) when not in dojo. 9mm Machine Pistol usually close to hand.

Vincent Kane/John Turvey   *115 points*

Vincent Kane and Jon Turvey are both second generation cops, both eldest sons, both divorced and childless, both quietly devout. Kane is descended from Russian Jews; Turvey, from Irish Catholics. Otherwise, for gaming purposes, treat them as identical.

Height 5'11", Wt 180 lbs, Size Modifier 0, Age 32.

Appearance: Tanned complexion, short brown hair, blue eyes.

Languages: English (Native). *TL:* 8. *Cultural Familiarity:* Western.

Attributes: ST 11 [10], DX 10 [0], IQ 11 [20], HT 10 [0].

Secondary Characteristics: Damage 1d-1/1d+1; BL 24 lbs.; HP 11 [0]; Will 11 [0]; Per 11 [0]; FP 10 [0]; Basic Speed 5.5 [0]; Basic Move 5 [0].

*Advantages and Perks:*Combat Reflexes [15]; Fit [5]; High Pain Threshold [10]; Honest Face [1]; Legal Enforcement Powers [5]; Police Rank 2 [10]; Style Familiarity (Jujutsu) [1].

Disadvantages and Quirks: Disciplines of Faith [-1]; Duty (15) [-15]; Minor Addiction (Coffee) [-1]; Overconfidence (15) [-2]; Sense of Duty [to fellow cops and honest citizens, -10].

Skills and Techniques: Acting (A) IQ+1 [4]-12; Area Knowledge (city) (E) IQ [1]-11; Arm Lock (A) Judo+1 [1]-11; Computer Operation/TL8 (E) IQ+1 [2]-12; Criminology (A) IQ+1 [4]-12; Current Affairs/TL8 (regional) (E) IQ [1]-11; Detect Lies (H) Per-1 [2]-10; Disarming (H) Judo+1 [2]-11; Disguise (A) IQ [2]-11; Driving (Car) (A) DX [2]-10; Electronics Operation/TL8 (Security Systems) (A) IQ [2]-10; Fast-Talk (A) IQ+3 [8]-14; First Aid/TL8 (E) IQ [1]-11; Guns/TL8 (pistol) (E) DX+1 [2]-12; Holdout (A) IQ+1 [4]-12; Intimidation (A) IQ [2]-12; Judo (H) DX [4]-10; Karate (H) DX [4]-10; Law (criminal) (H) IQ-2 [1]-9; Melee Weapon (Shortsword) (A) DX [2]-10; Observation (A) Per [2]-11; Psychology (H) IQ-1 [2]-10; Savoir-Faire (E) IQ [1]-11; Shadowing (A) IQ-1 [1]-10; Stealth (A) DX [2]-10; Streetwise (A) IQ+1 [4]-12; Writing (A) IQ [2]-11.

Sidney Torres   *150 points*

Homicide Detective Sidney Torres is intended as a potential Police Contact and possible future Ally and/or Dependent, and may be male or female depending on the make-up and preferences of the PC group.

As well as being single, Sidney is a serious student of the martial arts, trained in aikijutsu and interested in studying new styles.

Height 5'8", Wt 140 lbs, Size Modifier 0, Age 27.

Appearance: Olive complexion, wavy black hair, dark brown eyes: wears leather concealed carry coat over ballistic vest, cargo pants, hiking boots.

Languages: English (Native); Spanish (Accented) [4]. *TL:* 8. *Cultural Familiarity:* Western.

Attributes: ST 10 [0]; DX 12 [40]; IQ 12 [40]; HT 11 [10].

Secondary Characteristics: Damage 1d-2/1d; BL 20 lbs.; HP 10 [0]; Will 12 [0]; Per 13 [5]; FP 10 [0]; Basic Speed 6 [10]; Basic Move 6 [0].

Advantages and Perks: Attractive [5], Charisma 1 [5], Legal Enforcement Powers [5], Police Rank 2 [10], Style Familiarity (Aikijutsu) [1], Voice [10].

Disadvantages and Quirks: Broad-Minded [-1]; Duty (15) [-15]; Curious (12) [-5]; Imaginative [-1];]; Impulsiveness (15) [-5]; Lecherousness (15) [-7]; No fashion sense (-1 reaction from fashion victims) [-1]; Pacifism (Cannot Harm Innocents) [-10]; Responsive [-1]; Sense of Duty (fellow cops and honest citizens) [-10].

Skills and Techniques: Acting (A) IQ [2]-12; Administration (A) IQ-1 [1]-11; Area Knowledge (precinct) (E) IQ+1 [2]-13; Arm Lock (A) Judo+1 [1]-16; Brawling (E) DX [1]-13; Breath Control (H) HT-1 [2]-10; Computer Operation/TL8 (E) IQ [1]-12; Criminology (A) IQ+1 [4]-13; Detect Lies (H) Per-1 [2]-12; Diplomacy (H) IQ+2 [4]-14*; Disarming (H) Judo+1 [2]-16; Disguise (A) IQ-1 [1]-11; Driving/TL8 (Car) (A) DX [2]-12; Fast-Talk (A) IQ+1 [1]-12*; First Aid/TL8 (E) IQ [1]-12; Forensics/TL8 (H) IQ-1 [2]-11; Guns/TL8 (pistol) (E) DX+1 [2]-13; Interrogation (A) IQ [2]-12; Judo (H) DX+1 [12]-15; Law (Criminal) (H) IQ-1 [2]-11; Observation (A) Per [2]-12; Running (A) HT [2]-11; Sex Appeal (A) HT+2 [2]-13*; Savoir-Faire (E) IQ+2 [1]-14*; Search (A) Per-1 [1]-12; Stealth (A) DX [2]-12; Streetwise (A) IQ [2]-12; Writing (A) IQ [2]-12.

* +2 for Voice

Pieter Volker   170 points

Pieter Volker was raised on an isolated farm in Rhodesia, but his family fled to South Africa after Mugabe came to power, then to Canada, then to Idaho. Unskilled at making and keeping human friends, Pieter spent most of his time with the farm's animals, particularly the dogs. His grandfather and father taught him how to hunt and slaughter animals, and took him to illegal dogfights. Pieter also made friends with the local sheriff, who trained dogs for tracking, and the local veterinarian, who treated him as an apprentice and encouraged him to go to college.

While at college, Pieter began working part time as a security guard. Years later, when a former workmate became a regional manager for Merrimac, he sent their guard dogs to Pieter's surgery. As Merrimac expanded, their demand for dogs increased, and Pieter proposed a breeding and training program for larger, more dangerous sentry dogs.

Pieter's breeding and training program includes setting stronger dogs on weaker ones, as well as smaller animals, as a spectator sport; he also sells veterinary drugs and steroids to some of Merrimac's staff. His dogs are in sufficient demand that Glanton turns a blind eye to this in exchange for Pieter's co-operation with Glanton's own schemes.

Height 5'11", Wt 170 lbs, Size Modifier 0, Age 39.

Appearance: Lightly tanned complexion, short blond hair receding from widow's peak, blue eyes. Wears military style khaki pants and jacket, brown work boots, mirrorshades during day.

Languages: English (Native). *TL:* 8. *Cultural Familiarity:* Western.

Attributes: ST 12 [20]; DX 11 [20]; IQ 12 [40]; HT 10 [0].

Secondary Characteristics: Dmg 1d-1/1d+2; BL 29; HP 12 [0]; Will 12 [0]; Per 13 [5]; FP 10 [0]; Basic Speed 5.25 [0]; Basic Move 5 [0].

Advantages and Perks: Fearlessness 2 [4]; High Pain Threshold [10]; Improvised Weapons (Karate) [1]; Penetrating Voice [1]; Style Familiarity (Fairbairn Close Combat Training) [1]; Talent (Animal Friend) 1 [5]; Temperature Tolerance 2 [2]; Wealth (Comfortable) [10].

Disadvantages and Quirks: Bloodlust (15) [-5]; Dislikes all small animals [-1]; Horrible Hangovers [-1]; Intolerance (All other races) [-10]; Incompetence (Sex-Appeal) [-1]; Minor Addiction (Cigarettes) [-1]; Unattractive [-5]; Uncongenial [-1].

Skills and Techniques: Administration (A) IQ [2]-12; Animal Handling (Dog) (A) IQ [8]-15*; Detect Lies (H) Per [4]-13; Driving (Car) (A) DX [2]-11; Electronics Operation/TL8 (Security) (A) IQ [2]-12; First Aid (E) IQ [1]-12; Guns/TL8 (Rifle) (E) DX+2 [4]-13; Holdout (A) IQ-1 [1]-11; Interrogation (A) IQ+1 [4]-13; Intimidation (A) Will [2]-12; Judo (H) DX+1 [8]-12; Karate (H) DX+1 [8]-12; Melee Weapon (Knife) (E) DX+2 [4]-13; Neck Snap (H) ST-3 [2]-9; Observation (A) Per [2]-13; Riding (Horse) (A) DX+2 [2]-13*; Search (A) Per [2]-13; Smuggling (A) IQ [2]-12; Stealth (A) DX+1 [4]-12; Streetwise (A) IQ [2]-10; Survival (Plains) (A) Per [2]-13; Tracking (A) Per [2]-13; Traps/TL8 (A) IQ [2]-12; Veterinary/TL8 (H) IQ+2 [4]-14*.

* +2 for Animal Friend

Gear: Fine large knife. Sometimes carries dart rifle, self-loading rifle, or .40 Auto Pistol.

A Mélange of Magical Creatures XII

for *GURPS*

by Eric Funk

On the twelfth day of Christmas, this twelfth installment of magical creatures will fill your adventures with holiday cheers . . . or, perhaps, screaming of a different sort.

Wrecking Crane

"The criminals dug themselves into the home, and beckoned for us to try to come in and get them. The Chief called over a team from the Special Unit. The handler, Stevens, readied his lantern, and unmasked the bird. 'Hawnk,' the creature said. The Chief gave the signal, and Stevens shined the light at the front door of the home. Seeing the light, the bird charged the door with the men running behind her. As the door lay in splinters, the men pushed the bird in, and arrested the startled criminals."
-- Marcus Stevens, Crime Reporter

Outwardly appearing to be similar to whooping cranes, but with the build of an ostrich, these thick-billed birds use their mighty beaks to crack open dead trees. With an armored head, they are suggested to be a link between birds and dinosaurs. These birds are a nuisance to organizations that erect poles, such as hill forts and telephone and telegraph companies.

Encountered

These birds can easily be trained to "hate" a particular colored shape. "Operators" can then use hooded lanterns and project the shape on a wall. If it is close enough to the bird (normally about three yards), it will move and swing at the spot. Once it is in motion, it is hard to stop. Adventurers could easily make use of these creatures when breaking into fortifications; fitting it into the hallway is the trick.

Industrial Uses

"The craziest act? There was a guy that came in with a big bird, see? When it was his turn, he donned a shirt with a logo, and then took the bag off its head, jumping back. The bird then swung at him, even chipping the floor and walls as it did, but never connecting with the guy. For a finale, he swung himself up onto the bird's back and pulled his shirt over its head, stopping the rampaging beast. Never seen anything like it since."
-- Iani Rapozo, *Breaking into Show Business*

Wrecking Cranes are useful in many fields of construction, from knocking down trees to driving piles into the ground. Industry sees use for sound baffling (such as a "Wall of Silence" spell; see page 172 of ***Magic***) around these creatures to reduce the noise pollution while allowing the operator to receive feedback. Enchantments of Iron Hand and Body of Metal/Stone can be greatly enhanced by by-products of this bird.

Adventure

Some criminals seem to be using wrecking cranes as weapons. They will ambush targets, and from high cover, shine the "hate" shapes on their foes. The owners of the cranes have a reward out for the safe return of the animals. How will the PCs prepare? How will they bait the criminals?

Wrecking Crane

Appearance: A large crane-like bird with the build of an ostrich. Its head is grey to black, and body white to brown.
Category: Avian.
Diet: Omnivore.
ST 20; DX 9; IQ 3; HT 12.
Will 10; Per 11; Speed 5.25; Dodge 8; Move 5.
SM +1 (3 hexes, 8' tall); 200-300 lbs; DR 2 (+DR 20 head, +DR 10 neck).
Traits: Acute Vision 1; Congenial; Domestic (or Wild) Animal; Enhanced Move 1 (Ground Move 10); No Fine Manipulators; Semi-Upright; Striking ST +20 (Head only, bash only)
Skills: Brawling-10 (normally at +4 for immobile targets).

Giant Wrecking Crane

ST 40; DX 8; IQ 3; HT 14.
Will 11; Per 12; Speed 5.25; Dodge 8; Move 5.
SM +2 (4 hexes, 15' tall); lbs; DR 5 (+DR 15 head, +DR 30 neck).
Traits: As above, but Enhanced Move 1.5 (Ground Move 15); Striking ST +40 (Head only, bash only)

Acid Trees

"It was getting dark, and we were all tired from the hard march. The eight of us felt fortunate to find this cleared campsite in time. With the last light, we set up camp. The fire started quickly despite our soaked firewood. It sizzled and popped all night. The sound from the fire disguised the damage of the trees. Fortunately, our oiled tents took the brunt. We awoke in the morning to the acrid smell of seared leather. Some scout our guide was, camping us under Acid trees. At least we got a good night's sleep; we were to need it."
-- Lord Everett Brannigan, *Forests of Pain*

"Acid tree" is a term for a family of trees that share a common trait: caustic sap. Certain trees developed a form of acidic sap to deter herbivores, parasites, and competitors. Many are content to keep to themselves, but some drip sticky acid sap throughout mid-spring to mid-fall. This is uncomfortable to unfortunates who come in contact with it, and will overcome natural protection given time. These deciduous trees are on the offensive in the realm of plant warfare.

Encountered

The most visible signs of these trees are the seeds -- which seem perfectly ordinary -- flying in the wind. The trees do not start "weeping" until their tenth summer, when they are about 10 feet tall. Many cultures consider these arbors pests; a few mythos even label them as "cursed." The maturity at which the telltale signs become obvious will make them harder to remove as the acid damages axes and saws. The first sign of their maturity is often when metal implements used to chop them down begin to sizzle, which is bad news for armor, roofs, vehicles, and gates.

In *GURPS* terms, those victims without innate Damage Resistance and those with Damage Resistance due to Fur or Thick Skin will notice quickly (in 1d seconds). Rigid DR will not tell a victim more than if splashed by water! If ignored, it can cause 10 damage over a day or erode 10 points of armor.

Industrial Uses

"The portents indicated that the young man's rite of passage was to be 'trial by water.' Thus, he was stripped to his waist, with paint on his eyes and hands. Now, he must walk through the orchard nonchalantly without flinching, while acid drops fall on his skin. If he can keep a steady pace over the scarred ground, he will emerge on the other side a man."
-- Lord Everett Brannigan, *The Forest People of the Entaxi Plateau*

The wood from these trees is perfect for containing and resisting acids. Alchemists often make their work tables from this wood, although it offers no special resistance to flame. The acid is good for reducing the impurities from neutral metals such as gold. Less friendly places might plant these trees to prevent loiterers; victims might be tied below such a tree in a cruel form of water torture. Sages are often seeking the formula for the Universal Solvent; a few Guilds claim to have succeeded, but before they can claim the prestige, they are now racing to perfect the Universal Bottle so that they can present their findings.

Adventure

The heroes come across some young troublemakers who are passing the afternoon by baiting a large lizard to run through a thick copse of acid trees again and again. Just as it gets near one end, the youth hides, and another calls to it. The drake is injured and angry. As the party approaches, they can hear the youths' intentions to unleash it on the town as a prank. Will the adventurers kill it to put it out of its misery, or find a way to heal it, lead it away, and bring the real criminals to justice?

Acid Trees

Appearance: deciduous trees.
Category: Plant.
Diet: Photovore.
HT 14.
SM +2; DR 2, (+DR10 (Caustic only)).
Traits: Affliction (Agony (mild , 1h, 6-)); Affliction (Agony (extreme , 8h, 6-), insidious; Link); Resistance to Poison +8 (Caustic Only); Toxic Attack 1 (takes extra time, 8h; Link).

Clodhoppers

"These creatures have spawned many legends and faerie myths. This is impressive, considering that they are not magical creatures at all. All they do is steal people's shoes. That said, they were a part of children's tricks, especially in regions where shoes are customarily left at the door."
-- Historian Yvette Tsial, *Myths that are Not*

Clodhoppers are creatures with two reputations. Outside of a "shell," they appear to be small, short-nosed, short-tailed rodents that are brown or dark gray. They are more commonly noticed when they have appropriated a shell . . . or, in the case of urban areas, shoes or baskets. The name "clodhoppers" comes from city dwellers' sightings of a mammal acting like a hermit crab. Clodhoppers like taking cover . . . and then they take the cover with them. The habit of a mated pair to steal a pair of shoes together and then hop around in them inspires myths of ghosts. Their small, low-set ears are barely visible from under the inanimate object, and thus might be overlooked.

Encountered

In general, clodhoppers either found alone, in pairs, or in packs of about 20-30. They do not like stairs, so upper levels of homes are generally safe, although a "naked" clodhopper could navigate stairs in an emergency, should there be no cover it could take. In the wild, clodhoppers can often be found around seashores, carrying shells far inland. Some have also been seen using large, curled leaves.

Industrial Uses

"What can be said is that these animals have a sense of rhythm, able to keep in time with each other, and to pace other creatures as they move about. They say that a group of clodhoppers could destroy a bridge, if they all tried to cross it at once."
-- Comedian Arin Riadt

Industry continues to search for a practical uses for this creature. Some entrepreneurs are using clodhoppers in magic tricks, entertaining the public. A few prototype factories have them flipping switches in an assembly line. Enchantment of mirrors, illusions of independence, are simplified, if only to mirror other actions.

Adventure

The heroes are sent to obtain specially guarded magic boots. They are guarded by golems to keep sophonts and magic spells away. If the adventurers could keep a pair of clodhoppers occupied, and smuggle them in, they can hope to get the right result . . .

Clodhoppers

Appearance: A small grey-brown rodent, likely hiding in a shoe, or similarly sized concealment.
Category: Rodent.
Diet: omnivore, mainly herbivore.
ST 2-3; DX 12; IQ 3; HT 11.
Will 10; Per 12; Speed 6; Dodge 10; Move 6.
SM -5 (10"); 1-2 lbs.
Traits: Absolute Timing; Catfall; Super Jump 2; Talent (Music); Wild (or Domestic) Animal

Skills: Jumping-14.

Giant Clodhoppers

ST 4-6; DX 11; IQ 3; HT 12.
Will 10; Per 12; Speed ; Dodge ; Move 6.
SM -3 (2' long); 4-8 lbs; DR 1.
Traits: Add Enhanced Move 1 (Ground Speed 12)
Notes: This giant variant is, thankfully, rare, and has been blamed for broken kegs, pots, sacks, waste baskets, and the odd camper being pulled away in his sleep.

Woundwarts

"Have you ever seen a woundwart literally suck the injury from a person? It is hard to believe that such a vile-looking creature could save so many lives."
-- Captain Mathew Livent, plainship *Merlin's Cape*

The woundwart is a green, mottled lizard with a spine ridge. This long, tubular reptile has a big mouth, not unlike the maw of a leech; all these characteristics make the creature unlikely to win beauty contests. What makes this creature stand out is its ability to detect wounded creatures, and then apply first aid. They lick and suck the injury, internalizing the damage. Finding a wound, the woundwart devours the excess blood, and seals the wound with an antibiotic secretion. Unfortunately, because of the vacuum, the "patient" takes a small amount of internal damage at the same time due to blood loss. Its first documented use seems to be from a healing temple that sought to find a silver lining in an abominable-looking natural symbiont.

Encountered

Woundwarts are naturally encountered in swampy areas, especially those that tend to attract (or create) many injured creatures. It seems that in the wild, woundwarts are normally found in a symbiotic relationship with a species of large swamp dweller with relatively thin skin. These gargantuan beasts frequently get into contests "to first blood," requiring first aid.

The animal is hard to conceal especially in normally sterile areas, such as places of healing. It is noisy, requires lots of water, and smells terrible. Despite these negative characteristics, the woundwart is, itself, a very clean animal. Hospitals and military field stations may be issued as many as possible, but their upkeep is expensive, and are best used where the most wounded are.

In *GURPS* terms, the creature can provide the equivalent of TL6 First Aid. The "patient" -- and possibly witnesses -- may require a Fright Check if the victim is not expecting it.

Industrial Uses

"If the magical or alchemical means are available, it might be a good idea to put a woundwart in a form of suspended animation, or at least deep sleep, until it is needed."
-- Avid Txan, *Magical Logistics*

Medical areas can benefit the most from these creatures, but the food packing industry can use these clean creatures to remove a large percentage of blood from meat. Alcohol is technically a poison, and a woundwart can remove it; although there is a price, it is better than dying of alcohol poisoning. The enchantment of wound and fatigue-transfer items is aided by these creatures.

Adventure

The adventurers are instructed to healing a man against his will. The plan is to get him ready before a fight by closing his wounds, and sobering him up. The man's brother begs the heroes to sober the challenger, as he needs his wits about him. Even a master of drunken fighting needs help . . .

Woundwart

Appearance: An ugly-looking tubular-headed reptile with a leech-like mouth.
Category: Reptile.
Diet: Omnivore.
ST 4-6; DX 9; IQ 2; HT 13.
Will 8; Per 9; Speed 5.5; Dodge 10; Move 5.
SM -2; 40-60 lbs; DR 2.
Traits: 360° Vision; Appearance (Ugly); Bad Smell; Charitable; Faith Healing (Patient left with at least 1HP lost; user takes equal damage); Increased Consumption (Water); Reduced Consumption (Food); Regeneration (Wounds transferred by Healing only); Resistance to Disease +8; Resistance to Poison +8; Restricted Diet (requires red blood); Perks (Piercing Cry; Sanitized Metabolism); Wild Animal
Skills: First Aid-12.

Tiny Woundwart

ST 1-2; DX 10; IQ 2; HT 12.
Will 7; Per 10; Speed 5.5; Dodge 11; Move 4.
SM -4; 10-20 lbs; DR 1.

Giant Woundwart

ST 9-11; DX 8; IQ 2; HT 14.
Will 9; Per 8; Speed 5.5; Dodge 9; Move 6.
SM -1; 100-200 lbs; DR 2.

Dreamfruit

"Engineered by FabulFoods, the dreamfruit was an immediate success. Marketed initially as a diet aid, its popularity spread like wildfire through different demographics. It gives people the best culinary sensation that they can remember, or want to remember.

*In response, some companies then began to serve food that a diner **can't** remember . . ."*
-- Milo Travis, *Popular Magic*

Dreamfruit gives the diner the sensation of eating whatever he would most like to eat right now, even if he doesn't consciously recognize it. The "meat" of this tan-colored seedless "apple" is somewhat nutritious, and is a good stabilizer for other recipes. If resisted or eaten in no-mana zone, these fruit have only a neutral, acidic taste and the consistency of a seedless apple.

Encountered

The oil or juice of a dreamfruit is a key flavor in preserved rations. The fruit itself can be purchased at street corners, in supermarkets, as food additives, flavor enhancers, and raw fruit. A good maî tre D' can lead the diners to expect certain flavors, and thus a creative storyteller can make the meal . . .

In *GURPS* terms, a diner that specifically wills a sensation (on a Will+4 roll) will give him what he wishes, or Will-4 if he resists (or isn't expecting a magical effect). In either roll, Will can be replaced by the Mind Shield skill, if it is better. The effect could also be psionic or biological in nature. If the latter, then rolls are against HT instead of Will.

Industrial Uses

"Dreamfruit do not grow on trees. Instead, they are cultivated from a small frond which does not cast seeds. It must be spliced and grown in a special solution to grow roots . . . or so they say. They say that it cheapens a meal with an irreplaceable resource. Can it be true?"
-- Comedian Amil K'ran

Dreamfruit are considered incredibly useful for stored rations. In addition to fighting scurvy, these fruit can remove the tedium of dried rations, at the expense of reality. The art of storytelling at the dinner table might be revived to invite someone to experience something new. The enchantment of certain illusion and mind control effects are much more effective with this creature.

Adventure

The adventurers are charged with investigating a rumor that many people who have eaten dreamfruit are experiencing unusual side effects. Research seems to point back to a batch from one orchard. Digging will reveal that someone has added a secondary enchantment to a single bush. Getting access to check the farm's orchard will not be easy. Who did this? Is a spy testing a new spell?

Dreamfruit

Appearance: An apple-shaped tan fruit.
Category: Plant.
Diet: none.
HT 11.
SM -6 (3.5" "cube").
Traits: Affliction (Will; Blood Agent; Incapacitation: Hallucinating; Limited Use)

Dreamfruit Bush

Appearance: A misshapen, crooked bush with s-shaped leaves.
Category: Plant.
Diet: photovore, manavore.
HT 9.
SM -1; DR 2.

Mist Mount

"Foretelling if the mistriders had arrived was often an easy task. All a seer need do is look out the window and see the wall of fog. Isn't it odd that most seers are blind?"
-- Master Alfred Coren, *Popular Magic*

A mist mount looks like shaggy equine, with a frame something between that of a horse and a deer. The most noticeable feature is that it creates mist. The fog seems to seep off the animal, especially from the legs. The mist mount operates best in fog, providing it a measure of stealth (outside of the fact that the fog itself can often be seen as suspicious). This works well in the hilly highlands with a very light or no wind. In the wild, mist mounts normally operate in small herds, creating their own fog banks. In the dells these creatures naturally inhabit, the fog gathers, and rarely dissipates.

Encountered

Wild mist mounts must generally be broken before they can be ridden by just anyone (Otherwise, Animal Handling and riding rolls are at -5). They can bond to a rider with years of trust, generally raised from a calf. Bonded mounts will fight fiercely for their riders. Wild mist mounts seem to do best in rolling hills or forest with very little wind. Both sexes grow horns, but keepers normally trim and round the horns of domesticated animals.

Industrial Uses

"For all the hype, a lone animal can only move at a brisk walk, or it will outrun its fog. Where do they get the water from? Is it created, or do they leech it from the air?"
-- Kiel Arislund

Mist mounts are the preferred steed for scouts, sentries, and forest guardians. Lone sentries in graveyards and courtyards can also benefit from its abilities. Some seek to breed winged mist mounts that create clouds; the ability to see through clouds would make them much safer than pegasi in mountainous areas. Some enterprising businesses have been shipping mist mounts to the tropics and deserts to help normalize environments. Although the humidity mist mounts generate can be crucial to cargo and comfort, the creatures can be miserable if they do not have much room to move, however. Organizations that find they have too much mist often turn to fan birds to clear the area. Spells of Water Vision, fleetness of foot, and coolness can be aided even by discarded antlers from these animals.

Adventure

The heroes must find the way to a Lost Valley. To make the journey up the mountains requires a surefooted mount, preferably one that can see in fog . . .

Mist Mount (see horse and deer in *GURPS Bestiary*)

Appearance: A slender shaggy horse-deer hybrid that has seasonal horns.
Category: Mammal.
Diet: Herbivore.
ST 10-12; DX 13; IQ 2; HT 13-15.
Will 10; Per 10; Speed 7; Dodge 11; Move 7.

SM +1; 200-400 lbs; DR 1.
Traits: Acute Hearing +3; Acute Vision +1; Acute Vision +4 (Only to counter penalties due to fog); Create (Water; Permanent); Domestic (or Wild) Animal; Enhanced Move 1 (Ground Speed 14); Temperature Tolerance 4; *Skills:* Blind Fighting-12.

Giant Mist Mount

ST 15-20; DX 11; IQ 2; HT 15-16.
Will 11; Per 11; Speed 6; Dodge 10; Move 6.
SM +2; 1,000-1,500 lbs; DR 2.
Traits: As above, but Enhanced Move 2 (Ground Speed 24)

Variant (to either): Unbroken: add +1 to IQ, and an additional +2 to Will.

Dancing Eyes (*Rubax*)

"These little shadow creatures are just glowing eyes and a circular maw of pointed teeth . . . It is said that their bark is much worse than their bite. Still, any bite from something with that many sharp teeth would hurt, even if it is a small one."
-- Lady Amelia, *Journeys through the Crystal Fish*

This loud creature is just as it appears, a pair of eyes and a circular maw of teeth, floating in shadow. Its slitted eyes can come in different colors, although in stories they are usually glowing red. When it blinks, it is virtually untouchable. Fortunately, it rarely flinches, although it does growl as it shies away from very strong lights. Sudden bright sources of light can startle dancing eyes, if only to make it blink and take a new target. In general, light from wooden torches and small sources of flame do not scare the creatures any more than it would any other wild animal. Dancing Eyes are natural predators for shadow hands (hand-sized shadow creatures), and other such small creatures of shadow. Curiously enough, for a creature of shadow, dancing eyes seem to be afraid of absolute dark.

Encountered

Dancing eyes are often encountered nipping at individual's heels from the shadows. Dancing eyes will try to frighten humans just to get them out of their territory. They seem scarier than they actually are and will rarely *wound* larger creatures. Some individuals have raised rubax from pups and claim that they make good pets. If so, the usefulness of the creature as a sentry is thought to be on par with a small, yapping dog: more alarm than attack animal.

Industrial Uses

"Almost paradoxically, it is those individuals who hate creatures of shadow who will benefit the most from keeping a pet rubax. They eat or scare away most creatures of shadow that are smaller than them. They do have a problem with larger shadow predators that do not feel fear, however . . ."
-- Lady Amalita, *Better Homes and Drawbridges*

There is clear use for these beasts as symbionts to grant the host night vision ability. Research continues in the exploration of the other powers, such as flexibility and perfect recall. Enchanters today see opportunities to enhance night vision and meld with shadows using what they can gather of this creature.

Adventure

The Eyes Have It

Dancing eyes have stolen a McGuffin and have hidden it in a haunted house. Several prominent researchers believe

that dancing eyes are the product of human nightmares brought to the waking world. Alchemists are trying to bring objects such as goblets of gold to and from nightmares Studying lucid dreams seems to be the first obstacle. Now, they need volunteers to try to tap these powers . . .

Dancing Eyes

Appearance: Disembodied, cat eyes and a circular maw of teeth.
Category: Shadow.
Diet: Carnivore.
ST 2-4; DX 11; IQ 4; HT 11.
Will 12; Per 12; Speed 5.5; Dodge 11; Move 5.
SM -5; 1-2 lbs; DR 1 (ablative).
Traits: Body of Shadow (Switchable; Usually On); Bully (9); Fearlessness +4; Insubstantial (Accessibility: Must have eyes and mouth shut; Accessibility: Only in the Dark); Night Vision 6 (shifted); Night Vision 3; Phobia (Pitch Black) (9); Teeth (Fangs); Vermiform; Wild (Or Domestic) Animal

Giant Dancing Eyes

ST 5-7; DX 10; IQ 4; HT 12.
Will 12; Per 12; Speed 5.5; Dodge 11; Move 6.
SM -4; 4-8 lbs; DR 2.

Huge Dancing Eyes

ST 8-10; DX 9; IQ 4; HT 13.
Will 12; Per 12; Speed 5.5; Dodge 11; Move 7.
SM -3; 16-32 lbs; DR 3.

Gargantuan Dancing Eyes

ST 11-13; DX 8; IQ 4; HT 14.
Will 12; Per 12; Speed 5.5; Dodge 11; Move 8.
SM -2; 64-128 lbs; DR 4.

Beyond Fantasy

This article describes seven creatures, most of which could appear to physically exist in a hard-science world, even if the more wondrous aspects could not. Wrecking Crane could be birds with very thick skulls that stun prey. Acid trees exist to a less powerful extent. Clodhoppers, though slightly over-the-top, have no real special powers. Woundwarts can provide basic cleaning of wounds, as per bandaging. Dreamfruit might contain psychotropic drugs, not a magical effect. Mist mounts could simply have adapted to foggy conditions prevalent in their native area. Dancing eyes might be matte black creatures that keep to shadows, perhaps possessing luminescent teeth and eyes.

* * *

Special Thanks to JL Hatlen Linnell for his reply of "Me! me! me!" when the call went out.

From Stairwells to Sled Rides: A Case Study In Recycling

Yesterday, I took the family to the Indianapolis Children's Museum again, in our continued efforts to get the most out of our season pass. (There are still permanent exhibits that we haven't set foot in yet, even after a half-dozen trips.) One interesting thing about this visit was the trip on the Yule Slide, a temporary curved two-lane white slide that stretches from the second floor of the museum to the first, where folks climb aboard white pillow-case-like things akin to sleds and zoom down. Sam rode in each of our laps once, unsure the first time but having a good time the second.

Unfortunately, once we rode the slide to the first floor, to get back up to to the second floor, we either needed to take the elevator (which is pretty slow) or go a bit of a trek to the spiral walkway that interconnects all floors of the museum. Ordinarily, from that point in the museum, we would have taken the wide curved staircase that connects the first and second floors. But this wasn't an option today . . . because that staircase had been converted into the Yule Slide.

I'm not a museum nut, so such transformations might be commonplace. But I found it a brilliant usage of the space, radically altering the shape and structure of the museum and forcing me to reevaluate the entire experience with new eyes. But mostly I marveled in the efficiency of the entire endeavor; even if the kids knew of the structural alteration, they didn't *care;* the Yule Slide lines were long (but brisk) throughout the day.

In the world of RPGs, I can't stress how useful a technique this is as well. See, if you're a typical gamer, you probably have an entire library of useful books and products designed to make your life easier. (If nothing else, you're one click away from perusing the thousands of articles in our own humble archives.) But a long-running RPG campaign has a constant demand for new material. So why not transform what you already have into a new form? Depending on what you want -- and what you have, obviously -- it can be surprisingly trivial to slap a new coat of paint on something, rendering it almost unrecognizable. For example, if one of your books details the *Orient Express* train (such as the superlative ***Horror on the Orient Express*** or the old ***Orient Express*** supplement for ***Top Secret***), then you have a tube-like luxurious means of transport for a hundred different settings. Whether you need a magic-powered vehicle in a fantasy world, a steampunk subway system (or steampulp Cannon-Train to Mars), a mag-lev super-train in a Cyberpunk campaign, or a splendid interstellar spaceship, you're covered.

You can also reuse game stats as much as you like. Once you have one vaguely competent police-office type, you also have a security guard, an army recruit, a mastermind's mook (make as many as you like!), and so on. Of course, some games make this easier than others . . . a Generic Universal RolePlaying System really pays off here, as do games such as ***Savage Worlds, World of Darkness,*** the ***d20 System*** (and, to a lesser extent, its other time-period variants), and others. And if you're quick-witted enough (or plan ahead of time), you can even use more important "unique" characters again. For example, imagine a criminal genius with telekinesis, able to manipulate objects from afar. Or a martial artist with psychic "hunches" and hands with gauntlets with monomolecular blades that whip out in thin wires of death (with the gloves protecting the wearer). Well, I've just described filed-down versions of Mr. Fantastic, from the Fantastic Four; and Wolverine, from Every Marvel Comic Ever Extending Retroactively to the Dawn of Time. Really, the game stats would need to be changed very little, provided the name, costume, and attitude were all tweaked accordingly. (As an aside, Spider-Man used this very technique himself in the Identity Crisis storyline, splitting his Spider-Man persona into four different costumed identities -- two criminal, two heroic -- each using his powers in different ways so no one could discern that they were all the same person.)

And, of course, I've talked before about [reusing plots and storylines](), [exploring variations on plots](), and even [rebooting a campaign and using the same characters]().

The biggest obstacle in all this is trying to maintain the knowledge of "what is where"; it doesn't do you any good to have a need for a luxury train-like conveyance if you can't remember the name of the ***Orient Express*** and which of your books contains it. And, in many cases, it's probably easier to recreate game stats or other information than it is to

find it elsewhere (especially in fast-and-easy game systems where you are just scribbling down a few stats). I suspect the quest might become simpler in the future if and when libraries migrate more to electronic, PDF-like models, which are much more conducive to electronic information management; searching for "luxury train" (no quotes) in Google popped up a reference to the *Orient Express* in the fifth non-sponsored site.

In the meantime, reuse whatever you can; players probably won't notice . . . and even if they do, they may well not *care,* content to be wide-eyed kids ready to experience something as commonplace as a staircase with the new eyes of a sledder on the first snowy morning.

King Arthur Pendragon

Published by **[Arthaus, Inc.](#)**

Written by Greg Stafford

Cover by Michael Phillippi

Illustrated by John Bridges, Talon Dunning, Eric Hotz, Larry MacDougall, & William O'Connor

Cartography by Jeff Holt

234-page b&w hardcover; $34.99

Although there have been several RPGs devoted to the Arthurian legend, none have acquired the reputation and acclaim of *King Arthur Pendragon.* First published by Chaosium in 1985, it went through four editions with the fourth being regarded as the most complete version. Unfortunately out of print for some time, the new edition published by White Wolf Studios under its Arthaus imprint sees the designer revisiting the game, reorganizing and redesigning for a fifth edition.

When first published, *King Arthur Pendragon* was regarded as a highly radical game, introducing several revolutionary concepts. The first was that only a single character type, the knight, was available to play and that in order to play a knight, the character had to be male. Although later versions of the game allowed female knights and magic-using characters, the game's emphasis meant that any druid or sorcerer character was always secondary to the knights. Second, a character undertook adventures, quests, tasks, and battles during only part of the year, the rest of the time being dedicated to the upkeep of family, possessions, and lands. Third, long-term play was designed to be dynastic, with a character being expected to marry, procreate, and will his possessions to his eldest son, who in turn would become a player character. Fourth, characters were designed with traits and attributes that not only enforced a certain style of play and feel for the setting but could actually dictate the actions of a player character.

This new edition retains many those features. Players take the roles of knights newly ennobled at the age of 21 in 485 A.D., years before King Arthur's Golden Age when King Uther's Britain is threatened by Saxon invaders. Female knights are discussed, but whether they are allowed in a game is up to the GM.

The young knights follow Christianity or a pagan faith of the Cymric culture and owe their fealty to the Earl of Salisbury. Unlike the Fourth Edition (which provided cultural options for Saxon, Pictish, and Gallic knights), the Fifth Edition does not, instead returning *King Arthur Pendragon* to its beginning. In this, it is much like Green Knight's *Book of Knights,* but this Fifth Edition provides everything necessary to play, including an introductory scenario. The scenario casts the player characters as squires undertaking the ceremony of knighthood and then going on their first adventure, itself a series of encounters that neatly showcases various aspects of both the rules and the setting.

The rules themselves are a scaled down version of the Basic Roleplay System, employing a d20 rather than percentile dice. The core mechanic is still rolling low to succeed, but the closer the roll is to a target, the better the result. An exact roll of a target or skill value gives a critical success. Players deal damage using handfuls of six-sided dice, with a knight's strength and weapon used dictating how many; his constitution and size determine not just how many hit

points he has, but also how much damage it takes to knock him down and how much is a major wound.

Character generation also remains unchanged; involving the selection of attributes, assigning of skill points, and determination of distinctive physical traits, the aim being to qualify the character for knighthood. In addition, the player develops the family back story, rolling for the significant events during the lives of his character's father and grandfather. The new knight also inherits a family characteristic, for example, "Light Footed" (+10 Dancing) or "Love For Arms" (+10 Heraldry) plus a singular heirloom or legacy (such as extra money, a sacred religious relic, a weapon, a piece of clothing, or jewelry) or an extra horse. A player also needs to create his knight's coat of arms; unfortunately, in the game's only proper omission, a page of helpful heraldic charges and devices is absent.

To measure his personality and feelings, every knight (and major NPC) possesses a set of 26 Traits, divided into 13 pairs and any number of Passions. Each Trait pair, such as Chaste/Lustful or Valorous/Cowardly, together add to a total of 20. If any Trait has a value of 16 or more, then the knight is famous for it. During play, a Trait can be tested by the GM, a simple roll under it on a d20. For example, when a temptress tries to seduce a young knight, he resists by checking his Chaste Trait. A successful roll indicates resistance, but a failure does not mean that the knight falls for her charms. He still needs to make an opposing Lust check; if she wins, he falls into her arms.

The Traits also provide an objective for the character knights, not just in attempting to act in a particular way (for example, trying to be more Chaste or Energetic) but also in bonuses gained for attaining religious virtue. When a knight raises the Traits valued by his faith to 16 or more, he gains a bonus. For example, Roman Christian knights attempt to improve Chaste, Forgiving, Merciful, Modest, and Temperate Traits. Bonuses vary from faith to faith, such as a +2 Healing Rate for virtuous pagans and +6 hit points for Roman Christians.

A character can also possess Directed Traits, lesser feelings about a particular thing that give a bonus toward a full Trait in play. Acquired through play, suggested by the player or the GM, or inherited from family history, a Directed Trait might be weakness for redheads or a suspicion of a particular person. Additionally, knights hold to Passions, strong emotions toward something or someone, initially of a character's family and liege lord. Again, these work in fashion similar to Traits, which guide adventurers to expected behavior and attitudes as much as they enforce it.

Unlike other RPGs, experience checks come not at the end of an adventure but instead while in the game's Winter Phase. Likewise, checks for aging, economic circumstances and maintenance, a knight's stable and family, and training and practice occur during this period. This is also the time to run any solo adventures. Lastly, a knight's Glory is computed. Obtaining Glory is the objective of the game; it exists as a measure of a knight's fame, success, status, and influence. Glory is quantitative, representing the knight's reputation in bulk, the actual nature of the reputation being handled by the knight's Traits and Passions. This differing emphasis enables an evil knight to gain Glory despite the nature of his actions. Glory can be inherited, gained during play, and come from holding office and lands. As well as greater recognition and precedence, high Glory rewards a knight with enhancements to non-combat skills such as Flirting and Singing.

The book further explorers the knight's role with rules for handling tournaments and battles. There are guides to the function of magic and faith in Arthurian England with sufficient detail to involve both in a game. Despite the game's focus being 485 A.D., the future is not ignored. The book examines some of the changes inaugurated with the reign of King Arthur, such as the introduction of chivalry, the importance of romance, and various customs and advances in knightly equipment. All of this hints at the things to come in the Diana Jones Award-nominated ***Great Pendragon Campaign Sourcebook.***

So which version of the Arthurian legend is this game? It is certainly not that of Monty Python and the Holy Grail, a danger that it rigorously avoids. (This does not make the game humorless; for example, Brian, the knight of a player in the reviewer's group, inherited a holy lance and became Sir Brian of the Blessed Lance.) Rather, the game presents an idealized version that draws on the feudalism of the Middle Ages as much as English, French, Welsh, and modern versions of the legend, from *Le Morte D'Arthur* to *Once and Future King* to *The Mabinogion.*

Physically, the Fifth Edition of ***King Arthur Pendragon*** is a sturdy hardback given a clean polished look. Removing so much of the Fourth Edition's information has allowed the contents to breathe a little, and the book's layout suffers from none of the Fourth Edition's stodginess. The end papers are the book's only points of color, the front given over

to the saga's leading figures' heraldic devices, the back to a full-color map of Britain circa 485 A.D. Although a nice map, the reviewer's parents will be dismayed to learn that they live near "Donchester" rather than Dorchester.

King Arthur Pendragon is 21 years old and has not aged at all. It still feels fresh and modern, comparing pleasingly with more contemporary designs. Yet this new edition returns the game to the First Edition's simplicity, placing the emphasis on young knights as they prepare for the campaign to come. Although there have been pretenders to the throne, *King Arthur Pendragon* remains the definitive Arthurian roleplaying game.

Pyramid Review

Pick & Pack

Published by [Z-Man Games](#)

Designed by Simon Hunt

Art & graphics by Régis Moulon, Simon Hunt, & Kris Hunt

Full-color boxed game with board, wooden grabber pawn, 36 apple trays, 24 action tiles, & rules; $20

The best time for apples is in the fall, so grab those Red Delicious while you can. As you eat, appreciate the hard work the folks down at the plant put into packing them. Their mechanical grabber isn't working properly, so the workers are fighting over control of it as they attempt to *Pick & Pack.*

The object of the game is to score the most points for the apples collected.

Two players are vying for a bonus this season, so contention over the claw is fierce. The board is six spaces on a side, a grid of 36 squares filled with trays of apples. These counters have from one to six pieces of fruit on them. Two sides of the layout have spaces where special action tokens are placed for the blue player. The other two sides have the same thing, but in red for the other player. The apple counters are laid out at random and the grappling hand (a wooden cylinder) is placed wherever the big six-point tray is.

On his turn, a player moves the grabber left or right along its current row. The other player does the same, but he sits at a right angle to his opponent, so one person's "left to right" is another's "up and down." If someone lands on a tray of apples, he takes that counter and puts it into one of his four crates (pictured on the board just off the grid). Apple trays have to be (ahem) doled out evenly, so operators cannot put a second set of fruit into a box until all crates have their first.

If the grabber is shifted to an empty space on the board, the player instead gets the special action token above or below his position (both players get the same selection of action tiles). Most of these have an immediate effect, like switching trays of apples in their boxes or preventing anyone from getting a specified apple tray, while Rush Order permits two actions, one after the other. The "crate lids," however, can be the key to victory.

A crate can hold up to four trays before it's full. After that, it's a matter of sealing it up, something the player hopes to do before his opponent does it for him. One of the special actions is the Premium counter -- it's a mark of quality that says the apples inside are the best. Conversely, one's adversary can instead stamp the box Wholesale, which lowers the value of the fruit.

When one player has all his crates sealed, or he cannot make any more legal moves, the game ends and points are totaled. Unsealed apples are worth one point each, premium apples are worth two, and wholesale apples a disappointing half point per fruit.

While some amount of fumbling is almost guaranteed when all the pieces to be manipulated are pushed together into a grid like this, the apple counters are still good, thick items with pleasant illustrations. The special action chits are the same, and there's no arguing against a nice cylinder of wood for the grabber. The foldout, fully mounted board is an impressive item at this price, and it all fits in a sturdy little box. The counters even come punched out for you and fitted into a molded plastic bottom.

Z-Man Games has brought back the thinking man's game. It won't be replacing chess any time soon, but players who can think a move or three in advance have the rhythm necessary to excel at this endeavor. It can be mentally taxing to work out so many possibilities, but it's doable. Players can actively work against each other to prevent someone from getting certain actions. An opponent can be held at bay simply by not letting him get to the same area twice (he can only activate an action tile by landing on a space where apples *were*).

Players choose where to place their action tiles before the game starts, but there's no single overwhelming strategy, and grabbing a few good apple tiles and forcing a quick end to the game isn't easy either. While a player has two Premium lids at his disposal, he can't seal the other two crates himself . . . his rival has to do that, and if he's good, he won't do it until he's in a winning position. The dance **Pick & Pack** requires is a simple but highly replayable waltz that, at a mere 20 minutes a go, will keep this game near the top of the stack.

Etherscope

Published by [Goodman Games](#)

Written by Nigel McClelland & Ben Redmond with Christopher F. Allen, Chris Durham, Mark Charke, & David Schwartz

Cover by Jonathan Hill

Illustrated by Ilya Astrakhan, James Cosper, Eduardo Herrera, Alex Kosakowski, Jeremy Mohler, Ethan Pasternack, Alex Shiekman, & Chris Watkins

304-page b&w softcover; $24.99

Most Victoriana RPGs mix in another element with those of 19th century history, imperialism, industrialism, chaos based society and so on. Usually based around a new discovery this catapults society forward encompassing several changes, but still remaining with the 19th century and still with the base genre both recognizable and gameable. *Etherscope,* an OGL RPG from Goodman Games, the publisher of ***[DragonMech](#)*** and the Dungeon Crawl Classic lines is different.

True, *Etherscope* is a steampunk RPG and it is a Victorian age set RPG, but it is not set during the 19th century. Rather, it is set in the 20th Century, specifically 1984. The discovery of the Ether in 1874 gave another avenue for Victorian inventiveness and industry, through the discipline of Ether Science. Innovations and inventions enabled smaller steam engines, more powerful weaponry, advanced lighter, tougher metals, and both cybernetic limbs and implants. Not only is Ether a ready source of energy, it can be manipulated directly, and via an ingested drug or an implanted device, has become a frontier into which the user projects his mind . . .

Britain is of course still a world power, but with two rivals. British disinterest allowed a newly powerful Germany to conquer most of Europe during the 1914-1922 Pan-European war. A subsequent Royal marriage united Germany with the Austrian-Hungarian Empire, and today the Kaiser rules the New Reich that dominates Europe. During the Pan-Pacific War of 1941-1943, Britain used the Royal Navy to counter Japan's expansion of the 1930s, but before the home islands could be invaded, the corporate-dominated United States of America interceded to broker a peace treaty. This effectively divided the Pacific between the two of them, plus several smaller nations.

Currently a Cold War exists between the three great powers, with Great Britain the greatest industrial, largest sea going, and most extensive power. The USA dominates both North and South America, having admitted several Spanish and Portuguese colonies as full States. Today these territories form a new frontier that is not the Wild West, but rather the Savage South. The New Reich rules Europe with huge armies and aerial fortresses with the blessing of the Pope, who has called the New Reich the Holy Roman Empire. In the Far East, China remains a mysterious unknown, while Siberia is home to the Communist state of Russia. The Middle East is stilled ruled by the sybarite Ottoman Empire, which has found wealth anew with its oil deposits used for plastics.

At home, Great Britain is dominated by one city . . . not London, but the Great Metropolis, a conurbation that takes in both Liverpool and Manchester. It is the heart of the Empire's industrial might, a squalid warren rife with crime,

iniquity, and revolution. The Northumbrian Republican Movement foments for independence; the criminal gangs sell the Tabs that grant users access to pleasure palaces in the Etherscope; and the transgenic strains are put to work that normal workers will not do. After a workers' revolution was violently put down in 1937, the Eugenics League developed new human species that could be put to work, with the Alphas at the top, of course.

Humans (known as "Betas"); along with four transgenic strains (Alpha, Gamma, Delta, and Epsilon); and the little regarded Fey, the descendants of lost Lemuria, make up Etherscope's six races. Alphas are bred from the finest Beta examples, while Gamma, Delta and Epsilon humans have been cross bred with other species. Besides his race, each character also has a social template, representing his place in society. A social template gives wealth, feat, and skill bonuses, plus Influences. Working like skills, Influences represent a character's connections, social standing and so on within particular areas. Personality traits provide the opportunity to gain Excellence Points, used for re-rolls and activating abilities. Most characters will have an avatar, in essence their visible self when projected into the Etherscope.

The six basic classes are all tied to a particular attribute. The Charisma-based Broker builds connections and status; the Strength-based Combatant does as his name implies; the Constitution-based Enginaught is a worker, engineer, or pilot; the Wisdom-based Pursuer is a hunter, detective, or explorer; the Intelligence-based Savant is brilliant in one or more fields; and the Dexterity-based Scoundrel is also self-explanatory. Besides the usual skills and feats, a player selects his character's traits from each class' Talent Trees. These enable a player to customize his character, so that a Broker could concentrate upon influence, charm, or leadership talents or even become spirit medium. All of the six classes possess this degree of flexibility.

Etherscope's cybernaughtics are kept to a pleasing but simple few. The various devices are divided between implants, such as a Scope Jack or Motor Neuron Accelerators; and attachments, like limbs . . . though several items are available as either implants or attachments. The only limitation on how much cybernaughtics a character can have is his Constitution. Various feats can increase this, and feats provide the points to buy the cybernaughtics. The range of cybernaughtics available is what you would expect and also come in aesthetic (for the Toffs), industrial, military, and street grades.

The Etherscope is accessible via scope portals, literally openings into the Ether, by a 'scope jack, a cybernaughtic implant, or by a Tab, a chemically impregnated paper square that when ingested casts the user's consciousness into the 'scope, usually in a particular location (pleasure palaces being a popular destination). Other Tabs can upload knowledge or skills. Inside the 'scope itself each nation has created its own city based domain. Traveling between them is difficult, with the spaces between reputedly home to scope demons, including the mysterious System Agents. Movement and combat within the 'scope is much like roleplaying another character, making gaming within the 'scope easier than in other Cyberpunk games.

Given its mélange of genres, adventure ideas almost suggest themselves. Many of which are discussed in the GM's section. In addition, the book comes with two adventures itself, both designed for first level characters and involving a mcguffin of some kind. The ready-to-run "Analogue" takes place in the Great Metropolis and has the characters preventing a new device from falling into the hands of the New Reich. Earlier editions of the rulebook contained "Compound 13," a detailed outline involving a chase against every power to retrieve a new weapon from a crashed zeppelin in the Congo. The new edition replaces it with "Cinnamon Rose," a search for a missing Scope performer, a more useful inclusion as it can be run after "Compound 13." Also included is a very helpful list of inspiring reading, viewing, and listening, and -- new for this edition -- some bonus material taken from the game's other supplements. This is actually useful advertising, and it's nice to see a publisher use a second printing to make useful changes.

As an OGL game, *Etherscope* provides everything necessary to play, from the point-buy system for character attributes to the rules for creating beasts and NPCs. Of course, it also makes it mechanically familiar and all a player and GM has to do is familiarize themselves with the setting. Although there is just about enough detail provided, it is hindered in several ways. First, there are not enough illustrations, especially of the various pieces of equipment, weaponry, and vehicles. Second, there's no index. This is an absurd omission given the frequent need to refer to the book's contents. Third, the text in the book's many tables is a little small on the eye. Fourth -- and this is a minor problem -- another edit is needed, particularly as headlines often end a column, leaving its subsequent paragraph

widowed in the next column over. Finally, and this is a slighter problem, the map would have been clearer had it been in color.

Etherscope also suffers from having a little much of everything. For example, the Lemurian and the Fey aspects of the setting are left unaddressed in this book. In fact, they could have been dropped and the game would still be as interesting. And the reason it is interesting is that it blends several genres -- Victoriana, steampunk, and cyberpunk -- allowing only the first to dominate, though the rest still remain part of the setting. It is also interesting because time is given for the setting to develop at a more reasonable pace, rather than rushing to get to the point when play begins. Although the suggested time line feels forced in places, it gets the game into a very alternative (yet still cyberpunk) 1980s. But just as *Etherscope* is a whole new 1984 -- the seminal year for the genre -- it brings a pleasingly fresh eye to the steampunk genre.

--Matthew Pook

GURPS Martial Arts Case Study

Strong Guys: Part II

by Peter V. Dell'Orto

Only the Strong Shall Survive

In <u>Part I of this case study,</u> we looked at how Strong Guys fight. To benefit the most from these tactics, you need to be powerful enough to pull them off and strong enough to use the heavy weapons designed with big characters in mind -- those two-handed swords, polearms, morningstars, M60 machine guns, manpack miniguns, and your own meaty fists. So let's see what we need to build a Strong Guy.

Building the Strong Character

Building a Strong Guy isn't much different from designing any other type of fighter. Rather than go into a treatise on creating a fighter, this article concentrates on those particular aspects that help a powerfully built fighter thrive.

Many templates in *GURPS Martial Arts* come with the "Tough Guy" lens, detailed on page 32. That lens is a gold mine of good purchases for a would-be Strong Guy. Consult that first! You can't go wrong dedicating most of your spare points to characteristics from that lens.

Strength

This is the defining, central statistic for a Strong Guy. One good definition for a Strong Guy-type character is someone whose ST exceeds their DX. You need lots of it. How much? For humans, you'll want at least ST 13. That strength gives you a base thrust of 1d and swing of 2d-1. That's important for taking advantage of the "per die" multipliers for unarmed combat skills, various techniques, and maneuvers and options like All-Out Attack (Strong), Committed Attack (Strong), and Extra Effort (Mighty Blows). It'll also help offset the penalties for weaker moves that give you more flexibility, like Defensive Attack and Aggressive Parry.

But don't stop at ST 13. The more strength, the better. ST 17 provides a further breakpoint for 3d-1 swing, and ST 19 is the first appearance of multiple dice for thrust.

You'll also need to decide how you intend to fight before you settle on your final stats. Taking advantage of heavier weapons calls for a high ST score. For Unbalanced weapons, you'll want ST that is 1.5 times the Min ST of your weapon to avoid needing to ready it after each use. With sufficient ST, you can use even some two-handed weapons in one hand.

Don't forget about HP. Extra HP are always useful for keeping yourself alive and for doing more damage on a slam. If you can reach 20 HP, do it -- you'll heal twice as rapidly and get double benefits from magical healing (see page 88 of the *Basic Set*). The *Basic Set* recommends a limit of +30% over your ST. With that limit in place, you'll need at least ST 16 to obtain a high HP. With the appropriate Special Exercises perk from some martial arts styles (for example, Sumo), you can buy +100% of your ST as extra HP. This is usually well worth the investment. A ST 15 sumotori with this perk can buy his HP up to 30, allowing for triple-rate healing and massive slams! A great investment for the cost of a 1-point perk and 30 points for the HP.

Finally, a *large* guy is cheaper to make into a *strong* guy. Consider Gigantism and its SM+1 for the 10% discount on ST and HP. A ST 16, HP 32 sumotori would save 9 points this way -- enough to buy the required Special Exercises perk and +2 skill in Sumo Wrestling! Gigantism also comes with a +1 Move. But being big has its disadvantages.

You're more likely to be hit with missile weapons. Armor and clothing cost and weigh more. You might not be able to shop off-the-rack for armor in a modern society. That's less of an issue in a historical low-tech world where everything is usually handmade for a specific person, but the extra weight of your armor might be more than your additional BL. In fantasy worlds with tiny villages supporting smiths selling armor off the rack, modern limitations may apply -- sure, he has six suits of plate for sale, but none in XXL . . .

Health and Fatigue Points

Fatigue Points can be expended for Extra Effort in combat, allowing for Mighty Blows to get the benefits of an All-Out Attack without the loss of defenses. Fit helps a character to recover from FP loss because of combat at high encumbrance. On a budget, Hard to Subdue is useful for staying conscious, and Hard to Kill is useful for staying alive. But given a choice, improve your HT to take advantage of better rolls to avoid unconsciousness, overcome stunning, avoid lasting effects of crippling injuries, stay alive, and provide a larger pool of FP. A Strong Guy without fighting endurance won't be much use. Make sure you have enough HT to stay up fighting and shrug off the effects of incapacitating attacks, stuns, and so on, plus enough FP to fight hard and often. Afflictions and many spells are resisted by HT, which means HT is critical for a tank-like bruiser. Consider HT 14-15. It's not terribly expensive (only 40 or 50 points), and it gives you at least +1 Basic Move before accounting for DX, gives at least a 14 or less to survive or stay conscious, and gives you 14 FP.

DX and Combat Skills

You're strong and healthy now, but don't ignore DX and combat skills. You must be good enough to hit your target without resorting to All-Out Attack (Determined), Committed Attack (Determined), or Telegraphic Attack. Don't go crazy if you're on a budget, but don't cut here. You need to be able to fight. Emphasize ST over DX, and damage over skill, but don't ignore either. A powerful fighter pushes the balance between attacking skill and damage to 75%/25% or 60%/40%, not 100%/0%. All your ST is no good if you can't hit, or if you can only hit when you give up your defenses or enhance your opponent's defenses! A good skill level to shoot for is 14-16 -- you get a Parry of 10-11, and an unaimed attack or a torso attack will be good enough to minimize your chances of a critical failure. Don't let "Strong Guy" equal "unskilled klutz."

Perks

Any perk that fits your fighting style is worth taking -- don't limit yourself. But some perks are especially useful. Remember, you can buy perks from your style with half as many invested points in the style. But anyone can take one of these perks if they have 20 points in the appropriate skills. Certain perks are especially useful for Strong Guys.

- **Armor Familiarity.** Generally, Strong Guys reduce penalties for heavy armor simply by being tough enough to lower their overall encumbrance level. Most armored Strong Guys rely on weapon skills that simply aren't penalized by encumbrance. But if your main unarmed attack is Karate or Judo, or if you expect to fence with your rapier while armored down with a full musketeer's kit or slash with your saber while carrying off the Lost Gold of the Andes, Armor Familiarity becomes useful. An additional reduction of the penalty by -1 is worth looking at -- a fighter could armor up to Light encumbrance and have no penalty, or up to Medium for a mere -1. For a powerful character, that's a *lot* of additional weight carried without penalizing mobility-based fighting skills.
- **Improvised Weapons.** Strong Guys can benefit from this when it comes to swinging around barbells, chairs, lengths of pipe, tree branches (or sufficiently small trees) . . . and assorted bar-hall favorites like bottles and

Too Much HT?

One problem with HT 14 or 15 is that you're as likely to die as you are to pass out. In a losing fight, you may get hacked down to -5×HP and automatic death before you're unable to keep fighting . . . which means your fights will generally be "win" or "die." That *can* back a GM into a corner, and prevent fun opportunities for being captured by enemies who'll lecture you on their plans or toss you in gladiator pits. Before you make someone impossible to subdue, consider the consequences. That out of the way, a high HT is useful -- and a clever GM will find lots of penalties to your "unfailable" rolls . . .

barstools. This one is more useful in a modern campaign, where you might not be armed -- or can't resort to firearms to end a fight.

- **Iron Body Parts.** You've got high ST and a solid HT, but these perks let you withstand even more punishment in the chosen area. Many are gateways to Striker or Claws, Striking ST, or additional DR, all of which are useful for a big bruiser.
- **Neck Control.** Strong Guys are effective grappling against weaker opponents; this lets you leverage that for striking as well.
- **Power Grappling.** For Strong Guys who grapple, Power Grappling provides the best bang for the buck. In any situation you could benefit from the ST-bonus from Wrestling or Sumo Wrestling, you can swap it out for a ST-based skill roll. If your ST is much higher than your DX -- and it should be with this kind of character -- this means you can really maul opponents when you get a grip. Highly skilled grapplers are still a problem, but you'll be able to counter their DX-based moves with your ST-based skill. Combine this with a striking skill and Neck Control to grab opponents and belabor them about the head with your fists.

If your GM allows it, the Perk *Focused Fury* from the "[Designer's Notes: ***GURPS Martial Arts***](#)" is extremely useful for Strong Guys.

Weapons

"For Boris, weapons are like accessories to his damage score."
-- Aaron Falken, commenting on his then-ST 18 fighter's three-second tackle, grapple, and Neck Snap kill.

What to fight with? A critical question for any fighter, but for a Strong Guy, the options are much wider. With sufficient ST, almost anything can be a weapon. You might not even want to bother with weapons at all.

For fighters using low-tech weaponry, you want a weapon that doesn't have a low ST statistic -- if your ST exceeds the ST of your weapon by three times or more, the excess ST is wasted (see page 270 of ***GURPS Basic Set*** for details). This means that dress smallswords and smallswords are probably less effective for you. Ditto for other fencing weapons. This might explain *The Three Musketeers* hero Porthos' penchant for fighting with chairs, table legs, and his fists instead of his sword. You can use these weapons, but if your ST exceeds the minimum by three times, consider a heavier weapon -- or accept the restricted damage.

As noted earlier, a good ST score can allow two-handed weapon use in one hand, or get rid of the need to re-Ready it after attacks. However, this doesn't help if your weapon's *Parry* statistic is marked with a U -- but see Defensive Attack for a way to work around that limitation. If you're going to wield a balanced weapon or fight unarmed, a specific ST score isn't as critical.

Rely on big weapons that take advantage of additional special rules. Certain two-handed weapons rack up additional parries at -2, not -4, using the optional rules on ***GURPS Martial Arts,*** page 123. These include any ready, two-handed polearm, spear, staff, or two-handed sword weapon. Excellent choices within this group are the staff, pollaxe, greatsword, and longsword.

- **Polearms.** The Dueling versions of various polearms detailed in **GURPS Martial Arts** really shine in the hands of a Strong Guy. Wielded in a Defensive Grip and using the optional rules for Two-Handed Weapon Parries, they can fend off many attacks. Your superior ST means the damage penalties drop you from "high damage" to "medium damage" potential. This effectively allows you to trade ST off for superior skill when you need it most!
- **Two-Handed Swords.** Perhaps ideal for Strong Guys. Thrust/impale? Check. Swing/cut? Check. Useful at two different reaches without grip changes? Check. Balanced? Check. Two-handed swords in the grip of a Strong Guy are effective offensively, benefit from the optional rules for Two-Handed Weapon Parries, and, with enough ST, can be used one-handed. The real drawback is cost -- they're expensive. Good compromise include the bastard sword, the longsword, or the katana -- less damaging than a greatsword but more adapted to one-handed use. They are typically cheaper, which may be a factor in your weapon selection.
- **Two-Handed Axes.** Perhaps surprisingly, these are not so good for Strong Guys. Yes, your high ST lets you whip them around and deal lots of damage. But they are unbalanced (and thus parry poorly) and don't add

enough extra damage to justify that. Avoid them if you can and you don't need them for your character concept. They aren't without their uses, and the low cost and cutting damage of a greataxe -- even a Fine-quality greataxe is cheaper than a Good-quality thrusting greatsword -- makes it a destructive weapon in the right hands. They're also great for dealing with doors and other obstacles. Nonetheless, consider their downsides carefully.

- **Staves.** Staves exist as another excellent weapon for a tough fighter -- powerful defensively (both a +2 bonus to Parry and the rules for improved two-handed parries apply), powerful offensively (flexible reach, good damage), cheap, and heavy enough to parry all but the largest weapons. A high-ST fighter with a staff can be terrifying.
- **Morningstars.** Morningstars are another excellent weapon for Strong Guys. Investing points in ST instead of DX and skill means less ability to make Deceptive Attacks, but the morningstar comes with its own penalties for the defender. Following a Beat against Block or Dodge, you can force an opponent to Parry -- penalized because of your weapon!

If you use a one-handed weapon, consider adding a shield. A strong shield rush can knock down foes, and a good Block score can allow you to get away with normal Attacks and Committed Attacks using U-stat Parry weapons like morningstars and axes.

Weapons that get stuck -- picks and other swing/impale weapons -- pose fewer difficulties for a sufficiently powerful fighter. Freeing such a weapon takes a ST check, which a Strong Guy (especially with ST of 15 or more) will have no problems with. It also deals additional damage coming back out . . . but this damage is often less than you'd have dealt with two blows from another weapon. Take advantage of this feature, but don't make it your signature move. Your damage potential should be high enough to make this extra damage icing, not the cake.

One problem with swing/impale weapons is that they *require* two turns when you successfully hit someone: One to hit; one to pull it out. Against a high-defenses opponent with lots of HP, this may be useful. But in general, it's a wasted turn. Your goal should be to do enough damage to dispose of most normal fighters with one big, frightful attack. Swing/impale weapons slow you down and restrict your tactical options. If you need to engage another target, you're out of luck; even if you release the weapon, you'll need Fast-Draw to get out a replacement and attack.

When deciding upon a missile weapon, look for armaments with "swing" in the damage listing. Axes, hungamungas (large for Axe Throwing, small for Knife Throwing), slings, throwing sticks, and spear throwers really let you leverage your strength into range and damage. If you want impaling, you're going to need to settle for thrust damage, but a spear or javelin is a good way to get it. They also have good Accuracy, range, and damage. Don't bother with thrown knives. The range is short, they have poor Accuracy, and their maximum damage is low. It's generally wise to start a potential fight situation with a throwable weapon in your hand -- throw it at a likely target (whomever seems most dangerous or, preferably, least likely to be able to defend against it) -- and draw or Fast-Draw your main melee weapon.

For ***High-Tech*** and ***Ultra-Tech*** fighters, you may as well go for something big, either a large weapon with a lot of damage, or a smaller weapon that consumes ammunition prodigiously. Your great carrying capacity allows for a larger ammo load, a bigger gun, or a balance of these two aspects.

Similarly, the Strong Guy's high ST means that carrying a couple of pistols, some grenades, a light machine gun, and a rifle becomes possible. But don't overdo it. You're a fighter, not a mule. Pick what you need and what you'll use, and then load up on the ammunition and accessories for it. Generally, it's better to have one machine gun and lots of ammunition than three different long arms, if only because you can't shoot all three at once!

Note that many guns, especially bigger guns, have a ST statistic above 10. Large pistols (like the Auto .44M, minimum ST 13), squad-support weapons like the SAW (minimum ST 12B), and light machine gun (minimum ST 13B) are capable of being fired from the hip or shoulder by a well-built fighter. A ST 10 fighter with one of these weapons must use a bipod or two hands or both, or suffer a penalty equal to his ST deficit. ST 10 two-handed weapons like some submachine guns can be used one-handed with ST 15, too, allowing for dual-wielding Uzis if you're tough enough. While gun damage stays constant, stronger fighters can carry bigger guns and use them more effectively. That means more damage! At the high end of the scale, the .50 cal machine gun has ST 20M -- anyone can fire it in a vehicle mount, but a ST 20 fighter can dispense with the mount . . .

High-tech fighters should otherwise follow the guidelines for low-tech fighters. While a dueling halberd is unlikely for a Victorian soldier, a heavy broadsword or axe isn't so outlandish. A modern 21st-century fighter might carry a long knife or pack some brass knuckles to increase his punching damage. Don't overlook non-muscle powered weapons like pepper spray, force swords, or backup firearms, but take advantage of your ST. You don't need a power cell for brass knuckle-reinforced punch or a yawara-loaded Hammer Fist.

In the end, any weapon -- from a high-quality broadsword or dau to an improvised club -- is going to deal good damage for a high-ST fighter. Don't feel limited to only classic "Big Guy" weaponry. Take a look at all of your options. With enough ST, your weapon choice is more about style, versatility, and budget than the damage stat.

Armor

Wear as much armor as you can; you can hack it with your high ST. This means the nicest flak jacket or bullet-resistant vest you can get at high tech levels, or the most advanced metal armor (mail, scale, or plate) you can afford at low tech levels. Armor up -- if you maximize ST over DX, your defenses will suffer a bit and you'll get hit more often. Therefore, you should leverage that ST score to carry lots of DR, so you can absorb damage as well as deal it out.

You can also *layer* armor. Wearing multiple layers anywhere but the head gives you a -1 to DX and DX-based skills (see page 286 of the *Basic Set*), but that -1 DX can mean lots of extra DR. A suit of mail under light plate provides a total DR of 10/8. That's sufficient DR to *ignore* any non-critical hit from a ST 12 or less fighter with a broadsword or axe. Faced with a multitude of weaker foes, you may be able to forgo any defenses and rely on your DR to keep you safe. At the very least, wear a mail coif under your other headgear . . . there is no DX penalty, the weight is rarely significant, and a hit to the skull can end a fight.

In some genres, not much armor is available, but wear what you can -- extra DR is usually worth having, and with a high ST it shouldn't slow you down much. And for goodness' sake, high-tech fighters, in a cinematic game should remember to strip off their shirts under that flak jacket and crisscross ammo belts to show off their (Attractive or better) muscles! Bulletproof Nudity rules (page 470 of the *Basic Set*) aren't just for chainmail bikinis.

Martial Arts Styles for Strong Guys

Any style can be a "Strong Guy" style . . . but some styles really let big guys take advantage of their strength. Unarmed styles that focus on grappling are good Strong Guy styles, as are armed styles that feature heavy weapons. Styles such as French Smallsword Fencing, Dagger Fighting, and Shortsword Fighting aren't out of the question, but consider something that takes better advantage of your strength. Light weapons -- knives, smallswords, rapiers, batons -- often come with a low Min ST, which means a low maximum damage. A tough fighter shouldn't be limited by his weapon.

Some unarmed martial arts styles are well-known for their strong practitioners. These include Boxing (think heavyweights here), Judo, Hung Gar Kung Fu, any of the Wrestling styles (especially Indian Wrestling and Professional Wrestling). Sambo fighters are typically depicted as powerfully built men; they often lack shirts and seem to own only camo pants. Pankration and Ancient Greek Boxing are noted for their lack of weight classes, and the champions were often huge. Several of the short bios in *GURPS Martial Arts* talk about famously strong men -- try modeling your Strong Guy after Milo of Cretona (Greco-Roman Wrestling), Mas Oyama (Kyokushin), Gama (Indian Wrestling), or John L. Sullivan (Bare-Knuckle Boxing).

One quick way to find a style that's suited for a Strong Guy is to look for the words "Power Grappling" in the perk list. If it's there, it's an exceptionally appropriate style for big guys. For example, Judo, Jujutsu, Sambo, Sumo Wrestling, and Greco-Roman Wrestling all have Power Grappling, which is a perk any sufficiently hardy unarmed fighter will want. Getting a style with it as a perk means you can buy it as a Style Perk, freeing your "anything" Perk choice for other options.

Next, check the techniques. Look for the inclusion of things like Neck Snap, Wrench Limb, Wrench Spine, and Backbreaker. If they aren't there, consider a "Street" lens for the style and lobby the GM for your favorite Strong Guy

technique. Maybe you learned a stripped-down version of Boxing on the street and included Neck Snap, or someone in the big house taught you how to use a shiv with the Street version of Dagger Fighting . . . but tossed in Wrench Limb because of its bare-handed potential.

Soft arts, like T'ai Chi Chuan and Pa Kua Chuan, or those that emphasize skill over power, like Chin Na or Brazilian Jiu-Jitsu, might not fit your conception of a tough fighter. But again, keep an open mind. Heavyweight Brazilian Jiu-Jitsu fighters are perfectly realistic, and the surprise value of a mammothly built fighter who uses delicate Chin Na locks to defeat his foes in close might be rewarding to play. Nonetheless, when in doubt, look for something that directly rewards your ST.

For armed styles, give particular attention to ones that use heavy weapons. These include Longsword Fighting and Kenjutsu (two-handed swords), Pollaxe and Naginatajitsu (or anything under Polearm Fighting, page 187 of *GURPS Martial Arts,* for polearms), and Quarterstaff (and anything under Staff Fighting, page 192). General armed styles -- Masters of Defense Weapon Training, Krabi Krabong, Banshay, and Kobujutsu -- also favor powerful fighters. Unlike skilled fighters or someone with Weapon Masters, your ST score is sufficient to deal your full damage with these weapons without needing to plunk down a lot of points. You can learn a large number of weapons at a relatively low skill level, and then focus on one or two within the style. That way, you are versatile but also have sufficient ability in a choice weapon or two to face down skilled fighters.

Some armed techniques are especially useful for big fighters. Armed Grapple depends on your skill to catch the enemy, but once you have him, you can execute a takedown, pin, choke, or lock . . . with a two-handed weapon you've already put in position. (With a one-handed one, you'll need to Ready first.) The Hook technique requires a Contest of ST to pull them down once you hook them, but that's a contest you'll win. The same principle applies to Sweep.

Certain techniques default from Strength. Realistic ones include Neck Snap, Wrench Limb, Wrench Spine. Cinematic ones feature Backbreaker, Piledriver, and Snap Weapon. Any of these techniques can be used by a Strong Guy, even if they haven't been studied; just use the default. With a high ST score (15 or more), most of these are reliable enough to depend on in combat.

High-tech Strong Guys should take a look at the One-Man Army style in *GURPS High-Tech.*

Conclusion

The most important characteristic of strong guys is strength. But you can't just pay attention to your Strength score. Armed with a muscular fistful of points, the tactics in Part I, and the tips in this article, you're set to pack on the ST points and get fighting!

Nibá the Shaman

for *GURPS*

by Phil Masters

Nibá is a shamanic magic-worker dwelling in a sub-Arctic region, with powers and skills appropriate to those conditions. He's presented here as one of the Sami people of far northern Europe (previously known as Lapps), but he could easily enough be shifted to a setting with a similar environment and culture (such as the far northern Nomad Lands of *GURPS Banestorm's* Yrth). He can be used in a range of campaign types, so long as they can include powerful spirit-based magic in the hands of remote but not completely concealed experts.

In a supers game, he might sometimes be seen as the heroic defender of his homeland, but also, more often, as a rather crazy, sometimes unhelpful figure to whom super-mages might go for special advice and training, which in turn often comes with a strange price attached. In a "secret magic" game, he might have to be played as a bit more secretive, but the sheer remoteness of his home would help keep him concealed; he'd then be someone for PCs to meet when they have to travel northwards or when they need help with strange spirits from the northern lands. (In a *GURPS Cabal* game, he'd mostly avoid cabalists, seeing them as sinister and overly obsessed with dealings with the wrong kind of spirits, but he might be willing to trade lore if correctly approached with a very well-calculated offer.) In a "Weird War II" game, he could be encountered on the fringes of events, perhaps aiding the heroes against twisted Nazi sorcerers or militantly materialist commissars, but mostly concerned to maintain some kind of stability on the far northern flanks of the Finnish theater as the darkness of the modern world completes the occultation of spiritual power. And in a "Heaven vs. Hell" campaign, he might see himself as part of a third force, deeply suspicious of the great and arrogant powers of the universe just as his mundane neighbors may be cautious of the modern world's material goods, but fully aware of their raw power and so appropriately cautious of their agents. In all cases, he should strike even magic-wielding PCs as *strange* -- something from outside their regular range of experience, whatever that might be and despite the fact that he's fully human by most measures. He could also appear in multiple campaigns in the same setting, even in events which occur centuries apart; he seems to be effectively immortal.

Nibá is a major figure in his immediate home area, commanding considerable respect from his neighbors -- but, like many shamans, he's something of a loner, and is regarded as rather worrying and uncanny even by those humans whom he helps. (He doesn't see himself as solitary, however; he's almost always surrounded by spirits.) These quasi-solitary tendencies partly explain why Nibá hasn't moved to warmer, more populous regions; he's more comfortable in the wilderness, and sheer habit has a lot of force, too, even for someone with Nibá's willpower and intelligence. In addition, he has built up considerable knowledge of and contacts among the local spirits; he might have to start from scratch if he moved elsewhere. And, in fact, he has a real sense of duty to his people; shamans tend to drill this sort of attitude into their apprentices, as one who loses interest in helping others can all too easily tip over into dark madness, which usually leads to trouble for *everyone*. Incidentally, contacting him can be a rather weird procedure in itself; the best approach may well be to use an odd ritual to invoke some kind of minor messenger spirit.

Nibá *is* powerful, with enough arcane might to escape the effects of age. In fact, no one knows exactly how old he really is -- and he isn't telling, possibly because he isn't very clear on exact dates himself. He projects something of the image of timeless arcane power incarnate, perhaps because he really has achieved that status, perhaps just because an effective shaman needs to keep other people in awe. Even with his real power, it's convenient for him to keep other people a little bit nervous, and hence respectful, and it wouldn't be surprising if he has the act well down by now. His age in turn means that he has accumulated considerable knowledge, but this power also derives partly from a willingness to achieve altered states of consciousness by the most expedient methods to hand, which would be downright dangerous for most people. Going to him for training or insights can be hard on the brain.

Personality, Perceptions, and Poisons

It could also involve tricky negotiations. Nibá is good at "reading" people, animals, and spirits; the problem is, he believes that he is not merely good, but more or less infallible, and he tends to act on his opinions as though they were absolute certainties. He's intensely, even ruthlessly judgmental. If he finds someone undesirable on a first encounter, it's very difficult to get him to change his mind . . . and he firmly believes that he has the *right* to judge. He also draws little or no emotional distinction between the mundane, material world and the realm of spirits. He understands the difference between physical and intangible beings perfectly well, and indeed he can work powerful magic that hinges on the division, but he deals with beings and forces on both sides of the division with equal ease, and doesn't respect spirits any more or less than mortals . . . except insofar as they tend to be more powerful. In fact, he has a strong sense that all sentient beings are part of a complex hierarchy, in which some of the most powerful happen to be spirits; there also happen to be some less powerful spirits and very powerful material beings. He also has a very keen sense that his place in that hierarchy is fairly high.

This is another of Nibá's central personality traits; while he isn't overwhelmingly arrogant, and he will often help others for no reward other than gratitude if that's all they can afford, he has a very, very clear sense of his own worth, and he expects to receive the respect and honor he is due. This includes material rewards such as gifts or shelter when he needs them; in particular, he is a big eater who enjoys his food. (He likes a drink, too, though generally in moderation; self-control is important to him.) Although he burns food off fairly effectively thanks to his outdoor life, he is noticeably overweight. He might be compared to a career policeman who is proud of the badge (and who enjoys his donuts), except that he deals with powerful supernatural forces rather than petty criminals; he expects respect for his work, is at the very least curt when he doesn't get it, and also expects the pay that's supposed to come with his position. He doesn't have any delusions of grandeur; he *knows* that he is powerful . . . more powerful than many spirits, in fact, and if spirits are treated with reverence and awe, well, he must be due the same. As a matter of social convention, he expects to be offered good food and drink by anyone he meets -- or at least anyone he helps -- as a matter of course, with no comment or thanks required.

His aptitude for magic largely derives from his keen perceptions, which have relatively mundane as well as arcane aspects. His raw power involves an ability to detach himself from normal physical limitations and to perceive the world from a very strange, arcane, mystical point of view. To accomplish and reinforce this, Nibá makes use of psychoactive substances: specifically, the fly agaric mushroom, *Amanita muscaria,* which most people would classify as simply poisonous. This makes him rather *strange* by most people's standards; he spends much of his time in a semi-hallucinatory state, and his more polite social skills are unpracticed at the best of times. However, while Nibá usually has a few of the red-and-white heads of this mushroom in his belt pouch, to chew when he needs to unleash his full power, he'll usually advise anyone else against experimenting with it. As he explains, he's somewhat hardened against its effects, and he knows what makes an appropriate dose for himself; for almost anyone else, his habits would be fairly reliably deadly. (Actually, he appears to be almost immune to some of the non-psychoactive toxins -- but even he is still rationally cautious.) However, if anyone *insists* that they need to learn some of Nibá's arts, and he hasn't taken to them especially well, he may feel that they deserve whatever happens to them; even if he likes someone, if they look to take training from him, he'll assume that they've accepted the risks. Still, he won't usually *deliberately* poison anyone . . .

(It is said that some shamans who employ fly agaric's hallucinogenic powers protect themselves against its worst effects by feeding the mushroom to their reindeer, then collecting and drinking the reindeer's urine, which supposedly contains most of the psychoactive elements but fewer of the toxins. Nibá would say that this is slow, eliminates some useful effects of the mushroom, makes the dosage harder to judge, and is *unfair to the reindeer.* Other shamans have been heard to say that Nibá is crazy.)

Nibá's Powers

As a shaman, Nibá is a specialist in dealings with the spirit world. His magic, which, in **GURPS** mechanical terms, uses the Ritual Magic rules from page 242 of the **Basic Set,** technically involves the invocation of minor specialist spirits which will perform specific tasks on command; GMs can rule that any spell effect which can't plausibly be explained in terms of spirit invocation is beyond him -- though this shouldn't exclude much, given what spirits might be considered capable of achieving. Many of his demonstrated abilities require spells from **GURPS Magic.**

Incidentally, he rarely casts "Flying Carpet" on an actual *carpet;* he prefers to use a sleigh as a vehicle.

He doesn't need rituals for his more common operations, though, given his specially trained, psychoactively augmented perceptions and spiritual "authority." This is represented by a number of advantages, some of them with limitations such as Magical (see page 27 of **GURPS Powers** -- this is equivalent to Mana Sensitive, page 34 of the **Basic Set**), Temporary Disadvantages (side-effects of the necessary *Amanita* consumption, spiritual effects, or both), and Trigger (*Amanita* consumption). He sometimes implies that he is more than human in some specific but important respects, and he may have a point, given that he can apparently transcend aging and mortality.

His magic should be played as having a raw, elemental flavor, full of the power of ice and blood. The spirits on which he calls represent the rawness of nature, not higher ethical powers or intellectual abstractions. He's not *unduly* violent, and nor does he ever engage in blood sacrifices, and he avoids and despises any hint of demon-worship, but his magic draws on the uncaring elements. He's far from inhumane, though; in his terms, the duty of a shaman is to mediate between the nature-spirits and his fellow humans, and his ultimate loyalties lie with his own kind. While he's sometimes capable of real kindness, he is cautious about using his magic for casual purposes; he's fully aware of its frightening power, and he doesn't take it lightly. On the other hand, he's fully confident in his own ability to handle it when necessary.

He also has a group of eight intangible "airy animal spirits" who serve his will; if he was a PC, these would certainly be classified as an Allies, increasing his point value. They act as his guides and aides in the spirit realm and sometimes assist him in other ways. To spiritual perceptions, they appear as misty animal shapes, but they have more intelligence than a mundane animal. They can possess and control ordinary animals, scout for Nibá in spirit form, and so on. (As an Ally Group, these beings would rate as being worth 75% of Nibá's total value and appearing on 15 or less, making them worth 54 points on his character sheet, and him worth 604 points in total.) He *also* has a Contact Group: a group of "earth spirits," possibly akin to the dwarfs of Norse myth, with a keen supernatural sense of the nature and position of the minerals around them, and considerable skill in working them. They can tell him about events on or under the soil of his homeland, providing skills such as Area Knowledge, Current Affairs (Regional), and Prospecting, and also supply Nibá with good-quality equipment on occasion.

Nibá the Shaman   *550 points*

5'10"; 220 lbs.; A ruddy, stocky figure, dressed all in furs, with a long, snaggled beard.

ST 11 [10]; **DX** 11 [20]; **IQ** 13 [60]; **HT** 14 [40].

Damage 1d-1/1d+1; BL 24 lbs.; HP 15 [8]; Will 13 [0]; Per 13 [0]; FP 14 [0].
Basic Speed 6.25 [0]; Basic Move 6 [0]; Dodge 9; Parry 9 (Brawling).

Social Background

TL: 6 [-10].
CF: Western (Native) [0].
Languages: Northern Sami (Native) [0]; Finnish (Accented) [4]; Norwegian (Accented) [4]; Russian (Broken) [2].

Advantages

Animal Empathy [5]; Channeling (Trigger, *Amanita,* Common, -20%) [8]; Charisma 1 [5]; Contact Group (Earth Spirits; Effective Skill 15, 15 or less; Usually Reliable) [60]; Empathy [15]; Indomitable [15]; Magery (Ritual) 2 [25]; Magery (Ritual) +2 (Trigger, *Amanita,* Common, -20%) [16]; Magic Resistance 4 (Improved, +150%; Temporary Disadvantage, Phantom Voices, Annoying, -5%; Trigger , *Amanita,* Common, -20%) [18]; Medium [10]; Night Vision 3 [3]; Outdoorsman 2 [20]; Reputation +1 (As a force to be reckoned with, in the mystical world; 10 or less; Large

class) [1]; Reputation +2 (As a respected shaman, among his neighbors and traditionalist Sami; All the time; Small class) [3]; Social Regard (Respected) +1 [5]; Spirit Empathy [10]; Temperature Tolerance (Cold Resistance) 20 (Temporary Disadvantage, Odious Personal Habit -2 (Weird Behavior), -10%; Trigger, *Amanita,* Common, -20%) [14]; Unaging (Magical, -10%) [14].

Perks: Autotrance [1].

Disadvantages

Appearance (Unattractive) [-4]; Charitable (15) [-7]; Gluttony (12) [- 5]; Overweight [-1]; Selfish (9) [-7]; Sense of Duty (The Sami People, Large Group) [-10]; Wealth (Struggling) [-10].

Quirks: Broad-Minded; Judgmental - stubborn about first impressions; Staid; Uncongenial [-4].

Skills

Animal Handling (Reindeer)-14 (IQ+1) [4]; Area Knowledge (Lapland)-16 (IQ+3) [8]; Bow-11 (DX+0) [2]; Brawling-12 (DX+1) [2]; Camouflage-15* (IQ+2) [1]; Climbing-10 (DX-1) [1]; First Aid/TL6 (Human)-14 (IQ+1) [2]; Fortune-Telling (Dream Interpretation)-16† (IQ+3) [1]; Hidden Lore (Spirit Lore)-15 (IQ+2) [8]; Housekeeping-13 (IQ+0) [1]; Hypnotism (Human)-12 (IQ-1) [2]; Knife-11 (DX+0) [1]; Knot-Tying-11 (DX+0) [1]; Mimicry (Animal Sounds)-13* (IQ+0) [1]; Mimicry (Bird Calls)-13* (IQ+0) [1]; Musical Instrument (Percussion)-11 (IQ-2) [1]; Naturalist (Earth)-14* (IQ+1) [2]; Navigation/TL6 (Land)-14* (IQ+1) [1]; Packing-13 (IQ+0) [2]; Pharmacy/TL3 (Herbal)-14 (IQ+1) [8]; Poisons/TL6-13 (IQ+0) [3]; Psychology (Human Applied)-13 (IQ+0) [4]; Ritual Magic (Shamanic)-20‡ (IQ+7) [20]; Skiing-13 (HT-1) [2]; Spear-10 (DX-1) [1]; Staff-10 (DX-1) [1]; Stealth-10 (DX-1) [1]; Survival (Arctic)-16* (Per+3) [4]; Survival (Woodlands)-15* (Per+2) [2]; Teamster (Reindeer)-15 (IQ+2) [8]; Theology (Sami Folk-Beliefs)-12 (IQ-1) [2]; Tracking-14* (Per+1) [1]; Traps/TL3-12 (IQ-1) [1]; Veterinary/TL4-12 (IQ-1) [2]; Weather Sense-13 (IQ+0) [2].

* Includes +2 for Outdoorsman.
† Includes +1 from Charisma and +3 from Empathy.
‡ Includes +4 for Magery; note that effective skill drops to 18 if Nibá doesn't have access to a supply of fly agaric or isn't using it for any other reason.

Paths: Animal-16 (IQ+3) [3]; Body Control-18 (IQ+5) [11]; Food-15 (IQ+2) [1]; Gate-15 (IQ+2) [1]; Healing-15 (IQ+2) [1]; Movement-16 (IQ+3) [3]; Necromantic-18 (IQ+5) [11]; Water-16 (IQ+3) [3]; Weather-16 (IQ+3) [3].

All include +4 for Magery. Note that all effective skills drop by 2 if Nibá doesn't have access to a supply of fly agaric or isn't using it for any other reason.

Techniques: Banish-16 [9]; Command Spirit (Nature Spirits)-16 [4]; Control Gate-12 [9]; Cure Disease-13 [4]; Ethereal Body-13 [2]; Flying Carpet-16 [4]; Hail-13 [5]; Plane Shift (Spirit Plane)-14 [11]; Rain of Ice Daggers-12 [9]; Relieve Madness-12 [7]; Seek Gate-11 [7].

All include +4 for Magery. Note that all effective skills drop by 2 if Nibá doesn't have access to a supply of fly agaric or isn't using it for any other reason.

Notes

Nibá is defined here assuming a TL8 (modern-day) campaign, but he can be used in *many* other settings. Hence, his actual tech level depends on that of the game, but will usually be a couple of levels less than the baseline; he lives in a remote area and has little interest in new ideas. However, if the campaign TL is 4 or less, Nibá may not be *very* far behind; in such a case, the GM can reduce or eliminate his Low TL disadvantage. The TLs assigned to some of his skills are similarly adjustable, but some of these have been set even lower than his personal TL to reflect his old-

fashioned approach and tendency to work with minimal, primitive equipment and concepts.

His Wealth level and Status are complex issues, and even more campaign-dependent. He doesn't have much in the way of possessions by the standards of an advanced industrial society, but he does own a well-made sleigh, a few reindeer, and some good low-tech weapons; by the standards of his *own* society, he is quite well off. The above treatment views him from the point of view of the wider world from which the PCs will probably come. Likewise, he might be considered to have some positive Status, as a well-respected professional in his field -- but most people other than his neighbors would perceive him as a wild and scruffy backwoodsman, at least on a first meeting. Hence, he has been given Social Regard rather than raised Status.

The Sami speak a number of related languages, of which Northern Sami is today the most widespread. Nibá might be assumed to speak at least a little of some of the others, or at least to be able to get by on "default knowledge" from his native tongue. The Sami people are in close enough contact with Europe that they probably don't qualify for a distinct Cultural Familiarity in *GURPS* terms, but some games might treat this differently, especially if they are set during earlier periods or the GM wants to play up Nibá's strangeness even more.

Nibá *is* meant to be *powerful;* in games where ambient mana levels never rise above Low, GMs should feel free to improve his magical skills substantially, either directly or by giving him extra levels of Magery. The ritual magic system also makes him very versatile; for convenience, GMs should generally decide before the game begins which spells he's able and likely to use in the session, and calculate all the appropriate defaults and parameters in advance.

Notes

To anyone who can perceive astral spirits, these beings appear as rather nebulous four-legged creatures. In combat, however, they manifest hooves and short, blunt antlers. While they have some understanding of the human world, they evidently haven't paid much attention to technology in recent centuries; in most games, they should be treated as operating 5 TLs behind the campaign standard. However, if the campaign TL is 4 or less, they will simply be TL 0, and of course will get fewer points back from this than listed above increasing their net total.

If you consider the spirit plane to have a physical temperature, these entities are used to cold conditions; their native temperature range can be set accordingly.

Plot Ideas

You'd Better Watch Out: Nibá is a powerful NPC, but not generally likely to be directly hostile to PCs or their interests. However, he can be *difficult,* and if he does take against anyone, he is brusque at best, deadly at worst. Heroes who find that they *have* to deal with him for aid or advice, or who encounter him in the course of wide-ranging adventures, will have to work around his foibles. And if they are engaged in magical activities anywhere that he sees as his territory, they would be well advised to approach him first, even if they aren't doing anything dangerous or immoral; his Contact Group or other spirits will very likely alert him to the presence of such outsiders, and he regards himself as the local governing authority in such matters.

Won't you guide my sleigh? Things get even more complicated if the PCs have to approach Nibá for aid or advice. This might mean guidance through the northern spirit-realms, information on fighting monsters, dark spirits, or corrupt magic-workers from his land, or training or technical advice regarding some crucial ritual. He won't necessarily be unfriendly to visitors, but he'll expect even more respect, and very likely assign a price to the task. It may take him a while to decide what such outsiders have that he can use, and his decision may involve anything from minor (if outdated) luxury goods, through the acquisition of rare and bizarre herbal ingredients from around the world, to a dangerous quest through the spirit plane to fight some formidable and ancient spirit. Of course, in the latter case, it will be hard for Nibá to admit that any spirit is too powerful for him to tackle, so he may just imply that this task is beneath him, or he may say that it has some peculiar power to defeat his own abilities, which shouldn't worry these foreigners with their alien magics or weapons.

Coming to Town: Nibá rarely has much cause to travel outside of his home region . . . which is how he prefers things, because he knows very well that if and when he does, he's at a serious disadvantage. He lacks experience of the modern world and its technology, the local spirits may be unfamiliar or just sparse, the people he meets see him as a wild-eyed, fur-clad crazy man, rather than as an awe-inspiring spirit-commander. But if a threat to his people has to be pursued back to its source, or an intruder steals something of importance (perhaps from the spirit realm), it would hardly be the way of a great shaman to shy away from the task.

Getting PCs involved in the ensuing fun shouldn't be difficult. Perhaps they know Nibá from some earlier incident, and either owe him a favor or feel that anything which demands his attention must be serious. Perhaps they know him only by repute, but have a technical interest in his skills and take the chance to observe him. Or perhaps they feel obliged to oppose him, either because he's being unreasonable (on their terms), because he's acting like a supernatural vigilante and they have more respect for whatever law applies, or because, somehow, it's them he's after. Whatever the reason, the ensuing adventure can involve a strange mixture of social comedy, magical combat, and ethical debate.

Holy Symbols Mundane and Magical

for *d20 System*

by Lloyd Brown III

A religious character's holy symbol is the character's most identifying piece of equipment. It identifies to the world who or what the character worships, and this bit of information brings with it preconceptions based on the worshipper and the viewer. It is also the crux of the character's divine power, providing a tangible link to an intangible force.

Holy symbols can be held in the hand, but they often come with a metal chain by which they can be worn around the neck. Magical holy symbols either occupy the amulet body slot if they come with a chain or are unslotted items (thus requiring greater cost to craft).

Magical holy symbols are often restricted in their use. They might function for any character with the same alignment, a similar alignment (all Good characters, for example), or for characters who worship the god represented by the symbol. They might be usable only by characters who channel positive or negative energy. Lastly, they might be restricted to characters with access to a particular domain.

Except where otherwise indicated, an unholy symbol is treated the same as a holy symbol. A character may only have one holy symbol at a time serve as the focus of his faith; changing from one symbol to another would require some kind of ceremony or other non-trivial means of announcing his usage of a new symbol.

Mundane Holy Symbols

Arcane

The arcane holy symbol is carved with greater detail than a normal holy symbol. It is usually made from silver or electrum and traced with arcane symbols. Often, it incorporates lesser symbols of the faith in its designs.

Once per day, a spellcaster who uses an arcane holy symbol as a divine focus adds +1 to the save DC against that spell. This bonus only applies to a spell of less than 3rd level.

Celestial

A celestial holy symbol is crafted from some unique material not found to the material plane. It might be wooden, metallic, or completely different. It possesses an aura of the alignment of the plane on which it was crafted. Celestial holy symbols are very rare, even on the outer planes. When referring to an unholy symbol, this type of item is fiendish.

Celestial holy symbols allow a character who channels positive energy to turn or destroy evil outsiders as a good cleric turns undead. Fiendish holy symbols allow a character who channels negative energy to rebuke or command good outsiders as an evil cleric turns undead.

Darkwood

A darkwood holy symbol looks like a normal holy symbol of any other wood, except that it shows exceptional craftsmanship and is virtually weightless. Some of them feature thin ivory inlays, but clerics insist that they function best when unsullied by other materials. Darkwood is very hard and resists scratching or casual wear. Some of the darkwood holy symbols in use today have been around for generations.

Undead turned by a darkwood holy symbol remain turned for an additional 1d6 rounds.

Dragonbone

Dragonbone holy symbols, as the name indicates, are made from the bones of a dead metallic dragon. For unholy symbols, the makers use the bones of chromatic dragons. In either case, the bone is treated and coated to resist decay. The amount of detail is usually low because of the difficulty of working with the raw material.

Undead turned by a dragonbone holy symbol (or rebuked by an unholy symbol) suffer 1d6 points of damage of a type appropriate to the type of dragon-usually fire or acid. They suffer this damage at the same time as the other effects of turning, and they get no saving throw.

Gold

A gold holy symbol is the mark of a wealthy priest or experienced adventurer. In some cases, it is a sign of vanity and desire for personal gain at the expense of the church. In other cases, it might be a sign of great success within a church-if the church can afford this indulgence, the faithful must be filling its coffers with largesse. Other times, the gold holy symbol is a gift for a favored speaker or a reward for a challenging task.

Once per day, a gold holy symbol provides a +1 bonus on a turning check and turning damage for that check.

Ivory

An ivory holy symbol is more stylized than one made of metal or wood. In some cases, it might be difficult to identify the nature of the symbol due to the artist's personal touches. A worshipper or priest carrying such a symbol might be an iconoclast, a heretic, or a member of a religious minority. While his faith is sincere, it is often unorthodox. (Of course, in some religions, ivory might be a standard material, in which case this trend is invalid.)

A character using an ivory holy symbol as a divine focus receives a +2 bonus on Concentration checks made while spellcasting.

Mithral

Mithral gleams like silver, but its shine is brighter and resists tarnish. Some of them include a single gemstone in a central part of the symbol, but most of them are plain, relying on the purity of the exotic metal to channel the god's power.

A character with access to divine spells can make a touch attack with a mithral holy symbol. This touch inflicts 2d4 points of damage to undead or evil outsiders, as if they had been splashed by holy water.

Platinum

A platinum holy symbol make a clear statement about its owner: this character is wealthy and powerful.

Once per day, a character with a platinum holy symbol can turn undead as a move action instead of a standard action.

Relic

A relic holy symbol has a special compartment built inside that houses a part of a famous saint or hero of the faith. It might be a hair, a bone, a tooth, or even a few threads from an article of clothing. As with a sacred holy symbol, a character might recognize the symbol. In this case, because of the item's fame, the Knowledge (religion) check to recognize the symbol is DC 25.

When turning undead with a relic holy symbol, you can choose which undead are affected first. Normally, the closest undead are affected first.

Sacred

A sacred holy symbol is usually made of some exotic material like ivory, copper, or bronze. Originally normal in its effects, the sacred holy symbol belonged to a powerful or famous cleric of the faith. It might have been used by a special outsider, a high priest, or a martyr. They are unique; a character can recognize a sacred holy symbol and its story of origin with a Knowledge (religion) check DC 30.

When used to turn undead, the sacred holy symbol grants a range of 90 feet instead of the normal 60 feet.

Silver

A silver holy symbol is a more expensive display of the cleric's devotion. With proper care, it is a bright center of attention in a crowded worship hall or on the battlefield. When used to turn undead, it seems to shine with a brilliant white flame.

Once per day, a silver holy symbol provides a +1 bonus on turning damage.

Wooden

A wooden holy symbol is the standard holy symbol of most common clerics. It is inexpensive, easily replaced if damaged by accident or maliciousness, and perfectly serviceable for spellcasting and prayer. It provides no special benefits.

Holy Symbol	Cost	Weight
Arcane	900 gp	1 lb
Celestial	8,000 gp	--
Darkwood	350 gp	--
Dragonbone	2,000 gp	--
Gold	250 gp	1 lb
Ivory	100 gp	--
Mithral	2,500 gp	1 lb
Platinum	2500 gp	1 lb
Relic	5,000 gp	--
Sacred	4,000 gp	--
Silver	25 gp	1 lb
Wooden	1 gp	--

Magical Holy Symbols

Clerics with valuable holy symbols attempt to protect these holy symbols from incidental harm or from the hazards of their adventures. Glyphs of warding are common, usually tied to a spell like blindness/deafness. Blast glyphs are risky; they might go off accidentally and harm the cleric or an innocent worshipper.

Clerics also enchant their holy symbols to increase their potency. These effects tend to increase the magical uses to which the holy symbol is applies: turning undead and serving as a divine focus. They might also host a variety of effects concerning undead or other archetypal foes.

Icon of the Dungeons

This image sacred to certain faiths is rendered to show an opposition to chaos and destruction. It allows you to turn or destroy oozes as a good cleric turns or destroys undead once/day.

Strong conjuration; CL 15th; Craft Wondrous Item, creator must be able to turn or rebuke undead; Price 5,100 gp.

Icon of the Forestlord

This icon shows images of control over nature, often in the form of a lightning bolt or flood. It allows you to command or rebuke plants as an evil cleric commands or rebukes undead once/day.

Strong conjuration; CL 15th; Craft Wondrous Item, creator must be able to turn or rebuke undead, blight; Price 5,100 gp.

Icon of the Sewers

An image of an animal associated with destroying rats, like a snake, dog or cat is often featured on this icon. It allows you to command or rebuke vermin as an evil cleric commands or rebukes undead once/day.

Strong conjuration; CL 15th; Craft Wondrous Item, creator must be able to turn or rebuke undead, repel vermin; Price 5,100 gp.

Mark of the Enchanter

When used as the divine focus for magic fang, greater magic fang, magic weapon, greater magic weapon or magic vestment, the bonus granted is increased by +1.

Moderate transmutation; CL 15th; Craft Wondrous Item, creator must be able to turn or rebuke undead, magic weapon; Price 6,000 gp.

Mark of the Summoner

When used as the divine focus for a summon monster spell, all summoned creatures gain an additional hit point/level.

Minor transmutation; CL 3rd; Craft Wondrous Item, creator must be able to turn or rebuke undead, summon monster I; Price 4,000 gp.

Martyr's Mark

This holy symbol of wood or copper is plain and unadorned. Once per day, a character holding it can turn undead as a 1st-level cleric. A character must hold or wear the martyr's mark for 24 hours before using this ability.

Minor transmutation; CL 3rd; Craft Wondrous Item, creator must be able to turn or rebuke undead; Price 5,000 gp.

Shield of the Faithful

When used to repel a vampire, the shield of the faithful prevents the vampire from approaching within 10 feet instead of the normal 5 feet. Also, the vampire cannot attack the character with ranged attacks or target the character with spells. The vampire can cast area of effect spells that encompass the character as normal.

Strong abjuration; CL 7th; Craft Wondrous Item, creator must be able to turn or rebuke undead, invisibility to undead; Price 4,500 gp.

Symbol of Mercy

This symbol invokes the image of a god of healing, medicine, or strength. When used as the divine focus for a spontaneously-cast cure spell, the spell cures an additional hit point per spell level. If the spell affects multiple targets, each target receives the bonus healing.

Minor conjuration; CL 3rd; Craft Wondrous Item, creator must be able to spontaneously cast cure spells; Price 4,900 gp.

Titan's Shield

When brandished in one hand, this holy symbol provides a sacred bonus to saving throws. It takes a move action to gain this bonus; the bonus remains until the beginning of the character's next action.

Strong abjuration; CL 1st to 15th (3 times the bonus); Craft Wondrous Item, creator must be able to turn or rebuke undead; Price +1,000 gp (+1), 2,000 gp (+2), 3,000 gp (+3), 4,000 gp (+4), 5,000 gp (+5).

Warded

Each of these items bears an alignment appropriate to the divine force it represents. A character holding a warded holy symbol gains the benefit of protection from good, evil, law, or chaos, according to the alignment of the holy symbol. The symbol provides only one such benefit, even if two alignments are appropriate.

Strong abjuration; CL 3rd; Craft Wondrous Item, protection from evil; Price 4,000 gp.

Holy Symbol	Cost	Weight
Icon of the Dungeons	5,100 gp	--
Icon of the Forestlord	5,100 gp	--

Hell's Black Intelligencer: *Richard III*

"Foul devil, for God's sake, hence, and trouble us not;
For thou hast made the happy earth thy hell,
Fill'd it with cursing cries and deep exclaims.
If thou delight to view thy heinous deeds,
Behold this pattern of thy butcheries."
-- William Shakespeare, *Richard III,* I:ii:53-57

Now once more it's Yuletide, the long night of the year when thoughts turn to the fires of dramaturgy. Or mine do, anyway, and [each year](#) we puzzle out yet another batch of sorcerous hints in the works of Shakespeare. This time out, it's a delight to view the heinous deeds of the crouch-back, and learn the true meaning of Antichristmas.

"Bear with me; I am hungry for revenge,
And now I cloy me with beholding it.
Thy Edward he is dead, that kill'd my Edward;
Thy other Edward dead, to quit my Edward;
Young York he is but boot, because both they
Match not the high perfection of my loss:
Thy Clarence he is dead that stabb'd my Edward;
And the beholders of this tragic play,
The adulterate Hastings, Rivers, Vaughan, Grey,
Untimely smother'd in their dusky graves."
-- William Shakespeare, *Richard III,* IV:iv:64-73

Now as it happens, Richard, Duke of Gloucester and brother of the victorious King Edward IV of England, is bored in peacetime. As a crippled hunchback, he has no other outlet but Machiavellian maneuvers. He convinces the King Edward that their brother George, Duke of Clarence, is plotting against him, and then convinces Clarence that it is Edward's queen Elizabeth who has intrigued to imprison him in the Tower. Richard interrupts the funeral procession of the dead King Henry VI to woo Henry's daughter-in-law, Lady Anne, despite having killed both her husband and her father-in-law. Amazingly, this works. At court, his further machinations are interrupted by a lengthy series of curses delivered by Henry's widow, Queen Margaret. Two murderers (on Richard's orders) enter the Tower and drown Clarence in a barrel of wine. Edward's attempts to foster reconciliation in his court are cut short by his death. Richard and his ally Buckingham arrest Elizabeth's kinsmen, gain custody of Edward's heirs, and pop them into the Tower to await the young prince's coronation. Despite having been aggrieved by Elizabeth's faction, Lord Hastings refuses to go along with Richard's plan to usurp the crown.

At the meeting to plan the coronation, Richard accuses Hastings of witchcraft and has him executed. Then, he reveals that the young princes are bastards who cannot inherit, and with pious dumbshow convinces the Mayor of London to accede to his crowning as sole legitimate heir. Richard is still worried about his claim to the throne, so he has a destitute gentleman named Tyrrel kill the princes in the Tower. Further, he attempts to court his own niece, Edward's daughter, Lady Anne having conveniently died offstage. But Richard arrogantly refuses Buckingham a preference, alienating his key ally just before the Earl of Richmond (a kinsman of dead King Henry) lands with an army of Frenchmen in Wales. Lord Stanley, Richmond's stepfather, offers Richard an alliance which Richard, though suspicious enough to take Stanley's son hostage, must perforce accept with Buckingham gone. Richard prepares to meet Richmond in battle at Bosworth Field, and spends the night in near-collapse, visited by the ghosts of all his victims. Regardless, he charges into battle, despite the news that Stanley has indeed gone over to Richmond, and is slain. The victorious Richmond (the future Henry VII) vows to marry Edward's daughter and unify England under his new Tudor dynasty.

"But say, my lord, it were not register'd,
Methinks the truth should live from age to age,

As 'twere retail'd to all posterity,
Even to the general all-ending day."
-- William Shakespeare, *Richard III,* III:i:79-82

Shakespeare took the bulk of this story from Raphael Holinshed's 1587 *Chronicles,* although the dramatic theme of Nemesis came from Edward Halle's 1548 *Union of the Two Noble and Illustrious Families of Lancaster and York,* which also served as a source for Holinshed. One or two elements came from *A Mirror For Magistrates,* a book of historical morality tales revised in 1563 by one William Baldwin, and reprinted in 1587. Everybody involved took their portrait of Richard from Sir Thomas More's 1513 *Life of Richard III,* which came from a sincere desire to butter up King Henry VII by blackguarding his predecessor. When, exactly, Shakespeare wrote the play is a fraught question. The first quarto edition of *Richard III* was registered in 1597, and it is obviously a sequel to, or even a completion of, Shakespeare's *Henry VI* trilogy (or tetralogy), which would argue for a date close to 1592, when we know that *Henry VI, Part 3* had been performed. The only problem is that there is good evidence that *Henry VI, Part 1* was brand-new in 1592, which throws the dates for *Part 3* into a tizzy. Worse yet, the First Folio adds some 200 lines and makes any number of improvements in the play, which would be acceptable if the First Folio hadn't been assembled in 1623, seven years after Shakespeare's death.

"Deform'd, unfinish'd, sent before my time
Into this breathing world, scarce half made up,
And that so lamely and unfashionable
That dogs bark at me, as I halt by them."
-- William Shakespeare, *Richard III,* I:i:22-25

So was the text of the play, likewise, "deform'd, unfinish'd"? If so, it would get even moreso: The impresario-poet Colley Cibber put together a godawful abridgement in 1700 that became the default stage version for over two centuries. But the real deformity, monstrosity, "indigested lump" is Richard, as he and every other character in the play reminds us. But is that always a bad thing? In *Henry VI, Part 3* Richard brags that he can "add colours to the chameleon, change shapes with Proteus," which implies that Richard's misshapen self is but a guise that he can shift. In IV:v, Elizabeth swears she will not serve as go-between for Richard and her daughter "Unless thou couldst put on some other shape." And about 150 lines later, she agrees to do so. Richard's other great self-symbols are the mirror and the shadow, two more exemplars of shape-changing. The mirror famously shows something different to every beholder, and shadows grow and shrink depending on the hour.

"See how I am bewitch'd; behold mine arm
Is, like a blasted sapling, wither'd up:
And this is Edward's wife, that monstrous witch,
Consorted with that harlot strumpet Shore,
That by their witchcraft thus have marked me."
-- William Shakespeare, *Richard III,* III:iv:72-76

The rest of the play shows some standard earmarks we've come to recognize as Shakespeare's magical signature. The unlucky Lord Hastings is twinned with a walk-on pursuivant; there are two Elizabeths (a mother and a daughter), and two Edwards (the king and his heir). From the opening soliloquy -- "Now is the winter of our discontent/Made glorious summer" -- to the final battle between Richard and Richmond (who speaks of "summer fields"), the old winter-summer dichotomy is omnipresent, not least in the white (winter) rose of the Yorkists and the red (summer) rose of the Lancastrians. (The battle gives us our major time-shifting moment when the sun "disdains to shine" in the morning.) When Richmond wins the battle, he proposes an alchemical marriage of the two colors, of White Queen and Red King. Shakespeare gives us two murderers of Clarence, but our three murderers return to kill the princes in the Tower. Tyrrel recruits (offstage) two accomplices, Dighton and Forrest, which means we wind up seeing a total of three murderers on stage, though not all together.

There are even three witches, by the beginning of IV:iv, when the Duchess of York (Richard's mother) joins the dowager Queen Margaret (the prophetic crone) and the young, beautiful widow Queen Elizabeth (the maiden) in cursing Richard. (The woman named as a witch by Richard, Anne Shore, never appears on stage.) Margaret

specifically embodies the figure from Senecan tragedy known as the Fury, and the play hints that she has come back from the land of the dead ("I do find more pain in banishment Than death can yield me here . . ."), which might make the Three Sisters three aspects of Hecate or the three Furies. Clarence actually evokes the Furies during his lengthy dream sequence, which becomes an obvious -- and then, an explicit -- initiatory journey to the underworld in his dream, complete with implied shamanic body replacement (gems for eyes). This, combined with his theological disputations with his murderers, implies that Clarence is a priest-king, and sets up yet another triplicity. If Clarence is Jupiter, then Richard the warrior is Mars (he even conquers a woman with a sword, although Richard-like he does it backward), leaving the uxorious, lecherous, but sunny and fertile third brother Edward as Quirinus.

"What, do you tremble? Are you all afraid?
Alas, I blame you not; for you are mortal,
And mortal eyes cannot endure the devil."
-- William Shakespeare, *Richard III,* I:ii:46-48

But protean Richard embodies another figure still better than Mars. His first miracle -- the seduction of Anne, turning hate into lust -- occurs at a funeral. He makes the dead bleed, not rise. He massacres the innocents, like Herod. He orders the parodic "christening" of Clarence, and makes his death a parodic Eucharist. He is rejected, not mourned, by his mother. He is not Adam Kadmon, the ideal son of Adam, but a misshapen "toad." His emblem is the hog, where the demon Legion dwells. He honors the letter of the law while violating its core, and seeks the outer show of piety while inwardly villainous. He takes the crown despite the mob's disinterest, not the other way around. At his Last Supper, there are eleven ghosts (and one traitor, if you count Stanley, wherever he is) of victims, not eleven apostles. Finally, he dies fighting, and his crown is not of thorns, but (in a legend Shakespeare oddly didn't include) found on them. In short, Richard is the Antichrist.

"Come, cousin, canst thou quake, and change thy colour,
Murder thy breath in the middle of a word,
And then begin again, and stop again,
As if thou wert distraught and mad with terror?"
-- William Shakespeare, *Richard III,* III:v:1-4

So to what end would Shakespeare have written a dramaturgical capacitor for the Antichrist, a magical athanor in which to distill his infernal power? (And who wrote the patch on it in 1622? Bacon?) It's difficult to say, although one function of the Antichrist is to draw out the Last Emperor, known as King Arthur to all good British occultists such as King Edward IV. It's possible that the endless performances of *Richard III* (it went through seven editions by 1622, so we know it was popular) were building up a charge that would manifest in the brief, glorious career of Crown Prince Henry. Another possibility is a very dangerous attempt at sorcerously scapegoating Good Queen Bess' own hunchbacked "intelligencer" Robert Cecil, who may have retaliated by ordering the termination of Kit Marlowe. But whatever purpose Shakespeare, or his patron Lord Ferdinando Strange, intended with this Antichrist Engine, it apparently went unfulfilled. In Britain, anyway.

But somebody may have figured out the method, plumbed the dramaturgical circuitry in Shakespeare's play. Junius Brutus Booth was born on the same day as the Bavarian Illuminati, May 1, 1776. His first performance on a royal stage was as Richard III at Covent Garden on February 12, 1817. His first performance in the New World, likewise: Richard III at Richmond, Virginia, on July 6, 1821. And he brought up his sons in the same way: Edwin Booth's first stage performance (in 1849) was as Tressel in *Richard III,* but two years later, Edwin's first lead performance was as (you guessed it) Richard III, understudying his sick father. Indeed, Edwin performed as Richard III for Abraham Lincoln in 1864, on March 10: the beginning of the Dionysia, the sacred days that begat Western theater. And his son John Wilkes Booth made his 1855 stage debut in *Richard III* playing Richmond -- the tyrant-killer. But something had gone wrong; Booth, Sr. had died of drink, though his tipple was rum not malmsey. (But Booth, Sr. suspected something; like the flamen dialis, the Roman priest of Jupiter, he ate no meat.) So John Wilkes was unbalanced -- he played Richard III on his third major stage appearance (doubling up the thirds to make up for losing the charge from a debut, perhaps), but was shot in the leg the next day. Was John Wilkes' un-Ricardian handsomeness taking its toll by crippling his foot? He made up for it on November 2, when he played Richard III for his first performance at Ford's Theater. In his mind, he was Richmond, and when Richmond was burnt, perhaps the safeties on the play, even in

Cibber's stepped-down version, came off. He went back to the theater to kill a true king on Good Friday, 1865, a king whose birthday was the same date as his own father's first invocation of Antichrist. The play powered his murder, and then it presented the reckoning; Booth broke his leg -- the mark of Richard Club-Foot -- and his companions deserted or betrayed him in their turn. The handsomest man in America was left a cripple in a field, praying for a horse, with Nemesis closing in.

Holiday Gift Exchange

for *HeroClix*

by Nikola Vrtis

It's that time of year again: time for the office holiday party! And that means a white elephant (or Yankee) gift exchange. Not familiar with the concept? You don't know what you're missing! (And if you *are* familiar with this ritual, please keep reading anyway; different folks have different ways of running them.) In general, each participant brings in one inexpensive wrapped gift -- sometimes useful, sometimes with an amusing concept -- and places it in a central location. Then each person picks a gift, either a wrapped one or a gift that someone else already chose.

In this version of the gift exchange, players use teams of *HeroClix* figures to snag gifts from a central location and bring them back to a starting point. The team with the most and best gifts at the end of the game wins.

Setting Up the Game

In this game, two to four players assemble teams of two or more *HeroClix* figures, with a maximum total of 200 points. To know how to use the figures, this game requires the *HeroClix* rules, which can be found on the WizKids Web site (on the rules page). The playing area can be a *HeroClix* map with a large area of at least eight squares on each side (such as a warehouse or an office) or a checker board with squares that are at least 1.5 inches on each side. The game also needs one or more printouts of the gift tokens and their explanations, plus several tokens or items representing office equipment and furniture.

The game requires at least two gifts per figure; thus, if there are two teams, one with three figures and the other with two figures, then 10 gifts are used. Shuffle the gift tokens face down and randomly choose the appropriate number; players may decide to use more gifts than the minimum if they want.

Most local and Internet retailers sell *HeroClix,* but players can use the basic generic characters created for the "Six 'Clix Morris" article and any sort of counter or figure with a base of no more than 1.5 inches at its widest point, such as Steve Jackson Games' *Cardboard Heroes Modern Characters.*

Players may include almost any character in their teams with a few exceptions: No flying, double-base, giant, or colossal characters are allowed. Additionally, participants may not use battlefield conditions or feats.

Each player selects one corner of the board and places his figures in the squares closest to that corner. Then, the players decide who goes first by each rolling two dice and adding the results. The highest roll goes first; reroll any ties. (If there are more than two participants, play moves to the right of the starting player.) Next, the players takes turns placing furniture and equipment tokens anywhere on the map or board. Finally, all of the gifts are placed faced down (blank side up) in one or two squares in the center of the board. The gift explanation cards are set off to the side. After the gifts have been placed, the game begins.

Playing the Game

Participants take turns in the same order as they put down tokens. For attacking, movement, and power use, refer to the *HeroClix* rules, with the following modifications.

Quick Links to Useful Stuff

- *HeroClix* Rules
- Gift tokens and abilities
- Generic *HeroClix* Characters

Movement

Standard move rules apply, including the fact that characters may not travel off of the edge of the board and furniture, equipment, and gift tokens block movement (until picked up or moved). Maps from other sources may have their own restricted areas.

Getting Gifts

To pick up a present, a character must be adjacent to the gift token pile or a dropped gift token. It takes one action to pick up a gift. Figures may not attack when they are picking up a gift, although they may be attacked while they are so occupied. Figures may move and attack as normal when they are carrying presents.

Gifts must be kept face down until they are opened.

A character may not carry two gifts at the same time.

It does not take an action to drop a gift. A dropped present is placed in a square adjacent to the figure; it may not be put off of the board or map.

Team members may pass gifts to each other. The characters must be adjacent to each other. It costs the passing figure an action, but the accepting character does not use an action to take the gift.

In ranged combat, any hit that does damage forces the target to drop his gift (if he's carrying one); he also takes the clicks of damage inflicted. With close combat, the attacking player has two options with strikes that inflict clicks of damage: The figure may either force the opponent to drop the gift or he may take the opponent's gift (assuming, in both outcomes, that the defending figure has a present). Remember that a figure may not carry more than one gift. However, an attacking character who has a gift may exchange it for the defending player's present.

Teams may steal gifts from their opponent's starting areas.

Opening Gifts

To open a gift, the figure must first return with the gift to the team's starting corner. Once in the corner, it takes one action to open the gift. A character must be holding a gift in order to unwrap it. A figure may drop a present after he's opened it. The player with the opened present in his starting corner or carried by one of his figures takes the corresponding gift-explanation card.

A character does not have to unwrap a present when in the starting corner; he can simply drop it. If there are other presents already at the starting location, he may pick up on of those (which takes an action).

To indicate that a present is unwrapped, flip the gift face up. Once a gift is unwrap, the figure holding it may utilize any special powers that it confers.

Destroying Gifts

Treat gifts as light objects for purposes of inflicting damage. Presents can be destroyed in the same manner as any other object; however, gifts may not be targeted if they are in the center starting spot, in a team's corner, or being held by someone.

Ending the Game

The are a couple of ways the game could end:

when there are no more gift tokens in the center of the board and at least one team has at least one unwrapped gift per figure (either carried by a member of the team or in the team's starting corner)

- when only one team has any figures remaining on the board

Once the game has ended, each team adds together the point value on the gifts in their possession. Whoever has the highest total wins.

Variations

First Things First: A character may not take a present from another figure without first having picked up a gift from the central pile (even if he drops that gift immediately).

Treasure Hunt: Instead of putting all of the gifts in a central location, players may randomly place gift tokens (face down) anywhere on the map, except in squares in a player's corner or anywhere within one square of the starting corner.

Generic Hero Cards

To use the generic hero cards provided with the "Six 'Clix Morris" article, players must have an eight-sided die for each character. Turn the die so that the maximum clicks of damage shown on the card is face up. Each time a character takes a click of damage, turn the die to the next lower side. Stat values do not go down as a character takes damage. Furthermore, characters with super powers retain the use of those abilities until they are KO'd.

True20 Worlds of Adventure: Five Thrilling Worlds of Adventure (for *True20 Adventure Roleplaying*)

Published by [Green Ronin Publishing](#)

"Agents of Oblivion" by Sean Preston
"Blood Throne" by David Jarvis with Chris Caran, Aaron Henson, & Kenneth "Axel" Carrlson
"Land of the Crane" by David Garrett with David Kuchler, Scott Perry, Robert J. Schumacher, & Sarah Zielinski
"Nevermore" by Joseph Miller
"The Razor" in the Apple by Robert Schwalb

Cover by Vincent Dutrait

Illustrated by Michael Dixon, Chris Grun, Eric Lofgren, Malcolm McClinton, Scott Purdy, & Jason Walker

128-page b&w softcover; $22.95

When [*True20 Adventure Roleplaying*](#) was published in 2005, it included four different settings that showcased the versatility of the *True20* system. Each of the four were actually winners of a setting design contest launched by Green Ronin, the four best settings ending up in the core book, but such was the quality of the submissions that the publisher had more that it wanted to use. So the people at Green Ronin took the next five settings that they liked and put them in another book, and thus *True20 Worlds of Adventure: Five Thrilling Worlds of Adventure* for *True20 Adventure Roleplaying* was born.

Each setting presents a wealth of new background material along with a few new rules and feats specific to the setting. The shortest of the five is just 20 pages long, while the longest is 30 pages. All are decently illustrated and well written. There is even an index that covers all five settings! In fact, the only problem with the book is that in printing the pages have slightly slipped, cutting off the footer and page numbers on most pages. This is more of an aesthetic problem though, as the page numbers can still be read.

It opens with "Agents of Oblivion," a horror-conspiracy-espionage setting in which a government sanctioned top secret organization fight monsters, cultists, the eldritch, and the unknown, just as the Pandora Institute wants to use them all to gain power and influence. It gives a wealth of new backgrounds and roles, more detail on modern firearms and other gear, plus rules for Corruption and Sanity. Corruption represents the taint of the dark powers of the universe, and can be acquired through contact with them, usually by the Adept class to gain a power they do not have. Corruption can be worked off by paying Conviction points, the game's equivalent of Hero points, but is costly. The rules for Corruption feel under developed in comparison with those for Sanity, which work like a "psychological Toughness saving throw," and is a welcome addition to *True20 Adventure Roleplaying*. "Agents of Oblivion" is a frothy mix of magic, madness, psionics, esoteric tomes, guns, and explosions.

"Blood Throne" is another fantasy setting, one that has all but fallen to evil. Once a land of peace and high magic, Simarra has fallen into the Age of Blood and stands to be conquered by the avatar of an evil god. Refugees flee to the few remaining bastions of light, perhaps there being a few heroes amongst them who can stave off the darkness? Given the origins of the *True20* system, it is no surprise that Blood Throne feels very much like *Dungeons & Dragons,* but it packs in a lot of background information and adds in some interesting elements to its magic. It can be fueled from ley lines and mana wells, and shaman can call of spirits to aid them and fight for him, but with Ascendant Technology, fantastic devices can be constructed using mana shards, which feels reminiscent of computer games like *Final Fantasy* or *World of Warcraft.* The shortest of this supplement's settings, it deserved more space.

"Land of the Crane" presents a feudal Japanese fantasy Shogunate, complete with samurai, ninja, and martial arts monks, rival clans, while barbarians threaten the borders. It details all a GM needs to run a Bushido style game, even going as far as to alter *True20's* Conviction points to Honor, but the most notable fantasy addition is that of several new races. Kobolds become lizard riding barbarians who also train cavalry units; Hanyo are the distrusted children of humans and Oni who have horns, steaming breath, and an elemental ability; Harinezumi are anthropomorphic porcupines that revere nature; and Kitsune are mischievous shape-changing fox spirits. All this shows that True20 can do this type of setting and do it well, but "Land of the Crane" is the weakest of the five settings because it feels static and never comes alive compared to the other four in this supplement.

"Nevermore" is the oddest of the five settings: a land of dreams and imagination, a faerie world that is at times predictably changeable, at other times wildly chaotic. It can be run as a setting by itself, or as a parallel that the characters can visit from the GM's existing campaign, whether it is horror or standard or urban fantasy. Either way, a character gains Dreamer Conviction points, with which he can Dream Craft and Dream Weaving, creating items and manipulating the world around him. Dream Weaving can be dangerous, attempt to change too much and the weaver will suffer backlash as Nevermore reacts to the changes made to it. Of all of this supplement's settings, "Nevermore" is the least mainstream and the least accessible.

The fifth and last setting is "The Razor in the Apple," in which American kids face the monsters that their parents cannot see. Of course, in *True20* terms, kids are weaker than adults, and they are also defined by the roles of school subculture, such as Nerd or Cheerleader, and by their parents. A parent type is defined by its Sense Motive modifier: the degree to which the parents believe that their offspring is telling the truth, curfew hours, and Allowance modifier for buying things. During a game, a kid acquires two types of points: Imagination and Naughtiness. The latter are accrued for various actions, from getting into a fight to finding Daddy's secret magazines, and at the end of the day, a Kid must account for his actions to his parents. If they believe him, fine, but if not, his parents might be merely disappointed with him, or at worst, send him to military school. Imagination points are used to fight monsters, but not directly, rather they empower a kid's favorite toy. Need to fight a monster, then turn that action figure into an actual warrior or load that toy ray gun; distract the monster with the Bambi Doll's fluttering eyelashes and improbable anatomy; use your favorite blankie to hide form the monster; or get some random effect with a card drawn from your favorite Collectible Card Game deck. Although the GM will have to create the monsters, "The Razor in the Apple" suggests plenty of ways in which it can be used, from facing aliens from outer space to exploring haunted houses and going after buried treasure. Other options include running it at a certain school for wizardry or having the kids go through a wardrobe to a whole new fantasy world.

In addition to the settings, *True20 Worlds of Adventure: Five Thrilling Worlds of Adventure* adds in some new rules useful to other *True20* settings. Most notable being the Sanity mechanics, but also the extra information for modern firearms and equipment, and for summoning spirits. Other new rules, like "Blood Throne's" Ascendant Technology deserve more space and development. Yet, it is the settings, the "Worlds of Adventure," that is point of this supplement, and although a solid set of game worlds, there is nothing all that new here, at least in terms of the hobby. For each of the five settings here there is at least one complete RPG available that covers something similar in more detail. For "Agents of Oblivion" there is *Delta Green* or *Conspiracy X,* for "Blood Throne" there is *Midnight* or *Evernight,* for "Land of the Crane" there is *Legend of the Five Rings,* for "Nevermore" there is *Deliria* or *Changling: the Lost,* and for "The Razor in the Apple" there is *Grimm* or *Meddling Kids.*

Even if you can find an RPG that can do each of these settings to a fuller extent, these are nevertheless all good settings, even "Land of the Crane" which merely shows you how to do a Japanese style fantasy game using *True20*

and little else. The other four do that and more. Thus the bulk of ***True20 Worlds of Adventure: Five Thrilling Worlds of Adventure*** showcases what the ***True20*** system can do, but at least four both present and sell themselves, such that you would consider not only playing them, but also looking at them further if each were to see release as a full supplement.

--Matthew Pook

Family More, or Family Few'd?

This past weekend, in time for the holidays, I got to visit my uncle in Michigan. The trip was a lot more stressful than I was expecting, as the drive through the Michigan weather proved much more problematic than expected because of the existence of a foot of snow (what I called a "blizzard" and what I suspect kin Michiganders called a "dusting"). It wasn't until I got to check the Internet that I discovered the probable reason for this incredible amount of precipitation: The Miami Dolphins finally broke their 13-game losing streak, doing whatever the opposite of losing is against the Baltimore Ravens (who'd won four and lost nine in the season to that point), barely clinching their victory in an Overtime of Suck. Clearly, if the Lord of Lies is hucking snowballs at Hitler, it's going to get pretty frosty in the Mideast as well.

Anyway, the luncheon was a lovely affair, where I got to show off my toddling toddler Sam to his favorite great-uncle (at least, his favorite on my side of the family . . . I think my wife's gargantuan family brings in 117 other uncles into the fold). Oh, and there was one awkward bit where I got the critical failure on my Social Interaction roll:

Steven: So how is Tom? Do you talk to him at all? [My other uncle, his brother]

Uncle: Tom? That would be a long-distance call; Tom's been dead for years!

Yes, it turns out Tom died back in 1999, and somehow this fact had escaped below my radar. Clearly Tom and I weren't the closest of kin; my father and Tom had a falling out years ago, and so I never really kept up with him after that point. Then my Grandmother's death in 1999 (shortly before Tom) pretty much signaled the disintigration of that side of the family, and I guess with Tom's death shortly thereafter there wasn't really a network to let it be kwown to the rest of those out of the loop (which, now that I really think about it, pretty much means "me").

Also of personal note is the fact that this Christmas luncheon -- which, with me and my uncle, comprised about 50% of the Marshes in the universe -- followed less than 24 hours on the heels of my wife's family's Christmas party, an event that had a cast of thousands . . . or at least in the high double digits. To put it in perspective, there were about dozen kids within six months of my son's age there (and, curiously, all of them toddled out after dinner in an impromptu team and proceeded to beat the Miami Dolphins in a quick game). And that was just my wife's mother's side of the family . . . last I heard, her father's side had rented out Chicago for their Christmas party.

In RPGs, I know there's a tendency (at least in my own circle and in submissions I receive) to make family an "all or nothing" prospect; either family is an integral part of the character's *raison d'être,* or he's a loner whose entire family vanished from the scene long ago: The parents were killed by the Yakuza; the grandparents were eaten by unemployed rodents during the Great Depression; and every last aunt, uncle, niece, and nephew all succumbed to the [Byte_Bandit](#) virus. Oh, maybe there's a sister who was kidnapped by pirates he needs to find. Pirates are cool.

But for many characters, the pull of family forms a strong pull, even if it isn't the primary focus of the character. As a few examples from popular culture:

- I would argue that, more than any other trait, Peter Parker -- Spider-Man -- was defined in the beginning by his role as a family man (in his case, the need to care for an aged widowed aunt).
- In comparison, Superman's foster parents have played an important part of stories set in the past couple of decades. In fact, Superman is probably the best example of "important, but not central" role of family. Many tales have been told that play off various fascets of his family: his orphan-of-the-universe status, his obligations and desires to his foster family, his need to protect and encourage his wife, and so on. And in both the Silver Age and recent years, the "Superman family" has come to represent a wide net of supporting cast members with lives of their own: Supergirl, Superboy, super-dogs, and Heaven knows what else has been added this month.
- All five *Star Trek* television series have had captains with different tacks of family life, focus, and involvement, ranging from the detached flashbacks of Captain Archer to the day-to-day childhood upbringing of Captain Sisko to the vinyard visitations of Captain Picard.
- [Jessica Fletcher](#) and [Adrian Monk](#) are both defined, in many ways, by their relationships with family and kin . . .

yet neither one has family as a central characteristic. In other words, they're an ideal "middle ground" to examine for coming up with ideas for PCs.

- As an exercise, consider the family lives of action heroes [Martin Riggs](), [John McClane](), and [Conan T. Barbarian]().

In speaking with a number of players over the years, one concern that I've seen before is that they feel weird about introducing family if they haven't been a part of the character concept from the beginning. But this is only a cause for concern if the family is supposed to be extremely tight-knit; it's entirely possible for family to be distant, or even reasonably close. (Just because a character hasn't mentioned visiting his aunt once or twice a year doesn't mean it can't have happened . . . unless it's an interstellar "in a tin can, far above the world" campaign, of course.)[1] And even if someone *is* reasonably plugged into family events, it's still possible for things to fall through the character's knowledge . . . like a dead uncle.

But regardless of what your family state is like, and regardless of how big or small it may be, may the end of this year and the beginning of next see you and your loved ones as healthy and happy as you'd like them to be.

--Steven Marsh

* * *

[1] I'm probably one of the few folks who wasn't particularly bothered by the revelation of Spock's (half-)brother in *Star Trek V for Vendetta Against Logic* . . . although there are other miles of celuloid in that film to be bothered by.

Pyramid Review

Ingenious (for Windows)

Published by [Merscom LLC](#)

Original design by Reiner Knizia

Project lead Lena de Riese

Programming & design by Kai Ludwig, Stefan Stefanow, Jürgen Hoffmann, & Michael Zeilfelder

Graphics by Sascha Urbanek & Oliver Schulz

CD-ROM, rulebook; full color, boxed, for one to four players, 20 minutes playing time; $19.99

If it was taken out back behind the woodshed and beaten with a rubber hose, the attacker would only tire himself out; *Ingenious* is here and it's here to stay. It was recently reduced to a convenient little *travel* size, but depending on how one defines that term in an age of portable lap-top computers, it may also go on the road as part of the desktop. Welcome *Ingenious* for the personal computer.

The play of the game remains the same: There are six colored symbols in play, and players take it in turns to place domino-like pieces, with these same icons at either end, onto the board. Every color that matches a symbol already on the board scores a point in that color, and as the tiles stack up into a line, players can get a bigger score for every symbol in that line. When the board has filled up with tokens (a game takes about 20 minutes), the highest score wins the game . . . but every player can only claim his *lowest* scoring color as his "high" score.

The Windows computer version is good for anyone who wants to hone his skill when he doesn't have his friends handy (or if he just doesn't know one to three additional Euro-gamers). The user may choose to play against however many artificially intelligent opponents he cares to, and toggles determine how good the enemy is and how quickly the game moves. If the AI plays too fast to keep track of, the computer can be required to move only when it is told to, so that his strategies can be studied in a more leisurely fashion. There's a team option so it can be played like partners in bridge, if it gets too tiresome being beaten on one's own.

To really challenge oneself, the user can turn on the timer. Much like a chess clock, this forces the player to go more by instinct instead of carefully examining which plays garner the most points and which tile arrangements get maximum bonuses. Waste the entire allotment of time and the game ends tragically. If humans are around and ready for a game, there's a hot-seat option (players take turns sitting down to a single computer to take their turn), and the program can also be run on-line. Finally, the program keeps track of past games; it's a high score board, to put it simply, but with the quirky scoring

> ### System requirements
>
> - **OS:** Windows 2000/XP/Vista
> - **CPU:** 500 MHz
> - **Memory:** 128MB RAM
> - **Video Card:** 3D video card with 16MB RAM
> - **Hard Disk Space:** 170MB free hard disk space
> - **DirectX:** 8.1 or better
> - Internet connection is optional but necessary for multiplayer on-line play

system used the information provided is a bit more involved, not to mention performance is divided up into scores for the various modes of play.

There are a few minor catches here and there. It doesn't mention that players must choose a separate starting color the first turn of the game (not that it lets someone take an illegal move anyway); there's a grammatical error in the tutorial; and some background colors work better than others (this, too, can be chosen). Red and green are harsh on the eyes, but the gray backdrop makes it harder to tell which player is taking his turn (the current player's name highlights in gray). Blue seems the best way to go. Also, occasionally the game slows down for no apparent reason (perhaps it's been programmed to go more slowly on subsequent games depending on its opponent's achievements), and very rarely it locks up. In these cases the game can be saved and reloaded and that seems to clear the difficulty up.

Sweeping these aside, it's a tidy package. It duplicates most if not all of the options offered by the physical version, and even improves on it in a few spots. The included tutorial is quick and, though a bit dry in spots (it's mostly just the rules doled out in easily digested chunks), it's informative. The visual clues do a better, faster job of describing the action and its abstract nature. And unless someone in the play group is a classical musician, the jazzy score that plays along with it (with shades of reggae or Enigma) will actually see a bit of play before one toggles it off in frustration. Same goes for the sound effects.

It's never optimal, having to turn to a computer application to fulfill one's amusements, but in the absence of friends, *Ingenious* for Windows-based computers serves admirably. One can start at the easiest levels and work his way up against tougher opponent settings, and even at the top of the ladder there's no such thing as a guaranteed success with the canny and capable AI. Players will recognize that feature all too well.

--Andy Vetromile

'Clix New Year Balloon Drop

for *HeroClix*

by Nikola Vrtis

One of the fun ways to celebrate the coming of the new year is with a balloon drop. It's even more exciting with prizes, especially "powerful" ones that'll have heroes and villains battling over them into the new year. Once all of the balloons have been dropped and popped, of the two to four participating teams, the one with the most points wins.

Setting Up the Game

This game uses the *HeroClix* rules, which players can find on the WizKids Web site (check the rules page); the rules are used largely as is, with modifications mentioned herein.

For the playing area, the game requires a large area that's eight 1.5-inch squares on each side; a checkerboard or a map of a warehouse would work, or players can print out and assemble the game board. If participants decide to use something other than the supplied game board, they need to determine which is the upper-left-hand square of the board. This will be where they start counting from when figuring out where the balloons drop.

The game also needs one or more printouts of the balloon tokens and their prize explanations. Optionally, participants can include several tokens or items representing restaurant or party equipment, decorations, and furniture. Finally, two eight-sided dice of different colors are used to determine where a balloon lands. Decide on which die is associated with the rows and which one is associated with the columns of the board.

Once all of the components have been gathered, two to four players create teams of two or more *HeroClix* figures, with a maximum total of 200 points. Players may include almost any character in their teams with a few exceptions: No flying, double-base, giant, or colossal characters are allowed. Additionally, participants may not use battlefield conditions or feats.

Most local and Internet retailers sell *HeroClix,* but if those aren't handy, players can use the basic generic characters created for "Six 'Clix Morris" along with any sort of counter or figure with a base of no more than 1.5 inches at its widest point, such as Steve Jackson Games' *Cardboard Heroes Modern Characters.*

Once the teams are settled, players randomly choose the balloons so that there's a minimum of one balloon per figure. (For example, if two teams have two figures and one team has three figures, the participants would select a minimum of seven balloons.) Shuffle the balloon tokens face down and randomly choose the appropriate number; players may opt to include more balloons in the pile if they so desire. Set the chosen balloons, with the prize explanation cards, near the game board.

Players determine who goes first by each rolling two six-sided dice and totaling the results. The highest roll goes first, with ties rerolled. With three or four participants, play moves to the right of the starting participant.

Next, the players take turns placing party and restaurant items on the board, if these are being used. Finally, each person places a figure, one per turn, anywhere on the board.

Playing the Game

Participants take turns in the same order as they placed figures. For attacking, movement, and power use, use the *HeroClix* rules, with the following modifications.

Movement

Standard move rules apply, including the fact that characters may not travel off of the edge of the board. Party and restaurant tokens block movement (until picked up or moved). Balloon tokens do not hinder movement or line of sight; rather, if a figure moves through a spot with a balloon on it and does not pick up the item, the balloon is put on a square to the right or left (player's choice) of the movement path. Note that balloons cannot be shoved off the board.

Releasing the Balloons

Each player helps with deciding where each balloon falls. At the start of a participant's turn, before doing any other action, the player rolls the two eight-sided dice. Starting in the upper-left corner of the board, count, to the right, the number on the column die. Then go down from there, counting out the number on the row die. (The supplied game board is marked with coordinates.) This is where a balloon lands. If there is a figure there, the figure automatically catches the balloon if he is not holding any other object (even another balloon); otherwise, the balloon falls on the nearest empty square adjacent to the figure.

Balloons must be kept face down until they are popped.

Balloons and Prizes

It does not take an action to catch a falling balloon, nor does it take an action to drop a balloon. The player puts the released balloon in a spot adjacent to the figure; he may not place it off of the board.

To pick up a balloon or prize, a character must be adjacent to the token. It takes a single action to pick up a token. Characters may not attack when they are picking up balloons or prizes, although they may be attacked. Figures may move and attack as normal when they are carrying balloons and prizes.

A figure may carry up to two balloons at a time. However, a character can only catch or pop one balloon at a time (thus, if a figure has two balloons, he must drop one before he can pop the other).

Popping a balloon requires dealing it at least two clicks of damage. Once popped, flip the balloon over to reveal the prize number. Give the corresponding prize card to the player whose figure holds the prize. (Transfer this card if an opponent steals the prize.) The figure may now rely on the special power listed on the prize explanation for the duration of this game -- or until he loses the prize! (Of course, if the character already has the power, a second set doesn't do any good, though the team receives points for having the prize.) Figures may carry as many prizes as they like.

Team members may pass balloons and prizes between each other. The recipient must be adjacent to the passer. It costs the passer an action to hand over the balloon or prize; it does not cost the recipient an action to accept a prize or balloon.

In ranged combat, any hit that does damage forces the target to drop all of his balloons or (if he has no balloons) one prize (if he has any); he also takes the clicks of damage inflicted. With close combat, the attacking player has two options with blows that deal clicks of damage: The character may either force the opponent to drop balloons or he may take his choice of one of the target's prizes (assuming, in both outcomes, that the defending figure has a something). The defender also takes the damage. An attacking figure in close combat that has two balloons may exchange one of them for one of the defending player's balloons.

Balloons can be popped at a distance, as long as they are not being held by anyone.

Balloons and prizes may not be used as weapons. Prizes may not be damaged.

Ending the Game

The game ends when one of the following events occurs:

- There are no more balloons to drop and all of the balloons have been popped. (Should there be a balloon-carrying holdout, it's highly recommended that the opponents gang up on that character.)
- Only one team has any figures remaining on the board.

After the game ends, each team adds together the point value of the prizes in their figures' possession. The team with the highest total wins.

Variation

Turning in Early: Once all of the balloons have been released, each player gets one additional turn before the party ends. Unpopped balloons and prizes not in the possession of anyone do not count toward any team's final total.

Generic Hero Cards

To use the generic hero cards provided with the "Six 'Clix Morris," players use an eight-sided die to track character damage. Turn the die so that the maximum clicks of damage shown on the card is face up. Each time a character receives a click of damage, flip the die to the next lower side. Do not reduce stat values as a character takes damage. Furthermore, characters with super powers may continue to rely on those abilities until they are KO'd.

Designer's Notes: *GURPS Dungeon Fantasy: Adventurers*

by Sean Punch

There are times when you simply don't have enough hours to tackle something big. That statement applies in two very different ways to *GURPS Dungeon Fantasy: Adventurers.*

Toward the end of November 2007, I finished my edit of *GURPS Thaumatology* and found myself with perhaps a month left before my scheduled end-of-year vacation. My thoughts turned to an outline for a 240-page book called *GURPS Dungeon Fantasy* -- an outline that had been sitting on my hard drive since 2004. Here was a book that I had always wanted to write but never had time even to start . . . and now I had an opening. Unfortunately, that opening gave me a few *weeks,* not the few *months* that I'd need to write a full-length book.

Around that time, I noticed several threads over on our [forums](#) asking about stats for archetypal dungeon adventurers in *GURPS,* and how to convert abilities from other fantasy RPGs. To be honest, I could see why; *GURPS* hits gamers with a lot of information. Even a hack-and-slash fantasy romp means poring over the *GURPS Basic Set and [GURPS Magic](#) and [GURPS Powers](#)*, looking for skills, spells, powers, and gear. It was clear that many people still had a place in their heart for old-school dungeon crawls, but lacked the time to tackle character templates and special powers.

This is when Paul Chapman, Phil Reed, and I got the brainstorm that we could address both my lack of time and that of *GURPS* players by having me create *Dungeon Fantasy* not as a massive tome -- which would *worsen* the "information overload" problem -- but as a series of PDFs. We decided that the first two PDFs would be *Dungeon Fantasy: Adventurers* and *Dungeon Fantasy: Dungeons,* in keeping with the *Basic Set* split into *Characters* and *Campaigns.*

What It Is

Dungeon Fantasy: Adventurers focuses strictly on what you need to create stereotyped dungeon explorers in the spirit of old-school RPGs, [roguelikes](#), and [their more polished descendants](#). It's a crib sheet for GMs who can't justify spending hours immersed in their *GURPS* library, jotting down powers, equipment lists, and notes on allowed traits just so that their players can create PCs for one-off dungeon crawls. It's also a time-saver for players who don't want to put a lot of effort into designing hack-and-slash heroes who might get eaten by ice weasels in the first game session.

It took me 60-65 hours to pull everything together, check the math, and come up with "house rules" that let you skip most of *Characters* and get right to "You meet in a tavern." Granted, I spent half that time editing and polishing, but still . . . that's 30+ hours that *you* don't have to spend on this stuff. Not having to do all that work should make beer-and-pretzels dungeon hacks a lot more attractive to gamers who love the genre but feel that *GURPS* is too much game for the job.

What It Isn't

Appropriately enough for a minimalist supplement, *Dungeon Fantasy: Adventurers* is defined as much by what it *isn't* as by what it is.

First, it isn't a standalone game or even a half-step between *[GURPS Lite](#)* and the *Basic Set* (would that be *GURPS Medium*?). You still need the *Basic Set* for the advantage and skill write-ups, the combat system, and so on -- and you'll probably want *[Magic](#)* for spells, unless you seriously believe that you can run a dungeon crawl without goodies like the Rain of Nuts spell. This PDF is an excellent player handout and a real time-saver, but it doesn't cure cancer and produce infinite free energy.

Second, it isn't all of ***Dungeon Fantasy.*** At minimum, there will be a ***Dungeon Fantasy: Dungeons*** that does double duty as a GM's crib sheet for dungeon design and as a players' crib sheet for common tasks and activities down in the dungeon. There may be other PDFs, if people like the first two . . . monsters, traps, treasures, maybe even complete dungeons. We'll see.

Finally, it isn't serious. It is by turns cheesy, silly, and munchkin. If you're the sort of gamer who likes everything to be proper and by the book, or who believes that fantasy should always be serious, you might just want to skip this one. But where's the fun in that?

What's In There

The main components of ***Dungeon Fantasy: Adventurers*** are:

- Templates for 11 classic fantasy RPG archetypes: barbarian, bard, cleric, druid, holy warrior, knight, martial artist, scout, swashbuckler, thief, and wizard. These were designed as a set, in an effort to give each kind of PC a distinct, useful role. They're also optimized -- maybe even a little munchkin -- but not so much that they lack color.
- Seriously chopped down traits lists for players who don't like templates, removing distractions like Improved G-Tolerance and Beam Weapons.
- Quick-and-dirty rules for adapting the basic magic system to work for clerics, druids, *and* wizards without making them cheap carbon copies.
- Four nifty powers for simulating the innate abilities of certain fantasy heroes, with all of the modifiers and point costs worked out so that you don't have to do it.
- A big list of equipment, including old dungeon-crawl standbys, simple rules for custom weapons and armor, and even notes on oversized weapons and armor for *big* PCs.

Other useful tools include a set of new wildcard skills, explanations of how various spells and powers interact, and a few quick hacks that replace the standard rules for Wealth and Powerstones. Packed in around all of this are bits of advice on how to handle "training expenses," social traits in a genre where society consists of "town, where we buy, sell, and steal things," and disadvantages in a game where they amount to a way to tell Ed the Barbarian apart from Joe the Barbarian.

It's actually a lot of *crunch* squeezed into a small package.

As I hinted above, nothing here is exactly *new,* or much better than what any experienced ***GURPS*** GM could create with a couple of weeks of work. Except that you don't have to be experienced or do a couple of weeks of work to use it. And of course everything is consistent, and will remain consistent with later ***Dungeon Fantasy*** installments -- and also with your memories of good ol' hack-and-slash.

Pyramid Review

The Red Dragon Inn

Published by [Slugfest Games](#) Designed by Geoff Bottone, Colleen Skadl, & Cliff Bohm Art, direction, & layout by Cliff Bohm, Kennon James, Cold FuZion Studios, & Beth Trott

Full-color boxed set with 160 character cards (four decks, 40 cards each), four player mats, 30 drink cards, 50 gold piece counters, eight tokens (four fortitude & four alcohol content), plastic tray, rule sheet; $34.95

As the new year approaches, game groups are on the lookout for new games to play at parties, something to herald the onset of . . . never mind. If anyone's looking for a good drinking game -- literally -- they could do worse than Slugfest Games' latest, ***The Red Dragon Inn.***

The object of the game is to be the last character standing at the end of a hard evening of carousing.

It's an accepted fact that most adventuring parties get their start meeting at a tavern, so it's only fitting the survivors end up there to spend their hard-won gains. Here, two to four dungeon crawlers gather at the pub and gamble. And drink. And fight.

Each of these heroes gets his own deck of cards, a playing mat, and a pair of tokens to track fortitude and alcohol content. On his turn, a player may play an action card. These have many effects, like starting a round of gambling, causing harm to a fellow adventurer (*purely* by accident, of course), or getting a recount on the gold, among other things. He can only play one action per turn, but the other cards may be playable at other times: to counter a loss of health, for example, or to increase a rival's drunkenness. Then he buys a round for someone, and puts a drink card facedown on their playing mat. Finally, just to be agreeable, he slugs back one of the beverages someone else bought him.

A character starts with 20 fortitude and no alcohol in his system, the picture of health (now that Deirdre the Priestess has healed everyone up from their stint in the underearth). If he takes damage, his fortitude goes down on the point track on his mat, and if he consumes booze his alcohol content goes up on the same track. If e'er the twain should meet, that adventurer has had enough fun for one night, goes unconscious, and is out of the game (save that he -- or rather, his purse, divided as it is among the conscious -- continues to enrich the party). If he runs out of gold before he passes out, he's ejected from the Red Dragon and forced to sleep with the horses.

The threat of running out of money is a good reason to gamble. If someone uses their action to get a hand going, everyone is forced to ante up (unless they have a card that lets them skip the game), and all have a chance to play a card. If they can play a card, they take control of the game. If they haven't, they pass. If everyone passes, the person still in control collects all the gold. And what would gambling be without drinking? Easier, but what adventurer takes the easy way out? Drinks may be a straightforward addition to one's inebriation level, but some come with special effects like a chaser or an event like a drinking game. It's important to buy drinks for opponents, lest their drink stack runs out and they (gasp) sober up.

Booze, violence, and splurging eventually do everyone in. The last hero remaining with gold and his conscious wits wins.

The game is simple, but the components don't skimp. The money counters are tough cardstock, the playing mats are firm (and have most of the information needed during the game, like the order of play), and the alcohol and fortitude

counters are those fancy glass beads favored by players everywhere. The cards fall prey to the thin-stock syndrome, but the artwork is marvelous. It's humorous, colorful, and enjoyable, and could hold its own against your Phil Foglios and John Kovalics. The box comes with a quality, molded, plastic insert for keeping everything in its place.

And game play is just what gamers want to see: strategy balanced with simplicity. The rules are easy, and they make perfect sense. The separate decks for each character bring them to life. They all have their own advantages and drawbacks, and played properly the former keep someone in the game and the latter give definite vulnerabilities that can be exploited by a shrewd opponent. The priestess, for example, has her gods to turn to for favors and healing, but she's easily overtaken by imbibing too much. Sly Gerki, on the other hand, does well when cheati . . . er, gambling, but can't take too much physical punishment. Card interaction is lively and keeps things funny and fresh every game.

The Red Dragon Inn is going to be in business for some time to come, given its clientele and the supplement intended for 2008, and with a mere 30 to 60 minutes playing time, it deftly fills the holes in a gamer's, or partier's, schedule.

H.G. Wells' War of the Worlds Roleplaying Game (1PG System)

Published by http://www.deep7.com/Deep7

Written by James Stubbs

Photography by Andrew Tomlinson

13-Page 705 KB PDF file; $3.95

For very personal reasons, things have been very quiet at Deep7, best explained with the publication of their latest 1PG as the "Samantha Downing Commemorative Edition." This 1PG is also a marked departure for the 1PG (or One Page Game) series. All of the previous entries have been generic in their treatment of the genres covered. Each one upon several sources for their inspiration, whether Word War II for *Battleforce Bravo: Wartime Adventure*, anthropomorphized computer-generated bugs for *Buggin' RPG: The Tiny Game of Big Adventures*, or 1930s' pulps for *Dime Heroes*. The release of *H.G. Wells' War of the Worlds Roleplaying Game* significantly deviates from this by focusing on just the singular source.

It is still a 1PG though, meaning that its elements -- character generation, game mechanics, notes for the referee, and each of the six scenarios -- each just fit into a single page. But as the title suggests, this 1PG is based upon the classic tale of alien invasion, depicting an England overwhelmed by the superior technology of the Martians, only to be foiled by the smallest of details. Although the novel has proven a rich source for radio plays, movies, records, and television series, this is not the first time it has served as a source for RPGs. Gold Rush Games' *War of the Worlds Sourcebook* provides details for both the *d20 System* and the Action! System, while the possibility of the Martians possessing Mythos connections is explored in *Cthulhu by Gaslight*.

Mechanically, the *H.G. Wells' War of the Worlds Roleplaying Game* is no different from other 1PG titles. Attributes and skills range from one to three, and to do anything, a six-sided die is rolled to get under a combination of an appropriate skill and attribute. Character generation is quick: 1d3 is rolled for four attributes (Sturdiness, Looks, Craftiness, and Brains) and 1d3+3 points assigned to various skills. Further rolls determine a character's Blood (hit points), Spirit (mental well-being), Guts (courage), and Reputation. Unfortunately, unlike other 1PG titles, the dice rolled for each, and what exactly each term means, differs between the generation explanation and the checklist.

This being a Victorian/Edwardian set game, the usual status and background tables of a 1PG assume a greater importance. Each, of course, provides bonuses to attributes, skills, and secondary statistics, but the rolls on these tables also determines a character's place and role in society. Combinations like Aristocrat and Rake, and Soldier and Veteran give obvious results, while Aristocrat and Irrepressible could be explained as an adventuring noblewoman or wealthy adventuress, as could Working Man and Seduction, though the latter more in the style of Lola Montez.

The advice for the referee is typical for a 1PG: short and sweet. It directs the GM to cut to the chase, choose appropriate music to set the mood (suggesting even using the soundtrack to the modern film version), and keeping the bad guys -- the Martians -- a malevolent and unknowable antagonist. More importantly, characters are not expected to get along: Class and personal differences rear their ugly head as the invasion strips away the veneer of English civilization. Not surprisingly, this is at odds with the more contemplative nature of the novel, considering as it does the condition and survival of humanity in the face of bleak destruction, but then again, this is a roleplaying game. And a 1PG, which to be fair, does not call upon a player to contemplate the depth of his character's soul, or even employ method acting.

Being the lead guys of the piece, the Martians receive a whole page to themselves and their technology. Statistics are given for the Martian race, as well as all of their technology, including the cylinders they land in, the tripods they travel in, the handling machine used to construct and repair other devices, and the weapons they employ to eradicate mankind. All are given in terms compatible with ***The 1PG Companion: A Toolkit For Deep7's Beer & Pretzels RPGs*** and all are designed to give the invaders a very unfair but fitting edge in a fight.

The default set-up for the six scenarios included with the game casts the characters as refugees fleeing across England's green and pleasant lands, attempting to escape the path of the encroaching invaders. In "The Strange Case of Charles Milford," the odd behavior of a fellow refugee threatens both the party and an artillery battery. The opportunity to strike back at the invaders occurs in "The Destruction of a Martian Cylinder," in which the guerrilla action against the Martians takes to the sewers. "Those Who God Would Destroy" focuses on a madman in possession of a canister of Martian Black Smoke, which could either kill hundreds or be used to synthesize an antidote. A rumor of the government distributing bread in "Feast or Famine" proves to be a draw for the refugees just as they could be an attraction for the Martians. "Flight to the Coast" hides political motives, while "Martian Britain by Rail" and its potential sequel, "In a Puff of Green," present another opportunity to strike at the invaders and exploit a possible weakness.

These six are decent scenarios and, given familiarity with the source novel, could easily be run as part of a *The War of the Worlds* campaign. Yet this "as part of" aspect highlights the central weakness with this 1PG. Other titles in the series take a broad approach to their genre, but here the reverse is true. The game focuses in to give just snapshots of the time following the invasion, whereas a complete RPG would explain and explore much more -- if not its entire source. Perhaps not necessarily in scenario form, but at least within the meat of the game's background material. However, the game fails to provide this, just as it fails to give a guide to gaming in the Victorian or Edwardian eras.

To be fair, the ***H.G. Wells' War of the Worlds Roleplaying Game*** is well done, but not as a *complete* RPG. Instead, it works better as a source book for roleplaying in an England invaded, whether for the 1PG system, ***GURPS Steampun,k Forgotten Futures,*** or indeed the **War of the Worlds Sourcebook** published by Gold Rush Games. Perhaps if it had addressed the two omissions -- that of Victorian-era gaming and discussing the novel and how to "game" it, even with just a single page devoted to each -- the ***H.G. Wells' War of the Worlds Roleplaying Game*** would have lived up to its claim as a roleplaying game. In its current form, it does not quite do that and it feels constrained by the 1PG format. That is an unfortunate first for the series.

-- Matthew Pook

Vacation: Society's Smokescreen

It's that magical week between Christmas and New Year's. And you know it must be a magical time, because everyone and everything stops working right. At least, almost everything.

Yes, as tenured folks burn up the rest of their vacation time, the seats of government and many non-seasonal businesses tend to crawl to a standstill this week. Newspapers get notoriously light on "real" news, instead opting to whip out fluffier pieces that could have been written weeks or even months earlier. (Slate.com bemoaned this fact a [few days ago](.))

So, naturally, many people in positions of power often use this lull as an opportunity to sneak in questionable or undesirable news, knowing that in-depth analysis of the decision will be lacking for a couple of weeks. Thus this is the time of year when many companies announce major layoffs, or when questionable laws get passed (or vetoed). And the media is reluctant to admit that it dropped the ball when it finally dusts itself off a few weeks later, so the odds are slim of seeing a headline that reads, "Interim Appointments Made Two Weeks Ago; Department of Interior Now Headed by [Galactus](); This Might Be Important."

Of course, this doesn't apply to especially important news, such as Thursday's tragic assassination of Benazir Bhutto. But even in such events, it sometimes feels like the news media can be slow to respond during the holiday period; I remember the [Asian Tsunami of 2004](), and being glued to the television and hitting reload on websites for more info . . . which seemed to come in days later.

On a lighter note, I've also heard it be said that the popularity of the satirical political "news" commentary show *[The Daily Show]()* has resulted in some in the halls of power to try to time potentially embarrassing or mock-worthy incidents with the frequent hiatuses of that show. (Again, it isn't very timely to make fun of "news" that's two weeks old.)

So what relationship does this have to the world of gaming? Well, the desire to control the flow of information -- especially by timing -- has a long pedigree. For example, the American colonies declared their break from the English mainland on July 4th, the day they knew all the British would be at picnics and Independence Day sales. In particular, then, musing about timing can provide some interesting plot seeds and catalysts, as well as being an interesting way to "sneak" in revelations or campaign developments, especially in modern or not-too-distant-past (or future) settings.

- One long-running conspiracy theory has been that, when the invasion or black-helicopter overthrow of the United States comes, it will happen on Thanksgiving, when everyone's consolidated at home and drowsy from starches. (I'm not a big proponent myself, but it does make for some interesting idle consideration as I'm fumbling for the remote as powerful gravity rays grab my eyelids at 5:00 p.m.) Heroes might have their holiday meals interrupted by the need to disrupt a plot, or they might stumble across a town that *has* been taken over in a Thanksgiving Coup.
- Any campaign-affecting laws or decrees can come into effect in the world's "downtime." This can be especially useful in settings with PCs with powers: announcements could be made that psis are now required to register, or super-powered humans need to pay an unreasonable "insurance" tax. (As an added bonus, if these developments occur during holidays or other public festivities, the players have a chance for their heroes to react in not-entirely-familiar surroundings; how will they react to needing to register for the draft in the next 48 hours, when they had plans to spend the week with their relatives from Rwanda?)
- If the heroes need to find out any significant information that involves human interaction, it's entirely possible that their efforts will be more difficult (or even impossible) during those times of the year when mass vacations are popular. This can either be abstracted by increasing the difficulty of rolls, or roleplayed by the investigators trying to get the information they need from fill-in know-nothings or by interrupting vacations. ("You called me to learn *what?!* How did you get this number?!")
- News of significant but not earth-shattering importance can occur during such timing lulls. For example, any mid-level villain might escape during this time, or be acquitted (quite possibly on a technicality), or otherwise become available to be a future thorn in the heroes' sides. These adversaries need not *attack* during this downtime; rather, they can merely set their plans in motion, relatively confident that the two-paragraph blurb

about their freedom will be relegated to the bottom of page seven of the mid-week paper.

- On a related note, it's entirely possible for less-important (or seemingly less-important) news to be completely obscured in the news by larger events . . . or, at least, events that will sell more papers/airtime. As one example, the events of September 11th, 2001 led to a near-blackout of the reporting of any other significant news in the United States for almost a month; as another example, the mundane death of Mother Teresa on September 5th, 1997, was almost entirely overshadowed by the continuing coverage of the much-more-sensational demise of Princess Diana, five days earlier.

Things don't cease happening in the real world merely because people stop paying attention. The heroes may know what to do about a prison break of a hated foe when they hear about it "as it happens" on the news . . . but how do they react when they discover the news several days later? Or when they discover an anonymous threatening message on their voice mail? When the New Year comes in a few days, the dropping ball at midnight may well obscure the sound of the other shoe dropping elsewhere.

--Steven Marsh

Sentinels of the Styx, Part II

An Adventure for *GURPS Martial Arts*

by Stephen Dedman

Part Two: Return Strike

In [Part I of "Sentinels of the Styx,"](#) the heroes seek to avenge a dead friend. A series of clues leads them to murderer. It is recommended that players experience the first part of this adventure before continuing on to the second one, though any good GM should be able to tweak this set of scenarios into a one-shot if so desired.

As a reminder, the GM needs the *GURPS Basic Set* and *GURPS Martial Arts* for this adventure. It is designed for Heroic-level martial arts characters (100-200 points) but can be tweaked for higher level characters. It is also suitable for "realistic" supers or a cinematic espionage campaign where magic-using NPCs are a possibility. It is set in the present in a generic medium-sized city and can be easily adapted for any period from Cliffhangers to Cyberpunk, or for other systems such as *Shadowrun.*

Acting in Concert

Any PCs who have signed up with Merrimac Security receive a phone call on Day 9 (see *Timeline for Entire Adventure,* toward the end of this article) asking them whether they can work the next night. The doom metal band Cyanotix is performing in town, Merrimac is handling the security, and they need more bodies. Pay for the night's work is $250, plus the chance to talk to bored Merrimac staff.

Security at the concert mainly comprises checking people at the doors for obvious weapons (cell phones are not considered a problem), and standing guard over valuable equipment and staff-only entrances. Heroes who performed well in the "Gatekeeper" test are assigned to the doors. They are issued metal detector wands (which can be used as a baton at -2 damage; Shortsword -1), but these mostly give false alarms, as many of the concert-goers are carrying or wearing harmless metal items. A Very Bad reaction from someone who doesn't want to be searched may result in violence.

The rest of the characters guard the instruments and other equipment. At least one hero is nearby when a violent incident does break out -- a young man takes out a knife and inexpertly tries to commit seppuku during Cyanotix's song "Chushingura Café." (For the man, use the *Non-combatant* stats, listed in the *Cast* section of this article.) If an agent can disarm him without causing any further harm and get him into a lock, he drags him to the nearest first aid station without difficulty, and the audience thinks it's part of the show. Word of this gets back to Glanton, giving him a +2 to any reaction rolls made to the PC in future; on a Very Good or better reaction, he invites the infiltrator to his next mixed martial arts class (Day 16).

After the concert is over, the crowd has left, and the gear has been safely stashed away (about 1:00 a.m.), the security guards join the after-show party backstage. The band members have already left, but the backing musicians are still around, and there is plenty of food, alcohol and illegal drugs, as well as a few discarded groupies. PCs with the Addiction, Alcoholism, Compulsive Carousing, Gluttony, or Lecherousness disadvantages have the opportunity to indulge their vices. Any PC seen breaking the law becomes a potential blackmail target, but the only disadvantage likely to lead to trouble is Honesty: A PC who reports the drug use or any other illegal activity to the police or press receives a -4 to reactions from all Merrimac personnel.

A Thief in the Night

If Sabra has attempted to entrap and interrogate a hero and failed, Jerome "Ferret" Barrett finds out what he can about the PCs. If no one seems easy to blackmail, Ferret picks one, break into his home late at night, and lets Volker and Turvey in (plus a Merrimac heavy for everyone else who lives in the character's home). Volker then interrogates the investigator: see *Charm Offensive* in [Part One](#) for some ideas on how to proceed with this scene.

The China Shop

A hero who signed on with Merrimac (male, chosen on the basis of a reaction roll) receives a call after the Cyanotix concert, asking if he can substitute for another bouncer at the Moondance strip club, on the edge of Chinatown. If he accepts, the supervisor tells him to wear casual clothes with no obvious weapons.

The club complies with local laws, and the job is mostly trouble-free until shortly before midnight. With a successful Per roll, the guard notices that some clients pay the cover charge, move quickly to the bar, hand a large amount of money to the bartender in exchange for a scrap of paper, then walk through the club to the rear exit. They return by the same route 6d minutes later and quickly leave. If the hero investigates, he finds that the exit leads to a dimly lit (-6 to Vision) alley behind the club. The alley is a dead end, and a padlocked metal gate closes off the other end. Approximately opposite the exit are the back door and loading dock of another business, which a sign above the loading dock's door identifies as "Qian Kun Imports." A security camera mounted at the end of the alley watches all these doors.

Should the infiltrator knock on the door, it opens a few inches by a Merrimac mook, who has been ordered not to let anyone in without a ticket (available from the bartender for $200); how politely he communicates this depends on his reaction to the PC. The reinforced door (DR 7, HP 50) is secured with a chain lock (DR 11, HP 22: +3 to Lockpicking when open, -4 when closed).

If the hero takes more than a few minutes with his snooping, the bartender sends someone to remind the character that he's being paid to watch the front door, not the back one.

At 11:48 p.m., Lin Chu walks into the club and, unless stopped by the PC, straight through to the exit. Two minutes later, a small bell sounds and a light flashes at the bar. The bartender motions the guard over and tells him that he's needed "out the back." If the character ventures through the exit, he sees that the door opposite is wide open, and Lin Chu has disarmed the mook. As he watches, she hits the mook in the face once, stunning him, then steps out of sight.

Quian Kun Imports, as the name suggests, is filled with assorted Asian imported goods -- including two futon beds surrounded by folding screens, upon which lay four young, attractive, and scantily dressed Chinese women, all handcuffed and gagged. The women are illegal immigrants forced into the sex trade, whom Chu has come to rescue. Another Merrimac mook stands guard over the women.

Other imported goods on display that might prove useful to the PC include cheap quality martial arts weapons -- balisong knives, butterfly swords, combat fans, hook swords, horse-cutters, jianns, kakutes, machetes, nunchaku, rope darts, sais, shuriken, and slashing wheels -- as well as handcuffs, flashlights, cigarette lighters, batteries, and assorted other goods (clothing, furniture, fabrics, knock-off toys, and pirated DVDs). A first aid kit and small fire extinguisher are mounted on the wall next to the back door. Display cases and other furniture provide cover and may hamper the use of long weapons.

As soon as Lin Chu sees the women, she explains to the slaves (in Chinese) and to everyone else (in English) why she is there. She then disables the second slave guard and watches the PC warily while she frees the women. She intends to leave via the club and to fight anyone who tries to stop her -- preferring non-lethal but crippling attacks. This would be a very good time for the PC to decide which side he's on.

When Chu and the women come into the club, the bartender (treat as a mook) draws a .40 auto pistol from under the bar, and Ferret appears from his office with his holdout pistol drawn. Should the hero fail to prevent a firefight, Chu is shot at least once -- and if the PC makes a Per roll, he sees that she is unaffected by bullets or any other metal weapons.

If the PC aids Chu and the slaves with their escape (Chu has an rented van parked just outside), Chu offers him a lift to relative safety. She may tell some of her story to the hero, depending on her reaction to him.

- **Neutral:** Chu came to town a little more than two weeks ago, to try to break a people-smuggling ring that was forcing women it brought in from Asia and the former Soviet Union to work as sex slaves. She visited the docks searching for the women, but arrived too late to locate them. She has spent most of the past two weeks tracking them down to Qian Kun Imports. She has heard that a young woman, a freelance reporter, had also come down to the docks to investigate the smugglers, and was killed.
- **Good:** Chu is a member of a small group of martial arts masters known (in English) as the Society or Sentinels of the Styx. The group has no particular agenda apart from the development of the martial arts by protecting their best practitioners. It rarely meets except when a Sentinel has died and a successor must be chosen. Selection as a Sentinel is by a full-contact unarmed mixed martial arts contest. Though legend has it that this is a fight to the death, deliberate killing is not permitted and fatalities have been rare: Contestants are defeated by being forced out of the (5-yard diameter) ring, pinned for more than 22 seconds, rendered unconscious, or surrendering.
- **Very Good:** The Sentinels of the Styx know a magical formula that gives the skin DR 1 and renders it immune to the effects of any metal weapon, as well as slowing down the external appearance of aging. No one person knows the entire formula; each Sentinel knows part of it. The formula is only mixed together when a Sentinel dies and must be replaced by another master. Glanton hopes to be made a Sentinel and is rumored to know part of the formula; Chu is in town to confront him. If he was responsible for the attempt on her life, as she suspects, then the Sentinels are entitled to return the favor.
- **Excellent:** While none of the PCs are, as yet, serious contenders for membership in the society, if and when they are ready to be trained by a master, Chu gives them a hint on how to find one. See *Aftermath!* (later in this article).

Regardless of her reaction to the hero, Chu drops him off before the slaves and will not tell him where she's taking them.

Masterclass

Two weeks after Kim Song's death, Lin Chu comes to the dojo to meet the PCs. She cheerfully spars with anyone who wants to try, but her real intention is to gather backup for her meeting with Glanton the next night, when she intends to gatecrash his dojo. She is confident that she can tackle him, but he won't be alone, and she wants other fighters present in case matters get out of hand. She also fills the martial artists in on back-story (as above) depending on her most positive reaction to anyone present.

Clash of the Titans

The next night, at Glanton's dojo, Chu and anyone who has been invited because of exemplary performance at the concert (see *Acting in Concert,* above) is permitted to enter without being challenged. Anyone else must get past an unarmed heavy who is blocking the doorway.

Once inside, Chu and the PCs face an equal number of opponents. Glanton, Sabra, Volker, Ferret (if not too badly injured in previous encounters), and enough heavies to make up the numbers. Everyone is dressed in the dojo's uniform -- pants with a belt, bare feet, bare heads, bare (and empty) hands, and (except for Sabra, who wears a sports top) bare to the waist. The dojo contains fine training equipment, and the walls are lined with real and training weapons -- baseball bats, katana, machete, nunchaku, tonfa, an assortment of knives, and sticks of various lengths from yawara to quarterstaff.

Chu immediately challenges Glanton, accusing him of murdering Kim Song, as well as human trafficking. Glanton protests -- truthfully -- that he was not involved in either and knows nothing about them. If questioned, he admits to importing the cobras for their venom, having heard that it was a component of the Sentinels' formula, as well as

organizing arms smuggling. He knew that Ferret was running a brothel, but not where the women came from.

Chu then demands to know who was responsible for Kim Song's death. Successful contests of Body Language against IQ enable her (and the heroes, if they can manage it) to spot three heavies glancing at Sabra. If accused, Sabra draws knives from her pockets and charges at Chu, 15 yards away; one PC will be in a position to intercept her. Meanwhile, Glanton attempts to grapple Chu, and they fight. Ferret, Volker, and the heavies run for the weapon racks.

The room is 13 yards by 16 yards. When the fighting begins, everyone is 3d yards from the weapons rack (roll for each character). Chu and Glanton can be removed from the equation (though the GM is free to role-play their struggle if he chooses). Should Sabra defeat or evade the agent blocking her path and she reaches Chu, the older woman disarms her and Glanton grapples his associate, preventing her doing any further harm. He calls for an end to the fighting while he questions Sabra. If the PCs stop, so will the others.

Sabra admits (truthfully) to mistaking Kim Song for Chu, and killing her. She had heard that the contest for membership in the society was to the death, and she wanted to save Glanton, her lover. After Chu explains that the Sentinels are forbidden to kill, Glanton asks what Chu intends to do. Chu turns the question back to him -- what does he think she should do? -- for Ferret as well as Sabra. When Glanton offers to hand both Ferret and Volker over to the police, Ferret and Volker (if conscious and able) try to run; the heavies freeze, not knowing who they should follow, and it will be up to the PCs to try to catch the men.

Once the two slave traders are in hand, Glanton admits that he's unable to pass judgement on his lover, Sabra, and asks Chu to decide. Chu says that she's not sufficiently familiar with local laws, so she turns to the heroes and requests that they act as jury and judge.

Should the team vote to hand Sabra over to the police, Chu and Glanton comply. If they say a death sentence is appropriate, Chu insists that they kill her themselves; she calls for Glanton to release Sabra. Chu explains that if the younger woman can get past the characters and outside to her car, she's free to leave. The heavies who can be charged as accessories to Kim's death choose to run interference for her.

In the event that the heroes come up with some alternative suggestion, Chu and Glanton should accept or reject it as the GM sees fit.

Aftermath!

Provided that the PCs agree to hand Sabra over to the police, or come up with another suggestion that Chu (through the GM) thinks is just, Chu relates to them any parts of the back story that she hasn't already disclosed (see *The China Shop,* earlier in this article). She also lets them know how and where to begin their quest for a master (see **GURPS Basic Set,** p. 293, and **GURPS Martial Arts,** p. 248). Every few years (she says), there's a mixed martial arts tournament held, where all who can reach the dojo are welcome, and masters look for promising students. The next will be held on the first day of the Year of the Metal Tiger; on that day (February 14, 2010), as soon as possible after midnight but not before, they should go to the Green Dragon bar on the Singapore waterfront and ask for One-Ear Wang. Chu refuses to speak any further on the subject, and she leaves town the next day.

If Glanton is satisfied that the heroes have behaved honorably, he lets the matter rest there, though he dismisses anyone who found a job at the company. If not, he may become an Enemy. If Glanton is killed, the formidable Merrimac company could become an Enemy.

Timeline for Entire Adventure

Day -2. Lin Chu arrives in town, photographed at airport.

Day 1. Kim Song and Lin Chu, independently, investigate smuggling operations at the docks. Song films Chu defeating eight Merrimac guards, flees from gunmen. Chu defeats gunmen. Sabra Stein and heavies arrive at dock,

mistake Song for Chu, and shoot her with crossbow. Song heads for PCs' dojo, dies. Torres and Kane investigate murder, question PCs.

Day 8. Sabra and Torres return to PCs' dojo. Sabra attempts to seduce a PC, then interrogate him. Torres, attracted to a PC, offers to help their investigation.

Day 10. Cyanotix concert.

Days 11-13. If Sabra admits defeat at her seduction, Ferret breaks into home of another PC.

Day 14. Lin Chu helps women escape from Qian Kun Imports.

Day 15. Lin Chu comes to PCs' dojo, attempts to recruit them to avenge Kim Song.

Day 16. Confrontation at Glanton's dojo.

Cast

For stats for Merrimac mooks, Merrimac heavies, Sabra Stein, John Turvey, and Pieter Volker, see the *Cast* section of ["Sentinels of the Styx, Part I."](#)

Non-combatant   *Varies*

Attributes: ST 9 [-10]; DX 10 [0]; IQ 10 [0]; HT 9 [-10].

Secondary Characteristics: Dmg 1d-2/1d-1; BL 16; HP 9 [0]; Will 10 [0]; Per 10 [0]; FP 9 [0]; Basic Speed 4.75 [0]; Basic Move 4 [0].

Advantages: Appearance and Wealth varies.

Disadvantages: Combat Paralysis [-15] OR Pacifism (Cannot Kill or Self-Defense Only) [-15].

Skills: Combat skills at default level only.

Gear: No weapons or armor but may carry improvised weapons (belts, bras, purses, etc.).

The GM is free to intersperse non-combatants with more experienced martial artists (such as using stats for Merrimac mooks).

Jerome "Ferret" Barrett   *175 points*

Skinny, long-nosed, and generally unpleasant-looking, with his father in jail more often than not, Jerome Barrett had an utterly miserable childhood until he learned to break into buildings through narrow gaps and buy off the school bullies with stolen cigarettes, pornography, and alcohol. A stint in juvenile detention taught him several useful tricks, including how to avoid getting caught again. For the next few years, he moderated his greed and his drug use and remained strictly small time, until a prostitute he knew persuaded him to rob a rich client of hers while she distracted him. His share of the loot enabled him to buy a an adult bookshop and peepshow, while she had cosmetic surgery and became a porn star.

A few months later, Barrett met Pieter Volker at a strip club, and they went into business together, with Barrett using his shop to sell Volker's illegal imports. When Barrett's former partner reappeared, demanding more money, Barrett gave her a job -- but when he caught her stealing from him, he killed her and fed her body to Volker's dogs.

Barrett has no real friends, and no loyalty to anyone but himself. He will, however, do favors for his associates -- even taking their side in a fight -- if it seems worth his while.

Height 5'8", Wt 105 lbs., Size Modifier 0, Age 39.

Appearance: Pale, pockmarked skin; untidy dark blond hair; hazel eyes -- a scrawny, sharp-featured, shifty-looking man with an ugly toothbrush mustache.

Attributes: ST 9 [-10]; DX 13 [60]; IQ 11 [20]; HT 10 [0].

Secondary Characteristics: Dmg 1d-2/1d-1; BL 16; HP 9 [0]; Will 11 [0]; Per 13 [10]; FP 10 [0]; Basic Speed 6 [5]; Basic Move 7 [5].

Advantages and Perks: Contact Group (Street; Skill-15; 9 or less; Somewhat Reliable) [10]; Danger Sense [15]; Flexibility [5]; Night Vision 8 [8]; Peripheral Vision [15]; Style Familiarity (Dagger fighting; Krav Maga) [2]; Wealth (Comfortable) [10].

Disadvantages and Quirks: Callous [-5]; Careful [-1]; Dislikes most animals, especially dogs and cats [-1]; Greed (12) [-15]; Horrible Hangovers [-1]; Incompetence (Gambling) [-1]; Lecherousness (15) [-7]; Miserliness (12) [-10]; Overconfident when drunk [-1]; Skinny [-5]; Unattractive [-5]; Uncongenial [-1].

Skills and Techniques: Back Strike (Knife) (H) Knife-1 [2]-14; Climbing (A) DX [2]-12; Computer Operation/TL8 (E) IQ [1]-11; Detect Lies (H) Per [4]-13; Driving/TL8 (Car) (A) DX-1 [1]-12; Electronics Operation/TL8 (Security) (A) IQ+1 [4]-13; Escape (H) DX-1 [2]-12; Fast Talk (A) IQ [2]-11; Filch (A) DX+1 [4]-14; Forced Entry (E) DX [1]-13; Forgery (H) IQ-1 [2]-10; Garrote (E) DX [1]-13; Guns/ TL8 (Pistol) (E) DX+2 [4]-15; Holdout (A) IQ+1 [4]-12; Karate (H) DX-1 [2]-12; Lockpicking/TL8 (A) IQ+2 [8]-13; Mechanic/TL8 (Car) (A) IQ [2]-11; Melee Weapon (Knife) (E) DX+2 [4]-15; Merchant (A) IQ+1 [4]-12; Observation (A) Per [2]-13; Photography/TL8 (A) IQ+1 [4]-12; Professional Skill (Bartender) (A) IQ [2]-11; Search (A) Per [2]-13; Smuggling (A) IQ [2]-12; Stealth (A) DX+1 [4]-14; Streetwise (A) IQ+1 [4]-12; Wrestling (A) DX [2]-13.

Gear: Holdout pistol, .380; fine-quality large knife. Usually wears leather jacket and baggy pants over ballistic TL8 vest and cup.

Donald Glanton   *325 points*

Don Glanton is the son of a Recon Marine sniper and an ESL teacher. Most of his childhood and youth was spent following his parents around the Pacific, with long stints in Okinawa, Hawaii, and the Philippines. He learned local languages with the help of his mother and, from the age of five, local martial arts with the encouragement of his father -- including Escrima, Kajukenbo, and Kobujutsu. By the time he finished school and enlisted in the USMC, he was a red belt in Kajukenbo and familiar with many other styles.

The corps supported Glanton's participation in mixed martial arts tournaments, regarding it as good publicity -- but in the 1990s, he became increasingly bored and disillusioned with military life. After his father died of cancer, Glanton decided not to re-enlist, instead devoting himself to a punishing full-time training regime. Then, after a tournament in Japan, he caught a plane to Manila and effectively vanished. He spent three years being trained by a Kajukenbo master who told him stories of the Sentinels of the Styx and sent him on missions to try to discover their secrets. Glanton was also directed fight drug lords in the Golden Triangle, former Khmer Rouge in Cambodia, and Maoist rebels in Nepal. To his teacher's surprise, he always returned alive.

Glanton reappeared in the United States three years later at a tournament in Las Vegas and was recruited by Merrimac as an instructor. Though he describes himself as "indifferently honest," he uses Merrimac's already- established smuggling network to ship weapons around the world. However, he is not involved in nor aware of any of his associates' illegal sidelines.

Though still on ready reserve, Glanton is not motivated by patriotism as much as an honor code similar to Bushido, combined with wanderlust and a low tolerance for boredom.

Height 6'6", Wt 190 lbs., Size Modifier 0, Age 41.

Appearance: Tanned complexion, red-brown hair cut in hi-top fade, dark brown eyes -- a rangy, broad-shouldered, tough-looking man, with large callused hands and feet, a USMC tattoo on the right bicep and a hula girl on the left.

Languages: English (Native); Japanese (Accented) [2]; Mandarin Chinese (Accented) [2]; Spanish (Accented) [2]; Russian (Accented) [2]; Arabic (Accented) [2]; Hindi (Accented) [2]; Korean (Accented) [2]. *TL:* 8. *Cultural Familiarity:* Western [0], East Asian [1].

Attributes: ST 13 [30]; DX 13 [60]; IQ 12 [40]; HT 13 [30].

Secondary Characteristics: Damage 1d/2d-1; BL 34 lbs.; HP 16 [10]; Will 13 [5]; Per 13 [5]; FP 16 [9]; Basic Speed 7.00 [5]; Basic Move 8 [5].

Advantages and Perks: Combat Reflexes [15]; Enhanced Parry 1 (Bare Hands) [5]; High Pain Threshold [10]; Improvised Weapons (Brawling) [1]; Language Talent [10]; Less Sleep 2 [4]; Military Rank (Courtesy: reserve) 3 [3]; Night Vision 3 [3]; Penetrating Voice [1]; Rapid Healing [5], Style Familiarity (Hapkido, Jeet Kune Do, Jujutsu, Kajukenbo, Kobujutsu, Krav Maga, MCMAP, Muay Thai, Sambo, and Sumo) [10]; Style Perk (DR 1: Partial, both hands and both feet, -20%; Tough Skin, -40%) [2]; Temperature Tolerance 2 [2]; Trained by a Master [30]; Very Fit [15]; Wealth (Comfortable) [10].

Disadvantages and Quirks: Bloodlust (15) [-5]; Code of Honor (Soldier's) [-10]; Doesn't take any drugs except on doctor's orders [-1]; Duty (Merrimac, 12 or less) [-10], (Dojo, 12 or less) [-10]; Incompetence (Politics) [-1]; Intolerance (smokers) [-1]; Mild dislike of flying, and really hates parachuting [-1]; Obsession (Become the ultimate unarmed fighter) (12) [-10]; Still wonders whether he could have beaten his father in a fistfight [-1].

Skills: Administration (A) IQ [2]-12; Animal Handling (Dog) (A) IQ [2]-12; Boating/TL8 (Motorboat) (A) DX [2]-13; Body Language (A) Per +1 [4]-14; Brawling (E) DX+1 [2]-14; Breath Control (H) HT-1 [2]-12; Climbing (A) DX+1 [4]-14; Current Affairs (Sports) (E) IQ [1]-12; Driving (Car) (A) DX [2]-13; Electronics Operation/TL8 (Security) (A) IQ [2]-12; Erotic Art (A) DX-1 [1]-12; Escape (H) DX [4]-13; Explosives/TL8 (Demolition) (A) IQ [2]-12; Fast-Draw (Ammo) (E) DX+2 [2]-15*, (Knife) (E) DX+1 [1]-14*, (Long Arm) (E) DX+1 [1]-14*; First Aid/TL8 (E) IQ+1 [2]-13; Games (Go) (E) IQ+1 [2]-13; Guns/TL8 (Rifle) (E) DX+4 [12]-17; Hiking (A) HT [2]-13; Intimidation (A) Will+1 [4]-14; Judo (H) DX [16]-16; Karate (H) DX [20]-17; Leadership (A) IQ +1 [4]-13; Lifting (A) HT [2]-13; Melee Weapon (Axe/ Mace) (A) DX [2]-13, (Flail) (H) DX-2 [1]-11, (Jitte/Sai) (A) DX-1 [1]-12, (Knife) (E) DX+2 [4]-15, (Shortsword) (A) DX+1 [4]-14, (Staff) (A) DX [4]-14, (Tonfa) (A) DX+1 [1]-12; Navigation/TL8 (Land) (A) IQ [2]-12; Observation (A) Per [2]-13; Parachuting (E) DX+1 [2]-14; Power Blow (H) Will+1 [8]-14; Running (A) HT [2]-13; Savoir-Faire (Dojo) (E) IQ +2 [4]-14, (Military) (E) IQ [1]-12; Scuba/TL (A) IQ-1 [1]-11; Soldier (A) IQ+1 [4]-13; Stealth (A) DX+1 [4]-14; Streetwise (A) IQ+1 [4]-13; Survival (Island) (A) Per+1 [4]-14; Swimming (E) HT+2 [4]-15; Tactics (H) IQ+1 [8]-13; Teaching (A) IQ+2 [8]-14; Throwing (A) DX+1 [4]-14.

* +1 for Combat Reflexes

Techniques: Disarming (Judo) (H) Judo+1 [2]-17; Exotic Hand Strike (A) Karate [1]-16; Lethal Kick (H) Karate-3 [2]-14; Lifesaving (H) Swimming-4 [2]-11; Rope Up (A) Climbing-1 [1]-13.

Gear: Small very fine folding knife; TL8 ballistic vest; mini flashlight; multi-tool; personal basics. Owns a modest collection of guns, but rarely carries one. Usually wears a brown leather jacket, military-style khaki clothing, combat boots. In dojo, wears camouflage cargo pants with red belt.

Lin Chu   *500 points*

Lin Chu was born in Kowloon's Walled City. She learned to fight at an early age. She was barely five when her mother died, and was sent to an orphanage run by Buddhist nuns. She fled several times over the next two years before an old nun recognized her potential and sent her to the Omei Mountain temple to be trained in Kung Fu.

When the Maoist government attacked temples during the Cultural Revolution, Lin Chu hid with many of her fellow Shaolin students on a farm and secret school far from any city. Twelve years later, she succeeded her former master as head of the school. In 1987, she escaped from China to compete for membership in the Society of the Styx.

Since becoming a Sentinel, Lin Chu has lived a nomadic life as an itinerant worker, visiting Buddhist temples and martial arts schools around the world in search of promising students. Though she thinks Westerners are too materialistic and reliant on machines, she is neither a primitive nor a Luddite: she is a fan of non-lethal and appropriate technology, and would own a wearable computer and other gadgets if her vows permitted it. She and Glanton would agree on a surprising range of issues.

While Chu strives to be compassionate to all people, she feels a particular sense of duty toward young Asian women and does what she can to protect or rescue them from human traffickers and other criminals.

Height 5'3", Wt 125 lbs., Size Modifier 0, Age 68 (looks 40-ish).

Appearance: Golden complexion, shaved head (usually covered by black wig), dark brown eyes -- a wiry, serene-looking Asian woman with brands on her wrists (usually hidden by sleeves).

Languages: Mandarin Chinese (Native); English (Accented) [4]; Cantonese (Accented) [4]; Russian (Broken) [2]. *TL:* 8. *Cultural Familiarity:* Chinese [0].

Attributes: ST 11 [10]; DX 13 [60]; IQ 13 [60]; HT 13 [30].

Secondary Characteristics: Damage 1d-1/1d+1; BL 24 lbs.; HP 11 [0]; Will 15 [10]; Per 13 [0]; FP 13 [0]; Basic Speed 7 [10]; Basic Move 7 [0].

Advantages and Perks: Charisma 2 [10]; Claim to Hospitality (Buddhist monasteries) [1]; Clerical Investment [5]; Damage Resistance 1 (Tough Skin, -40%) [3], 50 (Metal Only, Common, -40%; Tough Skin, -40%) [50]; Enhanced Parry 1 (all) [10]; Extra Attack 1 (Multi-Strike, +20%) [30]; Fit [5]; High Pain Threshold [10]; Higher Purpose [5]; Less Sleep 2 [4]; Longevity [2]; Rank (Religious) 2 [10]; Reduced Consumption 1 [2]; Style Familiarity (Shaolin Kung Fu) [1]; Trained by a Master [30]; Unfazeable [15]; Wild Talent 1 [20].

Disadvantages and Quirks: Broad-Minded [-1]; Disciplines of Faith (Asceticism) [-15]; Dislikes motorized vehicles, prefers to walk when possible [-1]; Enemy (Chinese Ministry of State Security: Watcher, 6 or less) [-3]; Enemy (Triad: Hunter, 6 or less) [-15]; Likes musicals, especially Bollywood movies [-1]; Mild addiction to chocolate [-1]; Pacifism (Cannot Harm Innocents) [-10]; Sense of Duty (Humanity) [-15]; Talks to animals in Chinese [-1]; Workaholic [-5].

Skills: Acrobatics (H) DX+1 [8]-14; Artist (Calligraphy) (H) IQ-2 [1]-11; Blind Fighting (VH) Per-1 [4]-12; Body Control (VH) HT [8]-13; Body Language (A) Per+1 [4]-14; Breaking Blow (H) IQ [4]-13; Breath Control (H) HT [4]-13; Climbing (A) DX [2]-13; Computer Operation/TL8 (E) IQ [1]-13; Cooking (specialty: Vegetarian) (A) IQ [1]-13; Current Affairs (Science & Technology) (E) IQ [1]-13; Diplomacy (H) IQ [4]-13; Farming (A) IQ [2]-13; First Aid/TL8 (E) IQ [1]-13; Flying Leap (H) IQ [4]-13; Judo (H) DX+4 [20]-17; Jumping (E) DX [1]-13; Karate (H) DX+4 [20]-17; Light Walk (H) DX [4]-13; Lizard Climb (H) DX [4]-13; Meditation (H) Will [4]-15; Melee Weapon (Staff) (A) DX+2 [8]-15; Observation (A) Per-1 [1]-12; Pharmacy (Herbal) (H) IQ-1 [2]-12; Philosophy (Zen Buddhism) (H) IQ+2 [12]-15; Power Blow (H) Will [4]-15; Pressure Points (H) IQ+2 [12]-15; Research/TL8 (A) IQ-1 [1]-12; Running (A) HT [2]-13; Savoir-Faire (Dojo) (E) IQ+1 [2]-14; Stealth (A) DX+1 [4]-14; Streetwise (A) IQ [2]-13; Survival (Mountains) (A) Per [2]-13; Swimming (E) HT [1]-13; Teaching (A) IQ+1 [4]-14; Throwing (A) DX+1 [4]-14; Urban Survival (A) Per-1 [1]-12.

Techniques: Exotic Hand Strike (A) Karate [1]-16; Pole-Vault Kick (H) Karate-3 [2]-14; Pressure-Point Strike (H) Karate [4]-17; Roll with Blow (Judo-1) [2]-16; Whirlwind Attack (Staff) (H) [2]-11.

Gear: Faded black denim jacket and jeans; black wig; shoes. Small backpack holds orange robe and change of underwear, TL8 first aid kit, mini flashlight, thermos bottle, and personal basics (including passport but no money): 11.25 lbs.
