

TIFFANY STAR

An Official
HIWG Publication

March 1990
Issue #18

STAFF: Mike Mikesh and Ed Edwards.

TIFFANY STAR is a monthly amateur periodical published in support of the History of the Imperium Working Group (HIWG). The activities of HIWG are devoted to the development of the setting for Game Designers' Workshop's (GDW) science fiction role playing game of the far future, TRAVELLER. TRAVELLER is the registered trademark of GDW and is used with permission only. Portions of this periodical are derived from other TRAVELLER materials published by GDW or Digest Group Publications and are the copyright of the

respective groups.

TIFFANY STAR is available to History of the Imperium Working Group members at the single issue price of \$1.00. Members automatically receive subscriptions upon the payment of dues. Annual dues for HIWG membership are \$12.00 and are payable to Ed Edwards, HIWG, 1410 E. Boyd, Norman OK 73071. Stamps accepted.

Articles in specific format and illustrations are welcome. Send mail to Mike Mikesh, TIFFANY STAR, 3124 75th Ave #3, Landover MD 20785.

THUNDER FROM ABOVE

by Joe D. Fugate, Sr.

Travellers' Digest changing its name as of issue 22 5/10/90

As of issue 22, the Travellers' Digest is changing its name to the MegaTraveller JOURNAL. Along with the name change, we are bringing the magazine's content back to 100% Traveller. Given the recent upsurge in Traveller interest, we feel the better marketing approach is to concentrate on the clear leader rather than dilute the magazine's content with "other" games.

When the Travellers' Digest issue 21 comes out this fall, the four characters will have reached the end on their grand tour of the Imperium, and Digest Group Publications will have accomplished what we set out to do five years ago in our proposal to Marc Miller: publish a single 21-issue adventure campaign covering the entire Imperium and encountering all the major races called the Travellers' Digest.

Discussions have been going on here at DGP about just what to do after issue 21 has come out. For various reasons, we have decided we would like to call back to the glory days of GDW's old Journal of the Travellers' Aid Society, and to that end we want to give our Travellers' Digest a complete content and format enhancement with issue 22. Plus, we would like to adopt a new name for our enhanced magazine that is inspired by the original but now defunct Journal of the Travellers' Aid Society.

Several of the changes to be made in the magazine's internal format are inspired by what we consider was the best of the old Journal. Our most popular old columns will still be there, plus some old favorites from the original Journal, and there will be some new things too.

We're excited about this change, and are looking forward to once again referring to the premier Traveller magazine as the JOURNAL.

We need more small pieces than product proposals 4/23/90

Many of you may be overlooking a lucrative niche for seeing your work make it into print and making your Traveller habit pay its way somewhat.

We have never have enough 2,000-3,000 word pieces on hand for printing in the Travellers' Digest Magazine. We

are interested in most any topic. Just look through our magazine, think of something you are interested in, and write it up. We'd love to see lots more small piece submissions. If you think about it, you'll realize we print a lot more small articles than we print in products. In terms of sheer numbers, your chances of getting published are much greater if you don't take the grandiose approach, but just send us lots of small stuff. So here's your chance — get busy and send in your articles.

MANHUNT

2/25/90

Volume 1 of the Onnesium Quest Trilogy

Onnesium-118, the rarest and most valuable substance in the galaxy. Legends tell of a fabled asteroid belt, known only as the Victory Belt, loaded with onnesium-laden asteroids. Asteroid miners have searched for centuries for the fabled Victory Belt — and one man recently claimed to have discovered the location of such a fantastic belt. Few believed him. Curiously, this man has disappeared. Where has he gone? Can he be found, and is his story true? The only way to find out is to begin the MANHUNT!

It's volume 1 of the Onnesium Quest Trilogy, by Phillip Athans. Look for it in the May-June timeframe.

DESIGNING NUGGET-ORIENTED ADVENTURES

by Joe D. Fugate, Sr.

4/20/90

Designing a good nugget-oriented adventure is quite a bit different than doing an ordinary story-oriented adventure. Before getting into the nuts-and-bolts details of designing nugget adventures, let's briefly review how nugget adventures differ from the older story-style presentation.

NUGGETS VERSUS A STORY When writing either a nugget or a story style presentation, you layout the flow of events (that is, the plot) based upon certain assumptions. Nugget presentation uses different assumptions than does story presentation.

Story presentation assumes sequence is all-important. The events have to happen in the specified order, or forget it. This contains the referee presenting the adventure, because she must now try to control the sequence, and thus the PCs, to keep them from "going there before they should." A talented referee can adapt to this situation by altering the setting on-the-fly so the premature visit doesn't spoil the adventure. Other less creative referees (which includes most of us) will try to force the PCs into changing their mind by putting obstacles in their way, or worse, by simply dictating that their actions are not following the script and telling them "you can't do that." At this point, most PCs feel like they are being manipulated, and they resent it.

Because story presentation is so closely tied to things happening in a proper sequence, a second, related phenomenon occurs -- the PCs decide to go or do something that's not part of the story. At this point, most referees panic. "Uh oh! This isn't part of the story!"

Nugget presentation assumes setting is of primary importance, and that sequence is secondary. PCs are free to roam about their imaginary world, seldom aware that they need to "follow a script." This, after all, is what sets a roleplaying game apart from just reading a novel. It is the job of a good writer of a roleplaying adventure to provide the referee with the material she needs to make her job as easy as possible -- and her job is to present an imaginary world to the PCs. Nuggets, when properly used, meet that need significantly better than a story presentation does.

DOING A NUGGET ADVENTURE:

To do a good job of presenting an imaginary world for the referee to present to the PCs, follow these guidelines when writing nugget adventures:

1. Aim to detail everything to the same ~~minimum~~ level of detail -- both the important things, and the unimportant things. Avoid superdetailing one thing to the exclusion of other similar things.

2. Identify the key events that have to occur for the "plot line" to work and write them up as "key nuggets." If possible, make those key nuggets non-sequential -- although many times, sequence is unavoidable. Further, if at all possible, write the key nuggets so the specific location doesn't matter. (That is, the nugget could be "in some city on the world, but the specific location doesn't matter.")

3. Write random event nuggets for other things the players may visit, experience, or discover. Give the referee random event nuggets to cover several possibilities, plus indicate when and where these random nuggets might be available as options to the PCs. If possible, avoid making random nuggets location-specific. (For instance, "this random nugget must take place in a swamp" -- which qualifies as non-location specific, since it doesn't say what swamp on what world.)

4. Try to include at least one red-herring nugget in

each scenario. Ideally, carry the action set enough that the referee can either: 1) "loop-around" back into intended plot line, or 2) the PCs this route is a "dead end."

5. Try to include several rumors (presented in patrons style, with one "headline" and 6 possible detailed stories), some of which may prove useful later in the adventure, and others that will not.

6. As you are writing a nugget, ask yourself the question: "What if the PCs don't do this?" If possible, provide the referee with alternate-path nuggets that still fulfill the plot line, or provide the referee with some random event nuggets that compel the PCs to go back to the plot line.

7. Try to present background information through a nugget event rather than just giving the referee a dry essay and leaving it up to her to figure out how best to present it to the players. Even so-called library data can be made more exciting if written as an event nugget if you use your imagination a bit. ("You are standing in line at a starport fast-food counter when a vidcom program about the history of this world catches your attention...")

Writing these types of adventures is more challenging than just writing a story, but it's not ~~that much~~ harder. But therein lies the unique art of writing adventures versus writing novels. Adventure writing takes more advance planning on the part of a writer. But taking the time to plan will result in a well written nugget adventure that will automatically be more challenging for the PCs to play -- yet be vastly easier for the referee to present. Plus, a careful adventure writer will demand playtesting be done in order to find where the PCs don't want to follow their script.

As a useful by-product, well-written nugget adventures contain lots of reusable background material presented in nugget event form. Story adventures tend to be very specialized one-shot deals. Traditionally, adventure modules always experience poorer sales than do background-oriented products. It is our contention that the traditional story presentation is largely to blame for the poor sales performance of adventures. We believe proper nugget organization of MegaTraveller adventure products will lead to significantly better sales performance, and for this reason we insist on all our writers adopting a properly organized nugget presentation for all adventure submissions to us (or to GDW, for that matter).

Even a 5-page adventure for a magazine should follow this format: write a couple of key nuggets that have to occur to fulfill the plot, then fill out the rest of the adventure with related alternate-path nuggets, red-herring nuggets, rumor nuggets, and random event nuggets.

NEW HIWG DOCUMENTS

Order Number: HD-44.02 Economic Survey Data by Tim
11 pages Koors. Two types of tables for each sector with known UMPs. The Economic table lists for each subsector the number of systems, number of urban places, the population, the Gross Product, and type A and B shipbuilding capacities. A summary table of all the sectors is also given. The second table lists for each sector, the number of planets and population for each tech level from 0 to 17. Order paper from Ed Edwards.

Order Number: HD-6402 Anaxias System Survey by William
6 pages Carey. This includes system history and data, other worlds, star system data, physical data, cultural profile, technology profile, government, Anaxias defense force, and world map. Order from Mike Mikesh.

Order Number: HD-6403 Delphi Sector Analysis by William Carey. Includes astrology, history, corporate interests, fleet formations, Curator Corps operations in Delphi, robots in Delphi Sector, the Magash Ush Khasiim, Delphi Sector Maps of the Rebellion.

ENHANCEMENTS TO TRADE AND COMMERCE RULES 4/14/90
by Joe D. Fugate, Sr.

DATA COORDINATOR

by Bryan J. Borich

From the I/O stream:

I'm the Data Coordinator. Of course many of you are wondering what a Data Coordinator is, what does he do, can he do something for me?

At this time there's more than one thing that I do.

The first part of the job is to try and provide all HIWG Docs on disk. Sending HIWG material on disk is more efficient than sending it via paper mail. It's less costly, overall, especially for new HIWGer's and it provides for using your computer (or one you have access to) to more effectively search through the material for items pertinent to your interest.

The second part is try to make the material across as many computer platforms as possible for as low of a price as possible (I'm not in this to get rich, maybe break even, but I'm not worried about that yet). To date I have managed to make the following platforms available:

IBM	Myself
Amiga	Scott Olson
Atari	Peter Hircocq
MAC	Scott Streibich

I might even be able to do Apple and Commodore in the foreseeable future [but this is still up in the air].

[Note: Not all material is available on the MAC so far, since we lost our ability to transfer from IBM to MAC capability, but this is being worked on.]

The third part is that I can also provide paper copies, nicely printed and usually of fewer pages (one of the advantages of having a laser printer and a couple of fonts readable at smaller sizes). I can usually halve the number of pages that an article is in size. [NOTE: QE's, this is what I can do for you, if you provide the material in disk form, otherwise you need to wait till I get around to retyping it, a tiresome task, the only reason for me to get a paper copy with the disk is to note special formatting and the artwork]

Now what I need is for more people to submit their documents in machine readable form to the appropriate coordinator, if that's possible, since it's much easier than my retyping it and much faster.

Currently, we cannot transfer artwork, however this might change as I know of three HIWGer's that have digitizers and or have access to them. If this works out okay, we can then also provide the artwork that goes with the articles in some cases.

[P.S. PLEASE START MAKING YOUR HIWG MATERIAL AVAILABLE VIA COMPUTER WHERE POSSIBLE, !!!!THANKS!!!!].

[P.P.S. THIS DOES NOT MEAN THAT HIWG IS IGNORING THOSE WHO CAN ONLY HANDLE PAPER, IT'S JUST TRYING TO MAKE COMMUNICATION FASTER AND EASIER]

Here are some rules enhancements I'm putting in the "Trading Nuggets" chapter of GDW's upcoming product, Knightfall. Just a little sneak preview — and a bonus for being a MegaTraveller gamer who frequents GENie.

Since much of the early part of Knightfall deals with interstellar trade and commerce, the following optional additions to the Trade and Commerce rules are recommended. These additions provide an interesting new depth to interstellar speculation, enhancing the players' enjoyment.

Add to Step 3, Tech Level Effects (page 53 of the Referee's Manual): If the item being sold is a:

- o natural resource, ignore the tech level effects
- o processed resource, use tech level effects as given
- o manufactured hardware, always use tech level difference as a minus (-)
- o manufactured non-hardware, use tech level effects as given
- o information, use tech level effects as is
- o novelty, always use tech level difference as a plus (+)

RATIONALE

The basic MegaTraveller rules do not vary the tech level effects for different types of items. For those who are interested, here is how the above additional guidelines were arrived at:

Natural Resources: Tech Level doesn't have relevance when considering the price of raw natural resources. Differentiating between a tech level 5 rock and a tech level 15 rock makes little sense. So just ignore tech level.

Processed Resources: Tech level makes a big difference on the quality and desirability of processed resources. Tech level 15 aluminum is likely to be of a much higher quality than tech level 5 aluminum. So use the tech level effects as given.

Manufactured Resources: Manufactured resources are a mixed bag. If the resource is hardware (such as electronic equipment), matching the hardware tech level to the selling world's tech level will fetch the highest price. If the hardware is of too low a tech level, a product's quality and function will be less desirable to the locals — but if the tech level is too high, simple maintenance and understanding function becomes a problem, again lowering the desirability of the product on the local market. So the tech level of hardware you want to sell should match the local world tech level to fetch the highest price. Non-hardware (like spices or pharmaceuticals) are more like processed resources, however. Tech level 15 pharmaceuticals are likely to be of a much higher quality than tech level 5 pharmaceuticals, thus use the tech level effects as given for non-hardware manufactured goods.

Information Resources: High tech information is generally more robust and detailed, thus more valuable, so use the tech level effects as given.

Novelty Resources: Novelty resources generally work like manufactured hardware in reverse — that is, the greater the difference in tech level, the more valuable the item. A tech 15 souvenir is likely worth a lot more on a tech 5 world than on another tech 15 world. Likewise, a tech 5 souvenir is probably worth more on a tech 15 world than on another tech 5 world. Therefore, always use the difference in tech levels as a plus.

So give these enhancements a try in your next gaming session. Any comments would be appreciated.
